fpAcclngQgPStOffLPrioOctsH [Fp Acc Ing Qg PSt Off LPrio Octets H] (tmnxFPAcclngQgPStOffLPrioOctsH)	long	The value of tmnxFPAcclngQgPStOffLPrioOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStOffLPrioOcts.
fpAcclngQgPStOffLPrioOctsL [Fp Acc Ing Qg PSt Off LPrio Octets L] (tmnxFPAcclngQgPStOffLPrioOctsL)	long	The value of tmnxFPAcclngQgPStOffLPrioOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStOffLPrioOcts.
fpAcclngQgPStOffLPrioPkts [Fp Acc Ing Qg PSt Off LPrio Pkts] (tmnxFPAcclngQgPStOffLPrioPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStOffLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpAcclngQgPStOffLPrioPktsH [Fp Acc Ing Qg PSt Off LPrio Pkts H] (tmnxFPAcclngQgPStOffLPrioPktsH)	long	The value of tmnxFPAcclngQgPStOffLPrioPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStOffLPrioPkts.
fpAcclngQgPStOffLPrioPktsL [Fp Acc Ing Qg PSt Off LPrio Pkts L] (tmnxFPAcclngQgPStOffLPrioPktsL)	long	The value of tmnxFPAcclngQgPStOffLPrioPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStOffLPrioPkts.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStUncolOctsOff [Fp Acc Ing Qg PSt Uncol Octs Off] (tmnxFPAcclngQgPStUncolOctsOff)	java. math. BigInteger	The value of tmnxFPAcclngQgPStUncolOctsOff indicates the number of uncolored octets offered to the ingress Pchip.
fpAcclngQgPStUncolOctsOffH [Fp Acc Ing Qg PSt Uncol Octs Off H] (tmnxFPAcclngQgPStUncolOctsOffH)	long	The value of tmnxFPAcclngQgPStUncolOctsOffH indicates the higher 32 bits of the value of tmnxFPAcclngQgPStUncolOctsOff.
fpAcclngQgPStUncolOctsOffL [Fp Acc Ing Qg PSt Uncol Octs Off L] (tmnxFPAcclngQgPStUncolOctsOffL)	long	The value of tmnxFPAcclngQgPStUncolOctsOffL indicates the lower 32 bits of tmnxFPAcclngQgPStUncolOctsOff.
fpAcclngQgPStUncolPktsOff [Fp Acc Ing Qg PSt Uncol Pkts Off] (tmnxFPAcclngQgPStUncolPktsOff)	java. math. BigInteger	The value of tmnxFPAcclngQgPStUncolPktsOff indicates the number of uncolored packets offered to the ingress Pchip.
fpAcclngQgPStUncolPktsOffH [Fp Acc Ing Qg PSt Uncol Pkts Off H] (tmnxFPAcclngQgPStUncolPktsOffH)	long	The value of tmnxFPAcclngQgPStUncolPktsOffH indicates the upper 32 bits of tmnxFPAcclngQgPStUncolPktsOff.
fpAcclngQgPStUncolPktsOffL [Fp Acc Ing Qg PSt Uncol Pkts Off L] (tmnxFPAcclngQgPStUncolPktsOffL)	long	The value of tmnxFPAcclngQgPStUncolPktsOffL indicates the lower 32 bits of tmnxFPAcclngQgPStUncolPktsOff.
<p>FPNwIngQGrpArbiterStats</p> <p>MIB entry name: tFPNetIngQGrpArbitStatEntry</p> <p>Entry description: The value of tFPNetIngQGrpArbitStatEntry defines an entry in the tFPNetIngQGrpArbitStatTable. It represents statistics about a specific QoS ingress queue group arbiter.</p> <p>Table description (for tFPNetIngQGrpArbitStatTable): The value of tFPNetIngQGrpArbitStatTable contains forwarding-plane ingress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.FPNwIngQGrpEntry</p>		

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQGrpArbitStatFwdOcts [Fp Net Ing QGrp Arbit Stat Fwd Octs] (tFPNetIngQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tFPNetIngQGrpArbitStatFwdOcts indicates the number of forwarded octets by the ingress queue group arbiter Pchip.
fpNetIngQGrpArbitStatFwdOctsH [Fp Net Ing QGrp Arbit Stat Fwd Octs H] (tFPNetIngQGrpArbitStatFwdOctsH)	long	The value of tFPNetIngQGrpArbitStatFwdOctsH indicates the upper 32 bits of tFPNetIngQGrpArbitStatFwdOcts.
fpNetIngQGrpArbitStatFwdOctsL [Fp Net Ing QGrp Arbit Stat Fwd Octs L] (tFPNetIngQGrpArbitStatFwdOctsL)	long	The value of tFPNetIngQGrpArbitStatFwdOctsL indicates the lower 32 bits of tFPNetIngQGrpArbitStatFwdOcts.
fpNetIngQGrpArbitStatFwdPkts [Fp Net Ing QGrp Arbit Stat Fwd Pkts] (tFPNetIngQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tFPNetIngQGrpArbitStatFwdPkts indicates the number of forwarded packets by the ingress queue group arbiter Pchip.
fpNetIngQGrpArbitStatFwdPktsH [Fp Net Ing QGrp Arbit Stat Fwd Pkts H] (tFPNetIngQGrpArbitStatFwdPktsH)	long	The value of tFPNetIngQGrpArbitStatFwdPktsH indicates the upper 32 bits of tFPNetIngQGrpArbitStatFwdPkts.
fpNetIngQGrpArbitStatFwdPktsL [Fp Net Ing QGrp Arbit Stat Fwd Pkts L] (tFPNetIngQGrpArbitStatFwdPktsL)	long	The value of tFPNetIngQGrpArbitStatFwdPktsL indicates the lower 32 bits of tFPNetIngQGrpArbitStatFwdPkts.
fpNetIngQGrpArbitStatName [Fp Net Ing QGrp Arbit Stat Name] (tFPNetIngQGrpArbitStatName)	String	The value of tFPNetIngQGrpArbitStatName specifies the name of the ingress QoS arbiter of this forwarding-plane queue group on network.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FPNwIngQGrpPolicerStats</p> <p>MIB entry name: tmnxFPNetIngQGrpPStatEntry</p> <p>Entry description: The value of tmnxFPNetIngQGrpPStatEntry defines an entry in the tmnxFPNetIngQGrpPStatTable. It represents statistics about a specific QoS ingress queue group policer.</p> <p>Table description (for tmnxFPNetIngQGrpPStatTable): The tmnxFPNetIngQGrpPStatTable contains forwarding-plane ingress QoS queue group policer statistics on network side.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: equipment.FPNwIngQGrpEntry</p>		
fpNetIngQGrpPStatMode [Fp Net Ing QGrp PStat Mode] (tmnxFPNetIngQGrpPStatMode)	int	The value of tmnxFPNetIngQGrpPStatMode indicates the stat mode used by this policer.
fpNetIngQGrpPStatPolicerId [Fp Net Ing QGrp PStat Policer Id] (tmnxFPNetIngQGrpPStatPolicerId)	long	The value of tmnxFPNetIngQGrpPStatPolicerId specifies the index of the ingress QoS policer of this forwarding-plane queue group on network.
fpNetIngQgPStDrpHPrioOcts [Fp Net Ing Qg PSt Drp HPrio Octs] (tmnxFPNetIngQgPStDrpHPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpHPrioOctsH [Fp Net Ing Qg PSt Drp HPrio Octs H] (tmnxFPNetIngQgPStDrpHPrioOctsH)	long	The value of tmnxFPNetIngQgPStDrpHPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpHPrioOcts.
fpNetIngQgPStDrpHPrioOctsL [Fp Net Ing Qg PSt Drp HPrio Octs L] (tmnxFPNetIngQgPStDrpHPrioOctsL)	long	The value of tmnxFPNetIngQgPStDrpHPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpHPrioOcts.
fpNetIngQgPStDrpHPrioPkts [Fp Net Ing Qg PSt Drp HPrio Pkts] (tmnxFPNetIngQgPStDrpHPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStDrpHPrioPktsH [Fp Net Ing Qg PSt Drp HPrio Pkts H] (tmnxFPNetIngQgPStDrpHPrioPktsH)	long	The value of tmnxFPNetIngQgPStDrpHPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpHPrioPkts.
fpNetIngQgPStDrpHPrioPktsL [Fp Net Ing Qg PSt Drp HPrio Pkts L] (tmnxFPNetIngQgPStDrpHPrioPktsL)	long	The value of tmnxFPNetIngQgPStDrpHPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpHPrioPkts.
fpNetIngQgPStDrpLPrioOcts [Fp Net Ing Qg PSt Drp LPrio Octs] (tmnxFPNetIngQgPStDrpLPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpLPrioOctsH [Fp Net Ing Qg PSt Drp LPrio Octs H] (tmnxFPNetIngQgPStDrpLPrioOctsH)	long	The value of tmnxFPNetIngQgPStDrpLPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpLPrioOcts.
fpNetIngQgPStDrpLPrioOctsL [Fp Net Ing Qg PSt Drp LPrio Octs L] (tmnxFPNetIngQgPStDrpLPrioOctsL)	long	The value of tmnxFPNetIngQgPStDrpLPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpLPrioOcts.
fpNetIngQgPStDrpLPrioPkts [Fp Net Ing Qg PSt Drp LPrio Pkts] (tmnxFPNetIngQgPStDrpLPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpLPrioPktsH [Fp Net Ing Qg PSt Drp LPrio Pkts H] (tmnxFPNetIngQgPStDrpLPrioPktsH)	long	The value of tmnxFPNetIngQgPStDrpLPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpLPrioPkts.
fpNetIngQgPStDrpLPrioPktsL [Fp Net Ing Qg PSt Drp LPrio Pkts L] (tmnxFPNetIngQgPStDrpLPrioPktsL)	long	The value of tmnxFPNetIngQgPStDrpLPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpLPrioPkts.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStFwdInProfOcts [Fp Net Ing Qg PSt Fwd In Prof Octs] (tmnxFPNetIngQgPStFwdInProfOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdInProfOctsH [Fp Net Ing Qg PSt Fwd In Prof Octs H] (tmnxFPNetIngQgPStFwdInProfOctsH)	long	The value of tmnxFPNetIngQgPStFwdInProfOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdInProfOcts.
fpNetIngQgPStFwdInProfOctsL [Fp Net Ing Qg PSt Fwd In Prof Octs L] (tmnxFPNetIngQgPStFwdInProfOctsL)	long	The value of tmnxFPNetIngQgPStFwdInProfOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdInProfOcts.
fpNetIngQgPStFwdInProfPkts [Fp Net Ing Qg PSt Fwd In Prof Pkts] (tmnxFPNetIngQgPStFwdInProfPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdInProfPktsH [Fp Net Ing Qg PSt Fwd In Prof Pkts H] (tmnxFPNetIngQgPStFwdInProfPktsH)	long	The value of tmnxFPNetIngQgPStFwdInProfPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdInProfPkts.
fpNetIngQgPStFwdInProfPktsL [Fp Net Ing Qg PSt Fwd In Prof Pkts L] (tmnxFPNetIngQgPStFwdInProfPktsL)	long	The value of tmnxFPNetIngQgPStFwdInProfPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdInProfPkts.
fpNetIngQgPStFwdOutProfOcts [Fp Net Ing Qg PSt Fwd Out Prof Octs] (tmnxFPNetIngQgPStFwdOutProfOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdOutProfOctsH [Fp Net Ing Qg PSt Fwd Out Prof Octs H] (tmnxFPNetIngQgPStFwdOutProfOctsH)	long	The value of tmnxFPNetIngQgPStFwdOutProfOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdOutProfOcts.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStFwdOutProfOctsL [Fp Net Ing Qg PSt Fwd Out Prof Octs L] (tmnxFPNetIngQgPStFwdOutProfOctsL)	long	The value of tmnxFPNetIngQgPStFwdOutProfOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdOutProfOcts.
fpNetIngQgPStFwdOutProfPkts [Fp Net Ing Qg PSt Fwd Out Prof Pkts] (tmnxFPNetIngQgPStFwdOutProfPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdOutProfPktsH [Fp Net Ing Qg PSt Fwd Out Prof Pkts H] (tmnxFPNetIngQgPStFwdOutProfPktsH)	long	The value of tmnxFPNetIngQgPStFwdOutProfPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdOutProfPkts.
fpNetIngQgPStFwdOutProfPktsL [Fp Net Ing Qg PSt Fwd Out Prof Pkts L] (tmnxFPNetIngQgPStFwdOutProfPktsL)	long	The value of tmnxFPNetIngQgPStFwdOutProfPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdOutProfPkts.
fpNetIngQgPStOffHPrioOcts [Fp Net Ing Qg PSt Off HPrio Octs] (tmnxFPNetIngQgPStOffHPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffHPrioOctsH [Fp Net Ing Qg PSt Off HPrio Octs H] (tmnxFPNetIngQgPStOffHPrioOctsH)	long	The value of tmnxFPNetIngQgPStOffHPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffHPrioOcts.
fpNetIngQgPStOffHPrioOctsL [Fp Net Ing Qg PSt Off HPrio Octs L] (tmnxFPNetIngQgPStOffHPrioOctsL)	long	The value of tmnxFPNetIngQgPStOffHPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffHPrioOcts.
fpNetIngQgPStOffHPrioPkts [Fp Net Ing Qg PSt Off HPrio Pkts] (tmnxFPNetIngQgPStOffHPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStOffHPrioPktsH [Fp Net Ing Qg PSt Off HPrio Pkts H] (tmnxFPNetIngQgPStOffHPrioPktsH)	long	The value of tmnxFPNetIngQgPStOffHPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffHPrioPkts.
fpNetIngQgPStOffHPrioPktsL [Fp Net Ing Qg PSt Off HPrio Pkts L] (tmnxFPNetIngQgPStOffHPrioPktsL)	long	The value of tmnxFPNetIngQgPStOffHPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffHPrioPkts.
fpNetIngQgPStOffLPrioOcts [Fp Net Ing Qg PSt Off LPrio Octs] (tmnxFPNetIngQgPStOffLPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Pchip.
fpNetIngQgPStOffLPrioOctsH [Fp Net Ing Qg PSt Off LPrio Octs H] (tmnxFPNetIngQgPStOffLPrioOctsH)	long	The value of tmnxFPNetIngQgPStOffLPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffLPrioOcts.
fpNetIngQgPStOffLPrioOctsL [Fp Net Ing Qg PSt Off LPrio Octs L] (tmnxFPNetIngQgPStOffLPrioOctsL)	long	The value of tmnxFPNetIngQgPStOffLPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffLPrioOcts.
fpNetIngQgPStOffLPrioPkts [Fp Net Ing Qg PSt Off LPrio Pkts] (tmnxFPNetIngQgPStOffLPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffLPrioPktsH [Fp Net Ing Qg PSt Off LPrio Pkts H] (tmnxFPNetIngQgPStOffLPrioPktsH)	long	The value of tmnxFPNetIngQgPStOffLPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffLPrioPkts.
fpNetIngQgPStOffLPrioPktsL [Fp Net Ing Qg PSt Off LPrio Pkts L] (tmnxFPNetIngQgPStOffLPrioPktsL)	long	The value of tmnxFPNetIngQgPStOffLPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffLPrioPkts.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStUncolOctsOff [Fp Net Ing Qg PSt Uncol Octs Off] (tmnxFPNetIngQgPStUncolOctsOff)	java. math. BigInteger	The value of tmnxFPNetIngQgPStUncolOctsOff indicates the number of uncolored octets offered to the ingress Pchip.
fpNetIngQgPStUncolOctsOffH [Fp Net Ing Qg PSt Uncol Octs Off H] (tmnxFPNetIngQgPStUncolOctsOffH)	long	The value of tmnxFPNetIngQgPStUncolOctsOffH indicates the higher 32 bits of the value of tmnxFPNetIngQgPStUncolOctsOff.
fpNetIngQgPStUncolOctsOffL [Fp Net Ing Qg PSt Uncol Octs Off L] (tmnxFPNetIngQgPStUncolOctsOffL)	long	The value of tmnxFPNetIngQgPStUncolOctsOffL indicates the lower 32 bits of tmnxFPNetIngQgPStUncolOctsOff.
fpNetIngQgPStUncolPktsOff [Fp Net Ing Qg PSt Uncol Pkts Off] (tmnxFPNetIngQgPStUncolPktsOff)	java. math. BigInteger	The value of tmnxFPNetIngQgPStUncolPktsOff indicates the number of uncolored packets offered to the ingress Pchip.
fpNetIngQgPStUncolPktsOffH [Fp Net Ing Qg PSt Uncol Pkts Off H] (tmnxFPNetIngQgPStUncolPktsOffH)	long	The value of tmnxFPNetIngQgPStUncolPktsOffH indicates the upper 32 bits of tmnxFPNetIngQgPStUncolPktsOff.
fpNetIngQgPStUncolPktsOffL [Fp Net Ing Qg PSt Uncol Pkts Off L] (tmnxFPNetIngQgPStUncolPktsOffL)	long	The value of tmnxFPNetIngQgPStUncolPktsOffL indicates the lower 32 bits of tmnxFPNetIngQgPStUncolPktsOff.
FibNextHopStats MIB entry name: vRtrFibStatNextHopEntry Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system. Supports realtime plotting Supports scheduled collection Monitored class: equipment.BaseCard		

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.
<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpEvpnRoutes [Bgp Evpn Routes] (vRtrFibStatBGPEvpnRoutes)	long	The value of vRtrFibStatBGPEvpnRoutes indicates the current IPv4 BGP EVPN route counts for the virtual router.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
currentUtilization [Current Utilization] (vRtrFibStatCurrentUtilization)	long	The value of vRtrFibStatCurrentUtilization indicates the space usage by IPv4 routes in hardware FIB in percentage.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.
filteredRoutes [Filtered Routes] (vRtrFibStatFilteredRoutes)	long	The value of vRtrFibStatFilteredRoutes indicates the total number of IPv4 routes filtered due to selective download and so not installed in hardware FIB.
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISIRoutes)	long	vRtrFibStatISIRoutes indicates current ISIS route counts for the virtual router.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
natRoutes [Nat Routes] (vRtrFibStatNatRoutes)	long	vRtrFibStatNatRoutes indicates current NAT route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space due to IPv4 routes.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
totalInstalledRoutes [Total Installed Routes] (vRtrFibStatTotalInstalledRoutes)	long	The value of vRtrFibStatTotalInstalledRoutes indicates the total number of IPv4 routes installed in hardware FIB.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6AggrRoutes [V6 Aggr Routes] (vRtrFibStatV6AggrRoutes)	long	vRtrFibStatV6AggrRoutes indicates current aggregate route counts for the virtual router.
v6BGPRoutes [V6 BGPRoutes] (vRtrFibStatV6BGPRoutes)	long	vRtrFibStatV6BGPRoutes indicates current BGP route counts for the virtual router.
v6BGPVpnRoutes [V6 BGPVpn Routes] (vRtrFibStatV6BGPVpnRoutes)	long	vRtrFibStatV6BGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
v6CurrentUtilization [V6 Current Utilization] (vRtrFibStatV6CurrentUtilization)	long	The value of vRtrFibStatV6CurrentUtilization indicates the space usage by IPv6 routes in hardware FIB in percentage.
v6DirectRoutes [V6 Direct Routes] (vRtrFibStatV6DirectRoutes)	long	vRtrFibStatV6DirectRoutes indicates current direct route counts for the virtual router.
v6FilteredRoutes [V6 Filtered Routes] (vRtrFibStatV6FilteredRoutes)	long	The value of vRtrFibStatV6FilteredRoutes indicates the total number of IPv6 routes filtered due to selective download and so not installed in hardware FIB.
v6HostRoutes [V6 Host Routes] (vRtrFibStatV6HostRoutes)	long	vRtrFibStatV6HostRoutes indicates current host route counts for the virtual router.
v6ISISRoutes [V6 ISISRoutes] (vRtrFibStatV6ISISRoutes)	long	vRtrFibStatV6ISISRoutes indicates current ISIS route counts for the virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrFibStatV6ManagedRoutes)	long	vRtrFibStatV6ManagedRoutes indicates current managed route counts for the virtual router.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6NatRoutes [V6 Nat Routes] (vRtrFibStatV6NatRoutes)	long	vRtrFibStatV6NatRoutes indicates current NAT IPv6 route counts for the virtual router.
v6OSPFRoutes [V6 OSPFRoutes] (vRtrFibStatV6OSPFRoutes)	long	vRtrFibStatV6OSPFRoutes indicates current OSPF route counts for the virtual router.
v6Overflows [V6 Overflows] (vRtrFibStatV6Overflows)	long	vRtrFibStatV6Overflows indicates the number of times the FIB has run out of space due to IPv6 routes.
v6RIPRoutes [V6 RIPRoutes] (vRtrFibStatV6RIPRoutes)	long	vRtrFibStatV6RIPRoutes indicates current RIP route counts for the virtual router.
v6StaticRoutes [V6 Static Routes] (vRtrFibStatV6StaticRoutes)	long	vRtrFibStatV6StaticRoutes indicates current static route counts for the virtual router.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrFibStatV6SubMgmtRoutes)	long	vRtrFibStatV6SubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6TotalInstalledRoutes [V6 Total Installed Routes] (vRtrFibStatV6TotalInstalledRt)	long	The value of vRtrFibStatV6TotalInstalledRt indicates the total number of IPv6 routes installed in hardware FIB.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrFibStatV6VPNLeakRoutes)	long	vRtrFibStatV6VPNLeakRoutes indicates current IPv6 VPN Leak route counts for the virtual router.
v6bgpEvpnRoutes [V6 bgp Evpn Routes] (vRtrFibStatV6BGPEvpnRoutes)	long	The value of vRtrFibStatV6BGPEvpnRoutes indicates the current IPv6 BGP EVPN route counts for the virtual router.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnLeakRoutes [Vpn Leak Routes] (vRtrFibStatVPNLeakRoutes)	long	vRtrFibStatVPNLeakRoutes indicates current VPN Leak route counts for the virtual router.
<p>ForwardingPlaneResourceStats</p> <p>MIB entry name: tFPResEntry</p> <p>Entry description: The value of tFPResEntry represents forwarding plane (FP) specific system resource information.</p> <p>Table description (for tFPResTable): The value of tFPResTable represents system resource information that are specific to forwarding plane (FP) for a particular card on a given chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.CardSlot • equipment.ForwardingPlane 		
dynEgrClassAlloc [Dyn Egr Class Alloc] (tFPResDynEgrClassAlloc)	long	The value of tFPResDynEgrClassAlloc represents the total number of QoS dynamic egress classification resources that are currently allocated on this FP.
dynEgrClassIUBNE [Dyn Egr Class IUBNE] (tFPResDynEgrClassIUBNE)	long	The value of tFPResDynEgrClassIUBNE represents the subset of resources which are currently in use by network egress QoS classification out of currently allocated QoS dynamic egress classification resources, tFPResDynEgrClassAlloc. A network egress QoS classification resource is consumed whenever a network QoS policy has at least one egress DSCP or prec classification rule provisioned.
dynEgrClassIUBSE [Dyn Egr Class IUBSE] (tFPResDynEgrClassIUBSE)	long	The value of tFPResDynEgrClassIUBSE represents the subset of resources which are currently in use by sap-egress QoS policies out of currently allocated QoS dynamic egress classification resources, tFPResDynEgrClassAlloc.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynEgrClassTotal [Dyn Egr Class Total] (tFPResDynEgrClassTotal)	long	The value of tFPResDynEgrClassTotal represents the total number of QoS dynamic egress classification resources that are allowed to be in use on this FP.
dynPolicerAlloc [Dyn Policer Alloc] (tFPResDynPolicerAlloc)	long	The value of tFPResDynPolicerAlloc represents the total number of dynamic policers that are currently allocated on this FP.
dynPolicerIUBE [Dyn Policer IUBE] (tFPResDynPolicerIUBE)	long	The value of tFPResDynPolicerIUBE represents the subset of resources which are currently in use by egress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerIUBI [Dyn Policer IUBI] (tFPResDynPolicerIUBI)	long	The value of tFPResDynPolicerIUBI represents the subset of resources which are currently in use by ingress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerStatAlloc [Dyn Policer Stat Alloc] (tFPResDynPolicerStatAlloc)	long	The value of tFPResDynPolicerStatAlloc represents the total number of dynamic policers stats that are currently allocated on this FP.
dynPolicerStatIUBE [Dyn Policer Stat IUBE] (tFPResDynPolicerStatIUBE)	long	The value of tFPResDynPolicerStatIUBE represents the subset of resources which are currently in use by egress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatIUBI [Dyn Policer Stat IUBI] (tFPResDynPolicerStatIUBI)	long	The value of tFPResDynPolicerStatIUBI represents the subset of resources which are currently in use by ingress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatTotal [Dyn Policer Stat Total] (tFPResDynPolicerStatTotal)	long	The value of tFPResDynPolicerStatTotal represents the total number of dynamic policer stats that are supported on this FP. When the value of tFPResDynPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynPolicerTotal [Dyn Policer Total] (tFPResDynPolicerTotal)	long	The value of tFPResDynPolicerTotal represents the total number of dynamic policer that are supported on this FP. When the value of tFPResDynPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
dynQ2NamedPoolAlloc [Dyn Q2 Named Pool Alloc] (tFPResDynQ2NamedPoolAlloc)	long	The value of tFPResDynQ2NamedPoolAlloc represents the total number of dynamic Q2 named pools that are currently allocated on this FP.
dynQ2NamedPoolIUBE [Dyn Q2 Named Pool IUBE] (tFPResDynQ2NamedPoolIUBE)	long	The value of tFPResDynQ2NamedPoolIUBE represents the subset of resources which are currently in use by egress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolIUBI [Dyn Q2 Named Pool IUBI] (tFPResDynQ2NamedPoolIUBI)	long	The value of tFPResDynQ2NamedPoolIUBI represents the subset of resources which are currently in use by ingress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolTotal [Dyn Q2 Named Pool Total] (tFPResDynQ2NamedPoolTotal)	long	The value of tFPResDynQ2NamedPoolTotal represents the total number of dynamic Q2 named pools that are supported on this FP. When the value of tFPResDynQ2NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQ2WredPoolAlloc [Dyn Q2 Wred Pool Alloc] (tFPResDynQ2WredPoolAlloc)	long	The value of tFPResDynQ2WredPoolAlloc represents the total number of dynamic Q2 wred pools that are currently allocated on this FP.
dynQ2WredPoolTotal [Dyn Q2 Wred Pool Total] (tFPResDynQ2WredPoolTotal)	long	The value of tFPResDynQ2WredPoolTotal represents the total number of dynamic Q2 wred pools that are supported on this FP. When the value of tFPResDynQ2WredPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQueueAlloc [Dyn Queue Alloc] (tFPResDynQueueAlloc)	long	The value of tFPResDynQueueAlloc represents the total number of dynamic queues that are currently allocated on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQueueIUBE [Dyn Queue IUBE] (tFPResDynQueueIUBE)	long	The value of tFPResDynQueueIUBE represents the subset of resources which are currently in use by egress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.
dynQueueIUBI [Dyn Queue IUBI] (tFPResDynQueueIUBI)	long	The value of tFPResDynQueueIUBI represents the subset of resources which are currently in use by ingress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.
dynQueueTotal [Dyn Queue Total] (tFPResDynQueueTotal)	long	The value of tFPResDynQueueTotal represents the total number of dynamic queues that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
dynSvcEntryAlloc [Dyn Svc Entry Alloc] (tFPResDynSvcEntryAlloc)	long	The value of tFPResDynSvcEntryAlloc represents the total number of dynamic services that are currently allocated on this FP. The value of tFPResDynSvcEntryAlloc will always equal to the sum of tFPResSubHostAlloc, tFPResEncapGrpMemberAlloc and tFPResEgrNetQGrpMapAlloc since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
dynSvcEntryTotal [Dyn Svc Entry Total] (tFPResDynSvcEntryTotal)	long	The value of tFPResDynSvcEntryTotal represents the total number of dynamic services that are supported on this FP. When the value of tFPResDynSvcEntryTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResDynSvcEntryTotal will always equal to the sum of tFPResSubHostTotal, tFPResEncapGrpMemberTotal and tFPResEgrNetQGrpMapTotal since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrAclEntryAlloc [Egr Acl Entry Alloc] (tFPResEgrAclEntryAlloc)	long	The value of tFPResEgrAclEntryAlloc represents the total number of egress ACL CAM entries that are currently allocated on this FP.
egrAclEntryTotal [Egr Acl Entry Total] (tFPResEgrAclEntryTotal)	long	The value of tFPResEgrAclEntryTotal represents the total number of egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrAclFilterAlloc [Egr Acl Filter Alloc] (tFPResEgrAclFilterAlloc)	long	The value of tFPResEgrAclFilterAlloc represents the total number of egress MAC + IP ACL filter policies that are currently allocated on this FP.
egrAclFilterTotal [Egr Acl Filter Total] (tFPResEgrAclFilterTotal)	long	The value of tFPResEgrAclFilterTotal represents the total number of egress MAC + IP ACL filter policies that are supported on this FP. Note that on 7750 SR-c4/c12 the CPM enforced limit for the total number of ACL filter policies is lower than the value of this object.
egrAclQosEntryAlloc [Egr Acl Qos Entry Alloc] (tFPResEgrAclQosEntryAlloc)	long	The value of tFPResEgrAclQosEntryAlloc represents the total number of combined egress ACL and QoS CAM entries that are currently allocated on this FP.
egrAclQosEntryTotal [Egr Acl Qos Entry Total] (tFPResEgrAclQosEntryTotal)	long	The value of tFPResEgrAclQosEntryTotal represents the total number of combined egress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResEgrAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6AclEntryAlloc [Egr IPv 6 Acl Entry Alloc] (tFPResEgrIPv6AclEntryAlloc)	long	The value of tFPResEgrIPv6AclEntryAlloc represents the total number of IPv6 egress ACL CAM entries that are currently allocated on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrIPv6AclEntryTotal [Egr IPv 6 Acl Entry Total] (tFPResEgrIPv6AclEntryTotal)	long	The value of tFPResEgrIPv6AclEntryTotal represents the total number of IPv6 egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6QosEntryAlloc [Egr IPv 6 Qos Entry Alloc] (tFPResEgrIPv6QosEntryAlloc)	long	The value of tFPResEgrIPv6QosEntryAlloc represents the total number of IPv6 egress QoS CAM entries that are currently allocated on this FP.
egrIPv6QosEntryTotal [Egr IPv 6 Qos Entry Total] (tFPResEgrIPv6QosEntryTotal)	long	The value of tFPResEgrIPv6QosEntryTotal represents the total number of IPv6 egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrNetQGrpMapAlloc [Egr Net QGrp Map Alloc] (tFPResEgrNetQGrpMapAlloc)	long	The value of tFPResEgrNetQGrpMapAlloc represents the total number of egress network queue-group mappings that are currently allocated on this FP. The value of tFPResEgrNetQGrpMapAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since egress network queue-group mappings are subset of dynamic service entry resources.
egrNetQGrpMapTotal [Egr Net QGrp Map Total] (tFPResEgrNetQGrpMapTotal)	long	The value of tFPResEgrNetQGrpMapTotal represents the total number of egress network queue-group mappings that are supported on this FP. When the value of tFPResEgrNetQGrpMapTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEgrNetQGrpMapTotal will always be less than or equal to tFPResDynSvcEntryTotal since egress network queue-group mappings are subset of dynamic service entry resources.
egrPolicerAlloc [Egr Policer Alloc] (tFPResEgrPolicerAlloc)	long	The value of tFPResEgrPolicerAlloc represents the total number of egress policers that are currently allocated on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrPolicerStatAlloc [Egr Policer Stat Alloc] (tFPResEgrPolicerStatAlloc)	long	The value of tFPResEgrPolicerStatAlloc represents the total number of egress policer stats that are currently allocated on this FP.
egrPolicerStatTotal [Egr Policer Stat Total] (tFPResEgrPolicerStatTotal)	long	The value of tFPResEgrPolicerStatTotal represents the total number of egress policer stats that are supported on this FP. When the value of tFPResEgrPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
egrPolicerTotal [Egr Policer Total] (tFPResEgrPolicerTotal)	long	The value of tFPResEgrPolicerTotal represents the total number of egress policers that are supported on this FP. When the value of tFPResEgrPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
egrQ1NamedPoolAlloc [Egr Q1 Named Pool Alloc] (tFPResEgrQ1NamedPoolAlloc)	long	The value of tFPResEgrQ1NamedPoolAlloc represents the total number of egress Q1 named pools that are currently allocated on this FP.
egrQ1NamedPoolTotal [Egr Q1 Named Pool Total] (tFPResEgrQ1NamedPoolTotal)	long	The value of tFPResEgrQ1NamedPoolTotal represents the total number of egress Q1 named pools that are supported on this FP. When the value of tFPResEgrQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
egrQosEntryAlloc [Egr Qos Entry Alloc] (tFPResEgrQosEntryAlloc)	long	The value of tFPResEgrQosEntryAlloc represents the total number of egress QoS CAM entries that are currently allocated on this FP.
egrQosEntryTotal [Egr Qos Entry Total] (tFPResEgrQosEntryTotal)	long	The value of tFPResEgrQosEntryTotal represents the total number of egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrQueueAlloc [Egr Queue Alloc] (tFPResEgrQueueAlloc)	long	The value of tFPResEgrQueueAlloc represents the total number of egress queues that are currently allocated on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrQueueTotal [Egr Queue Total] (tFPResEgrQueueTotal)	long	The value of tFPResEgrQueueTotal represents the total number of egress queues that are supported on this FP. When the value of tFPResEgrQueueTotal is zero, it indicates that this resource type is not supported on this FP.
egrRootArbiterAlloc [Egr Root Arbiter Alloc] (tFPResEgrRootArbiterAlloc)	long	The value of tFPResEgrRootArbiterAlloc represents the total number of egress root arbiters that are currently allocated on this FP.
egrRootArbiterTotal [Egr Root Arbiter Total] (tFPResEgrRootArbiterTotal)	long	The value of tFPResEgrRootArbiterTotal represents the total number of egress root arbiters that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
encapGrpMemberAlloc [Encap Grp Member Alloc] (tFPResEncapGrpMemberAlloc)	long	The value of tFPResEncapGrpMemberAlloc represents the total number of encap group members that are currently allocated on this FP. The value of tFPResEncapGrpMemberAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since encap group members are subset of dynamic service entry resources.
encapGrpMemberTotal [Encap Grp Member Total] (tFPResEncapGrpMemberTotal)	long	The value of tFPResEncapGrpMemberTotal represents the total number of encap group members that are supported on this FP. When the value of tFPResEncapGrpMemberTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEncapGrpMemberTotal will always be less than or equal to tFPResDynSvcEntryTotal since encap group members are subset of dynamic service entry resources.
ingAclEntryAlloc [Ing Acl Entry Alloc] (tFPResIngAclEntryAlloc)	long	The value of tFPResIngAclEntryAlloc represents the total number of ingress ACL CAM entries that are currently allocated on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingAclEntryTotal [Ing Acl Entry Total] (tFPResIngAclEntryTotal)	long	The value of tFPResIngAclEntryTotal represents the total number of ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingAclFilterAlloc [Ing Acl Filter Alloc] (tFPResIngAclFilterAlloc)	long	The value of tFPResIngAclFilterAlloc represents the total number of ingress MAC + IP ACL filter policies that are currently allocated on this FP.
ingAclFilterTotal [Ing Acl Filter Total] (tFPResIngAclFilterTotal)	long	The value of tFPResIngAclFilterTotal represents the total number of ingress MAC + IP ACL filter policies that are supported on this FP. Note that on 7750 SR-c4/c12 the CPM enforced limit for the total number of ACL filter policies is lower than the value of this object.
ingAclQosEntryAlloc [Ing Acl Qos Entry Alloc] (tFPResIngAclQosEntryAlloc)	long	The value of tFPResIngAclQosEntryAlloc represents the total number of combined ingress ACL and QoS CAM entries that are currently allocated on this FP.
ingAclQosEntryTotal [Ing Acl Qos Entry Total] (tFPResIngAclQosEntryTotal)	long	The value of tFPResIngAclQosEntryTotal represents the total number of combined ingress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResIngAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6AclEntryAlloc [Ing IPv 6 Acl Entry Alloc] (tFPResIngIPv6AclEntryAlloc)	long	The value of tFPResIngIPv6AclEntryAlloc represents the total number of IPv6 ingress ACL CAM entries that are currently allocated on this FP.
ingIPv6AclEntryTotal [Ing IPv 6 Acl Entry Total] (tFPResIngIPv6AclEntryTotal)	long	The value of tFPResIngIPv6AclEntryTotal represents the total number of IPv6 ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingIPv6QosEntryAlloc [Ing IPv 6 Qos Entry Alloc] (tFPResIngIPv6QosEntryAlloc)	long	The value of tFPResIngIPv6QosEntryAlloc represents the total number of IPv6 ingress QoS CAM entries that are currently allocated on this FP.
ingIPv6QosEntryTotal [Ing IPv 6 Qos Entry Total] (tFPResIngIPv6QosEntryTotal)	long	The value of tFPResIngIPv6QosEntryTotal represents the total number of IPv6 ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingPolicerAlloc [Ing Policer Alloc] (tFPResIngPolicerAlloc)	long	The value of tFPResIngPolicerAlloc represents the total number of ingress policers that are currently allocated on this FP.
ingPolicerStatAlloc [Ing Policer Stat Alloc] (tFPResIngPolicerStatAlloc)	long	The value of tFPResIngPolicerStatAlloc represents the total number of ingress policer stats that are currently allocated on this FP.
ingPolicerStatTotal [Ing Policer Stat Total] (tFPResIngPolicerStatTotal)	long	The value of tFPResIngPolicerStatTotal represents the total number of ingress policer stats that are supported on this FP. When the value of tFPResIngPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
ingPolicerTotal [Ing Policer Total] (tFPResIngPolicerTotal)	long	The value of tFPResIngPolicerTotal represents the total number of ingress policers that are supported on this FP. When the value of tFPResIngPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
ingQ1NamedPoolAlloc [Ing Q1 Named Pool Alloc] (tFPResIngQ1NamedPoolAlloc)	long	The value of tFPResIngQ1NamedPoolAlloc represents the total number of ingress Q1 named pools that are currently allocated on this FP.
ingQ1NamedPoolTotal [Ing Q1 Named Pool Total] (tFPResIngQ1NamedPoolTotal)	long	The value of tFPResIngQ1NamedPoolTotal represents the total number of ingress Q1 named pools that are supported on this FP. When the value of tFPResIngQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQosEntryAlloc [Ing Qos Entry Alloc] (tFPResIngQosEntryAlloc)	long	The value of tFPResIngQosEntryAlloc represents the total number of ingress QoS CAM entries that are currently allocated on this FP.
ingQosEntryTotal [Ing Qos Entry Total] (tFPResIngQosEntryTotal)	long	The value of tFPResIngQosEntryTotal represents the total number of ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingQueueAlloc [Ing Queue Alloc] (tFPResIngQueueAlloc)	long	The value of tFPResIngQueueAlloc represents the total number of ingress queues that are currently allocated on this FP.
ingQueueTotal [Ing Queue Total] (tFPResIngQueueTotal)	long	The value of tFPResIngQueueTotal represents the total number of ingress queues that are supported on this FP. When the value of tFPResIngQueueTotal is zero, it indicates that this resource type is not supported on this FP.
ingRootArbiterAlloc [Ing Root Arbiter Alloc] (tFPResIngRootArbiterAlloc)	long	The value of tFPResIngRootArbiterAlloc represents the total number of ingress root arbiters that are currently allocated on this FP.
ingRootArbiterTotal [Ing Root Arbiter Total] (tFPResIngRootArbiterTotal)	long	The value of tFPResIngRootArbiterTotal represents the total number of ingress root arbiters that are supported on this FP. When the value of tFPResIngRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
intArbiterAlloc [Int Arbiter Alloc] (tFPResIntArbiterAlloc)	long	The value of tFPResIntArbiterAlloc represents the total number of intermediate arbiters that are currently allocated on this FP.
intArbiterTotal [Int Arbiter Total] (tFPResIntArbiterTotal)	long	The value of tFPResIntArbiterTotal represents the total number of intermediate arbiters that are supported on this FP. When the value of tFPResIntArbiterTotal is zero, it indicates that this resource type is not supported on this FP.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
macFdbRecAlloc [Mac Fdb Rec Alloc] (tFPResMacFdbRecAlloc)	long	The value of tFPResMacFdbRecAlloc represents the total number of MAC Forwarding Data-Base (FDB) records that are currently allocated on this FP.
macFdbRecTotal [Mac Fdb Rec Total] (tFPResMacFdbRecTotal)	long	The value of tFPResMacFdbRecTotal represents the total number of MAC Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResMacFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.
resRvplsFdbRecAlloc [Res Rvpls Fdb Rec Alloc] (tFPResResRvplsFdbRecAlloc)	long	The value of tFPResResRvplsFdbRecAlloc represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are currently allocated on this FP.
resRvplsFdbRecTotal [Res Rvpls Fdb Rec Total] (tFPResResRvplsFdbRecTotal)	long	The value of tFPResResRvplsFdbRecTotal represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResResRvplsFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tFPResSapIngQosPolAlloc)	long	The value of tFPResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently allocated on this FP.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tFPResSapIngQosPolTotal)	long	The value of tFPResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be in use on this FP.
subHostAlloc [Sub Host Alloc] (tFPResSubHostAlloc)	long	The value of tFPResSubHostAlloc represents the total number of subscriber hosts that are currently allocated on this FP. The value of tFPResSubHostAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since subscriber host resources are subset of dynamic service entry resources.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subHostTotal [Sub Host Total] (tFPResSubHostTotal)	long	The value of tFPResSubHostTotal represents the total number of subscriber hosts that are supported on this FP. When the value of tFPResSubHostTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResSubHostTotal will always be less than or equal to tFPResDynSvcEntryTotal since subscriber host resources are subset of dynamic service entry resources.
<p>FpDynamicEnforcementP1crStat MIB entry name: tmnxFpDcpDynEnfrcP1crStatEntry Entry description: The value of tmnxFpDcpDynEnfrcP1crStatEntry represents statistics information per forwarding plane for the dynamic enforcement policer. Table description (for tmnxFpDcpDynEnfrcP1crStatTable): The tmnxFpDcpDynEnfrcP1crStatTable has the statistics information of the dynamic enforcement policer per forwarding plane. Supports realtime plotting Supports scheduled collection Monitored class: equipment.ForwardingPlane</p>		
allocFailCount [Alloc Fail Count] (tmnxFpDcpDynP1crAllocFailCount)	long	The value of tmnxFpDcpDynP1crAllocFailCount indicated the number of times the system failed to allocate dynamic enforcement policers.
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
fpId [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hiWtrMrkHitCnt [Hi Wtr Mrk Hit Cnt] (tmnxFpDcpDynPlcrHiWtrMrkHitCnt)	long	The value of tmnxFpDcpDynPlcrHiWtrMrkHitCnt indicates the maximum number of dynamic enforcement policers in use at any point of time.
hiWtrMrkTime [Hi Wtr Mrk Time] (tmnxFpDcpDynPlcrHiWtrMrkTime)	long	The value of tmnxFpDcpDynPlcrHiWtrMrkTime indicates the time at which maximum number of dynamic enforcement policers was hit.
inUse [In Use] (tmnxFpDcpDynPlcrInUse)	long	The value of tmnxFpDcpDynPlcrInUse indicated the number of dynamic enforcement policers currently in use by the system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Nokia SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped. The tmnxPhysChassisClass is used to indicate a sub-class of a TmnxHwClass type. A value of 0 instead of 'routerChassis (3)' is used to represent router chassis: 32 25 24 17 16 9 8 1 +-----+----- +-----+-----+ TmnxHwClass TmnxPhysChassisClass Slot number +-----+----- +-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Nokia SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IngressPortFwdEngDropReasonStats</p> <p>MIB entry name: tPortIngressFwdEngDRStatsEntry</p> <p>Entry description: The value of tPortIngressFwdEngDRStatsEntry specifies per-reason drop statistics on each port for the packets dropped by the forwarding engine.</p> <p>Table description (for tPortIngressFwdEngDRStatsTable): The value of tPortIngressFwdEngDRStatsTable specifies per-reason drop statistics on each port for the packets dropped by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
aclFilterDiscards [Acl Filter Discards] (tFwdEngDRACLFilterDiscards)	java. math. BigInteger	The value of tFwdEngDRACLFilterDiscards indicates the total number of packets dropped by forwarding engine due to packets dropped by ACL filter on the line card. This does not include packets dropped by CPM filters or ESM antispoof filters.
bfdSpoofCheckFailed [Bfd Spoof Check Failed] (tFwdEngDRBFDSpoofChkFailed)	java. math. BigInteger	The value of tFwdEngDRBFDSpoofChkFailed indicates the total number of packets dropped by forwarding engine due to the received BFD packet either failed the TTL check or failed the source IP address lookup of known sessions.
ipRouteBlackHoled [Ip Route Black Holed] (tFwdEngDRIpRouteBlackHoled)	java. math. BigInteger	The value of tFwdEngDRIpRouteBlackHoled indicates the total number of packets dropped by forwarding engine due to IP address of the packet matching a black hole route.
ipv4HeaderErr [Ipv 4 Header Err] (tFwdEngDRIpv4HeaderError)	java. math. BigInteger	The value of tFwdEngDRIpv4HeaderError indicates the total number of packets dropped by forwarding engine due an error in the IPv4 packet header such as an IPv4 header checksum error, an invalid IP version number (not IPv4 or IPv6) or an incorrect Total Length field.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4InvalidAddr [Ipv 4 Invalid Addr] (tFwdEngDRIpv4InvalidAddress)	java. math. BigInteger	The value of tFwdEngDRIpv4InvalidAddress indicates the total number of packets dropped by forwarding engine due to an error in source (SA) or destination (DA) IPv4 address. Some examples include class D or class E IPv4 DAs, loopback SA (127.0.0.0/8), 0.0.0.0/8 DA, SA is a subnet broadcast or network address, and non-IP traffic arriving on an IP interface that is not a valid L2 protocol for that interface (valid protocols may include ARP, ISIS and PPP control), and cases where the IPv4 address is a multicast address but the ethernet destination address is not RFC1112 compliant. RFC1112 checks are also carried out on IPIPE traffic.
ipv6HeaderErr [Ipv 6 Header Err] (tFwdEngDRIpv6HeaderError)	java. math. BigInteger	The value of tFwdEngDRIpv6HeaderError indicates the total number of packets dropped by forwarding engine due to an error in the IPv6 packet header such as an incorrect payload length field or an IP version not equal to 'IPv6' when the ethernet etype or PPP ID indicates it is IPv6.
ipv6InvalidAddr [Ipv 6 Invalid Addr] (tFwdEngDRIpv6InvalidAddress)	java. math. BigInteger	The value of tFwdEngDRIpv6InvalidAddress indicates the total number of packets dropped by forwarding engine due to error in source (SA) or destination (DA) IPv6 addresses. Some examples include an unspecified IPv6 DA, an IPv6 multicast SA, non-IP traffic arriving on an IP interface or into an IPIPE service that is not a valid L2 protocol for that interface (valid protocols may include ARP, ISIS and PPP control), and cases where the IPv6 address is a multicast address but the ethernet destination address is not RFC2464 compliant. RFC 2464 checks are also carried out on IPIPE traffic.
l2ServiceMTUExceeded [L2 Service MTUExceeded] (tFwdEngDRL2ServiceMTUExceed)	java. math. BigInteger	The value of tFwdEngDRL2ServiceMTUExceed indicates the total number of packets dropped by forwarding engine due to the length of the packet received on a SAP bound to a Layer 2 service (e.g. VPLS, Epipe) exceeded the configured MTU for the service.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multicastMACWithUnicastDestIP [Multicast MACWith Unicast Dest IP] (tFwdEngDRMcastMACUnicastDstIp)	java. math. BigInteger	The value of tFwdEngDRMcastMACUnicastDstIp indicates the total number of packets dropped by forwarding engine due to the destination MAC address being multicast but the IP address is unicast.
needsICMP [Needs ICMP] (tFwdEngDRNeedsICMP)	java. math. BigInteger	The value of tFwdEngDRNeedsICMP indicates the total number of packets dropped by forwarding engine and the received packet requires the router to generate an ICMP message. Some examples include when the IP packet TTL is expired or the destination host, network or Enhanced Subscriber Management (ESM) subscriber is unreachable. Host unreachable can occur, amongst other reasons, if the destination address (e.g. 10.0.1.2) of a packet resolves to a loopback interface subnet (e.g. 10.0.1.1/24) but doesn't match the specific loopback address (e.g. 10.0.1.1). Destination unreachable can also occur, for example, in response to an IPv6 packet received by a router from a point-to-point link (e.g. a non-ethernet link) destined to an address within a subnet assigned to that same link (other than one of the receiving router's own addresses) as described in RFC 4443.
unicastMACDestnAddrMismatch [Unicast MACDestn Addr Mismatch] (tFwdEngDRUcastMACDstAddMismatch)	java. math. BigInteger	The value of tFwdEngDRUcastMACDstAddMismatch indicates the total number of packets dropped by forwarding engine due to the unicast destination MAC address not being present or when it does not match any of the expected MAC addresses associated with the receiving interface. Packets with multicast or broadcast MAC addresses do not increment this counter.
unicastRPFCheckFailed [Unicast RPFCheck Failed] (tFwdEngDRUcastRPFChkFailed)	java. math. BigInteger	The value of tFwdEngDRUcastRPFChkFailed indicates the total number of packets dropped by forwarding engine due to IP packet failed the unicast reverse path forwarding (uRPF) check.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownMACDestnAddrDiscardedInVPLS [Unknown MACDestn Addr Discarded In VPLS] (tFwdEngDRUnkwnMACDstAddDscrd- VPLS)	java. math. BigInte- ger	The value of tFwdEngDRUnkwnMACDstAddDscrdVPLS indicates the total number of packets dropped by forwarding engine due to the destination MAC address lookup in the MAC FIB failed and the VPLS service is configured to discard packets with unknown destination MAC addresses.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
IpSecMDAStats MIB entry name: tmnxIPsecMdaDpStatsEntry Entry description: Information about a single IPsec Mda Data Path Statistics entry. Table description (for tmnxIPsecMdaDpStatsTable): Table to retrieve the IPsec Mda Data Path Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
decryptBytes [Decrypt Bytes] (tmnxIPsecMdaDpStatsDecryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptBytes indicates the number of bytes encrypted by the IPsec data path.
decryptPackets [Decrypt Packets] (tmnxIPsecMdaDpStatsDecryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptPkts indicates the number of packets encrypted by the IPsec data path.
dynamicIPsecTunnels [Dynamic IPsec Tunnels] (tmnxIPsecMdaDpDynIPsecTnls)	long	The value of tmnxIPsecMdaDpDynIPsecTnls indicates number of dynamic IPsec tunnels in use on the MDA.
encryptBytes [Encrypt Bytes] (tmnxIPsecMdaDpStatsEncryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptBytes indicates the number of bytes encrypted by the IPsec data path.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptPackets [Encrypt Packets] (tmnxIPsecMdaDpStatsEncryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptPkts indicates the number of packets encrypted by the IPsec data path.
inboundIPDropPackets [Inbound IPDrop Packets] (tmnxIPsecMdaDpStatsInBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the IPsec data path.
inboundIPDstSrcMismatches [Inbound IPDst Src Mismatches] (tmnxIPsecMdaDpStatsInBIP-DstSrcMismatches)	long	The value of tmnxIPsecMdaDpStatsInBIPDstSrcMismatches indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to the received packet's outer IP destination or source address does not match the Tunnel's local or peer gateway address.
inboundSaMisses [Inbound Sa Misses] (tmnxIPsecMdaDpStatsInBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBSAMisses indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to no SA (security association) present.
outboundIPDropPackets [Outbound IPDrop Packets] (tmnxIPsecMdaDpStatsOutBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the IPsec data path.
outboundPolicyEntryMisses [Outbound Policy Entry Misses] (tmnxIPsecMdaDpStatsOutBPolicyEntryMisses)	long	The value of tmnxIPsecMdaDpStatsOutBPolicyEntryMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no matching Policy Entry.
outboundSaMisses [Outbound Sa Misses] (tmnxIPsecMdaDpStatsOutBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBSAMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no SA (security association) present.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticIPsecTunnels [Static IPsec Tunnels] (tmnxIPsecMdaDpStaticIPsecTnls)	long	The value of tmnxIPsecMdaDpStaticIPsecTnls indicates number of configured static IPsec tunnels on the MDA.
transmitPacketErrors [Transmit Packet Errors] (tmnxIPsecMdaDpStatsTxPktErrs)	long	The value of tmnxIPsecMdaDpStatsTxPktErrs indicates the number of packets transmit failures by the IPsec data path.
<p>LaneDDMStats</p> <p>MIB entry name: tmnxDDMLaneEntry</p> <p>Entry description: Each row represents a particular multi-lane optic that supports Digital Diagnostic Monitoring Lanes. Entries are created and deleted internally by the system.</p> <p>Table description (for tmnxDDMLaneTable): The tmnxDDMLaneTable has an entry for each multi-lane optic in the system that supports Lane Digital Diagnostic Monitoring (DDM). The table is indexed by tmnxPortPortID and tmnxDDMLaneId. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable multi-lane optics. Some example multi-lane optics are : CFP, CFP2, CFP4, QSFP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.LaneDDM</p>		
rxOpticalPower [Rx Optical Power] (tmnxDDMLaneRxOpticalPower)	float	The value of tmnxDDMLaneRxOpticalPower indicates the current Received Optical Power of the multi-lane optic in one tenths of a microwatt (uW). For example: Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMLaneRxOpticalPowerType)	int	The value of tmnxDDMLaneRxOpticalPowerType indicates whether the tmnxDDMLaneRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxDDMLaneTemperature)	float	The value of tmnxDDMLaneTemperature indicates the current temperature of the multi-lane optic in 1/256th degrees Celsius. The formula for translating between the value of tmnxDDMLaneTemperature and degrees Celsius is: $\text{tmnxDDMLaneTemperature} / 256$ For example: The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMLaneTxBiasCurrent)	float	The value of tmnxDDMLaneTxBiasCurrent indicates the current Transmit Bias Current of the multi-lane optic in 1/500 milliamperes (mA). The formula for translating between the value of tmnxDDMLaneTxBiasCurrent and amperes is: $\text{tmnxDDMLaneTxBiasCurrent} / 500$ For example: The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMLaneTxOutputPower)	float	The value of tmnxDDMLaneTxOutputPower indicates the current Output Power of the multi-lane optic in one tenths of a microwatt (uW). For example: Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
MDAResourceStats MIB entry name: tMDAResEntry Entry description: The value of tMDAResEntry represents MDA specific system resource information. Table description (for tMDAResTable): The value of tMDAResTable represents system resource information that are specific to MDA for a particular card on a given chassis. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
egrHsmdaQGrpAlloc [Egr Hsmda QGrp Alloc] (tMDAResEgrHsmdaQGrpAlloc)	long	The value of tMDAResEgrHsmdaQGrpAlloc represents the total number of egress HSMDA queue-groups that are currently allocated on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrHsmdaQGrpTotal [Egr Hsmda QGrp Total] (tMDAResEgrHsmdaQGrpTotal)	long	The value of tMDAResEgrHsmdaQGrpTotal represents the total number of egress HSMDA queue-groups that are supported on this MDA. When the value of tMDAResEgrHsmdaQGrpTotal is zero, it indicates that this resource type is not supported on this MDA.
egrHsmdaSecShaperAlloc [Egr Hsmda Sec Shaper Alloc] (tMDAResEgrHsmdaSecShaperAlloc)	long	The value of tMDAResEgrHsmdaSecShaperAlloc represents the total number of egress HSMDA secondary-shapers that are currently allocated on this MDA.
egrHsmdaSecShaperTotal [Egr Hsmda Sec Shaper Total] (tMDAResEgrHsmdaSecShaperTotal)	long	The value of tMDAResEgrHsmdaSecShaperTotal represents the total number of egress HSMDA secondary-shapers that are supported on this MDA. When the value of tMDAResEgrHsmdaSecShaperTotal is zero, it indicates that this resource type is not supported on this MDA.
<p>MediaIndependentStats MIB entry name: mediaIndependentEntry Entry description: Media independent statistics for promiscuous monitoring of any media. Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependentDropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHighCapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUCastHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MemoryUtilizationStats</p> <p>MIB entry name: tmnxCardMemResMonitorEntry</p> <p>Entry description: The tmnxCardMemResMonitorEntry contains the card's memory usage statistics.</p> <p>Table description (for tmnxCardMemResMonitorTable): The tmnxCardMemResMonitorTable details the specified current card's memory resources. The information described in this table is volatile and dependent on the current environmental conditions. Information is only displayed for online cards.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.CardSlot</p>		
memoryAvailable [Memory Available] (tmnxCardMemResMemoryAvailable)	long	The value of tmnxCardMemResMemoryAvailable indicates the amount of free memory, in kilobytes, in the card that is not allocated to memory pools, but is available in case a memory pool needs to grow.
memoryUsed [Memory Used] (tmnxCardMemResMemoryUsed)	long	The value of tmnxCardMemResMemoryUsed indicates the total pre-allocated pool memory, in kilobytes, currently in use on the card.
poolsAllocated [Pools Allocated] (tmnxCardMemResPoolsAllocated)	long	The value of tmnxCardMemResPoolsAllocated indicates the total memory, in kilobytes, currently allocated in memory-pools on the card. This memory may or may not be currently in use, but is pre-allocated should the software need to use it.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortEgressAggregateStats</p> <p>MIB entry name: tmnxPortEgrAggStatsEntry</p> <p>Entry description: The value of tmnxPortEgrAggStatsEntry specifies Aggregate Egress traffic statistics for the ports. This entry is created for all the ports that has the value of tmnxPortMonitorAggEgrQueueStats being set to 'enabled (1)'.</p> <p>Table description (for tmnxPortEgrAggStatsTable): The value of tmnxPortEgrAggStatsTable specifies Aggregate Egress traffic statistics for the ports.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
portEgrAggDropInProfOcts [Port Egr Agg Drop In Prof Octs] (tmnxPortEgrAggDropInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrAggDropInProfOcts indicates the number of conforming aggregate egress octets dropped on this port.
portEgrAggDropInProfPkts [Port Egr Agg Drop In Prof Pkts] (tmnxPortEgrAggDropInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrAggDropInProfPkts indicates the number of conforming aggregate egress packets dropped on this port.
portEgrAggDropOutProfOcts [Port Egr Agg Drop Out Prof Octs] (tmnxPortEgrAggDropOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrAggDropOutProfOcts indicates the number of exceeding aggregate egress octets dropped on this port.
portEgrAggDropOutProfPkts [Port Egr Agg Drop Out Prof Pkts] (tmnxPortEgrAggDropOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrAggDropOutProfPkts indicates the number of exceeding aggregate egress packets dropped on this port.
portEgrAggFwdInProfOcts [Port Egr Agg Fwd In Prof Octs] (tmnxPortEgrAggFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrAggFwdInProfOcts indicates the number of conforming aggregate egress octets forwarded on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrAggFwdInProfPkts [Port Egr Agg Fwd In Prof Pkts] (tmnxPortEgrAggFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrAggFwdInProfPkts indicates the number of conforming aggregate egress packets forwarded on this port.
portEgrAggFwdOutProfOcts [Port Egr Agg Fwd Out Prof Octs] (tmnxPortEgrAggFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrAggFwdOutProfOcts indicates the number of exceeding aggregate egress octets forwarded on this port.
portEgrAggFwdOutProfPkts [Port Egr Agg Fwd Out Prof Pkts] (tmnxPortEgrAggFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrAggFwdOutProfPkts indicates the number of exceeding aggregate egress packets forwarded on this port.
<p>PortEgressMonitorThresholdStats MIB entry name: tPortEgrMonThrEntry Entry description: The value of tPortEgrMonThrEntry represents threshold monitoring information for port scheduler policy specified by tmnxPortEgrPortSchedPlcy for each ethernet egress port when the value of tmnxPortEgrMonitorPortSched is set to 'enabled (1)'. Table description (for tPortEgrMonThrTable): The value of tPortEgrMonThrTable contains port scheduler policy's threshold monitoring information for each ethernet egress port when the value of tmnxPortEgrMonitorPortSched is set to 'enabled (1)'. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
egrMonThrEndTime [Egr Mon Thr End Time] (tPortEgrMonThrEndTime)	long	The value of tPortEgrMonThrEndTime represents the end time for threshold monitoring.
egrMonThrGrp1ExceedCnt [Egr Mon Thr Grp 1 Exceed Cnt] (tPortEgrMonThrGrp1ExceedCnt)	long	The value of tPortEgrMonThrGrp1ExceedCnt represents the exceed count for group 1 specified by tPortEgrMonThrGrp1Name.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrMonThrGrp1Name [Egr Mon Thr Grp 1 Name] (tPortEgrMonThrGrp1Name)	String	The value of tPortEgrMonThrGrp1Name represents port scheduler policy's group name.
egrMonThrGrp2ExceedCnt [Egr Mon Thr Grp 2 Exceed Cnt] (tPortEgrMonThrGrp2ExceedCnt)	long	The value of tPortEgrMonThrGrp2ExceedCnt represents the exceed count for group 2 specified by tPortEgrMonThrGrp2Name.
egrMonThrGrp2Name [Egr Mon Thr Grp 2 Name] (tPortEgrMonThrGrp2Name)	String	The value of tPortEgrMonThrGrp2Name represents port scheduler policy's group name.
egrMonThrGrp3ExceedCnt [Egr Mon Thr Grp 3 Exceed Cnt] (tPortEgrMonThrGrp3ExceedCnt)	long	The value of tPortEgrMonThrGrp3ExceedCnt represents the exceed count for group 3 specified by tPortEgrMonThrGrp3Name.
egrMonThrGrp3Name [Egr Mon Thr Grp 3 Name] (tPortEgrMonThrGrp3Name)	String	The value of tPortEgrMonThrGrp3Name represents port scheduler policy's group name.
egrMonThrGrp4ExceedCnt [Egr Mon Thr Grp 4 Exceed Cnt] (tPortEgrMonThrGrp4ExceedCnt)	long	The value of tPortEgrMonThrGrp4ExceedCnt represents the exceed count for group 4 specified by tPortEgrMonThrGrp4Name.
egrMonThrGrp4Name [Egr Mon Thr Grp 4 Name] (tPortEgrMonThrGrp4Name)	String	The value of tPortEgrMonThrGrp4Name represents port scheduler policy's group name.
egrMonThrGrp5ExceedCnt [Egr Mon Thr Grp 5 Exceed Cnt] (tPortEgrMonThrGrp5ExceedCnt)	long	The value of tPortEgrMonThrGrp5ExceedCnt represents the exceed count for group 5 specified by tPortEgrMonThrGrp5Name.
egrMonThrGrp5Name [Egr Mon Thr Grp 5 Name] (tPortEgrMonThrGrp5Name)	String	The value of tPortEgrMonThrGrp5Name represents port scheduler policy's group name.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrMonThrGrp6ExceedCnt [Egr Mon Thr Grp 6 Exceed Cnt] (tPortEgrMonThrGrp6ExceedCnt)	long	The value of tPortEgrMonThrGrp6ExceedCnt represents the exceed count for group 6 specified by tPortEgrMonThrGrp6Name.
egrMonThrGrp6Name [Egr Mon Thr Grp 6 Name] (tPortEgrMonThrGrp6Name)	String	The value of tPortEgrMonThrGrp6Name represents port scheduler policy's group name.
egrMonThrGrp7ExceedCnt [Egr Mon Thr Grp 7 Exceed Cnt] (tPortEgrMonThrGrp7ExceedCnt)	long	The value of tPortEgrMonThrGrp7ExceedCnt represents the exceed count for group 7 specified by tPortEgrMonThrGrp7Name.
egrMonThrGrp7Name [Egr Mon Thr Grp 7 Name] (tPortEgrMonThrGrp7Name)	String	The value of tPortEgrMonThrGrp7Name represents port scheduler policy's group name.
egrMonThrGrp8ExceedCnt [Egr Mon Thr Grp 8 Exceed Cnt] (tPortEgrMonThrGrp8ExceedCnt)	long	The value of tPortEgrMonThrGrp8ExceedCnt represents the exceed count for group 8 specified by tPortEgrMonThrGrp8Name.
egrMonThrGrp8Name [Egr Mon Thr Grp 8 Name] (tPortEgrMonThrGrp8Name)	String	The value of tPortEgrMonThrGrp8Name represents port scheduler policy's group name.
egrMonThrLvl1ExceedCnt [Egr Mon Thr Lvl 1 Exceed Cnt] (tPortEgrMonThrLvl1ExceedCnt)	long	The value of tPortEgrMonThrLvl1ExceedCnt represents the exceed count for priority level 1.
egrMonThrLvl2ExceedCnt [Egr Mon Thr Lvl 2 Exceed Cnt] (tPortEgrMonThrLvl2ExceedCnt)	long	The value of tPortEgrMonThrLvl2ExceedCnt represents the exceed count for priority level 2.
egrMonThrLvl3ExceedCnt [Egr Mon Thr Lvl 3 Exceed Cnt] (tPortEgrMonThrLvl3ExceedCnt)	long	The value of tPortEgrMonThrLvl3ExceedCnt represents the exceed count for priority level 3.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrMonThrLvl4ExceedCnt [Egr Mon Thr Lvl 4 Exceed Cnt] (tPortEgrMonThrLvl4ExceedCnt)	long	The value of tPortEgrMonThrLvl4ExceedCnt represents the exceed count for priority level 4.
egrMonThrLvl5ExceedCnt [Egr Mon Thr Lvl 5 Exceed Cnt] (tPortEgrMonThrLvl5ExceedCnt)	long	The value of tPortEgrMonThrLvl5ExceedCnt represents the exceed count for priority level 5.
egrMonThrLvl6ExceedCnt [Egr Mon Thr Lvl 6 Exceed Cnt] (tPortEgrMonThrLvl6ExceedCnt)	long	The value of tPortEgrMonThrLvl6ExceedCnt represents the exceed count for priority level 6.
egrMonThrLvl7ExceedCnt [Egr Mon Thr Lvl 7 Exceed Cnt] (tPortEgrMonThrLvl7ExceedCnt)	long	The value of tPortEgrMonThrLvl7ExceedCnt represents the exceed count for priority level 7.
egrMonThrLvl8ExceedCnt [Egr Mon Thr Lvl 8 Exceed Cnt] (tPortEgrMonThrLvl8ExceedCnt)	long	The value of tPortEgrMonThrLvl8ExceedCnt represents the exceed count for priority level 8.
egrMonThrPortExceedCnt [Egr Mon Thr Port Exceed Cnt] (tPortEgrMonThrPortExceedCnt)	long	The value of tPortEgrMonThrPortExceedCnt represents the exceed count for egress port scheduler.
egrMonThrStartTime [Egr Mon Thr Start Time] (tPortEgrMonThrStartTime)	long	The value of tPortEgrMonThrStartTime represents the start time for threshold monitoring.
egrMonThrTotalSamples [Egr Mon Thr Total Samples] (tPortEgrMonThrTotalSamples)	long	The value of tPortEgrMonThrTotalSamples represents total samples collected during the threshold monitoring interval.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortNetEgressStats</p> <p>MIB entry name: tmnxPortNetEgressStatsEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgressStatsTable. Entries are created and deleted by the system depending on the queue policy being used at the specific port.</p> <p>Table description (for tmnxPortNetEgressStatsTable): Defines the Nokia SROS series network port egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the physical queues being used for the ports to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • bundle.Interface • equipment.PhysicalPort 		
inProfileOctetsDropped [In Profile Octets Dropped] (tmnxPortNetEgressDroInProfOcts)	java. math. BigInteger	tmnxPortNetEgressDroInProfOcts indicates the number of conforming network egress octets dropped on this port using this queue.
inProfileOctetsForwarded [In Profile Octets Forwarded] (tmnxPortNetEgressFwdInProfOcts)	java. math. BigInteger	tmnxPortNetEgressFwdInProfOcts indicates the number of conforming network egress octets forwarded on this port using this queue.
inProfilePacketsDropped [In Profile Packets Dropped] (tmnxPortNetEgressDroInProfPkts)	java. math. BigInteger	tmnxPortNetEgressDroInProfPkts indicates the number of conforming network egress packets dropped on this port using this queue.
inProfilePacketsForwarded [In Profile Packets Forwarded] (tmnxPortNetEgressFwdInProfPkts)	java. math. BigInteger	tmnxPortNetEgressFwdInProfPkts indicates the number of conforming network egress packets forwarded on this port using this queue.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOfProfileOctetsDropped [Out Of Profile Octets Dropped] (tmnxPortNetEgressDroOutProfOcts)	java. math. BigInteger	tmnxPortNetEgressDroOutProfOcts indicates the number of exceeding network egress octets dropped on this port using this queue.
outOfProfileOctetsForwarded [Out Of Profile Octets Forwarded] (tmnxPortNetEgressFwdOutProfOcts)	java. math. BigInteger	tmnxPortNetEgressFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this port using this queue.
outOfProfilePacketsDropped [Out Of Profile Packets Dropped] (tmnxPortNetEgressDroOutProfPkts)	java. math. BigInteger	tmnxPortNetEgressDroOutProfPkts indicates the number of exceeding network egress packets dropped on this port using this queue.
outOfProfilePacketsForwarded [Out Of Profile Packets Forwarded] (tmnxPortNetEgressFwdOutProfPkts)	java. math. BigInteger	tmnxPortNetEgressFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this port using this queue.
queueId [Queue Id] (tmnxPortNetEgressQueueIndex)	long	tmnxPortNetEgressQueueIndex serves as the tertiary index. When used in conjunction with tmnxChassisIndex and tmnxPortPortID, it uniquely identifies a network egress queue for the specified port in the managed system.

inProfilePacketsForwarded [In Profile Packets Forwarded] (tmnxPortNetIngressFwdInProfPkts)	java. math. BigInteger	tmnxPortNetIngressFwdInProfPkts indicates the number of conforming network ingress packets forwarded on this port using this queue.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOfProfileOctetsDropped [Out Of Profile Octets Dropped] (tmnxPortNetIngressDroOutProfOcts)	java. math. BigInteger	tmnxPortNetIngressDroOutProfOcts indicates the number of exceeding network ingress octets dropped on this port using this queue.
outOfProfileOctetsForwarded [Out Of Profile Octets Forwarded] (tmnxPortNetIngressFwdOutProfOcts)	java. math. BigInteger	tmnxPortNetIngressFwdOutProfOcts indicates the number of exceeding network ingress octets forwarded on this port using this queue.
outOfProfilePacketsDropped [Out Of Profile Packets Dropped] (tmnxPortNetIngressDroOutProfPkts)	java. math. BigInteger	tmnxPortNetIngressDroOutProfPkts indicates the number of exceeding network ingress packets dropped on this port using this queue.
outOfProfilePacketsForwarded [Out Of Profile Packets Forwarded] (tmnxPortNetIngressFwdOutProfPkts)	java. math. BigInteger	tmnxPortNetIngressFwdOutProfPkts indicates the number of exceeding network ingress packets forwarded on this port using this queue.
<p>PortTerminationStats</p> <p>MIB entry name: tmnxBundleMemberImaEntry</p> <p>Entry description: Each row entry represents an IMA link associated with an IMA Group.</p> <p>Table description (for tmnxBundleMemberImaTable): The tmnxBundleMemberImaTable has an entry for an IMA link associated with an IMA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.PortTermination</p>		
bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscrHostEquipMdaStats</p> <p>MIB entry name: tmnxSubMgmtMdaStatsEntry</p> <p>Entry description: Each conceptual row represents statistics for a MDA on which subscriber hosts are allocated.</p> <p>Table description (for tmnxSubMgmtMdaStatsTable): The tmnxSubMgmtMdaStatsTable has an entry with statistics for each MDA on which subscriber hosts are allocated.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DaughterCard</p>		
currentSubscribers [Current Subscribers] (tmnxSubMgmtMdaSSubscribers)	long	The value of tmnxSubMgmtMdaSSubscribers indicates the number of current subscribers on this MDA.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtMdaSSubscribersPeak)	long	The value of tmnxSubMgmtMdaSSubscribersPeak indicates the peak number of subscribers on this MDA.
currentV4AAATrig [Current V4 AAATrig] (tmnxSubMgmtMdaSV4AaaTrig)	long	The value of tmnxSubMgmtMdaSV4AaaTrig indicates the number of current V4 AAA-triggered hosts on this MDA.
currentV4AAATrigPeak [Current V4 AAATrig Peak] (tmnxSubMgmtMdaSV4AaaTrigPeak)	long	The value of tmnxSubMgmtMdaSV4AaaTrigPeak indicates the peak number of V4 AAA-triggered hosts on this MDA.
currentV4DataTrig [Current V4 Data Trig] (tmnxSubMgmtMdaSV4DataTrig)	long	The value of tmnxSubMgmtMdaSV4DataTrig indicates the number of current V4 data-triggered hosts on this MDA.
currentV4DataTrigPeak [Current V4 Data Trig Peak] (tmnxSubMgmtMdaSV4DataTrigPeak)	long	The value of tmnxSubMgmtMdaSV4DataTrigPeak indicates the peak number of V4 data-triggered hosts on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentV6DataTrig [Current V6 Data Trig] (tmnxSubMgmtMdaSV6DataTrig)	long	The value of tmnxSubMgmtMdaSV6DataTrig indicates the number of current V6 data-triggered hosts on this MDA.
currentV6DataTrigMr [Current V6 Data Trig Mr] (tmnxSubMgmtMdaSV6DataTrigMr)	long	The value of tmnxSubMgmtMdaSV6DataTrigMr indicates the number of current V6 data-triggered prefix managed routes on this MDA.
currentV6DataTrigMrPeak [Current V6 Data Trig Mr Peak] (tmnxSubMgmtMdaSV6DataTrigMrPeak)	long	The value of tmnxSubMgmtMdaSV6DataTrigMrPeak indicates the peak number of V6 data-triggered prefix managed routes on this MDA.
currentV6DataTrigPd [Current V6 Data Trig Pd] (tmnxSubMgmtMdaSV6DataTrigPd)	long	The value of tmnxSubMgmtMdaSV6DataTrigPd indicates the number of current V6 data-triggered prefixes on this MDA.
currentV6DataTrigPdPeak [Current V6 Data Trig Pd Peak] (tmnxSubMgmtMdaSV6DataTrigPdPeak)	long	The value of tmnxSubMgmtMdaSV6DataTrigPdPeak indicates the peak number of V6 data-triggered prefixes on this MDA.
currentV6DataTrigPeak [Current V6 Data Trig Peak] (tmnxSubMgmtMdaSV6DataTrigPeak)	long	The value of tmnxSubMgmtMdaSV6DataTrigPeak indicates the peak number of V6 data-triggered hosts on this MDA.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtMdaSlpoeHosts)	long	The value of tmnxSubMgmtMdaSlpoeHosts indicates the number of current IPOE hosts on this MDA.
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtMdaSlpoeHostsPeak)	long	The value of tmnxSubMgmtMdaSlpoeHostsPeak indicates the peak number of IPOE hosts on this MDA.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtMdaSV4)	long	The value of tmnxSubMgmtMdaSV4 indicates the number of current V4 hosts on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtMdaSV4Peak)	long	The value of tmnxSubMgmtMdaSV4Peak indicates the peak number of V4 hosts on this MDA.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtMdaSArp)	long	The value of tmnxSubMgmtMdaSArp indicates the number of current IPOE hosts (ARP) on this MDA.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtMdaSArpPeak)	long	The value of tmnxSubMgmtMdaSArpPeak indicates the peak number of IPOE hosts (ARP) on this MDA.
ipv4DhcpBsm [Ipv 4 Dhcp Bsm] (tmnxSubMgmtMdaSDhcpBsm)	long	The value of tmnxSubMgmtMdaSDhcpBsm indicates the number of current IPOE BSM hosts (DHCP) on this MDA.
ipv4DhcpBsmAs [Ipv 4 Dhcp Bsm As] (tmnxSubMgmtMdaSDhcpBsmAs)	long	The value of tmnxSubMgmtMdaSDhcpBsmAs indicates the number of current IPOE BSM hosts with antispoof (DHCP) on this MDA.
ipv4DhcpBsmAsPeak [Ipv 4 Dhcp Bsm As Peak] (tmnxSubMgmtMdaSDhcpBsmAsPeak)	long	The value of tmnxSubMgmtMdaSDhcpBsmAsPeak indicates the peak number of IPOE BSM hosts with antispoof (DHCP) on this MDA.
ipv4DhcpBsmPeak [Ipv 4 Dhcp Bsm Peak] (tmnxSubMgmtMdaSDhcpBsmPeak)	long	The value of tmnxSubMgmtMdaSDhcpBsmPeak indicates the peak number of IPOE BSM hosts (DHCP) on this MDA.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtMdaSDhcp)	long	The value of tmnxSubMgmtMdaSDhcp indicates the number of current IPOE hosts (DHCP) on this MDA.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtMdaSDhcpPeak)	long	The value of tmnxSubMgmtMdaSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtMdaSIpcp)	long	The value of tmnxSubMgmtMdaSIpcp indicates the number of current PPP hosts (IPCP) on this MDA.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtMdaSIpcpPeak)	long	The value of tmnxSubMgmtMdaSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this MDA.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtMdaSL2tpHost)	long	The value of tmnxSubMgmtMdaSL2tpHost indicates the number of current L2TP hosts (LAC) on this MDA.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtMdaSL2tpHostPeak)	long	The value of tmnxSubMgmtMdaSL2tpHostPeak indicates the peak number of L2TP hosts (LAC) on this MDA.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtMdaSNonSub)	long	The value of tmnxSubMgmtMdaSNonSub indicates the number of current Non Sub hosts on this MDA.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtMdaSNonSubPeak)	long	The value of tmnxSubMgmtMdaSNonSubPeak indicates the peak number of Non Sub hosts on this MDA.
ipv4StaticBsm [Ipv 4 Static Bsm] (tmnxSubMgmtMdaSStaticBsm)	long	The value of tmnxSubMgmtMdaSStaticBsm indicates the number of current IPOE BSM static hosts on this MDA.
ipv4StaticBsmAs [Ipv 4 Static Bsm As] (tmnxSubMgmtMdaSStaticBsmAs)	long	The value of tmnxSubMgmtMdaSStaticBsmAs indicates the number of current IPOE BSM static hosts with antispoof on this MDA.
ipv4StaticBsmAsPeak [Ipv 4 Static Bsm As Peak] (tmnxSubMgmtMdaSStaticBsmAsPeak)	long	The value of tmnxSubMgmtMdaSStaticBsmAsPeak indicates the peak number of IPOE BSM static hosts with antispoof on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4StaticBsmPeak [Ipv 4 Static Bsm Peak] (tmnxSubMgmtMdaSStaticBsmPeak)	long	The value of tmnxSubMgmtMdaSStaticBsmPeak indicates the peak number of IPOE BSM static hosts on this MDA.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtMdaSStatic)	long	The value of tmnxSubMgmtMdaSStatic indicates the number of current IPOE hosts (Static) on this MDA.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtMdaSStaticPeak)	long	The value of tmnxSubMgmtMdaSStaticPeak indicates the peak number of IPOE hosts (Static) on this MDA.
ipv4TotDhcp [Ipv 4 Tot Dhcp] (tmnxSubMgmtMdaSTotDhcp)	long	The value of tmnxSubMgmtMdaSTotDhcp indicates the number of current DHCP hosts on this MDA.
ipv4TotDhcpPeak [Ipv 4 Tot Dhcp Peak] (tmnxSubMgmtMdaSTotDhcpPeak)	long	The value of tmnxSubMgmtMdaSTotDhcpPeak indicates the peak number of DHCP hosts on this MDA.
ipv6BsmDhcp6Na [Ipv 6 Bsm Dhcp 6 Na] (tmnxSubMgmtMdaSBsmDhcp6Na)	long	The value of tmnxSubMgmtMdaSBsmDhcp6Na indicates the number of current IPOE BSM hosts (DHCP6 NA) on this MDA.
ipv6BsmDhcp6NaPeak [Ipv 6 Bsm Dhcp 6 Na Peak] (tmnxSubMgmtMdaSBsmDhcp6NaPeak)	long	The value of tmnxSubMgmtMdaSBsmDhcp6NaPeak indicates the peak number of IPOE BSM hosts (DHCP6 NA) on this MDA.
ipv6BsmDhcp6Pd [Ipv 6 Bsm Dhcp 6 Pd] (tmnxSubMgmtMdaSBsmDhcp6Pd)	long	The value of tmnxSubMgmtMdaSBsmDhcp6Pd indicates the number of current IPOE BSM hosts (DHCP6 PD) on this MDA.
ipv6BsmDhcp6PdPeak [Ipv 6 Bsm Dhcp 6 Pd Peak] (tmnxSubMgmtMdaSBsmDhcp6PdPeak)	long	The value of tmnxSubMgmtMdaSBsmDhcp6PdPeak indicates the peak number of IPOE BSM hosts (DHCP6 PD) on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoE Dhcp6Mr [Ipv 6 IpoE Dhcp 6 Mr] (tmnxSubMgmtMdaSIpoE Dhcp6Mr)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp6Mr indicates the number of current IPOE PD Managed Routes on this MDA.
ipv6IpoE Dhcp6MrPeak [Ipv 6 IpoE Dhcp 6 Mr Peak] (tmnxSubMgmtMdaSIpoE Dhcp6MrPeak)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp6MrPeak indicates the peak number of IPOE PD Managed Routes on this MDA.
ipv6IpoE Dhcp6NaHosts [Ipv 6 IpoE Dhcp 6 Na Hosts] (tmnxSubMgmtMdaSIpoE Dhcp6Na)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this MDA.
ipv6IpoE Dhcp6NaHostsPeak [Ipv 6 IpoE Dhcp 6 Na Hosts Peak] (tmnxSubMgmtMdaSIpoE Dhcp6NaPeak)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp6NaPeak indicates the peak number of IPOE hosts (DHCP6 NA) on this MDA.
ipv6IpoE Dhcp6PdHosts [Ipv 6 IpoE Dhcp 6 Pd Hosts] (tmnxSubMgmtMdaSIpoE Dhcp6Pd)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this MDA.
ipv6IpoE Dhcp6PdHostsPeak [Ipv 6 IpoE Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtMdaSIpoE Dhcp6PdPeak)	long	The value of tmnxSubMgmtMdaSIpoE Dhcp6PdPeak indicates the peak number of IPOE hosts (DHCP6 PD) on this MDA.
ipv6IpoE SlaacHosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtMdaSIpoE Slaac)	long	The value of tmnxSubMgmtMdaSIpoE Slaac indicates the number of current IPOE hosts (SLAAC) on this MDA.
ipv6IpoE SlaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtMdaSIpoE SlaacPeak)	long	The value of tmnxSubMgmtMdaSIpoE SlaacPeak indicates the peak number of IPOE hosts (SLAAC) on this MDA.
ipv6IpoE StaticPd [Ipv 6 IpoE Static Pd] (tmnxSubMgmtMdaSV6StaticPd)	long	The value of tmnxSubMgmtMdaSV6StaticPd indicates the number of current IPOE IPv6 static prefixes on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoEStaticPdPeak [Ipv 6 IpoE Static Pd Peak] (tmnxSubMgmtMdaSV6StaticPdPeak)	long	The value of tmnxSubMgmtMdaSV6StaticPdPeak indicates the peak number of IPOE IPv6 static prefixes on this MDA.
ipv6IpoEStaticWan [Ipv 6 IpoE Static Wan] (tmnxSubMgmtMdaSV6StaticWan)	long	The value of tmnxSubMgmtMdaSV6StaticWan indicates the number of current IPOE IPv6 static WAN hosts on this MDA.
ipv6IpoEStaticWanPeak [Ipv 6 IpoE Static Wan Peak] (tmnxSubMgmtMdaSV6StaticWanPeak)	long	The value of tmnxSubMgmtMdaSV6StaticWanPeak indicates the peak number of IPOE IPv6 static WAN hosts on this MDA.
ipv6PppDhcp6Mr [Ipv 6 Ppp Dhcp 6 Mr] (tmnxSubMgmtMdaSPppDhcp6Mr)	long	The value of tmnxSubMgmtMdaSPppDhcp6Mr indicates the number of current PPP PD Managed Routes on this MDA.
ipv6PppDhcp6MrPeak [Ipv 6 Ppp Dhcp 6 Mr Peak] (tmnxSubMgmtMdaSPppDhcp6MrPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6MrPeak indicates the peak number of PPP PD Managed Routes on this MDA.
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtMdaSPppDhcp6Na)	long	The value of tmnxSubMgmtMdaSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this MDA.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtMdaSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this MDA.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtMdaSPppDhcp6Pd)	long	The value of tmnxSubMgmtMdaSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this MDA.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtMdaSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtMdaSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtMdaSPppSlaac)	long	The value of tmnxSubMgmtMdaSPppSlaac indicates the number of current PPP hosts (SLAAC) on this MDA.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtMdaSPppSlaacPeak)	long	The value of tmnxSubMgmtMdaSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this MDA.
ipv6TotDhcpV6 [Ipv 6 Tot Dhcp V6] (tmnxSubMgmtMdaSTotDhcpV6)	long	The value of tmnxSubMgmtMdaSTotDhcpV6 indicates the number of current DHCPv6 hosts on this MDA.
ipv6TotDhcpV6Peak [Ipv 6 Tot Dhcp V6 Peak] (tmnxSubMgmtMdaSTotDhcpV6Peak)	long	The value of tmnxSubMgmtMdaSTotDhcpV6Peak indicates the peak number of DHCPv6 hosts on this MDA.
ipv6TotMngdRt [Ipv 6 Tot Mngd Rt] (tmnxSubMgmtMdaSTotMngdRt)	long	The value of tmnxSubMgmtMdaSTotMngdRt indicates the number of current PD Managed Routes on this MDA.
ipv6TotMngdRtPeak [Ipv 6 Tot Mngd Rt Peak] (tmnxSubMgmtMdaSTotMngdRtPeak)	long	The value of tmnxSubMgmtMdaSTotMngdRtPeak indicates the peak number of PD Managed Routes on this MDA.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtMdaSV6)	long	The value of tmnxSubMgmtMdaSV6 indicates the number of current V6 hosts on this MDA.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtMdaSV6Peak)	long	The value of tmnxSubMgmtMdaSV6Peak indicates the peak number of V6 hosts on this MDA.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtMdaSTotal)	long	The value of tmnxSubMgmtMdaSTotal indicates the number of current total hosts on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtMdaSTotalPeak)	long	The value of tmnxSubMgmtMdaSTotalPeak indicates the peak number of total hosts on this MDA.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtMdaSPppHosts)	long	The value of tmnxSubMgmtMdaSPppHosts indicates the number of current PPP hosts on this MDA.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtMdaSPppHostsPeak)	long	The value of tmnxSubMgmtMdaSPppHostsPeak indicates the peak number of PPP hosts on this MDA.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtMdaSPppLacL2tp)	long	The value of tmnxSubMgmtMdaSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this MDA.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtMdaSPppLacL2tpPeak)	long	The value of tmnxSubMgmtMdaSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this MDA.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtMdaSPppLacOA)	long	The value of tmnxSubMgmtMdaSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this MDA.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtMdaSPppLacOAPeak)	long	The value of tmnxSubMgmtMdaSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this MDA.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtMdaSPppLacOEOA)	long	The value of tmnxSubMgmtMdaSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this MDA.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtMdaSPppLacOEOAPeak)	long	The value of tmnxSubMgmtMdaSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtMdaSPppLacOE)	long	The value of tmnxSubMgmtMdaSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this MDA.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtMdaSPppLacOEPeak)	long	The value of tmnxSubMgmtMdaSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this MDA.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtMdaSPppLclL2tp)	long	The value of tmnxSubMgmtMdaSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this MDA.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtMdaSPppLclL2tpPeak)	long	The value of tmnxSubMgmtMdaSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this MDA.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtMdaSPppLclOA)	long	The value of tmnxSubMgmtMdaSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this MDA.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtMdaSPppLclOAPeak)	long	The value of tmnxSubMgmtMdaSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this MDA.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtMdaSPppLclOEOA)	long	The value of tmnxSubMgmtMdaSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this MDA.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtMdaSPppLclOEOAPeak)	long	The value of tmnxSubMgmtMdaSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this MDA.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtMdaSPppLclOE)	long	The value of tmnxSubMgmtMdaSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtMdaSPppLclOEPeak)	long	The value of tmnxSubMgmtMdaSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this MDA.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtMdaSPppLclTotal)	long	The value of tmnxSubMgmtMdaSPppLclTotal indicates the total number of current locally terminated PPP sessions on this MDA.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtMdaSPppLclTotalPeak)	long	The value of tmnxSubMgmtMdaSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this MDA.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtMdaSPppSessIs)	long	The value of tmnxSubMgmtMdaSPppSessIs indicates the number of current PPP sessions in setup on this MDA.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtMdaSPppSessIsPeak)	long	The value of tmnxSubMgmtMdaSPppSessIsPeak indicates the peak number of PPP sessions in setup on this MDA.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtMdaSPppSessTotal)	long	The value of tmnxSubMgmtMdaSPppSessTotal indicates the total number of current PPP sessions established on this MDA.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtMdaSPppSessTotalPeak)	long	The value of tmnxSubMgmtMdaSPppSessTotalPeak indicates the total peak number of PPP sessions established on this MDA.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtMdaSPppLacTotal)	long	The value of tmnxSubMgmtMdaSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this MDA.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtMdaSPppLacTotalPeak)	long	The value of tmnxSubMgmtMdaSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalInternal [Total Internal] (tmnxSubMgmtMdaSTotInternal)	long	The value of tmnxSubMgmtMdaSTotInternal indicates the number of current internal hosts on this MDA.
totalInternalPeak [Total Internal Peak] (tmnxSubMgmtMdaSTotInternalPeak)	long	The value of tmnxSubMgmtMdaSTotInternalPeak indicates the peak number of internal hosts on this MDA.
totalIpoesSesIs [Total Ipoes Ses Is] (tmnxSubMgmtMdaSIpoesSesIs)	long	The value of tmnxSubMgmtMdaSIpoesSesIs indicates the number of current IPOE sessions in setup on this MDA.
totalIpoesSesIsPeak [Total Ipoes Ses Is Peak] (tmnxSubMgmtMdaSIpoesSesIsPeak)	long	The value of tmnxSubMgmtMdaSIpoesSesIsPeak indicates the peak number of IPOE sessions in setup on this MDA.
totalIpoesSesTotal [Total Ipoes Ses Total] (tmnxSubMgmtMdaSIpoesSesTotal)	long	The value of tmnxSubMgmtMdaSIpoesSesTotal indicates the number of current IPOE sessions on this MDA.
totalIpoesSesTotalPeak [Total Ipoes Ses Total Peak] (tmnxSubMgmtMdaSIpoesSesTotalPeak)	long	The value of tmnxSubMgmtMdaSIpoesSesTotalPeak indicates the peak number of IPOE sessions on this MDA.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

cardPortId [Card Port Id] (tmnxSubMgmtPortID)	long	tmnxSubMgmtPortID is an index into this table. It maps this port to its entry in the mib-2 interfaces table.
currentSubscribers [Current Subscribers] (tmnxSubMgmtPortSSubscribers)	long	The value of tmnxSubMgmtPortSSubscribers indicates the number of current subscribers on this port.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtPortSSubscribersPeak)	long	The value of tmnxSubMgmtPortSSubscribersPeak indicates the peak number of subscribers on this port.
currentV4AAATrig [Current V4 AAATrig] (tmnxSubMgmtPortSV4AaaTrig)	long	The value of tmnxSubMgmtPortSV4AaaTrig indicates the number of current V4 AAA-triggered hosts on this port.
currentV4AAATrigPeak [Current V4 AAATrig Peak] (tmnxSubMgmtPortSV4AaaTrigPeak)	long	The value of tmnxSubMgmtPortSV4AaaTrigPeak indicates the peak number of V4 AAA-triggered hosts on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentV4DataTrig [Current V4 Data Trig] (tmnxSubMgmtPortSV4DataTrig)	long	The value of tmnxSubMgmtPortSV4DataTrig indicates the number of current V4 data-triggered hosts on this port.
currentV4DataTrigPeak [Current V4 Data Trig Peak] (tmnxSubMgmtPortSV4DataTrigPeak)	long	The value of tmnxSubMgmtPortSV4DataTrigPeak indicates the peak number of V4 data-triggered hosts on this port.
currentV6DataTrig [Current V6 Data Trig] (tmnxSubMgmtPortSV6DataTrig)	long	The value of tmnxSubMgmtPortSV6DataTrig indicates the number of current V6 data-triggered hosts on this port.
currentV6DataTrigMr [Current V6 Data Trig Mr] (tmnxSubMgmtPortSV6DataTrigMr)	long	The value of tmnxSubMgmtPortSV6DataTrigMr indicates the number of current V6 data-triggered prefix managed routes on this port.
currentV6DataTrigMrPeak [Current V6 Data Trig Mr Peak] (tmnxSubMgmtPortSV6DataTrigMrPeak)	long	The value of tmnxSubMgmtPortSV6DataTrigMrPeak indicates the peak number of V6 data-triggered prefix managed routes on this port.
currentV6DataTrigPd [Current V6 Data Trig Pd] (tmnxSubMgmtPortSV6DataTrigPd)	long	The value of tmnxSubMgmtPortSV6DataTrigPd indicates the number of current V6 data-triggered prefixes on this port.
currentV6DataTrigPdPeak [Current V6 Data Trig Pd Peak] (tmnxSubMgmtPortSV6DataTrigPdPeak)	long	The value of tmnxSubMgmtPortSV6DataTrigPdPeak indicates the peak number of V6 data-triggered prefixes on this port.
currentV6DataTrigPeak [Current V6 Data Trig Peak] (tmnxSubMgmtPortSV6DataTrigPeak)	long	The value of tmnxSubMgmtPortSV6DataTrigPeak indicates the peak number of V6 data-triggered hosts on this port.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtPortSIpoeHosts)	long	The value of tmnxSubMgmtPortSIpoeHosts indicates the number of current IPOE hosts on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtPortSpoeHostsPeak)	long	The value of tmnxSubMgmtPortSpoeHostsPeak indicates the peak number of IPOE hosts on this port.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtPortSV4)	long	The value of tmnxSubMgmtPortSV4 indicates the number of current V4 hosts on this port.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtPortSV4Peak)	long	The value of tmnxSubMgmtPortSV4Peak indicates the peak number of V4 hosts on this port.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtPortSArp)	long	The value of tmnxSubMgmtPortSArp indicates the number of current IPOE hosts (ARP) on this port.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtPortSArpPeak)	long	The value of tmnxSubMgmtPortSArpPeak indicates the peak number of IPOE hosts (ARP) on this port.
ipv4DhcpBsm [Ipv 4 Dhcp Bsm] (tmnxSubMgmtPortSDhcpBsm)	long	The value of tmnxSubMgmtPortSDhcpBsm indicates the number of current IPOE BSM hosts (DHCP) on this port.
ipv4DhcpBsmAs [Ipv 4 Dhcp Bsm As] (tmnxSubMgmtPortSDhcpBsmAs)	long	The value of tmnxSubMgmtPortSDhcpBsmAs indicates the number of current IPOE BSM hosts with antispoof (DHCP) on this port.
ipv4DhcpBsmAsPeak [Ipv 4 Dhcp Bsm As Peak] (tmnxSubMgmtPortSDhcpBsmAsPeak)	long	The value of tmnxSubMgmtPortSDhcpBsmAsPeak indicates the peak number of IPOE BSM hosts with antispoof (DHCP) on this port.
ipv4DhcpBsmPeak [Ipv 4 Dhcp Bsm Peak] (tmnxSubMgmtPortSDhcpBsmPeak)	long	The value of tmnxSubMgmtPortSDhcpBsmPeak indicates the peak number of IPOE BSM hosts (DHCP) on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtPortSDhcp)	long	The value of tmnxSubMgmtPortSDhcp indicates the number of current IPOE hosts (DHCP) on this port.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtPortSDhcpPeak)	long	The value of tmnxSubMgmtPortSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this port.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtPortSIpcp)	long	The value of tmnxSubMgmtPortSIpcp indicates the number of current PPP hosts (IPCP) on this port.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtPortSIpcpPeak)	long	The value of tmnxSubMgmtPortSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this port.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtPortSL2tpHost)	long	The value of tmnxSubMgmtPortSL2tpHost indicates the number of current L2TP hosts (LAC) on this port.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtPortSL2tpHostPeak)	long	The value of tmnxSubMgmtPortSL2tpHostPeak indicates the peak number of L2TP hosts (LAC) on this port.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtPortSNonSub)	long	The value of tmnxSubMgmtPortSNonSub indicates the number of current Non Sub hosts on this port.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtPortSNonSubPeak)	long	The value of tmnxSubMgmtPortSNonSubPeak indicates the peak number of Non Sub hosts on this port.
ipv4StaticBsm [Ipv 4 Static Bsm] (tmnxSubMgmtPortSStaticBsm)	long	The value of tmnxSubMgmtPortSStaticBsm indicates the number of current IPOE BSM static hosts on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4StaticBsmAs [Ipv 4 Static Bsm As] (tmnxSubMgmtPortSStaticBsmAs)	long	The value of tmnxSubMgmtPortSStaticBsmAs indicates the number of current IPOE BSM static hosts with antispoof on this port.
ipv4StaticBsmAsPeak [Ipv 4 Static Bsm As Peak] (tmnxSubMgmtPortSStaticBsmAsPeak)	long	The value of tmnxSubMgmtPortSStaticBsmAsPeak indicates the peak number of IPOE BSM static hosts with antispoof on this port.
ipv4StaticBsmPeak [Ipv 4 Static Bsm Peak] (tmnxSubMgmtPortSStaticBsmPeak)	long	The value of tmnxSubMgmtPortSStaticBsmPeak indicates the peak number of IPOE BSM static hosts on this port.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtPortSStatic)	long	The value of tmnxSubMgmtPortSStatic indicates the number of current IPOE hosts (Static) on this port.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtPortSStaticPeak)	long	The value of tmnxSubMgmtPortSStaticPeak indicates the peak number of IPOE hosts (Static) on this port.
ipv4TotDhcp [Ipv 4 Tot Dhcp] (tmnxSubMgmtPortSTotDhcp)	long	The value of tmnxSubMgmtPortSTotDhcp indicates the number of current DHCP hosts on this port.
ipv4TotDhcpPeak [Ipv 4 Tot Dhcp Peak] (tmnxSubMgmtPortSTotDhcpPeak)	long	The value of tmnxSubMgmtPortSTotDhcpPeak indicates the peak number of DHCP hosts on this port.
ipv6BsmDhcp6Na [Ipv 6 Bsm Dhcp 6 Na] (tmnxSubMgmtPortSBsmDhcp6Na)	long	The value of tmnxSubMgmtPortSBsmDhcp6Na indicates the number of current IPOE BSM hosts (DHCP6 NA) on this port.
ipv6BsmDhcp6NaPeak [Ipv 6 Bsm Dhcp 6 Na Peak] (tmnxSubMgmtPortSBsmDhcp6NaPeak)	long	The value of tmnxSubMgmtPortSBsmDhcp6NaPeak indicates the peak number of IPOE BSM hosts (DHCP6 NA) on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6BsmDhcp6Pd [Ipv 6 Bsm Dhcp 6 Pd] (tmnxSubMgmtPortSBsmDhcp6Pd)	long	The value of tmnxSubMgmtPortSBsmDhcp6Pd indicates the number of current IPOE BSM hosts (DHCP6 PD) on this port.
ipv6BsmDhcp6PdPeak [Ipv 6 Bsm Dhcp 6 Pd Peak] (tmnxSubMgmtPortSBsmDhcp6PdPeak)	long	The value of tmnxSubMgmtPortSBsmDhcp6PdPeak indicates the peak number of IPOE BSM hosts (DHCP6 PD) on this port.
ipv6IpoeDhcp6Mr [Ipv 6 Ipoe Dhcp 6 Mr] (tmnxSubMgmtPortSIpoeDhcp6Mr)	long	The value of tmnxSubMgmtPortSIpoeDhcp6Mr indicates the number of current IPOE PD Managed Routes on this port.
ipv6IpoeDhcp6MrPeak [Ipv 6 Ipoe Dhcp 6 Mr Peak] (tmnxSubMgmtPortSIpoeDhcp6MrPeak)	long	The value of tmnxSubMgmtPortSIpoeDhcp6MrPeak indicates the peak number of IPOE PD Managed Routes on this port.
ipv6IpoeDhcp6NaHosts [Ipv 6 Ipoe Dhcp 6 Na Hosts] (tmnxSubMgmtPortSIpoeDhcp6Na)	long	The value of tmnxSubMgmtPortSIpoeDhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this port.
ipv6IpoeDhcp6NaHostsPeak [Ipv 6 Ipoe Dhcp 6 Na Hosts Peak] (tmnxSubMgmtPortSIpoeDhcp6NaPeak)	long	The value of tmnxSubMgmtPortSIpoeDhcp6NaPeak indicates the peak number of IPOE hosts (DHCP6 NA) on this port.
ipv6IpoeDhcp6PdHosts [Ipv 6 Ipoe Dhcp 6 Pd Hosts] (tmnxSubMgmtPortSIpoeDhcp6Pd)	long	The value of tmnxSubMgmtPortSIpoeDhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this port.
ipv6IpoeDhcp6PdHostsPeak [Ipv 6 Ipoe Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtPortSIpoeDhcp6PdPeak)	long	The value of tmnxSubMgmtPortSIpoeDhcp6PdPeak indicates the peak number of IPOE hosts (DHCP6 PD) on this port.
ipv6IpoeSlaacHosts [Ipv 6 Ipoe Slaac Hosts] (tmnxSubMgmtPortSIpoeSlaac)	long	The value of tmnxSubMgmtPortSIpoeSlaac indicates the number of current IPOE hosts (SLAAC) on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoEslaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtPortSIpoEslaacPeak)	long	The value of tmnxSubMgmtPortSIpoEslaacPeak indicates the peak number of IPOE hosts (SLAAC) on this port.
ipv6IpoEStaticPd [Ipv 6 IpoE Static Pd] (tmnxSubMgmtPortSV6StaticPd)	long	The value of tmnxSubMgmtPortSV6StaticPd indicates the number of current IPOE IPv6 static prefixes on this port.
ipv6IpoEStaticPdPeak [Ipv 6 IpoE Static Pd Peak] (tmnxSubMgmtPortSV6StaticPdPeak)	long	The value of tmnxSubMgmtPortSV6StaticPdPeak indicates the peak number of IPOE IPv6 static prefixes on this port.
ipv6IpoEStaticWan [Ipv 6 IpoE Static Wan] (tmnxSubMgmtPortSV6StaticWan)	long	The value of tmnxSubMgmtPortSV6StaticWan indicates the number of current IPOE IPv6 static WAN hosts on this port.
ipv6IpoEStaticWanPeak [Ipv 6 IpoE Static Wan Peak] (tmnxSubMgmtPortSV6StaticWanPeak)	long	The value of tmnxSubMgmtPortSV6StaticWanPeak indicates the peak number of IPOE IPv6 static WAN hosts on this port.
ipv6PppDhcp6Mr [Ipv 6 Ppp Dhcp 6 Mr] (tmnxSubMgmtPortSPppDhcp6Mr)	long	The value of tmnxSubMgmtPortSPppDhcp6Mr indicates the number of current PPP PD Managed Routes on this port.
ipv6PppDhcp6MrPeak [Ipv 6 Ppp Dhcp 6 Mr Peak] (tmnxSubMgmtPortSPppDhcp6MrPeak)	long	The value of tmnxSubMgmtPortSPppDhcp6MrPeak indicates the peak number of PPP PD Managed Routes on this port.
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtPortSPppDhcp6Na)	long	The value of tmnxSubMgmtPortSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this port.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtPortSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtPortSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtPortSPppDhcp6Pd)	long	The value of tmnxSubMgmtPortSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this port.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtPortSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtPortSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this port.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtPortSPppSlaac)	long	The value of tmnxSubMgmtPortSPppSlaac indicates the number of current PPP hosts (SLAAC) on this port.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtPortSPppSlaacPeak)	long	The value of tmnxSubMgmtPortSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this port.
ipv6TotDhcpV6 [Ipv 6 Tot Dhcp V6] (tmnxSubMgmtPortSTotDhcpV6)	long	The value of tmnxSubMgmtPortSTotDhcpV6 indicates the number of current DHCPv6 hosts on this port.
ipv6TotDhcpV6Peak [Ipv 6 Tot Dhcp V6 Peak] (tmnxSubMgmtPortSTotDhcpV6Peak)	long	The value of tmnxSubMgmtPortSTotDhcpV6Peak indicates the peak number of DHCPv6 hosts on this port.
ipv6TotMngdRt [Ipv 6 Tot Mngd Rt] (tmnxSubMgmtPortSTotMngdRt)	long	The value of tmnxSubMgmtPortSTotMngdRt indicates the number of current PD Managed Routes on this port.
ipv6TotMngdRtPeak [Ipv 6 Tot Mngd Rt Peak] (tmnxSubMgmtPortSTotMngdRtPeak)	long	The value of tmnxSubMgmtPortSTotMngdRtPeak indicates the peak number of PD Managed Routes on this port.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtPortSV6)	long	The value of tmnxSubMgmtPortSV6 indicates the number of current V6 hosts on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtPortSV6Peak)	long	The value of tmnxSubMgmtPortSV6Peak indicates the peak number of V6 hosts on this port.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtPortSTotal)	long	The value of tmnxSubMgmtPortSTotal indicates the number of current total hosts on this port.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtPortSTotalPeak)	long	The value of tmnxSubMgmtPortSTotalPeak indicates the peak number of total hosts on this port.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtPortSPppHosts)	long	The value of tmnxSubMgmtPortSPppHosts indicates the number of current PPP hosts on this port.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtPortSPppHostsPeak)	long	The value of tmnxSubMgmtPortSPppHostsPeak indicates the peak number of PPP hosts on this port.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtPortSPppLacL2tp)	long	The value of tmnxSubMgmtPortSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this port.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtPortSPppLacL2tpPeak)	long	The value of tmnxSubMgmtPortSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this port.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtPortSPppLacOA)	long	The value of tmnxSubMgmtPortSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this port.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtPortSPppLacOAPeak)	long	The value of tmnxSubMgmtPortSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtPortSPppLacOEOA)	long	The value of tmnxSubMgmtPortSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this port.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtPortSPppLacOEOAPeak)	long	The value of tmnxSubMgmtPortSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this port.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtPortSPppLacOE)	long	The value of tmnxSubMgmtPortSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this port.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtPortSPppLacOEPeak)	long	The value of tmnxSubMgmtPortSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this port.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtPortSPppLclL2tp)	long	The value of tmnxSubMgmtPortSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this port.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtPortSPppLclL2tpPeak)	long	The value of tmnxSubMgmtPortSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this port.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtPortSPppLclOA)	long	The value of tmnxSubMgmtPortSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this port.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtPortSPppLclOAPeak)	long	The value of tmnxSubMgmtPortSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this port.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtPortSPppLclOEOA)	long	The value of tmnxSubMgmtPortSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtPortSPppLclOEOAPeak)	long	The value of tmnxSubMgmtPortSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this port.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtPortSPppLclOE)	long	The value of tmnxSubMgmtPortSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this port.
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtPortSPppLclOEPeak)	long	The value of tmnxSubMgmtPortSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this port.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtPortSPppLclTotal)	long	The value of tmnxSubMgmtPortSPppLclTotal indicates the total number of current locally terminated PPP sessions on this port.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtPortSPppLclTotalPeak)	long	The value of tmnxSubMgmtPortSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this port.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtPortSPppSessIs)	long	The value of tmnxSubMgmtPortSPppSessIs indicates the number of current PPP sessions in setup on this port.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtPortSPppSessIsPeak)	long	The value of tmnxSubMgmtPortSPppSessIsPeak indicates the peak number of PPP sessions in setup on this port.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtPortSPppSessTotal)	long	The value of tmnxSubMgmtPortSPppSessTotal indicates the total number of current PPP sessions established on this port.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtPortSPppSessTotalPeak)	long	The value of tmnxSubMgmtPortSPppSessTotalPeak indicates the total peak number of PPP sessions established on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtPortSPppLacTotal)	long	The value of tmnxSubMgmtPortSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this port.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtPortSPppLacTotalPeak)	long	The value of tmnxSubMgmtPortSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this port.
totalInternal [Total Internal] (tmnxSubMgmtPortSTotInternal)	long	The value of tmnxSubMgmtPortSTotInternal indicates the number of current internal hosts on this port.
totalInternalPeak [Total Internal Peak] (tmnxSubMgmtPortSTotInternalPeak)	long	The value of tmnxSubMgmtPortSTotInternalPeak indicates the peak number of internal hosts on this port.
totalIpoesSesIs [Total Ipoes Ses Is] (tmnxSubMgmtPortSIpoesSesIs)	long	The value of tmnxSubMgmtPortSIpoesSesIs indicates the number of current IPOE sessions in setup on this port.
totalIpoesSesIsPeak [Total Ipoes Ses Is Peak] (tmnxSubMgmtPortSIpoesSesIsPeak)	long	The value of tmnxSubMgmtPortSIpoesSesIsPeak indicates the peak number of IPOE sessions in setup on this port.
totalIpoesSesTotal [Total Ipoes Ses Total] (tmnxSubMgmtPortSIpoesSesTotal)	long	The value of tmnxSubMgmtPortSIpoesSesTotal indicates the number of current IPOE sessions on this port.
totalIpoesSesTotalPeak [Total Ipoes Ses Total Peak] (tmnxSubMgmtPortSIpoesSesTotalPeak)	long	The value of tmnxSubMgmtPortSIpoesSesTotalPeak indicates the peak number of IPOE sessions on this port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscrHostEquipPwPortStats</p> <p>MIB entry name: tmnxSubMgmtPwPortStatsEntry</p> <p>Entry description: Each conceptual row represents statistics for a PW-port on which subscriber hosts are allocated.</p> <p>Table description (for tmnxSubMgmtPwPortStatsTable): The tmnxSubMgmtPwPortStatsTable has an entry with statistics for each PW-port on which subscriber hosts are allocated.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PwPort</p>		
currentSubscribers [Current Subscribers] (tmnxSubMgmtPwPortSSubscribers)	long	The value of tmnxSubMgmtPwPortSSubscribers indicates the number of current subscribers on this PW-port.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtPwPortSSubscribersPk)	long	The value of tmnxSubMgmtPwPortSSubscribersPk indicates the peak number of subscribers on this PW-port.
currentV4AAATrig [Current V4 AAATrig] (tmnxSubMgmtPwPortSV4AaaTrig)	long	The value of tmnxSubMgmtPwPortSV4AaaTrig indicates the number of current V4 AAA-triggered hosts on this PW-port.
currentV4AAATrigPeak [Current V4 AAATrig Peak] (tmnxSubMgmtPwPortSV4AaaTrigPk)	long	The value of tmnxSubMgmtPwPortSV4AaaTrigPk indicates the peak number of V4 AAA-triggered hosts on this PW-port.
currentV4DataTrig [Current V4 Data Trig] (tmnxSubMgmtPwPortSV4DataTrig)	long	The value of tmnxSubMgmtPwPortSV4DataTrig indicates the number of current V4 data-triggered hosts on this PW-port.
currentV4DataTrigPeak [Current V4 Data Trig Peak] (tmnxSubMgmtPwPortSV4DataTrigPk)	long	The value of tmnxSubMgmtPwPortSV4DataTrigPk indicates the peak number of V4 data-triggered hosts on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentV6DataTrig [Current V6 Data Trig] (tmnxSubMgmtPwPortSV6DataTrig)	long	The value of tmnxSubMgmtPwPortSV6DataTrig indicates the number of current V6 data-triggered hosts on this PW-port.
currentV6DataTrigMr [Current V6 Data Trig Mr] (tmnxSubMgmtPwPortSV6DataTrigMr)	long	The value of tmnxSubMgmtPwPortSV6DataTrigMr indicates the number of current V6 data-triggered prefix managed routes on this PW-port.
currentV6DataTrigMrPeak [Current V6 Data Trig Mr Peak] (tmnxSubMgmtPwPortSV6DataTrigMrPk)	long	The value of tmnxSubMgmtPwPortSV6DataTrigMrPk indicates the peak number of V6 data-triggered prefix managed routes on this PW-port.
currentV6DataTrigPd [Current V6 Data Trig Pd] (tmnxSubMgmtPwPortSV6DataTrigPd)	long	The value of tmnxSubMgmtPwPortSV6DataTrigPd indicates the number of current V6 data-triggered prefixes on this PW-port.
currentV6DataTrigPdPeak [Current V6 Data Trig Pd Peak] (tmnxSubMgmtPwPortSV6DataTrigPdPk)	long	The value of tmnxSubMgmtPwPortSV6DataTrigPdPk indicates the peak number of V6 data-triggered prefixes on this PW-port.
currentV6DataTrigPeak [Current V6 Data Trig Peak] (tmnxSubMgmtPwPortSV6DataTrigPk)	long	The value of tmnxSubMgmtPwPortSV6DataTrigPk indicates the peak number of V6 data-triggered hosts on this PW-port.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtPwPortSlpoeHosts)	long	The value of tmnxSubMgmtPwPortSlpoeHosts indicates the number of current IPOE hosts on this PW-port.
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtPwPortSlpoeHostsPk)	long	The value of tmnxSubMgmtPwPortSlpoeHostsPk indicates the Pk number of IPOE hosts on this PW-port.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtPwPortSV4)	long	The value of tmnxSubMgmtPwPortSV4 indicates the number of current V4 hosts on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtPwPortSV4Pk)	long	The value of tmnxSubMgmtPwPortSV4Pk indicates the peak number of V4 hosts on this PW-port.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtPwPortSArp)	long	The value of tmnxSubMgmtPwPortSArp indicates the number of current IPOE hosts (ARP) on this PW-port.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtPwPortSArpPk)	long	The value of tmnxSubMgmtPwPortSArpPk indicates the peak number of IPOE hosts (ARP) on this PW-port.
ipv4DhcpBsm [Ipv 4 Dhcp Bsm] (tmnxSubMgmtPwPortSDhcpBsm)	long	The value of tmnxSubMgmtPwPortSDhcpBsm indicates the number of current IPOE BSM hosts (DHCP) on this PW-port.
ipv4DhcpBsmAs [Ipv 4 Dhcp Bsm As] (tmnxSubMgmtPwPortSDhcpBsmAs)	long	The value of tmnxSubMgmtPwPortSDhcpBsmAs indicates the number of current IPOE BSM hosts with antispoof (DHCP) on this PW-port.
ipv4DhcpBsmAsPeak [Ipv 4 Dhcp Bsm As Peak] (tmnxSubMgmtPwPortSDhcpBsmAsPk)	long	The value of tmnxSubMgmtPwPortSDhcpBsmAsPk indicates the peak number of IPOE BSM hosts with antispoof (DHCP) on this PW-port.
ipv4DhcpBsmPeak [Ipv 4 Dhcp Bsm Peak] (tmnxSubMgmtPwPortSDhcpBsmPk)	long	The value of tmnxSubMgmtPwPortSDhcpBsmPk indicates the peak number of IPOE BSM hosts (DHCP) on this PW-port.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtPwPortSDhcp)	long	The value of tmnxSubMgmtPwPortSDhcp indicates the number of current IPOE hosts (DHCP) on this PW-port.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtPwPortSDhcpPk)	long	The value of tmnxSubMgmtPwPortSDhcpPk indicates the peak number of IPOE hosts (DHCP) on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtPwPortSlpcp)	long	The value of tmnxSubMgmtPwPortSlpcp indicates the number of current PPP hosts (IPCP) on this PW-port.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtPwPortSlpcpPk)	long	The value of tmnxSubMgmtPwPortSlpcpPk indicates the peak number of PPP hosts (IPCP) on this PW-port.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtPwPortSL2tpHost)	long	The value of tmnxSubMgmtPwPortSL2tpHost indicates the number of current L2TP hosts (LAC) on this PW-port.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtPwPortSL2tpHostPk)	long	The value of tmnxSubMgmtPwPortSL2tpHostPk indicates the peak number of L2TP hosts (LAC) on this PW-port.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtPwPortSNonSub)	long	The value of tmnxSubMgmtPwPortSNonSub indicates the number of current Non Sub hosts on this PW-port.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtPwPortSNonSubPk)	long	The value of tmnxSubMgmtPwPortSNonSubPk indicates the peak number of Non Sub hosts on this PW-port.
ipv4StaticBsm [Ipv 4 Static Bsm] (tmnxSubMgmtPwPortSStaticBsm)	long	The value of tmnxSubMgmtPwPortSStaticBsm indicates the number of current IPOE BSM static hosts on this PW-port.
ipv4StaticBsmAs [Ipv 4 Static Bsm As] (tmnxSubMgmtPwPortSStaticBsmAs)	long	The value of tmnxSubMgmtPwPortSStaticBsmAs indicates the number of current IPOE BSM static hosts with antispoof on this PW-port.
ipv4StaticBsmAsPeak [Ipv 4 Static Bsm As Peak] (tmnxSubMgmtPwPortSStaticBsmAsPk)	long	The value of tmnxSubMgmtPwPortSStaticBsmAsPk indicates the peak number of IPOE BSM static hosts with antispoof on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4StaticBsmPeak [Ipv 4 Static Bsm Peak] (tmnxSubMgmtPwPortSStaticBsmPk)	long	The value of tmnxSubMgmtPwPortSStaticBsmPk indicates the peak number of IPOE BSM static hosts on this PW-port.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtPwPortSStatic)	long	The value of tmnxSubMgmtPwPortSStatic indicates the number of current IPOE hosts (Static) on this PW-port.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtPwPortSStaticPk)	long	The value of tmnxSubMgmtPwPortSStaticPk indicates the peak number of IPOE hosts (Static) on this PW-port.
ipv4TotDhcp [Ipv 4 Tot Dhcp] (tmnxSubMgmtPwPortSTotDhcp)	long	The value of tmnxSubMgmtPwPortSTotDhcp indicates the number of current DHCP hosts on this PW-port.
ipv4TotDhcpPeak [Ipv 4 Tot Dhcp Peak] (tmnxSubMgmtPwPortSTotDhcpPk)	long	The value of tmnxSubMgmtPwPortSTotDhcpPk indicates the peak number of DHCP hosts on this PW-port.
ipv6BsmDhcp6Na [Ipv 6 Bsm Dhcp 6 Na] (tmnxSubMgmtPwPortSBsmDhcp6Na)	long	The value of tmnxSubMgmtPwPortSBsmDhcp6Na indicates the number of current IPOE BSM hosts (DHCP6 NA) on this PW-port.
ipv6BsmDhcp6NaPeak [Ipv 6 Bsm Dhcp 6 Na Peak] (tmnxSubMgmtPwPortSBsmDhcp6NaPk)	long	The value of tmnxSubMgmtPwPortSBsmDhcp6NaPk indicates the peak number of IPOE BSM hosts (DHCP6 NA) on this PW-port.
ipv6BsmDhcp6Pd [Ipv 6 Bsm Dhcp 6 Pd] (tmnxSubMgmtPwPortSBsmDhcp6Pd)	long	The value of tmnxSubMgmtPwPortSBsmDhcp6Pd indicates the number of current IPOE BSM hosts (DHCP6 PD) on this PW-port.
ipv6BsmDhcp6PdPeak [Ipv 6 Bsm Dhcp 6 Pd Peak] (tmnxSubMgmtPwPortSBsmDhcp6PdPk)	long	The value of tmnxSubMgmtPwPortSBsmDhcp6PdPk indicates the peak number of IPOE BSM hosts (DHCP6 PD) on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoE Dhcp6Mr [Ipv 6 IpoE Dhcp 6 Mr] (tmnxSubMgmtPwPortSIpoE Dhcp6Mr)	long	The value of tmnxSubMgmtPwPortSIpoE Dhcp6Mr indicates the number of current IPOE PD Managed Routes on this PW-port.
ipv6IpoE Dhcp6MrPeak [Ipv 6 IpoE Dhcp 6 Mr Peak] (tmnxSubMgmtPwPortSIpoE Dhcp6MrPk)	long	The value of tmnxSubMgmtPwPortSIpoE Dhcp6MrPk indicates the peak number of IPOE PD Managed Routes on this PW-port.
ipv6IpoE Dhcp6NaHosts [Ipv 6 IpoE Dhcp 6 Na Hosts] (tmnxSubMgmtPwPortSIpoE Dhcp6Na)	long	The value of tmnxSubMgmtPwPortSIpoE Dhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this PW-port.
ipv6IpoE Dhcp6NaHostsPeak [Ipv 6 IpoE Dhcp 6 Na Hosts Peak] (tmnxSubMgmtPwPortSIpoE Dhcp6NaPk)	long	The value of tmnxSubMgmtPwPortSIpoE Dhcp6NaPk indicates the Pk number of IPOE hosts (DHCP6 NA) on this PW-port.
ipv6IpoE Dhcp6PdHosts [Ipv 6 IpoE Dhcp 6 Pd Hosts] (tmnxSubMgmtPwPortSIpoE Dhcp6Pd)	long	The value of tmnxSubMgmtPwPortSIpoE Dhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this PW-port.
ipv6IpoE Dhcp6PdHostsPeak [Ipv 6 IpoE Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtPwPortSIpoE Dhcp6PdPk)	long	The value of tmnxSubMgmtPwPortSIpoE Dhcp6PdPk indicates the Pk number of IPOE hosts (DHCP6 PD) on this PW-port.
ipv6IpoE SlaacHosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtPwPortSIpoE Slaac)	long	The value of tmnxSubMgmtPwPortSIpoE Slaac indicates the number of current IPOE hosts (SLAAC) on this PW-port.
ipv6IpoE SlaacHostsPeak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtPwPortSIpoE SlaacPk)	long	The value of tmnxSubMgmtPwPortSIpoE SlaacPk indicates the Pk number of IPOE hosts (SLAAC) on this PW-port.
ipv6IpoE StaticPd [Ipv 6 IpoE Static Pd] (tmnxSubMgmtPwPortSV6StaticPd)	long	The value of tmnxSubMgmtPwPortSV6StaticPd indicates the number of current IPOE IPv6 static prefixes on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoEStaticPdPeak [Ipv 6 IpoE Static Pd Peak] (tmnxSubMgmtPwPortSV6StaticPdPk)	long	The value of tmnxSubMgmtPwPortSV6StaticPdPk indicates the peak number of IPOE IPv6 static prefixes on this PW-port.
ipv6IpoEStaticWan [Ipv 6 IpoE Static Wan] (tmnxSubMgmtPwPortSV6StaticWan)	long	The value of tmnxSubMgmtPwPortSV6StaticWan indicates the number of current IPOE IPv6 static WAN hosts on this PW-port.
ipv6IpoEStaticWanPeak [Ipv 6 IpoE Static Wan Peak] (tmnxSubMgmtPwPortSV6StaticWanPk)	long	The value of tmnxSubMgmtPwPortSV6StaticWanPk indicates the peak number of IPOE IPv6 static WAN hosts on this PW-port.
ipv6PppDhcp6Mr [Ipv 6 Ppp Dhcp 6 Mr] (tmnxSubMgmtPwPortSPppDhcp6Mr)	long	The value of tmnxSubMgmtPwPortSPppDhcp6Mr indicates the number of current PPP PD Managed Routes on this PW-port.
ipv6PppDhcp6MrPeak [Ipv 6 Ppp Dhcp 6 Mr Peak] (tmnxSubMgmtPwPortSPppDhcp6MrPk)	long	The value of tmnxSubMgmtPwPortSPppDhcp6MrPk indicates the peak number of PPP PD Managed Routes on this PW-port.
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtPwPortSPppDhcp6Na)	long	The value of tmnxSubMgmtPwPortSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this PW-port.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtPwPortSPppDhcp6NaPk)	long	The value of tmnxSubMgmtPwPortSPppDhcp6NaPk indicates the Pk number of PPP hosts (DHCP6 NA) on this PW-port.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtPwPortSPppDhcp6Pd)	long	The value of tmnxSubMgmtPwPortSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this PW-port.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtPwPortSPppDhcp6PdPk)	long	The value of tmnxSubMgmtPwPortSPppDhcp6PdPk indicates the Pk number of PPP hosts (DHCP6 PD) on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtPwPortSPppSlaac)	long	The value of tmnxSubMgmtPwPortSPppSlaac indicates the number of current PPP hosts (SLAAC) on this PW-port.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtPwPortSPppSlaacPk)	long	The value of tmnxSubMgmtPwPortSPppSlaacPk indicates the Pk number of PPP hosts (SLAAC) on this PW-port.
ipv6TotDhcpV6 [Ipv 6 Tot Dhcp V6] (tmnxSubMgmtPwPortSTotDhcpV6)	long	The value of tmnxSubMgmtPwPortSTotDhcpV6 indicates the number of current DHCPv6 hosts on this PW-port.
ipv6TotDhcpV6Peak [Ipv 6 Tot Dhcp V6 Peak] (tmnxSubMgmtPwPortSTotDhcpV6Pk)	long	The value of tmnxSubMgmtPwPortSTotDhcpV6Pk indicates the peak number of DHCPv6 hosts on this PW-port.
ipv6TotMngdRt [Ipv 6 Tot Mngd Rt] (tmnxSubMgmtPwPortSTotMngdRt)	long	The value of tmnxSubMgmtPwPortSTotMngdRt indicates the number of current PD Managed Routes on this PW-port.
ipv6TotMngdRtPeak [Ipv 6 Tot Mngd Rt Peak] (tmnxSubMgmtPwPortSTotMngdRtPk)	long	The value of tmnxSubMgmtPwPortSTotMngdRtPk indicates the peak number of PD Managed Routes on this PW-port.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtPwPortSV6)	long	The value of tmnxSubMgmtPwPortSV6 indicates the number of current V6 hosts on this PW-port.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtPwPortSV6Pk)	long	The value of tmnxSubMgmtPwPortSV6Pk indicates the peak number of V6 hosts on this PW-port.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtPwPortSTotal)	long	The value of tmnxSubMgmtPwPortSTotal indicates the number of current total hosts on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtPwPortSTotalPk)	long	The value of tmnxSubMgmtPwPortSTotalPk indicates the peak number of total hosts on this PW-port.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtPwPortSPppHosts)	long	The value of tmnxSubMgmtPwPortSPppHosts indicates the number of current PPP hosts on this PW-port.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtPwPortSPppHostsPk)	long	The value of tmnxSubMgmtPwPortSPppHostsPk indicates the Pk number of PPP hosts on this PW-port.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtPwPortSPppLacL2tp)	long	The value of tmnxSubMgmtPwPortSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this PW-port.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtPwPortSPppLacL2tpPk)	long	The value of tmnxSubMgmtPwPortSPppLacL2tpPk indicates the Pk number of PPP sessions (L2TP LTS) tunneled over L2TP on this PW-port.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtPwPortSPppLacOA)	long	The value of tmnxSubMgmtPwPortSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this PW-port.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtPwPortSPppLacOAPk)	long	The value of tmnxSubMgmtPwPortSPppLacOAPk indicates the Pk number of PPP sessions (PPPoA) tunneled over L2TP on this PW-port.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtPwPortSPppLacOEOA)	long	The value of tmnxSubMgmtPwPortSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this PW-port.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtPwPortSPppLacOEOAPk)	long	The value of tmnxSubMgmtPwPortSPppLacOEOAPk indicates the Pk number of PPP sessions (PPPoEoA) tunneled over L2TP on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtPwPortSPppLacOE)	long	The value of tmnxSubMgmtPwPortSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this PW-port.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtPwPortSPppLacOEPk)	long	The value of tmnxSubMgmtPwPortSPppLacOEPk indicates the Pk number of PPP sessions (PPPoE) tunneled over L2TP on this PW-port.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtPwPortSPppLclL2tp)	long	The value of tmnxSubMgmtPwPortSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this PW-port.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtPwPortSPppLclL2tpPk)	long	The value of tmnxSubMgmtPwPortSPppLclL2tpPk indicates the Pk number of locally terminated PPP sessions (L2TP LNS) on this PW-port.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtPwPortSPppLclOEA)	long	The value of tmnxSubMgmtPwPortSPppLclOEA indicates the number of current locally terminated PPP sessions (PPPoA) on this PW-port.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtPwPortSPppLclOAPk)	long	The value of tmnxSubMgmtPwPortSPppLclOAPk indicates the Pk number of locally terminated PPP sessions (PPPoA) on this PW-port.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtPwPortSPppLclOEOA)	long	The value of tmnxSubMgmtPwPortSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this PW-port.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtPwPortSPppLclOEOAPk)	long	The value of tmnxSubMgmtPwPortSPppLclOEOAPk indicates the Pk number of locally terminated PPP sessions (PPPoEoA) on this PW-port.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtPwPortSPppLclOE)	long	The value of tmnxSubMgmtPwPortSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtPwPortSPppLclOEPk)	long	The value of tmnxSubMgmtPwPortSPppLclOEPk indicates the Pk number of locally terminated PPP sessions (PPPoE) on this PW-port.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtPwPortSPppLclTotal)	long	The value of tmnxSubMgmtPwPortSPppLclTotal indicates the total number of current locally terminated PPP sessions on this PW-port.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtPwPortSPppLclTotalPk)	long	The value of tmnxSubMgmtPwPortSPppLclTotalPk indicates the total Pk number of locally terminated PPP sessions on this PW-port.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtPwPortSPppSessIs)	long	The value of tmnxSubMgmtPwPortSPppSessIs indicates the number of current PPP sessions in setup on this PW-port.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtPwPortSPppSessIsPk)	long	The value of tmnxSubMgmtPwPortSPppSessIsPk indicates the Pk number of PPP sessions in setup on this PW-port.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtPwPortSPppSessTotal)	long	The value of tmnxSubMgmtPwPortSPppSessTotal indicates the total number of current PPP sessions established on this PW-port.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtPwPortSPppSessTotalPk)	long	The value of tmnxSubMgmtPwPortSPppSessTotalPk indicates the total Pk number of PPP sessions established on this PW-port.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtPwPortSPppLacTotal)	long	The value of tmnxSubMgmtPwPortSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this PW-port.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtPwPortSPppLacTotalPk)	long	The value of tmnxSubMgmtPwPortSPppLacTotalPk indicates the total Pk number of PPP sessions tunneled over L2TP on this PW-port.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalInternal [Total Internal] (tmnxSubMgmtPwPortSTotInternal)	long	The value of tmnxSubMgmtPwPortSTotInternal indicates the number of current internal hosts on this PW-port.
totalInternalPeak [Total Internal Peak] (tmnxSubMgmtPwPortSTotInternalPk)	long	The value of tmnxSubMgmtPwPortSTotInternalPk indicates the peak number of internal hosts on this PW-port.
totalIpoesSesIs [Total Ipoes Ses Is] (tmnxSubMgmtPwPortSIpoesSesIs)	long	The value of tmnxSubMgmtPwPortSIpoesSesIs indicates the number of current IPOE sessions in setup on this PW-port.
totalIpoesSesIsPeak [Total Ipoes Ses Is Peak] (tmnxSubMgmtPwPortSIpoesSesIsPk)	long	The value of tmnxSubMgmtPwPortSIpoesSesIsPk indicates the peak number of IPOE sessions in setup on this PW-port.
totalIpoesSesTotal [Total Ipoes Ses Total] (tmnxSubMgmtPwPortSIpoesSesTotal)	long	The value of tmnxSubMgmtPwPortSIpoesSesTotal indicates the number of current IPOE sessions on this PW-port.
totalIpoesSesTotalPeak [Total Ipoes Ses Total Peak] (tmnxSubMgmtPwPortSIpoesSesTotalPk)	long	The value of tmnxSubMgmtPwPortSIpoesSesTotalPk indicates the peak number of IPOE sessions on this PW-port.
<p>SubscrHostEquipSlotStats</p> <p>MIB entry name: tmnxSubMgmtSlotStatsEntry</p> <p>Entry description: Each conceptual row represents statistics for a Slot on which subscriber hosts are allocated.</p> <p>Table description (for tmnxSubMgmtSlotStatsTable): The tmnxSubMgmtSlotStatsTable has an entry with statistics for each Slot on which subscriber hosts are allocated.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlotId [Card Slot Id] (tmnxSubMgmtSlotID)	long	tmnxSubMgmtSlotID is an index into this table. It maps this Slot to its entry in the mib-2 interfaces table.
currentSubscribers [Current Subscribers] (tmnxSubMgmtSlotSSubscribers)	long	The value of tmnxSubMgmtSlotSSubscribers indicates the number of current subscribers on this Slot.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtSlotSSubscribersPeak)	long	The value of tmnxSubMgmtSlotSSubscribersPeak indicates the peak number of subscribers on this Slot.
currentV4AAATrig [Current V4 AAATrig] (tmnxSubMgmtSlotSV4AaaTrig)	long	The value of tmnxSubMgmtSlotSV4AaaTrig indicates the number of current V4 AAA-triggered hosts on this Slot.
currentV4AAATrigPeak [Current V4 AAATrig Peak] (tmnxSubMgmtSlotSV4AaaTrigPeak)	long	The value of tmnxSubMgmtSlotSV4AaaTrigPeak indicates the peak number of V4 AAA-triggered hosts on this Slot.
currentV4DataTrig [Current V4 Data Trig] (tmnxSubMgmtSlotSV4DataTrig)	long	The value of tmnxSubMgmtSlotSV4DataTrig indicates the number of current V4 data-triggered hosts on this Slot.
currentV4DataTrigPeak [Current V4 Data Trig Peak] (tmnxSubMgmtSlotSV4DataTrigPeak)	long	The value of tmnxSubMgmtSlotSV4DataTrigPeak indicates the peak number of V4 data-triggered hosts on this Slot.
currentV6DataTrig [Current V6 Data Trig] (tmnxSubMgmtSlotSV6DataTrig)	long	The value of tmnxSubMgmtSlotSV6DataTrig indicates the number of current V6 data-triggered hosts on this Slot.
currentV6DataTrigMr [Current V6 Data Trig Mr] (tmnxSubMgmtSlotSV6DataTrigMr)	long	The value of tmnxSubMgmtSlotSV6DataTrigMr indicates the number of current V6 data-triggered prefix managed routes on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentV6DataTrigMrPeak [Current V6 Data Trig Mr Peak] (tmnxSubMgmtSlotSV6DataTrigMrPeak)	long	The value of tmnxSubMgmtSlotSV6DataTrigMrPeak indicates the peak number of V6 data-triggered prefix managed routes on this Slot.
currentV6DataTrigPd [Current V6 Data Trig Pd] (tmnxSubMgmtSlotSV6DataTrigPd)	long	The value of tmnxSubMgmtSlotSV6DataTrigPd indicates the number of current V6 data-triggered prefixes on this Slot.
currentV6DataTrigPdPeak [Current V6 Data Trig Pd Peak] (tmnxSubMgmtSlotSV6DataTrigPdPeak)	long	The value of tmnxSubMgmtSlotSV6DataTrigPdPeak indicates the peak number of V6 data-triggered prefixes on this Slot.
currentV6DataTrigPeak [Current V6 Data Trig Peak] (tmnxSubMgmtSlotSV6DataTrigPeak)	long	The value of tmnxSubMgmtSlotSV6DataTrigPeak indicates the peak number of V6 data-triggered hosts on this Slot.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtSlotIpoeHosts)	long	The value of tmnxSubMgmtSlotIpoeHosts indicates the number of current IPOE hosts on this Slot.
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtSlotIpoeHostsPeak)	long	The value of tmnxSubMgmtSlotIpoeHostsPeak indicates the peak number of IPOE hosts on this Slot.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtSlotSV4)	long	The value of tmnxSubMgmtSlotSV4 indicates the number of current V4 hosts on this Slot.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtSlotSV4Peak)	long	The value of tmnxSubMgmtSlotSV4Peak indicates the peak number of V4 hosts on this Slot.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtSlotSArp)	long	The value of tmnxSubMgmtSlotSArp indicates the number of current IPOE hosts (ARP) on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtSlotSArpPeak)	long	The value of tmnxSubMgmtSlotSArpPeak indicates the peak number of IPOE hosts (ARP) on this Slot.
ipv4DhcpBsm [Ipv 4 Dhcp Bsm] (tmnxSubMgmtSlotSDhcpBsm)	long	The value of tmnxSubMgmtSlotSDhcpBsm indicates the number of current IPOE BSM hosts (DHCP) on this Slot.
ipv4DhcpBsmAs [Ipv 4 Dhcp Bsm As] (tmnxSubMgmtSlotSDhcpBsmAs)	long	The value of tmnxSubMgmtSlotSDhcpBsmAs indicates the number of current IPOE BSM hosts with antispoof (DHCP) on this Slot.
ipv4DhcpBsmAsPeak [Ipv 4 Dhcp Bsm As Peak] (tmnxSubMgmtSlotSDhcpBsmAsPeak)	long	The value of tmnxSubMgmtSlotSDhcpBsmAsPeak indicates the peak number of IPOE BSM hosts with antispoof (DHCP) on this Slot.
ipv4DhcpBsmPeak [Ipv 4 Dhcp Bsm Peak] (tmnxSubMgmtSlotSDhcpBsmPeak)	long	The value of tmnxSubMgmtSlotSDhcpBsmPeak indicates the peak number of IPOE BSM hosts (DHCP) on this Slot.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtSlotSDhcp)	long	The value of tmnxSubMgmtSlotSDhcp indicates the number of current IPOE hosts (DHCP) on this Slot.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtSlotSDhcpPeak)	long	The value of tmnxSubMgmtSlotSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this Slot.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtSlotSIpcp)	long	The value of tmnxSubMgmtSlotSIpcp indicates the number of current PPP hosts (IPCP) on this Slot.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtSlotSIpcpPeak)	long	The value of tmnxSubMgmtSlotSIpcpPeak indicates the peak number of PPP hosts (IPCP) on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtSlotSL2tpHost)	long	The value of tmnxSubMgmtSlotSL2tpHost indicates the number of current L2TP hosts (LAC) on this Slot.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtSlotSL2tpHostPeak)	long	The value of tmnxSubMgmtSlotSL2tpHostPeak indicates the peak number of L2TP hosts (LAC) on this Slot.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtSlotSNonSub)	long	The value of tmnxSubMgmtSlotSNonSub indicates the number of current Non Sub hosts on this Slot.
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtSlotSNonSubPeak)	long	The value of tmnxSubMgmtSlotSNonSubPeak indicates the peak number of Non Sub hosts on this Slot.
ipv4StaticBsm [Ipv 4 Static Bsm] (tmnxSubMgmtSlotSStaticBsm)	long	The value of tmnxSubMgmtSlotSStaticBsm indicates the number of current IPOE BSM static hosts on this Slot.
ipv4StaticBsmAs [Ipv 4 Static Bsm As] (tmnxSubMgmtSlotSStaticBsmAs)	long	The value of tmnxSubMgmtSlotSStaticBsmAs indicates the number of current IPOE BSM static hosts with antispoof on this Slot.
ipv4StaticBsmAsPeak [Ipv 4 Static Bsm As Peak] (tmnxSubMgmtSlotSStaticBsmAsPeak)	long	The value of tmnxSubMgmtSlotSStaticBsmAsPeak indicates the peak number of IPOE BSM static hosts with antispoof on this Slot.
ipv4StaticBsmPeak [Ipv 4 Static Bsm Peak] (tmnxSubMgmtSlotSStaticBsmPeak)	long	The value of tmnxSubMgmtSlotSStaticBsmPeak indicates the peak number of IPOE BSM static hosts on this Slot.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtSlotSStatic)	long	The value of tmnxSubMgmtSlotSStatic indicates the number of current IPOE hosts (Static) on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtSlotSStaticPeak)	long	The value of tmnxSubMgmtSlotSStaticPeak indicates the peak number of IPOE hosts (Static) on this Slot.
ipv4TotDhcp [Ipv 4 Tot Dhcp] (tmnxSubMgmtSlotSTotDhcp)	long	The value of tmnxSubMgmtSlotSTotDhcp indicates the number of current DHCP hosts on this Slot.
ipv4TotDhcpPeak [Ipv 4 Tot Dhcp Peak] (tmnxSubMgmtSlotSTotDhcpPeak)	long	The value of tmnxSubMgmtSlotSTotDhcpPeak indicates the peak number of DHCP hosts on this Slot.
ipv6BsmDhcp6Na [Ipv 6 Bsm Dhcp 6 Na] (tmnxSubMgmtSlotSBsmDhcp6Na)	long	The value of tmnxSubMgmtSlotSBsmDhcp6Na indicates the number of current IPOE BSM hosts (DHCP6 NA) on this Slot.
ipv6BsmDhcp6NaPeak [Ipv 6 Bsm Dhcp 6 Na Peak] (tmnxSubMgmtSlotSBsmDhcp6NaPeak)	long	The value of tmnxSubMgmtSlotSBsmDhcp6NaPeak indicates the peak number of IPOE BSM hosts (DHCP6 NA) on this Slot.
ipv6BsmDhcp6Pd [Ipv 6 Bsm Dhcp 6 Pd] (tmnxSubMgmtSlotSBsmDhcp6Pd)	long	The value of tmnxSubMgmtSlotSBsmDhcp6Pd indicates the number of current IPOE BSM hosts (DHCP6 PD) on this Slot.
ipv6BsmDhcp6PdPeak [Ipv 6 Bsm Dhcp 6 Pd Peak] (tmnxSubMgmtSlotSBsmDhcp6PdPeak)	long	The value of tmnxSubMgmtSlotSBsmDhcp6PdPeak indicates the peak number of IPOE BSM hosts (DHCP6 PD) on this Slot.
ipv6Ipoedhcp6Mr [Ipv 6 Ipoedhcp 6 Mr] (tmnxSubMgmtSlotSIpoedhcp6Mr)	long	The value of tmnxSubMgmtSlotSIpoedhcp6Mr indicates the number of current IPOE PD Managed Routes on this Slot.
ipv6Ipoedhcp6MrPeak [Ipv 6 Ipoedhcp 6 Mr Peak] (tmnxSubMgmtSlotSIpoedhcp6MrPeak)	long	The value of tmnxSubMgmtSlotSIpoedhcp6MrPeak indicates the peak number of IPOE PD Managed Routes on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoE Dhcp6 Na Hosts [Ipv 6 IpoE Dhcp 6 Na Hosts] (tmnxSubMgmtSlotIpoE Dhcp6 Na)	long	The value of tmnxSubMgmtSlotIpoE Dhcp6 Na indicates the number of current IPOE hosts (DHCP6 NA) on this Slot.
ipv6IpoE Dhcp6 Na Hosts Peak [Ipv 6 IpoE Dhcp 6 Na Hosts Peak] (tmnxSubMgmtSlotIpoE Dhcp6 Na Peak)	long	The value of tmnxSubMgmtSlotIpoE Dhcp6 Na Peak indicates the peak number of IPOE hosts (DHCP6 NA) on this Slot.
ipv6IpoE Dhcp6 Pd Hosts [Ipv 6 IpoE Dhcp 6 Pd Hosts] (tmnxSubMgmtSlotIpoE Dhcp6 Pd)	long	The value of tmnxSubMgmtSlotIpoE Dhcp6 Pd indicates the number of current IPOE hosts (DHCP6 PD) on this Slot.
ipv6IpoE Dhcp6 Pd Hosts Peak [Ipv 6 IpoE Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSlotIpoE Dhcp6 Pd Peak)	long	The value of tmnxSubMgmtSlotIpoE Dhcp6 Pd Peak indicates the peak number of IPOE hosts (DHCP6 PD) on this Slot.
ipv6IpoE Slaac Hosts [Ipv 6 IpoE Slaac Hosts] (tmnxSubMgmtSlotIpoE Slaac)	long	The value of tmnxSubMgmtSlotIpoE Slaac indicates the number of current IPOE hosts (SLAAC) on this Slot.
ipv6IpoE Slaac Hosts Peak [Ipv 6 IpoE Slaac Hosts Peak] (tmnxSubMgmtSlotIpoE Slaac Peak)	long	The value of tmnxSubMgmtSlotIpoE Slaac Peak indicates the peak number of IPOE hosts (SLAAC) on this Slot.
ipv6IpoE Static Pd [Ipv 6 IpoE Static Pd] (tmnxSubMgmtSlotSV6StaticPd)	long	The value of tmnxSubMgmtSlotSV6StaticPd indicates the number of current IPOE IPv6 static prefixes on this Slot.
ipv6IpoE Static Pd Peak [Ipv 6 IpoE Static Pd Peak] (tmnxSubMgmtSlotSV6StaticPdPeak)	long	The value of tmnxSubMgmtSlotSV6StaticPdPeak indicates the peak number of IPOE IPv6 static prefixes on this Slot.
ipv6IpoE Static Wan [Ipv 6 IpoE Static Wan] (tmnxSubMgmtSlotSV6StaticWan)	long	The value of tmnxSubMgmtSlotSV6StaticWan indicates the number of current IPOE IPv6 static WAN hosts on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6IpoEStaticWanPeak [Ipv 6 IpoE Static Wan Peak] (tmnxSubMgmtSlotSV6StaticWanPeak)	long	The value of tmnxSubMgmtSlotSV6StaticWanPeak indicates the peak number of IPOE IPv6 static WAN hosts on this Slot.
ipv6PppDhcp6Mr [Ipv 6 Ppp Dhcp 6 Mr] (tmnxSubMgmtSlotSPppDhcp6Mr)	long	The value of tmnxSubMgmtSlotSPppDhcp6Mr indicates the number of current PPP PD Managed Routes on this Slot.
ipv6PppDhcp6MrPeak [Ipv 6 Ppp Dhcp 6 Mr Peak] (tmnxSubMgmtSlotSPppDhcp6MrPeak)	long	The value of tmnxSubMgmtSlotSPppDhcp6MrPeak indicates the peak number of PPP PD Managed Routes on this Slot.
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtSlotSPppDhcp6Na)	long	The value of tmnxSubMgmtSlotSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this Slot.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtSlotSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtSlotSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this Slot.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtSlotSPppDhcp6Pd)	long	The value of tmnxSubMgmtSlotSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this Slot.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSlotSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtSlotSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this Slot.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtSlotSPppSlaac)	long	The value of tmnxSubMgmtSlotSPppSlaac indicates the number of current PPP hosts (SLAAC) on this Slot.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtSlotSPppSlaacPeak)	long	The value of tmnxSubMgmtSlotSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotDhcpV6 [Ipv 6 Tot Dhcp V6] (tmnxSubMgmtSlotSTotDhcpV6)	long	The value of tmnxSubMgmtSlotSTotDhcpV6 indicates the number of current DHCPv6 hosts on this Slot.
ipv6TotDhcpV6Peak [Ipv 6 Tot Dhcp V6 Peak] (tmnxSubMgmtSlotSTotDhcpV6Peak)	long	The value of tmnxSubMgmtSlotSTotDhcpV6Peak indicates the peak number of DHCPv6 hosts on this Slot.
ipv6TotMngdRt [Ipv 6 Tot Mngd Rt] (tmnxSubMgmtSlotSTotMngdRt)	long	The value of tmnxSubMgmtSlotSTotMngdRt indicates the number of current PD Managed Routes on this Slot.
ipv6TotMngdRtPeak [Ipv 6 Tot Mngd Rt Peak] (tmnxSubMgmtSlotSTotMngdRtPeak)	long	The value of tmnxSubMgmtSlotSTotMngdRtPeak indicates the peak number of PD Managed Routes on this Slot.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtSlotSV6)	long	The value of tmnxSubMgmtSlotSV6 indicates the number of current V6 hosts on this Slot.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtSlotSV6Peak)	long	The value of tmnxSubMgmtSlotSV6Peak indicates the peak number of V6 hosts on this Slot.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtSlotSTotal)	long	The value of tmnxSubMgmtSlotSTotal indicates the number of current total hosts on this Slot.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtSlotSTotalPeak)	long	The value of tmnxSubMgmtSlotSTotalPeak indicates the peak number of total hosts on this Slot.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtSlotSPppHosts)	long	The value of tmnxSubMgmtSlotSPppHosts indicates the number of current PPP hosts on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtSlotSPppHostsPeak)	long	The value of tmnxSubMgmtSlotSPppHostsPeak indicates the peak number of PPP hosts on this Slot.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtSlotSPppLacL2tp)	long	The value of tmnxSubMgmtSlotSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this Slot.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtSlotSPppLacL2tpPeak)	long	The value of tmnxSubMgmtSlotSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this Slot.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtSlotSPppLacOA)	long	The value of tmnxSubMgmtSlotSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this Slot.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtSlotSPppLacOAPeak)	long	The value of tmnxSubMgmtSlotSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this Slot.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtSlotSPppLacOEOA)	long	The value of tmnxSubMgmtSlotSPppLacOEOA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this Slot.
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtSlotSPppLacOEOAPeak)	long	The value of tmnxSubMgmtSlotSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this Slot.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtSlotSPppLacOE)	long	The value of tmnxSubMgmtSlotSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this Slot.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtSlotSPppLacOEPeak)	long	The value of tmnxSubMgmtSlotSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtSlotSPppLclL2tp)	long	The value of tmnxSubMgmtSlotSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this Slot.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtSlotSPppLclL2tpPeak)	long	The value of tmnxSubMgmtSlotSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this Slot.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtSlotSPppLclOA)	long	The value of tmnxSubMgmtSlotSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this Slot.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtSlotSPppLclOAPeak)	long	The value of tmnxSubMgmtSlotSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this Slot.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtSlotSPppLclOEOA)	long	The value of tmnxSubMgmtSlotSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this Slot.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtSlotSPppLclOEOAPeak)	long	The value of tmnxSubMgmtSlotSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this Slot.
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtSlotSPppLclOE)	long	The value of tmnxSubMgmtSlotSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this Slot.
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtSlotSPppLclOEPeak)	long	The value of tmnxSubMgmtSlotSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this Slot.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtSlotSPppLclTotal)	long	The value of tmnxSubMgmtSlotSPppLclTotal indicates the total number of current locally terminated PPP sessions on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtSlotSPppLclTotalPeak)	long	The value of tmnxSubMgmtSlotSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this Slot.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtSlotSPppSessIs)	long	The value of tmnxSubMgmtSlotSPppSessIs indicates the number of current PPP sessions in setup on this Slot.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtSlotSPppSessIsPeak)	long	The value of tmnxSubMgmtSlotSPppSessIsPeak indicates the peak number of PPP sessions in setup on this Slot.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtSlotSPppSessTotal)	long	The value of tmnxSubMgmtSlotSPppSessTotal indicates the total number of current PPP sessions established on this Slot.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtSlotSPppSessTotalPeak)	long	The value of tmnxSubMgmtSlotSPppSessTotalPeak indicates the total peak number of PPP sessions established on this Slot.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtSlotSPppLacTotal)	long	The value of tmnxSubMgmtSlotSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this Slot.
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtSlotSPppLacTotalPeak)	long	The value of tmnxSubMgmtSlotSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this Slot.
totalInternal [Total Internal] (tmnxSubMgmtSlotSTotInternal)	long	The value of tmnxSubMgmtSlotSTotInternal indicates the number of current internal hosts on this Slot.
totalInternalPeak [Total Internal Peak] (tmnxSubMgmtSlotSTotInternalPeak)	long	The value of tmnxSubMgmtSlotSTotInternalPeak indicates the peak number of internal hosts on this Slot.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalIpoesSesIs [Total Ipoes Ses Is] (tmnxSubMgmtSlotIpoesSesIs)	long	The value of tmnxSubMgmtSlotIpoesSesIs indicates the number of current IPOE sessions in setup on this Slot.
totalIpoesSesIsPeak [Total Ipoes Ses Is Peak] (tmnxSubMgmtSlotIpoesSesIsPeak)	long	The value of tmnxSubMgmtSlotIpoesSesIsPeak indicates the peak number of IPOE sessions in setup on this Slot.
totalIpoesSesTotal [Total Ipoes Ses Total] (tmnxSubMgmtSlotIpoesSesTotal)	long	The value of tmnxSubMgmtSlotIpoesSesTotal indicates the number of current IPOE sessions on this Slot.
totalIpoesSesTotalPeak [Total Ipoes Ses Total Peak] (tmnxSubMgmtSlotIpoesSesTotalPeak)	long	The value of tmnxSubMgmtSlotIpoesSesTotalPeak indicates the peak number of IPOE sessions on this Slot.
<p>SubscrHostEquipSystStats</p> <p>MIB entry name: tmnxSubMgmtSystStatsEntry</p> <p>Entry description: Each conceptual row represents statistics for a system on which subscriber hosts are allocated.</p> <p>Table description (for tmnxSubMgmtSystStatsTable): The tmnxSubMgmtSystStatsTable has an entry with statistics for each system on which subscriber hosts are allocated.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
currentSubscribers [Current Subscribers] (tmnxSubMgmtSystSSubscribers)	long	The value of tmnxSubMgmtSystSSubscribers indicates the number of current subscribers on this system.
currentSubscribersPeak [Current Subscribers Peak] (tmnxSubMgmtSystSSubscribersPeak)	long	The value of tmnxSubMgmtSystSSubscribersPeak indicates the peak number of subscribers on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentV4AAATrig [Current V4 AAATrig] (tmnxSubMgmtSystSV4AaaTrig)	long	The value of tmnxSubMgmtSystSV4AaaTrig indicates the number of current V4 AAA-triggered hosts on this system.
currentV4AAATrigPeak [Current V4 AAATrig Peak] (tmnxSubMgmtSystSV4AaaTrigPeak)	long	The value of tmnxSubMgmtSystSV4AaaTrigPeak indicates the peak number of V4 AAA-triggered hosts on this system.
currentV4DataTrig [Current V4 Data Trig] (tmnxSubMgmtSystSV4DataTrig)	long	The value of tmnxSubMgmtSystSV4DataTrig indicates the number of current V4 data-triggered hosts on this system.
currentV4DataTrigPeak [Current V4 Data Trig Peak] (tmnxSubMgmtSystSV4DataTrigPeak)	long	The value of tmnxSubMgmtSystSV4DataTrigPeak indicates the peak number of V4 data-triggered hosts on this system.
currentV6DataTrig [Current V6 Data Trig] (tmnxSubMgmtSystSV6DataTrig)	long	The value of tmnxSubMgmtSystSV6DataTrig indicates the number of current V6 data-triggered hosts on this system.
currentV6DataTrigMr [Current V6 Data Trig Mr] (tmnxSubMgmtSystSV6DataTrigMr)	long	The value of tmnxSubMgmtSystSV6DataTrigMr indicates the number of current V6 data-triggered prefix managed routes on this system.
currentV6DataTrigMrPeak [Current V6 Data Trig Mr Peak] (tmnxSubMgmtSystSV6DataTrigMrPeak)	long	The value of tmnxSubMgmtSystSV6DataTrigMrPeak indicates the peak number of V6 data-triggered prefix managed routes on this system.
currentV6DataTrigPd [Current V6 Data Trig Pd] (tmnxSubMgmtSystSV6DataTrigPd)	long	The value of tmnxSubMgmtSystSV6DataTrigPd indicates the number of current V6 data-triggered prefixes on this system.
currentV6DataTrigPdPeak [Current V6 Data Trig Pd Peak] (tmnxSubMgmtSystSV6DataTrigPdPeak)	long	The value of tmnxSubMgmtSystSV6DataTrigPdPeak indicates the peak number of V6 data-triggered prefixes on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentV6DataTrigPeak [Current V6 Data Trig Peak] (tmnxSubMgmtSystSV6DataTrigPeak)	long	The value of tmnxSubMgmtSystSV6DataTrigPeak indicates the peak number of V6 data-triggered hosts on this system.
ipTotalHosts [Ip Total Hosts] (tmnxSubMgmtSystIpoeHosts)	long	The value of tmnxSubMgmtSystIpoeHosts indicates the number of current IPOE hosts on this system.
ipTotalHostsPeak [Ip Total Hosts Peak] (tmnxSubMgmtSystIpoeHostsPeak)	long	The value of tmnxSubMgmtSystIpoeHostsPeak indicates the peak number of IPOE hosts on this system.
ipTotalv4Hosts [Ip Totalv 4 Hosts] (tmnxSubMgmtSystSV4)	long	The value of tmnxSubMgmtSystSV4 indicates the number of current V4 hosts on this system.
ipTotalv4HostsPeak [Ip Totalv 4 Hosts Peak] (tmnxSubMgmtSystSV4Peak)	long	The value of tmnxSubMgmtSystSV4Peak indicates the peak number of V4 hosts on this system.
ipv4ArpHosts [Ipv 4 Arp Hosts] (tmnxSubMgmtSystSArp)	long	The value of tmnxSubMgmtSystSArp indicates the number of current IPOE hosts (ARP) on this system.
ipv4ArpHostsPeak [Ipv 4 Arp Hosts Peak] (tmnxSubMgmtSystSArpPeak)	long	The value of tmnxSubMgmtSystSArpPeak indicates the peak number of IPOE hosts (ARP) on this system.
ipv4DhcpBsm [Ipv 4 Dhcp Bsm] (tmnxSubMgmtSystSDhcpBsm)	long	The value of tmnxSubMgmtSystSDhcpBsm indicates the number of current IPOE BSM hosts (DHCP) on this system.
ipv4DhcpBsmAs [Ipv 4 Dhcp Bsm As] (tmnxSubMgmtSystSDhcpBsmAs)	long	The value of tmnxSubMgmtSystSDhcpBsmAs indicates the number of current IPOE BSM hosts with antispoof (DHCP) on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4DhcpBsmAsPeak [Ipv 4 Dhcp Bsm As Peak] (tmnxSubMgmtSystSDhcpBsmAsPeak)	long	The value of tmnxSubMgmtSystSDhcpBsmAsPeak indicates the peak number of IPOE BSM hosts with antispoof (DHCP) on this system.
ipv4DhcpBsmPeak [Ipv 4 Dhcp Bsm Peak] (tmnxSubMgmtSystSDhcpBsmPeak)	long	The value of tmnxSubMgmtSystSDhcpBsmPeak indicates the peak number of IPOE BSM hosts (DHCP) on this system.
ipv4DhcpHosts [Ipv 4 Dhcp Hosts] (tmnxSubMgmtSystSDhcp)	long	The value of tmnxSubMgmtSystSDhcp indicates the number of current IPOE hosts (DHCP) on this system.
ipv4DhcpHostsPeak [Ipv 4 Dhcp Hosts Peak] (tmnxSubMgmtSystSDhcpPeak)	long	The value of tmnxSubMgmtSystSDhcpPeak indicates the peak number of IPOE hosts (DHCP) on this system.
ipv4IpcpHosts [Ipv 4 Ipcp Hosts] (tmnxSubMgmtSystIpcp)	long	The value of tmnxSubMgmtSystIpcp indicates the number of current PPP hosts (IPCP) on this system.
ipv4IpcpHostsPeak [Ipv 4 Ipcp Hosts Peak] (tmnxSubMgmtSystIpcpPeak)	long	The value of tmnxSubMgmtSystIpcpPeak indicates the peak number of PPP hosts (IPCP) on this system.
ipv4L2tpHosts [Ipv 4 L2 tp Hosts] (tmnxSubMgmtSystSL2tpHost)	long	The value of tmnxSubMgmtSystSL2tpHost indicates the number of current L2TP hosts (LAC) on this system.
ipv4L2tpHostsPeak [Ipv 4 L2 tp Hosts Peak] (tmnxSubMgmtSystSL2tpHostPeak)	long	The value of tmnxSubMgmtSystSL2tpHostPeak indicates the peak number of L2TP hosts (LAC) on this system.
ipv4NonSubHosts [Ipv 4 Non Sub Hosts] (tmnxSubMgmtSystSNonSub)	long	The value of tmnxSubMgmtSystSNonSub indicates the number of current Non Sub hosts on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4NonSubHostsPeak [Ipv 4 Non Sub Hosts Peak] (tmnxSubMgmtSystSNonSubPeak)	long	The value of tmnxSubMgmtSystSNonSubPeak indicates the peak number of Non Sub hosts on this system.
ipv4StaticBsm [Ipv 4 Static Bsm] (tmnxSubMgmtSystSStaticBsm)	long	The value of tmnxSubMgmtSystSStaticBsm indicates the number of current IPOE BSM static hosts on this system.
ipv4StaticBsmAs [Ipv 4 Static Bsm As] (tmnxSubMgmtSystSStaticBsmAs)	long	The value of tmnxSubMgmtSystSStaticBsmAs indicates the number of current IPOE BSM static hosts with antispoof on this system.
ipv4StaticBsmAsPeak [Ipv 4 Static Bsm As Peak] (tmnxSubMgmtSystSStaticBsmAsPeak)	long	The value of tmnxSubMgmtSystSStaticBsmAsPeak indicates the peak number of IPOE BSM static hosts with antispoof on this system.
ipv4StaticBsmPeak [Ipv 4 Static Bsm Peak] (tmnxSubMgmtSystSStaticBsmPeak)	long	The value of tmnxSubMgmtSystSStaticBsmPeak indicates the peak number of IPOE BSM static hosts on this system.
ipv4StaticHosts [Ipv 4 Static Hosts] (tmnxSubMgmtSystSStatic)	long	The value of tmnxSubMgmtSystSStatic indicates the number of current IPOE hosts (Static) on this system.
ipv4StaticHostsPeak [Ipv 4 Static Hosts Peak] (tmnxSubMgmtSystSStaticPeak)	long	The value of tmnxSubMgmtSystSStaticPeak indicates the peak number of IPOE hosts (Static) on this system.
ipv4TotDhcp [Ipv 4 Tot Dhcp] (tmnxSubMgmtSystSTotDhcp)	long	The value of tmnxSubMgmtSystSTotDhcp indicates the number of current DHCP hosts on this system.
ipv4TotDhcpPeak [Ipv 4 Tot Dhcp Peak] (tmnxSubMgmtSystSTotDhcpPeak)	long	The value of tmnxSubMgmtSystSTotDhcpPeak indicates the peak number of DHCP hosts on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6BsmDhcp6Na [Ipv 6 Bsm Dhcp 6 Na] (tmnxSubMgmtSystSBsmDhcp6Na)	long	The value of tmnxSubMgmtSystSBsmDhcp6Na indicates the number of current IPOE BSM hosts (DHCP6 NA) on this system.
ipv6BsmDhcp6NaPeak [Ipv 6 Bsm Dhcp 6 Na Peak] (tmnxSubMgmtSystSBsmDhcp6NaPeak)	long	The value of tmnxSubMgmtSystSBsmDhcp6NaPeak indicates the peak number of IPOE BSM hosts (DHCP6 NA) on this system.
ipv6BsmDhcp6Pd [Ipv 6 Bsm Dhcp 6 Pd] (tmnxSubMgmtSystSBsmDhcp6Pd)	long	The value of tmnxSubMgmtSystSBsmDhcp6Pd indicates the number of current IPOE BSM hosts (DHCP6 PD) on this system.
ipv6BsmDhcp6PdPeak [Ipv 6 Bsm Dhcp 6 Pd Peak] (tmnxSubMgmtSystSBsmDhcp6PdPeak)	long	The value of tmnxSubMgmtSystSBsmDhcp6PdPeak indicates the peak number of IPOE BSM hosts (DHCP6 PD) on this system.
ipv6Ipoedhcp6Mr [Ipv 6 Ipoedhcp 6 Mr] (tmnxSubMgmtSystSIpoedhcp6Mr)	long	The value of tmnxSubMgmtSystSIpoedhcp6Mr indicates the number of current IPOE PD Managed Routes on this system.
ipv6Ipoedhcp6MrPeak [Ipv 6 Ipoedhcp 6 Mr Peak] (tmnxSubMgmtSystSIpoedhcp6MrPeak)	long	The value of tmnxSubMgmtSystSIpoedhcp6MrPeak indicates the peak number of IPOE PD Managed Routes on this system.
ipv6Ipoedhcp6NaHosts [Ipv 6 Ipoedhcp 6 Na Hosts] (tmnxSubMgmtSystSIpoedhcp6Na)	long	The value of tmnxSubMgmtSystSIpoedhcp6Na indicates the number of current IPOE hosts (DHCP6 NA) on this system.
ipv6Ipoedhcp6NaHostsPeak [Ipv 6 Ipoedhcp 6 Na Hosts Peak] (tmnxSubMgmtSystSIpoedhcp6NaPeak)	long	The value of tmnxSubMgmtSystSIpoedhcp6NaPeak indicates the peak number of IPOE hosts (DHCP6 NA) on this system.
ipv6Ipoedhcp6PdHosts [Ipv 6 Ipoedhcp 6 Pd Hosts] (tmnxSubMgmtSystSIpoedhcp6Pd)	long	The value of tmnxSubMgmtSystSIpoedhcp6Pd indicates the number of current IPOE hosts (DHCP6 PD) on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6Ipoedhcp6PdHostsPeak [Ipv 6 Ipoedhcp 6 Pd Hosts Peak] (tmnxSubMgmtSystIpoedhcp6PdPeak)	long	The value of tmnxSubMgmtSystIpoedhcp6PdPeak indicates the peak number of IPOE hosts (DHCP6 PD) on this system.
ipv6IpoeslaacHosts [Ipv 6 Ipoeslaac Hosts] (tmnxSubMgmtSystIpoeslaac)	long	The value of tmnxSubMgmtSystIpoeslaac indicates the number of current IPOE hosts (SLAAC) on this system.
ipv6IpoeslaacHostsPeak [Ipv 6 Ipoeslaac Hosts Peak] (tmnxSubMgmtSystIpoeslaacPeak)	long	The value of tmnxSubMgmtSystIpoeslaacPeak indicates the peak number of IPOE hosts (SLAAC) on this system.
ipv6IpoestaticPd [Ipv 6 Ipoestatic Pd] (tmnxSubMgmtSystSV6StaticPd)	long	The value of tmnxSubMgmtSystSV6StaticPd indicates the number of current IPOE IPv6 static prefixes on this system.
ipv6IpoestaticPdPeak [Ipv 6 Ipoestatic Pd Peak] (tmnxSubMgmtSystSV6StaticPdPeak)	long	The value of tmnxSubMgmtSystSV6StaticPdPeak indicates the peak number of IPOE IPv6 static prefixes on this system.
ipv6IpoestaticWan [Ipv 6 Ipoestatic Wan] (tmnxSubMgmtSystSV6StaticWan)	long	The value of tmnxSubMgmtSystSV6StaticWan indicates the number of current IPOE IPv6 static WAN hosts on this system.
ipv6IpoestaticWanPeak [Ipv 6 Ipoestatic Wan Peak] (tmnxSubMgmtSystSV6StaticWanPeak)	long	The value of tmnxSubMgmtSystSV6StaticWanPeak indicates the peak number of IPOE IPv6 static WAN hosts on this system.
ipv6PppDhcp6Mr [Ipv 6 Ppp Dhcp 6 Mr] (tmnxSubMgmtSystSPppDhcp6Mr)	long	The value of tmnxSubMgmtSystSPppDhcp6Mr indicates the number of current PPP PD Managed Routes on this system.
ipv6PppDhcp6MrPeak [Ipv 6 Ppp Dhcp 6 Mr Peak] (tmnxSubMgmtSystSPppDhcp6MrPeak)	long	The value of tmnxSubMgmtSystSPppDhcp6MrPeak indicates the peak number of PPP PD Managed Routes on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6PppDhcp6NaHosts [Ipv 6 Ppp Dhcp 6 Na Hosts] (tmnxSubMgmtSystSPppDhcp6Na)	long	The value of tmnxSubMgmtSystSPppDhcp6Na indicates the number of current PPP hosts (DHCP6 NA) on this system.
ipv6PppDhcp6NaHostsPeak [Ipv 6 Ppp Dhcp 6 Na Hosts Peak] (tmnxSubMgmtSystSPppDhcp6NaPeak)	long	The value of tmnxSubMgmtSystSPppDhcp6NaPeak indicates the peak number of PPP hosts (DHCP6 NA) on this system.
ipv6PppDhcp6PdHosts [Ipv 6 Ppp Dhcp 6 Pd Hosts] (tmnxSubMgmtSystSPppDhcp6Pd)	long	The value of tmnxSubMgmtSystSPppDhcp6Pd indicates the number of current PPP hosts (DHCP6 PD) on this system.
ipv6PppDhcp6PdHostsPeak [Ipv 6 Ppp Dhcp 6 Pd Hosts Peak] (tmnxSubMgmtSystSPppDhcp6PdPeak)	long	The value of tmnxSubMgmtSystSPppDhcp6PdPeak indicates the peak number of PPP hosts (DHCP6 PD) on this system.
ipv6PppSlaacHosts [Ipv 6 Ppp Slaac Hosts] (tmnxSubMgmtSystSPppSlaac)	long	The value of tmnxSubMgmtSystSPppSlaac indicates the number of current PPP hosts (SLAAC) on this system.
ipv6PppSlaacHostsPeak [Ipv 6 Ppp Slaac Hosts Peak] (tmnxSubMgmtSystSPppSlaacPeak)	long	The value of tmnxSubMgmtSystSPppSlaacPeak indicates the peak number of PPP hosts (SLAAC) on this system.
ipv6TotDhcpV6 [Ipv 6 Tot Dhcp V6] (tmnxSubMgmtSystSTotDhcpV6)	long	The value of tmnxSubMgmtSystSTotDhcpV6 indicates the number of current DHCPv6 hosts on this system.
ipv6TotDhcpV6Peak [Ipv 6 Tot Dhcp V6 Peak] (tmnxSubMgmtSystSTotDhcpV6Peak)	long	The value of tmnxSubMgmtSystSTotDhcpV6Peak indicates the peak number of DHCPv6 hosts on this system.
ipv6TotMngdRt [Ipv 6 Tot Mngd Rt] (tmnxSubMgmtSystSTotMngdRt)	long	The value of tmnxSubMgmtSystSTotMngdRt indicates the number of current PD Managed Routes on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6TotMngdRtPeak [Ipv 6 Tot Mngd Rt Peak] (tmnxSubMgmtSystSTotMngdRtPeak)	long	The value of tmnxSubMgmtSystSTotMngdRtPeak indicates the peak number of PD Managed Routes on this system.
ipv6TotalHosts [Ipv 6 Total Hosts] (tmnxSubMgmtSystSV6)	long	The value of tmnxSubMgmtSystSV6 indicates the number of current V6 hosts on this system.
ipv6TotalHostsPeak [Ipv 6 Total Hosts Peak] (tmnxSubMgmtSystSV6Peak)	long	The value of tmnxSubMgmtSystSV6Peak indicates the peak number of V6 hosts on this system.
ipv6v4TotalHosts [Ipv 6 v 4 Total Hosts] (tmnxSubMgmtSystSTotal)	long	The value of tmnxSubMgmtSystSTotal indicates the number of current total hosts on this system.
ipv6v4TotalHostsPeak [Ipv 6 v 4 Total Hosts Peak] (tmnxSubMgmtSystSTotalPeak)	long	The value of tmnxSubMgmtSystSTotalPeak indicates the peak number of total hosts on this system.
l2tpTunOrig [L2 tp Tun Orig] (tmnxSubMgmtSystSL2tpTunOrig)	long	The value of tmnxSubMgmtSystSL2tpTunOrig indicates the number of current L2TP Tunnels (originator) on this system.
l2tpTunOrigPeak [L2 tp Tun Orig Peak] (tmnxSubMgmtSystSL2tpTunOrigPeak)	long	The value of tmnxSubMgmtSystSL2tpTunOrigPeak indicates the peak number of L2TP Tunnels (originator) on this system.
l2tpTunRecv [L2 tp Tun Recv] (tmnxSubMgmtSystSL2tpTunRecv)	long	The value of tmnxSubMgmtSystSL2tpTunRecv indicates the number of current L2TP Tunnels (receiver) on this system.
l2tpTunRecvPeak [L2 tp Tun Recv Peak] (tmnxSubMgmtSystSL2tpTunRecvPeak)	long	The value of tmnxSubMgmtSystSL2tpTunRecvPeak indicates the peak number of L2TP Tunnels (receiver) on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
I2tpTunTotal [L2 tp Tun Total] (tmnxSubMgmtSystSL2tpTunTotal)	long	The value of tmnxSubMgmtSystSL2tpTunTotal indicates the total number of current L2TP Tunnels on this system.
I2tpTunTotalPeak [L2 tp Tun Total Peak] (tmnxSubMgmtSystSL2tpTunTotalPeak)	long	The value of tmnxSubMgmtSystSL2tpTunTotalPeak indicates the peak total number of L2TP Tunnels on this system.
pppHostsTotal [Ppp Hosts Total] (tmnxSubMgmtSystSPppHosts)	long	The value of tmnxSubMgmtSystSPppHosts indicates the number of current PPP hosts on this system.
pppHostsTotalPeak [Ppp Hosts Total Peak] (tmnxSubMgmtSystSPppHostsPeak)	long	The value of tmnxSubMgmtSystSPppHostsPeak indicates the peak number of PPP hosts on this system.
pppLacL2tpSess [Ppp Lac L2 tp Sess] (tmnxSubMgmtSystSPppLacL2tp)	long	The value of tmnxSubMgmtSystSPppLacL2tp indicates the number of current PPP sessions (L2TP LTS) tunneled over L2TP on this system.
pppLacL2tpSessPeak [Ppp Lac L2 tp Sess Peak] (tmnxSubMgmtSystSPppLacL2tpPeak)	long	The value of tmnxSubMgmtSystSPppLacL2tpPeak indicates the peak number of PPP sessions (L2TP LTS) tunneled over L2TP on this system.
pppLacOASess [Ppp Lac OASess] (tmnxSubMgmtSystSPppLacOA)	long	The value of tmnxSubMgmtSystSPppLacOA indicates the number of current PPP sessions (PPPoA) tunneled over L2TP on this system.
pppLacOASessPeak [Ppp Lac OASess Peak] (tmnxSubMgmtSystSPppLacOAPeak)	long	The value of tmnxSubMgmtSystSPppLacOAPeak indicates the peak number of PPP sessions (PPPoA) tunneled over L2TP on this system.
pppLacOEOASess [Ppp Lac OEOASess] (tmnxSubMgmtSystSPppLacOEoA)	long	The value of tmnxSubMgmtSystSPppLacOEoA indicates the number of current PPP sessions (PPPoEoA) tunneled over L2TP on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLacOEOASessPeak [Ppp Lac OEOASess Peak] (tmnxSubMgmtSystSPppLacOEOAPeak)	long	The value of tmnxSubMgmtSystSPppLacOEOAPeak indicates the peak number of PPP sessions (PPPoEoA) tunneled over L2TP on this system.
pppLacOESess [Ppp Lac OESess] (tmnxSubMgmtSystSPppLacOE)	long	The value of tmnxSubMgmtSystSPppLacOE indicates the number of current PPP sessions (PPPoE) tunneled over L2TP on this system.
pppLacOESessPeak [Ppp Lac OESess Peak] (tmnxSubMgmtSystSPppLacOEPeak)	long	The value of tmnxSubMgmtSystSPppLacOEPeak indicates the peak number of PPP sessions (PPPoE) tunneled over L2TP on this system.
pppLclL2tpSess [Ppp Lcl L2 tp Sess] (tmnxSubMgmtSystSPppLclL2tp)	long	The value of tmnxSubMgmtSystSPppLclL2tp indicates the number of current locally terminated PPP sessions (L2TP LNS) on this system.
pppLclL2tpSessPeak [Ppp Lcl L2 tp Sess Peak] (tmnxSubMgmtSystSPppLclL2tpPeak)	long	The value of tmnxSubMgmtSystSPppLclL2tpPeak indicates the peak number of locally terminated PPP sessions (L2TP LNS) on this system.
pppLclOASess [Ppp Lcl OASess] (tmnxSubMgmtSystSPppLclOA)	long	The value of tmnxSubMgmtSystSPppLclOA indicates the number of current locally terminated PPP sessions (PPPoA) on this system.
pppLclOASessPeak [Ppp Lcl OASess Peak] (tmnxSubMgmtSystSPppLclOAPeak)	long	The value of tmnxSubMgmtSystSPppLclOAPeak indicates the peak number of locally terminated PPP sessions (PPPoA) on this system.
pppLclOEOASess [Ppp Lcl OEOASess] (tmnxSubMgmtSystSPppLclOEOA)	long	The value of tmnxSubMgmtSystSPppLclOEOA indicates the number of current locally terminated PPP sessions (PPPoEoA) on this system.
pppLclOEOASessPeak [Ppp Lcl OEOASess Peak] (tmnxSubMgmtSystSPppLclOEOAPeak)	long	The value of tmnxSubMgmtSystSPppLclOEOAPeak indicates the peak number of locally terminated PPP sessions (PPPoEoA) on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppLclOESess [Ppp Lcl OESess] (tmnxSubMgmtSystSPppLclOE)	long	The value of tmnxSubMgmtSystSPppLclOE indicates the number of current locally terminated PPP sessions (PPPoE) on this system.
pppLclOESessPeak [Ppp Lcl OESess Peak] (tmnxSubMgmtSystSPppLclOEPeak)	long	The value of tmnxSubMgmtSystSPppLclOEPeak indicates the peak number of locally terminated PPP sessions (PPPoE) on this system.
pppLclTotalSess [Ppp Lcl Total Sess] (tmnxSubMgmtSystSPppLclTotal)	long	The value of tmnxSubMgmtSystSPppLclTotal indicates the total number of current locally terminated PPP sessions on this system.
pppLclTotalSessPeak [Ppp Lcl Total Sess Peak] (tmnxSubMgmtSystSPppLclTotalPeak)	long	The value of tmnxSubMgmtSystSPppLclTotalPeak indicates the total peak number of locally terminated PPP sessions on this system.
pppSessInSetup [Ppp Sess In Setup] (tmnxSubMgmtSystSPppSessIs)	long	The value of tmnxSubMgmtSystSPppSessIs indicates the number of current PPP sessions in setup on this system.
pppSessInSetupPeak [Ppp Sess In Setup Peak] (tmnxSubMgmtSystSPppSessIsPeak)	long	The value of tmnxSubMgmtSystSPppSessIsPeak indicates the peak number of PPP sessions in setup on this system.
pppSessTotal [Ppp Sess Total] (tmnxSubMgmtSystSPppSessTotal)	long	The value of tmnxSubMgmtSystSPppSessTotal indicates the total number of current PPP sessions established on this system.
pppSessTotalPeak [Ppp Sess Total Peak] (tmnxSubMgmtSystSPppSessTotalPeak)	long	The value of tmnxSubMgmtSystSPppSessTotalPeak indicates the total peak number of PPP sessions established on this system.
pppTotalLacSess [Ppp Total Lac Sess] (tmnxSubMgmtSystSPppLacTotal)	long	The value of tmnxSubMgmtSystSPppLacTotal indicates the total number of current PPP sessions tunneled over L2TP on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppTotalLacSessPeak [Ppp Total Lac Sess Peak] (tmnxSubMgmtSystSPppLacTotalPeak)	long	The value of tmnxSubMgmtSystSPppLacTotalPeak indicates the total peak number of PPP sessions tunneled over L2TP on this system.
systemHostsScale [System Hosts Scale] (tmnxSubMgmtSystSHostsScale)	long	The value of tmnxSubMgmtSystSHostsScale indicates the number of current total hosts on this system, including internal hosts.
systemHostsScalePeak [System Hosts Scale Peak] (tmnxSubMgmtSystSHostsScalePeak)	long	The value of tmnxSubMgmtSystSHostsScalePeak indicates the peak number of total hosts on this system, including internal hosts.
totalInternal [Total Internal] (tmnxSubMgmtSystSTotInternal)	long	The value of tmnxSubMgmtSystSTotInternal indicates the number of current internal hosts on this system.
totalInternalPeak [Total Internal Peak] (tmnxSubMgmtSystSTotInternalPeak)	long	The value of tmnxSubMgmtSystSTotInternalPeak indicates the peak number of internal hosts on this system.
totalIpoesSesIs [Total Ipoes Ses Is] (tmnxSubMgmtSystSIpoesSesIs)	long	The value of tmnxSubMgmtSystSIpoesSesIs indicates the number of current IPOE sessions in setup on this system.
totalIpoesSesIsPeak [Total Ipoes Ses Is Peak] (tmnxSubMgmtSystSIpoesSesIsPeak)	long	The value of tmnxSubMgmtSystSIpoesSesIsPeak indicates the peak number of IPOE sessions in setup on this system.
totalIpoesSesTotal [Total Ipoes Ses Total] (tmnxSubMgmtSystSIpoesSesTotal)	long	The value of tmnxSubMgmtSystSIpoesSesTotal indicates the number of current IPOE sessions on this system.
totalIpoesSesTotalPeak [Total Ipoes Ses Total Peak] (tmnxSubMgmtSystSIpoesSesTotalPeak)	long	The value of tmnxSubMgmtSystSIpoesSesTotalPeak indicates the peak number of IPOE sessions on this system.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 252 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 253 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AccessEgrQDepthInfo</p> <p>MIB entry name: tPortAccEgrQGrpQDepthInfoEntry</p> <p>Entry description: The value of tPortAccEgrQGrpQDepthInfoEntry represents queue-depth monitoring information for each access egress port queue-group override queue for which the value of tPortAccEgrQOverMonitorDepth is set to 'true (1)'.</p> <p>Table description (for tPortAccEgrQGrpQDepthInfoTable): The value of tPortAccEgrQGrpQDepthInfoTable has an entry for each access egress port queue-group override queue for which the value of tPortAccEgrQOverMonitorDepth is set to 'true (1)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.AccessEgrQOverride</p>		
depthAvgElpsdTime [Depth Avg Elpsd Time] (tPortAccEgrQGrpQDepthAvgElpsdTme)	String	The value of tPortAccEgrQGrpQDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctInterval [Depth Avg Poll Prct Interval] (tPortAccEgrQGrpQDepthAvgPollInt)	long	The value of tPortAccEgrQGrpQDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrct1 [Depth Poll Prct 1] (tPortAccEgrQGrpQDepthPollPrct1)	double	The value of tPortAccEgrQGrpQDepthPollPrct1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrct10 [Depth Poll Prct 10] (tPortAccEgrQGrpQDepthPollPrct10)	double	The value of tPortAccEgrQGrpQDepthPollPrct10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.
depthPollPrct2 [Depth Poll Prct 2] (tPortAccEgrQGrpQDepthPollPrct2)	double	The value of tPortAccEgrQGrpQDepthPollPrct2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrnt3 [Depth Poll Prcnt 3] (tPortAccEgrQGrpQDepthPollPrnt3)	double	The value of tPortAccEgrQGrpQDepthPollPrnt3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt4 [Depth Poll Prcnt 4] (tPortAccEgrQGrpQDepthPollPrnt4)	double	The value of tPortAccEgrQGrpQDepthPollPrnt4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt5 [Depth Poll Prcnt 5] (tPortAccEgrQGrpQDepthPollPrnt5)	double	The value of tPortAccEgrQGrpQDepthPollPrnt5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt6 [Depth Poll Prcnt 6] (tPortAccEgrQGrpQDepthPollPrnt6)	double	The value of tPortAccEgrQGrpQDepthPollPrnt6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt7 [Depth Poll Prcnt 7] (tPortAccEgrQGrpQDepthPollPrnt7)	double	The value of tPortAccEgrQGrpQDepthPollPrnt7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt8 [Depth Poll Prcnt 8] (tPortAccEgrQGrpQDepthPollPrnt8)	double	The value of tPortAccEgrQGrpQDepthPollPrnt8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt9 [Depth Poll Prcnt 9] (tPortAccEgrQGrpQDepthPollPrnt9)	double	The value of tPortAccEgrQGrpQDepthPollPrnt9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AccessIngrQDepthInfo</p> <p>MIB entry name: tPortAcclngQGrpQDepthInfoEntry</p> <p>Entry description: The value of tPortAcclngQGrpQDepthInfoEntry represents queue-depth monitoring information for each access ingress port queue-group override queue for which the value of tPortAcclngQOverMonitorDepth is set to 'true (1)'.</p> <p>Table description (for tPortAcclngQGrpQDepthInfoTable): The value of tPortAcclngQGrpQDepthInfoTable has an entry for each access ingress port queue-group override queue for which the value of tPortAcclngQOverMonitorDepth is set to 'true (1)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.AccessIngrQOverride</p>		
depthAvgElpsdTime [Depth Avg Elpsd Time] (tPortAcclngQGrpQDepthAvgElpsdTme)	String	The value of tPortAcclngQGrpQDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctlInterval [Depth Avg Poll Prctl Interval] (tPortAcclngQGrpQDepthAvgPollInt)	long	The value of tPortAcclngQGrpQDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrctl1 [Depth Poll Prctl 1] (tPortAcclngQGrpQDepthPollPrctl1)	double	The value of tPortAcclngQGrpQDepthPollPrctl1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrctl10 [Depth Poll Prctl 10] (tPortAcclngQGrpQDepthPollPrctl10)	double	The value of tPortAcclngQGrpQDepthPollPrctl10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.
depthPollPrctl2 [Depth Poll Prctl 2] (tPortAcclngQGrpQDepthPollPrctl2)	double	The value of tPortAcclngQGrpQDepthPollPrctl2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrct3 [Depth Poll Prct 3] (tPortAcclngQGrpQDepthPollPrct3)	double	The value of tPortAcclngQGrpQDepthPollPrct3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrct4 [Depth Poll Prct 4] (tPortAcclngQGrpQDepthPollPrct4)	double	The value of tPortAcclngQGrpQDepthPollPrct4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrct5 [Depth Poll Prct 5] (tPortAcclngQGrpQDepthPollPrct5)	double	The value of tPortAcclngQGrpQDepthPollPrct5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrct6 [Depth Poll Prct 6] (tPortAcclngQGrpQDepthPollPrct6)	double	The value of tPortAcclngQGrpQDepthPollPrct6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrct7 [Depth Poll Prct 7] (tPortAcclngQGrpQDepthPollPrct7)	double	The value of tPortAcclngQGrpQDepthPollPrct7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrct8 [Depth Poll Prct 8] (tPortAcclngQGrpQDepthPollPrct8)	double	The value of tPortAcclngQGrpQDepthPollPrct8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrct9 [Depth Poll Prct 9] (tPortAcclngQGrpQDepthPollPrct9)	double	The value of tPortAcclngQGrpQDepthPollPrct9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CohOptPortStats</p> <p>MIB entry name: tmnxCohOptPortStatsEntry</p> <p>Entry description: Each row entry includes statistics for a DWDM coherent optical port in the system. Entries cannot be created or deleted via SNMP SET operations.</p> <p>Table description (for tmnxCohOptPortStatsTable): The tmnxCohOptPortStatsTable contains statistics information for DWDM coherent optical ports in the Nokia SROS system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
cohOptPortRxBER [Coh Opt Port Rx BER] (tmnxCohOptPortRxBER)	long	The value of tmnxCohOptPortRxBER indicates the RX Bit Error Rate (BER) since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERAvg [Coh Opt Port Rx BERAvg] (tmnxCohOptPortRxBERAvg)	long	The value of tmnxCohOptPortRxBERAvg indicates the RX average BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERMax [Coh Opt Port Rx BERMax] (tmnxCohOptPortRxBERMax)	long	The value of tmnxCohOptPortRxBERMax indicates the RX maximum BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERMin [Coh Opt Port Rx BERMin] (tmnxCohOptPortRxBERMin)	long	The value of tmnxCohOptPortRxBERMin indicates the RX minimum BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxChromaticDisp [Coh Opt Port Rx Chromatic Disp] (tmnxCohOptPortRxChromaticDisp)	long	The value of tmnxCohOptPortRxChromaticDisp indicates the RX chromatic dispersion since the last port statistics clear.
cohOptPortRxChromaticDispAvg [Coh Opt Port Rx Chromatic Disp Avg] (tmnxCohOptPortRxChromaticDispAvg)	long	The value of tmnxCohOptPortRxChromaticDispAvg indicates the RX average chromatic dispersion since the last port statistics clear.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxChromaticDispMax [Coh Opt Port Rx Chromatic Disp Max] (tmnxCohOptPortRxChromaticDispMax)	long	The value of tmnxCohOptPortRxChromaticDispMax indicates the RX maximum chromatic dispersion since the last port statistics clear.
cohOptPortRxChromaticDispMin [Coh Opt Port Rx Chromatic Disp Min] (tmnxCohOptPortRxChromaticDispMin)	long	The value of tmnxCohOptPortRxChromaticDispMin indicates the RX minimum chromatic dispersion since the last port statistics clear.
cohOptPortRxDiffGrpDly [Coh Opt Port Rx Diff Grp Dly] (tmnxCohOptPortRxDiffGrpDly)	long	The value of tmnxCohOptPortRxDiffGrpDly indicates the RX differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyAvg [Coh Opt Port Rx Diff Grp Dly Avg] (tmnxCohOptPortRxDiffGrpDlyAvg)	long	The value of tmnxCohOptPortRxDiffGrpDlyAvg indicates the RX average differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyMax [Coh Opt Port Rx Diff Grp Dly Max] (tmnxCohOptPortRxDiffGrpDlyMax)	long	The value of tmnxCohOptPortRxDiffGrpDlyMax indicates the RX maximum differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyMin [Coh Opt Port Rx Diff Grp Dly Min] (tmnxCohOptPortRxDiffGrpDlyMin)	long	The value of tmnxCohOptPortRxDiffGrpDlyMin indicates the RX minimum differential group delay since the last port statistics clear.
cohOptPortRxFreqOffset [Coh Opt Port Rx Freq Offset] (tmnxCohOptPortRxFreqOffset)	long	The value of tmnxCohOptPortRxFreqOffset indicates the RX frequency offset since the last port statistics clear.
cohOptPortRxFreqOffsetAvg [Coh Opt Port Rx Freq Offset Avg] (tmnxCohOptPortRxFreqOffsetAvg)	long	The value of tmnxCohOptPortRxFreqOffsetAvg indicates the RX average frequency offset since the last port statistics clear.
cohOptPortRxFreqOffsetMax [Coh Opt Port Rx Freq Offset Max] (tmnxCohOptPortRxFreqOffsetMax)	long	The value of tmnxCohOptPortRxFreqOffsetMax indicates the RX maximum frequency offset since the last port statistics clear.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxFreqOffsetMin [Coh Opt Port Rx Freq Offset Min] (tmnxCohOptPortRxFreqOffsetMin)	long	The value of tmnxCohOptPortRxFreqOffsetMin indicates the RX minimum frequency offset since the last port statistics clear.
cohOptPortRxFreqPower [Coh Opt Port Rx Power] (tmnxCohOptPortRxFreqPower)	float	The value of tmnxCohOptPortRxFreqPower indicates the RX optical power since the last port statistics clear.
cohOptPortRxFreqPowerAvg [Coh Opt Port Rx Power Avg] (tmnxCohOptPortRxFreqPowerAvg)	float	The value of tmnxCohOptPortRxFreqPowerAvg indicates the RX average optical power since the last port statistics clear.
cohOptPortRxFreqPowerMax [Coh Opt Port Rx Power Max] (tmnxCohOptPortRxFreqPowerMax)	float	The value of tmnxCohOptPortRxFreqPowerMax indicates the RX maximum optical power since the last port statistics clear.
cohOptPortRxFreqPowerMin [Coh Opt Port Rx Power Min] (tmnxCohOptPortRxFreqPowerMin)	float	The value of tmnxCohOptPortRxFreqPowerMin indicates the RX minimum optical power since the last port statistics clear.
cohOptPortRxQ [Coh Opt Port Rx Q] (tmnxCohOptPortRxQ)	long	The value of tmnxCohOptPortRxQ indicates the RX Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQAvg [Coh Opt Port Rx QAvg] (tmnxCohOptPortRxQAvg)	long	The value of tmnxCohOptPortRxQAvg indicates the RX average Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQMax [Coh Opt Port Rx QMax] (tmnxCohOptPortRxQMax)	long	The value of tmnxCohOptPortRxQMax indicates the RX maximum Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQMin [Coh Opt Port Rx QMin] (tmnxCohOptPortRxQMin)	long	The value of tmnxCohOptPortRxQMin indicates the RX minimum Q since the last port statistics clear, represented in tenths of a dB.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxSNR [Coh Opt Port Rx SNR] (tmnxCohOptPortRxSNR)	long	The value of tmnxCohOptPortRxSNR indicates the RX Signal-to-Noise Ratio (SNR) since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRAvg [Coh Opt Port Rx SNRAvg] (tmnxCohOptPortRxSNRAvg)	long	The value of tmnxCohOptPortRxSNRAvg indicates the RX average SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRMax [Coh Opt Port Rx SNRMax] (tmnxCohOptPortRxSNRMax)	long	The value of tmnxCohOptPortRxSNRMax indicates the RX maximum SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRMin [Coh Opt Port Rx SNRMin] (tmnxCohOptPortRxSNRMin)	long	The value of tmnxCohOptPortRxSNRMin indicates the RX minimum SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortStatsElapsedSec [Coh Opt Port Stats Elapsed Sec] (tmnxCohOptPortStatsElapsedSec)	long	The value of tmnxCohOptPortStatsElapsedSec indicates the number of elapsed seconds since the start of coherent optical stats collection after the last port statistics clear.
cohOptPortTxPower [Coh Opt Port Tx Power] (tmnxCohOptPortTxPower)	float	The value of tmnxCohOptPortTxPower indicates the TX optical power since the last port statistics clear.
cohOptPortTxPowerAvg [Coh Opt Port Tx Power Avg] (tmnxCohOptPortTxPowerAvg)	float	The value of tmnxCohOptPortTxPowerAvg indicates the TX average optical power since the last port statistics clear.
cohOptPortTxPowerMax [Coh Opt Port Tx Power Max] (tmnxCohOptPortTxPowerMax)	float	The value of tmnxCohOptPortTxPowerMax indicates the TX maximum optical power since the last port statistics clear.
cohOptPortTxPowerMin [Coh Opt Port Tx Power Min] (tmnxCohOptPortTxPowerMin)	float	The value of tmnxCohOptPortTxPowerMin indicates the TX minimum optical power since the last port statistics clear.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsHighCapacityPkts1024to1518Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsHighCapacityPkts128to255Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsHighCapacityPkts256to511Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsHighCapacityPkts512to1023Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernet. If the network is a full-duplex ethernet and the mediaIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting mediaIndependentInPkts for etherStatsHighCapacityPkts, and mediaIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting mediaIndependentOutPkts for etherStatsHighCapacityPkts, and mediaIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>NetworkEgrQDepthInfo MIB entry name: tPortNetEgrQGrpQDepthInfoEntry Entry description: The value of tPortNetEgrQGrpQDepthInfoEntry represents queue-depth monitoring information for each network egress port queue-group override queue for which the value of tPortNetEgrQOverMonitorDepth is set to 'true (1)'. Table description (for tPortNetEgrQGrpQDepthInfoTable): The value of tPortNetEgrQGrpQDepthInfoTable has an entry for each network egress port queue-group override queue for which the value of tPortNetEgrQOverMonitorDepth is set to 'true (1)'. Supports realtime plotting Supports scheduled collection Monitored class: ethernetequipment.NetworkEgrQOverride</p>		
depthAvgElpsdTime [Depth Avg Elpsd Time] (tPortNetEgrQGrpQDepthAvgElpsdTme)	String	The value of tPortNetEgrQGrpQDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctlInterval [Depth Avg Poll Prctl Interval] (tPortNetEgrQGrpQDepthAvgPollInt)	long	The value of tPortNetEgrQGrpQDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrctl1 [Depth Poll Prctl 1] (tPortNetEgrQGrpQDepthPollPrctl1)	double	The value of tPortNetEgrQGrpQDepthPollPrctl1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrctl10 [Depth Poll Prctl 10] (tPortNetEgrQGrpQDepthPollPrctl10)	double	The value of tPortNetEgrQGrpQDepthPollPrctl10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrct2 [Depth Poll Prct 2] (tPortNetEgrQGrpQDepthPollPrct2)	double	The value of tPortNetEgrQGrpQDepthPollPrct2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.
depthPollPrct3 [Depth Poll Prct 3] (tPortNetEgrQGrpQDepthPollPrct3)	double	The value of tPortNetEgrQGrpQDepthPollPrct3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrct4 [Depth Poll Prct 4] (tPortNetEgrQGrpQDepthPollPrct4)	double	The value of tPortNetEgrQGrpQDepthPollPrct4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrct5 [Depth Poll Prct 5] (tPortNetEgrQGrpQDepthPollPrct5)	double	The value of tPortNetEgrQGrpQDepthPollPrct5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrct6 [Depth Poll Prct 6] (tPortNetEgrQGrpQDepthPollPrct6)	double	The value of tPortNetEgrQGrpQDepthPollPrct6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrct7 [Depth Poll Prct 7] (tPortNetEgrQGrpQDepthPollPrct7)	double	The value of tPortNetEgrQGrpQDepthPollPrct7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrct8 [Depth Poll Prct 8] (tPortNetEgrQGrpQDepthPollPrct8)	double	The value of tPortNetEgrQGrpQDepthPollPrct8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrct9 [Depth Poll Prct 9] (tPortNetEgrQGrpQDepthPollPrct9)	double	The value of tPortNetEgrQGrpQDepthPollPrct9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OtulfStats</p> <p>MIB entry name: tmnxOtulfRawStatsEntry</p> <p>Entry description: The tmnxOtulfRawStatsEntry stores the statistics for an individual OTU interface. tmnxOtulfRawStatsEntry rows are created and destroyed by the system when rows are added or removed in the tmnxOtulfTable.</p> <p>Table description (for tmnxOtulfRawStatsTable): The tmnxOtulfRawStatsTable consists of the raw statistics associated with the OTU interfaces contained in the tmnxOtulfTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
elapsedSec [Elapsed Sec] (tmnxOtulfRawStatsElapsedSec)	long	The value of tmnxOtulfRawStatsElapsedSec indicates the number of Elapsed seconds since the last OTU raw statistics clearing.
feCes [Fe Ces] (tmnxOtulfRawStatsFECES)	long	The value of tmnxOtulfRawStatsFECES indicates the number of Forward Error Correction (FEC) Errors Seconds (ES).
fecCorrOnes [Fec Corr Ones] (tmnxOtulfRawStatsFECCorrOnes)	long	The value of tmnxOtulfRawStatsFECCorrOnes indicates the number of Forward Error Correction (FEC) corrected ones.
fecCorrZeros [Fec Corr Zeros] (tmnxOtulfRawStatsFECCorrZeros)	long	The value of tmnxOtulfRawStatsFECCorrZeros indicates the number of Forward Error Correction (FEC) corrected zeros.
fecSes [Fec Ses] (tmnxOtulfRawStatsFECSES)	long	The value of tmnxOtulfRawStatsFECSES indicates the number of Forward Error Correction (FEC) Severely Errors Seconds (SES).
fecUas [Fec Uas] (tmnxOtulfRawStatsFECUAS)	long	The value of tmnxOtulfRawStatsFECUAS indicates the number of Forward Error Correction (FEC) Unavailable Seconds (UAS).

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecUncorrSr [Fec Uncorr Sr] (tmnxOtuIfRawStatsFECUncorrSR)	long	The value of tmnxOtuIfRawStatsFECUncorrSR indicates the number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcFecCorrOnes [Hc Fec Corr Ones] (tmnxOtuIfRawStatsHCFECCorrOnes)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrOnes indicates the High Capacity number of Forward Error Correction (FEC) corrected ones.
hcFecCorrZeros [Hc Fec Corr Zeros] (tmnxOtuIfRawStatsHCFECCorrZeros)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrZeros indicates the High Capacity number of Forward Error Correction (FEC) corrected zeros.
hcFecUncorrSr [Hc Fec Uncorr Sr] (tmnxOtuIfRawStatsHCFECUncorrSR)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECUncorrSR indicates the High Capacity number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcPmBei [Hc Pm Bei] (tmnxOtuIfRawStatsHCPMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBEI indicates the High Capacity number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
hcPmBip8 [Hc Pm Bip 8] (tmnxOtuIfRawStatsHCPMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBIP8 indicates the High Capacity number of Path Monitoring (PM) BIP8 errors.
hcSmBei [Hc Sm Bei] (tmnxOtuIfRawStatsHCSMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBEI indicates the High Capacity number of Section Monitoring (SM) Backward Error Indication (BEI) errors.
hcSmBip8 [Hc Sm Bip 8] (tmnxOtuIfRawStatsHCSMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBIP8 indicates the High Capacity number of Section Monitoring (SM) BIP8 errors.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
npj [Npj] (tmnxOtuIfRawStatsNPJ)	long	The value of tmnxOtuIfRawStatsNPJ indicates the number of Negative Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
ofFecCorrOnes [Of Fec Corr Ones] (tmnxOtuIfRawStatsOFFECCorrOnes)	long	The value of tmnxOtuIfRawStatsOFFECCorrOnes indicates the number of times the tmnxOtuIfRawStatsFECCorrOnes overflowed.
ofFecCorrZeros [Of Fec Corr Zeros] (tmnxOtuIfRawStatsOFFECCorrZeros)	long	The value of tmnxOtuIfRawStatsOFFECCorrZeros indicates the number of times the tmnxOtuIfRawStatsFECCorrZeros overflowed.
ofFecUncorrSr [Of Fec Uncorr Sr] (tmnxOtuIfRawStatsOFFECUncorrSR)	long	The value of tmnxOtuIfRawStatsOFFECUncorrSR indicates the number of times the tmnxOtuIfRawStatsFECUncorrSR overflowed.
ofPmBei [Of Pm Bei] (tmnxOtuIfRawStatsOFPMBEI)	long	The value of tmnxOtuIfRawStatsOFPMBEI indicates the number of times tmnxOtuIfRawStatsPMBEI overflowed.
ofPmBip8 [Of Pm Bip 8] (tmnxOtuIfRawStatsOFPMBIP8)	long	The value of tmnxOtuIfRawStatsOFPMBIP8 indicates the number of times the tmnxOtuIfRawStatsPMBIP8 overflowed.
ofSmBei [Of Sm Bei] (tmnxOtuIfRawStatsOFSMBEI)	long	The value of tmnxOtuIfRawStatsOFSMBEI indicates the number of times the tmnxOtuIfRawStatsSMBEI overflowed.
ofSmBip8 [Of Sm Bip 8] (tmnxOtuIfRawStatsOF SMBIP8)	long	The value of tmnxOtuIfRawStatsOF SMBIP8 indicates the number of times the tmnxOtuIfRawStatsSMBIP8 overflowed.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmBei [Pm Bei] (tmnxOtuIfRawStatsPMBEI)	long	The value of tmnxOtuIfRawStatsPMBEI indicates the number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
pmBip8 [Pm Bip 8] (tmnxOtuIfRawStatsPMBIP8)	long	The value of tmnxOtuIfRawStatsPMBIP8 indicates the number of Path Monitoring (PM) BIP8 errors.
pmEs [Pm Es] (tmnxOtuIfRawStatsPMES)	long	The value of tmnxOtuIfRawStatsPMES indicates the number of Path Monitoring (PM) Errored Seconds (ES).
pmSes [Pm Ses] (tmnxOtuIfRawStatsPMSES)	long	The value of tmnxOtuIfRawStatsPMSES indicates the number of Path Monitoring (PM) Severely Errored Seconds (SES).
pmUas [Pm Uas] (tmnxOtuIfRawStatsPMUAS)	long	The value of tmnxOtuIfRawStatsPMUAS indicates the number of Path Monitoring (PM) Unavailable Seconds (UAS).
ppj [Ppj] (tmnxOtuIfRawStatsPPJ)	long	The value of tmnxOtuIfRawStatsPPJ indicates the number of Positive Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
smBei [Sm Bei] (tmnxOtuIfRawStatsSMBEI)	long	The value of tmnxOtuIfRawStatsSMBEI indicates the number of Section Monitoring (SM) Backward Error Indication (BEI) errors.
smBip8 [Sm Bip 8] (tmnxOtuIfRawStatsSMBIP8)	long	The value of tmnxOtuIfRawStatsSMBIP8 indicates the number of Section Monitoring (SM) BIP8 errors.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
smEs [Sm Es] (tmnxOtuIfRawStatsSMES)	long	The value of tmnxOtuIfRawStatsSMES indicates the number of Section Monitoring (SM) Errored Seconds (ES).
smSes [Sm Ses] (tmnxOtuIfRawStatsSMSES)	long	The value of tmnxOtuIfRawStatsSMSES indicates the number of Section Monitoring (SM) Severely Errored Seconds (SES).
smUas [Sm Uas] (tmnxOtuIfRawStatsSMUAS)	long	The value of tmnxOtuIfRawStatsSMUAS indicates the number of Section Monitoring (SM) Unavailable Seconds (UAS).
<p>PortEgrQosQueueStat MIB entry name: tmnxPortEgrQosQStatEntry Entry description: Egress statistics about a specific port's QoS queue-group queue. In release 11.0, tPortAccEgrQGrpInStanceId is added as another index before tmnxPortEgrQosQStatQueueId for this tmnxPortEgrQosQStatTable. Table description (for tmnxPortEgrQosQStatTable): A table that contains egress QoS queue-group queue port statistics. Supports realtime plotting Does not support scheduled collection Monitored class: ethernetequipment.AccessEgrQGroup</p>		
portEgrQosQStatDpdInProfOcts [Port Egr Qos QStat Dpd In Prof Octs] (tmnxPortEgrQosQStatDpdInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdInProfOcts indicates the number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatDpdInProfPkts [Port Egr Qos QStat Dpd In Prof Pkts] (tmnxPortEgrQosQStatDpdInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdInProfPkts indicates the number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatDpdOutProfOcts [Port Egr Qos QStat Dpd Out Prof Octs] (tmnxPortEgrQosQStatDpdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdOutProfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrQosQStatDpdOutProfPkts [Port Egr Qos QStat Dpd Out Prof Pkts] (tmnxPortEgrQosQStatDpdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdOutProfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatFwdInProfOcts [Port Egr Qos QStat Fwd In Prof Octs] (tmnxPortEgrQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdInProfPkts [Port Egr Qos QStat Fwd In Prof Pkts] (tmnxPortEgrQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdOutProfOcts [Port Egr Qos QStat Fwd Out Prof Octs] (tmnxPortEgrQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdOutProfPkts [Port Egr Qos QStat Fwd Out Prof Pkts] (tmnxPortEgrQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
portEgrQosQStatQueueId [Port Egr Qos QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
<p>PortIngQosQueueStat MIB entry name: tmnxPortIngQosQStatEntry Entry description: Ingress statistics about a specific port's QoS queue-group queue. Table description (for tmnxPortIngQosQStatTable): A table that contains ingress QoS queue-group queue port statistics. Supports realtime plotting Does not support scheduled collection Monitored class: ethernetequipment.AccessIngrQGroup</p>		

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatDpdHiPrioOcts [Port Ing Qos QStat Dpd Hi Prio Octs] (tmnxPortIngQosQStatDpdHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdHiPrioPkts [Port Ing Qos QStat Dpd Hi Prio Pkts] (tmnxPortIngQosQStatDpdHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioOcts [Port Ing Qos QStat Dpd Lo Prio Octs] (tmnxPortIngQosQStatDpdLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioPkts [Port Ing Qos QStat Dpd Lo Prio Pkts] (tmnxPortIngQosQStatDpdLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatFwdInProfOcts [Port Ing Qos QStat Fwd In Prof Octs] (tmnxPortIngQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdInProfPkts [Port Ing Qos QStat Fwd In Prof Pkts] (tmnxPortIngQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfOcts [Port Ing Qos QStat Fwd Out Prof Octs] (tmnxPortIngQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfPkts [Port Ing Qos QStat Fwd Out Prof Pkts] (tmnxPortIngQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatOffHiPrioOcts [Port Ing Qos QStat Off Hi Prio Octs] (tmnxPortIngQosQStatOffHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffHiPrioPkts [Port Ing Qos QStat Off Hi Prio Pkts] (tmnxPortIngQosQStatOffHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioOcts [Port Ing Qos QStat Off Lo Prio Octs] (tmnxPortIngQosQStatOffLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioPkts [Port Ing Qos QStat Off Lo Prio Pkts] (tmnxPortIngQosQStatOffLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatQueueId [Port Ing Qos QStat Queue Id] (tmnxPortIngQosQStatQueueId)	long	The value of tmnxPortIngQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
portIngQosQStatUncolOctsOff [Port Ing Qos QStat Uncol Octs Off] (tmnxPortIngQosQStatUncolOctsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolOctsOff indicates the number of uncolored octets offered to the ingress Qchip.
portIngQosQStatUncolPktsOff [Port Ing Qos QStat Uncol Pkts Off] (tmnxPortIngQosQStatUncolPktsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolPktsOff indicates the number of uncolored packets offered to the ingress Qchip.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortNetEgrQGrpArbitStat</p> <p>MIB entry name: tPortNetEgrQGrpArbitStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpArbitStatEntry defines an entry in the tPortNetEgrQGrpArbitStatTable. It represents statistics about a specific QoS egress queue group arbiter.</p> <p>Table description (for tPortNetEgrQGrpArbitStatTable): The value of tPortNetEgrQGrpArbitStatTable contains egress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQGrpArbitStatFwdOcts [Port Net Egr QGrp Arbit Stat Fwd Octs] (tPortNetEgrQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdOcts indicates the number of forwarded octets by the egress queue group arbiter Pchip.
portNetEgrQGrpArbitStatFwdOctsH [Port Net Egr QGrp Arbit Stat Fwd Octs H] (tPortNetEgrQGrpArbitStatFwdOctsH)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdOctsL [Port Net Egr QGrp Arbit Stat Fwd Octs L] (tPortNetEgrQGrpArbitStatFwdOctsL)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdPkts [Port Net Egr QGrp Arbit Stat Fwd Pkts] (tPortNetEgrQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdPkts indicates the number of forwarded packets by the egress queue group arbiter Pchip.
portNetEgrQGrpArbitStatFwdPktsH [Port Net Egr QGrp Arbit Stat Fwd Pkts H] (tPortNetEgrQGrpArbitStatFwdPktsH)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatFwdPktsL [Port Net Egr QGrp Arbit Stat Fwd Pkts L] (tPortNetEgrQGrpArbitStatFwdPktsL)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpArbitStatName [Port Net Egr QGrp Arbit Stat Name] (tPortNetEgrQGrpArbitStatName)	String	The value of tPortNetEgrQGrpArbitStatName specifies the name of the egress QoS arbiter of this port network queue group.
<p>PortNetEgrQGrpPStat</p> <p>MIB entry name: tPortNetEgrQGrpPStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpPStatEntry defines an entry in the tPortNetEgrQGrpPStatTable. It represents statistics about a specific QoS egress queue group policer on the specified port.</p> <p>Table description (for tPortNetEgrQGrpPStatTable): The value of tPortNetEgrQGrpPStatTable contains port egress queue group policer statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQGrpPStDrpExdProfOcts [Port Net Egr QGrp PSt Drp Exd Prof Octs] (tPortNetEgrQGrpPStDrpExdProfOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpExdProfOcts indicates the number of exceed-profile octets forwarded by the egress Pchip.
portNetEgrQGrpPStDrpExdProfPkts [Port Net Egr QGrp PSt Drp Exd Prof Pkts] (tPortNetEgrQGrpPStDrpExdProfPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpExdProfPkts indicates the number of exceed-profile packets discarded by the egress Pchip.
portNetEgrQGrpPStDrpInPlusProfOcts [Port Net Egr QGrp PSt Drp In Plus Prof Octs] (tPortNetEgrQGrpPStDrpInPProfOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpInPProfOcts indicates the number of inplus-profile octets forwarded by the egress Pchip.
portNetEgrQGrpPStDrpInPlusProfPkts [Port Net Egr QGrp PSt Drp In Plus Prof Pkts] (tPortNetEgrQGrpPStDrpInPProfPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpInPProfPkts indicates the number of inplus-profile packets discarded by the egress Pchip.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStDrpInProfOct [Port Net Egr QGrp PSt Drp In Prof Oct] (tPortNetEgrQGrpPStDrpInProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpInProfOct indicates the number of in-profile octets discarded by the egress Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portNetEgrQGrpPStDrpInProfOctH [Port Net Egr QGrp PSt Drp In Prof Oct H] (tPortNetEgrQGrpPStDrpInProfOctH)	long	The value of tPortNetEgrQGrpPStDrpInProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStDrpInProfOct.
portNetEgrQGrpPStDrpInProfOctL [Port Net Egr QGrp PSt Drp In Prof Oct L] (tPortNetEgrQGrpPStDrpInProfOctL)	long	The value of tPortNetEgrQGrpPStDrpInProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStDrpInProfOct.
portNetEgrQGrpPStDrpInProfPkt [Port Net Egr QGrp PSt Drp In Prof Pkt] (tPortNetEgrQGrpPStDrpInProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpInProfPkt indicates the number of in-profile packets discarded by the egress Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portNetEgrQGrpPStDrpInProfPktH [Port Net Egr QGrp PSt Drp In Prof Pkt H] (tPortNetEgrQGrpPStDrpInProfPktH)	long	The value of tPortNetEgrQGrpPStDrpInProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStDrpInProfPkt.
portNetEgrQGrpPStDrpInProfPktL [Port Net Egr QGrp PSt Drp In Prof Pkt L] (tPortNetEgrQGrpPStDrpInProfPktL)	long	The value of tPortNetEgrQGrpPStDrpInProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStDrpInProfPkt.
portNetEgrQGrpPStDrpOutProfOct [Port Net Egr QGrp PSt Drp Out Prof Oct] (tPortNetEgrQGrpPStDrpOutProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpOutProfOct indicates the number of out-of-profile octets discarded by the egress Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portNetEgrQGrpPStDrpOutProfOctH [Port Net Egr QGrp PSt Drp Out Prof Oct H] (tPortNetEgrQGrpPStDrpOutProfOctH)	long	The value of tPortNetEgrQGrpPStDrpOutProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStDrpOutProfOct.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStDrpOutProfOctL [Port Net Egr QGrp PSt Drp Out Prof Oct L] (tPortNetEgrQGrpPStDrpOutProfOctL)	long	The value of tPortNetEgrQGrpPStDrpOutProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStDrpOutProfOct.
portNetEgrQGrpPStDrpOutProfPkt [Port Net Egr QGrp PSt Drp Out Prof Pkt] (tPortNetEgrQGrpPStDrpOutProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpOutProfPkt indicates the number of out-of-profile packets discarded by the egress Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portNetEgrQGrpPStDrpOutProfPktH [Port Net Egr QGrp PSt Drp Out Prof Pkt H] (tPortNetEgrQGrpPStDrpOutProfPktH)	long	The value of tPortNetEgrQGrpPStDrpOutProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStDrpOutProfPkt.
portNetEgrQGrpPStDrpOutProfPktL [Port Net Egr QGrp PSt Drp Out Prof Pkt L] (tPortNetEgrQGrpPStDrpOutProfPktL)	long	The value of tPortNetEgrQGrpPStDrpOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStDrpOutProfPkt.
portNetEgrQGrpPStFwdExdProfOcts [Port Net Egr QGrp PSt Fwd Exd Prof Octs] (tPortNetEgrQGrpPStFwdExdProfOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStFwdExdProfOcts indicates the number of exceed-profile octets forwarded by the egress Pchip.
portNetEgrQGrpPStFwdExdProfPkts [Port Net Egr QGrp PSt Fwd Exd Prof Pkts] (tPortNetEgrQGrpPStFwdExdProfPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStFwdExdProfPkts indicates the number of exceed-profile packets forwarded by the egress Pchip.
portNetEgrQGrpPStFwdInPlusProfOcts [Port Net Egr QGrp PSt Fwd In Plus Prof Octs] (tPortNetEgrQGrpPStFwdInPProfOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStFwdInPProfOcts indicates the number of inplus-profile octets forwarded by the egress Pchip.
portNetEgrQGrpPStFwdInPlusProfPkts [Port Net Egr QGrp PSt Fwd In Plus Prof Pkts] (tPortNetEgrQGrpPStFwdInPProfPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStFwdInPProfPkts indicates the number of inplus-profile packets forwarded by the egress Pchip.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStOffOutProfOctL [Port Net Egr QGrp PSt Off Out Prof Oct L] (tPortNetEgrQGrpPStOffOutProfOctL)	long	The value of tPortNetEgrQGrpPStOffOutProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfPkt [Port Net Egr QGrp PSt Off Out Prof Pkt] (tPortNetEgrQGrpPStOffOutProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfPkt indicates the number of out-of-profile packets (rate above CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffOutProfPktH [Port Net Egr QGrp PSt Off Out Prof Pkt H] (tPortNetEgrQGrpPStOffOutProfPktH)	long	The value of tPortNetEgrQGrpPStOffOutProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStOffOutProfPktL [Port Net Egr QGrp PSt Off Out Prof Pkt L] (tPortNetEgrQGrpPStOffOutProfPktL)	long	The value of tPortNetEgrQGrpPStOffOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStUncolOctOff [Port Net Egr QGrp PSt Uncol Oct Off] (tPortNetEgrQGrpPStUncolOctOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolOctOff indicates the number of uncolored octets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolOctOffH [Port Net Egr QGrp PSt Uncol Oct Off H] (tPortNetEgrQGrpPStUncolOctOffH)	long	The value of tPortNetEgrQGrpPStUncolOctOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolOctOffL [Port Net Egr QGrp PSt Uncol Oct Off L] (tPortNetEgrQGrpPStUncolOctOffL)	long	The value of tPortNetEgrQGrpPStUncolOctOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolPktOff [Port Net Egr QGrp PSt Uncol Pkt Off] (tPortNetEgrQGrpPStUncolPktOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolPktOff indicates the number of uncolored packets forwarded by the egress Pchip.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStUncolPktOffH [Port Net Egr QGrp PSt Uncol Pkt Off H] (tPortNetEgrQGrpPStUncolPktOffH)	long	The value of tPortNetEgrQGrpPStUncolPktOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStUncolPktOffL [Port Net Egr QGrp PSt Uncol Pkt Off L] (tPortNetEgrQGrpPStUncolPktOffL)	long	The value of tPortNetEgrQGrpPStUncolPktOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStatMode [Port Net Egr QGrp PStat Mode] (tPortNetEgrQGrpPStatMode)	int	The value of tPortNetEgrQGrpPStatMode indicates the stat mode used by this policer.
portNetEgrQGrpPStatQosPolicerId [Port Net Egr QGrp PStat Qos Policer Id] (tPortNetEgrQGrpPStatQosPolicerId)	long	The value of tPortNetEgrQGrpPStatQosPolicerId specifies the index of the egress QoS policer queue group on network port.
<p>PortNetEgrQueueStat</p> <p>MIB entry name: tmnxPortNetEgrQStatEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgrQStatTable. Entries are created and deleted by the system depending on the queue policy being used at the specific port. In release 10.0 tPortNetEgrQGrpInstanceId is added as another index before tmnxPortEgrQosQStatQueueId for this tmnxPortNetEgrQStatTable.</p> <p>Table description (for tmnxPortNetEgrQStatTable): Defines the Nokia SROS series network port egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the queue-group queues being used for the ports to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQDroInProfOcts [Port Net Egr QDro In Prof Octs] (tmnxPortNetEgrQDroInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfOcts indicates the number of conforming network egress octets dropped on this port using this queue-group queue.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQDroInProfPkts [Port Net Egr QDro In Prof Pkts] (tmnxPortNetEgrQDroInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfPkts indicates the number of conforming network egress packets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfOcts [Port Net Egr QDro Out Prof Octs] (tmnxPortNetEgrQDroOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfOcts indicates the number of exceeding network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfPkts [Port Net Egr QDro Out Prof Pkts] (tmnxPortNetEgrQDroOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfPkts indicates the number of exceeding network egress packets dropped on this port using this queue-group queue.
portNetEgrQFwdInProfOcts [Port Net Egr QFwd In Prof Octs] (tmnxPortNetEgrQFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfOcts indicates the number of conforming network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdInProfPkts [Port Net Egr QFwd In Prof Pkts] (tmnxPortNetEgrQFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfPkts indicates the number of conforming network egress packets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfOcts [Port Net Egr QFwd Out Prof Octs] (tmnxPortNetEgrQFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfPkts [Port Net Egr QFwd Out Prof Pkts] (tmnxPortNetEgrQFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this port using this queue-group queue.
portNetEgrQStatQueueId [Port Net Egr QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.

qosClassifier3DroppedPackets [Qos Classifier 3 Dropped Packets] (tmnxPortIngrMdaQos03StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos03StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 03 because of an overload condition on the MDA.
qosClassifier4DroppedPackets [Qos Classifier 4 Dropped Packets] (tmnxPortIngrMdaQos04StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos04StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 04 because of an overload condition on the MDA.
qosClassifier5DroppedPackets [Qos Classifier 5 Dropped Packets] (tmnxPortIngrMdaQos05StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos05StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 05 because of an overload condition on the MDA.
qosClassifier6DroppedPackets [Qos Classifier 6 Dropped Packets] (tmnxPortIngrMdaQos06StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos06StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 06 because of an overload condition on the MDA.
qosClassifier7DroppedPackets [Qos Classifier 7 Dropped Packets] (tmnxPortIngrMdaQos07StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos07StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 07 because of an overload condition on the MDA.
qosClassifier8DroppedPackets [Qos Classifier 8 Dropped Packets] (tmnxPortIngrMdaQos08StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos08StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 08 because of an overload condition on the MDA.
qosClassifier9DroppedPackets [Qos Classifier 9 Dropped Packets] (tmnxPortIngrMdaQos09StatDropPkts)	java. math. BigInteger	tmnxPortIngrMdaQos09StatDropPkts indicates the number of packets dropped on the oversubscribed MDA for QoS classifier result threshold 09 because of an overload condition on the MDA.

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WaveLengthTrackerOpticalStats</p> <p>MIB entry name: tmnxOpticalPortOperEntry</p> <p>Entry description: Each row entry represents an Optical port on a IOM card in a chassis in the system. The tmnxOpticalPortOperEntry contains attributes that are unique to the Optical ports.</p> <p>Table description (for tmnxOpticalPortOperTable): The tmnxOpticalPortOperTable has an entry for each DWDM Optical port on each IOM card in each chassis in the Nokia SROS system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.WaveLengthTracker</p>		
opticalAmpPowerIn [Optical Amp Power In] (tmnxOpticalPortAmpPowerIn)	float	The value of tmnxOpticalPortAmpPowerIn indicates the received average optical power at the input of the optical amplifier. The UNITS millibels (mBm) are units of 0.01 decibel relative to one milliwatt (0 dBm) or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
<p>WaveLengthTrackerStats</p> <p>MIB entry name: tmnxWaveTrackerEntry</p> <p>Entry description: Each row entry represents a Wave Tracker capable port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. The tmnxWaveTrackerEntry contains attributes that are unique to the Wave Tracker capable ports.</p> <p>Table description (for tmnxWaveTrackerTable): The tmnxWaveTrackerTable has an entry for each Wavelength Tracker port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.WaveLengthTracker</p>		

Table 253 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
targetPower [Target Power] (tmnxWaveTrackerTargetPower)	float	The value of tmnxWaveTrackerTargetPower specifies the desired average output power of the interface's transmitted optical signal when tmnxWaveTrackerPowerCtrlEnable is set to 'true (1)'. The UNITS millibels (mBm) are units of 0.01 decibel relative to one milliwatt (0 dBm) or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
waveTrackerLowerPowerMargin [Wave Tracker Lower Power Margin] (tmnxWaveTrackerLowerPowerMargin)	float	tmnxWaveTrackerLowerPowerMargin indicates how much the average output power of the interface's transmitted optical signal can be decreased. The UNITS mBm are units of 0.01 dB or dB multiplied by 100. The mB is used when integers are required instead of floating point. For example: 5.21 dB is equivalent to 521 mB.
waveTrackerMeasuredPower [Wave Tracker Measured Power] (tmnxWaveTrackerMeasuredPower)	float	tmnxWaveTrackerMeasuredPower indicates the current average output power of the interface's transmitted optical signal. The UNITS mBm are units of 0.01 dBm or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
waveTrackerUpperPowerMargin [Wave Tracker Upper Power Margin] (tmnxWaveTrackerUpperPowerMargin)	float	tmnxWaveTrackerUpperPowerMargin indicates how much the average output power of the interface's transmitted optical signal can be increased. The UNITS millibels (mB) are units of 0.01 dB or dB multiplied by 100. The mB is used when integers are required instead of floating point. For example: 5.21 dB is equivalent to 521 mB.

Table 254 ethernetoam statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmComponentLimitStats</p> <p>MIB entry name: tmnxDot1agCfmComponentLimitEntry</p> <p>Entry description: The tmnxDot1agCfmComponentLimitEntry consists of the resource limits for a particular component of ETH-CFM. Rows are managed by the system and can not be created or destroyed using SNMP set requests.</p> <p>Table description (for tmnxDot1agCfmComponentLimitTable): The tmnxDot1agCfmComponentLimitTable stores the current resource counts as well as their resource limits for Ethernet Connectivity Fault Management (ETH-CFM) components in the SROS series system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmComponentLimit</p>		
compName [Comp Name] (tmnxDot1agCfmCompName)	String	The value of tmnxDot1agCfmCompName indicates the name of the ETH-CFM component.
compResourceLimit [Comp Resource Limit] (tmnxDot1agCfmCompResourceLimit)	long	The value of tmnxDot1agCfmCompResourceLimit indicates the maximum resource usage limit for the ETH-CFM component for the SROS series system.
compResourceUsage [Comp Resource Usage] (tmnxDot1agCfmCompResourceUsage)	long	The value of tmnxDot1agCfmCompResourceUsage indicates the current resource usage for the ETH-CFM component.
majorIndex [Major Index] (tmnxDot1agCfmCompMajorIndex)	long	The value of tmnxDot1agCfmCompMajorIndex specifies the major identifier of the ETH-CFM component.
minorIndex [Minor Index] (tmnxDot1agCfmCompMinorIndex)	long	The value of tmnxDot1agCfmCompMinorIndex specifies the minor identifier of the ETH-CFM component.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmDmmBinStats</p> <p>MIB entry name: tmnxOamPmStsDelayDmmBinEntry</p> <p>Entry description: tmnxOamPmStsDelayDmmBinEntry contains the per-bin DMM (Delay Measurement Message) statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a corresponding row is created in tmnxOamPmStsDelayDmmTable. If the tmnxOamPmStsDelayDmmTable row is created with the index value tmnxOamPmCfgBinType = 'fd(1)', then the the number of rows created in this table is tmnxOamPmCfgBinGroupFdBinCount. Similarly, 'fdr(2)' and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsDelayDmmTable row is destroyed. When a test is running, the DMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. A successful clear operation zeros all the raw DMM statistics for the specified session.</p> <p>Table description (for tmnxOamPmStsDelayDmmBinTable): tmnxOamPmStsDelayDmmBinTable contains the per-bin DMM (Delay Measurement Message) statistics for OAM Performance Monitoring Measurement Interval Data Sets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmDmmBin</p>		
<p>delayDmmBinBwdCount [Delay Dmm Bin Bwd Count] (tmnxOamPmStsDelayDmmBinBwdCount)</p>	<p>long</p>	<p>The value of tmnxOamPmStsDelayDmmBinBwdCount indicates the number of measurements in the backward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of DMM measurements (in microseconds) in the backward direction in the first interval of 'dmmSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).</p>

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayDmmBinFwdCount [Delay Dmm Bin Fwd Count] (tmnxOamPmStsDelayDmmBinFwdCount)	long	The value of tmnxOamPmStsDelayDmmBinFwdCount indicates the number of measurements in the forward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 9 Then, the value of this object indicates the number of DMM measurements (in microseconds) in the forward direction in the first interval of 'dmmSess1' that fit in the highest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayDmmBinNum [Delay Dmm Bin Num] (tmnxOamPmStsDelayDmmBinNum)	long	The value of tmnxOamPmStsDelayDmmBinNum specifies the bin number of the statistics to be read.
delayDmmBintwoWayCount [Delay Dmm BintwoWay Count] (tmnxOamPmStsDelayDmmBin2wyCount)	long	The value of tmnxOamPmStsDelayDmmBin2wyCount indicates the number of two-way measurements that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of two-way DMM measurements (in microseconds) in the first interval of 'dmmSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmDmmSessionStats</p> <p>MIB entry name: tmnxOamPmStsDelayDmmEntry</p> <p>Entry description: tmnxOamPmStsDelayDmmEntry contains the summarized DMM (Delay Measurement Message) statistics for one OAM Performance Monitoring Measurement Interval Data Set. When a row is created in tmnxOamPmStsBaseTable with tmnxOamPmStsBaseTestType = 'dmm(1)', three rows are created in this table. The three rows have the following values in the tmnxOamPmCfgBinType index column: 'fd(1)', 'fdr(2)', and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. When a test is running, the DMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. delayDmm2wyAvg [Delay Dmm 2 wy Avg] (tmnxOamPmStsDelayDmm2wyAvg)	long	The value of tmnxOamPmStsDelayDmm2wyAvg indicates the average two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayDmm2wyMax [Delay Dmm 2 wy Max] (tmnxOamPmStsDelayDmm2wyMax)	long	The value of tmnxOamPmStsDelayDmm2wyMax indicates the maximum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmm2wyMin [Delay Dmm 2 wy Min] (tmnxOamPmStsDelayDmm2wyMin)	long	The value of tmnxOamPmStsDelayDmm2wyMin indicates the minimum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdAvg [Delay Dmm Bwd Avg] (tmnxOamPmStsDelayDmmBwdAvg)	long	The value of tmnxOamPmStsDelayDmmBwdAvg indicates the average delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdMax [Delay Dmm Bwd Max] (tmnxOamPmStsDelayDmmBwdMax)	long	The value of tmnxOamPmStsDelayDmmBwdMax indicates the maximum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdMin [Delay Dmm Bwd Min] (tmnxOamPmStsDelayDmmBwdMin)	long	The value of tmnxOamPmStsDelayDmmBwdMin indicates the minimum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdAvg [Delay Dmm Fwd Avg] (tmnxOamPmStsDelayDmmFwdAvg)	long	The value of tmnxOamPmStsDelayDmmFwdAvg indicates the average delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdMax [Delay Dmm Fwd Max] (tmnxOamPmStsDelayDmmFwdMax)	long	The value of tmnxOamPmStsDelayDmmFwdMax indicates the maximum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdMin [Delay Dmm Fwd Min] (tmnxOamPmStsDelayDmmFwdMin)	long	The value of tmnxOamPmStsDelayDmmFwdMin indicates the minimum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmGlobalOpcodeStats MIB entry name: tmnxDot1agCfmGlobalOpcodeEntry Entry description: A Global Opcode Stats Table entry. Table description (for tmnxDot1agCfmGlobalOpcodeTable): tmnxDot1agCfmGlobalOpcodeTable consists of global statistics that are kept in the receive and transmit direction on the node for each CFM PDU Opcode. Supports realtime plotting Supports scheduled collection Monitored class: ethernetoam.CfmGlobalOpcode</p>		
globalOpcode [Global Opcode] (tmnxDot1agCfmGlobalOpcode)	int	Integer that defines which CFM PDU Opcode the statistics refer to.
globalOpcodeRx [Global Opcode Rx] (tmnxDot1agCfmGlobalOpcodeRx)	long	The total number of PDUs received on the node with the specified Opcode.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
globalOpcodeTx [Global Opcode Tx] (tmnxDot1agCfmGlobalOpcodeTx)	long	The total number of PDUs transmitted from the node with the specified Opcode.
<p>CfmLmmSessionStats</p> <p>MIB entry name: tmnxOamPmStsLossLmmEntry</p> <p>Entry description: tmnxOamPmStsLossLmmEntry contains the LMM test statistics for one OAM Performance Monitoring Measurement Interval Data Set. A row is created in this table when a tmnxOamPmStsBaseTable row is created with tmnxOamPmStsBaseTestType = 'lmm(4)'. A row is destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. The following objects are modelled after the MEF-35 loss parameters defined for Synthetic Loss Measurement (SLM) tests: tmnxOamPmStsLossLmmAvailIndBwd, tmnxOamPmStsLossLmmAvailIndFwd, tmnxOamPmStsLossLmmChliBwd, tmnxOamPmStsLossLmmChliFwd, tmnxOamPmStsLossLmmHliBwd, tmnxOamPmStsLossLmmHliFwd, tmnxOamPmStsLossLmmUnavailIndBwd, and tmnxOamPmStsLossLmmUnavailIndFwd. Hence, the REFERENCE text for this object is a MEF-35 SLM section. The value of tmnxOamPmCfgLossLmmAvAdminStatus controls the value of several objects in this table. See the tmnxOamPmCfgLossLmmAvAdminStatus DESCRIPTION clause for more information. When a test is running, the LMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. A successful clear operation zeros all raw LMM statistics for the specified session.</p> <p>Table description (for tmnxOamPmStsLossLmmTable): tmnxOamPmStsLossLmmTable contains the frame loss statistics for OAM Performance Monitoring LMM (Loss Measurement Message) tests.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmLmmSession</p>		
pmLmmAvailIndBwd [Pm Lmm Avail Ind Bwd] (tmnxOamPmStsLossLmmAvailIndBwd)	long	The value of tmnxOamPmStsLossLmmAvailIndBwd indicates the number of availability indicators evaluated as Available in the backward direction for the specified measurement interval data set.
pmLmmAvailIndFwd [Pm Lmm Avail Ind Fwd] (tmnxOamPmStsLossLmmAvailIndFwd)	long	The value of tmnxOamPmStsLossLmmAvailIndFwd indicates the number of availability indicators evaluated as Available in the forward direction for the specified measurement interval data set.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmAvgFlrBwd [Pm Lmm Avg Flr Bwd] (tmnxOamPmStsLossLmmAvgFlrBwd)	long	The value of tmnxOamPmStsLossLmmAvgFlrBwd indicates the average Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmAvgFlrFwd [Pm Lmm Avg Flr Fwd] (tmnxOamPmStsLossLmmAvgFlrFwd)	long	The value of tmnxOamPmStsLossLmmAvgFlrFwd indicates the average Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmChliBwd [Pm Lmm Chli Bwd] (tmnxOamPmStsLossLmmChliBwd)	long	The value of tmnxOamPmStsLossLmmChliBwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the backward direction for the specified measurement interval data set.
pmLmmChliFwd [Pm Lmm Chli Fwd] (tmnxOamPmStsLossLmmChliFwd)	long	The value of tmnxOamPmStsLossLmmChliFwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the forward direction for the specified measurement interval data set.
pmLmmHliBwd [Pm Lmm Hli Bwd] (tmnxOamPmStsLossLmmHliBwd)	long	The value of tmnxOamPmStsLossLmmHliBwd indicates the number of High Loss Intervals (HLIs) in the backward direction for the specified measurement interval data set.
pmLmmHliFwd [Pm Lmm Hli Fwd] (tmnxOamPmStsLossLmmHliFwd)	long	The value of tmnxOamPmStsLossLmmHliFwd indicates the number of High Loss Intervals (HLIs) in the forward direction for the specified measurement interval data set.
pmLmmMaxFlrBwd [Pm Lmm Max Flr Bwd] (tmnxOamPmStsLossLmmMaxFlrBwd)	long	The value of tmnxOamPmStsLossLmmMaxFlrBwd indicates the maximum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmMaxFlrFwd [Pm Lmm Max Flr Fwd] (tmnxOamPmStsLossLmmMaxFlrFwd)	long	The value of tmnxOamPmStsLossLmmMaxFlrFwd indicates the maximum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmMinFlrBwd [Pm Lmm Min Flr Bwd] (tmnxOamPmStsLossLmmMinFlrBwd)	long	The value of tmnxOamPmStsLossLmmMinFlrBwd indicates the minimum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmMinFlrFwd [Pm Lmm Min Flr Fwd] (tmnxOamPmStsLossLmmMinFlrFwd)	long	The value of tmnxOamPmStsLossLmmMinFlrFwd indicates the minimum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set. This value is computed using the procedures in Y.1731 Section 8.1.
pmLmmRxBwd [Pm Lmm Rx Bwd] (tmnxOamPmStsLossLmmRxBwd)	java. math. BigInte- ger	The value of tmnxOamPmStsLossLmmRxBwd indicates the number of service frames received in the backward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmLmmRxFwd [Pm Lmm Rx Fwd] (tmnxOamPmStsLossLmmRxFwd)	java. math. BigInte- ger	The value of tmnxOamPmStsLossLmmRxFwd indicates the number of service frames received in the forward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmLmmTxBwd [Pm Lmm Tx Bwd] (tmnxOamPmStsLossLmmTxBwd)	java. math. BigInte- ger	The value of tmnxOamPmStsLossLmmTxBwd indicates the number of service frames transmitted in the backward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.
pmLmmTxFwd [Pm Lmm Tx Fwd] (tmnxOamPmStsLossLmmTxFwd)	java. math. BigInte- ger	The value of tmnxOamPmStsLossLmmTxFwd indicates the number of service frames transmitted in the forward direction for the specified measurement interval data set. This counter is computed using the procedures in Y.1731 Section 8.1.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmUnavailIndBwd [Pm Lmm Unavail Ind Bwd] (tmnxOamPmStsLossLmmUnavailIndBwd)	long	The value of tmnxOamPmStsLossLmmUnavailIndBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction for the specified measurement interval data set.
pmLmmUnavailIndFwd [Pm Lmm Unavail Ind Fwd] (tmnxOamPmStsLossLmmUnavailIndFwd)	long	The value of tmnxOamPmStsLossLmmUnavailIndFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction for the specified measurement interval data set.
pmLmmUndtAvlBwd [Pm Lmm Undt Avl Bwd] (tmnxOamPmStsLossLmmUndtAvlBwd)	long	The value of tmnxOamPmStsLossLmmUndtAvlBwd indicates the number of availability indicators evaluated as Undetermined Available, in the backward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the backward direction was Available. In that case, the availability indicator is Undetermined Available because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Available).
pmLmmUndtAvlFwd [Pm Lmm Undt Avl Fwd] (tmnxOamPmStsLossLmmUndtAvlFwd)	long	The value of tmnxOamPmStsLossLmmUndtAvlFwd indicates the number of availability indicators evaluated as Undetermined Available, in the forward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the forward direction was Available. In that case, the availability indicator is Undetermined Available because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Available).

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmUndtDeltaBwd [Pm Lmm Undt Delta Bwd] (tmnxOamPmStsLossLmmUndetDelTsBwd)	long	The value of tmnxOamPmStsLossLmmUndetDelTsBwd indicates the number of undetermined MEF-35 'delta_t's (also known as 'Small Time Intervals') for the backward direction for the specified measurement interval data set. An undetermined delta_t occurs when no Loss Measurement Reply (LMR) PDUs are received during the time interval. This counter is incremented because of a problem with the data path, or because the MEF-35 delta_t for this test is too short. delta_t is configured using tmnxOamPmCfgLossLmmInterval and tmnxOamPmCfgLossLmmTxFrmsPerDelT.
pmLmmUndtDeltaFwd [Pm Lmm Undt Delta Fwd] (tmnxOamPmStsLossLmmUndetDelTsFwd)	long	The value of tmnxOamPmStsLossLmmUndetDelTsFwd indicates the number of undetermined MEF-35 'delta_t's (also known as 'Small Time Intervals') for the forward direction for the specified measurement interval data set. An undetermined delta_t occurs when no Loss Measurement Reply (LMR) PDUs are received during the time interval. This counter is incremented because of a problem with the data path, or because the MEF-35 delta_t for this test is too short. delta_t is configured using tmnxOamPmCfgLossLmmInterval and tmnxOamPmCfgLossLmmTxFrmsPerDelT.
pmLmmUndtUnavlBwd [Pm Lmm Undt Unavl Bwd] (tmnxOamPmStsLossLmmUndtUnavlBwd)	long	The value of tmnxOamPmStsLossLmmUndtUnavlBwd indicates the number of availability indicators evaluated as Undetermined Unavailable, in the backward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the backward direction was Unavailable. In that case, the availability indicator is Undetermined Unavailable because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Unavailable).

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmUndtUnavlFwd [Pm Lmm Undt Unavl Fwd] (tmnxOamPmStsLossLmmUndtUnavlFwd)	long	The value of tmnxOamPmStsLossLmmUndtUnavlFwd indicates the number of availability indicators evaluated as Undetermined Unavailable, in the forward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the forward direction was Unavailable. In that case, the availability indicator is Undetermined Unavailable because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Unavailable).
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmMepOpcodeStats</p> <p>MIB entry name: tmnxDot1agCfmMepOpcodeEntry</p> <p>Entry description: A Mep Opcode Stats Table entry.</p> <p>Table description (for tmnxDot1agCfmMepOpcodeTable): tmnxDot1agCfmMepOpcodeTable consists of statistics that are kept in the receive and transmit direction on a MEP for each CFM PDU Opcode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmMepOpcode</p>		
mepOpcode [Mep Opcode] (tmnxDot1agCfmMepOpcode)	int	The value of tmnxDot1agCfmMepOpcode specifies the CFM PDU Opcode to which the statistics refer.
mepOpcodeRx [Mep Opcode Rx] (tmnxDot1agCfmMepOpcodeRx)	long	The total number of PDUs received on the MEP with the specified Opcode.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mepOpcodeTx [Mep Opcode Tx] (tmnxDot1agCfmMepOpcodeTx)	long	The total number of PDUs transmitted from the MEP with the specified Opcode.
CfmPacketCountStats MIB entry name: tmnxDot1agCfmGlobalPacketStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
globalAisTxActive [Global Ais Tx Active] (tmnxDot1agCfmGlobalAisTxActive)	long	The value of tmnxDot1agCfmGlobalAisTxActive indicates the number of sessions where fault (AIS or other) is actively being transmitted.
globalAisTxFail [Global Ais Tx Fail] (tmnxDot1agCfmGlobalAisTxFail)	long	The value of tmnxDot1agCfmGlobalAisTxFail indicates the number of sessions where fault (AIS or other) can't be transmitted due to lack of resources.
globalPacketDiscard [Global Packet Discard] (tmnxDot1agCfmGlobalPacketDiscard)	long	The value of tmnxDot1agCfmGlobalPacketDiscard indicates the number of packets discarded by ETH-CFM. A packet may be discarded for several reasons including, but not limited to, malformed PDU, invalid TLVs, MEP admin down, etc.
globalPacketDropped [Global Packet Dropped] (tmnxDot1agCfmGlobalPacketDropped)	long	The value of tmnxDot1agCfmGlobalPacketDropped indicates the number of packets dropped by ETH-CFM. A packet is dropped because of resource contention.
globalPacketRxCount [Global Packet Rx Count] (tmnxDot1agCfmGlobalPacketRxCount)	long	The value of tmnxDot1agCfmGlobalPacketRxCount indicates the number of received ETH-CFM packets.
globalPacketTxCount [Global Packet Tx Count] (tmnxDot1agCfmGlobalPacketTxCount)	long	The value of tmnxDot1agCfmGlobalPacketTxCount indicates the number of transmitted ETH-CFM packets.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmSlmSessionStats</p> <p>MIB entry name: tmnxOamPmStsBaseEntry</p> <p>Entry description: tmnxOamPmStsBaseEntry contains the base statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a test is started (e.g. using tmnxOamPmCfgDelayDmmAdminStatus and tmnxOamPmCfgDelayDmmOnDmndStatus). At that time, a row for the current interval (with the index value tmnxOamPmStsIntvlNum=1) is created for each row with a matching session name in tmnxOamPmCfgMeasIntvlTable. In addition, a row is created in this table for the test's 'miRaw(1)' interval. After that, the timed creation and destruction of rows in this table is explained using the following example. Suppose the configured number of intervals to be retained is as follows (where index columns are underlined with octothorpes, and 'tmnxOamPm' is abbreviated as '_'): <u>_CfgSessName</u> <u>_CfgMeasIntvlDuration</u> <u>_CfgMeasIntvlStored</u> ##### ##### 'mySess1' 'mi15Minutes(2)' 3 Suppose statistics collection started at t = 0 (minutes). Suppose the following rows exist in tmnxOamPmStsBaseTable at t = 59 (minutes): <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 1 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 The interval numbers are assigned as follows: 1 - the historical interval ended at t = 15 minutes 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the current interval Then, after the next 15 minute interval ends (e.g. at t = 61 minutes), the following rows will exist: <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 5 The interval numbers are assigned as follows: 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the historical interval ended at t = 60 minutes 5 - the current interval The row with interval number 1 was destroyed, because tmnxOamPmCfgMeasIntvlStored=3 specifies that at most three historical intervals be retained. Rows are also destroyed in this table when the corresponding tmnxOamPmCfgMeasIntvlTable row is destroyed. When the index value tmnxOamPmStsMeasIntvlDuration is 'miRaw(1)', only one interval is available (i.e. tmnxOamPmStsIntvlNum = 1). When a test is running, the measurement interval data set for a test's 'miRaw(1)' measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. The change to the objects in the specified row is as follows. Object Change on Clear Operation tmnxOamPmStsBaseOperStatus No change tmnxOamPmStsBaseSuspect Set to 'true(1)' tmnxOamPmStsBaseStartTime Set to UTC time of the clear operation tmnxOamPmStsBaseElapsedTime Set to zero tmnxOamPmStsBaseTestFramesTx Set to zero tmnxOamPmStsBaseTestFramesRx Set to zero Measurement interval data sets for measurement interval durations other than 'miRaw(1)' cannot be cleared.</p> <p>Table description (for tmnxOamPmStsBaseTable): tmnxOamPmStsBaseTable contains the base statistics for OAM Performance Monitoring Measurement Interval Data Sets. The statistics in this table are common to all test types (e.g. DMM and SLM tests).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmSlmSession</p>		

Table 254 ethernetOam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmSlmAvailIndBwd [Pm Slm Avail Ind Bwd] (tmnxOamPmStsLossSlmAvailIndBwd)	long	The value of tmnxOamPmStsLossSlmAvailIndBwd indicates the number of availability indicators evaluated as Available in the backward direction for the specified measurement interval data set.
pmSlmAvailIndFwd [Pm Slm Avail Ind Fwd] (tmnxOamPmStsLossSlmAvailIndFwd)	long	The value of tmnxOamPmStsLossSlmAvailIndFwd indicates the number of availability indicators evaluated as Available in the forward direction for the specified measurement interval data set.
pmSlmAvgFlrBwd [Pm Slm Avg Flr Bwd] (tmnxOamPmStsLossSlmAvgFlrBwd)	float	The value of tmnxOamPmStsLossSlmAvgFlrBwd indicates the average Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmSlmAvgFlrFwd [Pm Slm Avg Flr Fwd] (tmnxOamPmStsLossSlmAvgFlrFwd)	float	The value of tmnxOamPmStsLossSlmAvgFlrFwd indicates the average Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmSlmChliBwd [Pm Slm Chli Bwd] (tmnxOamPmStsLossSlmChliBwd)	long	The value of tmnxOamPmStsLossSlmChliBwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the backward direction for the specified measurement interval data set.
pmSlmChliFwd [Pm Slm Chli Fwd] (tmnxOamPmStsLossSlmChliFwd)	long	The value of tmnxOamPmStsLossSlmChliFwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the forward direction for the specified measurement interval data set.
pmSlmHliBwd [Pm Slm Hli Bwd] (tmnxOamPmStsLossSlmHliBwd)	long	The value of tmnxOamPmStsLossSlmHliBwd indicates the number of High Loss Intervals (HLIs) in the backward direction for the specified measurement interval data set.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmHliFwd [Pm Slm Hli Fwd] (tmnxOamPmStsLossSlmHliFwd)	long	The value of tmnxOamPmStsLossSlmHliFwd indicates the number of High Loss Intervals (HLIs) in the forward direction for the specified measurement interval data set.
pmSlmMaxFlrBwd [Pm Slm Max Flr Bwd] (tmnxOamPmStsLossSlmMaxFlrBwd)	float	The value of tmnxOamPmStsLossSlmMaxFlrBwd indicates the maximum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmSlmMaxFlrFwd [Pm Slm Max Flr Fwd] (tmnxOamPmStsLossSlmMaxFlrFwd)	float	The value of tmnxOamPmStsLossSlmMaxFlrFwd indicates the maximum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmSlmMinFlrBwd [Pm Slm Min Flr Bwd] (tmnxOamPmStsLossSlmMinFlrBwd)	float	The value of tmnxOamPmStsLossSlmMinFlrBwd indicates the minimum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmSlmMinFlrFwd [Pm Slm Min Flr Fwd] (tmnxOamPmStsLossSlmMinFlrFwd)	float	The value of tmnxOamPmStsLossSlmMinFlrFwd indicates the minimum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmSlmRxBwd [Pm Slm Rx Bwd] (tmnxOamPmStsLossSlmRxBwd)	long	The value of tmnxOamPmStsLossSlmRxBwd indicates the number of SLR reply frames received in the backward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.
pmSlmRxFwd [Pm Slm Rx Fwd] (tmnxOamPmStsLossSlmRxFwd)	long	The value of tmnxOamPmStsLossSlmRxFwd indicates the number of SLM request frames received in the forward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmTxBwd [Pm Slm Tx Bwd] (tmnxOamPmStsLossSlmTxBwd)	long	The value of tmnxOamPmStsLossSlmTxBwd indicates the number of SLR reply frames transmitted in the backward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmSlmTxFwd [Pm Slm Tx Fwd] (tmnxOamPmStsLossSlmTxFwd)	long	The value of tmnxOamPmStsLossSlmTxFwd indicates the number of SLM request frames transmitted in the forward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmSlmUnavailIndBwd [Pm Slm Unavail Ind Bwd] (tmnxOamPmStsLossSlmUnavlIndBwd)	long	The value of tmnxOamPmStsLossSlmUnavlIndBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction for the specified measurement interval data set.
pmSlmUnavailIndFwd [Pm Slm Unavail Ind Fwd] (tmnxOamPmStsLossSlmUnavlIndFwd)	long	The value of tmnxOamPmStsLossSlmUnavlIndFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction for the specified measurement interval data set.
pmSlmUndtAvlBwd [Pm Slm Undt Avl Bwd] (tmnxOamPmStsLossSlmUndtAvlBwd)	long	The value of tmnxOamPmStsLossSlmUndtAvlBwd indicates the number of availability indicators evaluated as Available in the backward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmUndtAvlFwd [Pm Slm Undt Avl Fwd] (tmnxOamPmStsLossSlmUndtAvlFwd)	long	The value of tmnxOamPmStsLossSlmUndtAvlFwd indicates the number of availability indicators evaluated as Available in the forward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmSlmUndtUnavlBwd [Pm Slm Undt Unavl Bwd] (tmnxOamPmStsLossSlmUndtUnavlBwd)	long	The value of tmnxOamPmStsLossSlmUndtUnavlBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmSlmUndtUnavlFwd [Pm Slm Undt Unavl Fwd] (tmnxOamPmStsLossSlmUndtUnavlFwd)	long	The value of tmnxOamPmStsLossSlmUndtUnavlFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 254 ethernetOam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStatsIntvlNum)	long	The value of tmnxOamPmStatsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStatsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>OamPerfReqTypesStats</p> <p>MIB entry name: tmnxOamSysPerfReqTypeEntry</p> <p>Entry description: Rows in tmnxOamSysPerfReqTypeTable are system-generated at CPM restart. Rows cannot be created or destroyed using SNMP.</p> <p>Table description (for tmnxOamSysPerfReqTypeTable): tmnxOamSysPerfReqTypeTable has a row for each relevant OAM echo request packet type. Each row contains packet counters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetOam.OamPerfReqTypes</p>		
oamTypeName [Oam Type Name] (tmnxOamSysPerfReqTypeName)	String	The value of tmnxOamSysPerfReqTypeName specifies the name of an echo request packet type (e.g. 'ICMP'). The name is the index for the row.
rxPackets [Rx Packets] (tmnxOamSysPerfReqTypeRemoteTstRx)	long	The value of tmnxOamSysPerfReqTypeRemoteTstRx indicates the number of echo request packets received from remotely initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
txPackets [Tx Packets] (tmnxOamSysPerfReqTypeLocalTestTx)	long	The value of tmnxOamSysPerfReqTypeLocalTestTx indicates the number of echo request packets transmitted by locally initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OamSysPerfStats MIB entry name: tmnxOamGeneralStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
currentNumberOfSAATests [Current Number Of SAATests] (tmnxOamSysSessionCount)	long	The value of tmnxOamSysSessionCount indicates the number of currently allocated sessions in the OAM general session pool. A test with one of the following test types allocates a session from the OAM general session pool: 1. Filter redirect policy ping test. 2. SDP keep-alive. 3. Static route CPE check. 4. VRRP policy host unreachable ping test. 5. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 6. Any test configured using TIMETRA-OAM-PM-MIB. 7. Background ICMP Bridged Residential Gateway ping test. A session is allocated from the OAM general session pool when a test is configured (in the case of some test types) or activated (in the remaining cases). The session is freed when the test is deactivated or deleted. tmnxOamSysSessionCount will not exceed tmnxOamSysSessionLimit. Configuration or activation of a test (with a test type listed above) will fail when tmnxOamSysSessionCount equals tmnxOamSysSessionLimit.
currentTxRateForContinousTests [Current Tx Rate For Continous Tests] (tmnxOamSysPerfCfgTotalTx)	long	The value of tmnxOamSysPerfCfgTotalTx indicates this node's current total configured echo request packet transmission rate, for the set of tests listed in the tmnxOamSysPerfCfgLimitTx DESCRIPTION clause. For example, suppose: a) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and b) several SAA continuous tests are enabled, totalling 2000 echo request packets per second, and c) no other relevant tests are enabled. Then, tmnxOamSysPerfCfgTotalTx will have the value 3000. The value of tmnxOamSysPerfCfgTotalTx will not exceed the value of tmnxOamSysPerfCfgLimitTx.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lastClearStatsTime [Last Clear Stats Time] (tmnxOamSysPerfLastClearedTime)	long	The value of tmnxOamSysPerfLastClearedTime indicates the sysUpTime when the following statistics were cleared: tmnxOamSysPerfLocalTestTx, tmnxOamSysPerfRemoteTestRx, and tmnxOamSysPerfReqTypeTable. If the statistics have not been cleared since the last CPM restart, zero is returned. A packet count which is time stamped by this object can be converted to an average packets per second value using, for example, pps = tmnxOamSysPerfLocalTestTx / [(sysUpTime - tmnxOamSysPerfLastClearedTime)/100].
maxNumberOfSAATests [Max Number Of SAATests] (tmnxOamSysSessionLimit)	long	The value of tmnxOamSysSessionLimit indicates the maximum number of sessions in the OAM general session pool. OAM general session pool sessions are allocated and freed as described in the tmnxOamSysSessionCount DESCRIPTION clause.
maxTxRateForAllOamTests [Max Tx Rate For All Oam Tests] (tmnxOamSysPerfOprLimitTx)	long	The value of tmnxOamSysPerfOprLimitTx indicates this node's upper bound on the total echo request packet transmission rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following test types: 1. Background ICMP Bridged Residential Gateway ping test. 2. Filter redirect policy ping test. 3. SDP keep-alive. 4. Static route CPE check. 5. VRRP policy host unreachable ping test. 6. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 7. Any test configured using TIMETRA-OAM-PM-MIB.

Table 254 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxTxRateForContinousTests [Max Tx Rate For Continous Tests] (tmnxOamSysPerfCfgLimitTx)	long	The value of tmnxOamSysPerfCfgLimitTx indicates this node's upper bound on the total configured echo request packet transmission rate for a set of test types. The upper bound is enforced to avoid echo request packet transmit overload, i.e. to ensure each enabled test can transmit echo request packets at the test's configured rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following 'always on' test types: 1. Background ICMP Bridged Residential Gateway ping test. 2. Filter redirect policy ping test. 3. SDP keep-alive. 4. Static route CPE check. 5. VRRP policy host unreachable ping test. 6. SAA continuous test (see tmnxOamSaaCtlContinuous). 7. OAM-PM proactive test (see TIMETRA-OAM-PM-MIB::tmnxOamPmCfgSessType). For example, suppose: a) tmnxOamSysPerfCfgLimitTx has the value 4000 echo request packets per second, and b) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and c) several SAA continuous tests are enabled, totalling 3000 echo request packets per second. Then, an attempt to enable an additional SAA continuous test would be rejected with a 'resourceUnavailable(13)' error.
totalNumberOfEchoRequestPacketsReceived [Total Number Of Echo Request Packets Received] (tmnxOamSysPerfRemoteTestRx)	long	The value of tmnxOamSysPerfRemoteTestRx indicates this node's total number of echo request packets received from remotely initiated tests (since the last clear).
totalNumberOfEchoRequestPacketsTransmitted [Total Number Of Echo Request Packets Transmitted] (tmnxOamSysPerfLocalTestTx)	long	The value of tmnxOamSysPerfLocalTestTx indicates this node's total number of echo request packets transmitted by locally initiated tests (since the last clear). The test types are listed in the tmnxOamSysPerfOprLimitTx DESCRIPTION clause.

Table 255 fr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: tmnxFRDlcmiEntry</p> <p>Entry description: The Parameters for a particular Data Link Connection Management Interface. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxFRDlcmiTable): The tmnxFRDlcmiTable has an entry for each port in the system that is configured for Frame Relay. It contains the parameters for the Data Link Connection Management Interface (DLCMI) for the frame relay service on this port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: fr.Interface</p>		
lmiDiscardedMessages [Lmi Discarded Messages] (tmnxFRDlcmiDiscardedMsgs)	long	tmnxFRDlcmiDiscardedMsgs indicates the number of times the LMI agent discarded a received message because it wasn't expecting it, the type of message was incorrect, or the contents of the message were invalid.
lmiInvalidRxSeqNumMessages [Lmi Invalid Rx Seq Num Messages] (tmnxFRDlcmiInvRxSeqNumMsgs)	long	tmnxFRDlcmiInvRxSeqNumMsgs indicates the number of times the LMI agent received a message with an invalid receive sequence number: i.e. a sequence number that does not match the last transmitted sequence number of the agent.
lmiRxStatusEnquiryMessages [Lmi Rx Status Enquiry Messages] (tmnxFRDlcmiRxStatusEnqMsgs)	long	tmnxFRDlcmiRxStatusEnqMsgs indicates the number of LMI Status Enquiry messages received on this Frame Relay interface.
lmiRxStatusMessages [Lmi Rx Status Messages] (tmnxFRDlcmiRxStatusMsgs)	long	tmnxFRDlcmiRxStatusMsgs indicates the number of LMI Status messages received on this Frame Relay interface.
lmiStatusEnquiryMsgTimeouts [Lmi Status Enquiry Msg Timeouts] (tmnxFRDlcmiStatusEnqMsgTimeouts)	long	tmnxFRDlcmiStatusEnqMsgTimeouts indicates the number of times the LMI agent did not receive a Status Enquiry message within the allotted time.

Table 255 fr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lmiStatusMsgTimeouts [Lmi Status Msg Timeouts] (tmnxFRDlcmiStatusMsgTimeouts)	long	tmnxFRDlcmiStatusMsgTimeouts indicates the number of times the LMI agent did not receive a Status message within the allotted time.
lmiTxStatusEnquiryMessages [Lmi Tx Status Enquiry Messages] (tmnxFRDlcmiTxStatusEnqMsgs)	long	tmnxFRDlcmiTxStatusEnqMsgs indicates the number of LMI Status Enquiry messages transmitted on this Frame Relay interface.
lmiTxStatusMessages [Lmi Tx Status Messages] (tmnxFRDlcmiTxStatusMsgs)	long	tmnxFRDlcmiTxStatusMsgs indicates the number of LMI Status messages transmitted on this Frame Relay interface.

Table 256 gsmpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GsmppSessionStats</p> <p>MIB entry name: tmnxAncpSessionStatsEntry</p> <p>Entry description: Each row contains statistics information about an ANCP session known to the system. Rows are created/deleted automatically by the system. The table contains read-only information only.</p> <p>Table description (for tmnxAncpSessionStatsTable): The table tmnxAncpSessionStatsTable contains statistic information for every ANCP session known to the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: gsmpp.GsmppGroupNeighborSession</p>		
ancpAckReceived [Ancp Ack Received] (tmnxAncpSesStatRxAck)	long	The value of tmnxAncpSesStatRxAck indicates the number of GSMP ACK messages received in this ANCP session.
ancpAckTransmitted [Ancp Ack Transmitted] (tmnxAncpSesStatTxAck)	long	The value of tmnxAncpSesStatTxAck indicates the number of GSMP ACK messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpLoopBackReceived [Ancp Loop Back Received] (tmnxAncpSesStatRxLoopback)	long	The value of tmnxAncpSesStatRxLoopback indicates the number of GSMP Loopback messages received in this ANCP session.
ancpLoopBackTransmitted [Ancp Loop Back Transmitted] (tmnxAncpSesStatTxLoopback)	long	The value of tmnxAncpSesStatTxLoopback indicates the number of GSMP Loopback messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpPortDownReceived [Ancp Port Down Received] (tmnxAncpSesStatRxPortDown)	long	The value of tmnxAncpSesStatRxPortDown indicates the number of GSMP 'PortDown' messages received in this ANCP session.
ancpPortDownTransmitted [Ancp Port Down Transmitted] (tmnxAncpSesStatTxPortDown)	long	The value of tmnxAncpSesStatTxPortDown indicates the number of GSMP 'PortDown' messages that were transmitted to the ANCP neighbor in this session.

Table 256 gsmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ancpPortUpReceived [Ancp Port Up Received] (tmnxAncpSesStatRxPortUp)	long	The value of tmnxAncpSesStatRxPortUp indicates the number of GSMP 'PortUp' messages received in this ANCP session.
ancpPortUpTransmitted [Ancp Port Up Transmitted] (tmnxAncpSesStatTxPortUp)	long	The value of tmnxAncpSesStatTxPortUp indicates the number of GSMP 'PortUp' messages that were transmitted to the ANCP neighbor in this session.
ancpRstAckReceived [Ancp Rst Ack Received] (tmnxAncpSesStatRxRstAck)	long	The value of tmnxAncpSesStatRxRstAck indicates the number of GSMP RST ACK messages received in this ANCP session.
ancpRstAckTransmitted [Ancp Rst Ack Transmitted] (tmnxAncpSesStatTxRstAck)	long	The value of tmnxAncpSesStatTxRstAck indicates the number of GSMP RST ACK messages that were transmitted to the ANCP neighbor in this session.
ancpSynAckReceived [Ancp Syn Ack Received] (tmnxAncpSesStatRxSynAck)	long	The value of tmnxAncpSesStatRxSynAck indicates the number of GSMP SYN ACK messages received in this ANCP session.
ancpSynAckTransmitted [Ancp Syn Ack Transmitted] (tmnxAncpSesStatTxSynAck)	long	The value of tmnxAncpSesStatTxSynAck indicates the number of GSMP SYN ACK messages that were transmitted to the ANCP neighbor in this ANCP session.
ancpSynReceived [Ancp Syn Received] (tmnxAncpSesStatRxSyn)	long	The value of tmnxAncpSesStatRxSyn indicates the number of GSMP SYN messages received in this ANCP session.
ancpSynTransmitted [Ancp Syn Transmitted] (tmnxAncpSesStatTxSyn)	long	The value of tmnxAncpSesStatTxSyn indicates the number of GSMP SYN messages that were transmitted to the ANCP neighbor in this ANCP session.

Table 256 gsmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ancpTransmittedDropped [Ancp Transmitted Dropped] (tmnxAncpSesStatTxDrop)	long	The value of tmnxAncpSesStatTxDrop indicates the number of GSMP protocol messages that were created by the system in order for them to be sent to the ACNP neighbor, but were never transmitted.

Table 257 ies statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapDataTrigStats</p> <p>MIB entry name: tmnxSapDataTrigStatsEntry</p> <p>Entry description: Each conceptual row contains detailed data trigger statistics information about a SAP. Entries in this table are created and removed automatically by the system. The system creates conceptual rows in this table only for SAP's where the value of sapStatHostMacLearnOptions is equal to 'dataTriggered'. The system does not create rows unless there is at least one non-zero counter.</p> <p>Table description (for tmnxSapDataTrigStatsTable): The tmnxSapDataTrigStatsTable contains detailed statistics information about the data triggers involved in creating data-triggered subscriber hosts. The typical usage of this table is to fill in the part of the index that identifies a SAP, and perform a partial walk to get all the statistics applicable to that SAP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ies.ServiceAccessPoint</p>		
dropUnsupportedProtocol [Drop Unsupported Protocol] (tmnxSapDataTrigStatsVal)	java. math. BigInteger	The value of the object tmnxSapDataTrigStatsVal indicates the value of the statistics contained in this conceptual row.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.

Table 257 ies statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsId [Stats Id] (tmnxSapDataTrigStatsId)	long	The value of tmnxSapDataTrigStatsId indicates the identifier of the SAP data trigger statistics contained in this conceptual row. It is a meaningless number generated by this system.

Table 258 igmp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GroupInterfaceSapStats MIB entry name: vRtrIgmPGrpIfSapStatsEntry Entry description: An entry in the vRtrIgmPGrpIfSapStatsTable. Table description (for vRtrIgmPGrpIfSapStatsTable): The table listing the IGMP statistics for a particular SAP on a group-interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.GroupInterfaceSap</p>		
importPlyDrops [Import Ply Drops] (vRtrIgmPGrpIfSapImportPlyDrops)	long	The value of vRtrIgmPGrpIfSapImportPlyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy tmnxSubIgmPlyImportPolicy.
rxBadChksumPkts [Rx Bad Chksum Pkts] (vRtrIgmPGrpIfSapRxBadChksumPkts)	long	The value of vRtrIgmPGrpIfSapRxBadChksumPkts indicates the total number of IGMP packets with bad checksum received for this SAP.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmPGrpIfSapRxBadEncodings)	long	The value of vRtrIgmPGrpIfSapRxBadEncodings indicates the total number of IGMP packets received for this SAP which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmPGrpIfSapRxBadLenPkts)	long	The value of vRtrIgmPGrpIfSapRxBadLenPkts indicates the total number of IGMP packets with bad length received for this SAP.
rxBadRecvIfPkts [Rx Bad Recv If Pkts] (vRtrIgmPGrpIfSapRxBadRecvIfPkts)	long	The value of vRtrIgmPGrpIfSapRxBadRecvIfPkts indicates the total number of IGMP packets incorrectly received for this SAP.
rxGenQueries [Rx Gen Queries] (vRtrIgmPGrpIfSapRxGenQueries)	long	The value of vRtrIgmPGrpIfSapRxGenQueries indicates the total number of IGMP General Queries received for this SAP.

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpQueries [Rx Grp Queries] (vRtrIgmPGrpIfSapRxGrpQueries)	long	The value of vRtrIgmPGrpIfSapRxGrpQueries indicates the number of IGMP Group Specific Queries received for this SAP.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmPGrpIfSapRxGrpSrcQueries)	long	The value of vRtrIgmPGrpIfSapRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received for this SAP.
rxLeaves [Rx Leaves] (vRtrIgmPGrpIfSapRxLeaves)	long	The value of vRtrIgmPGrpIfSapRxLeaves indicates the total number of IGMP V2 Leaves received for this SAP.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmPGrpIfSapRxLocalScopePkts)	long	The value of the object vRtrIgmPGrpIfSapRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmPGrpIfSapRxNoRtrAlertPkts)	long	The value of vRtrIgmPGrpIfSapRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received for this SAP which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmPGrpIfSapRxNonLocal)	long	The value of vRtrIgmPGrpIfSapRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmPGrpIfSapRxPktDrops)	long	The value of vRtrIgmPGrpIfSapRxPktDrops indicates the total number of IGMP packets that were received for this SAP but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmPGrpIfSapRxRsvdScopePkts)	long	The value of the object vRtrIgmPGrpIfSapRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.
rxUnknTypePkts [Rx Unkn Type Pkts] (vRtrIgmPGrpIfSapRxUnknTypePkts)	long	The value of vRtrIgmPGrpIfSapRxUnknTypePkts indicates the total number of IGMP packets with unknown type received for this SAP.

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV1Reports [Rx V1 Reports] (vRtrIgmPGrpIfSapRxV1Reports)	long	The value of vRtrIgmPGrpIfSapRxV1Reports indicates the total number of IGMP V1 Reports received for this SAP.
rxV2Reports [Rx V2 Reports] (vRtrIgmPGrpIfSapRxV2Reports)	long	The value of vRtrIgmPGrpIfSapRxV2Reports indicates the total number of IGMP V2 Reports received for this SAP.
rxV3Reports [Rx V3 Reports] (vRtrIgmPGrpIfSapRxV3Reports)	long	The value of vRtrIgmPGrpIfSapRxV3Reports indicates the total number of IGMP V3 Reports received for this SAP.
rxWrongVersions [Rx Wrong Versions] (vRtrIgmPGrpIfSapRxWrongVersions)	long	The value of vRtrIgmPGrpIfSapRxWrongVersions indicates the total number of IGMP packets with wrong versions received for this SAP.
statsMcacPlcyDrp [Stats Mcac Plcy Drp] (vRtrIgmPGrpIfSapStatsMcacPlcyDrp)	long	The value of the object vRtrIgmPGrpIfSapStatsMcacPlcyDrp indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy for this SAP.
statsSGTypes [Stats SGTypes] (vRtrIgmPGrpIfSapStatsSGTypes)	long	The value of vRtrIgmPGrpIfSapStatsSGTypes indicates the number of entries for this SAP for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmPGrpIfSapStatsStarGTypes)	long	vRtrIgmPGrpIfSapStatsStarGTypes indicates the number of entries for this SAP for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmPGrpIfSapTxErrors)	long	The value of vRtrIgmPGrpIfSapTxErrors indicates the total number of times there was an error transmitting IGMP packets for this SAP.
txGenQueries [Tx Gen Queries] (vRtrIgmPGrpIfSapTxGenQueries)	long	The value of vRtrIgmPGrpIfSapTxGenQueries indicates the number of IGMP General Queries transmitted for this SAP.

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txGrpQueries [Tx Grp Queries] (vRtrIgmPGrpIfSapTxGrpQueries)	long	The value of vRtrIgmPGrpIfSapTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted for this SAP.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmPGrpIfSapTxGrpSrcQueries)	long	The value of vRtrIgmPGrpIfSapTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted for this SAP.
txLeaves [Tx Leaves] (vRtrIgmPGrpIfSapTxLeaves)	long	The value of vRtrIgmPGrpIfSapTxLeaves indicates the total number of IGMP Leaves transmitted for this SAP.
txV1Reports [Tx V1 Reports] (vRtrIgmPGrpIfSapTxV1Reports)	long	The value of vRtrIgmPGrpIfSapTxV1Reports indicates the total number of IGMP V1 Reports transmitted for this SAP.
txV2Reports [Tx V2 Reports] (vRtrIgmPGrpIfSapTxV2Reports)	long	The value of vRtrIgmPGrpIfSapTxV2Reports indicates the total number of IGMP V2 Reports transmitted for this SAP.
txV3Reports [Tx V3 Reports] (vRtrIgmPGrpIfSapTxV3Reports)	long	The value of vRtrIgmPGrpIfSapTxV3Reports indicates the total number of IGMP V3 Reports transmitted for this SAP.
InterfaceStats MIB entry name: vRtrIgmPlfStatsEntry Entry description: An entry in the vRtrIgmPlfStatsTable. Table description (for vRtrIgmPlfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
importPolicyDrops [Import Policy Drops] (vRtrIgmplfImportPolicyDrops)	long	The value of vRtrIgmplfImportPolicyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy vRtrIgmplfImportPolicy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrIgmplfStatsMcacPolicyDrops)	long	The value of the object vRtrIgmplfStatsMcacPolicyDrops indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy on this interface.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrIgmplfRxBadChecksumPkts)	long	The value of vRtrIgmplfRxBadChecksumPkts indicates the total number of IGMP packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmplfRxBadEncodings)	long	The value of vRtrIgmplfRxBadEncodings indicates the total number of IGMP packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmplfRxBadLenPkts)	long	The value of vRtrIgmplfRxBadLenPkts indicates the total number of IGMP packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrIgmplfRxBadReceiveIfPkts)	long	The value of vRtrIgmplfRxBadReceiveIfPkts indicates the total number of IGMP packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrIgmplfRxGenQueries)	long	The value of vRtrIgmplfRxGenQueries indicates the total number of IGMP General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrIgmplfRxGrpQueries)	long	The value of vRtrIgmplfRxGrpQueries indicates the number of IGMP Group Specific Queries received on this interface.

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmplfRxGrpSrcQueries)	long	The value of vRtrIgmplfRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrIgmplfRxLeaves)	long	The value of vRtrIgmplfRxLeaves indicates the total number of IGMP V2 Leaves received on this interface.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmplfRxNoRtrAlertPkts)	long	The value of vRtrIgmplfRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmplfRxNonLocal)	long	The value of vRtrIgmplfRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmplfRxPktDrops)	long	The value of vRtrIgmplfRxPktDrops indicates the total number of IGMP packets that were received on this interface but were dropped.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrIgmplfRxUnknownTypePkts)	long	The value of vRtrIgmplfRxUnknownTypePkts indicates the total number of IGMP packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrIgmplfRxV1Reports)	long	The value of vRtrIgmplfRxV1Reports indicates the total number of IGMP V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrIgmplfRxV2Reports)	long	The value of vRtrIgmplfRxV2Reports indicates the total number of IGMP V2 Reports received on this interface.
rxV3Reports [Rx V3 Reports] (vRtrIgmplfRxV3Reports)	long	The value of vRtrIgmplfRxV3Reports indicates the total number of IGMP V3 Reports received on this interface.

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxWrongVersions [Rx Wrong Versions] (vRtrIgmplfRxWrongVersions)	long	The value of vRtrIgmplfRxWrongVersions indicates the total number of IGMP packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrIgmplfStatsSGTypes)	long	The value of vRtrIgmplfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmplfStatsStarGTypes)	long	vRtrIgmplfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmplfTxErrors)	long	The value of vRtrIgmplfTxErrors indicates the total number of times there was an error transmitting IGMP packets on this interface..
txGenQueries [Tx Gen Queries] (vRtrIgmplfTxGenQueries)	long	The value of vRtrIgmplfTxGenQueries indicates the number of IGMP General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrIgmplfTxGrpQueries)	long	The value of vRtrIgmplfTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmplfTxGrpSrcQueries)	long	The value of vRtrIgmplfTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted on this interface.
txLeaves [Tx Leaves] (vRtrIgmplfTxLeaves)	long	The value of vRtrIgmplfTxLeaves indicates the total number of IGMP Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrIgmplfTxV1Reports)	long	The value of vRtrIgmplfTxV1Reports indicates the total number of IGMP V1 Reports transmitted on this interface.

Table 258 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV2Reports [Tx V2 Reports] (vRtrIgmplfTxV2Reports)	long	The value of vRtrIgmplfTxV2Reports indicates the total number of IGMP V2 Reports transmitted on this interface.
txV3Reports [Tx V3 Reports] (vRtrIgmplfTxV3Reports)	long	The value of vRtrIgmplfTxV3Reports indicates the total number of IGMP V3 Reports transmitted on this interface.
InterfaceStatsExtension MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmplfRxLocalScopePkts)	long	The value of the object vRtrIgmplfRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmplfRxRsvdScopePkts)	long	The value of the object vRtrIgmplfRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.

Table 259 ipsec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IPSecRemoteUserDhcpLeaseStats</p> <p>MIB entry name: tIPsecRUTnIDhcpLeaseStatEntry</p> <p>Entry description: The tIPsecRUTnIDhcpLeaseStatEntry contains the statistics information of one private IP address DHCP lease in the dynamic IPsec remote user tunnel. Rows in this table are created when the value of tIPsecRUTnIPrivatelpAddr or tIPsecRUTnIPrivatelpAddr2 in the associated entry of tIPsecRUTnITable is changed from all-zeros to any valid address that was obtained from a DHCP server. Rows in this table are destroyed when the associated entry is destroyed in tIPsecRUTnITable.</p> <p>Table description (for tIPsecRUTnIDhcpLeaseStatTable): The tIPsecRUTnIDhcpLeaseStatTable contains the statistics information of the private IP address DHCP leases in the dynamic IPsec remote user tunnel. Refer to tIPsecRUTnITable for the information of the dynamic IPsec remote user tunnel. Each tunnel has at most two private IP addresses (i.e., tIPsecRUTnIPrivatelpAddr and tIPsecRUTnIPrivatelpAddr2).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ipsec.IPSecRemoteUser</p>		
acquiredTime [Acquired Time] (tIPsecRUTnIDhcpLeaseStatAcquirTm)	String	The value of tIPsecRUTnIDhcpLeaseStatAcquirTm indicates the UTC date when the latest DHCP lease was acquired from the server. The address of the server is indicated by tIPsecRUTnIDhcpLeaseStatSverAddr. The value of tIPsecRUTnIDhcpLeaseStatAcquirTm can be the time when the private IP address (i.e., tIPsecRUTnIDhcpLeaseStatPrivAddr) of the dynamic IPsec user remote tunnel first obtained the DHCP lease, or the time when the lease was renewed or rebound.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
privPref [Priv Pref] (tIPsecRUTnIDhcpLeaseStatPrivPref)	String	The value of tIPsecRUTnIDhcpLeaseStatPrivPref indicates the UTC date when the preferred lifetime of the private IP address (i.e., tIPsecRUTnIDhcpLeaseStatPrivAddr) for the dynamic IPsec user remote tunnel will expire. In the preferred state, tIPsecRUTnIDhcpLeaseStatPrivAddr can be used without any restriction. Once the lifetime expires, tIPsecRUTnIDhcpLeaseStatPrivAddr is still valid, but needs to be renewed or rebound. The value of tIPsecRUTnIDhcpLeaseStatPrivPref is meaningless when tIPsecRUTnIDhcpLeaseStatSverAddT is 'ipv4 (1)'.
privValid [Priv Valid] (tIPsecRUTnIDhcpLeaseStatPrivVald)	String	The value of tIPsecRUTnIDhcpLeaseStatPrivVald indicates the UTC date when the valid lifetime of the private IP address (i.e., tIPsecRUTnIDhcpLeaseStatPrivAddr) for the dynamic IPsec user remote tunnel will expire. Once the valid lifetime expires, tIPsecRUTnIDhcpLeaseStatPrivAddr must be renewed or rebound.
privateAddress [Private Address] (tIPsecRUTnIDhcpLeaseStatPrivAddr)	String	The value of tIPsecRUTnIDhcpLeaseStatPrivAddr specifies the private IP address of the dynamic IPsec remote user tunnel. It can be either tIPsecRUTnIPrivatelpAddr or tIPsecRUTnIPrivatelpAddr2.
privateAddressType [Private Address Type] (tIPsecRUTnIDhcpLeaseStatPrivAddT)	int	The value of tIPsecRUTnIDhcpLeaseStatPrivAddT specifies the address type of tIPsecRUTnIDhcpLeaseStatPrivAddr.
rebindTime [Rebind Time] (tIPsecRUTnIDhcpLeaseStatRebindTm)	String	The value of tIPsecRUTnIDhcpLeaseStatRebindTm indicates the UTC date when the current DHCP lease needs to be rebound.
renewTime [Renew Time] (tIPsecRUTnIDhcpLeaseStatRenewTm)	String	The value of tIPsecRUTnIDhcpLeaseStatRenewTm indicates the UTC date when the current DHCP lease needs to be renewed.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
serverAddress [Server Address] (tIPsecRUTnIDhcpLeaseStatSverAddr)	String	The value of tIPsecRUTnIDhcpLeaseStatSverAddr indicates the DHCP server address.
serverAddressType [Server Address Type] (tIPsecRUTnIDhcpLeaseStatSverAddT)	int	The value of tIPsecRUTnIDhcpLeaseStatSverAddT indicates the address type of tIPsecRUTnIDhcpLeaseStatSverAddr. The value of tIPsecRUTnIDhcpLeaseStatSverAddT is always equal to tIPsecRUTnIDhcpLeaseStatPrivAddT.
IPSecRemoteUserSAStats MIB entry name: tIPsecRUSASStatsEntry Entry description: Information about a single IPsec Remote-User SA Statistics entry. Table description (for tIPsecRUSASStatsTable): Table to retrieve the IPsec Remote-User SA Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecRemoteUserSecurityAssociation		
bytesProcessed [Bytes Processed] (tIPsecRUSASStatsBytesProcessed)	java. math. BigInteger	The value of tIPsecRUSASStatsBytesProcessed indicates the number of bytes successfully processed for this SA.
cryptoErrors [Crypto Errors] (tIPsecRUSASStatsCryptoErrors)	long	The value of tIPsecRUSASStatsCryptoErrors indicates the number of crypto errors encountered on this SA. The crypto errors include errors on packets where protocol does not match or if the check on authentication header length failed.
pktsProcessed [Pkts Processed] (tIPsecRUSASStatsPktsProcessed)	java. math. BigInteger	The value of tIPsecRUSASStatsPktsProcessed indicates the number of packets successfully processed for this SA.
policyErrors [Policy Errors] (tIPsecRUSASStatsPolicyErrors)	long	The value of tIPsecRUSASStatsPolicyErrors indicates the number of policy errors encountered on this SA. The policy errors include bundled SA, selector check and policy direction error.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
replayErrors [Replay Errors] (tIPsecRUSASStatsReplayErrors)	long	The value of tIPsecRUSASStatsReplayErrors indicates the number of replay errors encountered on this SA.
saErrors [Sa Errors] (tIPsecRUSASStatsSAErrors)	long	The value of tIPsecRUSASStatsSAErrors indicates the number of SA errors encountered on this SA. The SA errors include sequence number failure, invalid SA, policy version mismatch, illegal authentication algorithm, expanded packet too big, illegal configured algorithm and ttl decrement error.
IPSecRemoteUserStats MIB entry name: tIPsecRUTnlStatsEntry Entry description: Statistics for a single IPsec Remote User Tunnel. Table description (for tIPsecRUTnlStatsTable): Table to store IPsec Remote User Tunnel statistics Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecRemoteUser		
isakmpEstabTime [Isakmp Estab Time] (tIPsecRUTnlIsakmpEstabTime)	long	The value of tIPsecRUTnlIsakmpEstabTime indicates the sysUpTime at the time the IPsec phase 1 negotiation completed.
isakmpNegLifeTime [Isakmp Neg Life Time] (tIPsecRUTnlIsakmpNegLifeTime)	long	The value of tIPsecRUTnlIsakmpNegLifeTime indicates the lifetime negotiated for phase1 IKE key.
isakmpState [Isakmp State] (tIPsecRUTnlIsakmpState)	long	The value of tIPsecRUTnlIsakmpState indicates the state of phase 1 IPsec negotiation.
numCtrlPktsRx [Num Ctrl Pkts Rx] (tIPsecRUTnlNumCtrlPktsRx)	long	The value of tIPsecRUTnlNumCtrlPktsRx indicates the number of control packets this IPsec Tunnel has received.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numCtrlPktsTx [Num Ctrl Pkts Tx] (tIPsecRUTnlNumCtrlPktsTx)	long	The value of tIPsecRUTnlNumCtrlPktsTx indicates the number of control packets this IPsec Tunnel has sent.
numCtrlRxErrors [Num Ctrl Rx Errors] (tIPsecRUTnlNumCtrlRxErrors)	long	The value of tIPsecRUTnlNumCtrlRxErrors indicates the number of control packet receive errors.
numCtrlTxErrors [Num Ctrl Tx Errors] (tIPsecRUTnlNumCtrlTxErrors)	long	The value of tIPsecRUTnlNumCtrlTxErrors indicates the number of control packet transmit errors.
numDpdAckRx [Num Dpd Ack Rx] (tIPsecRUTnlNumDpdAckRx)	long	The value of tIPsecRUTnlNumDpdAckRx indicates the number of Dead-Peer-Detection acknowledgement packets received.
numDpdAckTx [Num Dpd Ack Tx] (tIPsecRUTnlNumDpdAckTx)	long	The value of tIPsecRUTnlNumDpdAckTx indicates the number of Dead-Peer-Detection acknowledgement packets transmitted.
numDpdRx [Num Dpd Rx] (tIPsecRUTnlNumDpdRx)	long	The value of tIPsecRUTnlNumDpdRx indicates the number of Dead-Peer-Detection packets received.
numDpdTx [Num Dpd Tx] (tIPsecRUTnlNumDpdTx)	long	The value of tIPsecRUTnlNumDpdTx indicates the number of Dead-Peer-Detection packets transmitted.
numExpRx [Num Exp Rx] (tIPsecRUTnlNumExpRx)	long	The value of tIPsecRUTnlNumExpRx indicates the number of DPD R-U-THERE packets that have not been acknowledged.
numInvalidDpdRx [Num Invalid Dpd Rx] (tIPsecRUTnlNumInvalidDpdRx)	long	The value of tIPsecRUTnlNumInvalidDpdRx indicates the number of malformed DPD R-U-THERE acknowledgement packets received.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IPSecSAStats MIB entry name: tmnxIPsecSAStatsEntry Entry description: Information about a single IPsec SA Statistics entry. Table description (for tmnxIPsecSAStatsTable): Table to retrieve the IPsec SA Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecSecurityAssociation</p>		
bytesProcessed [Bytes Processed] (tmnxIPsecSAStatsBytesProcessed)	java. math. BigInteger	The value of tmnxIPsecSAStatsBytesProcessed indicates the number of bytes successfully processed for this SA.
cryptoErrors [Crypto Errors] (tmnxIPsecSAStatsCryptoErrors)	long	The value of tmnxIPsecSAStatsCryptoErrors indicates the number of crypto errors encountered on this SA. The crypto errors include errors on packets where protocol does not match or if the check on authentication header length failed.
pktsProcessed [Pkts Processed] (tmnxIPsecSAStatsPktsProcessed)	java. math. BigInteger	The value of tmnxIPsecSAStatsPktsProcessed indicates the number of packets successfully processed for this SA.
policyErrors [Policy Errors] (tmnxIPsecSAStatsPolicyErrors)	long	The value of tmnxIPsecSAStatsPolicyErrors indicates the number of policy errors encountered on this SA. The policy errors include bundled SA, selector check and policy direction error.
replayErrors [Replay Errors] (tmnxIPsecSAStatsReplayErrors)	long	The value of tmnxIPsecSAStatsReplayErrors indicates the number of replay errors encountered on this SA.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saErrors [Sa Errors] (tmnxIPsecSAStatsSAErrors)	long	The value of tmnxIPsecSAStatsSAErrors indicates the number of SA errors encountered on this SA. The SA errors include sequence number failure, invalid SA, policy version mismatch, illegal authentication algorithm, expanded packet too big, illegal configured algorithm and ttl decrement error.
IPSecTunnelCountStats MIB entry name: tmnxIPsecTunnelCountObjs Supports realtime plotting Supports scheduled collection Monitored class: sitesec.SiteSystemSecurityPublicKey		
gtwCertTunnels [Gtw Cert Tunnels] (tmnxIPsecGWCertTunnels)	long	The value of tmnxIPsecGWCertTunnels indicates the number of IPSec gateway tunnels with tmnxIkePolicyAuthMethod set to 'cert'.
gtwPskTunnels [Gtw Psk Tunnels] (tmnxIPsecGWPsKtunnels)	long	The value of tmnxIPsecGWPsKtunnels indicates the number of IPSec gateway tunnels with tmnxIkePolicyAuthMethod set to 'psk'.
gtwPskXAuthTunnels [Gtw Psk XAuth Tunnels] (tmnxIPsecGWPsKXAuthTunnels)	long	The value of tmnxIPsecGWPsKXAuthTunnels indicates the number of IPSec gateway tunnels with tmnxIkePolicyAuthMethod set to 'plainPskXAuth'.
pskTunnels [Psk Tunnels] (tmnxIPsecPsKtunnels)	long	The value of tmnxIPsecPsKtunnels indicates the number of IPSec tunnels with tmnxIkePolicyAuthMethod set to 'psk'.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
IPSecTunnelStats MIB entry name: tmnxIPsecTunnelStatsEntry Entry description: Statistics for a single IPsec Tunnel. Table description (for tmnxIPsecTunnelStatsTable): Table to store IPsec Tunnel statistics Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecTunnel		
isakmpEstabTime [Isakmp Estab Time] (tmnxIPsecTunnellsakmpEstabTime)	long	The value of tmnxIPsecTunnellsakmpEstabTime indicates the sysUpTime at the time the IPsec phase 1 negotiation completed.
isakmpNegLifeTime [Isakmp Neg Life Time] (tmnxIPsecTunnellsakmpNegLifeTime)	long	The value of tmnxIPsecTunnellsakmpNegLifeTime indicates the lifetime negotiated for phase1 IKE key.
isakmpState [Isakmp State] (tmnxIPsecTunnellsakmpState)	long	The value of tmnxIPsecTunnellsakmpState indicates the state of phase 1 IPsec negotiation.
numCtrlPktsRx [Num Ctrl Pkts Rx] (tmnxIPsecTunnelNumCtrlPktsRx)	long	The value of tmnxIPsecTunnelNumCtrlPktsRx indicates the number of control packets this IPsec Tunnel has received.
numCtrlPktsTx [Num Ctrl Pkts Tx] (tmnxIPsecTunnelNumCtrlPktsTx)	long	The value of tmnxIPsecTunnelNumCtrlPktsTx indicates the number of control packets this IPsec Tunnel has sent.
numCtrlRxErrors [Num Ctrl Rx Errors] (tmnxIPsecTunnelNumCtrlRxErrors)	long	The value of tmnxIPsecTunnelNumCtrlRxErrors indicates the number of control packet receive errors.

Table 259 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numCtrlTxErrors [Num Ctrl Tx Errors] (tmnxIPsecTunnelNumCtrlTxErrors)	long	The value of tmnxIPsecTunnelNumCtrlTxErrors indicates the number of control packet transmit errors.
numDpdAckRx [Num Dpd Ack Rx] (tmnxIPsecTunnelNumDpdAckRx)	long	The value of tmnxIPsecTunnelNumDpdAckRx indicates the number of Dead-Peer-Detection acknowledgement packets received.
numDpdAckTx [Num Dpd Ack Tx] (tmnxIPsecTunnelNumDpdAckTx)	long	The value of tmnxIPsecTunnelNumDpdAckTx indicates the number of Dead-Peer-Detection acknowledgement packets transmitted.
numDpdRx [Num Dpd Rx] (tmnxIPsecTunnelNumDpdRx)	long	The value of tmnxIPsecTunnelNumDpdRx indicates the number of Dead-Peer-Detection packets received.
numDpdTx [Num Dpd Tx] (tmnxIPsecTunnelNumDpdTx)	long	The value of tmnxIPsecTunnelNumDpdTx indicates the number of Dead-Peer-Detection packets transmitted.
numExpRx [Num Exp Rx] (tmnxIPsecTunnelNumExpRx)	long	The value of tmnxIPsecTunnelNumExpRx indicates the number of DPD R-U-THERE packets that have not been acknowledged.
numInvalidDpdRx [Num Invalid Dpd Rx] (tmnxIPsecTunnelNumInvalidDpdRx)	long	The value of tmnxIPsecTunnelNumInvalidDpdRx indicates the number of malformed DPD R-U-THERE acknowledgement packets received.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AaSapSumStats</p> <p>MIB entry name: tmnxBsxAaSubSumEntry</p> <p>Entry description: Each tmnxBsxAaSubSumEntry contains the ISA-AA subscriber summary information within a group partition and statistics interval.</p> <p>Table description (for tmnxBsxAaSubSumTable): The tmnxBsxAaSubSumTable contains an entry for each ISA-AA subscriber in the system. Each row contains the subscriber summary information for a given ISA-AA group, partition and statistics interval.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.AccessInterface</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxAaSubSumActFlwsFmSb)	long	The value of tmnxBsxAaSubSumActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxAaSubSumActFlwsToSb)	long	The value of tmnxBsxAaSubSumActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxAaSubSumHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxAaSubSumHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxAaSubSumHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumShrtDurFlws.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxAaSubSumHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxAaSubSumHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxAaSubSumHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxAaSubSumHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxAaSubSumFlwsDnyToSb.
mdaMdaNum [Mda Mda Num] (tmnxBsxAaSubSumMdaMdaNum)	int	The value of tmnxBsxAaSubSumMdaMdaNum indicates the MDA number of the ISA-AA MDA servicing the subscriber.
mdaSlotNum [Mda Slot Num] (tmnxBsxAaSubSumMdaSlotNum)	int	The value of tmnxBsxAaSubSumMdaSlotNum indicates the slot number of the ISA-AA MDA servicing the subscriber.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxAaSubSumHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxAaSubSumHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmToSb.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxAaSubSumHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxAaSubSumHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxAaSubSumHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxAaSubSumHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxAaSubSumHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxAaSubSumHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxAaSubSumHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlwDur.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlows [Term Flows] (tmnxBsxAaSubSumHCTermFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlws.
<p>AaSpokeSdpBindingSumStats</p> <p>MIB entry name: tmnxBsxAaSubSumEntry</p> <p>Entry description: Each tmnxBsxAaSubSumEntry contains the ISA-AA subscriber summary information within a group partition and statistics interval.</p> <p>Table description (for tmnxBsxAaSubSumTable): The tmnxBsxAaSubSumTable contains an entry for each ISA-AA subscriber in the system. flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxAaSubSumHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxAaSubSumHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxAaSubSumHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxAaSubSumHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxAaSubSumFlwsDnyToSb.
mdaMdaNum [Mda Mda Num] (tmnxBsxAaSubSumMdaMdaNum)	int	The value of tmnxBsxAaSubSumMdaMdaNum indicates the MDA number of the ISA-AA MDA servicing the subscriber.
mdaSlotNum [Mda Slot Num] (tmnxBsxAaSubSumMdaSlotNum)	int	The value of tmnxBsxAaSubSumMdaSlotNum indicates the slot number of the ISA-AA MDA servicing the subscriber.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxAaSubSumHCOctAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctAdmFmSb.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxAaSubSumHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxAaSubSumHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxAaSubSumHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxAaSubSumHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxAaSubSumHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxAaSubSumHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxAaSubSumHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxAaSubSumHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlwDur.
termFlows [Term Flows] (tmnxBsxAaSubSumHCTermFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlws.
<p>AaSubSumStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxAaSubSumActFlwsFmSb)	long	The value of tmnxBsxAaSubSumActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxAaSubSumActFlwsToSb)	long	The value of tmnxBsxAaSubSumActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsLong [Duration Flows Long] (tmnxBsxAaSubSumHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxAaSubSumHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxAaSubSumHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxAaSubSumShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxAaSubSumHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxAaSubSumHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxAaSubSumHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxAaSubSumHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxAaSubSumFlwsDnyToSb.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdaMdaNum [Mda Mda Num] (tmnxBsxAaSubSumMdaMdaNum)	int	The value of tmnxBsxAaSubSumMdaMdaNum indicates the MDA number of the ISA-AA MDA servicing the subscriber.
mdaSlotNum [Mda Slot Num] (tmnxBsxAaSubSumMdaSlotNum)	int	The value of tmnxBsxAaSubSumMdaSlotNum indicates the slot number of the ISA-AA MDA servicing the subscriber.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxAaSubSumHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxAaSubSumHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxAaSubSumHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxAaSubSumHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxAaSubSumHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxAaSubSumHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsAdmToSb.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxAaSubSumHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxAaSubSumHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxAaSubSumPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxAaSubSumHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlwDur.
termFlows [Term Flows] (tmnxBsxAaSubSumHCTermFlws)	java. math. BigInteger	The value of tmnxBsxAaSubSumHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxAaSubSumTermFlws.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxMdaStats</p> <p>MIB entry name: tmnxBsxGrpStatusEntry</p> <p>Entry description: Each tmnxBsxGrpStatusEntry contains the performance-oriented status information for a particular group and ISA-AA MDA. An index with a valid tmnxBsxIsaAaGroupIndex, tmnxChassisIndex set to one, and a zero value for each of the tmnxBsxCardSlotNum/tmnxMDASlotNum indices will return the summarized per group status. Rows in this table are created by the agent at initialization and cannot be created or destroyed by SNMP Set requests.</p> <p>Table description (for tmnxBsxGrpStatusTable): The tmnxBsxGrpStatusTable contains an entry for each ISA-AA MDA and Group in the system. Each row contains the performance-oriented status information per group for an ISA-AA MDA uniquely identified by the tmnxChassisIndex, tmnxBsxCardSlotNum, and the tmnxMDASlotNum.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • isa.AaGroup • isa.AaGroupMember 		
bitRateRsdCount [Bit Rate Rsd Count] (tmnxBsxGrpStatusBitRateRsdCount)	java. math. BigInteger	The value of tmnxBsxGrpStatusBitRateRsdCount indicates the number of times the bit rate TCA (tmnxBsxIsaAaGrpBitRate) was raised since system startup.
bitRateRsdTime [Bit Rate Rsd Time] (tmnxBsxGrpStatusBitRateRsdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusBitRateRsdTime indicates the amount of time the bit rate TCA (tmnxBsxIsaAaGrpBitRate) was in the raised state since system startup.
bitRateState [Bit Rate State] (tmnxBsxGrpStatusBitRateState)	int	The value of tmnxBsxGrpStatusBitRateState indicates the state of the bit rate TCA (tmnxBsxIsaAaGrpBitRate).
datapathCpu [Datapath Cpu] (tmnxBsxGrpStatusDatapathCpu)	float	The value of tmnxBsxGrpStatusDatapathCpu indicates the percent utilization of the datapath CPU on the ISA-AA MDA(s).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
datapathCpuAvg [Datapath Cpu Avg] (tmnxBsxGrpStatusDatapathCpuAvg)	float	The value of tmnxBsxGrpStatusDatapathCpuAvg indicates the average percent utilization of the datapath CPU on the ISA-AA MDA(s) within the last 60 minutes.
datapathCpuPeak [Datapath Cpu Peak] (tmnxBsxGrpStatusDatapathCpuPeak)	float	The value of tmnxBsxGrpStatusDatapathCpuPeak indicates the peak percent utilization of the datapath CPU on the ISA-AA MDA(s) since system startup.
datapathCpuRsdCt [Datapath Cpu Rsd Ct] (tmnxBsxGrpStatusDatapathCpuRsdCt)	java. math. BigInteger	The value of tmnxBsxGrpStatusDatapathCpuRsdCt indicates the number of times the datapath CPU TCA (tmnxBsxDatapathCpuUsage) was raised since system startup.
datapathCpuRsdTm [Datapath Cpu Rsd Tm] (tmnxBsxGrpStatusDatapathCpuRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusDatapathCpuRsdTm indicates the amount of time the datapath CPU TCA (tmnxBsxDatapathCpuUsage) was in the raised state since system startup.
datapathCpuState [Datapath Cpu State] (tmnxBsxGrpStatusDatapathCpuState)	int	The value of tmnxBsxGrpStatusDatapathCpuState indicates the state of the datapath CPU TCA (tmnxBsxDatapathCpuUsage).
flowResAvg [Flow Res Avg] (tmnxBsxGrpStatusFlowResAvg)	long	The value of tmnxBsxGrpStatusFlowResAvg indicates the average number of flow resources in-use on the ISA-AA MDA(s) within the last 60 minutes.
flowResMax [Flow Res Max] (tmnxBsxGrpStatusFlowResMax)	long	The value of tmnxBsxGrpStatusFlowResMax indicates the maximum number of flow resources available on the ISA-AA MDA(s).
flowResPeak [Flow Res Peak] (tmnxBsxGrpStatusFlowResPeak)	long	The value of tmnxBsxGrpStatusFlowResPeak indicates the peak number of flow resources in-use on the ISA-AA MDA(s) since system startup.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flowResRaisdTime [Flow Res Raisd Time] (tmnxBsxGrpStatusFlowResRaisdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowResRaisdTime indicates the amount of time the flow resource TCA (tmnxBsxIsaAaGrpFlowFull) was in the raised state since system startup.
flowResRsdCount [Flow Res Rsd Count] (tmnxBsxGrpStatusFlowResRsdCount)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowResRsdCount indicates the number of times the flow resource TCA (tmnxBsxIsaAaGrpFlowFull) was raised since system startup.
flowResState [Flow Res State] (tmnxBsxGrpStatusFlowResState)	int	The value of tmnxBsxGrpStatusFlowResState indicates the state of the flow resource TCA (tmnxBsxIsaAaGrpFlowFull).
flowResourcesInUse [Flow Resources In Use] (tmnxBsxGrpStatusFlowResInUse)	long	The value of tmnxBsxGrpStatusFlowResInUse indicates the number of flow resources currently in-use on the ISA-AA MDA.
flowSetupRate [Flow Setup Rate] (tmnxBsxGrpStatusFlowSetupRate)	long	The value of tmnxBsxGrpStatusFlowSetupRate indicates the number of flow setups per second over the most recent 10 second period.
flowSetupRsdCnt [Flow Setup Rsd Cnt] (tmnxBsxGrpStatusFlowSetupRsdCnt)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowSetupRsdCnt indicates the number of times the flow setup rate TCA (tmnxBsxIsaAaGrpFlowSetup) was raised since system startup.
flowSetupRsdTime [Flow Setup Rsd Time] (tmnxBsxGrpStatusFlowSetupRsdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlowSetupRsdTime indicates the amount of time the flow setup rate TCA (tmnxBsxIsaAaGrpFlowSetup) was in the raised state since system startup.
flowSetupState [Flow Setup State] (tmnxBsxGrpStatusFlowSetupState)	int	The value of tmnxBsxGrpStatusFlowSetupState indicates the state of the flow setup rate TCA (tmnxBsxIsaAaGrpFlowSetup).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
flows [Flows] (tmnxBsxGrpStatusFlows)	long	The value of tmnxBsxGrpStatusFlows indicates the total number of flows created on the ISA-AA MDA(s).
flowsCurrent [Flows Current] (tmnxBsxGrpStatusFlowsCurrent)	long	The value of tmnxBsxGrpStatusFlowsCurrent indicates the number of active flows currently being tracked by the ISA-AA MDA(s).
flwResCtThruOcts [Flw Res Ct Thru Octs] (tmnxBsxGrpStatusFlwResCtThruOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlwResCtThruOcts indicates the number of octets that the ISA-AA MDA(s) have cut-through due to flow resource exhaustion.
flwResCtThruPkts [Flw Res Ct Thru Pkts] (tmnxBsxGrpStatusFlwResCtThruPkts)	java. math. BigInteger	The value of tmnxBsxGrpStatusFlwResCtThruPkts indicates the number of packets that the ISA-AA MDA(s) have cut-through due to flow resource exhaustion.
hCFlows [HCFlows] (tmnxBsxGrpStatusHCFlows)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCFlows indicates the number of active flows seen by the ISA-AA MDA(s). Note that if the same 5-tuple is seen for a different flow within the flow timeout, it will still be considered one flow.
hCOctsDiscCongIn [HCOcts Disc Cong In] (tmnxBsxGrpStatusHCOctsDiscCongIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDiscCongIn indicates the number of bytes discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
hCOctsDiscCongMda [HCOcts Disc Cong Mda] (tmnxBsxGrpStatusHCOctsDisCongMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDisCongMda indicates the number of bytes discarded by the ISA-AA MDA(s) due to congestion.
hCOctsDiscCongOut [HCOcts Disc Cong Out] (tmnxBsxGrpStatusHCOctsDisCongOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDisCongOut indicates the number of bytes discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hCOctsDiscErrors [HCOcts Disc Errors] (tmnxBsxGrpStatusHCOctsDiscErrors)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDiscErrors indicates the number of bytes discarded due to unrecoverable errors.
hCOctsDiscPolicy [HCOcts Disc Policy] (tmnxBsxGrpStatusHCOctsDiscPolicy)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsDiscPolicy indicates the number of bytes discarded by the ISA-AA MDA(s) due to policy policers or discard actions.
hCOctsFromMda [HCOcts From Mda] (tmnxBsxGrpStatusHCOctsFromMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsFromMda indicates the number of bytes which exit the ISA-AA MDA(s) and are sent to the local IOM.
hCOctsIn [HCOcts In] (tmnxBsxGrpStatusHCOctsIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsIn indicates the number of bytes diverted from ingress IOMs towards the ISA-AA MDA(s).
hCOctsInMda [HCOcts In Mda] (tmnxBsxGrpStatusHCOctsInMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsInMda indicates the number of bytes buffered by the ISA-AA MDA(s).
hCOctsInspected [HCOcts Inspected] (tmnxBsxGrpStatusHCOctsInspected)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsInspected indicates the number of bytes sent for protocol determination by the ISA-AA MDA(s).
hCOctsOut [HCOcts Out] (tmnxBsxGrpStatusHCOctsOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsOut indicates the number of bytes returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
hCOctsPolicyByPass [HCOcts Policy By Pass] (tmnxBsxGrpStatusHCOctsPolicyByPass)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsPolicyByPass indicates the number of bytes which passed untouched that did not have statistics or policy applied. These bytes are counted as policy bypass errors.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hCOctsToMda [HCOcts To Mda] (tmnxBsxGrpStatusHCOctsToMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCOctsToMda indicates the number of bytes sent from an IOM which enter the ISA-AA MDA(s).
hCPktsDiscCongIn [HCPkts Disc Cong In] (tmnxBsxGrpStatusHCPktsDiscCongIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDiscCongIn indicates the number of packets discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
hCPktsDiscCongMda [HCPkts Disc Cong Mda] (tmnxBsxGrpStatusHCPktsDisCongMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDisCongMda indicates the number of packets discarded by the ISA-AA MDA(s) due to congestion.
hCPktsDiscCongOut [HCPkts Disc Cong Out] (tmnxBsxGrpStatusHCPktsDisCongOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDisCongOut indicates the number of packets discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.
hCPktsDiscErrors [HCPkts Disc Errors] (tmnxBsxGrpStatusHCPktsDiscErrors)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDiscErrors indicates the number of packets discarded due to unrecoverable errors.
hCPktsDiscPolicy [HCPkts Disc Policy] (tmnxBsxGrpStatusHCPktsDiscPolicy)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsDiscPolicy indicates the number of packets discarded by the ISA-AA MDA(s) due to policy policers or discard actions.
hCPktsFromMda [HCPkts From Mda] (tmnxBsxGrpStatusHCPktsFromMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsFromMda indicates the number of packets which exit the ISA-AA MDA(s) and are sent to the local IOM.
hCPktsIn [HCPkts In] (tmnxBsxGrpStatusHCPktsIn)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsIn indicates the number of packets diverted from ingress IOMs towards the ISA-AA MDA(s).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hCPktsInMda [HCPkts In Mda] (tmnxBsxGrpStatusHCPktsInMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsInMda indicates the number of packets buffered by the ISA-AA MDA(s).
hCPktsInPchipErrors [HCPkts In Pchip Errors] (tmnxBsxGrpStatusHCPktsInPChipErs)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsInPChipErs indicates the number of packets discarded by the egress P-chip due to errors in the packets.
hCPktsInspected [HCPkts Inspected] (tmnxBsxGrpStatusHCPktsInspected)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsInspected indicates the number of packets sent for protocol determination by the ISA-AA MDA(s).
hCPktsOut [HCPkts Out] (tmnxBsxGrpStatusHCPktsOut)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsOut indicates the number of packets returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
hCPktsOutPchipErrors [HCPkts Out Pchip Errors] (tmnxBsxGrpStatusHCPktsOutPChipEr)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsOutPChipEr indicates the number of packets discarded by the ingress P-chip due to errors in the packets which return to the normal forwarding path.
hCPktsPolicyByPass [HCPkts Policy By Pass] (tmnxBsxGrpStatusHCPktsPolicyByps)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsPolicyByps indicates the number of packets which passed untouched that did not have statistics or policy applied. These packets are counted as policy bypass errors.
hCPktsToMda [HCPkts To Mda] (tmnxBsxGrpStatusHCPktsToMda)	java. math. BigInteger	The value of tmnxBsxGrpStatusHCPktsToMda indicates the number of packets sent from an IOM which enter the ISA-AA MDA(s).
mgmtCpu [Mgmt Cpu] (tmnxBsxGrpStatusMgmtCpu)	float	The value of tmnxBsxGrpStatusMgmtCpu indicates the percent utilization of the management CPU on the ISA-AA MDA(s).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mgmtCpuAvg [Mgmt Cpu Avg] (tmnxBsxGrpStatusMgmtCpuAvg)	float	The value of tmnxBsxGrpStatusMgmtCpuAvg indicates the average percent utilization of the management CPU on the ISA-AA MDA(s) within the last 60 minutes.
mgmtCpuPeak [Mgmt Cpu Peak] (tmnxBsxGrpStatusMgmtCpuPeak)	float	The value of tmnxBsxGrpStatusMgmtCpuPeak indicates the peak percent utilization of the management CPU on the ISA-AA MDA(s) since system startup.
octsDiscCongIn [Octs Disc Cong In] (tmnxBsxGrpStatusOctsDiscCongIn)	long	The value of tmnxBsxGrpStatusOctsDiscCongIn indicates the number of bytes discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
octsDiscCongMda [Octs Disc Cong Mda] (tmnxBsxGrpStatusOctsDisCongMda)	long	The value of tmnxBsxGrpStatusOctsDisCongMda indicates the number of bytes discarded by the ISA-AA MDA(s) due to congestion.
octsDiscCongOut [Octs Disc Cong Out] (tmnxBsxGrpStatusOctsDisCongOut)	long	The value of tmnxBsxGrpStatusOctsDisCongOut indicates the number of bytes discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.
octsDiscErrors [Octs Disc Errors] (tmnxBsxGrpStatusOctsDiscErrors)	long	The value of tmnxBsxGrpStatusOctsDiscErrors indicates the number of bytes discarded due to unrecoverable errors.
octsDiscPolicy [Octs Disc Policy] (tmnxBsxGrpStatusOctsDiscPolicy)	long	The value of tmnxBsxGrpStatusOctsDiscPolicy indicates the number of bytes discarded by the ISA-AA MDA(s) due to policy.
octsFromMda [Octs From Mda] (tmnxBsxGrpStatusOctsFromMda)	long	The value of tmnxBsxGrpStatusOctsFromMda indicates the number of bytes which exit the ISA-AA MDA(s) and are sent to the local IOM.
octsIn [Octs In] (tmnxBsxGrpStatusOctsIn)	long	The value of tmnxBsxGrpStatusOctsIn indicates the number of bytes diverted from ingress IOMs towards the ISA-AA MDA(s).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsInMda [Octs In Mda] (tmnxBsxGrpStatusOctsInMda)	long	The value of tmnxBsxGrpStatusOctsInMda indicates the number of bytes buffered by the ISA-AA MDA(s).
octsInspected [Octs Inspected] (tmnxBsxGrpStatusOctsInspected)	long	The value of tmnxBsxGrpStatusOctsInspected indicates the number of bytes sent for protocol determination by the ISA-AA MDA(s).
octsOut [Octs Out] (tmnxBsxGrpStatusOctsOut)	long	The value of tmnxBsxGrpStatusOctsOut indicates the number of bytes returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).
octsPolicyByPass [Octs Policy By Pass] (tmnxBsxGrpStatusOctsPolicyByps)	long	The value of tmnxBsxGrpStatusOctsPolicyByps indicates the number of bytes which pass untouched that did not have statistics or policy applied. These bytes are counted as policy bypass errors.
octsToMda [Octs To Mda] (tmnxBsxGrpStatusOctsToMda)	long	The value of tmnxBsxGrpStatusOctsToMda indicates the number of bytes sent from an IOM which enter the ISA-AA MDA(s).
ovrldCtThruOcts [Ovrld Ct Thru Octs] (tmnxBsxGrpStatusOvrldCtThruOcts)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrldCtThruOcts indicates the number of octets that the ISA-AA MDA has cut-through due to the overload cut-through configuration as indicated by the object tmnxBsxIsaAaGrpOverloadCutThru.
ovrldCtThruPkts [Ovrld Ct Thru Pkts] (tmnxBsxGrpStatusOvrldCtThruPkts)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrldCtThruPkts indicates the number of octets that the ISA-AA MDA has cut-through due to the overload cut-through configuration as indicated by the object tmnxBsxIsaAaGrpOverloadCutThru.
ovrldCtThruRsdCt [Ovrld Ct Thru Rsd Ct] (tmnxBsxGrpStatusOvrldCtThruRsdCt)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrldCtThruRsdCt indicates the number of times the overload cut-through TCA (tmnxBsxIsaAaGrpOvrldCutthru) was raised since system startup.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ovrldCtThruRsdTm [OvrlD Ct Thru Rsd Tm] (tmnxBsxGrpStatusOvrlDcTThruRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusOvrlDcTThruRsdTm indicates the amount of time the overload cut-through TCA (tmnxBsxIsaAaGrpOvrlDcutthru) was in the raised state since system startup.
ovrldCtThruState [OvrlD Ct Thru State] (tmnxBsxGrpStatusOvrlDcTThruState)	int	The value of tmnxBsxGrpStatusOvrlDcTThruState indicates the state of the overload cut-through TCA (tmnxBsxIsaAaGrpOvrlDcutthru).
packetRate [Packet Rate] (tmnxBsxGrpStatusPacketRate)	long	The value of tmnxBsxGrpStatusPacketRate indicates the current number of packets per second incoming to the ISA-AA MDA(s).
pktRateRaisdTime [Pkt Rate Raisd Time] (tmnxBsxGrpStatusPktRateRaisdTime)	java. math. BigInteger	The value of tmnxBsxGrpStatusPktRateRaisdTime indicates the amount of time the packet rate TCA (tmnxBsxIsaAaGrpPacketRate) was in the raised state since system startup.
pktRateRsdCount [Pkt Rate Rsd Count] (tmnxBsxGrpStatusPktRateRsdCount)	java. math. BigInteger	The value of tmnxBsxGrpStatusPktRateRsdCount indicates the number of times the packet rate TCA (tmnxBsxIsaAaGrpPacketRate) was raised since system startup.
pktRateState [Pkt Rate State] (tmnxBsxGrpStatusPktRateState)	int	The value of tmnxBsxGrpStatusPktRateState indicates the state of the packet rate TCA (tmnxBsxIsaAaGrpPacketRate).
pktsDiscCongIn [Pkts Disc Cong In] (tmnxBsxGrpStatusPktsDiscCongIn)	long	The value of tmnxBsxGrpStatusPktsDiscCongIn indicates the number of packets discarded by the IOMs prior to the ISA-AA MDA(s) due to egress IOM congestion.
pktsDiscCongMda [Pkts Disc Cong Mda] (tmnxBsxGrpStatusPktsDisCongMda)	long	The value of tmnxBsxGrpStatusPktsDisCongMda indicates the number of packets discarded by the ISA-AA MDA(s) due to congestion.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsDiscCongOut [Pkts Disc Cong Out] (tmnxBsxGrpStatusPktsDiscCongOut)	long	The value of tmnxBsxGrpStatusPktsDiscCongOut indicates the number of packets discarded by the IOMs after the ISA-AA MDA(s) due to ingress IOM congestion.
pktsDiscErrors [Pkts Disc Errors] (tmnxBsxGrpStatusPktsDiscErrors)	long	The value of tmnxBsxGrpStatusPktsDiscErrors indicates the number of packets discarded due to unrecoverable errors.
pktsDiscPolicy [Pkts Disc Policy] (tmnxBsxGrpStatusPktsDiscPolicy)	long	The value of tmnxBsxGrpStatusPktsDiscPolicy indicates the number of packets discarded by the ISA-AA MDA(s) due to policy.
pktsFromMda [Pkts From Mda] (tmnxBsxGrpStatusPktsFromMda)	long	The value of tmnxBsxGrpStatusPktsFromMda indicates the number of packets which exit the ISA-AA MDA(s) and are sent to the local IOM.
pktsIn [Pkts In] (tmnxBsxGrpStatusPktsIn)	long	The value of tmnxBsxGrpStatusPktsIn indicates the number of packets diverted from ingress IOMs towards the ISA-AA MDA(s).
pktsInMda [Pkts In Mda] (tmnxBsxGrpStatusPktsInMda)	long	The value of tmnxBsxGrpStatusPktsInMda indicates the number of packets buffered by the ISA-AA MDA(s).
pktsInPChipErrors [Pkts In PChip Errors] (tmnxBsxGrpStatusPktsInPChipErs)	long	The value of tmnxBsxGrpStatusPktsInPChipErs indicates the number of packets discarded by the egress P-chip due to errors in the packets.
pktsInspected [Pkts Inspected] (tmnxBsxGrpStatusPktsInspected)	long	The value of tmnxBsxGrpStatusPktsInspected indicates the number of packets sent for protocol determination by the ISA-AA MDA(s).
pktsOut [Pkts Out] (tmnxBsxGrpStatusPktsOut)	long	The value of tmnxBsxGrpStatusPktsOut indicates the number of packets returned to the normal forwarding path that are sent to egress IOMs from the ISA-AA MDA(s).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsOutPChipErrors [Pkts Out PChip Errors] (tmnxBsxGrpStatusPktsOutPChipEr)	long	The value of tmnxBsxGrpStatusPktsOutPChipEr indicates the number of packets discarded due to an error detected by the P-chip while attempting to return the packet to the normal forwarding path.
pktsPolicyByPass [Pkts Policy By Pass] (tmnxBsxGrpStatusPktsPolicyByps)	long	The value of tmnxBsxGrpStatusPktsPolicyByps indicates the number of packets which passed untouched that did not have statistics or policy applied. These packets are counted as policy bypass errors.
pktsToMda [Pkts To Mda] (tmnxBsxGrpStatusPktsToMda)	long	The value of tmnxBsxGrpStatusPktsToMda indicates the number of packets sent from an IOM which enter the ISA-AA MDA(s).
subsCurrent [Subs Current] (tmnxBsxGrpStatusSubsCurrent)	long	The value of tmnxBsxGrpStatusSubsCurrent indicates the number of subscribers currently with flow records in the ISA-AA MDA(s).
subsDiverted [Subs Diverted] (tmnxBsxGrpStatusSubsDiverted)	long	The value of tmnxBsxGrpStatusSubsDiverted indicates the number of subscribers defined in TIMETRA-SUBSCRIBER-MGMT-MIB::tmnxSubInfoAppProfile in the tmnxSubscriberInfoTable with tmnxBsxAppProfDivert set to 'true'.
trafficRate [Traffic Rate] (tmnxBsxGrpStatusTrafficRate)	long	The value of tmnxBsxGrpStatusTrafficRate indicates the traffic rate in kilo-bits per second (kbps) incoming to the ISA-AA MDA(s).
waSBfFmSub [Wa SBf Fm Sub] (tmnxBsxGrpStatusWaSBfFmSub)	float	The value of tmnxBsxGrpStatusWaSBfFmSub indicates the percent utilization of the subscriber to network weighted average shared buffer on the ISA-AA MDA(s).
waSBfFmSubRsdCnt [Wa SBf Fm Sub Rsd Cnt] (tmnxBsxGrpStatusWaSBfFmSubRsdCnt)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfFmSubRsdCnt indicates the number of times the subscriber to network weighted average shared buffer TCA (tmnxBsxIsaAaGrpFmS-bWaSBufOvld) was raised since system startup.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
waSBfFmSubRsdTm [Wa SBf Fm Sub Rsd Tm] (tmnxBsxGrpStatusWaSBfFmSubRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfFmSubRsdTm indicates the amount of time the subscriber to network weighted average shared buffer TCA (tmnxBsxIsaAaGrpFmSbWaSBufOvld) was in the raised state since system startup.
waSBfFmSubState [Wa SBf Fm Sub State] (tmnxBsxGrpStatusWaSBfFmSubState)	int	The value of tmnxBsxGrpStatusWaSBfFmSubState indicates the state of the subscriber to network weighted average shared buffer TCA (tmnxBsxIsaAaGrpFmSbWaSBufOvld).
waSBfToSub [Wa SBf To Sub] (tmnxBsxGrpStatusWaSBfToSub)	float	The value of tmnxBsxGrpStatusWaSBfToSub indicates the percent utilization of the network to subscriber weighted average shared buffer on the ISA-AA MDA(s).
waSBfToSubRsdCnt [Wa SBf To Sub Rsd Cnt] (tmnxBsxGrpStatusWaSBfToSubRsdCnt)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfToSubRsdCnt indicates the number of times the network to subscriber weighted average shared buffer TCA (tmnxBsxIsaAaGrpToSbWaSBufOvld) was raised since system startup.
waSBfToSubRsdTm [Wa SBf To Sub Rsd Tm] (tmnxBsxGrpStatusWaSBfToSubRsdTm)	java. math. BigInteger	The value of tmnxBsxGrpStatusWaSBfToSubRsdTm indicates the amount of time the network to subscriber weighted average shared buffer TCA (tmnxBsxIsaAaGrpToSbWaSBufOvld) was in the raised state since system startup.
waSBfToSubState [Wa SBf To Sub State] (tmnxBsxGrpStatusWaSBfToSubState)	int	The value of tmnxBsxGrpStatusWaSBfToSubState indicates the state of the network to subscriber weighted average shared buffer TCA (tmnxBsxIsaAaGrpToSbWaSBufOvld).

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IsaLnsGroupMemberStats</p> <p>MIB entry name: tmnxL2tplsaMdaStatisticsEntry</p> <p>Entry description: Each conceptual row contains statistics information about a Media Dependent Adapter (MDA) of an L2TP ISA Group. Entries in this table are created and removed automatically by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxL2tplsaMdaStatisticsTable): The tmnxL2tplsaMdaStatisticsTable contains statistics information about the Media Dependent Adapters (MDA) of an L2TP ISA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isa.LnsGroupMember</p>		
InsL2tpMlpppSequenceNumberReset [Lns L2 tp Mlppp Sequence Number Reset] (tmnxL2tplsaMdaStatsValue)	java. math. BigInteger	The value of the object tmnxL2tplsaMdaStatsValue indicates the value of the statistics contained in this conceptual row.
<p>LnsGroupMemberStats</p> <p>MIB entry name: tmnxL2tplsaMdaStatEntry</p> <p>Entry description: Each conceptual row contains status and statistics information about a Media Dependent Adapter (MDA) of an L2TP ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxL2tplsaMdaStatTable): The tmnxL2tplsaMdaStatTable contains status and statistics information about the Media Dependent Adapters (MDA) of an L2TP ISA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: isa.LnsGroupMember</p>		
operState [Oper State] (tmnxL2tplsaMdaStatOperState)	int	The value of tmnxL2tplsaMdaStatOperState indicates the operational state of this L2TP ISA MDA.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessions [Sessions] (tmnxL2tplsaMdaStatSessions)	long	The value of tmnxL2tplsaMdaStatSessions indicates the actual number of PPP sessions on this L2TP ISA MDA.
<p>VideoGroupMemberStats MIB entry name: tmnxVdoGrpMDAEntry Entry description: Each row entry represents an MDA configured for a Video ISA Group in the system. Entries are created and deleted by the user. Table description (for tmnxVdoGrpMDATable): The tmnxVdoGrpMDATable has an entry for each MDA configured for the Video ISP Group in the system. A specific MDA is configured for only a tmnxVdoGrpId. Supports realtime plotting Supports scheduled collection Monitored class: isa.VideoGroupMember</p>		
vdoGrpMdaActiveRtcpSessions [Vdo Grp Mda Active Rtcp Sessions] (tmnxVdoGrpMdaActiveRtcpSessions)	long	The value of tmnxVdoGrpMdaActiveRtcpSessions indicates the number of active Real Time Transport Control Protocol (RTCP) sessions on this MDA.
vdoGrpMdaAdStreamAborts [Vdo Grp Mda Ad Stream Aborts] (tmnxVdoGrpMdaAdStreamAborts)	long	The value of tmnxVdoGrpMdaAdStreamAborts indicates the number of ad stream aborts on this MDA. An ad stream abort could happen when an egress reset happens.
vdoGrpMdaAdStreamResets [Vdo Grp Mda Ad Stream Resets] (tmnxVdoGrpMdaAdStreamResets)	long	The value of tmnxVdoGrpMdaAdStreamResets indicates the number of ad stream resets on this MDA. An ad stream reset occurs when the ingress ad stream stops.
vdoGrpMdaAvailableMemory [Vdo Grp Mda Available Memory] (tmnxVdoGrpMdaAvailableMemory)	long	The value of tmnxVdoGrpMdaAvailableMemory indicates the amount of cache available on the MDA for storing the video stream.
vdoGrpMdaBwInUse [Vdo Grp Mda Bw In Use] (tmnxVdoGrpMdaBwInUse)	long	The value of tmnxVdoGrpMdaBwInUse indicates the total aggregate bandwidth of the currently running egress streams.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaChannelAllocFails [Vdo Grp Mda Channel Alloc Fails] (tmnxVdoGrpMdaChannelAllocFails)	long	The value of tmnxVdoGrpMdaChannelAllocFails indicates the number of failed channel allocations on this MDA.
vdoGrpMdaChannels [Vdo Grp Mda Channels] (tmnxVdoGrpMdaChannels)	long	The value of tmnxVdoGrpMdaChannels indicates the number of channels being served on this MDA.
vdoGrpMdaEgressStreamResets [Vdo Grp Mda Egress Stream Resets] (tmnxVdoGrpMdaEgressStreamResets)	long	The value of tmnxVdoGrpMdaEgressStreamResets indicates the number of egress stream resets on this MDA. An egress stream reset occurs when there are no packets to transmit on the MDA.
vdoGrpMdaHighPktPoolLimitHit [Vdo Grp Mda High Pkt Pool Limit Hit] (tmnxVdoGrpMdaHighPktPoolLimitHit)	long	The value of tmnxVdoGrpMdaHighPktPoolLimitHit indicates the number of times the high packet pool limit has been hit. A high value of this object indicates potential failure in ingress packet storage.
vdoGrpMdaIngressStreamResets [Vdo Grp Mda Ingress Stream Resets] (tmnxVdoGrpMdaIngressStreamResets)	long	The value of tmnxVdoGrpMdaIngressStreamResets indicates the number of ingress stream resets on this MDA. An ingress stream reset occurs when the ingress stream stopped coming in for more than one second.
vdoGrpMdaMaxBwExceeded [Vdo Grp Mda Max Bw Exceeded] (tmnxVdoGrpMdaMaxBwExceeded)	long	The value of tmnxVdoGrpMdaMaxBwExceeded indicates the number of times maximum allowed bandwidth has been exceeded for each egress stream.
vdoGrpMdaRequestedRtpPkts [Vdo Grp Mda Requested Rtp Pkts] (tmnxVdoGrpMdaRequestedRtpPkts)	long	The value of tmnxVdoGrpMdaRequestedRtpPkts indicates the number of Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this MDA.
vdoGrpMdaRtcpConfigErrors [Vdo Grp Mda Rtcp Config Errors] (tmnxVdoGrpMdaRtcpConfigErrors)	long	The value of tmnxVdoGrpMdaRtcpConfigErrors indicates the number of Real-time Transport Control Protocol (RTCP) config errors on this MDA. These errors occur when there is inconsistency between the RTCP values and the configured values.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaRtcpIntErrors [Vdo Grp Mda Rtcp Int Errors] (tmnxVdoGrpMdaRtcpIntErrors)	long	The value of tmnxVdoGrpMdaRtcpIntErrors indicates the number of Real-time Transport Control Protocol (RTCP) interface related errors on this MDA.
vdoGrpMdaRtcpIpcErrors [Vdo Grp Mda Rtcp Ipc Errors] (tmnxVdoGrpMdaRtcpIpcErrors)	long	The value of tmnxVdoGrpMdaRtcpIpcErrors indicates the number of Real-time Transport Control Protocol (RTCP) inter-process communication message processing errors on this MDA.
vdoGrpMdaRtcpParseErrors [Vdo Grp Mda Rtcp Parse Errors] (tmnxVdoGrpMdaRtcpParseErrors)	long	The value of tmnxVdoGrpMdaRtcpParseErrors indicates the number of Real-time Transport Control Protocol (RTCP) packet parsing errors on this MDA.
vdoGrpMdaRtcpSgErrors [Vdo Grp Mda Rtcp Sg Errors] (tmnxVdoGrpMdaRtcpSgErrors)	long	The value of tmnxVdoGrpMdaRtcpSgErrors indicates the number of Real-time Transport Control Protocol (RTCP) channel errors on this MDA. These errors occur when a channel is not found for a given interface to process RTCP packets.
vdoGrpMdaRtcpSubErrors [Vdo Grp Mda Rtcp Sub Errors] (tmnxVdoGrpMdaRtcpSubErrors)	long	The value of tmnxVdoGrpMdaRtcpSubErrors indicates the number of Real-time Transport Control Protocol (RTCP) subscriber parameter errors on this MDA. These errors occur when the subscriber calculations exceed the maximum allowed bandwidth.
vdoGrpMdaRxDataOctets [Vdo Grp Mda Rx Data Octets] (tmnxVdoGrpMdaRxDataOctets)	java. math. BigInteger	The value of tmnxVdoGrpMdaRxDataOctets indicates the number of data octets received on this MDA.
vdoGrpMdaRxDataOctetsHigh32 [Vdo Grp Mda Rx Data Octets High 32] (tmnxVdoGrpMdaRxDataOctetsHigh32)	long	The value of tmnxVdoGrpMdaRxDataOctetsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaRxDataOctets.
vdoGrpMdaRxDataOctetsLow32 [Vdo Grp Mda Rx Data Octets Low 32] (tmnxVdoGrpMdaRxDataOctetsLow32)	long	The value of tmnxVdoGrpMdaRxDataOctetsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaRxDataOctets.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaRxDataPacketErrors [Vdo Grp Mda Rx Data Packet Errors] (tmnxVdoGrpMdaRxDataPacketErrors)	java. math. BigInteger	The value of tmnxVdoGrpMdaRxDataPacketErrors indicates the number of malformed or non-RTP (Real Time Transport Protocol) packets received on this MDA.
vdoGrpMdaRxDataPackets [Vdo Grp Mda Rx Data Packets] (tmnxVdoGrpMdaRxDataPackets)	java. math. BigInteger	The value of tmnxVdoGrpMdaRxDataPackets indicates the number of data packets received on this MDA.
vdoGrpMdaRxDataPacketsHigh32 [Vdo Grp Mda Rx Data Packets High 32] (tmnxVdoGrpMdaRxDataPacketsHigh32)	long	The value of tmnxVdoGrpMdaRxDataPacketsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaRxDataPackets.
vdoGrpMdaRxDataPacketsLow32 [Vdo Grp Mda Rx Data Packets Low 32] (tmnxVdoGrpMdaRxDataPacketsLow32)	long	The value of tmnxVdoGrpMdaRxDataPacketsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaRxDataPackets.
vdoGrpMdaRxDataPktErrsHigh32 [Vdo Grp Mda Rx Data Pkt Errs High 32] (tmnxVdoGrpMdaRxDataPktErrsHigh32)	long	The value of tmnxVdoGrpMdaRxDataPktErrsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaRxDataPacketErrors.
vdoGrpMdaRxDataPktErrsLow32 [Vdo Grp Mda Rx Data Pkt Errs Low 32] (tmnxVdoGrpMdaRxDataPktErrsLow32)	long	The value of tmnxVdoGrpMdaRxDataPktErrsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaRxDataPacketErrors.
vdoGrpMdaSsrcCollisions [Vdo Grp Mda Ssrc Collisions] (tmnxVdoGrpMdaSsrcCollisions)	long	The value of tmnxVdoGrpMdaSsrcCollisions indicates the number of synchronization source (SSRC) id collisions on this MDA.
vdoGrpMdaTxDataOctets [Vdo Grp Mda Tx Data Octets] (tmnxVdoGrpMdaTxDataOctets)	java. math. BigInteger	The value of tmnxVdoGrpMdaTxDataOctets indicates the number of data octets transmitted on this MDA.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaTxDataOctetsHigh32 [Vdo Grp Mda Tx Data Octets High 32] (tmnxVdoGrpMdaTxDataOctetsHigh32)	long	The value of tmnxVdoGrpMdaTxDataOctetsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaTxDataOctets.
vdoGrpMdaTxDataOctetsLow32 [Vdo Grp Mda Tx Data Octets Low 32] (tmnxVdoGrpMdaTxDataOctetsLow32)	long	The value of tmnxVdoGrpMdaTxDataOctetsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaTxDataOctets.
vdoGrpMdaTxDataPacketErrors [Vdo Grp Mda Tx Data Packet Errors] (tmnxVdoGrpMdaTxDataPacketErrors)	java. math. BigInteger	The value of tmnxVdoGrpMdaTxDataPacketErrors indicates the number of failed data packets due to lack of resources to be transmitted on this MDA.
vdoGrpMdaTxDataPackets [Vdo Grp Mda Tx Data Packets] (tmnxVdoGrpMdaTxDataPackets)	java. math. BigInteger	The value of tmnxVdoGrpMdaTxDataPackets indicates the number of data packets transmitted on this MDA.
vdoGrpMdaTxDataPacketsHigh32 [Vdo Grp Mda Tx Data Packets High 32] (tmnxVdoGrpMdaTxDataPacketsHigh32)	long	The value of tmnxVdoGrpMdaTxDataPacketsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaTxDataPackets.
vdoGrpMdaTxDataPacketsLow32 [Vdo Grp Mda Tx Data Packets Low 32] (tmnxVdoGrpMdaTxDataPacketsLow32)	long	The value of tmnxVdoGrpMdaTxDataPacketsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaTxDataPackets.
vdoGrpMdaTxDataPktErrsHigh32 [Vdo Grp Mda Tx Data Pkt Errs High 32] (tmnxVdoGrpMdaTxDataPktErrsHigh32)	long	The value of tmnxVdoGrpMdaTxDataPktErrsHigh32 indicates the higher 32 bits of the value of tmnxVdoGrpMdaTxDataPacketErrors.
vdoGrpMdaTxDataPktErrsLow32 [Vdo Grp Mda Tx Data Pkt Errs Low 32] (tmnxVdoGrpMdaTxDataPktErrsLow32)	long	The value of tmnxVdoGrpMdaTxDataPktErrsLow32 indicates the lower 32 bits of the value of tmnxVdoGrpMdaTxDataPacketErrors.

Table 260 isa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpMdaTxLostPackets [Vdo Grp Mda Tx Lost Packets] (tmnxVdoGrpMdaTxLostPackets)	long	The value of tmnxVdoGrpMdaTxLostPackets indicates the number of packets not found in the video MDA buffer for retransmission. When a retransmission request arrives, packets are checked in the buffer and if they are not found, the value of this object is incremented.
vdoGrpMdaUsedMemory [Vdo Grp Mda Used Memory] (tmnxVdoGrpMdaUsedMemory)	long	The value of tmnxVdoGrpMdaUsedMemory indicates the amount of cache being used by the video group for storing the video stream.

The tmnxL2tpTgStatTable has an entry for each L2TP Tunnel Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: l2tp.GroupProfile</p>		
activeSessions [Active Sessions] (tmnxL2tpTgStatActiveSessions)	long	The value of tmnxL2tpTgStatActiveSessions indicates the number of sessions currently established in this tunnel group.
activeTunnels [Active Tunnels] (tmnxL2tpTgStatActiveTunnels)	long	The value of tmnxL2tpTgStatActiveTunnels indicates the number of tunnels currently established in this tunnel group.
attemptedSessions [Attempted Sessions] (tmnxL2tpTgStatTotalSessions)	long	The value of tmnxL2tpTgStatTotalSessions indicates the number of session creation attempts in this tunnel group since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
attemptedTunnels [Attempted Tunnels] (tmnxL2tpTgStatTotalTunnels)	long	The value of tmnxL2tpTgStatTotalTunnels indicates the total number of tunnel set up attempts in this tunnel group since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
cleared [Cleared] (tmnxL2tpTgStatCleared)	long	The value of the object tmnxL2tpTgStatCleared indicates the value of sysUpTime when the tunnel group statistics were cleared. The value zero indicates that the statistics have not been cleared since the last re-initialization of the local network management subsystem.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlRxOctets [Control Rx Octets] (tmnxL2tpTgStatControlRxOctets)	java. math. BigInteger	The value of tmnxL2tpTgStatControlRxOctets indicates the number of control channel octets received by the current tunnels in this tunnel group.
controlRxOctetsHw [Control Rx Octets Hw] (tmnxL2tpTgStatControlRxOctetsHw)	long	The value of tmnxL2tpTgStatControlRxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTgStatControlRxOctets.
controlRxOctetsLw [Control Rx Octets Lw] (tmnxL2tpTgStatControlRxOctetsLw)	long	The value of tmnxL2tpTgStatControlRxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTgStatControlRxOctets.
controlRxPkts [Control Rx Pkts] (tmnxL2tpTgStatControlRxPkts)	long	The value of tmnxL2tpTgStatControlRxPkts indicates the accumulated number of control packets received by the current tunnels in this tunnel group.
controlTxOctets [Control Tx Octets] (tmnxL2tpTgStatControlTxOctets)	java. math. BigInteger	The value of tmnxL2tpTgStatControlTxOctets indicates the accumulated number of control channel octets that were transmitted to the current tunnel endpoints in this tunnel group.
controlTxOctetsHw [Control Tx Octets Hw] (tmnxL2tpTgStatControlTxOctetsHw)	long	The value of tmnxL2tpTgStatControlTxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTgStatControlTxOctets.
controlTxOctetsLw [Control Tx Octets Lw] (tmnxL2tpTgStatControlTxOctetsLw)	long	The value of tmnxL2tpTgStatControlTxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTgStatControlTxOctets.
controlTxPkts [Control Tx Pkts] (tmnxL2tpTgStatControlTxPkts)	long	The value of tmnxL2tpTgStatControlTxPkts indicates the accumulated number of control packets that were transmitted to the current tunnel endpoints in this tunnel group.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
errorRxPkts [Error Rx Pkts] (tmnxL2tpTgStatErrorRxPkts)	long	The value of tmnxL2tpTgStatErrorRxPkts indicates the accumulated number of errored packets that were received on the current tunnels in this tunnel group.
errorTxPkts [Error Tx Pkts] (tmnxL2tpTgStatErrorTxPkts)	long	The value of tmnxL2tpTgStatErrorTxPkts indicates the accumulated number of packet transmission errors on the current tunnels in this tunnel group.
failedSessions [Failed Sessions] (tmnxL2tpTgStatFailedSessions)	long	The value of tmnxL2tpTgStatFailedSessions indicates the number of sessions in this tunnel group that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTuAuth [Failed Tu Auth] (tmnxL2tpTgStatFailedTuAuth)	long	The value of tmnxL2tpTgStatFailedTuAuth indicates the number of tunnels in this tunnel group that failed authentication since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTunnels [Failed Tunnels] (tmnxL2tpTgStatFailedTunnels)	long	The value of tmnxL2tpTgStatFailedTunnels indicates the number of tunnels in this tunnel group that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
sessionAssignMethod [Session Assign Method] (tmnxL2tpTgStatSeAssignMethod)	int	The value of the object tmnxL2tpTgStatSeAssignMethod indicates the latest actual method used for the authentication of the tunnels in this Layer Two Tunneling Protocol Tunnel Group. Note that the next tunnel that will be set up in this L2TP tunnel group may or may not use the same method, since the configuration of the RADIUS server may have changed in the meantime.
sessionLimit [Session Limit] (tmnxL2tpTgStatSessionLimit)	long	The value of tmnxL2tpTgStatSessionLimit indicates the configured session limit of this tunnel group.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
state [State] (tmnxL2tpTgStatState)	int	The value of tmnxL2tpTgStatState indicates the operational state of this Layer Two Tunneling Protocol Tunnel Group.
totalSessions [Total Sessions] (tmnxL2tpTgStatSessions)	long	The value of tmnxL2tpTgStatSessions indicates the actual number of sessions in this tunnel group.
totalTunnels [Total Tunnels] (tmnxL2tpTgStatTunnels)	long	The value of tmnxL2tpTgStatTunnels indicates the actual number of tunnels in this tunnel group.
<p>PeerProtStats MIB entry name: tmnxL2tpPeerProtStatsEntry Entry description: Each conceptual row represents protocol statistics of a specific type for a specific L2TP peer. Entries in this table are created and destroyed by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table. Table description (for tmnxL2tpPeerProtStatsTable): The tmnxL2tpPeerProtStatsTable contains protocol statistics information about L2TP peers. Supports realtime plotting Supports scheduled collection Monitored class: I2tp.Peer</p>		

Table 264 L2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protInstance [Prot Instance] (tmnxL2tpPeerProtStatsInstance)	long	The value of the object tmnxL2tpPeerProtStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. For example: if the value of the object tmnxL2tpPeerProtStatsType is equal to 'outgoingMsgType', the value of tmnxL2tpPeerProtStatsInstance is a message identifier, e.g. instance '2' refers to '(SCCRP) Start-Control-Connection-Reply', and the value of tmnxL2tpPeerProtStatsVal indicates the number of SCCRP messages transmitted for this tunnel. The value of this object is 4294967294 for Zero-Length Body (ZLB) messages. The value of this object is 4294967295 for incoming protocol messages with unknown values for message ID, return code or result code.
protName [Prot Name] (tmnxL2tpPeerProtStatsName)	String	The value of the object tmnxL2tpPeerProtStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxL2tpPeerProtStatsName is '(SCCRP) Start-Control-Connection-Reply'.
protType [Prot Type] (tmnxL2tpPeerProtStatsType)	int	The value of the object tmnxL2tpPeerProtStatsType indicates the type of L2TP protocol statistics contained in this conceptual row.
protVal [Prot Val] (tmnxL2tpPeerProtStatsVal)	long	The value of the object tmnxL2tpPeerProtStatsVal indicates the value of the statistics contained in this conceptual row.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxL2tpPeerStatEntry</p> <p>Entry description: Each row entry represents status and statistics information about a particular L2TP peer. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxL2tpPeerStatTable): The tmnxL2tpPeerStatTable contains status and statistics information about L2TP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2tp.Peer</p>		
activeSessions [Active Sessions] (tmnxL2tpPeerStatActiveSessions)	long	The value of tmnxL2tpPeerStatActiveSessions indicates the number of sessions associated with this peer that are currently established.
activeTunnels [Active Tunnels] (tmnxL2tpPeerStatActiveTunnels)	long	The value of tmnxL2tpPeerStatActiveTunnels indicates the number of tunnels associated with this peer that are currently established.
controlRxOct [Control Rx Oct] (tmnxL2tpPeerStatControlRxOct)	java. math. BigInteger	The value of tmnxL2tpPeerStatControlRxOct indicates the number of control channel octets received in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlRxOctHw [Control Rx Oct Hw] (tmnxL2tpPeerStatControlRxOctHw)	long	The value of tmnxL2tpPeerStatControlRxOctHw indicates the higher 32-bits word of the value of tmnxL2tpPeerStatControlRxOct.
controlRxOctLw [Control Rx Oct Lw] (tmnxL2tpPeerStatControlRxOctLw)	long	The value of tmnxL2tpPeerStatControlRxOctLw indicates the lower 32-bits word of the value of tmnxL2tpPeerStatControlRxOct.
controlRxPkts [Control Rx Pkts] (tmnxL2tpPeerStatControlRxPkts)	long	The value of tmnxL2tpPeerStatControlRxPkts indicates the number of control packets received by this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlTxOct [Control Tx Oct] (tmnxL2tpPeerStatControlTxOct)	java. math. BigInteger	The value of tmnxL2tpPeerStatControlTxOct indicates the number of control channel octets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOctHw [Control Tx Oct Hw] (tmnxL2tpPeerStatControlTxOctHw)	long	The value of tmnxL2tpPeerStatControlTxOctHw indicates the higher 32-bits word of the value of tmnxL2tpPeerStatControlTxOct.
controlTxOctLw [Control Tx Oct Lw] (tmnxL2tpPeerStatControlTxOctLw)	long	The value of tmnxL2tpPeerStatControlTxOctLw indicates the lower 32-bits word of the value of tmnxL2tpPeerStatControlTxOct.
controlTxPkts [Control Tx Pkts] (tmnxL2tpPeerStatControlTxPkts)	long	The value of tmnxL2tpPeerStatControlTxPkts indicates the number of control packets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
draining [Draining] (tmnxL2tpPeerStatDraining)	int	The value of tmnxL2tpPeerStatDraining indicates if this peer is being drained.
errorRxPkts [Error Rx Pkts] (tmnxL2tpPeerStatErrorRxPkts)	long	The value of tmnxL2tpPeerStatErrorRxPkts indicates the number of errored packets that were received on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
errorTxPkts [Error Tx Pkts] (tmnxL2tpPeerStatErrorTxPkts)	long	The value of tmnxL2tpPeerStatErrorTxPkts indicates the number of packet transmission errors on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lastCleared [Last Cleared] (tmnxL2tpPeerStatLastCleared)	long	The value of the object tmnxL2tpPeerStatLastCleared indicates the value of sysUpTime when the contents of this conceptual row were cleared for the last time. The value zero means that the contents of this conceptual row have not yet been cleared.
msgAccepted [Msg Accepted] (tmnxL2tpPeerStatMsgAccepted)	long	The value of tmnxL2tpPeerStatMsgAccepted indicates the number of Finite State Machine (FSM) messages that were accepted from this peer since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
msgDuplicateRx [Msg Duplicate Rx] (tmnxL2tpPeerStatMsgDuplicateRx)	long	The value of tmnxL2tpPeerStatMsgDuplicateRx indicates the number of Finite State Machine (FSM) duplicate messages that were received from this peer since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
msgOutOfWndwRx [Msg Out Of Wndw Rx] (tmnxL2tpPeerStatMsgOutOfWndwRx)	long	The value of tmnxL2tpPeerStatMsgOutOfWndwRx indicates the number of Finite State Machine (FSM) messages that were received out of the receive window from this peer since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
sessions [Sessions] (tmnxL2tpPeerStatSessions)	long	The value of tmnxL2tpPeerStatSessions indicates the actual number of sessions associated with this peer.
tunnels [Tunnels] (tmnxL2tpPeerStatTunnels)	long	The value of tmnxL2tpPeerStatTunnels indicates the actual number of tunnels associated with this peer.
unreachableTime [Unreachable Time] (tmnxL2tpPeerStatUnreachableTime)	long	The value of the object tmnxL2tpPeerStatUnreachableTime indicates the value of sysUpTime when the this peer was deemed unreachable for the last time. The value zero means that this peer has not been deemed unreachable yet.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteStats</p> <p>MIB entry name: tmnxL2tpStatEntry</p> <p>Entry description: L2TP specific information about a virtual router. Each entry represents a L2TP protocol instance.</p> <p>Table description (for tmnxL2tpStatTable): A table that contains L2TP configuration information about virtual routers. The system automatically creates an entry in this table for each virtual router where L2TP is supported. Only the Base router supports L2TP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2tp.Site</p>		
activeSessions [Active Sessions] (tmnxL2tpStatActiveSessions)	long	The value of tmnxL2tpStatActiveSessions indicates the number of sessions currently established.
activeTunnels [Active Tunnels] (tmnxL2tpStatActiveTunnels)	long	The value of tmnxL2tpStatActiveTunnels indicates the number of tunnels currently established.
attemptedSessions [Attempted Sessions] (tmnxL2tpStatTotalSessions)	long	The value of tmnxL2tpStatTotalSessions indicates the number of session creation attempts since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
attemptedTunnels [Attempted Tunnels] (tmnxL2tpStatTotalTunnels)	long	The value of tmnxL2tpStatTotalTunnels indicates the total number of tunnel set up attempts since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
cleared [Cleared] (tmnxL2tpStatCleared)	long	The value of the object tmnxL2tpStatCleared indicates the value of sysUpTime when the system statistics were cleared. The value zero indicates that the system statistics have not been cleared since the last re-initialization of the local network management subsystem.

Table 264 l2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentBlackListLength [Current Black List Length] (tmnxL2tpStatCurrSelBlackListLen)	long	The value of tmnxL2tpStatCurrSelBlackListLen indicates the actual number of tunnels and peers in the tunnel-selection-blacklist.
failedSessions [Failed Sessions] (tmnxL2tpStatFailedSessions)	long	The value of tmnxL2tpStatFailedSessions indicates the number of sessions that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTuAuth [Failed Tu Auth] (tmnxL2tpStatFailedTuAuth)	long	The value of tmnxL2tpStatFailedTuAuth indicates the number of tunnels that failed authentication since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
failedTunnels [Failed Tunnels] (tmnxL2tpStatFailedTunnels)	long	The value of tmnxL2tpStatFailedTunnels indicates the number of tunnels that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the system statistics were cleared.
totalSessions [Total Sessions] (tmnxL2tpStatCurrentSessions)	long	The value of tmnxL2tpStatCurrentSessions indicates the actual number of sessions.
totalTunnels [Total Tunnels] (tmnxL2tpStatCurrentTunnels)	long	The value of tmnxL2tpStatCurrentTunnels indicates the actual number of tunnels.
unavailableTunnelIds [Unavailable Tunnel Ids] (tmnxL2tpStatUnavailTunnelIds)	long	The value of tmnxL2tpStatUnavailTunnelIds indicates the number of tunnel identifiers that is unavailable for the L2TP protocol because they are used by some other application. An example of such an application is NAT.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

protName [Prot Name] (tmnxL2tpTuProtStatsName)	String	The value of the object tmnxL2tpTuProtStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxL2tpTuProtStatsName is '(SCCRP) Start-Control-Connection-Reply'.
protType [Prot Type] (tmnxL2tpTuProtStatsType)	int	The value of the object tmnxL2tpTuProtStatsType indicates the type of L2TP protocol statistics contained in this conceptual row.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protVal [Prot Val] (tmnxL2tpTuProtStatsVal)	long	The value of the object tmnxL2tpTuProtStatsVal indicates the value of the statistics contained in this conceptual row.
<p>TunnelStatusStats MIB entry name: tmnxL2tpTuStatsEntry Entry description: Each conceptual row represents statistics information of a Layer Two Tunneling Protocol Tunnel. Entries in this table are created and destroyed by the system. Table description (for tmnxL2tpTuStatsTable): The tmnxL2tpTuStatsTable has an entry for each Layer Two Tunneling Protocol Tunnel. Supports realtime plotting Supports scheduled collection Monitored class: I2tp.TunnelStatus</p>		
activeSessions [Active Sessions] (tmnxL2tpTuStatsActiveSessions)	long	The value of tmnxL2tpTuStatsActiveSessions indicates the number of sessions currently established in this tunnel.
attemptedSessions [Attempted Sessions] (tmnxL2tpTuStatsTotalSessions)	long	The value of tmnxL2tpTuStatsTotalSessions indicates the number of session creation attempts in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlRxOctets [Control Rx Octets] (tmnxL2tpTuStatsControlRxOctets)	java. math. BigInteger	The value of tmnxL2tpTuStatsControlRxOctets indicates the number of control channel octets received in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlRxOctetsHw [Control Rx Octets Hw] (tmnxL2tpTuStatsControlRxOctetsHw)	long	The value of tmnxL2tpTuStatsControlRxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTuStatsControlRxOctets.
controlRxOctetsLw [Control Rx Octets Lw] (tmnxL2tpTuStatsControlRxOctetsLw)	long	The value of tmnxL2tpTuStatsControlRxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTuStatsControlRxOctets.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
controlRxPkts [Control Rx Pkts] (tmnxL2tpTuStatsControlRxPkts)	long	The value of tmnxL2tpTuStatsControlRxPkts indicates the number of control packets received by this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOctets [Control Tx Octets] (tmnxL2tpTuStatsControlTxOctets)	java. math. BigInteger	The value of tmnxL2tpTuStatsControlTxOctets indicates the number of control channel octets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
controlTxOctetsHw [Control Tx Octets Hw] (tmnxL2tpTuStatsControlTxOctetsHw)	long	The value of tmnxL2tpTuStatsControlTxOctetsHw indicates the higher 32-bits word of the value of tmnxL2tpTuStatsControlTxOctets.
controlTxOctetsLw [Control Tx Octets Lw] (tmnxL2tpTuStatsControlTxOctetsLw)	long	The value of tmnxL2tpTuStatsControlTxOctetsLw indicates the lower 32-bits word of the value of tmnxL2tpTuStatsControlTxOctets.
controlTxPkts [Control Tx Pkts] (tmnxL2tpTuStatsControlTxPkts)	long	The value of tmnxL2tpTuStatsControlTxPkts indicates the number of control packets that were transmitted to the current tunnel endpoints in this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
errorRxPkts [Error Rx Pkts] (tmnxL2tpTuStatsErrorRxPkts)	long	The value of tmnxL2tpTuStatsErrorRxPkts indicates the number of errored packets that were received on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
errorTxPkts [Error Tx Pkts] (tmnxL2tpTuStatsErrorTxPkts)	long	The value of tmnxL2tpTuStatsErrorTxPkts indicates the number of packet transmission errors on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedSessions [Failed Sessions] (tmnxL2tpTuStatsFailedSessions)	long	The value of tmnxL2tpTuStatsFailedSessions indicates the number of sessions in this tunnel that failed to reach the established state since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
fsmMsgAccepted [Fsm Msg Accepted] (tmnxL2tpTuStatsFsmMsgAccepted)	long	The value of tmnxL2tpTuStatsFsmMsgAccepted indicates the number of Finite State Machine (FSM) messages that were accepted on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
fsmMsgDuplicateRx [Fsm Msg Duplicate Rx] (tmnxL2tpTuStatsFsmMsgDuplicateRx)	long	The value of tmnxL2tpTuStatsFsmMsgDuplicateRx indicates the number of Finite State Machine (FSM) duplicate messages that were received on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
fsmMsgOutOfWdwRx [Fsm Msg Out Of Wndw Rx] (tmnxL2tpTuStatsFsmMsgOutOfWdwRx)	long	The value of tmnxL2tpTuStatsFsmMsgOutOfWdwRx indicates the number of Finite State Machine (FSM) messages that were received out of the receive window on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
lastCleared [Last Cleared] (tmnxL2tpTuStatsLastCleared)	long	The value of the object tmnxL2tpTuStatsLastCleared indicates the value of sysUpTime when the contents of this conceptual row were cleared for the last time. The value zero means that the contents of this conceptual row have not yet been cleared.
qLengthAckCur [QLength Ack Cur] (tmnxL2tpTuStatsQLengthAckCur)	long	The value of tmnxL2tpTuStatsQLengthAckCur indicates the the current length of the acknowledged message queue on this tunnel.

Table 264 I2tp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
qLengthAckMax [QLength Ack Max] (tmnxL2tpTuStatsQLengthAckMax)	long	The value of tmnxL2tpTuStatsQLengthAckMax indicates the the maximum length of the acknowledged message queue on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
qLengthUnsentCur [QLength Unsent Cur] (tmnxL2tpTuStatsQLengthUnsentCur)	long	The value of tmnxL2tpTuStatsQLengthUnsentCur indicates the the current length of the unsent message queue on this tunnel.
qLengthUnsentMax [QLength Unsent Max] (tmnxL2tpTuStatsQLengthUnsentMax)	long	The value of tmnxL2tpTuStatsQLengthUnsentMax indicates the the maximum length of the unsent message queue on this tunnel since the last re-initialization of the local network management subsystem, or the last time the tunnel statistics were cleared.
totalSessions [Total Sessions] (tmnxL2tpTuStatsSessions)	long	The value of tmnxL2tpTuStatsSessions indicates the actual number of sessions in this tunnel.
windowSizeCur [Window Size Cur] (tmnxL2tpTuStatsWindowSizeCur)	long	The value of tmnxL2tpTuStatsWindowSizeCur indicates the the current size of the receive window on this tunnel.

Table 265 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. Each entry represents an active Link Aggregation Group.</p> <p>Table description (for tLagOperationTable): Operational information about each Link Aggregation Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lag.Interface</p>		
portThresholdFalling [Port Threshold Falling] (tLagPortThresholdFalling)	long	counts the number of linkDown or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being less than or equal to tLagPortThreshold value.
portThresholdRising [Port Threshold Rising] (tLagPortThresholdRising)	long	counts the number of linkUp or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being greater than tLagPortThreshold value.
<p>MultiChassisLagMemberStats</p> <p>MIB entry name: tmnxMcLagLagStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a lag that participates in a multi-chassis configuration with a given peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagLagStatsTable): The tmnxMcLagLagStatsTable has an entry for each lag that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lag.MultiChassisLagMember • multichassis.MultiChassisLagMember 		
configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 265 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 265 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 265 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 265 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 266 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IPv6InterfaceStats</p> <p>MIB entry name: vRtrLdpNgInetIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface for given Inet address family. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpNgSessionStatsEntry.</p> <p>Table description (for vRtrLdpNgInetIfStatsTable): The vRtrLdpNgInetIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces for given Inet address family on this LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgInetIfTable, and the augmenting table, vRtrLdpNgInetIfStatsTable. This in effect extends the vRtrLdpNgInetIfTable with additional columns. Creation or deletion of a row in the vRtrLdpNgInetIfTable results in the same fate for the row in the vRtrLdpNgInetIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.IPv6Extension</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpNgInetIfStatsExistingAdj)	long	The value of vRtrLdpNgInetIfStatsExistingAdj indicates a count of the total active adjacencies on this LDP interface for given Inet address family.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4PfxFecReceived [Ipv 4 Pfx Fec Received] (vRtrLdpNgSessStatsIPv4PfxFecRcv)	long	The value of vRtrLdpNgSessStatsIPv4PfxFecRcv counts the number of IPv4 prefix FECs received for this session.
ipv4PfxFecSent [Ipv 4 Pfx Fec Sent] (vRtrLdpNgSessStatsIPv4PfxFecSnt)	long	The value of vRtrLdpNgSessStatsIPv4PfxFecSnt counts the number of IPv4 prefix FECs sent for this session.
ipv6AddrReceived [Ipv 6 Addr Received] (vRtrLdpNgSessStatsIPv6AddrRecv)	long	The value of vRtrLdpNgSessStatsIPv6AddrRecv counts the number of IPv6 local addresses received for this session.
ipv6AddrSent [Ipv 6 Addr Sent] (vRtrLdpNgSessStatsIPv6AddrSent)	long	The value of vRtrLdpNgSessStatsIPv6AddrSent counts the number of IPv6 local addresses sent for this session.
ipv6P2mpFecReceived [Ipv 6 P2 mp Fec Received] (vRtrLdpNgSessStatsIPv6P2MPFecRcv)	long	The value of vRtrLdpNgSessStatsIPv6P2MPFecRcv counts the number of IPv6 P2MP FECs received for this session.
ipv6P2mpFecSent [Ipv 6 P2 mp Fec Sent] (vRtrLdpNgSessStatsIPv6P2MPFecSnt)	long	The value of vRtrLdpNgSessStatsIPv6P2MPFecSnt counts the number of IPv6 P2MP FECs sent for this session.
ipv6PfxFecReceived [Ipv 6 Pfx Fec Received] (vRtrLdpNgSessStatsIPv6PfxFecRcv)	long	The value of vRtrLdpNgSessStatsIPv6PfxFecRcv counts the number of IPv6 prefix FECs received for this session.
ipv6PfxFecSent [Ipv 6 Pfx Fec Sent] (vRtrLdpNgSessStatsIPv6PfxFecSnt)	long	The value of vRtrLdpNgSessStatsIPv6PfxFecSnt counts the number of IPv6 prefix FECs sent for this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpNgSessStatsKeepaliveIn)	long	The value of vRtrLdpNgSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.

Table 266 Idp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpNgSessStatsKeepaliveOut)	long	The value of vRtrLdpNgSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpNgSessStatsLblAbortIn)	long	The value of vRtrLdpNgSessStatsLblAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpNgSessStatsLblAbortOut)	long	The value of vRtrLdpNgSessStatsLblAbortOut counts the number of Label Abort Messages that have been sent during this session.
labelMappingsReceived [Label Mappings Received] (vRtrLdpNgSessStatsLblMappingIn)	long	The value of vRtrLdpNgSessStatsLblMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpNgSessStatsLblMappingOut)	long	The value of vRtrLdpNgSessStatsLblMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpNgSessStatsLblReleaseIn)	long	The value of vRtrLdpNgSessStatsLblReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpNgSessStatsLblReleaseOut)	long	The value of vRtrLdpNgSessStatsLblReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpNgSessStatsLblRequestIn)	long	The value of vRtrLdpNgSessStatsLblRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpNgSessStatsLblRequestOut)	long	The value of vRtrLdpNgSessStatsLblRequestOut counts the number of Label Request Messages that have been sent during this session.

Table 266 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpNgSessStatsLblWithdrawIn)	long	The value of vRtrLdpNgSessStatsLblWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpNgSessStatsLblWithdrawOut)	long	The value of vRtrLdpNgSessStatsLblWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpNgSessStatsLinkAdj)	long	The value of vRtrLdpNgSessStatsLinkAdj indicates the number of link adjacencies for this session.
notificationMessagesReceived [Notification Messages Received] (vRtrLdpNgSessStatsNotifIn)	long	The value of vRtrLdpNgSessStatsNotifIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpNgSessStatsNotifOut)	long	The value of vRtrLdpNgSessStatsNotifOut counts the number of Notification Messages that have been sent during this session.
svcFec128Received [Svc Fec 128 Received] (vRtrLdpNgSessStatsSvcFec128Recv)	long	The value of vRtrLdpNgSessStatsSvcFec128Recv counts the number of service FEC 128 received for this session.
svcFec128Sent [Svc Fec 128 Sent] (vRtrLdpNgSessStatsSvcFec128Sent)	long	The value of vRtrLdpNgSessStatsSvcFec128Sent counts the number of service FEC 128 sent for this session.
svcFec129Received [Svc Fec 129 Received] (vRtrLdpNgSessStatsSvcFec129Recv)	long	The value of vRtrLdpNgSessStatsSvcFec129Recv counts the number of service FEC 129 received for this session.
svcFec129Sent [Svc Fec 129 Sent] (vRtrLdpNgSessStatsSvcFec129Sent)	long	The value of vRtrLdpNgSessStatsSvcFec129Sent counts the number of service FEC 129 sent for this session.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpNgSessStatsTargAdj)	long	The value of vRtrLdpNgSessStatsTargAdj indicates the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vLdpNgStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vLdpNgStatsTable): vLdpNgStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgGeneralTable, and the augmenting table, vLdpNgStatsTable. This in effect extends the vRtrLdpNgGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpNgGeneralTable results in the same fate for the row in the vLdpNgStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Site</p>		
activeInterfaces [Active Interfaces] (vLdpNgStatsIPv4ActiveIf)	long	The value of vLdpNgStatsIPv4ActiveIf indicates the number of active (i.e. operationally up) IPv4 interfaces associated with the LDP instance.
activeLinkAdjacencies [Active Link Adjacencies] (vLdpNgStatsIPv4ActiveLinkAdj)	long	The value of vLdpNgStatsIPv4ActiveLinkAdj indicates the number of active IPv4 link adjacencies (i.e. established adjacencies) associated with the LDP instance.
activeSessions [Active Sessions] (vLdpNgStatsIPv4ActiveSess)	long	The value of vLdpNgStatsIPv4ActiveSess indicates the number of active IPv4 sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargAdjacencies [Active Targ Adjacencies] (vLdpNgStatsIPv4ActiveTargAdj)	long	The value of vLdpNgStatsIPv4ActiveTargAdj indicates the number of active IPv4 target adjacencies (i.e. established sessions) associated with the LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeTargetedSessions [Active Targeted Sessions] (vLdpNgStatsIPv4ActiveTargPeers)	long	The value of vLdpNgStatsIPv4ActiveTargPeers indicates the number of configured IPv4 targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vLdpNgStatsIPv4PfxFecRecv)	long	The value of vLdpNgStatsIPv4PfxFecRecv indicates the number of IPv4 Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vLdpNgStatsIPv4PfxFecSent)	long	The value of vLdpNgStatsIPv4PfxFecSent indicates the number of IPv4 Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vLdpNgStatsIPv4AttemptedSessions)	long	The value of vLdpNgStatsIPv4AttemptedSessions indicates the total number of attempted IPv4 sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vLdpNgStatsBadLdpIdErrors)	long	The value of vLdpNgStatsBadLdpIdErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vLdpNgStatsBadMsgLengthErrors)	long	The value of vLdpNgStatsBadMsgLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vLdpNgStatsBadPduLengthErrors)	long	The value of vLdpNgStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vLdpNgStatsBadTlvLengthErrors)	long	The value of vLdpNgStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.
egrFecPfxCount [Egr Fec Pfx Count] (vLdpNgStatsIPv4EgrFecPfxCount)	long	The value of vLdpNgStatsIPv4EgrFecPfxCount indicates the number of IPv4 egress FEC prefix statistics configured for this LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fec128FecInOverloaded [Fec 128 Fec In Overloaded] (vLdpNgStatsFec128FecInOLoad)	long	The value of vLdpNgStatsFec128FecInOLoad indicates the number PW ID FEC in overload state in LDP instance.
fec128FecOLSessionReceived [Fec 128 Fec OLSession Received] (vLdpNgStatsFec128FecOLSessRecv)	long	The value of vLdpNgStatsFec128FecOLSessRecv indicates the number of Overload Notifications received for PW ID FEC over sessions in LDP instance.
fec128FecOLSessionSent [Fec 128 Fec OLSession Sent] (vLdpNgStatsFec128FecOLSessSent)	long	The value of vLdpNgStatsFec128FecOLSessSent indicates the number of Overload Notifications sent for PW ID FEC over sessions in LDP instance.
fec129FecInOverloaded [Fec 129 Fec In Overloaded] (vLdpNgStatsFec129FecInOLoad)	long	The value of vLdpNgStatsFec129FecInOLoad indicates the number General PW ID FEC in overload state in LDP instance.
fec129FecOLSessionReceived [Fec 129 Fec OLSession Received] (vLdpNgStatsFec129FecOLSessRecv)	long	The value of vLdpNgStatsFec129FecOLSessRecv indicates the number of Overload Notifications received for General PW ID FEC over sessions in LDP instance.
fec129FecOLSessionSent [Fec 129 Fec OLSession Sent] (vLdpNgStatsFec129FecOLSessSent)	long	The value of vLdpNgStatsFec129FecOLSessSent indicates the number of Overload Notifications sent for General PW ID FEC over sessions in LDP instance.
inactiveInterfaces [Inactive Interfaces] (vLdpNgStatsIPv4Inactifelf)	long	The value of vLdpNgStatsIPv4Inactifelf indicates the number of inactive (i.e. operationally down) IPv4 interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vLdpNgStatsIPv4InactiveTargPeers)	long	The value of vLdpNgStatsIPv4InactiveTargPeers indicates the number of inactive (i.e. operationally down) IPv4 targeted sessions associated with the LDP instance.
ipv6ActiveInterfaces [Ipv 6 Active Interfaces] (vLdpNgStatsIPv6Activelf)	long	The value of vLdpNgStatsIPv6Activelf indicates the number of active (i.e. operationally up) IPv6 interfaces associated with the LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6ActiveLinkAdjacencies [Ipv 6 Active Link Adjacencies] (vLdpNgStatsIPv6ActiveLinkAdj)	long	The value of vLdpNgStatsIPv6ActiveLinkAdj indicates the number of active IPv6 link adjacencies (i.e. established adjacencies) associated with the LDP instance.
ipv6ActiveSessions [Ipv 6 Active Sessions] (vLdpNgStatsIPv6ActiveSess)	long	The value of vLdpNgStatsIPv6ActiveSess indicates the number of active IPv6 sessions (i.e. session in some form of creation) associated with the LDP instance.
ipv6ActiveTargAdjacencies [Ipv 6 Active Targ Adjacencies] (vLdpNgStatsIPv6ActiveTargAdj)	long	The value of vLdpNgStatsIPv6ActiveTargAdj indicates the number of active IPv6 target adjacencies (i.e. established sessions) associated with the LDP instance.
ipv6ActiveTargetedSessions [Ipv 6 Active Targeted Sessions] (vLdpNgStatsIPv6ActiveTargPeers)	long	The value of vLdpNgStatsIPv6ActiveTargPeers indicates the number of configured IPv6 targeted peers that are administratively up in an LDP instance.
ipv6AddressFECsReceived [Ipv 6 Address FECs Received] (vLdpNgStatsIPv6PfxFecRecv)	long	The value of vLdpNgStatsIPv6PfxFecRecv indicates the number of IPv6 Address FECs received by the LDP instance from its neighbors.
ipv6AddressFECsSent [Ipv 6 Address FECs Sent] (vLdpNgStatsIPv6PfxFecSent)	long	The value of vLdpNgStatsIPv6PfxFecSent indicates the number of IPv6 Address FECs sent by the LDP instance to its neighbors.
ipv6AttemptedSessions [Ipv 6 Attempted Sessions] (vLdpNgStatsIPv6AttemptedSessions)	long	The value of vLdpNgStatsIPv6AttemptedSessions indicates the total number of attempted IPv6 sessions for this LDP instance.
ipv6EgrFecPfxCount [Ipv 6 Egr Fec Pfx Count] (vLdpNgStatsIPv6EgrFecPfxCount)	long	The value of vLdpNgStatsIPv6EgrFecPfxCount indicates the number of IPv6 egress FEC prefix statistics configured for this LDP instance.
ipv6InactiveInterfaces [Ipv 6 Inactive Interfaces] (vLdpNgStatsIPv6InactifIf)	long	The value of vLdpNgStatsIPv6InactifIf indicates the number of inactive (i.e. operationally down) IPv6 interfaces associated with the LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6InactiveTargetedSessions [Ipv 6 Inactive Targeted Sessions] (vLdpNgStatsIPv6InactiveTargPeers)	long	The value of vLdpNgStatsIPv6InactiveTargPeers indicates the number of inactive (i.e. operationally down) IPv6 targeted sessions associated with the LDP instance.
ipv6OverloadedInterfaces [Ipv 6 Overloaded Interfaces] (vLdpNgStatsIPv6OLoadInterfaces)	long	The value of vLdpNgStatsIPv6OLoadInterfaces indicates the number of overloaded IPv6 interfaces in LDP instance.
ipv6OverloadedTargetedPeers [Ipv 6 Overloaded Targeted Peers] (vLdpNgStatsIPv6OLoadTargPeers)	long	The value of vLdpNgStatsIPv6OLoadTargPeers indicates the number of overloaded IPv6 targeted peers in LDP instance.
ipv6P2mpFecInOverloaded [Ipv 6 P2 mp Fec In Overloaded] (vLdpNgStatsIPv6P2MPFecInOLoad)	long	The value of vLdpNgStatsIPv6P2MPFecInOLoad indicates the number IPv4 P2MP FEC in overload state in LDP instance.
ipv6P2mpFecOLSessionReceived [Ipv 6 P2 mp Fec OLSession Received] (vLdpNgStatsIPv6P2MPFecOLSessRecv)	long	The value of vLdpNgStatsIPv6P2MPFecOLSessRecv indicates the number of Overload Notifications received for IPv6 P2MP FEC over sessions in LDP instance.
ipv6P2mpFecOLSessionSent [Ipv 6 P2 mp Fec OLSession Sent] (vLdpNgStatsIPv6P2MPFecOLSessSent)	long	The value of vLdpNgStatsIPv6P2MPFecOLSessSent indicates the number of Overload Notifications sent for IPv6 P2MP FEC over sessions in LDP instance.
ipv6PfxFecInOverloaded [Ipv 6 Pfx Fec In Overloaded] (vLdpNgStatsIPv6PfxFecInOLoad)	long	The value of vLdpNgStatsIPv6PfxFecInOLoad indicates the number IPv6 Address FEC in overload state in LDP instance.
ipv6PfxFecOLSessionReceived [Ipv 6 Pfx Fec OLSession Received] (vLdpNgStatsIPv6PfxFecOLSessRecv)	long	The value of vLdpNgStatsIPv6PfxFecOLSessRecv indicates the number of Overload Notifications received for IPv6 address FEC over sessions in LDP instance.
ipv6PfxFecOLSessionSent [Ipv 6 Pfx Fec OLSession Sent] (vLdpNgStatsIPv6PfxFecOLSessSent)	long	The value of vLdpNgStatsIPv6PfxFecOLSessSent indicates the number of Overload Notifications sent for IPv6 address FEC over sessions in LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAliveExpiredErrors [Keep Alive Expired Errors] (vLdpNgStatsKeepAliveExpErrors)	long	The value of vLdpNgStatsKeepAliveExpErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vLdpNgStatsMalformedTlvErrors)	long	The value of vLdpNgStatsMalformedTlvErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vLdpNgStatsIPv4OperDownEvents)	long	The value of vLdpNgStatsIPv4OperDownEvents indicates the number of times the IPv4 LDP instance has gone operationally down since the instance was created.
overloadedInterfaces [Overloaded Interfaces] (vLdpNgStatsIPv4OLoadInterfaces)	long	The value of vLdpNgStatsIPv4OLoadInterfaces indicates the number of overloaded IPv4 interfaces in LDP instance.
overloadedTargetedPeers [Overloaded Targeted Peers] (vLdpNgStatsIPv4OLoadTargPeers)	long	The value of vLdpNgStatsIPv4OLoadTargPeers indicates the number of overloaded IPv4 targeted peers in LDP instance.
p2mpFecInOverloaded [P2 mp Fec In Overloaded] (vLdpNgStatsIPv4P2MPFecInOLoad)	long	The value of vLdpNgStatsIPv4P2MPFecInOLoad indicates the number IPv4 P2MP FEC in overload state in LDP instance.
p2mpFecOLSessionReceived [P2 mp Fec OLSession Received] (vLdpNgStatsIPv4P2MPFecOLSessionReceived)	long	The value of vLdpNgStatsIPv4P2MPFecOLSessionReceived indicates the number of Overload Notifications received for IPv4 P2MP FEC over sessions in LDP instance.
p2mpFecOLSessionSent [P2 mp Fec OLSession Sent] (vLdpNgStatsIPv4P2MPFecOLSessionSent)	long	The value of vLdpNgStatsIPv4P2MPFecOLSessionSent indicates the number of Overload Notifications sent for IPv4 P2MP FEC over sessions in LDP instance.
pfxFecInOverloaded [Pfx Fec In Overloaded] (vLdpNgStatsIPv4PfxFecInOLoad)	long	The value of vLdpNgStatsIPv4PfxFecInOLoad indicates the number IPv4 Address FEC in overload state in LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pfxFecOLSessionReceived [Pfx Fec OLSession Received] (vLdpNgStatsIPv4PfxFecOLSessRecv)	long	The value of vLdpNgStatsIPv4PfxFecOLSessRecv indicates the number of Overload Notifications received for IPv4 address FEC over sessions in LDP instance.
pfxFecOLSessionSent [Pfx Fec OLSession Sent] (vLdpNgStatsIPv4PfxFecOLSessSent)	long	The value of vLdpNgStatsIPv4PfxFecOLSessSent indicates the number of Overload Notifications sent for IPv4 address FEC over sessions in LDP instance.
service129FECsReceived [Service 129 FECs Received] (vLdpNgStatsFec129FecRecv)	long	The value of vLdpNgStatsFec129FecRecv indicates the number of General Pseudo wire ID FECs received by the LDP instance from its neighbors.
service129FECsSent [Service 129 FECs Sent] (vLdpNgStatsFec129FecSent)	long	The value of vLdpNgStatsFec129FecSent indicates the number of General Pseudo wire ID FECs sent by the LDP instance to its neighbors.
serviceFECsReceived [Service FECs Received] (vLdpNgStatsFec128FecRecv)	long	The value of vLdpNgStatsFec128FecRecv indicates the number of Pseudo wire ID FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vLdpNgStatsFec128FecSent)	long	The value of vLdpNgStatsFec128FecSent indicates the number of Pseudo wire ID FECs sent by the LDP instance to its neighbors.
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vLdpNgStatsSessRejAdvErrors)	long	The value of vLdpNgStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vLdpNgStatsSessRejLbIRngeErrs)	long	The value of vLdpNgStatsSessRejLbIRngeErrs gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.

Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vLdpNgStatsSessRejMaxPduErrs)	long	The value of vLdpNgStatsSessRejMaxPduErrs gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vLdpNgStatsSessRejNoHelloErrs)	long	The value of vLdpNgStatsSessRejNoHelloErrs gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vLdpNgStatsShutdownNotifRecv)	long	The value of vLdpNgStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vLdpNgStatsShutdownNotifSent)	long	The value of vLdpNgStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vLdpNgStatsUnknownTlvErrors)	long	The value of vLdpNgStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.
<p>SiteStatsExtension</p> <p>MIB entry name: vLdpNgStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vLdpNgStatsTable): vLdpNgStatsTable is a read-only table. Table 266 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6P2mpFecReceived [Ipv 6 P2 mp Fec Received] (vLdpNgStatsIPv6P2MPFecRecv)	long	The value of vLdpNgStatsIPv6P2MPFecRecv indicates the number of IPv6 P2MP FECs received by the LDP instance from its neighbors.
ipv6P2mpFecSent [Ipv 6 P2 mp Fec Sent] (vLdpNgStatsIPv6P2MPFecSent)	long	The value of vLdpNgStatsIPv6P2MPFecSent indicates the number of IPv6 P2MP FECs sent by the LDP instance to its neighbors.
p2mpFecReceived [P2 mp Fec Received] (vLdpNgStatsIPv4P2MPFecRecv)	long	The value of vLdpNgStatsIPv4P2MPFecRecv indicates the number of IPv4 P2MP FECs received by the LDP instance from its neighbors.
p2mpFecSent [P2 mp Fec Sent] (vLdpNgStatsIPv4P2MPFecSent)	long	The value of vLdpNgStatsIPv4P2MPFecSent indicates the number of IPv4 P2MP FECs sent by the LDP instance to its neighbors.
<p>TargetedPeerStats</p> <p>MIB entry name: vRtrLdpNgTargPeerStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpNgSessionStatsEntry.</p> <p>Table description (for vRtrLdpNgTargPeerStatsTable): The vRtrLdpNgTargPeerStatsTable is a read-only table. The purpose of this table is to keep statistical information about the Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgTargPeerTable, and the augmenting table, vRtrLdpNgTargPeerStatsTable. This in effect extends the vRtrLdpNgTargPeerTable with additional columns. Creation or deletion of a row in the vRtrLdpNgTargPeerTable results in the same fate for the row in the vRtrLdpNgTargPeerTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.TargetedPeer</p>		

Table 266 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
existingAdjacencies [Existing Adjacencies] (vRtrLdpNgTargPeerStatExistingAdj)	long	The value of vRtrLdpNgTargPeerStatExistingAdj indicates a count of the total active adjacencies with this targeted peer.

Table 267 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 267 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPPortConfiguration</p>		

Table 267 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and lldpExtensions objects because the information timeliness interval has expired. This counter is similar to lldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
lldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
lldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
lldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 267 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
lldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lldp.LLDPPortConfiguration</p>		
lldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
lldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 268 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GroupSourceSummaryStats</p> <p>MIB entry name: vRtrMldGrpSrcSummaryEntry</p> <p>Entry description: An entry in the vRtrMldGrpSrcSummaryTable. Each entry represents the summary counters for each Group/Source combination.</p> <p>Table description (for vRtrMldGrpSrcSummaryTable): The table listing the IP multicast Group/Source summary counters.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Site</p>		
blockedGrpIntfSaps [Blocked Grp Intf Saps] (vRtrMldGrpSrcSummBlkGrpIfSaps)	long	The value of vRtrMldGrpSrcSummBlkGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the blocking list.
blockedHosts [Blocked Hosts] (vRtrMldGrpSrcSummBlkHosts)	long	The value of vRtrMldGrpSrcSummBlkHosts indicates the number of hosts having this Group/Source combination in the blocking list.
blockedInterfaces [Blocked Interfaces] (vRtrMldGrpSrcSummBlkInterfaces)	long	The value of vRtrMldGrpSrcSummBlkInterfaces indicates the number of interfaces having this Group/Source combination in the blocking list.
fwdGrpIntfSaps [Fwd Grp Intf Saps] (vRtrMldGrpSrcSummFwdGrpIfSaps)	long	The value of vRtrMldGrpSrcSummFwdGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the forwarding list.
fwdHosts [Fwd Hosts] (vRtrMldGrpSrcSummFwdHosts)	long	The value of vRtrMldGrpSrcSummFwdHosts indicates the number of hosts having this Group/Source combination in the forwarding list.
fwdInterfaces [Fwd Interfaces] (vRtrMldGrpSrcSummFwdInterfaces)	long	The value of vRtrMldGrpSrcSummFwdInterfaces indicates the number of interfaces having this Group/Source combination in the forwarding list.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
GrpInterfaceSapStats MIB entry name: sapBaseInfoEntry Entry description: Information about a specific SAP. Table description (for sapBaseInfoTable): A table that contains basic SAP information. Supports realtime plotting Supports scheduled collection Monitored class: mld.GrpInterfaceSap		
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fwdServiceId [Fwd Service Id] (vRtrIfFwdSvcId)	long	The value of vRtrIfFwdSvcId specifies the forwarding service ID for a subscriber interface in a retailer context.
groupIfIndex [Group If Index] (vRtrGrpIfIndex)	long	The unique value which identifies this interface of this virtual router in the Tmnx system. This field provides an identifier for virtual router interfaces similar to the ifIndex values used in the mib-2 interfaces table for physical interfaces. The vRtrGrpIfIndex values can be reused for different virtual routers, but are unique within those entries with the same vRtrID. The vRtrGrpIfIndex value for each virtual interface must remain constant at least from one re-initialization of the system management processor to the next.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
importPolicyDrops [Import Policy Drops] (vRtrMldGrpIfSapImportPlcyDrops)	long	The value of vRtrMldGrpIfSapImportPlcyDrops indicates the total number of times MLD protocol instance matched the host IP address or group/source addresses specified in the import policy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrMldGrpIfSapStatsMcacPlcyDrp)	long	The value of the object vRtrMldGrpIfSapStatsMcacPlcyDrp indicates the number times an MLD Group is dropped because of applying a multicast CAC policy for this SAP.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldGrpIfSapRxBadChksumPkts)	long	The value of vRtrMldGrpIfSapRxBadChksumPkts indicates the total number of MLD packets with bad checksum received for this SAP.
rxBadEncodings [Rx Bad Encodings] (vRtrMldGrpIfSapRxBadEncodings)	long	The value of vRtrMldGrpIfSapRxBadEncodings indicates the total number of MLD packets received for this SAP which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldGrpIfSapRxBadLenPkts)	long	The value of vRtrMldGrpIfSapRxBadLenPkts indicates the total number of MLD packets with bad length received for this SAP.
rxBadReceivIfPkts [Rx Bad Receive If Pkts] (vRtrMldGrpIfSapRxBadRecvIfPkts)	long	The value of vRtrMldGrpIfSapRxBadRecvIfPkts indicates the total number of MLD packets incorrectly received for this SAP.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGenQueries [Rx Gen Queries] (vRtrMldGrpIfSapRxGenQueries)	long	The value of vRtrMldGrpIfSapRxGenQueries indicates the total number of MLD General Queries received for this SAP.
rxGrpQueries [Rx Grp Queries] (vRtrMldGrpIfSapRxGrpQueries)	long	The value of vRtrMldGrpIfSapRxGrpQueries indicates the number of MLD Group Specific Queries received for this SAP.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldGrpIfSapRxGrpSrcQueries)	long	The value of vRtrMldGrpIfSapRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received for this SAP.
rxLeaves [Rx Leaves] (vRtrMldGrpIfSapRxLeaves)	long	The value of vRtrMldGrpIfSapRxLeaves indicates the total number of MLD Leaves received for this SAP.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldGrpIfSapRxLocalScopePkts)	long	The value of the object vRtrMldGrpIfSapRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv4 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldGrpIfSapRxNoRtrAlertPkts)	long	The value of vRtrMldGrpIfSapRxNoRtrAlertPkts indicates the total number of MLDv2 packets received for this SAP which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldGrpIfSapRxNonLocal)	long	The value of vRtrMldGrpIfSapRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldGrpIfSapRxPktDrops)	long	The value of vRtrMldGrpIfSapRxPktDrops indicates the total number of MLD packets that were received for this SAP but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldGrpIfSapRxRsvdScopePkts)	long	The value of the object vRtrMldGrpIfSapRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv4 multicast address.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldGrpIfSapRxUnknTypePkts)	long	The value of vRtrMldGrpIfSapRxUnknTypePkts indicates the total number of MLD packets with unknown type received for this SAP.
rxV1Reports [Rx V1 Reports] (vRtrMldGrpIfSapRxV1Reports)	long	The value of vRtrMldGrpIfSapRxV1Reports indicates the total number of MLD V1 Reports received for this SAP.
rxV2Reports [Rx V2 Reports] (vRtrMldGrpIfSapRxV2Reports)	long	The value of vRtrMldGrpIfSapRxV2Reports indicates the total number of MLD V2 Reports received for this SAP.
rxWrongVersions [Rx Wrong Versions] (vRtrMldGrpIfSapRxWrongVersions)	long	The value of vRtrMldGrpIfSapRxWrongVersions indicates the total number of MLD packets with wrong versions received for this SAP.
sgTypes [Sg Types] (vRtrMldGrpIfSapStatsSGTypes)	long	The value of vRtrMldGrpIfSapStatsSGTypes indicates the number of entries for this SAP for which the source type is 'sg'.
starGTypes [Star GTypes] (vRtrMldGrpIfSapStatsStarGTypes)	long	The value of vRtrMldGrpIfSapStatsStarGTypes indicates the number of entries for this SAP for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldGrpIfSapTxErrors)	long	The value of vRtrMldGrpIfSapTxErrors indicates the total number of times there was an error transmitting MLD packets for this SAP.
txGenQueries [Tx Gen Queries] (vRtrMldGrpIfSapTxGenQueries)	long	The value of vRtrMldGrpIfSapTxGenQueries indicates the number of MLD General Queries transmitted for this SAP.
txGrpQueries [Tx Grp Queries] (vRtrMldGrpIfSapTxGrpQueries)	long	The value of vRtrMldGrpIfSapTxGrpQueries indicates the number of MLD Group Specific Queries transmitted for this SAP.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldGrpIfSapTxGrpSrcQueries)	long	The value of vRtrMldGrpIfSapTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted for this SAP.
txLeaves [Tx Leaves] (vRtrMldGrpIfSapTxLeaves)	long	The value of vRtrMldGrpIfSapTxLeaves indicates the total number of MLD Leaves transmitted for this SAP.
txV1Reports [Tx V1 Reports] (vRtrMldGrpIfSapTxV1Reports)	long	The value of vRtrMldGrpIfSapTxV1Reports indicates the total number of MLD V1 Reports transmitted for this SAP.
txV2Reports [Tx V2 Reports] (vRtrMldGrpIfSapTxV2Reports)	long	The value of vRtrMldGrpIfSapTxV2Reports indicates the total number of MLD V2 Reports transmitted for this SAP.
InterfaceStats MIB entry name: vRtrMldIfStatsEntry Entry description: An entry in the vRtrMldIfStatsTable. Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: mld.Interface		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv2 packets received on this interface which did not have the router alert flag set.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsMcacPolicyDrops [Stats Mcac Policy Drops] (vRtrMldIfStatsMcacPolicyDrops)	long	The value of the object vRtrMldIfStatsMcacPolicyDrops indicates the number times an MLD Group is dropped because of applying a multicast CAC policy on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	The value of vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
MidHostStats MIB entry name: vRtrMidHostStatsEntry Entry description: An entry in the vRtrMidHostStatsTable. Table description (for vRtrMidHostStatsTable): The table listing the MLD statistics for a particular host. Supports realtime plotting Does not support scheduled collection Monitored class: mld.MidHost		
importPolicyDrops [Import Policy Drops] (vRtrMidHostImportPolicyDrops)	long	The value of vRtrMidHostImportPolicyDrops indicates the total number of times MLD protocol instance matched the host IP address or group/source addresses specified in the import policy.
ipAddrType [Ip Addr Type] (vRtrMidHostAddressType)	int	The value of vRtrMidHostAddressType indicates the type of address to be used for vRtrMidHostAddress.
ipAddress [Ip Address] (vRtrMidHostAddress)	String	The value of vRtrMidHostAddress indicates the IP host address for which this entry contains information.
macAddress [Mac Address] (vRtrMidHostMacAddress)	String	The value of vRtrMidHostMacAddress indicates the MAC address of this subscriber host.
mcacPolicyDrops [Mcac Policy Drops] (vRtrMidHostStatsMcacPolicyDrops)	long	The value of the object vRtrMidHostStatsMcacPolicyDrops indicates the number times an MLD Group is dropped because of applying a multicast CAC policy for this host.
pppoeSessionId [Pppoe Session Id] (vRtrMidHostPppoeSessionId)	long	The value of vRtrMidHostPppoeSessionId indicates the PPPoE session id of this subscriber host.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
redirectionDrops [Redirection Drops] (vRtrMldHostRedirectionDrops)	long	The value of the object vRtrMldHostRedirectionDrops indicates the number times an MLD Group is dropped because of a failure while applying a redirection policy for this host.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldHostRxBadChecksumPkts)	long	The value of vRtrMldHostRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received for this host.
rxBadEncodings [Rx Bad Encodings] (vRtrMldHostRxBadEncodings)	long	The value of vRtrMldHostRxBadEncodings indicates the total number of MLD packets received for this host which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldHostRxBadLenPkts)	long	The value of vRtrMldHostRxBadLenPkts indicates the total number of MLD packets with bad length received for this host.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldHostRxBadReceiveIfPkts)	long	The value of vRtrMldHostRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received for this host.
rxGenQueries [Rx Gen Queries] (vRtrMldHostRxGenQueries)	long	The value of vRtrMldHostRxGenQueries indicates the total number of MLD General Queries received for this host.
rxGrpQueries [Rx Grp Queries] (vRtrMldHostRxGrpQueries)	long	The value of vRtrMldHostRxGrpQueries indicates the number of MLD Group Specific Queries received for this host.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldHostRxGrpSrcQueries)	long	The value of vRtrMldHostRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received for this host.
rxLeaves [Rx Leaves] (vRtrMldHostRxLeaves)	long	The value of vRtrMldHostRxLeaves indicates the total number of MLD Leaves received for this host.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldHostRxLocalScopePkts)	long	The value of the object vRtrMldHostRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv4 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldHostRxNoRtrAlertPkts)	long	The value of vRtrMldHostRxNoRtrAlertPkts indicates the total number of MLDv2 packets received for this host which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldHostRxNonLocal)	long	The value of vRtrMldHostRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldHostRxPktDrops)	long	The value of vRtrMldHostRxPktDrops indicates the total number of MLD packets that were received for this host but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldHostRxRsvdScopePkts)	long	The value of the object vRtrMldHostRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv4 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldHostRxUnknownTypePkts)	long	The value of vRtrMldHostRxUnknownTypePkts indicates the total number of MLD packets with unknown type received for this host.
rxV1Reports [Rx V1 Reports] (vRtrMldHostRxV1Reports)	long	The value of vRtrMldHostRxV1Reports indicates the total number of MLD V1 Reports received for this host.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV2Reports [Rx V2 Reports] (vRtrMldHostRxV2Reports)	long	The value of vRtrMldHostRxV2Reports indicates the total number of MLD V2 Reports received for this host.
rxWrongVersions [Rx Wrong Versions] (vRtrMldHostRxWrongVersions)	long	The value of vRtrMldHostRxWrongVersions indicates the total number of MLD packets with wrong versions received for this host.
sgTypes [Sg Types] (vRtrMldHostStatsSGTypes)	long	The value of vRtrMldHostStatsSGTypes indicates the number of entries for this host for which the source type is 'sg'.
starGTypes [Star GTypes] (vRtrMldHostStatsStarGTypes)	long	The value of vRtrMldHostStatsStarGTypes indicates the number of entries for this host for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldHostTxErrors)	long	The value of vRtrMldHostTxErrors indicates the total number of times there was an error transmitting MLD packets for this host.
txGenQueries [Tx Gen Queries] (vRtrMldHostTxGenQueries)	long	The value of vRtrMldHostTxGenQueries indicates the number of MLD General Queries transmitted for this host.
txGrpQueries [Tx Grp Queries] (vRtrMldHostTxGrpQueries)	long	The value of vRtrMldHostTxGrpQueries indicates the number of MLD Group Specific Queries transmitted for this host.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldHostTxGrpSrcQueries)	long	The value of vRtrMldHostTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted for this host.
txLeaves [Tx Leaves] (vRtrMldHostTxLeaves)	long	The value of vRtrMldHostTxLeaves indicates the total number of MLD Leaves transmitted for this host.

Table 268 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV1Reports [Tx V1 Reports] (vRtrMldHostTxV1Reports)	long	The value of vRtrMldHostTxV1Reports indicates the total number of MLD V1 Reports transmitted for this host.
txV2Reports [Tx V2 Reports] (vRtrMldHostTxV2Reports)	long	The value of vRtrMldHostTxV2Reports indicates the total number of MLD V2 Reports transmitted for this host.
SiteStats MIB entry name: vRtrMldGenStatsEntry Entry description: Each row entry represents statistics for an instance of the MLD protocol running within a virtual router. Table description (for vRtrMldGenStatsTable): The vRtrMldGenStatsTable contains objects for general statistics for the MLD protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mld.Site		
statsSGTypes [Stats SGTypes] (vRtrMldGenStatsSGTypes)	long	The value of vRtrMldGenStatsSGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldGenStatsStarGTypes)	long	The value of vRtrMldGenStatsStarGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'starG'.

Table 269 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries indicates the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/vRtrMplsLspAge * 100 %).

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats MIB entry name: vRtrMplsIfStatEntry Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system. Supports realtime plotting Supports scheduled collection Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>P2MPInstanceStats</p> <p>MIB entry name: vRtrMplsP2mplInstStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsP2mplInstStatTable): The vRtrMplsP2mplInstStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.P2MPInstance</p>		
configuredS2Is [Configured S2 Is] (vRtrMplsP2mplInstStatConfiguredS2Is)	long	The value of vRtrMplsP2mplInstStatConfiguredS2Is indicates the number of S2Is configured for this P2MP LSP.
lastS2IChange [Last S2 I Change] (vRtrMplsP2mplInstStatLastS2IChange)	long	The value of vRtrMplsP2mplInstStatLastS2IChange indicates the time since the last change occurred on this P2MP LSP.
lastS2ITimeDown [Last S2 I Time Down] (vRtrMplsP2mplInstStatLastS2ITimeDown)	long	The value of vRtrMplsP2mplInstStatLastS2ITimeDown indicates the total time that this S2I has not been operational.
lastTrans [Last Trans] (vRtrMplsP2mplInstStatLastTrans)	long	The value of vRtrMplsP2mplInstStatLastTrans indicates the time since the last transition occurred on this P2mp instance.
operationalS2Is [Operational S2 Is] (vRtrMplsP2mplInstStatOperationalS2Is)	long	The value of vRtrMplsP2mplInstStatOperationalS2Is indicates the number of operational S2Is for this P2MP LSP. This includes the S2Is currently active.
s2IChanges [S2 I Changes] (vRtrMplsP2mplInstStatS2IChanges)	long	The value of vRtrMplsP2mplInstStatS2IChanges indicates the number of S2I changes this P2MP LSP has had. For every S2I change (S2I down, S2I up, S2I change), a corresponding syslog/trap (if enabled) is generated for it.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2lTimeUp [S2l Time Up] (vRtrMplsP2mplInstStatLastS2lTimeUp)	long	The value of vRtrMplsP2mplInstStatLastS2lTimeUp indicates the total time that this S2l has been operational.
timeDown [Time Down] (vRtrMplsP2mplInstStatTimeDown)	long	The value of vRtrMplsP2mplInstStatTimeDown indicates the total time that this P2MP instance has not been operational.
timeUp [Time Up] (vRtrMplsP2mplInstStatTimeUp)	long	The value of vRtrMplsP2mplInstStatTimeUp indicates the total time that this P2MP instance has been operational.
transitions [Transitions] (vRtrMplsP2mplInstStatTransitions)	long	The value of vRtrMplsP2mplInstStatTransitions indicates the number of state transitions (up -> down and down -> up) this P2mp instance has undergone.
<p>S2LPathStats</p> <p>MIB entry name: vRtrMplsS2lSubLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Source to Leaf (S2L) Sub Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsS2lSubLspStatTable): The vRtrMplsS2lSubLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.S2LPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsS2lSubLspCspfQueries)	long	The value of vRtrMplsS2lSubLspCspfQueries indicates the number of CSPF queries that have been made for this LSP S2l.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retryAttempts [Retry Attempts] (vRtrMplsS2ISubLspRetryAttempts)	long	The value of vRtrMplsS2ISubLspRetryAttempts indicates the number of unsuccessful attempts which have been made to signal this S2I. As soon as the S2I gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsS2ISubLspTimeDown)	long	The value of vRtrMplsS2ISubLspTimeDown indicates the total time that this LSP S2I has not been operational.
timeUp [Time Up] (vRtrMplsS2ISubLspTimeUp)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsS2ISubLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitionCount [Transition Count] (vRtrMplsS2ISubLspTransitionCount)	long	The value of vRtrMplsS2ISubLspTransitionCount indicates the number of transitions that have occurred for this LSP.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.

Table 269 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.
srTeLspOriginate [Sr Te Lsp Originate] (vRtrMplsGeneralSrTeLspOriginate)	long	The value of vRtrMplsGeneralSrTeLspOriginate indicates the number of Segment Routing TE LSPs that are originating at this virtual router.
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 270 mplstp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PathMepStats</p> <p>MIB entry name: vRtrMplsTpLspPtPathMepStatEntry</p> <p>Entry description: The vRtrMplsTpLspPathMepEntry represents a Maintenance Endpoint for a MPLS-TP LSP protection Path. Rows are created and destroyed by the system based on the configuration of the MEP protection-type.</p> <p>Table description (for vRtrMplsTpLspPtPathMepStatTable): The vRtrMplsTpLspPtPathMepStatTable maintains the Maintenance End Points (MEPs) statistics for MPLS-TP LSP protection paths.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: mplstp.PathMep</p>		
wtrTimer [Wtr Timer] (vRtrMplsTpLspPtPathMepWTRTimer)	long	The value of vRtrMplsTpLspPtPathMepWTRTimer indicates the remaining Wait-To-Restore time, in seconds, before the protection path can switch back to the working path. A value of zero (0) indicates that there is no WTR timer in effect.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplstp.Site</p>		
mplsTpLspOriginate [Mpls Tp Lsp Originate] (vRtrMplsGenMplsTpLspOriginate)	long	The value of vRtrMplsGenMplsTpLspOriginate indicates the number of MPLS TP LSPs that originate at this virtual router.
mplsTpLspTerminate [Mpls Tp Lsp Terminate] (vRtrMplsGenMplsTpLspTerminate)	long	The value of vRtrMplsGenMplsTpLspTerminate indicates the number of MPLS TP LSPs that terminate at this virtual router.

Table 270 mplsTp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsTpLspTransit [Mpls Tp Lsp Transit] (vRtrMplsGenMplsTpLspTransit)	long	The value of vRtrMplsGenMplsTpLspTransit indicates the number of MPLS TP LSPs that transit through this virtual router.
mplsTpOrigPathInst [Mpls Tp Orig Path Inst] (vRtrMplsGenMplsTpOrigPathInst)	long	The value of vRtrMplsGenMplsTpOrigPathInst indicates the number of MPLS TP LSPs originate path instances.
mplsTpTermPathInst [Mpls Tp Term Path Inst] (vRtrMplsGenMplsTpTermPathInst)	long	The value of vRtrMplsGenMplsTpTermPathInst indicates the number of MPLS TP LSPs terminated path instances.
mplsTpTranPathInst [Mpls Tp Tran Path Inst] (vRtrMplsGenMplsTpTranPathInst)	long	The value of vRtrMplsGenMplsTpTranPathInst indicates the number of MPLS TP LSPs transit path instances.
TpLspEgressStats MIB entry name: vRtrMplsLspStatisticsEntry Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system. Supports realtime plotting Supports scheduled collection Monitored class: mplsTp.TPLsp		
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.

Table 270 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.

Table 270 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.

Table 270 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.

Table 270 mplsstp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 270 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TpLspGeneralStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsdp.TPLsp</p>		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.

Table 270 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by $(vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) \%$.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>TpLspIngressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsdp.TPLsp</p>		

Table 270 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.

Table 270 mplsstp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.

Table 270 mplstp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 271 msdp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMsdpNgPeerStatsEntry</p> <p>Entry description: tmnxMsdpNgPeerStatsEntry is an entry (conceptual row) in the tmnxMsdpNgPeerStatsTable. Each entry represents a MSDP peer related statistics information.</p> <p>Table description (for tmnxMsdpNgPeerStatsTable): The table tmnxMsdpNgPeerStatsTable is the statistics information related to a MSDP peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • msdp.GroupPeer • msdp.Peer 		
errorMsgsReceived [Error Msgs Received] (tmnxMsdpNgPeerStatsErrMsgsRx)	long	The value of tmnxMsdpNgPeerStatsErrMsgsRx indicates number of error messages received.
keepAliveMsgsReceived [Keep Alive Msgs Received] (tmnxMsdpNgPeerStatsKAMsgsRx)	long	The value of tmnxMsdpNgPeerStatsKAMsgsRx indicates the number of keep-alive messages received.
keepAliveMsgsSent [Keep Alive Msgs Sent] (tmnxMsdpNgPeerStatsKAMsgsSent)	long	The value of tmnxMsdpNgPeerStatsKAMsgsSent indicates the number of keep-alive messages sent.
lastMsgPeer [Last Msg Peer] (tmnxMsdpNgPeerStatsLastMsgPeer)	long	The value of tmnxMsdpNgPeerStatsLastMsgPeer indicates how long ago the last message was received from this peer instance.
lastStateChange [Last State Change] (tmnxMsdpNgPeerStatsLastStChange)	long	The value of tmnxMsdpNgPeerStatsLastStChange indicates how long ago the peer state changed.

Table 271 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerTimeouts [Peer Timeouts] (tmnxMsdpNgPeerStatsPeerTimeouts)	long	The value of tmnxMsdpNgPeerStatsPeerTimeouts indicates the number of peer timeouts.
remoteCloses [Remote Closes] (tmnxMsdpNgPeerStatsRemoteCloses)	long	The value of tmnxMsdpNgPeerStatsRemoteCloses indicates the number of times the remote peer closed.
reservedMsgsReceived [Reserved Msgs Received] (tmnxMsdpNgPeerStatsResvMsgsRx)	long	The value of tmnxMsdpNgPeerStatsResvMsgsRx indicates the number of MSDP messages received with type 'Reserved'.
rpfFailures [Rpf Failures] (tmnxMsdpNgPeerStatsRPFFailures)	long	The value of tmnxMsdpNgPeerStatsRPFFailures indicates number of reverse path forwarding (RPF) failures.
saLearned [Sa Learned] (tmnxMsdpNgPeerStatsSALearnt)	long	The value of tmnxMsdpNgPeerStatsSALearnt indicates the number of unique source active entries in the cache learned from the peer.
saLimitExceeded [Sa Limit Exceeded] (tmnxMsdpNgPeerStatsActSrcLimExcd)	long	The value of tmnxMsdpNgPeerStatsActSrcLimExcd indicates the number of times the global active source limit has been exceeded by this peer instance.
saMsgsReceived [Sa Msgs Received] (tmnxMsdpNgPeerStatsSAMsgsRx)	long	The value of tmnxMsdpNgPeerStatsSAMsgsRx indicates the number of source-active messages received.
saMsgsSent [Sa Msgs Sent] (tmnxMsdpNgPeerStatsSAMsgsSent)	long	The value of tmnxMsdpNgPeerStatsSAMsgsSent indicates the number of source-active messages sent.
saRejectExportPolicy [Sa Reject Export Policy] (tmnxMsdpNgPeerStatsSARejExpPlcy)	long	The value of tmnxMsdpNgPeerStatsSARejExpPlcy indicates the number of source active messages from the peer that were not sent due to export policy.

Table 271 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saRejectImportPolicy [Sa Reject Import Policy] (tmnxMsdpNgPeerStatsSARejImpPlcy)	long	The value of tmnxMsdpNgPeerStatsSARejImpPlcy indicates the number of source active messages from the peer that were rejected due to import policy.
saRequestMsgsReceived [Sa Request Msgs Received] (tmnxMsdpNgPeerStatsSAReqMsgsRx)	long	The value of tmnxMsdpNgPeerStatsSAReqMsgsRx indicates the number of source-active request messages received.
saRequestMsgsSent [Sa Request Msgs Sent] (tmnxMsdpNgPeerStatsSAReqMsgsSent)	long	The value of tmnxMsdpNgPeerStatsSAReqMsgsSent indicates the number of source-active request messages sent.
saResponseMsgsReceived [Sa Response Msgs Received] (tmnxMsdpNgPeerStatsSAResMsgsRx)	long	The value of tmnxMsdpNgPeerStatsSAResMsgsRx indicates the number of source-active response messages received.
saResponseMsgsSent [Sa Response Msgs Sent] (tmnxMsdpNgPeerStatsSAResMsgsSent)	long	The value of tmnxMsdpNgPeerStatsSAResMsgsSent indicates the number of source-active response messages sent.
unknownMsgsReceived [Unknown Msgs Received] (tmnxMsdpNgPeerStatsUnknMsgsRx)	long	The value of tmnxMsdpNgPeerStatsUnknMsgsRx indicates the number of unknown messages received.

Table 272 multicast statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastCacChannelServiceStats MIB entry name: tmnxMcacServStatsEntry Entry description: An entry in the tmnxMcacServStatsTable Table description (for tmnxMcacServStatsTable): The tmnxMcacServStatsTable has an entry for each service protocol (igmp-snooping on sap/sdp) channel that was either accepted/discarded by the applied multicast cac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy</p>		
action [Action] (tmnxMcacServStatsAction)	int	The value of tmnxMcacServStatsAction indicates the action specified by the mcac policy for the service application to act upon.
algorithmReapply [Algorithm Reapply] (tmnxMcacServStatsAlgoReapply)	boolean	The value of tmnxMcacServStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the service application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacServStatsBundleAvailBW)	long	The value of tmnxMcacServStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
channelBw [Channel Bw] (tmnxMcacServStatsChannelBW)	long	The value of tmnxMcacServStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the service application.
channelRequestCount [Channel Request Count] (tmnxMcacServStatsApplyAttempts)	long	The value of tmnxMcacServStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the service application.
channelType [Channel Type] (tmnxMcacServStatsChannelType)	int	The value of tmnxMcacServStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the service application.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encapValueOrVCId [Encap Value Or VCId] (tmnxMcacServStatsEncapValue)	String	The value of tmnxMcacServStatsEncapValue indicates the SAP/SDP Encap value of which the mcac policy is applied.
interfaceAvailBw [Interface Avail Bw] (tmnxMcacServStatsIntfAvailBW)	long	The value of tmnxMcacServStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
portIdOrTunnelId [Port Id Or Tunnel Id] (tmnxMcacServStatsPortId)	String	The value of tmnxMcacServStatsPortId indicates the port Id of the SAP/SDP on which the mcac policy is applied.
reason [Reason] (tmnxMcacServStatsReason)	int	The value of tmnxMcacServStatsReason indicates the reason for the action specified by the mcac policy for the service application to act upon.
timeStamp [Time Stamp] (tmnxMcacServStatsTimeStamp)	long	The value of tmnxMcacServStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
McastCacChannelStats MIB entry name: tmnxMcacStatsEntry Entry description: An entry in the tmnxMcacStatsTable Table description (for tmnxMcacStatsTable): The tmnxMcacStatsTable has an entry for each protocol interface channel that was either accepted/discarded by the applied multicast cac policy. This table is deprecated and replaced by tmnxMcacStatsNgTable. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
action [Action] (tmnxMcacStatsAction)	int	The value of tmnxMcacStatsAction indicates the action specified by the mcac policy for the application interface to act upon.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
algorithmReapply [Algorithm Reapply] (tmnxMcacStatsAlgoReapply)	boolean	The value of tmnxMcacStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacStatsBundleAvailBW)	long	The value of tmnxMcacStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
bundleName [Bundle Name] (tmnxMcacStatsBundleName)	String	The value of tmnxMcacStatsBundleName indicates the name of the multicast CAC policy bundle. The value of tmnxMcacStatsBundleName could be an empty string, meaning that this particular statistics entry's channel did not belong to any bundle in the policy.
channelAddress [Channel Address] (tmnxMcacStatsChlAddr)	String	The value of tmnxMcacStatsChlAddr indicates the address of the multicast channel that mcac policy was applied upon when requested by the application interface. Address type is indicated by tmnxMcacStatsChlAddrType.
channelAddressType [Channel Address Type] (tmnxMcacStatsChlAddrType)	int	The value of tmnxMcacStatsChlAddrType indicates the address type of tmnxMcacStatsChlAddr.
channelBw [Channel Bw] (tmnxMcacStatsChannelBW)	long	The value of tmnxMcacStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the application interface.
channelRequestCount [Channel Request Count] (tmnxMcacStatsApplyAttempts)	long	The value of tmnxMcacStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the application.
channelType [Channel Type] (tmnxMcacStatsChannelType)	int	The value of tmnxMcacStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the application interface.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interfaceAvailBw [Interface Avail Bw] (tmnxMcacStatsIntfAvailBW)	long	The value of tmnxMcacStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
interfaceId [Interface Id] (tmnxMcacStatsIfIndex)	long	The value of tmnxMcacStatsIfIndex indicates the application interface index that has applied mcac policy.
protocolName [Protocol Name] (tmnxMcacStatsProtocolIndex)	int	The value of tmnxMcacStatsProtocolIndex indicates the application that has applied mcac policy.
reason [Reason] (tmnxMcacStatsReason)	int	The value of tmnxMcacStatsReason indicates the reason for the action specified by the mcac policy for the application interface to act upon.
timeStamp [Time Stamp] (tmnxMcacStatsTimeStamp)	long	The value of tmnxMcacStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
McastCacOper MIB entry name: tmnxMcacOperEntry Entry description: An entry in the tmnxMcacOperTable Table description (for tmnxMcacOperTable): The tmnxMcacOperTable has an entry for each protocol interface that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
activeChannels [Active Channels] (tmnxMcacOperActiveChannels)	long	The value of tmnxMcacOperActiveChannels indicates the number of active channels for this entry.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
availMandBw [Avail Mand Bw] (tmnxMcacOperAvailMandBw)	long	The value of tmnxMcacOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacOperAvailOptnlBw)	long	The value of tmnxMcacOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
currConstrtlvl [Curr Constrt Lvl] (tmnxMcacOperCurrConstrtlvl)	long	The value of tmnxMcacOperCurrConstrtlvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacOperInUseMandBw)	long	The value of tmnxMcacOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacOperInUseOptnlBw)	long	The value of tmnxMcacOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this protocol interface instance.
maxBw [Max Bw] (tmnxMcacOperMaxBw)	long	The value of tmnxMcacOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
portsDown [Ports Down] (tmnxMcacOperPortsDown)	long	The value of tmnxMcacOperPortsDown indicates the the number of ports down on the application interface. This value is used to index the table tmnxMcacLagTable to get the bundle level id.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
valuesInTransit [Values In Transit] (tmnxMcacOperValuesInTransit)	boolean	The value of tmnxMcacOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacOperAvailOptnlBw tmnxMcacOperAvailMandBw tmnxMcacOperInUseMandBw tmnxMcacOperInUseOptnlBw When Multicast CAC Policy is applied on the interface for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacOperValuesInTransit will be set to 'false'. If the value of tmnxMcacOperValuesInTransit is 'true' then the values are in transition.
McastCacServOperStats MIB entry name: tmnxMcacServOperEntry Entry description: An entry in the tmnxMcacServOperTable Table description (for tmnxMcacServOperTable): The tmnxMcacServOperTable has an entry for each service application (igmp-snooping on sap/sdp) that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy		
activeChannels [Active Channels] (tmnxMcacServOperActiveChannels)	long	The value of tmnxMcacServOperActiveChannels indicates the number of active channels for this entry.
availMandBw [Avail Mand Bw] (tmnxMcacServOperAvailMandBw)	long	The value of tmnxMcacServOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacServOperAvailOptnlBw)	long	The value of tmnxMcacServOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currConstrLvl [Curr Constrt Lvl] (tmnxMcacServOperCurrConstrtLvl)	long	The value of tmnxMcacServOperCurrConstrtLvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacServOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacServOperInUseMandBw)	long	The value of tmnxMcacServOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacServOperInUseOptnlBw)	long	The value of tmnxMcacServOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this service application on sap/sdp instance.
maxBw [Max Bw] (tmnxMcacServOperMaxBw)	long	The value of tmnxMcacServOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.
portsDown [Ports Down] (tmnxMcacServOperPortsDown)	long	The value of tmnxMcacServOperPortsDown indicates the the number of ports down on the service application on sap/sdp. This value is used to index the table tmnxMcacLagTable to get the bundle level id.
valuesInTransit [Values In Transit] (tmnxMcacServOperValuesInTransit)	boolean	The value of tmnxMcacServOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacServOperAvailOptnlBw tmnxMcacServOperAvailMandBw tmnxMcacServOperInUseMandBw tmnxMcacServOperInUseOptnlBw When Multicast CAC Policy is applied on the sap/sdp for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacServOperValuesInTransit will be set to 'false'. If the value of tmnxMcacServOperValuesInTransit is 'true' then the values are in transition.

Table 272 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastReportDestinationStats</p> <p>MIB entry name: tmnxMcPathRprtDestEntry</p> <p>Entry description: Each row entry represents a particular multicast reporting destination. Entries are created/deleted by the user.</p> <p>Table description (for tmnxMcPathRprtDestTable): The tmnxMcPathRprtDestTable has an entry for each multicast reporting destination configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastReportDestination</p>		
framesLost [Frames Lost] (tmnxMcPathRprtDestFrmsLost)	long	The value of tmnxMcPathRprtDestFrmsLost specifies the number of frames lost for this mcast reporting destination.
framesSent [Frames Sent] (tmnxMcPathRprtDestFrmsSent)	long	The value of tmnxMcPathRprtDestFrmsSent specifies the number of frames sent to this mcast reporting destination.
recordsLost [Records Lost] (tmnxMcPathRprtDestRecsLost)	long	The value of tmnxMcPathRprtDestRecsLost specifies the number of records lost for this mcast reporting destination.
recordsSent [Records Sent] (tmnxMcPathRprtDestRecsSent)	long	The value of tmnxMcPathRprtDestRecsSent specifies the number of records sent to this mcast reporting destination.

Table 273 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McEPPeerStats</p> <p>MIB entry name: tmnxMcEPPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcEPPeerStatsTable): The tmnxMcEPPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisEndpoint</p>		
configPacketsReceived [Config Packets Received] (tmnxMcEPPeerStatsPktsRxConfig)	long	The value of tmnxMcEPPeerStatsPktsRxConfig indicates how many valid MC-Endpoint control packets of type end-point config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcEPPeerStatsDropMD5)	long	The value of tmnxMcEPPeerStatsDropMD5 indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcEPPeerStatsPktsTxFailed)	long	The value of tmnxMcEPPeerStatsPktsTxFailed indicates how many MC-Endpoint control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlId)	long	The value of tmnxMcEPPeerStatsDropTlvInvlId indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis end-point.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlSz)	long	The value of tmnxMcEPPeerStatsDropTlvInvlSz indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet size was invalid.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcEPPeerStatsPktsRxKpalive)	long	The value of tmnxMcEPPeerStatsPktsRxKpalive indicates how many valid MC-Endpoint control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcEPPeerStatsPktsTxKpalive)	long	The value of tmnxMcEPPeerStatsPktsTxKpalive indicates how many MC-Endpoint control packets of type keepalive were transmitted from this system to the peer.
noEpPeerPacketsDropped [No Ep Peer Packets Dropped] (tmnxMcEPPeerStatsDropEpNoPeer)	long	The value of tmnxMcEPPeerStatsDropEpNoPeer indicates how many pkts were dropped because MC-Endpoint does not have a MC-peer assigned yet or MC-Endpoint is attached to a different peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcEPPeerStatsDropOutOfSeq)	long	The value of tmnxMcEPPeerStatsDropOutOfSeq indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcEPPeerStatsPktsRx)	long	The value of tmnxMcEPPeerStatsPktsRx indicates how many valid MC-Endpoint control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcEPPeerStatsPktsTx)	long	The value of tmnxMcEPPeerStatsPktsTx indicates how many MC-Endpoint control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcEPPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsRxPeerCfg indicates how many valid MC-Endpoint control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcEPPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsTxPeerCfg indicates how many MC-Endpoint control packets of type peer config were transmitted from this system to the peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcEPPeerStatsDropStateDsblnd)	long	The value of tmnxMcEPPeerStatsDropStateDsblnd indicates how many MC-Endpoint control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcEPPeerStatsPktsRxState)	long	The value of tmnxMcEPPeerStatsPktsRxState indicates how many valid MC-Endpoint control packets of type end-point state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcEPPeerStatsDropPktTooShrt)	long	The value of tmnxMcEPPeerStatsDropPktTooShrt indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcEPPeerStatsDropUnknownTlv)	long	The value of tmnxMcEPPeerStatsDropUnknownTlv indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>McPeerIPSecTunnelGroupStats MIB entry name: tMcPeerTnlGrpStatEntry Entry description: Each row entry represents a particular ipsec tunnel statistics group of multi-chassis peer. Table description (for tMcPeerTnlGrpStatTable): The tMcPeerTnlGrpStatTable has statistics entry for each ipsec tunnel group specific to multi-chassis peer configured on this system. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.McPeerIPSecTunnelGroup</p>		
dynamicAwaitConf [Dynamic Await Conf] (tMcPeerTnlGrpStatDynAwaitConf)	long	The value of tMcPeerTnlGrpStatDynAwaitConf indicates the number of dynamic multi-chassis tunnel awaiting configuration on this tunnel-group to be synchronized on this multi-chassis peer.
dynamicFailed [Dynamic Failed] (tMcPeerTnlGrpStatDynFailed)	long	The value of tMcPeerTnlGrpStatDynFailed indicates the number of dynamic multi-chassis tunnel failed to install on this tunnel-group to be synchronized on this multi-chassis peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynamicInstalled [Dynamic Installed] (tMcPeerTnlGrpStatDynInstalled)	long	The value of tMcPeerTnlGrpStatDynInstalled indicates the number of dynamic multi-chassis tunnel installed on this tunnel-group to be synchronized on this multi-chassis peer.
dynamicInstalling [Dynamic Installing] (tMcPeerTnlGrpStatDynInstalling)	long	The value of tMcPeerTnlGrpStatDynInstalling indicates the number of dynamic multi-chassis tunnel being installed on this tunnel-group to be synchronized on this multi-chassis peer.
staticAwaitConf [Static Await Conf] (tMcPeerTnlGrpStatAwaitConf)	long	The value of tMcPeerTnlGrpStatAwaitConf indicates the number of static multi-chassis tunnel awaiting configuration on this tunnel-group to be synchronized on this multi-chassis peer.
staticFailed [Static Failed] (tMcPeerTnlGrpStatFailed)	long	The value of tMcPeerTnlGrpStatFailed indicates the number of static multi-chassis tunnel failed to install on this tunnel-group to be synchronized on this multi-chassis peer.
staticInstalled [Static Installed] (tMcPeerTnlGrpStatInstalled)	long	The value of tMcPeerTnlGrpStatInstalled indicates the number of static multi-chassis tunnel installed on this tunnel-group to be synchronized on this multi-chassis peer.
staticInstalling [Static Installing] (tMcPeerTnlGrpStatInstalling)	long	The value of tMcPeerTnlGrpStatInstalling indicates the number of static multi-chassis tunnel being installed on this tunnel-group to be synchronized on this multi-chassis peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McWppPeerStats</p> <p>MIB entry name: tmnxMcWppPeerStatsEntry</p> <p>Entry description: Each conceptual row represents multi-chassis WPP peer statistics of a specific instance. Entries in this table are created and destroyed by the system. Rows are only created where the statistics value is nonzero; this allows faster walking through this table; hence, it is recommended to perform only get-next-request operations to retrieve information from this table.</p> <p>Table description (for tmnxMcWppPeerStatsTable): The tmnxMcWppPeerStatsTable shows multi-chassis WPP peer statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
noResources [No Resources] (tmnxMcWppPeerStatsVal)	long	The value of the object tmnxMcWppPeerStatsVal indicates the value of the statistics contained in this conceptual row.
statsInstance [Stats Instance] (tmnxMcWppPeerStatsInstance)	long	The value of the object tmnxMcWppPeerStatsInstance indicates the instance identifier of the statistics contained in this conceptual row.
<p>McsClientAppStats</p> <p>MIB entry name: tmnxMcsClientAppEntry</p> <p>Entry description: Each row entry represents a particular multi-chassis peer synchronization protocol application. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcsClientAppTable): The tmnxMcsClientAppTable has an entry for each application using the multi-chassis peer synchronization protocol configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
alarmedEntries [Alarmed Entries] (tmnxMcsClientAlarmedEntries)	long	The value of tmnxMcsClientAlarmedEntries indicates the number of alarmed entries in the MCS database per multi-chassis peer for a particular application. Entries with an alarm are entries that are not being used by the local client application due to resource constraints.
application [Application] (tmnxMcsClientApplication)	int	The value of tmnxMcsClientApplication indicates the type of application using multi-chassis synchronization.
lclDeletedEntries [Lcl Deleted Entries] (tmnxMcsClientLclDeletedEntries)	long	The value of tmnxMcsClientLclDeletedEntries indicates the number of locally deleted entries in the MCS database per multi-chassis peer for a particular application. Locally deleted entries are entries that are not being used by the local MCS client application.
numEntries [Num Entries] (tmnxMcsClientNumEntries)	long	The value of tmnxMcsClientNumEntries indicates the total number of entries in the MCS database per multi-chassis peer for a particular application.
omcrAlarmedEntries [Omcr Alarmed Entries] (tmnxMcsClientOmcrAlarmed)	long	The value of tmnxMcsClientOmcrAlarmed indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) alarmed entries in the MCS database of this multi-chassis peer for this particular application.
omcrStandbyEntries [Omcr Standby Entries] (tmnxMcsClientOmcrStandby)	long	The value of tmnxMcsClientOmcrStandby indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) standby entries in the MCS database of this multi-chassis peer for this particular application.
remAlarmedEntries [Rem Alarmed Entries] (tmnxMcsClientRemAlarmedEntries)	long	The value of tmnxMcsClientRemAlarmedEntries indicates the number of alarmed entries in the MCS database on the multi-chassis peer for a particular application. Entries with an alarm are entries that are not being used by the remote client application due to resource constraints.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remLclDelEntries [Rem Lcl Del Entries] (tmnxMcsClientRemLclDelEntries)	long	The value of tmnxMcsClientRemLclDelEntries indicates the number of locally deleted entries in the MCS database on the multi-chassis peer for a particular application. Locally deleted entries are entries that are not being used by the remote MCS client application.
remNumEntries [Rem Num Entries] (tmnxMcsClientRemNumEntries)	long	The value of tmnxMcsClientRemNumEntries indicates the total number of entries in the MCS database on the multi-chassis peer for a particular application.
remOmcrAlarmedEntries [Rem Omcr Alarmed Entries] (tmnxMcsClientOmcrRemAlarmed)	long	The value of tmnxMcsClientOmcrRemAlarmed indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) alarmed entries for this particular application reported by the remote MCR system.
remOmcrStandbyEntries [Rem Omcr Standby Entries] (tmnxMcsClientOmcrRemStandby)	long	The value of tmnxMcsClientOmcrRemStandby indicates the number of Oversubscribed Multi-Chassis Redundancy (OMCR) standby entries for this particular application reported by the remote MCR system.
<p>MultiChassisPeerRingStats</p> <p>MIB entry name: tmnxMcrPeerStatsEntry</p> <p>Entry description: Each row entry in the tmnxMcrPeerStatsTable represents additional columns of operational data for a multi-chassis peer.</p> <p>Table description (for tmnxMcrPeerStatsTable): The tmnxMcrPeerStatsTable has an entry for each multi-chassis peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
keepAlivePacketsTransmitted [Keep Alive Packets Transmitted] (tmnxMcrPeerStatsTxKeepAlive)	long	The value of tmnxMcrPeerStatsTxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were transmitted to the peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcsIdRequestPacketsReceived [Mcs Id Request Packets Received] (tmnxMcrPeerStatsRxMcsIdReq)	long	The value of tmnxMcrPeerStatsRxMcsIdReq indicates how many valid MCS ID requests were received from the peer.
mcsIdRequestPacketsTransmitted [Mcs Id Request Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdReq)	long	The value of tmnxMcrPeerStatsTxMcsIdReq indicates how many valid MCS ID requests were transmitted to the peer.
mcsIdResponsePacketsReceived [Mcs Id Response Packets Received] (tmnxMcrPeerStatsRxMcsIdRsp)	long	The value of tmnxMcrPeerStatsRxMcsIdRsp indicates how many valid MCS ID responses were received from the peer.
mcsIdResponsePacketsTransmitted [Mcs Id Response Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdRsp)	long	The value of tmnxMcrPeerStatsTxMcsIdRsp indicates how many valid MCS ID responses were transmitted to the peer.
ringExistsRequestPacketsReceived [Ring Exists Request Packets Received] (tmnxMcrPeerStatsRxRingExistsReq)	long	The value of tmnxMcrPeerStatsRxRingExistsReq indicates how many valid 'ring exists' requests were received from the peer.
ringExistsRequestPacketsTransmitted [Ring Exists Request Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsReq)	long	The value of tmnxMcrPeerStatsTxRingExistsReq indicates how many valid 'ring exists' requests were transmitted to the peer.
ringExistsResponsePacketsReceived [Ring Exists Response Packets Received] (tmnxMcrPeerStatsRxRingExistsRsp)	long	The value of tmnxMcrPeerStatsRxRingExistsRsp indicates how many valid 'ring exists' responses were received from the peer.
ringExistsResponsePacketsTransmitted [Ring Exists Response Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsRsp)	long	The value of tmnxMcrPeerStatsTxRingExistsRsp indicates how many valid 'ring exists' responses were transmitted to the peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ringKeepAlivePacketsReceived [Ring Keep Alive Packets Received] (tmnxMcrPeerStatsRxKeepAlive)	long	The value of tmnxMcrPeerStatsRxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were received from the peer.
ringSignallingPacketsReceived [Ring Signalling Packets Received] (tmnxMcrPeerStatsRx)	long	The value of tmnxMcrPeerStatsRx indicates how many valid MC-Ring signalling messages were received from the peer.
ringSignallingPacketsTransmitted [Ring Signalling Packets Transmitted] (tmnxMcrPeerStatsTx)	long	The value of tmnxMcrPeerStatsTx indicates how many valid MC-Ring signalling messages were transmitted to the peer.
MultiChassisRingGlobalStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
deliveredToPeerPacketsReceived [Delivered To Peer Packets Received] (tmnxMcrStatsRxDelivrdToPeer)	long	The value of tmnxMcrStatsRxDelivrdToPeer indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their peer.
deliveredToRingNodePacketsReceived [Delivered To Ring Node Packets Received] (tmnxMcrStatsRxDelivrdToRingNode)	long	The value of tmnxMcrStatsRxDelivrdToRingNode indicates how many MC-R signalling packets were received by this system that were correctly delivered to their ring node.
deliveredToRingPacketsReceived [Delivered To Ring Packets Received] (tmnxMcrStatsRxDelivrdToRing)	long	The value of tmnxMcrStatsRxDelivrdToRing indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their ring.
incompletePacketsReceived [Incomplete Packets Received] (tmnxMcrStatsRxIncomplete)	long	The value of tmnxMcrStatsRxIncomplete indicates how many MC-Ring signalling packets were received by this system that were incomplete.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidTlvPacketsReceived [Invalid Tlv Packets Received] (tmnxMcrStatsRxInvalidTlv)	long	The value of tmnxMcrStatsRxInvalidTlv indicates how many MC-Ring signalling packets were received by this system with invalid TLV.
missedBfdEvents [Missed Bfd Events] (tmnxMcrStatsMissedBfdEvent)	long	The value of tmnxMcrStatsMissedBfdEvent indicates the number of missed BFD events on this system.
missedConfigEvents [Missed Config Events] (tmnxMcrStatsMissedConfigEvent)	long	The value of tmnxMcrStatsMissedConfigEvent indicates the number of missed configuration events on this system.
noBufferPacketsNotTransmitted [No Buffer Packets Not Transmitted] (tmnxMcrStatsTxNoBuffer)	long	The value of tmnxMcrStatsTxNoBuffer indicates how many MC-Ring signalling packets could not be transmitted by this system due to a lack of packet buffers.
signallingPacketsNotTransmitted [Signalling Packets Not Transmitted] (tmnxMcrStatsTxTransmitFailed)	long	The value of tmnxMcrStatsTxTransmitFailed indicates how many MC-Ring signalling packets could not be transmitted by this system due to a transmission failure.
signallingPacketsReceived [Signalling Packets Received] (tmnxMcrStatsRx)	long	The value of tmnxMcrStatsRx indicates how many MC-Ring signalling packets were received by this system.
signallingPacketsTransmitted [Signalling Packets Transmitted] (tmnxMcrStatsTx)	long	The value of tmnxMcrStatsTx indicates how many MC-Ring signalling packets were transmitted by this system.
tooShortPacketsReceived [Too Short Packets Received] (tmnxMcrStatsRxTooShort)	long	The value of tmnxMcrStatsRxTooShort indicates how many MC-Ring signalling packets were received by this system that were too short.
unknownDestinationPacketsDropped [Unknown Destination Packets Dropped] (tmnxMcrStatsTxUnknownDest)	long	The value of tmnxMcrStatsTxUnknownDest indicates how many MC-R signalling packets were dropped because the destination was unknown.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownPeerPacketsReceived [Unknown Peer Packets Received] (tmnxMcrStatsRxUnknownPeer)	long	The value of tmnxMcrStatsRxUnknownPeer indicates how many MC-Ring signalling packets were received by this system that were related to an unknown peer.
unknownRingNodePacketsReceived [Unknown Ring Node Packets Received] (tmnxMcrStatsRxUnknownRingNode)	long	The value of tmnxMcrStatsRxUnknownRingNode indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring node.
unknownRingPacketsReceived [Unknown Ring Packets Received] (tmnxMcrStatsRxUnknownRing)	long	The value of tmnxMcrStatsRxUnknownRing indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMcrStatsRxUnknownType)	long	The value of tmnxMcrStatsRxUnknownType indicates how many MC-Ring signalling packets were received by this system that were of unknown type.
wrongAuthenticationPacketsReceived [Wrong Authentication Packets Received] (tmnxMcrStatsRxWrongAuth)	long	The value of tmnxMcrStatsRxWrongAuth indicates how many MC-Ring signalling packets were received by this system with invalid authentication.
<p>MultiChassisRingNodeStats MIB entry name: tmnxMcrRingNodeStatsEntry Entry description: Each row entry represents statistics related to an access node that participates in a multi-chassis ring configuration with a given peer. Rows are created or removed automatically by the system. Table description (for tmnxMcrRingNodeStatsTable): The tmnxMcrRingNodeStatsTable has an entry for each access node that participates in a multi-chassis ring configuration for the indicated peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRingNode</p>		
detectedPacketsAcknowledged [Detected Packets Acknowledged] (tmnxMcrRingNodeStatsTxDetectAck)	long	The value of tmnxMcrRingNodeStatsTxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged to the peer for this multi-chassis ring node.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detectedPacketsPeerAcknowledged [Detected Packets Peer Acknowledged] (tmnxMcrRingNodeStatsRxDetectAck)	long	The value of tmnxMcrRingNodeStatsRxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged by the peer for this multi-chassis ring node.
detectedPacketsReceived [Detected Packets Received] (tmnxMcrRingNodeStatsRxDetect)	long	The value of tmnxMcrRingNodeStatsRxDetect indicates how many valid 'detected ring node' signalling messages were received from the peer for this multi-chassis ring node.
detectedPacketsTransmitted [Detected Packets Transmitted] (tmnxMcrRingNodeStatsTxDetect)	long	The value of tmnxMcrRingNodeStatsTxDetect indicates how many valid 'detected ring node' signalling messages were transmitted to the peer for this multi-chassis ring node.
rcvPacketsReceived [Rcv Packets Received] (tmnxMcrRingNodeStatsRncvRxResp)	long	The value of tmnxMcrRingNodeStatsRncvRxResp indicates how many valid connectivity verification messages were received from this multi-chassis ring node.
rcvPacketsRoundTripTime [Rcv Packets Round Trip Time] (tmnxMcrRingNodeStatsRncvRtTime)	long	The value of tmnxMcrRingNodeStatsRncvRtTime indicates the round-trip-time of the last successful connectivity verification for this multi-chassis ring node. If there has not been a successful connectivity verification, the value of tmnxMcrRingNodeStatsRncvRtTime is zero.
rcvPacketsTransmitted [Rcv Packets Transmitted] (tmnxMcrRingNodeStatsRncvTxReq)	long	The value of tmnxMcrRingNodeStatsRncvTxReq indicates how many valid connectivity verification messages were transmitted to this multi-chassis ring node.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MultiChassisRingStats</p> <p>MIB entry name: tmnxMcrRingStatsEntry</p> <p>Entry description: Each row entry in the tmnxMcrRingStatsTable represents additional columns of operational data for a ring that participates in a multi-chassis operation with a given peer.</p> <p>Table description (for tmnxMcrRingStatsTable): The tmnxMcrRingStatsTable has an entry for each multi-chassis ring that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisRing</p>		
opaquePacketsReceivedDelivered [Opaque Packets Received Delivered] (tmnxMcrRingStatsRxOpaqueDelivrd)	long	The value of tmnxMcrRingStatsRxOpaqueDelivrd indicates how many valid opaque signalling messages were received from the peer and delivered for this multi-chassis ring.
opaquePacketsReceivedNoDestination [Opaque Packets Received No Destination] (tmnxMcrRingStatsRxOpaqueNoDest)	long	The value of tmnxMcrRingStatsRxOpaqueNoDest indicates how many valid opaque signalling messages were received from the peer and for which no destination could be found.
opaquePacketsTransmitted [Opaque Packets Transmitted] (tmnxMcrRingStatsTxOpaque)	long	The value of tmnxMcrRingStatsTxOpaque indicates how many valid opaque signalling messages were transmitted to the peer for this multi-chassis ring.
sapsChangedPacketsReceived [Saps Changed Packets Received] (tmnxMcrRingStatsRxSapsChanged)	long	The value of tmnxMcrRingStatsRxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were received from the peer for this multi-chassis ring.
sapsChangedPacketsTransmitted [Saps Changed Packets Transmitted] (tmnxMcrRingStatsTxSapsChanged)	long	The value of tmnxMcrRingStatsTxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were transmitted to the peer for this multi-chassis ring.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagPeerStatsTable): The tmnxMcLagPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • multichassis.PSSPeer • multichassis.Peer 		
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlId)	long	The value of tmnxMcLagPeerStatsDropTlvInvlId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvlSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblid)	long	The value of tmnxMcLagPeerStatsDropStateDsblid indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statePacketsReceived [State Packets Received] (tmnxMcLagPeerStatsPktsRxState)	long	The value of tmnxMcLagPeerStatsPktsRxState indicates how many valid MC-Lag control packets of type lag state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagPeerStatsDropPktTooShrt)	long	The value of tmnxMcLagPeerStatsDropPktTooShrt indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagPeerStatsDropUnknownTlv)	long	The value of tmnxMcLagPeerStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>PeerSynchronizationProtocolStats</p> <p>MIB entry name: tmnxMcPeerSyncStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis synchronization protocol entry. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcPeerSyncStatsTable): The tmnxMcPeerSyncStatsTable has an entry for each multi-chassis peer synchronization protocol entry.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		
bodyDecodeErrorPacketsReceived [Body Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrBody)	long	The value of tmnxMcPeerSyncPktsRxErrBody indicates the number of packets with body decode errors received from the multi-chassis peer.
dataPacketsReceived [Data Packets Received] (tmnxMcPeerSyncPktsRxData)	long	The value of tmnxMcPeerSyncPktsRxData indicates the number of hello packets received from the multi-chassis peer.
dataPacketsTransmitted [Data Packets Transmitted] (tmnxMcPeerSyncPktsTxData)	long	The value of tmnxMcPeerSyncPktsTxData indicates the number of data packets transmitted to the multi-chassis peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroneousPacketsReceived [Erroneous Packets Received] (tmnxMcPeerSyncPktsRxErr)	long	The value of tmnxMcPeerSyncPktsRxErr indicates the number of erroneous packets received from the multi-chassis peer.
headerDecodeErrorPacketsReceived [Header Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrHeader)	long	The value of tmnxMcPeerSyncPktsRxErrHeader indicates the number of packets with header decode errors received from the multi-chassis peer.
helloPacketsReceived [Hello Packets Received] (tmnxMcPeerSyncPktsRxHello)	long	The value of tmnxMcPeerSyncPktsRxHello indicates the number of hello packets received from the multi-chassis peer.
helloPacketsTransmitted [Hello Packets Transmitted] (tmnxMcPeerSyncPktsTxHello)	long	The value of tmnxMcPeerSyncPktsTxHello indicates the number of hello packets transmitted to the multi-chassis peer.
otherPacketsReceived [Other Packets Received] (tmnxMcPeerSyncPktsRxOther)	long	The value of tmnxMcPeerSyncPktsRxOther indicates the number of all other packet types received from the multi-chassis peer.
otherPacketsTransmitted [Other Packets Transmitted] (tmnxMcPeerSyncPktsTxOther)	long	The value of tmnxMcPeerSyncPktsTxOther indicates the number of all other packet types transmitted to the multi-chassis peer.
packetTransmissionErrors [Packet Transmission Errors] (tmnxMcPeerSyncPktsTxErr)	long	The value of tmnxMcPeerSyncPktsTxErr indicates the number of packet transmission errors.
sequenceNumberErrorPacketsReceived [Sequence Number Error Packets Received] (tmnxMcPeerSyncPktsRxErrSeqNum)	long	The value of tmnxMcPeerSyncPktsRxErrSeqNum indicates the number of packets with sequence number errors received from the multi-chassis peer.

Table 273 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPacketsReceived [Total Packets Received] (tmnxMcPeerSyncPktsRxAll)	long	The value of tmnxMcPeerSyncPktsRxAll indicates the total number of packets received from the multi-chassis peer.
totalPacketsTransmitted [Total Packets Transmitted] (tmnxMcPeerSyncPktsTxAll)	long	The value of tmnxMcPeerSyncPktsTxAll indicates the total number of packets transmitted to the multi-chassis peer.

Table 274 nat statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IsaMemberUsageStats</p> <p>MIB entry name: tmnxNatIsaMemberEntry</p> <p>Entry description: Each conceptual row contains status and basic statistics information about a member of a NAT ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxNatIsaMemberTable): The tmnxNatIsaMemberTable contains status and statistics information about the members of a NAT-capable ISA Group. A member of a NAT ISA Group can be mapped to a physical NAT ISA MDA.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • nat.IsaMda • nat.IsaMember 		
priSessions [Pri Sessions] (tmnxNatIsaMemberSessionsPrio)	long	The value of tmnxNatIsaMemberSessionsPrio indicates the current number of active prioritized sessions of the MDA associated with this member.
sessionUsage [Session Usage] (tmnxNatIsaMemberSessionUsage)	long	The value of tmnxNatIsaMemberSessionUsage indicates the session usage of the MDA associated with this member.
sessionUsageHi [Session Usage Hi] (tmnxNatIsaMemberSessionUsageHi)	int	The value of tmnxNatIsaMemberSessionUsageHi indicates if the session usage of the MDA associated with this member is high according to the values of the objects tmnxNatGrpCfg-SessionWatermarkHi and tmnxNatGrpCfgSessionWatermarkLo.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AwSubscriberStats</p> <p>MIB entry name: tmnxNatL2AwSubStatEntry</p> <p>Entry description: Each conceptual row represents a Layer-2-Aware NAT subscriber. Entries in this table are created and destroyed automatically by the system.</p> <p>Table description (for tmnxNatL2AwSubStatTable): The tmnxNatL2AwSubStatTable contains status and basic statistics information about Layer-2-Aware NAT subscribers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.L2AwSubscriber</p>		
icmpPortUsage [Icmp Port Usage] (tmnxNatL2AwSubStatIcmpPortUsage)	int	The value of the object tmnxNatL2AwSubStatIcmpPortUsage indicates the ICMP port usage of this NAT subscriber.
icmpPortUsageHi [Icmp Port Usage Hi] (tmnxNatL2AwSubStatIcmpPortUsageH)	boolean	The value of the object tmnxNatL2AwSubStatIcmpPortUsageH indicates if the ICMP port usage of this NAT subscriber is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.
residentialSubscriber [Residential Subscriber] (tmnxSubInfoSubIdent)	String	The value of tmnxSubInfoSubIdent specifies the subscriber identification of this subscriber.
sessionUsage [Session Usage] (tmnxNatL2AwSubStatSessionUsage)	int	The value of the object tmnxNatL2AwSubStatSessionUsage indicates the session usage of this NAT subscriber.
sessions [Sessions] (tmnxNatL2AwSubStatSessions)	int	The value of tmnxNatL2AwSubStatSessions indicates the current number of active sessions of this NAT subscriber. In other words, it is the number of ports in use out of the nonreserved range.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionsPrio [Sessions Prio] (tmnxNatL2AwSubStatSessionsPrio)	int	The value of tmnxNatL2AwSubStatSessionsPrio indicates the current number of active prioritized sessions of this subscriber. In other words, it is the number of reserved ports in use.
tcpPortUsage [Tcp Port Usage] (tmnxNatL2AwSubStatTcpPortUsage)	int	The value of the object tmnxNatL2AwSubStatTcpPortUsage indicates the TCP port usage of this NAT subscriber.
tcpPortUsageHi [Tcp Port Usage Hi] (tmnxNatL2AwSubStatTcpPortUsageHi)	boolean	The value of the object tmnxNatL2AwSubStatTcpPortUsageHi indicates if the TCP port usage of this NAT subscriber is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.
udpPortUsage [Udp Port Usage] (tmnxNatL2AwSubStatUdpPortUsage)	int	The value of the object tmnxNatL2AwSubStatUdpPortUsage indicates the UDP port usage of this NAT subscriber.
udpPortUsageHi [Udp Port Usage Hi] (tmnxNatL2AwSubStatUdpPortUsageHi)	boolean	The value of the object tmnxNatL2AwSubStatUdpPortUsageHi indicates if the UDP port usage of this NAT subscriber is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.
<p>NatIsaMdaStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMda</p>		

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlot [Card Slot] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
icmpFragmentedError [Icmp Fragmented Error] (tmnxNatlsaMdaStatsValue)	java. math. BigInte- ger	The value of the object tmnxNatlsaMdaStatsValue indicates the value of the statistics contained in this conceptual row.
mdaSlot [Mda Slot] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
mdaStatsType [Mda Stats Type] (tmnxNatlsaMdaStatsType)	int	The value of tmnxNatlsaMdaStatsType indicates the type of NAT session statistics contained in this conceptual row.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NatIsaMemberResrcStats</p> <p>MIB entry name: tmnxNatIsaMemberResrcEntry</p> <p>Entry description: Each conceptual row contains the name and statistics value of a particular resource of a member of a NAT ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxNatIsaMemberResrcTable): The tmnxNatIsaMemberResrcTable contains detailed statistics information about the resources of a member of a NAT ISA Group. The typical usage of this table is to fill in the part of the index that identifies a member, and perform a partial walk to get all the resources statistics applicable to that member.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMember</p>		
flowlogPcktsSet2Applicable [Flowlog Pckts Set 2 Applicable] (tmnxNatIsaMemberResrcApplicable)	boolean	The value of the object tmnxNatIsaMemberResrcApplicable indicates if the resource statistics contained in this conceptual row are applicable. Depending on the configuration of the NAT ISA group, in particular while the value of tmnxNatIsaGrpRedundancy is equal to 'activeActive', some resources may actually be associated with the ISA MDA physically, rather than with the group member; in that case, the information can be found in the tmnxNatIsaMdaStatsTable.
flowlogPcktsSet2Val [Flowlog Pckts Set 2 Val] (tmnxNatIsaMemberResrcVal)	java. math. BigInteger	The value of the object tmnxNatIsaMemberResrcVal indicates the actual value of the resource statistics contained in this conceptual row.
flowlogPcktsSet2ValMax [Flowlog Pckts Set 2 Val Max] (tmnxNatIsaMemberResrcValMax)	java. math. BigInteger	The value of the object tmnxNatIsaMemberResrcValMax indicates the maximum available value of the resource statistics contained in this conceptual row.
groupNumber [Group Number] (tmnxNatIsaGrpId)	int	The value of the object tmnxNatIsaGrpId specifies the identifier of the NAT Integrated Service Adaptor group.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
resourceId [Resource Id] (tmnxNatlsaMemberResrcId)	int	The value of tmnxNatlsaMemberResrcId indicates the identifier of this conceptual row. It is a meaningless number generated by the system as identifier of this conceptual row.
<p>NatlsaMemberStats</p> <p>MIB entry name: tmnxNatlsaMemberStatsEntry</p> <p>Entry description: Each conceptual row contains detailed statistics information about a member of a NAT ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxNatlsaMemberStatsTable): The tmnxNatlsaMemberStatsTable contains detailed statistics information about the members of a NAT-capable ISA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMember</p>		
icmpFragmentedError [Icmp Fragmented Error] (tmnxNatlsaMemberStatsValue)	java. math. BigInteger	The value of the object tmnxNatlsaMemberStatsValue indicates the value of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxNatlsaMemberStatsType)	int	The value of tmnxNatlsaMemberStatsType indicates the type of NAT session statistics contained in this conceptual row.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NatlsaResourceStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMda</p>		
cardSlot [Card Slot] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
mdaSlot [Mda Slot] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
statsId [Stats Id] (tmnxNatlsaResrcStatsId)	int	The value of tmnxNatlsaResrcStatsId indicates the identifier of this conceptual row. It is a meaningless number generated by the system as identifier of this conceptual row.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsLimited [Stats Limited] (tmnxNatlsaResrcStatsLimited)	boolean	The value of the object tmnxNatlsaResrcStatsLimited indicates if the value of tmnxNatlsaResrcStatsValMax is actually limited to the fraction indicated for this MDA by the value of tmnxNatlsaMdaStatResrcAllocated.
statsMaxValue [Stats Max Value] (tmnxNatlsaResrcStatsValMax)	java. math. BigInteger	The value of the object tmnxNatlsaResrcStatsValMax indicates the maximum available value of the resource statistics contained in this conceptual row.
statsName [Stats Name] (tmnxNatlsaResrcStatsName)	String	The value of the object tmnxNatlsaResrcStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsValue [Stats Value] (tmnxNatlsaResrcStatsVal)	java. math. BigInteger	The value of the object tmnxNatlsaResrcStatsVal indicates the actual value of the resource statistics contained in this conceptual row.

Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal. Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • nat.IsaMda • nat.NatPolicy </p>		

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlot [Card Slot] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
mdaSlot [Mda Slot] (tmnxMDASlotNum)	int	The unique value which identifies this MDA slot within a specific IOM card in the system. Rows with a tmnxMDASlotNum value of zero (0) represent the special case of an IOM card without MDA slots but that instead has its ports directly on the IOM card itself. In that case, there should be only that one row entry in the tmnxMDATable for that IOM card.
policyName [Policy Name] (tmnxNatPlcyName)	String	The value of tmnxNatPlcyName specifies the name of this NAT policy.
statsName [Stats Name] (tmnxNatPlcyStatsName)	String	The value of the object tmnxNatPlcyStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxNatPlcyStatsType)	int	The value of tmnxNatPlcyStatsType indicates the type of NAT usage statistics contained in this conceptual row.
statsValue [Stats Value] (tmnxNatPlcyStatsVal)	long	The value of the object tmnxNatPlcyStatsVal indicates the value of the statistics contained in this conceptual row.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NatPoolL2AwStats</p> <p>MIB entry name: tmnxNatPIL2AwEntry</p> <p>Entry description: Each conceptual row represents a Layer-2-Aware NAT address pool. Entries in this table are automatically created and deleted by the system.</p> <p>Table description (for tmnxNatPIL2AwTable): The tmnxNatPIL2AwTable contains information about the Layer-2-Aware NAT address pools.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.NatPool</p>		
blkUsage [Blk Usage] (tmnxNatPIL2AwBlockUsage)	long	The value of the object tmnxNatPIL2AwBlockUsage indicates the block usage of this Layer-2-Aware NAT address pool.
blkUsageHi [Blk Usage Hi] (tmnxNatPIL2AwBlockUsageHi)	boolean	The value of the object tmnxNatPIL2AwBlockUsageHi indicates if the block usage of this Layer-2-Aware NAT address pool is high according to the values of the objects tmnxNatPIWatermarkHigh and tmnxNatPIWatermarkLow.
vrtrId [Vrtr Id] (vRtrID)	long	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 274 nat statistics (continued)

<p>NatPoolLsnStats</p> <p>MIB entry name: tmnxNatPILsnMemberEntry</p> <p>Entry description: Each conceptual row represents Large Scale NAT address pool information in a NAT ISA group member. Entries in this table are automatically created and deleted by the system.</p> <p>Table description (for tmnxNatPILsnMemberTable): The tmnxNatPILsnMemberTable contains information about the Large Scale NAT address pools per ISA group member.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.NatPool</p>		
mbrBlockUsage [Mbr Block Usage] (tmnxNatPILsnMemberBlockUsage)	long	The value of the object tmnxNatPILsnMemberBlockUsage indicates the block usage of this Large Scale NAT address pool.
mbrBlockUsageHi [Mbr Block Usage Hi] (tmnxNatPILsnMemberBlockUsageHi)	boolean	The value of the object tmnxNatPILsnMemberBlockUsageHi indicates if the block usage of this Large Scale NAT address pool is high according to the values of the objects tmnxNatPIWatermarkHigh and tmnxNatPIWatermarkLow.
mbrIsaGrpId [Mbr Isa Grp Id] (tmnxNatPILsnMemberIsaGrpId)	int	The value of the object tmnxNatPILsnMemberIsaGrpId indicates the identifier of the NAT Integrated Service Adaptor group where this member belongs to.
natIsaMbrID [Nat Isa Mbr ID] (tmnxNatIsaMemberId)	int	The value of the object tmnxNatIsaMemberId indicates the identifier of this NAT ISA Group member.
natPIName [Nat PI Name] (tmnxNatPIName)	String	The value of tmnxNatPIName specifies the name of this NAT address pool.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vrtrId [Vrtr Id] (vRtrID)	long	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>NatReassemblyStats</p> <p>MIB entry name: tmnxNatReassemblyStatsEntry</p> <p>Entry description: Each conceptual row contains reassembly statistics information about a member of a NAT-capable ISA Group. Entries in this table are created and removed automatically by the system.</p> <p>Table description (for tmnxNatReassemblyStatsTable): The tmnxNatReassemblyStatsTable contains statistics information about IP datagram reassembly on NAT-capable ISA Groups. Note that the IP reassembly function can be activated while the NAT function is not.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.IsaMember</p>		
statsName [Stats Name] (tmnxNatReassemblyStatsName)	String	The value of the object tmnxNatReassemblyStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
statsType [Stats Type] (tmnxNatReassemblyStatsType)	int	The value of tmnxNatReassemblyStatsType indicates the type of IP datagram reassembly statistics contained in this conceptual row.
statsValue [Stats Value] (tmnxNatReassemblyStatsVal)	java. math. BigInteger	The value of the object tmnxNatReassemblyStatsVal indicates the statistics value contained in this conceptual row.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PcpServerInterfaceStats</p> <p>MIB entry name: vRtrIfEntry</p> <p>Entry description: Each row entry represents a virtual router interface in the system. Entries can be created and deleted via SNMP SET operations using the vRtrIfRowStatus variable.</p> <p>Table description (for vRtrIfTable): The vRtrIfTable has an entry for each router interface configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.PcpServerInterface</p>		
pcpSrvIfIndex [Pcp Srv If Index] (vRtrIfIndex)	long	The unique value which identifies this interface of this virtual router in the TmNx system. This field provides an identifier for virtual router interfaces similar to the ifIndex values used in the mib-2 interfaces table for physical interfaces. The vRtrIfIndex values can be reused for different virtual routers, but are unique within those entries with the same vRtrID. The vRtrIfIndex value for each virtual interface must remain constant at least from one re-initialization of the system management processor to the next.
pcpSrvIfStatsName [Pcp Srv If Stats Name] (tmnxNatPcpSrvIfStatsName)	String	The value of the object tmnxNatPcpSrvIfStatsName indicates the human-readable identifier of the statistics contained in this conceptual row.
pcpSrvIfStatsType [Pcp Srv If Stats Type] (tmnxNatPcpSrvIfStatsType)	int	The value of tmnxNatPcpSrvIfStatsType indicates the type of PCP statistics contained in this conceptual row. It is merely a numerical index, the meaning of the PCP statistics in this conceptual row is indicated by the value of the object tmnxNatPcpSrvIfStatsName.
pcpSrvIfStatsVal [Pcp Srv If Stats Val] (tmnxNatPcpSrvIfStatsVal)	java. math. BigInteger	The value of the object tmnxNatPcpSrvIfStatsVal indicates the value of the statistics contained in this conceptual row.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pcpSrvName [Pcp Srv Name] (tmnxNatPcpSrvName)	String	The value of tmnxNatPcpSrvName specifies the name of this PCP server.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
<p>QueryBasedLsnSubscriberStats</p> <p>MIB entry name: tmnxNatQryLsnSubResEntry</p> <p>Entry description: Each conceptual row represents a Large Scale NAT subscriber. Conceptual rows in this table are created and destroyed automatically by the system. Conceptual rows in this table are volatile: they are lost upon reboot or switchover. The system creates rows in this table as a result of the creation of a row in the query table tmnxNatQryLsnSubTable, and destroys them when that row is destroyed.</p> <p>Table description (for tmnxNatQryLsnSubResTable): The tmnxNatQryLsnSubResTable contains the results of one or more queries for LSN subscribers.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • nat.ClassicLsnHost • nat.DsLiteSubscriber • nat.Nat64Subscriber 		
icmpPortUsage [Icmp Port Usage] (tmnxNatQryLsnSubResIcmpPortUsg)	int	The value of the object tmnxNatQryLsnSubResIcmpPortUsg indicates the ICMP port usage of this NAT subscriber and policy.
icmpPortUsageHi [Icmp Port Usage Hi] (tmnxNatQryLsnSubResIcmpPortUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResIcmpPortUsgHi indicates if the ICMP port usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lsnSubId [Lsn Sub Id] (tmnxNatQryLsnSubResId)	long	The value of tmnxNatQryLsnSubResId indicates the identifier of this Large Scale NAT subscriber.
sessionUsage [Session Usage] (tmnxNatQryLsnSubResSessionUsg)	int	The value of the object tmnxNatQryLsnSubResSessionUsg indicates the session usage of this NAT subscriber and policy.
sessionUsageHi [Session Usage Hi] (tmnxNatQryLsnSubResSessionUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResSessionUsgHi indicates if the session usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcySessionWatermarkHigh and tmnxNatPlcySessionWatermarkLow.
sessions [Sessions] (tmnxNatQryLsnSubResSessions)	int	The value of tmnxNatQryLsnSubResSessions indicates the current number of active sessions of this NAT subscriber and policy. In other words, it is the number of ports in use out of the nonreserved range.
sessionsPeak [Sessions Peak] (tmnxNatQryLsnSubResSessionsPeak)	int	The value of tmnxNatQryLsnSubResSessionsPeak indicates the maximum number of sessions that were active together up to this point in time.
sessionsPrio [Sessions Prio] (tmnxNatQryLsnSubResSessionsPrio)	int	The value of tmnxNatQryLsnSubResSessionsPrio indicates the current number of active prioritized sessions of this subscriber and policy. In other words, it is the number of reserved ports in use.
tcpPortUsage [Tcp Port Usage] (tmnxNatQryLsnSubResTcpPortUsg)	int	The value of the object tmnxNatQryLsnSubResTcpPortUsg indicates the TCP port usage of this NAT subscriber and policy.
tcpPortUsageHi [Tcp Port Usage Hi] (tmnxNatQryLsnSubResTcpPortUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResTcpPortUsgHi indicates if the TCP port usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
udpPortUsage [Udp Port Usage] (tmnxNatQryLsnSubResUdpPortUsg)	int	The value of the object tmnxNatQryLsnSubResUdpPortUsg indicates the UDP port usage of this NAT subscriber and policy.
udpPortUsageHi [Udp Port Usage Hi] (tmnxNatQryLsnSubResUdpPortUsgHi)	boolean	The value of the object tmnxNatQryLsnSubResUdpPortUsgHi indicates if the UDP port usage of this NAT subscriber and policy is high according to the values of the objects tmnxNatPlcyPortWatermarkHigh and tmnxNatPlcyPortWatermarkLow.
<p>UpnpPolicyMappingStats</p> <p>MIB entry name: tmnxNatUpnpPlcyStatEntry</p> <p>Entry description: Each conceptual row contains general status and statistics information about a UPnP IGD function in a virtual router instance. Entries in this table are created and removed automatically by the system; creation and deletion of a conceptual row in the tmnxNatUpnpPlcyTable automatically results creation and deletion of the corresponding row in this table.</p> <p>Table description (for tmnxNatUpnpPlcyStatTable): The tmnxNatUpnpPlcyStatTable contains general status and statistics information about the Universal Plug 'n Play (UPnP) Internet Gateway Device (IGD) operation.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.UpnpPolicy</p>		
activeMappings [Active Mappings] (tmnxNatUpnpPlcyStatActMappings)	long	The value of the object tmnxNatUpnpPlcyStatActMappings indicates the number of active UPnP mappings associated with this server.
policyName [Policy Name] (tmnxNatUpnpPlcyName)	String	The value of tmnxNatUpnpPlcyName specifies the name of this UPnP policy.
subscribers [Subscribers] (tmnxNatUpnpPlcyStatSubscr)	long	The value of the object tmnxNatUpnpPlcyStatSubscr indicates the number of subscribers associated with this server.

Table 274 nat statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subscribersMapped [Subscribers Mapped] (tmnxNatUpnpPlcyStatSubscrMapped)	long	The value of the object tmnxNatUpnpPlcyStatSubscrMapped indicates the number of subscribers with UPnP mappings associated with this server.
<p>UpnpPolicyStats</p> <p>MIB entry name: tmnxNatUpnpPlcyStatsEntry</p> <p>Entry description: Each conceptual row contains detailed statistics information about a UPnP IGD function in a virtual router instance. Entries in this table are created and removed automatically by the system, only for virtual router instances where a row exists in the tmnxNatUpnpPlcyTable.</p> <p>Table description (for tmnxNatUpnpPlcyStatsTable): The tmnxNatUpnpPlcyStatsTable contains detailed statistics information about the Universal Plug 'n Play (UPnP) Internet Gateway Device (IGD) operation. The typical usage of this table is to fill in the part of the index that identifies a virtual router instance, and perform a partial walk to get all the statistics applicable to that virtual router instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: nat.UpnpPolicy</p>		
dropRateLimited [Drop Rate Limited] (tmnxNatUpnpPlcyStatsVal)	java. math. BigInteger	The value of the object tmnxNatUpnpPlcyStatsVal indicates the value of the statistics contained in this conceptual row.
policyName [Policy Name] (tmnxNatUpnpPlcyName)	String	The value of tmnxNatUpnpPlcyName specifies the name of this UPnP policy.
statsId [Stats Id] (tmnxNatUpnpPlcyStatsId)	long	The value of tmnxNatUpnpPlcyStatsId indicates the identifier of the UPnP IGD statistics contained in this conceptual row. It is a meaningless number generated by this system.

Table 275 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
NEBgpAutoRdStats MIB entry name: svcBgpAutoRDType1Group Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
svcBgpAutoRDType1InUse [Svc Bgp Auto RDType 1 In Use] (svcBgpAutoRDType1InUse)	long	The value of svcBgpAutoRDType1InUse indicates number of community values in use for this entry.
SnmplnASNParseErrs MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sglSnmplnGetBulks [Sgl Snmp In Get Bulks] (sglSnmplnGetBulks)	long	The value of sglSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [SnmplnASNParseErrs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.

Table 275 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityNames [Snmp In Bad Community Names] (snmpInBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.

Table 275 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 276 openflow statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OFChannelStats</p> <p>MIB entry name: tmnxOFChannelStatsEntry</p> <p>Entry description: The value of tmnxOFChannelStatsEntry specifies statistics information for the various packets exchanged between an open-flow switch and the controller.</p> <p>Table description (for tmnxOFChannelStatsTable): The tmnxOFChannelStatsTable contains channel statistics information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: openflow.OFChannelTable</p>		
pktsErr [Pkts Err] (tmnxOFChannelPacketErr)	java. math. BigInteger	The value of tmnxOFChannelPacketErr indicates the total number of error packets exchanged by open-flow switch specified by tmnxOFSwitchName with the controller.
pktsRx [Pkts Rx] (tmnxOFChannelPacketRx)	java. math. BigInteger	The value of tmnxOFChannelPacketRx indicates the total number of packets received by an open-flow switch specified by tmnxOFSwitchName.
pktsTx [Pkts Tx] (tmnxOFChannelPacketTx)	java. math. BigInteger	The value of tmnxOFChannelPacketTx indicates the total number of packets transmitted by an open-flow switch specified by tmnxOFSwitchName.
pktsType [Pkts Type] (tmnxOFChannelPacketType)	int	The value of tmnxOFChannelPacketType specifies the packet type exchanged between an open-flow switch and the controller.

Table 276 openflow statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OFPortStats</p> <p>MIB entry name: tmnxOFPortStatsEntry</p> <p>Entry description: The value of tmnxOFPortStatsEntry specifies statistics information related to port associated with an open-flow switch.</p> <p>Table description (for tmnxOFPortStatsTable): The tmnxOFPortStatsTable contains port statistics information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: openflow.OFPortDescription</p>		
portId [Port Id] (tmnxOFPortID)	long	The value of tmnxOFPortID specifies the port identifier for uniquely identifying a port within an open-flow switch instance specified by tmnxOFSwitchName.
portName [Port Name] (tmnxOFPortName)	String	The value of tmnxOFPortName indicates the textual name of the interface. The value of this object should be the name of the interface as assigned by the open-flow switch.
portTxBytes [Port Tx Bytes] (tmnxOFPortTxBytes)	java. math. BigInteger	The value of tmnxOFPortTxBytes indicates the total number of bytes transmitted by this open-flow port.
portTxPkts [Port Tx Pkts] (tmnxOFPortTxPackets)	java. math. BigInteger	The value of tmnxOFPortTxPackets indicates the total number of packets transmitted by this open-flow port.

Table 276 openflow statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portType [Port Type] (tmnxOFPortType)	int	The value of tmnxOFPortType indicates the port-type for port identifier specified by tmnxOFPortID. openFlowPhysicalPort (1) - corresponds to hardware interface of an open-flow switch. openFlowLogicalPort (2) - corresponds to higher level abstractions defined by an open-flow switch (e.g. link aggregation groups, tunnels, loopback interfaces). openFlowReservedPort (3) - specifies generic forwarding actions such as sending to the controller, flooding, or forwarding using non open-flow methods, such as 'normal' switch processing.

Table 277 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
InterfaceStatusStats MIB entry name: tmnxOspfNgIfStatsEntry Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface. Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.Interface		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddr)	long	The value of tmnxOspfNglfBadDstAddr indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNglfBadNetworks)	long	The value of tmnxOspfNglfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNglfBadOptions)	long	The value of tmnxOspfNglfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNglfBadPacketTypes)	long	The value of tmnxOspfNglfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNglfBadVersions)	long	The value of tmnxOspfNglfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNglfBadVirtualLinks)	long	The value of tmnxOspfNglfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNglfDiscardPackets)	long	The value of tmnxOspfNglfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNglfRetransmitOuts)	long	The value of tmnxOspfNglfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

events [Events] (tmnxOspfVirtIfEvents)	long	The value of tmnxOspfVirtIfEvents indicates the number of state changes or error events on this Virtual Link
<p>VirtualLinkReceiveStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualLinkStatusStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAddrs)	long	The value of tmnxOspfVirtIfBadDstAddrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervals)	long	The value of tmnxOspfVirtIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualNeighborGeneralStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor		

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 277 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 278 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 278 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 278 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 278 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes: • equipment.ManagementPort • equipment.PhysicalPort</p>		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

Table 278 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthSessionOctetsTx [Dot 1 x Auth Session Octets Tx] (dot1xAuthSessionOctetsTx)	java. math. BigInteger	The number of octets transmitted in user data frames on this Port during the session.
dot1xAuthSessionTerminateCause [Dot 1 x Auth Session Terminate Cause] (dot1xAuthSessionTerminateCause)	int	The reason for the session termination.
dot1xAuthSessionTime [Dot 1 x Auth Session Time] (dot1xAuthSessionTime)	long	The duration of the session in seconds.
<p>PaePortAuthenticatorStats MIB entry name: dot1xAuthStatsEntry Entry description: The statistics information for an Authenticator PAE. Table description (for dot1xAuthStatsTable): A table that contains the statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 278 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 279 pcep statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PcepPeerAdditionalStats</p> <p>MIB entry name: tmnxPcepPeerStatsEntry</p> <p>Entry description: The value of tmnxPcepPeerStatsEntry represents statistics information about a single peer which spans all PCEP sessions to that peer.</p> <p>Table description (for tmnxPcepPeerStatsTable): The tmnxPcepPeerStatsTable contains statistics information about peers known by the PCEP entity.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: pcep.PcepPccPeer</p>		
numberPCRptReceived [Number PCRpt Received] (tmnxPcepPeerNumPCRptRcvd)	long	The value of tmnxPcepPeerNumPCRptRcvd indicates the number of PCRpt messages received from this peer.
numberPCRptSent [Number PCRpt Sent] (tmnxPcepPeerNumPCRptSent)	long	The value of tmnxPcepPeerNumPCRptSent indicates the number of PCRpt messages sent to this peer.
numberPCUpdReceived [Number PCUpd Received] (tmnxPcepPeerNumPCUpdRcvd)	long	The value of tmnxPcepPeerNumPCUpdRcvd indicates the number of PCUpd messages received from this peer.
numberPCUpdSent [Number PCUpd Sent] (tmnxPcepPeerNumPCUpdSent)	long	The value of tmnxPcepPeerNumPCUpdSent indicates the number of PCUpd messages sent to this peer.
numberRptReceived [Number Rpt Received] (tmnxPcepPeerNumRptRcvd)	long	The value of tmnxPcepPeerNumRptRcvd indicates the number of report messages received from this peer. This might be greater than tmnxPcepPeerNumPCRptRcvd because multiple requests can be batched into a single PCRpt message.

Table 279 pcep statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberRptSent [Number Rpt Sent] (tmnxPcepPeerNumRptSent)	long	The value of tmnxPcepPeerNumRptSent indicates the number of report messages sent to this peer. This might be greater than tmnxPcepPeerNumPCRptSent because multiple requests can be batched into a single PCRpt message.
peerAddress [Peer Address] (tmnxPcepPeerAddr)	String	The value of tmnxPcepPeerAddr specifies the Internet address of the peer.
<p>PcepPeerStats MIB entry name: pcePcepPeerEntry Entry description: Information about a single peer that spans all PCEP sessions to that peer. Table description (for pcePcepPeerTable): This table contains information about peers known by the local PCEP entity. The entries in this table are read-only. This table gives peer information that spans PCEP sessions. Information about current PCEP sessions can be found in the pcePcepSessTable table. Supports realtime plotting Supports scheduled collection Monitored class: pcep.PcepPccPeer</p>		
numberKeepAliveReceived [Number Keep Alive Received] (pcePcepPeerNumKeepaliveRcvd)	long	The number of Keepalive messages received from this peer.
numberKeepAliveSent [Number Keep Alive Sent] (pcePcepPeerNumKeepaliveSent)	long	The number of Keepalive messages sent to this peer.
numberPCErrorReceived [Number PCError Received] (pcePcepPeerNumPCErrRcvd)	long	The number of PCErr messages received from this peer.
numberPCErrorSent [Number PCError Sent] (pcePcepPeerNumPCErrSent)	long	The number of PCErr messages sent to this peer.

Table 279 pcep statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberPCNotificationSent [Number PCNotification Sent] (pcePcepPeerNumPCNtfSent)	long	The number of PCNtf messages sent to this peer.
numberPCNotificionReceived [Number PCNotificion Received] (pcePcepPeerNumPCNtfRcvd)	long	The number of PCNtf messages received from this peer.
numberPCReplyReceived [Number PCReply Received] (pcePcepPeerNumPCRepRcvd)	long	The number of PCRep messages received from this peer.
numberPCReplySent [Number PCReply Sent] (pcePcepPeerNumPCRepSent)	long	The number of PCRep messages sent to this peer.
numberPCRequestReceived [Number PCRequest Received] (pcePcepPeerNumPCReqRcvd)	long	The number of PCReq messages received from this peer.
numberPCRequestSent [Number PCRequest Sent] (pcePcepPeerNumPCReqSent)	long	The number of PCReq messages sent to this peer.
numberRequestReceived [Number Request Received] (pcePcepPeerNumReqRcvd)	long	The number of requests received from this peer. A request corresponds 1:1 with an RP object in a PCReq message. This might be greater than pcePcepPeerNumPCReqRcvd because multiple requests can be batched into a single PCReq message.
numberRequestSent [Number Request Sent] (pcePcepPeerNumReqSent)	long	The number of requests sent to this peer. A request corresponds 1:1 with an RP object in a PCReq message. This might be greater than pcePcepPeerNumPCReqSent because multiple requests can be batched into a single PCReq message.

Table 279 pcep statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberSessionSetupFail [Number Session Setup Fail] (pcePcepPeerNumSessSetupFail)	long	The number of PCEP sessions with the peer that have been attempted but failed before being fully established. This counter is incremented each time a session retry to this peer fails.
numberSessionSetupSuccess [Number Session Setup Success] (pcePcepPeerNumSessSetupOK)	long	The number of PCEP sessions successfully established with the peer, including any current session. This counter is incremented each time a session with this peer is successfully established.
peerAddress [Peer Address] (pcePcepPeerAddr)	String	The Internet address of the peer. The type is given by pcePcepPeerAddrType.

Table 280 pim statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceAdditionalStats MIB entry name: vRtrPimNgIfStatsEntry Entry description: An entry in the vRtrPimNgIfStatsTable. Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: pim.Interface</p>		
bootstrapExpPolicyDrops [Bootstrap Exp Policy Drops] (vRtrPimNgIfBtrExpPolicyDrops)	long	The value of vRtrPimNgIfBtrExpPolicyDrops indicates the number of Bootstrap Messages that were not transmitted on this interface because of Bootstrap export policy. PIM Bootstrap export policies are configured using bootstrap export policy objects in vRtrPimNgGenPolicyTable.
bootstrapImpPolicyDrops [Bootstrap Imp Policy Drops] (vRtrPimNgIfBtrImpPolicyDrops)	long	The value of vRtrPimNgIfBtrImpPolicyDrops indicates the number of Bootstrap Messages received on this interface but were dropped because of Bootstrap import policy. PIM Bootstrap import policies are configured using bootstrap import policy objects in vRtrPimNgGenPolicyTable.
joinPolicyDrops [Join Policy Drops] (vRtrPimNgIfJoinPolicyDrops)	long	The value of vRtrPimNgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message. PIM Join policies are configured using join policy objects in vRtrPimNgGenPolicyTable.
registerPolicyDrops [Register Policy Drops] (vRtrPimNgIfRegisterPolicyDrops)	long	The value of vRtrPimNgIfRegisterPolicyDrops indicates the number of times the register policy match resulted in dropping PIM Register Message. PIM Register policies are configured using the register policy objects in vRtrPimNgGenPolicyTable.
rxBSMNoRouterAlertDrops [Rx BSMNo Router Alert Drops] (vRtrPimNgIfRxBSMNoRouterAlertDrops)	long	The value of vRtrPimNgIfRxBSMNoRouterAlertDrops indicates the number of BSM messages that were dropped because router alert option was not present.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBSMWrongIfDrops [Rx BSMWrong If Drops] (vRtrPimNgIfRxBSMWrongIfDrops)	long	The value of vRtrPimNgIfRxBSMWrongIfDrops indicates the number of BSM messages that were dropped either because they were not sent by the correct RPF neighbor or because they arrived on the wrong interface.
rxInvalidJoinPrunes [Rx Invalid Join Prunes] (vRtrPimNgIfRxInvalidJoinPrunes)	long	The value of vRtrPimNgIfRxInvalidJoinPrunes indicates the number of invalid PIM Join Prune messages received on this interface. A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidJoinPrune notification is sent.
rxInvalidRegisters [Rx Invalid Registers] (vRtrPimNgIfRxInvalidRegisters)	long	The value of vRtrPimNgIfRxInvalidRegisters indicates the number of invalid PIM Register messages received on this interface. A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a vRtrPimNgInvalidRegister notification is sent.
rxJoinPruneErrs [Rx Join Prune Errs] (vRtrPimNgIfRxJoinPruneErrs)	long	The value of vRtrPimNgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
rxJoinPrunes [Rx Join Prunes] (vRtrPimNgIfRxJoinPrunes)	long	The value of vRtrPimNgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
txJoinPrunes [Tx Join Prunes] (vRtrPimNgIfTxJoinPrunes)	long	The value of vRtrPimNgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrPimNgIfStatsEntry</p> <p>Entry description: An entry in the vRtrPimNgIfStatsTable.</p> <p>Table description (for vRtrPimNgIfStatsTable): The table listing the PIM statistics for a particular interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: pim.Interface</p>		
bsmErrs [Bsm Errs] (vRtrPimNgIfTxBsmErrs)	long	The value of vRtrPimNgIfTxBsmErrs indicates the number of errors while transmitting PIM Bootstrap Messages (BSM) on this interface.
bsmPdus [Bsm Pdus] (vRtrPimNgIfTxBsmPdus)	long	The value of vRtrPimNgIfTxBsmPdus indicates the number of PIM Bootstrap Messages (BSM) transmitted on this interface.
mcacPolicyDrops [Mcac Policy Drops] (vRtrPimNgIfMcacPolicyDrops)	long	The value of the object vRtrPimNgIfMcacPolicyDrops indicates the number times a PIM Group is dropped because of applying a multicast CAC policy on this interface.
registerStopErrs [Register Stop Errs] (vRtrPimNgIfTxRegisterStopErrs)	long	The value of vRtrPimNgIfTxRegisterStopErrs indicates the number of PIM errors while trasmitting PIM Register Stop messages on this interface.
registerStops [Register Stops] (vRtrPimNgIfTxRegisterStops)	long	The value of vRtrPimNgIfTxRegisterStops indicates the number of PIM Register Stop messages transmitted on this interface.
rxAssertErrs [Rx Assert Errs] (vRtrPimNgIfRxAssertErrs)	long	The value of vRtrPimNgIfRxAssertErrs indicates the number of errors while processing Assert messages received on this interface.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxAsserts [Rx Asserts] (vRtrPimNgIfRxAsserts)	long	The value of vRtrPimNgIfRxAsserts indicates the number of PIM Assert messages received on this interface.
rxBadChecksumDiscards [Rx Bad Checksum Discards] (vRtrPimNgIfRxBadChecksumDiscard)	long	The value of vRtrPimNgIfRxBadChecksumDiscard indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
rxBadEncodings [Rx Bad Encodings] (vRtrPimNgIfRxBadEncodings)	long	The value of vRtrPimNgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
rxBadVersionDiscards [Rx Bad Version Discards] (vRtrPimNgIfRxBadVersionDiscard)	long	The value of vRtrPimNgIfRxBadVersionDiscard indicates the number of PIM messages with bad versions received on this interface.
rxBsmPduDrops [Rx Bsm Pdu Drops] (vRtrPimNgIfRxBsmPduDrops)	long	The value of vRtrPimNgIfRxBsmPduDrops indicates the number of Bootstrap Messages received on this interface but were dropped.
rxBsmPdus [Rx Bsm Pdus] (vRtrPimNgIfRxBsmPdus)	long	The value of vRtrPimNgIfRxBsmPdus indicates the number of Bootstrap Messages received on this interface.
rxCRPAdvNoRouterAlert [Rx CRPAdv No Router Alert] (vRtrPimNgIfRxCRPAdvNoRtrAlert)	long	The value of vRtrPimNgIfRxCRPAdvNoRtrAlert indicates the number of Candidate-RP Advertisements(C-RP-Adv) received on this interface which had no router alert option set.
rxHellos [Rx Hellos] (vRtrPimNgIfRxHellos)	long	The value of vRtrPimNgIfRxHellos indicates the number of PIM hello messages received on this interface.
rxHellosDropped [Rx Hellos Dropped] (vRtrPimNgIfRxHellosDropped)	long	The value of vRtrPimNgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxNbrUnknown [Rx Nbr Unknown] (vRtrPimNgIfRxNbrUnknown)	long	The value of vRtrPimNgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
rxNullRegisters [Rx Null Registers] (vRtrPimNgIfRxNullRegisters)	long	The value of vRtrPimNgIfRxNullRegisters indicates the number of PIM Null Register messages received on this interface.
rxPkts [Rx Pkts] (vRtrPimNgIfRxPkts)	long	The value of vRtrPimNgIfRxPkts indicates the number of multicast data packets received on this interface.
rxRegisterErrs [Rx Register Errs] (vRtrPimNgIfRxRegisterErrs)	long	The value of vRtrPimNgIfRxRegisterErrs indicates the number of errors while processing Register messages received on this interface.
rxRegisterStopErrs [Rx Register Stop Errs] (vRtrPimNgIfRxRegisterStopErrs)	long	The value of vRtrPimNgIfRxRegisterStopErrs indicates the number of errors while processing Register Stop messages received on this interface.
rxRegisterStops [Rx Register Stops] (vRtrPimNgIfRxRegisterStops)	long	The value of vRtrPimNgIfRxRegisterStops indicates the number of PIM Register Stop messages received on this interface.
rxRegisters [Rx Registers] (vRtrPimNgIfRxRegisters)	long	The value of vRtrPimNgIfRxRegisters indicates the number of PIM Register messages received on this interface.
rxUnknownPdus [Rx Unknown Pdus] (vRtrPimNgIfRxUnknownPdus)	long	The value of vRtrPimNgIfRxUnknownPdus indicates the number of packets received with an unsupported PIM type.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sgTypes [Sg Types] (vRtrPimNgIfSGTypes)	long	The value of vRtrPimNgIfSGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIf-GrpSrcType is 'sg'.
starGTypes [Star GTypes] (vRtrPimNgIfStarGTypes)	long	The value of vRtrPimNgIfStarGTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIf-GrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgIfStarStarRPTypes)	long	The value of vRtrPimNgIfStarStarRPTypes indicates the number of entries in vRtrPimNgIfGrpSrcTable for which vRtrPimNgIfGrpSrcType is 'starStarRP'.
txAsserts [Tx Asserts] (vRtrPimNgIfTxAsserts)	long	The value of vRtrPimNgIfTxAsserts indicates the number of PIM Assert messages transmitted on this interface.
txHellos [Tx Hellos] (vRtrPimNgIfTxHellos)	long	The value of vRtrPimNgIfTxHellos indicates the number of PIM Hello messages transmitted on this interface.
txPkts [Tx Pkts] (vRtrPimNgIfTxPkts)	long	The value of vRtrPimNgIfTxPkts indicates the number of multicast data packets transmitted on this interface.
<p>PimGenSiteStats MIB entry name: vRtrPimNgGenStatEntry Entry description: An entry in the vRtrPimNgGenStatTable. Table description (for vRtrPimNgGenStatTable): vRtrPimNgGenStatTable lists PIM statistics for a particular PIM instance. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • pim.Site • pim.SiteExtension 		

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardCrpaDrops [Forward Crpa Drops] (vRtrPimNgGenStatFwdCrpaDrops)	long	The value of vRtrPimNgGenStatFwdCrpaDrops indicates the number of times the Candidate-RP Advertisements(C-RP-Adv) could not be forwarded by the router.
forwardCrpaPdus [Forward Crpa Pdu] (vRtrPimNgGenStatForwardCrpaPdus)	long	The value of vRtrPimNgGenStatForwardCrpaPdus indicates the number of Candidate-RP Advertisements(C-RP-Adv) that were forwarded by the router. C-RP-Adv's are forwarded when the received advertisement has a router alert set and the destination address is not the router's local address.
rxActiveMdts [Rx Active Mdts] (vRtrPimNgGenStatRxActiveMdts)	long	The value of vRtrPimNgGenStatRxActiveMdts indicates number of active Mdts on which the PE is receiving packets. This object is applicable to VPRNs only.
rxCrpaPduDrops [Rx Crpa Pdu Drops] (vRtrPimNgGenStatRxCrpaPduDrops)	long	The value of vRtrPimNgGenStatRxCrpaPduDrops indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) received by this instance, but were dropped.
rxCrpaPdus [Rx Crpa Pdu] (vRtrPimNgGenStatRxCrpaPdus)	long	The value of vRtrPimNgGenStatRxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) received by this instance.
rxMdtJoinTlvErrs [Rx Mdt Join Tlv Errs] (vRtrPimNgGenStatRxMdtJnTlvErrs)	long	The value of vRtrPimNgGenStatRxMdtJnTlvErrs indicates number of times MDT Join TLVs were dropped due to errors in the received TLV.
rxMdtJoinTlvs [Rx Mdt Join Tlvs] (vRtrPimNgGenStatRxMdtJoinTlvs)	long	The value of vRtrPimNgGenStatRxMdtJoinTlvs indicates the number of times MDT Join TLV were received.
sgTypes [Sg Types] (vRtrPimNgGenStatSGTypes)	long	The value of vRtrPimNgGenStatSGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'sg'.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
starGTypes [Star GTypes] (vRtrPimNgGenStatStarGTypes)	long	The value of vRtrPimNgGenStatStarGTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starG'.
starStarRPTypes [Star Star RPTypes] (vRtrPimNgGenStatStarStarRPTypes)	long	The value of vRtrPimNgGenStatStarStarRPTypes indicates the number of entries in vRtrPimNgGrpSrcTable for which vRtrPimNgGrpSrcType is 'starStarRP'.
txActiveMdts [Tx Active Mdts] (vRtrPimNgGenStatTxActiveMdts)	long	The value of vRtrPimNgGenStatTxActiveMdts indicates the number of active MDTs on which the PE is forwarding packets. This object is applicable to VPRNs only.
txCrpaPduErrs [Tx Crpa Pdu Errs] (vRtrPimNgGenStatTxCrpaPduErrs)	long	The value of vRtrPimNgGenStatTxCrpaPduErrs indicates the number of errors while transmitting PIM Candidate-RP Advertisements (C-RP-Adv).
txCrpaPdus [Tx Crpa Pdus] (vRtrPimNgGenStatTxCrpaPdus)	long	The value of vRtrPimNgGenStatTxCrpaPdus indicates the number of PIM Candidate-RP Advertisements (C-RP-Adv) transmitted by this router instance.
txMdtJoinTlvErrs [Tx Mdt Join Tlv Errs] (vRtrPimNgGenStatTxMdtJnTlvErrs)	long	The value of vRtrPimNgGenStatTxMdtJnTlvErrs indicates the number of times MDT Join TLV could not be transmitted.
txMdtJoinTlvs [Tx Mdt Join Tlvs] (vRtrPimNgGenStatTxMdtJoinTlvs)	long	The value of vRtrPimNgGenStatTxMdtJoinTlvs indicates the number of times MDT Join TLV were transmitted.
txNullRegisters [Tx Null Registers] (vRtrPimNgGenStatTxNullRegisters)	long	The value of vRtrPimNgGenStatTxNullRegisters indicates the number of PIM Null Register messages transmitted by this instance.
txRegisterErrs [Tx Register Errs] (vRtrPimNgGenStatTxRegisterErrs)	long	The value of vRtrPimNgGenStatTxRegisterErrs indicates the number the times there was an error while transmitting PIM Register messages by this instance.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txRegisterTTL Drops [Tx Register TTL Drops] (vRtrPimNgGenStatTxRegTTL Drops)	long	The value of vRtrPimNgGenStatTxRegTTL Drops indicates the number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.
txRegisters [Tx Registers] (vRtrPimNgGenStatTxRegisters)	long	The value of vRtrPimNgGenStatTxRegisters indicates the number of PIM Register messages transmitted by this instance.
<p>PimGroupStats MIB entry name: vRtrPimNgGrpSrcStatEntry Entry description: An entry in the vRtrPimNgGrpSrcStatTable. Table description (for vRtrPimNgGrpSrcStatTable): vRtrPimNgGrpSrcStatTable contains statistics for the entries in the vRtrPimNgGrpSrcTable. These statistics are collected by the forwarding engine. Supports realtime plotting Supports scheduled collection Monitored class: pim.Groups</p>		
discardedPkts [Discarded Pkts] (vRtrPimNgGrpSrcStatDscrdPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatDscrdPkts indicates the number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
forwardedOctets [Forwarded Octets] (vRtrPimNgGrpSrcStatFrdedOct)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list.
forwardedPkts [Forwarded Pkts] (vRtrPimNgGrpSrcStatFrwdedPkts)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatFrwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. vRtrPimNgGrpSrcIfTable lists all the interfaces in the outgoing interface list. This packet count is calculated before ingress QoS policing or shaping is applied.

Table 280 pim statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rpfMismatches [Rpf Mismatches] (vRtrPimNgGrpSrcStatRPFMsmatch)	java. math. BigInteger	The value of vRtrPimNgGrpSrcStatRPFMsmatch indicates the number of multicast packets that matched this source group entry but they did not arrive on the the interface indicated by vRtrPimNgGrpSrcRpflIndex.

Table 281 ppp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppStats</p> <p>MIB entry name: tmnxPppEntry</p> <p>Entry description: Each row entry represents a port from the tmnxPortTable that is configured for PPP. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxPppTable): The tmnxPppTable has an entry for each port in the system that is configured for PPP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ppp.Interface</p>		
keepaliveEchoReplyPacketsReceived [Keepalive Echo Reply Packets Received] (tmnxPppKaInPktCount)	long	The number of echo-reply packets received.
keepaliveEchoRequestPacketsSent [Keepalive Echo Request Packets Sent] (tmnxPppKaOutPktCount)	long	The number of echo-request packets sent.
keepaliveThresholdExceedsCount [Keepalive Threshold Exceeds Count] (tmnxPppKaThresholdExceedsCount)	long	The number of times that tmnxPppKaDropCount was reached.
lqmInRate [Lqm In Rate] (tmnxPppLqmInRate)	long	The average of 'SaveInPackets'/'PeerOutPackets' in the last five consecutive LQRs received.
lqmLqrPacketsReceived [Lqm Lqr Packets Received] (tmnxPppLqmInPktCount)	long	The number of LQR packets received.
lqmLqrPacketsSent [Lqm Lqr Packets Sent] (tmnxPppLqmOutPktCount)	long	The number of LQR packets sent.

Table 281 ppp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lqmOutRate [Lqm Out Rate] (tmnxPppLqmOutRate)	long	The average of 'PeerInPackets'/'LastOutPackets' in the last five consecutive LQRs received.
lqmThresholdExceedsCount [Lqm Threshold Exceeds Count] (tmnxPppLqmThresholdExceedsCount)	long	The number of times that either tmnxPppLqmInRate or tmnxPppLqmOutRate falls below the specified quality percentage when PPP quality or LQM is enforced.

Table 282 ptp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IEEEPTPPortStats</p> <p>MIB entry name: tmnxPtpPortStatsEntry</p> <p>Entry description: The tmnxPtpPortStatsEntry contains the directional packet statistics for a specific Ethernet port configured for direct transport of PTP over Ethernet. Rows are created and destroyed by the system, when corresponding entries in the tmnxPtpPortTable are created and deleted.</p> <p>Table description (for tmnxPtpPortStatsTable): The tmnxPtpPortStatsTable contains packet statistics for Ethernet ports configured for direct transport of PTP over Ethernet.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPPort</p>		
ptpPortStatAnnounce [Ptp Port Stat Announce] (tmnxPtpPortStatAnnounce)	long	The value of tmnxPtpPortStatAnnounce indicates the number of accumulated PTP Announce packets transmitted or received on the Ethernet port.
ptpPortStatDelayRequest [Ptp Port Stat Delay Request] (tmnxPtpPortStatDelayRequest)	long	The value of tmnxPtpPortStatDelayRequest indicates the number of accumulated PTP Delay Request packets transmitted or received on the Ethernet port.
ptpPortStatDelayResponse [Ptp Port Stat Delay Response] (tmnxPtpPortStatDelayResponse)	long	The value of tmnxPtpPortStatDelayResponse indicates the number of accumulated PTP Delay Response packets transmitted or received on the Ethernet port.
ptpPortStatDirection [Ptp Port Stat Direction] (tmnxPtpPortStatDirection)	int	The value of tmnxPtpPortStatDirection specifies which direction the packet statistics for the particular row are accumulated.
ptpPortStatDropAltMaster [Ptp Port Stat Drop Alt Master] (tmnxPtpPortStatDropAltMaster)	long	The value of tmnxPtpPortStatDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPortStatDropBadDomain [Ptp Port Stat Drop Bad Domain] (tmnxPtpPortStatDropBadDomain)	long	The value of tmnxPtpPortStatDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpPortStatDropOther [Ptp Port Stat Drop Other] (tmnxPtpPortStatDropOther)	long	The value of tmnxPtpPortStatDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in tmnxPtpPortStatDropBadDomain, tmnxPtpPortStatDropAltMaster, and tmnxPtpPortStatDropOutOfSeq. This object is accumulated for the 'rx' direction only.
ptpPortStatDropOutOfSeq [Ptp Port Stat Drop Out Of Seq] (tmnxPtpPortStatDropOutOfSeq)	long	The value of tmnxPtpPortStatDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpPortStatFollowUp [Ptp Port Stat Follow Up] (tmnxPtpPortStatFollowUp)	long	The value of tmnxPtpPortStatFollowUp indicates the number of accumulated PTP Follow-Up packets transmitted or received on the Ethernet port. Because 'tmnxPtpClockStep-Type' is 'oneStep (1)', the system will never transmit PTP Follow-Up packets. However, it may receive PTP Follow-Up packets from a two-step master or boundary clock.
ptpPortStatOther [Ptp Port Stat Other] (tmnxPtpPortStatOther)	long	The value of tmnxPtpPortStatOther indicates the number of accumulated PTP packets of all other types. This object is accumulated in the 'rx' direction only.
ptpPortStatSignaling [Ptp Port Stat Signaling] (tmnxPtpPortStatSignaling)	long	The value of tmnxPtpPortStatSignaling indicates the number of accumulated PTP Signaling packets received on the Ethernet port. This object is accumulated in the 'rx' direction only.
ptpPortStatSync [Ptp Port Stat Sync] (tmnxPtpPortStatSync)	long	The value of tmnxPtpPortStatSync indicates the number of accumulated PTP Sync packets transmitted or received on the Ethernet port.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPortStatTimeStampCpm [Ptp Port Stat Time Stamp Cpm] (tmnxPtpPortStatTimeStampCpm)	long	The value of tmnxPtpPortStatTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp is taken at the operating system kernel on the CPM card.
ptpPortStatTimeStampPort [Ptp Port Stat Time Stamp Port] (tmnxPtpPortStatTimeStampPort)	long	The value of tmnxPtpPortStatTimeStampPort indicates the accumulated packet statistics for PTP event packets on the Ethernet port where the timestamp is taken at the physical layer on the Ethernet port.
<p>PTPClockPacketStats</p> <p>MIB entry name: tmnxPtpClockPacketStatsEntry</p> <p>Entry description: The tmnxPtpClockPacketStatsEntry contain the directional packet statistics for the Precision Time Protocol (PTP). Rows are created and destroyed by the system.</p> <p>Table description (for tmnxPtpClockPacketStatsTable): The tmnxPtpClockPacketStatsTable consists of the packet statistics associated with the Precision Time Protocol (PTP).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ptp.IEEEPTPClock</p>		
ptpClkPktStatsAnnounce [Ptp Clk Pkt Stats Announce] (tmnxPtpClkPktStatsAnnounce)	long	The value of tmnxPtpClkPktStatsAnnounce indicates the accumulated packet statistics for PTP Announce messages.
ptpClkPktStatsDelayRequest [Ptp Clk Pkt Stats Delay Request] (tmnxPtpClkPktStatsDelayRequest)	long	The value of tmnxPtpClkPktStatsDelayRequest indicates the accumulated packet statistics for PTP Delay Request messages.
ptpClkPktStatsDelayResp [Ptp Clk Pkt Stats Delay Resp] (tmnxPtpClkPktStatsDelayResp)	long	The value of tmnxPtpClkPktStatsDelayResp indicates the accumulated packet statistics for PTP Delay Response messages.
ptpClkPktStatsDirection [Ptp Clk Pkt Stats Direction] (tmnxPtpClkPktStatsDirection)	int	The value of tmnxPtpClkPktStatsDirection specifies which direction the packet statistics for the particular row are accumulated.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsDropAltMaster [Ptp Clk Pkt Stats Drop Alt Master] (tmnxPtpClkPktStatsDropAltMaster)	long	The value of tmnxPtpClkPktStatsDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropBadDomain [Ptp Clk Pkt Stats Drop Bad Domain] (tmnxPtpClkPktStatsDropBadDomain)	long	The value of tmnxPtpClkPktStatsDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOther [Ptp Clk Pkt Stats Drop Other] (tmnxPtpClkPktStatsDropOther)	long	The value of tmnxPtpClkPktStatsDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in the 'tmnxPtpClkPktStatsDropBadDomain', 'tmnxPtpClkPktStatsDropAltMaster', 'tmnxPtpClkPktStatsDropOutOfSeq', and 'tmnxPtpClkPktStatsDropPeerShut' objects. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropOutOfSeq [Ptp Clk Pkt Stats Drop Out Of Seq] (tmnxPtpClkPktStatsDropOutOfSeq)	long	The value of tmnxPtpClkPktStatsDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsDropPeerShut [Ptp Clk Pkt Stats Drop Peer Shut] (tmnxPtpClkPktStatsDropPeerShut)	long	The value of tmnxPtpClkPktStatsDropPeerShut indicates the accumulated packet statistics for PTP packets dropped because the packets were received from a PTP peer that has been administratively disabled. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsFollowUp [Ptp Clk Pkt Stats Follow Up] (tmnxPtpClkPktStatsFollowUp)	long	The value of tmnxPtpClkPktStatsFollowUp indicates the accumulated packet statistics for PTP Follow Up messages.
ptpClkPktStatsOther [Ptp Clk Pkt Stats Other] (tmnxPtpClkPktStatsOther)	long	The value of tmnxPtpClkPktStatsOther indicates the accumulated packet statistics for all other PTP messages. This object is accumulated in the 'rx' direction only.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsOtherTLVs [Ptp Clk Pkt Stats Other TLVs] (tmnxPtpClkPktStatsOtherTLVs)	long	The value of tmnxPtpClkPktStatsOtherTLVs indicates the accumulated packet statistics for other PTP TLV signaling messages. This object is accumulated for the 'rx' direction only.
ptpClkPktStatsSignaling [Ptp Clk Pkt Stats Signaling] (tmnxPtpClkPktStatsSignaling)	long	The value of tmnxPtpClkPktStatsSignaling indicates the accumulated packet statistics for PTP signaling messages.
ptpClkPktStatsSync [Ptp Clk Pkt Stats Sync] (tmnxPtpClkPktStatsSync)	long	The value of tmnxPtpClkPktStatsSync indicates the accumulated packet statistics for PTP Sync messages.
ptpClkPktStatsTimeStampCpm [Ptp Clk Pkt Stats Time Stamp Cpm] (tmnxPtpClkPktStatsTimeStampCpm)	long	The value of tmnxPtpClkPktStatsTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the operating system kernel.
ptpClkPktStatsTimeStampPort [Ptp Clk Pkt Stats Time Stamp Port] (tmnxPtpClkPktStatsTimeStampPort)	long	The value of tmnxPtpClkPktStatsTimeStampPort indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the physical layer.
ptpClkPktStatsUniAckCnclAnno [Ptp Clk Pkt Stats Uni Ack Cncl Anno] (tmnxPtpClkPktStatsUniAckCnclAnno)	long	The value of tmnxPtpClkPktStatsUniAckCnclAnno indicates the accumulated packet statistics for Unicast Acknowledge Cancel Announce TLVs.
ptpClkPktStatsUniAckCnclDly [Ptp Clk Pkt Stats Uni Ack Cncl Dly] (tmnxPtpClkPktStatsUniAckCnclDly)	long	The value of tmnxPtpClkPktStatsUniAckCnclDly indicates the accumulated packet statistics for Unicast Acknowledge Cancel Delay Response TLVs.
ptpClkPktStatsUniAckCnclSync [Ptp Clk Pkt Stats Uni Ack Cncl Sync] (tmnxPtpClkPktStatsUniAckCnclSync)	long	The value of tmnxPtpClkPktStatsUniAckCnclSync indicates the accumulated packet statistics for Unicast Acknowledge Cancel Sync TLVs.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsUniCancelAnno [Ptp Clk Pkt Stats Uni Cancel Anno] (tmnxPtpClkPktStatsUniCancelAnno)	long	The value of tmnxPtpClkPktStatsUniCancelAnno indicates the accumulated packet statistics for Unicast Cancel Announce TLVs.
ptpClkPktStatsUniCancelDelay [Ptp Clk Pkt Stats Uni Cancel Delay] (tmnxPtpClkPktStatsUniCancelDelay)	long	The value of tmnxPtpClkPktStatsUniCancelDelay indicates the accumulated packet statistics for Unicast Cancel Delay TLVs.
ptpClkPktStatsUniCancelSync [Ptp Clk Pkt Stats Uni Cancel Sync] (tmnxPtpClkPktStatsUniCancelSync)	long	The value of tmnxPtpClkPktStatsUniCancelSync indicates the accumulated packet statistics for Unicast Cancel Sync TLVs.
ptpClkPktStatsUniDenyAnno [Ptp Clk Pkt Stats Uni Deny Anno] (tmnxPtpClkPktStatsUniDenyAnno)	long	The value of tmnxPtpClkPktStatsUniDenyAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpClkPktStatsUniDenyDelRsp [Ptp Clk Pkt Stats Uni Deny Del Rsp] (tmnxPtpClkPktStatsUniDenyDelRsp)	long	The value of tmnxPtpClkPktStatsUniDenyDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpClkPktStatsUniDenySync [Ptp Clk Pkt Stats Uni Deny Sync] (tmnxPtpClkPktStatsUniDenySync)	long	The value of tmnxPtpClkPktStatsUniDenySync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpClkPktStatsUniGrantAnno [Ptp Clk Pkt Stats Uni Grant Anno] (tmnxPtpClkPktStatsUniGrantAnno)	long	The value of tmnxPtpClkPktStatsUniGrantAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpClkPktStatsUniGrantDelRsp [Ptp Clk Pkt Stats Uni Grant Del Rsp] (tmnxPtpClkPktStatsUniGrantDelRsp)	long	The value of tmnxPtpClkPktStatsUniGrantDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpClkPktStatsUniGrantSync [Ptp Clk Pkt Stats Uni Grant Sync] (tmnxPtpClkPktStatsUniGrantSync)	long	The value of tmnxPtpClkPktStatsUniGrantSync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpClkPktStatsUniReqAnno [Ptp Clk Pkt Stats Uni Req Anno] (tmnxPtpClkPktStatsUniReqAnno)	long	The value of tmnxPtpClkPktStatsUniReqAnno indicates the accumulated packet statistics for Unicast Request Announce TLVs.
ptpClkPktStatsUniReqDelayRsp [Ptp Clk Pkt Stats Uni Req Delay Rsp] (tmnxPtpClkPktStatsUniReqDelayRsp)	long	The value of tmnxPtpClkPktStatsUniReqDelayRsp indicates the accumulated packet statistics for Unicast Request Delay Response TLVs.
ptpClkPktStatsUniReqSync [Ptp Clk Pkt Stats Uni Req Sync] (tmnxPtpClkPktStatsUniReqSync)	long	The value of tmnxPtpClkPktStatsUniReqSync indicates the accumulated packet statistics for Unicast Request Sync TLVs.
PTPClockRecoveryEventStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPClock		
tmnxPtpClockRecStatsDlyHiPktLss [Tmnx Ptp Clock Rec Stats Dly Hi Pkt Lss] (tmnxPtpClockRecStatsDlyHiPktLss)	long	The value of tmnxPtpClockRecStatsDlyHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the delay request/response flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsDlyHighPDV [Tmnx Ptp Clock Rec Stats Dly High PDV] (tmnxPtpClockRecStatsDlyHighPDV)	long	The value of tmnxPtpClockRecStatsDlyHighPDV indicates the number of times that the clock recovery process has determined that a sample of delay request packets to the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPtpClockRecStatsDlyPktLoss [Tmnx Ptp Clock Rec Stats Dly Pkt Loss] (tmnxPtpClockRecStatsDlyPktLoss)	long	The value of tmnxPtpClockRecStatsDlyPktLoss indicates the number of times that the clock recovery process detected packet loss in the delay request/response packet flow from the best master clock.
tmnxPtpClockRecStatsDlyStep [Tmnx Ptp Clock Rec Stats Dly Step] (tmnxPtpClockRecStatsDlyStep)	long	The value of tmnxPtpClockRecStatsDlyStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for delay request packets to be sent to the best master clock. This normally occurs if the route taken by packets to the best master changes.
tmnxPtpClockRecStatsSyncHiPktLss [Tmnx Ptp Clock Rec Stats Sync Hi Pkt Lss] (tmnxPtpClockRecStatsSyncHiPktLss)	long	The value of tmnxPtpClockRecStatsSyncHiPktLss indicates the number of times that the clock recovery process detected a large amount of packet loss in the sync flow from the remote master clock. When this event occurs, the clock recovery process restarts.
tmnxPtpClockRecStatsSyncHighPDV [Tmnx Ptp Clock Rec Stats Sync High PDV] (tmnxPtpClockRecStatsSyncHighPDV)	long	The value of tmnxPtpClockRecStatsSyncHighPDV indicates the number of times that the clock recovery process has determined that a sample of sync packets from the best master clock had too much packet delay variation to be useful in recovering the clock from the best master. When this event occurs, the entire sample of packets is not used in the clock recovery process.
tmnxPtpClockRecStatsSyncPktLoss [Tmnx Ptp Clock Rec Stats Sync Pkt Loss] (tmnxPtpClockRecStatsSyncPktLoss)	long	The value of tmnxPtpClockRecStatsSyncPktLoss indicates the number of times that the clock recovery process detected packet loss in the sync packet flow from the best master clock.
tmnxPtpClockRecStatsSyncStep [Tmnx Ptp Clock Rec Stats Sync Step] (tmnxPtpClockRecStatsSyncStep)	long	The value of tmnxPtpClockRecStatsSyncStep indicates the number of times that the clock recovery process detected a large change in the amount of time taken for sync packets to be sent from the best master clock. This normally occurs if the route taken by packets from the best master changes.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
PTPClockRecoveryStateStats MIB entry name: tmnxPtpClockRecoveryStatistics Supports realtime plotting Supports scheduled collection Monitored class: ptp.IEEEPTPClock		
tmnxPtpClockRecStatsAcquiring [Tmnx Ptp Clock Rec Stats Acquiring] (tmnxPtpClockRecStatsAcquiring)	java. math. BigInteger	The value of tmnxPtpClockRecStatsAcquiring indicates the number of seconds that the clock recovery system has been in the acquiring state.
tmnxPtpClockRecStatsHoldover [Tmnx Ptp Clock Rec Stats Holdover] (tmnxPtpClockRecStatsHoldover)	java. math. BigInteger	The value of tmnxPtpClockRecStatsHoldover indicates the number of seconds that the clock recovery system has been in the hold-over state.
tmnxPtpClockRecStatsInitial [Tmnx Ptp Clock Rec Stats Initial] (tmnxPtpClockRecStatsInitial)	java. math. BigInteger	The value of tmnxPtpClockRecStatsInitial indicates the number of seconds that the clock recovery system has been in the initial state.
tmnxPtpClockRecStatsLocked [Tmnx Ptp Clock Rec Stats Locked] (tmnxPtpClockRecStatsLocked)	java. math. BigInteger	The value of tmnxPtpClockRecStatsLocked indicates the number of seconds that the clock recovery system has been in the locked state.
tmnxPtpClockRecStatsPhaseTrack [Tmnx Ptp Clock Rec Stats Phase Track] (tmnxPtpClockRecStatsPhaseTrack)	java. math. BigInteger	The value of tmnxPtpClockRecStatsPhaseTrack indicates the number of seconds that the clock recovery system has been in the phase tracking state.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PTPPeerPacketStats</p> <p>MIB entry name: tmnxPtpPeerPacketStatsEntry</p> <p>Entry description: The tmnxPtpPeerPacketStatsEntry contain the directional packet statistics for the Precision Time Protocol (PTP). ptpPeerPktStatAnnounce [Ptp Peer Pkt Stat Announce] (tmnxPtpPeerPktStatAnnounce)	long	The value of tmnxPtpPeerPktStatAnnounce indicates the accumulated packet statistics for PTP Announce messages.
ptpPeerPktStatDelayRequest [Ptp Peer Pkt Stat Delay Request] (tmnxPtpPeerPktStatDelayRequest)	long	The value of tmnxPtpPeerPktStatDelayRequest indicates the accumulated packet statistics for PTP Delay Request messages.
ptpPeerPktStatDelayResp [Ptp Peer Pkt Stat Delay Resp] (tmnxPtpPeerPktStatDelayResp)	long	The value of tmnxPtpPeerPktStatDelayResp indicates the accumulated packet statistics for PTP Delay Response messages.
ptpPeerPktStatDirection [Ptp Peer Pkt Stat Direction] (tmnxPtpPeerPktStatDirection)	int	The value of tmnxPtpPeerPktStatDirection specifies which direction the packet statistics for the particular row are accumulated.
ptpPeerPktStatDropAltMaster [Ptp Peer Pkt Stat Drop Alt Master] (tmnxPtpPeerPktStatDropAltMaster)	long	The value of tmnxPtpPeerPktStatDropAltMaster indicates the accumulated packet statistics for PTP packets dropped because the PTP header has the 'alternateMasterFlag' set. This object is accumulated for the 'rx' direction only.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatDropBadDomain [Ptp Peer Pkt Stat Drop Bad Domain] (tmnxPtpPeerPktStatDropBadDomain)	long	The value of tmnxPtpPeerPktStatDropBadDomain indicates the accumulated packet statistics for PTP packets dropped because the PTP domain indicated in the packet does not match the configured PTP domain. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatDropOther [Ptp Peer Pkt Stat Drop Other] (tmnxPtpPeerPktStatDropOther)	long	The value of tmnxPtpPeerPktStatDropOther indicates the accumulated packet statistics for PTP packets dropped and not counted in the 'tmnxPtpPeerPktStatDropBadDomain', 'tmnxPtpPeerPktStatDropAltMaster', 'tmnxPtpPeerPktStatDropOutOfSeq', and 'tmnxPtpPeerPktStatDropPeerShut' objects. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatDropOutOfSeq [Ptp Peer Pkt Stat Drop Out Of Seq] (tmnxPtpPeerPktStatDropOutOfSeq)	long	The value of tmnxPtpPeerPktStatDropOutOfSeq indicates the accumulated packet statistics for PTP packets dropped because the packets were received out of sequence. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatDropPeerShut [Ptp Peer Pkt Stat Drop Peer Shut] (tmnxPtpPeerPktStatDropPeerShut)	long	The value of tmnxPtpPeerPktStatDropPeerShut indicates the accumulated packet statistics for PTP packets dropped because the packets were received from a PTP peer that has been administratively disabled. This object is accumulated for the 'rx' direction only.
ptpPeerPktStatFollowUp [Ptp Peer Pkt Stat Follow Up] (tmnxPtpPeerPktStatFollowUp)	long	The value of tmnxPtpPeerPktStatFollowUp indicates the accumulated packet statistics for PTP Follow Up messages.
ptpPeerPktStatOther [Ptp Peer Pkt Stat Other] (tmnxPtpPeerPktStatOther)	long	The value of tmnxPtpPeerPktStatOther indicates the accumulated packet statistics for all other PTP messages. This object is accumulated in the 'rx' direction only.
ptpPeerPktStatOtherTLVs [Ptp Peer Pkt Stat Other TLVs] (tmnxPtpPeerPktStatOtherTLVs)	long	The value of tmnxPtpPeerPktStatOtherTLVs indicates the accumulated packet statistics for other PTP TLV signaling messages. This object is accumulated for the 'rx' direction only.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatSignaling [Ptp Peer Pkt Stat Signaling] (tmnxPtpPeerPktStatSignaling)	long	The value of tmnxPtpPeerPktStatSignaling indicates the accumulated packet statistics for PTP signaling messages.
ptpPeerPktStatSync [Ptp Peer Pkt Stat Sync] (tmnxPtpPeerPktStatSync)	long	The value of tmnxPtpPeerPktStatSync indicates the accumulated packet statistics for PTP Sync messages.
ptpPeerPktStatUniAckCnclAnno [Ptp Peer Pkt Stat Uni Ack Cncl Anno] (tmnxPtpPeerPktStatUniAckCnclAnno)	long	The value of tmnxPtpPeerPktStatUniAckCnclAnno indicates the accumulated packet statistics for Unicast Acknowledge Cancel Announce TLVs.
ptpPeerPktStatUniAckCnclDly [Ptp Peer Pkt Stat Uni Ack Cncl Dly] (tmnxPtpPeerPktStatUniAckCnclDly)	long	The value of tmnxPtpPeerPktStatUniAckCnclDly indicates the accumulated packet statistics for Unicast Acknowledge Cancel Delay Response TLVs.
ptpPeerPktStatUniAckCnclSync [Ptp Peer Pkt Stat Uni Ack Cncl Sync] (tmnxPtpPeerPktStatUniAckCnclSync)	long	The value of tmnxPtpPeerPktStatUniAckCnclSync indicates the accumulated packet statistics for Unicast Acknowledge Cancel Sync TLVs.
ptpPeerPktStatUniCancelAnno [Ptp Peer Pkt Stat Uni Cancel Anno] (tmnxPtpPeerPktStatUniCancelAnno)	long	The value of tmnxPtpPeerPktStatUniCancelAnno indicates the accumulated packet statistics for Unicast Cancel Announce TLVs.
ptpPeerPktStatUniCancelDelay [Ptp Peer Pkt Stat Uni Cancel Delay] (tmnxPtpPeerPktStatUniCancelDelay)	long	The value of tmnxPtpPeerPktStatUniCancelDelay indicates the accumulated packet statistics for Unicast Cancel Delay TLVs.
ptpPeerPktStatUniCancelSync [Ptp Peer Pkt Stat Uni Cancel Sync] (tmnxPtpPeerPktStatUniCancelSync)	long	The value of tmnxPtpPeerPktStatUniCancelSync indicates the accumulated packet statistics for Unicast Cancel Sync TLVs.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatUniDenyAnno [Ptp Peer Pkt Stat Uni Deny Anno] (tmnxPtpPeerPktStatUniDenyAnno)	long	The value of tmnxPtpPeerPktStatUniDenyAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpPeerPktStatUniDenyDelRsp [Ptp Peer Pkt Stat Uni Deny Del Rsp] (tmnxPtpPeerPktStatUniDenyDelRsp)	long	The value of tmnxPtpPeerPktStatUniDenyDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpPeerPktStatUniDenySync [Ptp Peer Pkt Stat Uni Deny Sync] (tmnxPtpPeerPktStatUniDenySync)	long	The value of tmnxPtpPeerPktStatUniDenySync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was denied. The request was denied if the duration indicated in the TLV was zero.
ptpPeerPktStatUniGrantAnno [Ptp Peer Pkt Stat Uni Grant Anno] (tmnxPtpPeerPktStatUniGrantAnno)	long	The value of tmnxPtpPeerPktStatUniGrantAnno indicates the accumulated packet statistics for Unicast Grant Announce TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpPeerPktStatUniGrantDelRsp [Ptp Peer Pkt Stat Uni Grant Del Rsp] (tmnxPtpPeerPktStatUniGrantDelRsp)	long	The value of tmnxPtpPeerPktStatUniGrantDelRsp indicates the accumulated packet statistics for Unicast Grant Delay Response TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpPeerPktStatUniGrantSync [Ptp Peer Pkt Stat Uni Grant Sync] (tmnxPtpPeerPktStatUniGrantSync)	long	The value of tmnxPtpPeerPktStatUniGrantSync indicates the accumulated packet statistics for Unicast Grant Sync TLVs, where the request was granted. The request was granted if the duration indicated in the TLV was non-zero.
ptpPeerPktStatUniReqAnno [Ptp Peer Pkt Stat Uni Req Anno] (tmnxPtpPeerPktStatUniReqAnno)	long	The value of tmnxPtpPeerPktStatUniReqAnno indicates the accumulated packet statistics for Unicast Request Announce TLVs.
ptpPeerPktStatUniReqDelayRsp [Ptp Peer Pkt Stat Uni Req Delay Rsp] (tmnxPtpPeerPktStatUniReqDelayRsp)	long	The value of tmnxPtpPeerPktStatUniReqDelayRsp indicates the accumulated packet statistics for Unicast Request Delay Response TLVs.

Table 282 ptp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ptpPeerPktStatUniReqSync [Ptp Peer Pkt Stat Uni Req Sync] (tmnxPtpPeerPktStatUniReqSync)	long	The value of tmnxPtpPeerPktStatUniReqSync indicates the accumulated packet statistics for Unicast Request Sync TLVs.
ptpPeerPktStatsTimeStampCpm [Ptp Peer Pkt Stats Time Stamp Cpm] (tmnxPtpPeerPktStatTimeStampCpm)	long	The value of tmnxPtpPeerPktStatTimeStampCpm indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the operating system kernel.
ptpPeerPktStatsTimeStampPort [Ptp Peer Pkt Stats Time Stamp Port] (tmnxPtpPeerPktStatTimeStampPort)	long	The value of tmnxPtpPeerPktStatTimeStampPort indicates the accumulated packet statistics for PTP event packets where the timestamp point is at the physical layer.

Table 283 radiusaccounting statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicyStats</p> <p>MIB entry name: tmnxSubAcctPlcyStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a subscriber RADIUS accounting policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAcctPlcyStatsTable): The tmnxSubAcctPlcyStatsTable has an entry for each subscriber RADIUS accounting policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: radiusaccounting.Policy</p>		
receiveResponses [Receive Responses] (tmnxSubAcctPlcyRxResponses)	long	The value of tmnxSubAcctPlcyRxResponses indicates the number of accounting responses received for this policy.
requestRetries [Request Retries] (tmnxSubAcctPlcySendRetries)	long	The value of tmnxSubAcctPlcySendRetries indicates the number of retries to a different server for a single accounting request for this policy.
requestTimeOut [Request Time Out] (tmnxSubAcctPlcyReqTimeouts)	long	The value of tmnxSubAcctPlcyReqTimeouts indicates the number of accounting requests which have timed out for this policy.
requestsFail [Requests Fail] (tmnxSubAcctPlcySendFail)	long	The value of tmnxSubAcctPlcySendFail indicates how many accounting requests failed because the packet could not be sent out.
transferRequests [Transfer Requests] (tmnxSubAcctPlcyTxRequests)	long	The value of tmnxSubAcctPlcyTxRequests indicates the number of accounting requests transmitted for this policy.

Table 283 radiusaccounting statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadiusEntryStats</p> <p>MIB entry name: tmnxSubAcctPlcyRadStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a specific RADIUS server in a subscriber accounting policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAcctPlcyRadStatsTable): The tmnxSubAcctPlcyRadStatsTable has an entry for each RADIUS accounting server configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: radiusaccounting.RadiusEntry</p>		
receiveResponses [Receive Responses] (tmnxSubAcctPlcyRadRxResponses)	long	The value of tmnxSubAcctPlcyRadRxResponses indicates the number of accounting responses received for this server.
requestTimeOut [Request Time Out] (tmnxSubAcctPlcyRadReqTimeouts)	long	The value of tmnxSubAcctPlcyRadReqTimeouts indicates the number of accounting requests which have timed out for this server.
requestsFail [Requests Fail] (tmnxSubAcctPlcyRadReqSendFail)	long	The value of tmnxSubAcctPlcyRadReqSendFail indicates the number of accounting requests failed because the packet could not be sent out.
transferRequests [Transfer Requests] (tmnxSubAcctPlcyRadTxRequests)	long	The value of tmnxSubAcctPlcyRadTxRequests indicates the number of accounting requests transmitted for this server.

Table 284 ressubscr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSubCustRecAppGrpStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.

Table 284 resubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSubCustRecAppGrpUsageMonStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: resubscr.ResidentialSubscriberInstance</p>		
aaSubscriberType [Aa Subscriber Type] (tmnxBsxAaSubscriberType)	int	The value of tmnxBsxAaSubscriberType specifies the format of the Application Assurance Subscriber identifier.
operationStatus [Operation Status] (tmnxBsxAaSubUMOperStatus)	int	The value of tmnxBsxAaSubUMOperStatus indicates the operational state for the usage monitor. When 'active (2)', a rule has been received and credits have been sent from policy server. When 'inactive (1)', a rule has been received but no credits have been sent from policy server. When 'adminDisabled (0)', a rule has been 'shutdown' on the policy server.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
umBothGrantCredit [Um Both Grant Credit] (tmnxBsxAaSubUMBothGrantCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMBothGrantCredit indicates the amount of credits allocated by the policy server for either direction.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
umBothGrantStatus [Um Both Grant Status] (tmnxBsxAaSubUMBothGrantStatus)	int	The value of tmnxBsxAaSubUMBothGrantStatus indicates grant status for the network to subscriber direction.
umBothUsedCredit [Um Both Used Credit] (tmnxBsxAaSubUMBothUsedCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMBothUsedCredit indicates the amount of credits used by either direction.
umFromSubGrantCredit [Um From Sub Grant Credit] (tmnxBsxAaSubUMFmSubGrantCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMFmSubGrantCredit indicates the amount of credits allocated by the policy server for the subscriber to network direction.
umFromSubGrantStatus [Um From Sub Grant Status] (tmnxBsxAaSubUMFmSubGrantStatus)	int	The value of tmnxBsxAaSubUMFmSubGrantStatus indicates grant status for the subscriber to network direction.
umFromSubUsedCredit [Um From Sub Used Credit] (tmnxBsxAaSubUMFmSubUsedCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMFmSubUsedCredit indicates the amount of credits used by the subscriber to network direction.
umToSubGrantCredit [Um To Sub Grant Credit] (tmnxBsxAaSubUMToSubGrantCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMToSubGrantCredit indicates the amount of credits allocated by the policy server for the network to subscriber direction.
umToSubGrantStatus [Um To Sub Grant Status] (tmnxBsxAaSubUMToSubGrantStatus)	int	The value of tmnxBsxAaSubUMToSubGrantStatus indicates grant status for the network to subscriber direction.
umToSubUsedCredit [Um To Sub Used Credit] (tmnxBsxAaSubUMToSubUsedCredit)	java. math. BigInteger	The value of tmnxBsxAaSubUMToSubUsedCredit indicates the amount of credits used by the network to subscriber direction.

Table 284 ressubscr statistics (continued)

pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.
<p>BsxSubStudyAppStats</p> <p>MIB entry name: tmnxBsxStatAaSubSdyEntry</p> <p>Entry description: Each tmnxBsxStatAaSubSdyEntry contains the application assurance per-special study subscriber statistics for a combination of group, partition, statistics interval, statistics type, subscriber, and statistics name. A value of 'chargingGroup (4)' is not supported for the tmnxBsxStatAaType.</p> <p>Table description (for tmnxBsxStatAaSubSdyTable): The tmnxBsxStatAaSubSdyTable contains an entry for each application-assurance special study subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the special study subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubSdyActFlwsFmSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubSdyActFlwsToSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubSdyHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLngDurFlws.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFlwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFlwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFlwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFlwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
<p>BsxSubStudyProtStats</p> <p>MIB entry name: tmnxBsxStatAaSubSdyEntry</p> <p>Entry description: Each tmnxBsxStatAaSubSdyEntry contains the application assurance per-special study subscriber statistics for a combination of group, partition, statistics interval, statistics type, subscriber, and statistics name. pPPType [PPPType] (tmnxSubPppSvcTypeIndex)	int	The value of the object tmnxSubPppSvcTypeIndex indicates the type of subscriber PPP.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pPPoL2tp [PPPo L2 tp] (tmnxSubPppSvcTypeSessions)	long	The value of the object tmnxSubPppSvcTypeSessions indicates the actual number of PPP session of this type.
<p>SLAEgrQoS SchedStats</p> <p>MIB entry name: tmnxSPIEgrQoS SchedStatsEntry</p> <p>Entry description: Each row entry contains egress statistics about a particular SLA profile instance QoS scheduler.</p> <p>Table description (for tmnxSPIEgrQoS SchedStatsTable): The tmnxSPIEgrQoS SchedStatsTable contains egress QoS scheduler statistics about SLA profile instances. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
egrQoS SchedStatsFwdOctets [Egr Qos Sched Stats Fwd Octets] (tmnxSPIEgrQoS SchedStatsFwdOctets)	java. math. BigInteger	The value of tmnxSPIEgrQoS SchedStatsFwdOctets indicates the number of forwarded octets by the egress Qchip, as determined by the SLA profile instance egress scheduler policy.
egrQoS SchedStatsFwdPkts [Egr Qos Sched Stats Fwd Pkts] (tmnxSPIEgrQoS SchedStatsFwdPkts)	java. math. BigInteger	The value of tmnxSPIEgrQoS SchedStatsFwdPkts indicates the number of forwarded packets by the egress Qchip, as determined by the SLA profile instance egress scheduler policy.
egrQoS SchedStatsName [Egr Qos Sched Stats Name] (tmnxSPIEgrQoS SchedStatsName)	String	The value of tmnxSPIEgrQoS SchedStatsName specifies the egress QoS scheduler of this SLA profile instance.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
slaProfileName [Sla Profile Name] (tmnxSLAProfName)	String	The value of tmnxSLAProfName specifies the name of the SLA profile.
subldent [Sub Ident] (tmnxSubInfoSubldent)	String	The value of tmnxSubInfoSubldent specifies the subscriber identification of this subscriber.
<p>SLAProfInstEgrPStats MIB entry name: tmnxSLAProfInstEgrPStatsEntry Entry description: Each row entry contains egress statistics about a particular SLA profile instance QoS policer. Table description (for tmnxSLAProfInstEgrPStatsTable): The tmnxSLAProfInstEgrPStatsTable contains egress QoS policer statistics about SLA profile instances. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip. Does not support realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
egrPolicerId [Egr Policer Id] (tmnxSPIEgrPStatsPolId)	long	The value of tmnxSPIEgrPStatsPolId specifies the index of the egress QoS policer of this SLA profile instance.
spiEgrPStatsDrpExdProfOcts [Spi Egr PStats Drp Exd Prof Octs] (tmnxSPIEgrPStatsDrpExdProfOcts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsDrpExdProfOcts indicates the number of out-of-profile octets (rate above PIR) dropped by the egress Pchip.
spiEgrPStatsDrpExdProfPkts [Spi Egr PStats Drp Exd Prof Pkts] (tmnxSPIEgrPStatsDrpExdProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsDrpExdProfPkts indicates the number of exceed-profile packets (rate above PIR) dropped by the egress Pchip.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
spiEgrPStatsDrpInPProfOcts [Spi Egr PStats Drp In PProf Octs] (tmnxSPIEgrPStatsDrpInPProfOcts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsDrpInPProfOcts indicates the number of inplus-profile octets forwarded by the egress Pchip.
spiEgrPStatsDrpInPProfPkts [Spi Egr PStats Drp In PProf Pkts] (tmnxSPIEgrPStatsDrpInPProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsDrpInPProfPkts indicates the number of inplus-profile packets discarded by the egress Pchip.
spiEgrPStatsDrpInProfOctsH [Spi Egr PStats Drp In Prof Octs H] (tmnxSPIEgrPStatsDrpInProfOctsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsDrpInProfOcts.
spiEgrPStatsDrpInProfOctsL [Spi Egr PStats Drp In Prof Octs L] (tmnxSPIEgrPStatsDrpInProfOctsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsDrpInProfOcts.
spiEgrPStatsDrpInProfPktsH [Spi Egr PStats Drp In Prof Pkts H] (tmnxSPIEgrPStatsDrpInProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsDrpInProfPkts.
spiEgrPStatsDrpInProfPktsL [Spi Egr PStats Drp In Prof Pkts L] (tmnxSPIEgrPStatsDrpInProfPktsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsDrpInProfPkts.
spiEgrPStatsDrpOutProfOctsH [Spi Egr PStats Drp Out Prof Octs H] (tmnxSPIEgrPStatsDrpOutProfOctsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsDrpOutProfOcts.
spiEgrPStatsDrpOutProfOctsL [Spi Egr PStats Drp Out Prof Octs L] (tmnxSPIEgrPStatsDrpOutProfOctsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsDrpOutProfOcts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
spiEgrPStatsDrpOutProfPktsH [Spi Egr PStats Drp Out Prof Pkts H] (tmnxSPIEgrPStatsDrpOutProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsDrpOutProfPkts.
spiEgrPStatsDrpOutProfPktsL [Spi Egr PStats Drp Out Prof Pkts L] (tmnxSPIEgrPStatsDrpOutProfPktsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsDrpOutProfPkts.
spiEgrPStatsFwdExdProfOcts [Spi Egr PStats Fwd Exd Prof Octs] (tmnxSPIEgrPStatsFwdExdProfOcts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsFwdExdProfOcts indicates the number of out-of-profile octets (rate above PIR) forwarded by the egress Pchip.
spiEgrPStatsFwdExdProfPkts [Spi Egr PStats Fwd Exd Prof Pkts] (tmnxSPIEgrPStatsFwdExdProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsFwdExdProfPkts indicates the number of exceed-profile packets (rate above PIR) forwarded by the egress Pchip.
spiEgrPStatsFwdInPProfOcts [Spi Egr PStats Fwd In PProf Octs] (tmnxSPIEgrPStatsFwdInPProfOcts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsFwdInPProfOcts indicates the number of inplus-profile octets forwarded by the egress Pchip.
spiEgrPStatsFwdInPProfPkts [Spi Egr PStats Fwd In PProf Pkts] (tmnxSPIEgrPStatsFwdInPProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsFwdInPProfPkts indicates the number of inplus-profile packets forwarded by the egress Pchip.
spiEgrPStatsFwdInProfOctsH [Spi Egr PStats Fwd In Prof Octs H] (tmnxSPIEgrPStatsFwdInProfOctsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsFwdInProfOcts.
spiEgrPStatsFwdInProfOctsL [Spi Egr PStats Fwd In Prof Octs L] (tmnxSPIEgrPStatsFwdInProfOctsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsFwdInProfOcts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
spiEgrPStatsFwdInProfPktsH [Spi Egr PStats Fwd In Prof Pkts H] (tmnxSPIEgrPStatsFwdInProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsFwdInProfPkts.
spiEgrPStatsFwdInProfPktsL [Spi Egr PStats Fwd In Prof Pkts L] (tmnxSPIEgrPStatsFwdInProfPktsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsFwdInProfPkts.
spiEgrPStatsFwdOutProfOctsH [Spi Egr PStats Fwd Out Prof Octs H] (tmnxSPIEgrPStatsFwdOutProfOctsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsFwdOutProfOcts.
spiEgrPStatsFwdOutProfOctsL [Spi Egr PStats Fwd Out Prof Octs L] (tmnxSPIEgrPStatsFwdOutProfOctsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsFwdOutProfOcts.
spiEgrPStatsFwdOutProfPktsH [Spi Egr PStats Fwd Out Prof Pkts H] (tmnxSPIEgrPStatsFwdOutProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsFwdOutProfPkts.
spiEgrPStatsFwdOutProfPktsL [Spi Egr PStats Fwd Out Prof Pkts L] (tmnxSPIEgrPStatsFwdOutProfPktsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsFwdOutProfPkts.
spiEgrPStatsMode [Spi Egr PStats Mode] (tmnxSPIEgrPStatsMode)	int	The value of tmnxSPIEgrPStatsMode indicates the stat mode used by the policer.
spiEgrPStatsOffExdProfOcts [Spi Egr PStats Off Exd Prof Octs] (tmnxSPIEgrPStatsOffExdProfOcts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsOffExdProfOcts indicates the number of exceed-profile octets offered by the egress Pchip.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
spiEgrPStatsOffExdProfPkts [Spi Egr PStats Off Exd Prof Pkts] (tmnxSPIEgrPStatsOffExdProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsOffExdProfPkts indicates the number of exceed-profile packets offered by the egress Pchip.
spiEgrPStatsOffInPProfPkts [Spi Egr PStats Off In PProf Pkts] (tmnxSPIEgrPStatsOffInPProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsOffInPProfPkts indicates the number of inplus-profile packets offered by the egress Pchip.
spiEgrPStatsOffInPProfPkts [Spi Egr PStats Off In PProf Pkts] (tmnxSPIEgrPStatsOffInPProfPkts)	java. math. BigInteger	The value of tmnxSPIEgrPStatsOffInPProfPkts indicates the number of inplus-profile packets offered by the egress Pchip.
spiEgrPStatsOffInProfPktsH [Spi Egr PStats Off In Prof Pkts H] (tmnxSPIEgrPStatsOffInProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsOffInProfPkts.
spiEgrPStatsOffInProfPktsL [Spi Egr PStats Off In Prof Pkts L] (tmnxSPIEgrPStatsOffInProfPktsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsOffInProfPkts.
spiEgrPStatsOffInProfPktsH [Spi Egr PStats Off In Prof Pkts H] (tmnxSPIEgrPStatsOffInProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsOffInProfPkts.
spiEgrPStatsOffInProfPktsL [Spi Egr PStats Off In Prof Pkts L] (tmnxSPIEgrPStatsOffInProfPktsL)	long	Indicates the lower 32 bits of tmnxSPIEgrPStatsOffInProfPkts.
spiEgrPStatsOffOutProfPktsH [Spi Egr PStats Off Out Prof Pkts H] (tmnxSPIEgrPStatsOffOutProfPktsH)	long	Indicates the upper 32 bits of tmnxSPIEgrPStatsOffOutProfPkts.

egrQoS SchedName [Egr Qos Sched Name] (tmnxSubEgrQosSchedStatsName)	String	The value of tmnxSubEgrQosSchedStatsName specifies the egress QoS scheduler of this subscriber.
forwardedOctets [Forwarded Octets] (tmnxSubEgrQosSchedStatsFwdOctets)	java. math. BigInteger	The value of tmnxSubEgrQosSchedStatsFwdOctets indicates the number of forwarded octets by the egress Qchip, as determined by the subscriber egress scheduler policy.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedPackets [Forwarded Packets] (tmnxSubEgrQosSchedStatsFwdPkts)	java. math. BigInteger	The value of tmnxSubEgrQosSchedStatsFwdPkts indicates the number of forwarded packets by the egress Qchip, as determined by the subscriber egress scheduler policy.
<p>SubIngQosArbiterStats</p> <p>MIB entry name: tmnxSubIngQosArbitStatsEntry</p> <p>Entry description: Each row entry contains ingress statistics about a particular subscriber QoS arbiter.</p> <p>Table description (for tmnxSubIngQosArbitStatsTable): The tmnxSubIngQosArbitStatsTable contains ingress QoS arbiter statistics about subscribers. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
arbiterName [Arbiter Name] (tmnxSubIngQosArbitStatsName)	String	The value of tmnxSubIngQosArbitStatsName specifies the ingress QoS arbiter of this subscriber.
subIngQosArbitStatsFwdOcts [Sub Ing Qos Arbit Stats Fwd Octs] (tmnxSubIngQosArbitStatsFwdOcts)	java. math. BigInteger	The value of tmnxSubIngQosArbitStatsFwdOcts indicates the number of forwarded octets, as determined by the subscriber ingress policer control policy, offered by the Pchip to the Qchip.
subIngQosArbitStatsFwdPkts [Sub Ing Qos Arbit Stats Fwd Pkts] (tmnxSubIngQosArbitStatsFwdPkts)	java. math. BigInteger	The value of tmnxSubIngQosArbitStatsFwdPkts indicates the number of forwarded packets, as determined by the subscriber ingress policer control policy, offered by the Pchip to the Qchip.

subEgrPStatsDrpInProfOcts [Sub Egr PStats Drp In Prof Octs] (tmnxSubEgrPStatsDrpInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsDrpInProfOcts indicates the number of in-profile octets dropped by the egress Pchip.
subEgrPStatsDrpInProfPkts [Sub Egr PStats Drp In Prof Pkts] (tmnxSubEgrPStatsDrpInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrPStatsDrpInProfPkts indicates the number of in-profile packets dropped by the egress Pchip.
subEgrPStatsDrpOutProfOcts [Sub Egr PStats Drp Out Prof Octs] (tmnxSubEgrPStatsDrpOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsDrpOutProfOcts indicates the number of out-of-profile octets dropped by the egress Pchip.
subEgrPStatsDrpOutProfPkts [Sub Egr PStats Drp Out Prof Pkts] (tmnxSubEgrPStatsDrpOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrPStatsDrpOutProfPkts indicates the number of out-of-profile packets dropped by the egress Pchip.
subEgrPStatsFwdInProfOcts [Sub Egr PStats Fwd In Prof Octs] (tmnxSubEgrPStatsFwdInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsFwdInProfOcts indicates the number of in-profile octets forwarded by the egress Pchip.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrPStatsFwdInProfPkts [Sub Egr PStats Fwd In Prof Pkts] (tmnxSubEgrPStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrPStatsFwdInProfPkts indicates the number of in-profile packets forwarded by the egress Pchip.
subEgrPStatsFwdOutProfOcts [Sub Egr PStats Fwd Out Prof Octs] (tmnxSubEgrPStatsFwdOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsFwdOutProfOcts indicates the number of out-of-profile octets forwarded by the egress Pchip.
subEgrPStatsFwdOutProfPkts [Sub Egr PStats Fwd Out Prof Pkts] (tmnxSubEgrPStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrPStatsFwdOutProfPkts indicates the number of out-of-profile packets forwarded by the egress Pchip.
subEgrPStatsMode [Sub Egr PStats Mode] (tmnxSubEgrPStatsMode)	int	The value of tmnxSubEgrPStatsMode indicates the stat mode used by the policer.
subEgrPStatsOffInProfOcts [Sub Egr PStats Off In Prof Octs] (tmnxSubEgrPStatsOffInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsOffInProfOcts indicates the number of in-profile octets offered by the egress Pchip.
subEgrPStatsOffInProfPkts [Sub Egr PStats Off In Prof Pkts] (tmnxSubEgrPStatsOffInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrPStatsOffInProfPkts indicates the number of in-profile packets offered by the egress Pchip.
subEgrPStatsOffOutProfOcts [Sub Egr PStats Off Out Prof Octs] (tmnxSubEgrPStatsOffOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsOffOutProfOcts indicates the number of out-of-profile octets offered by the egress Pchip.
subEgrPStatsOffOutProfPkts [Sub Egr PStats Off Out Prof Pkts] (tmnxSubEgrPStatsOffOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrPStatsOffOutProfPkts indicates the number of out-of-profile packets offered by the egress Pchip.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrPStatsOffUncolOcts [Sub Egr PStats Off Uncol Octs] (tmnxSubEgrPStatsOffUncolOcts)	java. math. BigInteger	The value of tmnxSubEgrPStatsOffUncolOcts indicates the number of uncolored octets offered by the egress Pchip.
subEgrPStatsPolicyId [Sub Egr PStats Policy Id] (tSapEgrPolicerId)	long	tSapEgrPolicerId defines the SAP Egress Policer identifier. It identifies an sap-egress policer in the managed system.
SubscriberEgrQStats MIB entry name: tmnxSubscriberEgrQStatsEntry Entry description: Egress statistics about a specific subscriber's HSMDA queue. Table description (for tmnxSubscriberEgrQStatsTable): A table that contains subscriber egress HSMDA queue statistics. Supports realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance		
subEgrQStatsHsmdaQueueId [Sub Egr QStats Hsmda Queue Id] (tmnxSubEgrQStatsQueueId)	long	The value of tmnxSubEgrQStatsQueueId index specifies the Hsmda egress queue for this entry.
subEgrQStatsSubPortId [Sub Egr QStats Sub Port Id] (tmnxSubEgrQStatsSubPortId)	long	The value of tmnxSubEgrQStatsSubPortId indicates the access port for this entry.
SubscriberEgrQV4V6Stats MIB entry name: tmnxSubscriberEgrQStatsEntry Entry description: Egress statistics about a specific subscriber's HSMDA queue. Table description (for tmnxSubscriberEgrQStatsTable): A table that contains subscriber egress HSMDA queue statistics. Does not support realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance		

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrQStatsDropV4Octets [Sub Egr QStats Drop V4 Octets] (tmnxSubEgrQStatsDropInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropInProfOcts indicates the number of high-priority octets dropped on egress on this subscriber.
subEgrQStatsDropV4Packets [Sub Egr QStats Drop V4 Packets] (tmnxSubEgrQStatsDropInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropInProfPkts indicates the number of high-priority packets dropped on egress on this subscriber.
subEgrQStatsDropV6Octets [Sub Egr QStats Drop V6 Octets] (tmnxSubEgrQStatsDropOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropOutProfOcts indicates the number of low-priority octets dropped on egress on this subscriber.
subEgrQStatsDropV6Packets [Sub Egr QStats Drop V6 Packets] (tmnxSubEgrQStatsDropOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsDropOutProfPkts indicates the number of low-priority packets dropped on egress on this subscriber.
subEgrQStatsFwdV4Octets [Sub Egr QStats Fwd V4 Octets] (tmnxSubEgrQStatsFwdInProfOcts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdInProfOcts indicates the number of out-of-profile octets forwarded on egress on this subscriber.
subEgrQStatsFwdV4Packets [Sub Egr QStats Fwd V4 Packets] (tmnxSubEgrQStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdInProfPkts indicates the number of in-profile packets forwarded on egress on this subscriber.
subEgrQStatsFwdV6Octets [Sub Egr QStats Fwd V6 Octets] (tmnxSubEgrQStatsFwdOutProfOcts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdOutProfOcts indicates the number of out-of-profile octets forwarded on egress on this subscriber.
subEgrQStatsFwdV6Packets [Sub Egr QStats Fwd V6 Packets] (tmnxSubEgrQStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubEgrQStatsFwdOutProfPkts indicates the number of out-of-profile packets forwarded on egress on this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrQStatsHsmdaQueueId [Sub Egr QStats Hsmda Queue Id] (tmnxSubEgrQStatsQueueId)	long	The value of tmnxSubEgrQStatsQueueId index specifies the Hsmda egress queue for this entry.
subEgrQStatsSubPortId [Sub Egr QStats Sub Port Id] (tmnxSubEgrQStatsSubPortId)	long	The value of tmnxSubEgrQStatsSubPortId indicates the access port for this entry.
<p>SubscriberHsmdaStats MIB entry name: tmnxSubscriberHsmdaStatsEntry Entry description: HSMDA statistics for a specific subscriber. Table description (for tmnxSubscriberHsmdaStatsTable): A table that contains HSMDA subscriber statistics. Supports realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
hsmdaStatsSubPortId [Hsmda Stats Sub Port Id] (tmnxSubHsmdaStSubPortId)	long	The value of tmnxSubHsmdaStSubPortId indicates the access port for this entry.
subEgrDropInProfileOctets [Sub Egr Drop In Profile Octets] (tmnxSubHsmdaStEgrDropInProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropInProfOct indicates the number of high-priority octets discarded by the egress Qchip for this subscriber.
subEgrDropInProfilePackets [Sub Egr Drop In Profile Packets] (tmnxSubHsmdaStEgrDropInProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropInProfPkt indicates the number of high-priority packets discarded by the egress Qchip for this subscriber.
subEgrDropOutProfileOctets [Sub Egr Drop Out Profile Octets] (tmnxSubHsmdaStEgrDropOutProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropOutProfOct indicates the number of low-priority octets discarded by the egress Qchip for this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrDropOutProfilePackets [Sub Egr Drop Out Profile Packets] (tmnxSubHsmdaStEgrDropOutProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropOutProfPkt indicates the number of low-priority packets discarded by the egress Qchip for this subscriber.
subEgrFwdInProfilePackets [Sub Egr Fwd In Profile Packets] (tmnxSubHsmdaStEgrFwdInProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdInProfPkt indicates the number of in-profile packets forwarded by the egress Qchip for this subscriber.
subEgrFwdOutProfileOctets [Sub Egr Fwd Out Profile Octets] (tmnxSubHsmdaStEgrFwdOutProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdOutProfOct indicates the number of out-of-profile octets forwarded by the egress Qchip for this subscriber.
subEgrFwdOutProfilePackets [Sub Egr Fwd Out Profile Packets] (tmnxSubHsmdaStEgrFwdOutProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdOutProfPkt indicates the number of out-of-profile packets forwarded by the egress Qchip for this subscriber.
subIngDropHiPriorityOctets [Sub Ing Drop Hi Priority Octets] (tmnxSubHsmdaStIngDropHiPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropHiPrioOct indicates the number of high-priority octets discarded by the ingress Qchip for this subscriber.
subIngDropHiPriorityPackets [Sub Ing Drop Hi Priority Packets] (tmnxSubHsmdaStIngDropHiPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropHiPrioPkt indicates the number of high-priority packets discarded by the ingress Qchip for this subscriber.
subIngDropLoPriorityOctets [Sub Ing Drop Lo Priority Octets] (tmnxSubHsmdaStIngDropLoPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropLoPrioOct indicates the number of low-priority octets discarded by the ingress Qchip for this subscriber.
subIngDropLoPriorityPackets [Sub Ing Drop Lo Priority Packets] (tmnxSubHsmdaStIngDropLoPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropLoPrioPkt indicates the number of low-priority packets discarded by the ingress Qchip for this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngFwdInProfileOctets [Sub Ing Fwd In Profile Octets] (tmnxSubHsmdaStIngFwdInProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdInProfOct indicates the number of out-of-profile octets forwarded by the ingress Qchip for this subscriber.
subIngFwdInProfilePackets [Sub Ing Fwd In Profile Packets] (tmnxSubHsmdaStIngFwdInProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdInProfPkt indicates the number of in-profile packets forwarded by the ingress Qchip for this subscriber.
subIngFwdOutProfileOctets [Sub Ing Fwd Out Profile Octets] (tmnxSubHsmdaStIngFwdOutProfOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdOutProfOct indicates the number of out-of-profile octets forwarded by the ingress Qchip for this subscriber.
subIngFwdOutProfilePackets [Sub Ing Fwd Out Profile Packets] (tmnxSubHsmdaStIngFwdOutProfPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdOutProfPkt indicates the number of out-of-profile packets forwarded by the ingress Qchip for this subscriber.
subIngOffHiPrioOct [Sub Ing Off Hi Prio Oct] (tmnxSubHsmdaStIngOffHiPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffHiPrioOct indicates the number of high priority octets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffHiPrioOctHw [Sub Ing Off Hi Prio Oct Hw] (tmnxSubHsmdaStIngOffHiPrioOctHw)	long	The value of tmnxSubHsmdaStIngOffHiPrioOctHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioOct.
subIngOffHiPrioOctLw [Sub Ing Off Hi Prio Oct Lw] (tmnxSubHsmdaStIngOffHiPrioOctLw)	long	The value of tmnxSubHsmdaStIngOffHiPrioOctLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioOct.
subIngOffHiPrioPkt [Sub Ing Off Hi Prio Pkt] (tmnxSubHsmdaStIngOffHiPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffHiPrioPkt indicates the number of high priority packets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngOffHiPrioPktHw [Sub Ing Off Hi Prio Pkt Hw] (tmnxSubHsmdaStIngOffHiPrioPktHw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioPkt.
subIngOffHiPrioPktLw [Sub Ing Off Hi Prio Pkt Lw] (tmnxSubHsmdaStIngOffHiPrioPktLw)	long	The value of tmnxSubHsmdaStIngOffHiPrioPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffHiPrioPkt.
subIngOffLoPrioOct [Sub Ing Off Lo Prio Oct] (tmnxSubHsmdaStIngOffLoPrioOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffLoPrioOct indicates the number of low priority octets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffLoPrioOctHw [Sub Ing Off Lo Prio Oct Hw] (tmnxSubHsmdaStIngOffLoPrioOctHw)	long	The value of tmnxSubHsmdaStIngOffLoPrioOctHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioOct.
subIngOffLoPrioOctLw [Sub Ing Off Lo Prio Oct Lw] (tmnxSubHsmdaStIngOffLoPrioOctLw)	long	The value of tmnxSubHsmdaStIngOffLoPrioOctLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioOct.
subIngOffLoPrioPkt [Sub Ing Off Lo Prio Pkt] (tmnxSubHsmdaStIngOffLoPrioPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffLoPrioPkt indicates the number of low priority packets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffLoPrioPktHw [Sub Ing Off Lo Prio Pkt Hw] (tmnxSubHsmdaStIngOffLoPrioPktHw)	long	The value of tmnxSubHsmdaStIngOffLoPrioPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioPkt.
subIngOffLoPrioPktLw [Sub Ing Off Lo Prio Pkt Lw] (tmnxSubHsmdaStIngOffLoPrioPktLw)	long	The value of tmnxSubHsmdaStIngOffLoPrioPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffLoPrioPkt.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngOffTotalOctets [Sub Ing Off Total Octets] (tmnxSubHsmdaStIngOffTotalOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffTotalOct indicates the total number of octets offered on ingress for this subscriber.
subIngOffTotalPackets [Sub Ing Off Total Packets] (tmnxSubHsmdaStIngOffTotalPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffTotalPkt indicates the total number of packets offered on ingress for this subscriber.
subIngOffUncolOct [Sub Ing Off Uncol Oct] (tmnxSubHsmdaStIngOffUncolOct)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffUncolOct indicates the number of uncolored octets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffUncolOctHw [Sub Ing Off Uncol Oct Hw] (tmnxSubHsmdaStIngOffUncolOctHw)	long	The value of tmnxSubHsmdaStIngOffUncolOctHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffUncolOct.
subIngOffUncolOctLw [Sub Ing Off Uncol Oct Lw] (tmnxSubHsmdaStIngOffUncolOctLw)	long	The value of tmnxSubHsmdaStIngOffUncolOctLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffUncolOct.
subIngOffUncolPkt [Sub Ing Off Uncol Pkt] (tmnxSubHsmdaStIngOffUncolPkt)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffUncolPkt indicates the number of uncolored packets offered by the Pchip to the Qchip for this subscriber. This is only supported for subscribers on an HSM DA-2.
subIngOffUncolPktHw [Sub Ing Off Uncol Pkt Hw] (tmnxSubHsmdaStIngOffUncolPktHw)	long	The value of tmnxSubHsmdaStIngOffUncolPktHw indicates the higher 32-bits word of the value of tmnxSubHsmdaStIngOffUncolPkt.
subIngOffUncolPktLw [Sub Ing Off Uncol Pkt Lw] (tmnxSubHsmdaStIngOffUncolPktLw)	long	The value of tmnxSubHsmdaStIngOffUncolPktLw indicates the lower 32-bits word of the value of tmnxSubHsmdaStIngOffUncolPkt.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscriberHsmdaV4V6Stats</p> <p>MIB entry name: tmnxSubscriberHsmdaStatsEntry</p> <p>Entry description: HSMDA statistics for a specific subscriber.</p> <p>Table description (for tmnxSubscriberHsmdaStatsTable): A table that contains HSMDA subscriber statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
hsmdaStatsSubPortId [Hsmda Stats Sub Port Id] (tmnxSubHsmdaStSubPortId)	long	The value of tmnxSubHsmdaStSubPortId indicates the access port for this entry.
subEgrDropV4Octets [Sub Egr Drop V4 Octets] (tmnxSubHsmdaStEgrDropV4Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropV4Octets indicates the number of IPv4 octets discarded by the egress Qchip for this subscriber.
subEgrDropV4Packets [Sub Egr Drop V4 Packets] (tmnxSubHsmdaStEgrDropV4Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropV4Packets indicates the number of IPv4 packets discarded by the egress Qchip for this subscriber.
subEgrDropV6Octets [Sub Egr Drop V6 Octets] (tmnxSubHsmdaStEgrDropV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropV6Octets indicates the number of IPv6 octets discarded by the egress Qchip for this subscriber.
subEgrDropV6Packets [Sub Egr Drop V6 Packets] (tmnxSubHsmdaStEgrDropV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrDropV6Packets indicates the number of IPv6 packets discarded by the egress Qchip for this subscriber.
subEgrFwdV4Octets [Sub Egr Fwd V4 Octets] (tmnxSubHsmdaStEgrFwdV4Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdV4Octets indicates the number of IPv4 octets forwarded by the egress Qchip for this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subEgrFwdV4Packets [Sub Egr Fwd V4 Packets] (tmnxSubHsmdaStEgrFwdV4Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdV4Packets indicates the number of IPv4 packets forwarded by the egress Qchip for this subscriber.
subEgrFwdV6Octets [Sub Egr Fwd V6 Octets] (tmnxSubHsmdaStEgrFwdV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdV6Octets indicates the number of IPv6 octets forwarded by the egress Qchip for this subscriber.
subEgrFwdV6Packets [Sub Egr Fwd V6 Packets] (tmnxSubHsmdaStEgrFwdV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStEgrFwdV6Packets indicates the number of IPv6 packets forwarded by the egress Qchip for this subscriber.
subIngDropV4Octets [Sub Ing Drop V4 Octets] (tmnxSubHsmdaStIngDropV4Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropV4Octets indicates the number of IPv4 octets discarded by the ingress Qchip for this subscriber.
subIngDropV4Packets [Sub Ing Drop V4 Packets] (tmnxSubHsmdaStIngDropV4Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropV4Packets indicates the number of IPv4 packets discarded by the ingress Qchip for this subscriber.
subIngDropV6Octets [Sub Ing Drop V6 Octets] (tmnxSubHsmdaStIngDropV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropV6Octets indicates the number of IPv6 octets discarded by the ingress Qchip for this subscriber.
subIngDropV6Packets [Sub Ing Drop V6 Packets] (tmnxSubHsmdaStIngDropV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngDropV6Packets indicates the number of IPv6 packets discarded by the ingress Qchip for this subscriber.
subIngFwdV4Octets [Sub Ing Fwd V4 Octets] (tmnxSubHsmdaStIngFwdV4Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdV4Octets indicates the number of IPv4 octets forwarded by the ingress Qchip for this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngFwdV4Packets [Sub Ing Fwd V4 Packets] (tmnxSubHsmdaStIngFwdV4Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdV4Packets indicates the number of IPv4 packets forwarded by the ingress Qchip for this subscriber.
subIngFwdV6Octets [Sub Ing Fwd V6 Octets] (tmnxSubHsmdaStIngFwdV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdV6Octets indicates the number of IPv6 octets forwarded by the ingress Qchip for this subscriber.
subIngFwdV6Packets [Sub Ing Fwd V6 Packets] (tmnxSubHsmdaStIngFwdV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngFwdV6Packets indicates the number of IPv6 packets forwarded by the ingress Qchip for this subscriber.
subIngOffV4Octets [Sub Ing Off V4 Octets] (tmnxSubHsmdaStIngOffV4Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV4Octets indicates the number of IPv4 octets offered on ingress for this subscriber.
subIngOffV4Packets [Sub Ing Off V4 Packets] (tmnxSubHsmdaStIngOffV4Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV4Packets indicates the number of IPv4 packets offered on ingress for this subscriber.
subIngOffV6Octets [Sub Ing Off V6 Octets] (tmnxSubHsmdaStIngOffV6Octets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV6Octets indicates the number of IPv6 octets offered on ingress for this subscriber.
subIngOffV6Packets [Sub Ing Off V6 Packets] (tmnxSubHsmdaStIngOffV6Packets)	java. math. BigInteger	The value of tmnxSubHsmdaStIngOffV6Packets indicates the number of IPv6 packets offered on ingress for this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscriberIngPStats</p> <p>MIB entry name: tmnxSubIngPStatsEntry</p> <p>Entry description: Each row entry contains ingress QoS policer statistics about a particular HSMDA-2 subscriber and policer. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip.</p> <p>Table description (for tmnxSubIngPStatsTable): The tmnxSubIngPStatsTable contains ingress QoS policer statistics about HSMDA-2 subscribers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
subIngPStatsDrpHiPrioOctsH [Sub Ing PStats Drp Hi Prio Octs H] (tmnxSubIngPStatsDrpHiPrioOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpHiPrioOcts.
subIngPStatsDrpHiPrioOctsL [Sub Ing PStats Drp Hi Prio Octs L] (tmnxSubIngPStatsDrpHiPrioOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpHiPrioOcts.
subIngPStatsDrpHiPrioPktsH [Sub Ing PStats Drp Hi Prio Pkts H] (tmnxSubIngPStatsDrpHiPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpHiPrioPkts.
subIngPStatsDrpHiPrioPktsL [Sub Ing PStats Drp Hi Prio Pkts L] (tmnxSubIngPStatsDrpHiPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpHiPrioPkts.
subIngPStatsDrpLoPrioOctsH [Sub Ing PStats Drp Lo Prio Octs H] (tmnxSubIngPStatsDrpLoPrioOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpLoPrioOcts.
subIngPStatsDrpLoPrioOctsL [Sub Ing PStats Drp Lo Prio Octs L] (tmnxSubIngPStatsDrpLoPrioOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpLoPrioOcts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsDrpLoPrioPktsH [Sub Ing PStats Drp Lo Prio Pkts H] (tmnxSubIngPStatsDrpLoPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsDrpLoPrioPkts.
subIngPStatsDrpLoPrioPktsL [Sub Ing PStats Drp Lo Prio Pkts L] (tmnxSubIngPStatsDrpLoPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsDrpLoPrioPkts.
subIngPStatsFwdInProfOctsH [Sub Ing PStats Fwd In Prof Octs H] (tmnxSubIngPStatsFwdInProfOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdInProfOcts.
subIngPStatsFwdInProfOctsL [Sub Ing PStats Fwd In Prof Octs L] (tmnxSubIngPStatsFwdInProfOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdInProfOcts.
subIngPStatsFwdInProfPktsH [Sub Ing PStats Fwd In Prof Pkts H] (tmnxSubIngPStatsFwdInProfPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdInProfPkts.
subIngPStatsFwdInProfPktsL [Sub Ing PStats Fwd In Prof Pkts L] (tmnxSubIngPStatsFwdInProfPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdInProfPkts.
subIngPStatsFwdOutProfOctsH [Sub Ing PStats Fwd Out Prof Octs H] (tmnxSubIngPStatsFwdOutProfOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdOutProfOcts.
subIngPStatsFwdOutProfOctsL [Sub Ing PStats Fwd Out Prof Octs L] (tmnxSubIngPStatsFwdOutProfOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdOutProfOcts.
subIngPStatsFwdOutProfPktsH [Sub Ing PStats Fwd Out Prof Pkts H] (tmnxSubIngPStatsFwdOutProfPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsFwdOutProfPkts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsFwdOutProfPktsL [Sub Ing PStats Fwd Out Prof Pkts L] (tmnxSubIngPStatsFwdOutProfPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsFwdOutProfPkts.
subIngPStatsMode [Sub Ing PStats Mode] (tmnxSubIngPStatsMode)	int	The value of tmnxSubIngPStatsMode indicates the stat mode used by the policer.
subIngPStatsOffHiPrioOctsH [Sub Ing PStats Off Hi Prio Octs H] (tmnxSubIngPStatsOffHiPrioOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffHiPrioOcts.
subIngPStatsOffHiPrioOctsL [Sub Ing PStats Off Hi Prio Octs L] (tmnxSubIngPStatsOffHiPrioOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffHiPrioOcts.
subIngPStatsOffHiPrioPktsH [Sub Ing PStats Off Hi Prio Pkts H] (tmnxSubIngPStatsOffHiPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffHiPrioPkts.
subIngPStatsOffHiPrioPktsL [Sub Ing PStats Off Hi Prio Pkts L] (tmnxSubIngPStatsOffHiPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffHiPrioPkts.
subIngPStatsOffLoPrioOctsH [Sub Ing PStats Off Lo Prio Octs H] (tmnxSubIngPStatsOffLoPrioOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffLoPrioOcts.
subIngPStatsOffLoPrioOctsL [Sub Ing PStats Off Lo Prio Octs L] (tmnxSubIngPStatsOffLoPrioOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffLoPrioOcts.
subIngPStatsOffLoPrioPktsH [Sub Ing PStats Off Lo Prio Pkts H] (tmnxSubIngPStatsOffLoPrioPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffLoPrioPkts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsOffLoPrioPktsL [Sub Ing PStats Off Lo Prio Pkts L] (tmnxSubIngPStatsOffLoPrioPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffLoPrioPkts.
subIngPStatsOffUncolOcts [Sub Ing PStats Off Uncol Octs] (tmnxSubIngPStatsOffUncolOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffUncolOcts indicates the number of uncolored octets offered to the ingress Pchip.
subIngPStatsOffUncolOctsH [Sub Ing PStats Off Uncol Octs H] (tmnxSubIngPStatsOffUncolOctsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffUncolOcts.
subIngPStatsOffUncolOctsL [Sub Ing PStats Off Uncol Octs L] (tmnxSubIngPStatsOffUncolOctsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffUncolOcts.
subIngPStatsOffUncolPkts [Sub Ing PStats Off Uncol Pkts] (tmnxSubIngPStatsOffUncolPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffUncolPkts indicates the number of uncolored packets offered to the ingress Pchip.
subIngPStatsOffUncolPktsH [Sub Ing PStats Off Uncol Pkts H] (tmnxSubIngPStatsOffUncolPktsH)	long	Indicates the upper 32 bits of tmnxSubIngPStatsOffUncolPkts.
subIngPStatsOffUncolPktsL [Sub Ing PStats Off Uncol Pkts L] (tmnxSubIngPStatsOffUncolPktsL)	long	Indicates the lower 32 bits of tmnxSubIngPStatsOffUncolPkts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscriberIngPV4V6Stats</p> <p>MIB entry name: tmnxSubIngPStatsEntry</p> <p>Entry description: Each row entry contains ingress QoS policer statistics about a particular HSMDA-2 subscriber and policer. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip.</p> <p>Table description (for tmnxSubIngPStatsTable): The tmnxSubIngPStatsTable contains ingress QoS policer statistics about HSMDA-2 subscribers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
subIngPStatsDrpV4Octs [Sub Ing PStats Drp V4 Octs] (tmnxSubIngPStatsDrpHiPrioOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsDrpHiPrioOcts indicates the number of high priority octets, as determined by the SLA profile ingress QoS policy, dropped by the Pchip.
subIngPStatsDrpV4Pkts [Sub Ing PStats Drp V4 Pkts] (tmnxSubIngPStatsDrpHiPrioPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsDrpHiPrioPkts indicates the number of high priority packets dropped by the Qchip.
subIngPStatsDrpV6Octs [Sub Ing PStats Drp V6 Octs] (tmnxSubIngPStatsDrpLoPrioOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsDrpLoPrioOcts indicates the number of low priority octets, as determined by the SLA profile ingress QoS policy, dropped by the Pchip.
subIngPStatsDrpV6Pkts [Sub Ing PStats Drp V6 Pkts] (tmnxSubIngPStatsDrpLoPrioPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsDrpLoPrioPkts indicates the number of low priority packets dropped by the Pchip.
subIngPStatsFwdV4Octs [Sub Ing PStats Fwd V4 Octs] (tmnxSubIngPStatsFwdInProfOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Pchip.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsFwdV4Pkts [Sub Ing PStats Fwd V4 Pkts] (tmnxSubIngPStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Pchip.
subIngPStatsFwdV6Octs [Sub Ing PStats Fwd V6 Octs] (tmnxSubIngPStatsFwdOutProfOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Pchip.
subIngPStatsFwdV6Pkts [Sub Ing PStats Fwd V6 Pkts] (tmnxSubIngPStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Pchip.
subIngPStatsMode [Sub Ing PStats Mode] (tmnxSubIngPStatsMode)	int	The value of tmnxSubIngPStatsMode indicates the stat mode used by the policer.
subIngPStatsOffV4Octs [Sub Ing PStats Off V4 Octs] (tmnxSubIngPStatsOffHiPrioOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffHiPrioOcts indicates the number of high priority octets, as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
subIngPStatsOffV4Pkts [Sub Ing PStats Off V4 Pkts] (tmnxSubIngPStatsOffHiPrioPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffHiPrioPkts indicates the number of high priority packets offered by the Pchip to the Qchip.
subIngPStatsOffV6Octs [Sub Ing PStats Off V6 Octs] (tmnxSubIngPStatsOffLoPrioOcts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffLoPrioOcts indicates the number of low priority octets, as determined by the SLA profile ingress QoS policy, offered by the Pchip to the Qchip.
subIngPStatsOffV6Pkts [Sub Ing PStats Off V6 Pkts] (tmnxSubIngPStatsOffLoPrioPkts)	java. math. BigInteger	The value of tmnxSubIngPStatsOffLoPrioPkts indicates the number of low priority packets offered by the Pchip to the Qchip.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngPStatsPolicerId [Sub Ing PStats Policer Id] (tSapIngPolicerId)	long	tSapIngPolicerId defines the SAP Ingress Policer identifier. It identifies an sap-ingress policer in the managed system.
<p>SubscriberIngQStats MIB entry name: tmnxSubscriberIngQStatsEntry Entry description: Ingress statistics about a specific subscriber's HSMDA queue. Table description (for tmnxSubscriberIngQStatsTable): A table that contains subscriber ingress HSMDA queue statistics. Supports realtime plotting Supports scheduled collection Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
subIngQStatsHsmdaQueueId [Sub Ing QStats Hsmda Queue Id] (tmnxSubIngQStatsQueueId)	long	The value of tmnxSubIngQStatsQueueId index specifies the Hsmda ingress queue for this entry.
subIngQStatsOffHiPrioOctsHw [Sub Ing QStats Off Hi Prio Octs Hw] (tmnxSubIngQStatsOffHiPrioOctsHw)	long	The value of tmnxSubIngQStatsOffHiPrioOctsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffHiPrioOcts.
subIngQStatsOffHiPrioOctsLw [Sub Ing QStats Off Hi Prio Octs Lw] (tmnxSubIngQStatsOffHiPrioOctsLw)	long	The value of tmnxSubIngQStatsOffHiPrioOctsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffHiPrioOcts.
subIngQStatsOffHiPrioPktsHw [Sub Ing QStats Off Hi Prio Pkts Hw] (tmnxSubIngQStatsOffHiPrioPktsHw)	long	The value of tmnxSubIngQStatsOffHiPrioPktsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffHiPrioPkts.
subIngQStatsOffHiPrioPktsLw [Sub Ing QStats Off Hi Prio Pkts Lw] (tmnxSubIngQStatsOffHiPrioPktsLw)	long	The value of tmnxSubIngQStatsOffHiPrioPktsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffHiPrioPkts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsOffLoPrioOctsHw [Sub Ing QStats Off Lo Prio Octs Hw] (tmnxSubIngQStatsOffLoPrioOctsHw)	long	The value of tmnxSubIngQStatsOffLoPrioOctsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffLoPrioOcts.
subIngQStatsOffLoPrioOctsLw [Sub Ing QStats Off Lo Prio Octs Lw] (tmnxSubIngQStatsOffLoPrioOctsLw)	long	The value of tmnxSubIngQStatsOffLoPrioOctsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffLoPrioOcts.
subIngQStatsOffLoPrioPktsHw [Sub Ing QStats Off Lo Prio Pkts Hw] (tmnxSubIngQStatsOffLoPrioPktsHw)	long	The value of tmnxSubIngQStatsOffLoPrioPktsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffLoPrioPkts.
subIngQStatsOffLoPrioPktsLw [Sub Ing QStats Off Lo Prio Pkts Lw] (tmnxSubIngQStatsOffLoPrioPktsLw)	long	The value of tmnxSubIngQStatsOffLoPrioPktsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffLoPrioPkts.
subIngQStatsOffTotalOctets [Sub Ing QStats Off Total Octets] (tmnxSubIngQStatsOffTotalOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffTotalOcts indicates the total number of octets offered on ingress on this subscriber.
subIngQStatsOffTotalPackets [Sub Ing QStats Off Total Packets] (tmnxSubIngQStatsOffTotalPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffTotalPkts indicates the total number of packets offered for this subscriber.
subIngQStatsOffUncolOcts [Sub Ing QStats Off Uncol Octs] (tmnxSubIngQStatsOffUncolOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffUncolOcts indicates the number of uncolored octets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffUncolOctsHw [Sub Ing QStats Off Uncol Octs Hw] (tmnxSubIngQStatsOffUncolOctsHw)	long	The value of tmnxSubIngQStatsOffUncolOctsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffUncolOcts.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsOffUncolOctsLw [Sub Ing QStats Off Uncol Octs Lw] (tmnxSubIngQStatsOffUncolOctsLw)	long	The value of tmnxSubIngQStatsOffUncolOctsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffUncolOcts.
subIngQStatsOffUncolPkts [Sub Ing QStats Off Uncol Pkts] (tmnxSubIngQStatsOffUncolPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffUncolPkts indicates the number of uncolored packets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffUncolPktsHw [Sub Ing QStats Off Uncol Pkts Hw] (tmnxSubIngQStatsOffUncolPktsHw)	long	The value of tmnxSubIngQStatsOffUncolPktsHw indicates the higher 32-bits word of the value of tmnxSubIngQStatsOffUncolPkts.
subIngQStatsOffUncolPktsLw [Sub Ing QStats Off Uncol Pkts Lw] (tmnxSubIngQStatsOffUncolPktsLw)	long	The value of tmnxSubIngQStatsOffUncolPktsLw indicates the lower 32-bits word of the value of tmnxSubIngQStatsOffUncolPkts.
subIngQStatsSubPortId [Sub Ing QStats Sub Port Id] (tmnxSubIngQStatsSubPortId)	long	The value of tmnxSubIngQStatsSubPortId indicates the access port for this entry.
<p>SubscriberIngQV4V6Stats</p> <p>MIB entry name: tmnxSubscriberIngQStatsEntry</p> <p>Entry description: Ingress statistics about a specific subscriber's HSMDA queue.</p> <p>Table description (for tmnxSubscriberIngQStatsTable): A table that contains subscriber ingress HSMDA queue statistics.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ressubscr.ResidentialSubscriberInstance</p>		
subIngQStatsDropV4Octets [Sub Ing QStats Drop V4 Octets] (tmnxSubIngQStatsDropHiPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropHiPrioOcts indicates the number of high-priority octets dropped on ingress on this subscriber.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsDropV4Packets [Sub Ing QStats Drop V4 Packets] (tmnxSubIngQStatsDropHiPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropHiPrioPkts indicates the number of high-priority packets dropped on ingress on this subscriber.
subIngQStatsDropV6Octets [Sub Ing QStats Drop V6 Octets] (tmnxSubIngQStatsDropLoPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropLoPrioOcts indicates the number of low-priority octets dropped on ingress on this subscriber.
subIngQStatsDropV6Packets [Sub Ing QStats Drop V6 Packets] (tmnxSubIngQStatsDropLoPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsDropLoPrioPkts indicates the number of low-priority packets dropped on ingress on this subscriber.
subIngQStatsFwdV4Octets [Sub Ing QStats Fwd V4 Octets] (tmnxSubIngQStatsFwdInProfOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdInProfOcts indicates the number of out-of-profile octets forwarded on ingress on this subscriber.
subIngQStatsFwdV4Packets [Sub Ing QStats Fwd V4 Packets] (tmnxSubIngQStatsFwdInProfPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdInProfPkts indicates the number of in-profile packets forwarded on ingress on this subscriber.
subIngQStatsFwdV6Octets [Sub Ing QStats Fwd V6 Octets] (tmnxSubIngQStatsFwdOutProfOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdOutProfOcts indicates the number of out-of-profile octets forwarded on ingress on this subscriber.
subIngQStatsFwdV6Packets [Sub Ing QStats Fwd V6 Packets] (tmnxSubIngQStatsFwdOutProfPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsFwdOutProfPkts indicates the number of out-of-profile packets forwarded on ingress on this subscriber.
subIngQStatsHsmdaQueueId [Sub Ing QStats Hsmda Queue Id] (tmnxSubIngQStatsQueueId)	long	The value of tmnxSubIngQStatsQueueId index specifies the Hsmda ingress queue for this entry.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subIngQStatsOffV4Octs [Sub Ing QStats Off V4 Octs] (tmnxSubIngQStatsOffHiPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffHiPrioOcts indicates the number of high-priority octets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffV4Pkts [Sub Ing QStats Off V4 Pkts] (tmnxSubIngQStatsOffHiPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffHiPrioPkts indicates the number of high-priority packets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffV6Octs [Sub Ing QStats Off V6 Octs] (tmnxSubIngQStatsOffLoPrioOcts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffLoPrioOcts indicates the number of low-priority octets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsOffV6Pkts [Sub Ing QStats Off V6 Pkts] (tmnxSubIngQStatsOffLoPrioPkts)	java. math. BigInteger	The value of tmnxSubIngQStatsOffLoPrioPkts indicates the number of low-priority packets offered by the Pchip to the Qchip for this subscriber and this HSMDA-2 queue.
subIngQStatsSubPortId [Sub Ing QStats Sub Port Id] (tmnxSubIngQStatsSubPortId)	long	The value of tmnxSubIngQStatsSubPortId indicates the access port for this entry.
<p>SubscriberServiceStats</p> <p>MIB entry name: tmnxSubHostInfoV2Entry</p> <p>Entry description: Each row entry contains information about a particular subscriber host available in the system.</p> <p>Table description (for tmnxSubHostInfoV2Table): The tmnxSubHostInfoV2Table has an entry for each subscriber host found in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ressubscr.SubscriberService</p>		
ipAddress [Ip Address] (tmnxSubHostInfoV2IpAddress)	String	The value of tmnxSubHostInfoV2IpAddress specifies the IP address of this subscriber host.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipAddressType [Ip Address Type] (tmnxSubHostInfoV2IpAddressType)	int	The value of tmnxSubHostInfoV2IpAddressType specifies the type of address stored in tmnxSubHostInfoV2IpAddress.
macAddress [Mac Address] (tmnxSubHostInfoV2MacAddress)	String	The value of tmnxSubHostInfoV2MacAddress specifies the MAC address of this subscriber host.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
pppoeSessionId [Pppoe Session Id] (tmnxSubHostInfoV2PppoeSessionId)	long	The value of tmnxSubHostInfoV2PppoeSessionId specifies the PPPoE session id of this subscriber host.
sapEncapValue [Sap Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
subSvcId [Sub Svc Id] (tmnxSubSvcId)	long	The value of tmnxSubSvcId indicates the identifier of this subscriber service.
subSvcInOcts [Sub Svc In Octs] (tmnxSubSvcInOcts)	java. math. BigInteger	The value of tmnxSubSvcInOcts indicates the number of ingress octets sent for this subscriber service.
subSvcInPkts [Sub Svc In Pkts] (tmnxSubSvcInPkts)	java. math. BigInteger	The value of tmnxSubSvcInPkts indicates the number of ingress packets sent for this subscriber service.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subSvcOutOcts [Sub Svc Out Octs] (tmnxSubSvcOutOcts)	java. math. BigInteger	The value of tmnxSubSvcOutOcts indicates the number of egress octets sent for this subscriber service.
subSvcOutPckts [Sub Svc Out Pckts] (tmnxSubSvcOutPckts)	java. math. BigInteger	The value of tmnxSubSvcOutPckts indicates the number of egress packets sent for this subscriber service.
svclId [Svc Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>TotalPppSubscrSessionStats MIB entry name: tmnxSubPppTypeEntry Entry description: Each conceptual row represents information about a specific type of subscriber PPP. Entries in this table are created and destroyed by the system. Table description (for tmnxSubPppTypeTable): The tmnxSubPppTypeTable has an entry for each each type of subscriber PPP Session. Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
pPpType [PPType] (tmnxSubPppTypeIndex)	int	The value of the object tmnxSubPppTypeIndex indicates the type of subscriber PPP.
pPpL2tp [PPPo L2 tp] (tmnxSubPppTypeSessions)	long	The value of the object tmnxSubPppTypeSessions indicates the actual number of PPP session of this type.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WholesalerRetailerStats</p> <p>MIB entry name: svcWholesalerInfoEntry</p> <p>Entry description: Each row entry represents the attributes of a wholesaler-retailer pairing. Entries are created/destroyed when forwarding interfaces are defined.</p> <p>Table description (for svcWholesalerInfoTable): The svcWholesalerInfoTable has an entry for each wholesaler service associated with a retailer service on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.Site • vprn.Site 		
numArpHosts [Num Arp Hosts] (svcWholesalerNumArpHosts)	long	The value of svcWholesalerNumArpHosts indicates the number of ARP hosts in the wholesaler indicated by svcWholesalerID that belong to subnets of the retailer service.
numDhcp6LeaseStates [Num Dhcp 6 Lease States] (svcWholesalerNumDhcp6LeaseStates)	long	The value of svcWholesalerNumDhcp6LeaseStates indicates the number of DHCPv6 lease states in the wholesaler indicated by svcWholesalerID that belong to the retailer service.
numDhcpLeaseStates [Num Dhcp Lease States] (svcWholesalerNumDhcpLeaseStates)	long	The value of svcWholesalerNumDhcpLeaseStates indicates the number of DHCP lease states in the wholesaler indicated by svcWholesalerID that belong to subnets of the retailer service.
numDynamicHosts [Num Dynamic Hosts] (svcWholesalerNumDynamicHosts)	long	The value of svcWholesalerNumDynamicHosts indicates the number of dynamic hosts in the wholesaler indicated by svcWholesalerID that belong to subnets of the retailer service.
numIpcpHosts [Num Ipcp Hosts] (svcWholesalerNumIpcpHosts)	long	The value of svcWholesalerNumIpcpHosts indicates the number of PPP IPCP hosts in the wholesaler indicated by svcWholesalerID that belong to the retailer service.

Table 284 ressubscr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numIpoESessions [Num IpoE Sessions] (svcWholesalerNumIpoESessions)	long	The value of svcWholesalerNumIpoESessions indicates the number of IPoE sessions in the wholesaler indicated by svcWholesalerID that belong to the retailer service.
numPppoeSessions [Num Pppoe Sessions] (svcWholesalerNumPppoeSessions)	long	The value of svcWholesalerNumPppoeSessions indicates the number of PPPoE sessions in the wholesaler indicated by svcWholesalerID that belong to subnets of the retailer service.
numSlaacHosts [Num Slaac Hosts] (svcWholesalerNumSlaacHosts)	long	The value of svcWholesalerNumSlaacHosts indicates the number of SLAAC hosts in the wholesaler indicated by svcWholesalerID that belong to the retailer service.
numStatic6Hosts [Num Static 6 Hosts] (svcWholesalerNumStatic6Hosts)	long	The value of svcWholesalerNumStatic6Hosts indicates the number of static ipv6 hosts in the wholesaler indicated by svcWholesalerID that belong to the retailer service.
numStaticHosts [Num Static Hosts] (svcWholesalerNumStaticHosts)	long	The value of svcWholesalerNumStaticHosts indicates the number of static hosts in the wholesaler indicated by svcWholesalerID that belong to subnets of the retailer service.
svclD [Svc Id] (svclD)	long	The value of the object svclD specifies the Service identifier. This value should be unique within the service domain.
wholesalerID [Wholesaler ID] (svcWholesalerID)	long	The value of svcWholesalerID is used to specify the service ID of the wholesaler.

Table 285 rip statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceReceiveStats MIB entry name: vRtrRipIfStatEntry Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface. Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP. Supports realtime plotting Supports scheduled collection Monitored class: rip.Interface		
badPackets [Bad Packets] (vRtrRipIfStatAllRcvBadPackets)	long	vRtrRipIfStatAllRcvBadPackets is the number of RIP updates received on this interface that were discarded as invalid.
v1BadRoutes [V1 Bad Routes] (vRtrRipIfStatV1BadRoutes)	long	vRtrRipIfStatV1BadRoutes is the number of routes, in valid RIPv1 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v1Requests [V1 Requests] (vRtrRipIfStatV1RcvRequests)	long	vRtrRipIfStatV1RcvRequests is the number of RIPv1 request packets received by the RIP process.
v1RequestsIgnored [V1 Requests Ignored] (vRtrRipIfStatV1BadRequests)	long	vRtrRipIfStatV1BadRequests is the number of RIPv1 request packets received by the RIP process that were subsequently discarded for any reason.
v1Updates [V1 Updates] (vRtrRipIfStatV1RcvUpdates)	long	vRtrRipIfStatV1RcvUpdates is the number of RIPv1 response packets received by the RIP process.
v1UpdatesIgnored [V1 Updates Ignored] (vRtrRipIfStatV1BadUpdates)	long	vRtrRipIfStatV1BadUpdates is the number of RIPv1 response packets received by the RIP process which were subsequently discarded for any reason.

Table 285 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v2AuthenticationErrors [V2 Authentication Errors] (vRtrRipIfStatAuthErrors)	long	vRtrRipIfStatAuthErrors is the number of RIPv2 packets received by the RIP process which were subsequently discarded because of an error authenticating the packet.
v2BadRoutes [V2 Bad Routes] (vRtrRipIfStatV2BadRoutes)	long	vRtrRipIfStatV2BadRoutes is the number of routes, in valid RIPv2 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v2Requests [V2 Requests] (vRtrRipIfStatV2RcvRequests)	long	vRtrRipIfStatV2RcvRequests is the number of RIPv2 request packets received by the RIP process.
v2RequestsIgnored [V2 Requests Ignored] (vRtrRipIfStatV2BadRequests)	long	vRtrRipIfStatV2BadRequests is the number of RIPv2 request packets received by the RIP process that were subsequently discarded for any reason.
v2Updates [V2 Updates] (vRtrRipIfStatV2RcvUpdates)	long	vRtrRipIfStatV2RcvUpdates is the number of RIPv2 response packets received by the RIP process.
v2UpdatesIgnored [V2 Updates Ignored] (vRtrRipIfStatV2BadUpdates)	long	vRtrRipIfStatV2BadUpdates is the number of RIPv2 response packets received by the RIP process which were subsequently discarded for any reason.
<p>InterfaceTransmitStats</p> <p>MIB entry name: vRtrRipIfStatEntry</p> <p>Entry description: vRtrRipIfStatEntry is an entry (conceptual row) in the vRtrRipIfStatTable. Each entry represents statistical information for a RIP interface.</p> <p>Table description (for vRtrRipIfStatTable): vRtrRipIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rip.Interface</p>		

Table 285 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalUpdates [Total Updates] (vRtrRipIfStatAllSentUpdates)	long	vRtrRipIfStatAllSentUpdates is the number of all RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.
triggeredUpdates [Triggered Updates] (vRtrRipIfStatAllTriggeredUpdates)	long	vRtrRipIfStatAllTriggeredUpdates is the number of triggered RIP updates actually sent on this interface. This explicitly does include full updates sent containing new information.

Table 286 rsvp statistics

Table 286 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.
bundles [Bundles] (vRtrRsvplfStatRxBundles)	java. math. BigInteger	The total number of RSVP bundled packets received on this RSVP interface. Bundled packets are sent when refresh reduction is enabled.
errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
helloTimeout [Hello Timeout] (vRtrRsvplfStatHelloTimeout)	long	The total number of hello messages that timed out on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRxPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.

Table 286 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.
totalPackets [Total Packets] (vRtrRsvplfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.

Table 286 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
RsvpInterfaceStats MIB entry name: vRtrRsvplfEntry Entry description: Each row entry in the vRtrRsvplfTable represents additional columns for attributes specific to the Nokia 7x50 SR RSVP implementation. Table description (for vRtrRsvplfTable): The vRtrRsvplfTable provides an extension of the rsvplfTable in the RSVP-MIB. Supports realtime plotting Supports scheduled collection Monitored class: rsvp.Interface		
activeReservations [Active Reservations] (vRtrRsvplfActiveReservationCount)	long	The total number of active RSVP sessions that have reserved bandwidth.
activeSessions [Active Sessions] (vRtrRsvplfActiveSessionCount)	long	The total number of active RSVP sessions on this interface. This count includes sessions that have requested bandwidth as well as sessions that have not requested any bandwidth.
bandwidth [Bandwidth] (vRtrRsvplfBandwidth)	long	The value of vRtrRsvplfBandwidth indicates the interface bandwidth in mega-bits per second (Mbps) for the RSVP protocol on this interface. This is typically the port Speed.
reservedBandwidth [Reserved Bandwidth] (vRtrRsvplfReservedBandwidth)	long	The value of vRtrRsvplfReservedBandwidth indicates the amount of bandwidth in mega-bits per second (Mbps) to reserved by the RSVP sessions on this interface. A value of zero (0) indicates that no bandwidth is reserved.
totalSessions [Total Sessions] (vRtrRsvplfTotalSessionCount)	long	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signalled but a response has not yet been received.

<p>Dhcp6Stats</p> <p>MIB entry name: vRtrDHCP6MsgStatEntry</p> <p>Entry description: Each row entry represents a collection of counters for each DHCP6 message type for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrDHCP6MsgStatTable): The vRtrDHCP6MsgStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.RoutingInstanceSite • vprn.Site 		
dhcp6MsgTypeMaxValueDrpPkts [Dhcp 6 Msg Type Max Value Drp Pkts] (vRtrDHCP6MsgStatsDropped)	long	The value of vRtrDHCP6MsgStatsDropped indicates the number of DHCP6 packets were dropped of the DHCP6 message type indicated by vRtrDHCP6MsgStatsMsgType.
dhcp6MsgTypeMaxValueRxPkts [Dhcp 6 Msg Type Max Value Rx Pkts] (vRtrDHCP6MsgStatsRcvd)	long	The value of vRtrDHCP6MsgStatsRcvd indicates the number of DHCP6 packets were received of the DHCP6 message type indicated by vRtrDHCP6MsgStatsMsgType.
dhcp6MsgTypeMaxValueTxPkts [Dhcp 6 Msg Type Max Value Tx Pkts] (vRtrDHCP6MsgStatsSent)	long	The value of vRtrDHCP6MsgStatsSent indicates the number of DHCP6 packets were sent of the DHCP6 message type indicated by vRtrDHCP6MsgStatsMsgType.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DhcpRelayStats</p> <p>MIB entry name: vRtrIfDHCPRelayStatsEntry</p> <p>Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrpIfDhcpRelayCfg • rtr.SubIfDhcpRelayCfg 		
authPktsDiscarded [Auth Pkts Discarded] (vRtrIfDHCPRelayAuthPktsDiscarded)	long	vRtrIfDHCPRelayAuthPktsDiscarded indicates the total number of packets discarded because authentication was not successful.
authPktsSuccess [Auth Pkts Success] (vRtrIfDHCPRelayAuthPktsSuccess)	long	vRtrIfDHCPRelayAuthPktsSuccess indicates the total number of packets for which authentication was successful.
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.
clientPktsProxLS [Client Pkts Prox LS] (vRtrIfDHCPRelayClientPktsProxLS)	long	vRtrIfDHCPRelayClientPktsProxLS indicates the total number of client packets proxied by the DHCP relay agent based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
clientPktsProxNq [Client Pkts Prox Nq] (vRtrIfDHCPRelayClientPktsProxNq)	long	The value of the object vRtrIfDHCPRelayClientPktsProxNq indicates the total number of client packets proxied by the DHCP relay agent based on data received from a Diameter NASREQ server.
clientPktsProxRad [Client Pkts Prox Rad] (vRtrIfDHCPRelayClientPktsProxRad)	long	vRtrIfDHCPRelayClientPktsProxRad indicates the total number of client packets proxied by the DHCP relay agent based on data received from a RADIUS server.
clientPktsProxUDB [Client Pkts Prox UDB] (vRtrIfDHCPRelayClientPktsProxUDB)	long	vRtrIfDHCPRelayClientPktsProxUDB indicates the total number of client packets proxied by the DHCP relay agent based on the local user database.
clientPktsStream [Client Pkts Stream] (vRtrIfDHCPRelayClientPktsStream)	long	The value of the object vRtrIfDHCPRelayClientPktsStream indicates the total number of received client packets scheduled for streaming to an external server, by the DHCP proxy function.
pktsGenForceRenew [Pkts Gen Force Renew] (vRtrIfDHCPRelayPktsGenForceRenew)	long	vRtrIfDHCPRelayPktsGenForceRenew indicates the total number of DHCP FORCERENEW messages spoofed by the DHCP relay agent to the DHCP clients.
pktsGenRelease [Pkts Gen Release] (vRtrIfDHCPRelayPktsGenRelease)	long	vRtrIfDHCPRelayPktsGenRelease indicates the total number of DHCP RELEASE messages spoofed by the DHCP relay agent to the DHCP server.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.
serverPktsSnooped [Server Pkts Snooped] (vRtrIfDHCPRelayServerPktsSnooped)	long	vRtrIfDHCPRelayServerPktsSnooped indicates the total number of server packets snooped by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
<p>DhcpRelayV6Stats</p> <p>MIB entry name: svclfdHCP6MsgStatEntry</p> <p>Entry description: Each row entry represents a collection of counters for each DHCP6 message type for an interface in a service. vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.
<p>PolicyAccountInterfaceStats</p> <p>MIB entry name: vRtrPlcyAcctInterfaceStatsEntry</p> <p>Entry description: Each row entry in the vRtrPlcyAcctInterfaceStatsTable represents statistics related to the vRtrPlcyAcctSrcClassTable and vRtrPlcyAcctDestClassTable.</p> <p>Table description (for vRtrPlcyAcctInterfaceStatsTable): The vRtrPlcyAcctInterfaceStatsTable has stats for each source class and dest class associated with an interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • ies.IPsecInterface • ies.L3AccessInterface • rtr.NetworkInterface • vprn.GroupInterface • vprn.IPsecInterface • vprn.L3AccessInterface 		
forwardBytes [Forward Bytes] (vRtrPlcyAcctRxFwdBytes)	java. math. BigInteger	The value of the object vRtrPlcyAcctRxFwdBytes indicates the total number of bytes received for this vRtrPlcyAcctIndex associated with the interface.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardPackets [Forward Packets] (vRtrPlyAcctRxFwdPkts)	java. math. BigInteger	The value of the object vRtrPlyAcctRxFwdPkts indicates the total number of packets received for this vRtrPlyAcctIndex associated with the interface.
incompleteCount [Incomplete Count] (vRtrPlyAcctRxIncompleteCnt)	boolean	The value of the object vRtrPlyAcctRxIncompleteCnt indicates whether the count of vRtrPlyAcctRxFwdBytes and vRtrPlyAcctRxFwdPkts is incomplete or not. When the value of vRtrPlyAcctRxIncompleteCnt is 'true', both vRtrPlyAcctRxFwdBytes and vRtrPlyAcctRxFwdPkts will be incomplete.
<p>RouteStats MIB entry name: vRtrStatEntry Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'bgp'.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeMplsTpTunnels [Active Mpls Tp Tunnels] (vRtrStatActiveMplsTpTunnels)	long	vRtrStatActiveMplsTpTunnels indicates the current number of active MPLS-TP tunnels.
activeRsvpTunnels [Active Rsvp Tunnels] (vRtrStatActiveRsvpTunnels)	long	The value of vRtrStatActiveRsvpTunnels indicates the current number of rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'rsvp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPAciveRoutes)	long	vRtrBGPAciveRoutes indicates the current number of active bgp routes for this instance of the route table.
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
dynamicArpEntries [Dynamic Arp Entries] (vRtrStatDynamicARPEntries)	long	The value of vRtrStatDynamicARPEntries indicates the total number of active and inactive dynamic ARP entries for the specified virtual router in the system.
hostActiveRoutes [Host Active Routes] (vRtrHostActiveRoutes)	long	The value of vRtrHostActiveRoutes indicates the current number of active direct routes with prefix value 32 for this instance of the route table.
hostRoutes [Host Routes] (vRtrHostRoutes)	long	The value of vRtrHostRoutes indicates the current number of direct routes with prefix value 32 for this instance of the route table.
iPsecActiveRoutes [IPsec Active Routes] (vRtrIPsecActiveRoutes)	long	The value of the object vRtrIPsecActiveRoutes indicates the current number of active IPsec routes for this instance of the route table.
iPsecRoutes [IPsec Routes] (vRtrIPsecRoutes)	long	The value of the object vRtrIPsecRoutes indicates the current number of IPsec routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
internalArpEntries [Internal Arp Entries] (vRtrStatInternalARPEntries)	long	The value of vRtrStatInternalARPEntries indicates the total number of active and inactive internal ARP entries for the specified virtual router in the system.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveRoutes [Ldp Active Routes] (vRtrLDPActiveRoutes)	long	vRtrLDPActiveRoutes indicates the current number of active ldp routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'ldp'.
ldpRoutes [Ldp Routes] (vRtrLDPRoutes)	long	vRtrLDPRoutes indicates the current number of ldp routes for this instance of the route table.
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
localArpEntries [Local Arp Entries] (vRtrStatLocalARPEntries)	long	The value of vRtrStatLocalARPEntries indicates the total number of active and inactive local ARP entries for the specified virtual router in the system.
managedActiveRoutes [Managed Active Routes] (vRtrManagedActiveRoutes)	long	The value of vRtrManagedActiveRoutes indicates the total number of active managed routes for the specified virtual router in the system.
managedArpEntries [Managed Arp Entries] (vRtrStatManagedARPEntries)	long	The value of vRtrStatManagedARPEntries indicates the total number of active and inactive managed ARP entries for the specified virtual router in the system.
managedRoutes [Managed Routes] (vRtrManagedRoutes)	long	The value of vRtrManagedRoutes indicates the total number of active and inactive managed routes for the specified virtual router in the system.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcastIpv4StatBGPEvpnActvRts [Mcast Ipv 4 Stat BGPEvpn Actv Rts] (vRtrMcastIpv4StatBGPEvpnActvRts)	long	The value of vRtrMcastIpv4StatBGPEvpnActvRts indicates the total number of active IPv4 Multicast BGP EVPN route entries for the specified virtual router in the system.
mcastIpv4StatBGPEvpnRoutes [Mcast Ipv 4 Stat BGPEvpn Routes] (vRtrMcastIpv4StatBGPEvpnRoutes)	long	The value of vRtrMcastIpv4StatBGPEvpnRoutes indicates the total number of IPv4 Multicast BGP EVPN route entries for the specified virtual router in the system.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
natActiveRoutes [Nat Active Routes] (vRtrNatActiveRoutes)	long	The value of vRtrNatActiveRoutes indicates the current number of IPv4 NAT routes for this instance of the route table.
natRoutes [Nat Routes] (vRtrNatRoutes)	long	The value of vRtrNatRoutes indicates the current number of IPv4 NAT (Network Address Translation) routes for this instance of the route table.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
perActiveRoutes [Per Active Routes] (vRtrPeriodicActiveRoutes)	long	The value of vRtrPeriodicActiveRoutes indicates the current number of active periodic routes for this instance of the route table.
perRoutes [Per Routes] (vRtrPeriodicRoutes)	long	The value of vRtrPeriodicRoutes indicates the current number of periodic routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
statBGPEVPNARPEntries [Stat BGPEVPNARPEntries] (vRtrStatBGPEVPNARPEntries)	long	The value of vRtrStatBGPEVPNARPEntries indicates the total number of BGP EVPN ARP entries for the specified virtual router in the system.
statBGPEvpnActiveRoutes [Stat BGPEvpn Active Routes] (vRtrStatBGPEvpnActiveRoutes)	long	The value of vRtrStatBGPEvpnActiveRoutes indicates the total number of active IPv4 BGP EVPN route entries for the specified virtual router in the system.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statBGPEvpnRoutes [Stat BGPEvpn Routes] (vRtrStatBGPEvpnRoutes)	long	The value of vRtrStatBGPEvpnRoutes indicates the total number of IPv4 BGP EVPN route entries for the specified virtual router in the system.
statBGPLabelV4ActiveRoutes [Stat BGPLabel V4 Active Routes] (vRtrStatBGPLabelV4ActiveRoutes)	long	The value of vRtrStatBGPLabelV4ActiveRoutes indicates the total number of active labeled IPv4 BGP route entries for the specified virtual router in the system.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.
staticArpEntries [Static Arp Entries] (vRtrStatStaticARPEntries)	long	The value of vRtrStatStaticARPEntries indicates the total number of active and inactive static ARP entries for the specified virtual router in the system.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
subMgmtActiveRoutes [Sub Mgmt Active Routes] (vRtrSubMgmtActiveRoutes)	long	The value of vRtrSubMgmtActiveRoutes indicates the number of active subscriber management routes.
subMgmtRoutes [Sub Mgmt Routes] (vRtrSubMgmtRoutes)	long	The value of vRtrSubMgmtRoutes indicates the total number of subscriber management routes in the route Table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalMplsTpTunnels [Total Mpls Tp Tunnels] (vRtrStatTotalMplsTpTunnels)	long	vRtrStatTotalMplsTpTunnels indicates the current number of both active and inactive MPLS-TP tunnels.
totalRsvpTunnels [Total Rsvp Tunnels] (vRtrStatTotalRsvpTunnels)	long	The value of vRtrStatTotalRsvpTunnels indicates the current number of both active and inactive RSVP tunnels.
vpnLeakActiveRoutes [Vpn Leak Active Routes] (vRtrVPNLeakActiveRoutes)	long	vRtrVPNLeakActiveRoutes indicates the current number of active VPN Leak routes for this instance of the route table.
vpnLeakRoutes [Vpn Leak Routes] (vRtrVPNLeakRoutes)	long	vRtrVPNLeakRoutes indicates the current number of VPN Leak routes for this instance of the route table.
V6RouteStats MIB entry name: vRtrStatEntry Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.RoutingInstanceSite • vprn.Site 		
statBGPLabelV6ActiveRoutes [Stat BGPLabel V6 Active Routes] (vRtrStatBGPLabelV6ActiveRoutes)	long	The value of vRtrStatBGPLabelV6ActiveRoutes indicates the total number of active labeled IPv6 BGP route entries for the specified virtual router in the system.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6ActiveNbrEntries [V6 Active Nbr Entries] (vRtrV6StatActiveNbrEntries)	long	vRtrV6StatActiveNbrEntries indicates the number of active V6 neighbor discovery entries for the specified virtual router in the system.
v6ActiveRsvpTunnels [V6 Active Rsvp Tunnels] (vRtrV6StatActiveRsvpTunnels)	long	The value of vRtrV6StatActiveRsvpTunnels indicates the current number of IPv6 rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'rsvp'.
v6AggregateActiveRoutes [V6 Aggregate Active Routes] (vRtrV6AggregateActiveRoutes)	long	vRtrV6AggregateActiveRoutes indicates the current number of active v6 aggregate routes for this instance of the route table.
v6AggregateRoutes [V6 Aggregate Routes] (vRtrV6AggregateRoutes)	long	vRtrV6AggregateRoutes indicates the current number of v6 aggregate routes for this instance of the route table.
v6BgpActiveRoutes [V6 Bgp Active Routes] (vRtrV6BGPAciveRoutes)	long	vRtrV6BGPAciveRoutes indicates the current number of v6 active bgp routes for this instance of the route table.
v6BgpRoutes [V6 Bgp Routes] (vRtrV6BGPRoutes)	long	vRtrV6BGPRoutes indicates the current number of v6 bgp routes for this instance of the route table.
v6BgpVpnActiveRoutes [V6 Bgp Vpn Active Routes] (vRtrV6StatBGPVpnActiveRoutes)	long	vRtrV6StatBGPVpnActiveRoutes indicates the current number of active VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6BgpVpnRoutes [V6 Bgp Vpn Routes] (vRtrV6StatBGPVpnRoutes)	long	vRtrV6StatBGPVpnRoutes indicates the current number of VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6Dhcpv6NaActiveRoutes [V6 Dhcpv 6 Na Active Routes] (vRtrV6Dhcpv6NaActiveRoutes)	long	The value of vRtrV6Dhcpv6NaActiveRoutes indicates the current number of active IPv6 DHCPv6 non-temporary address routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6Dhcpv6NaRoutes [V6 Dhcpv 6 Na Routes] (vRtrV6Dhcpv6NaRoutes)	long	The value of vRtrV6Dhcpv6NaRoutes indicates the current number of IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6PdActiveRoutes [V6 Dhcpv 6 Pd Active Routes] (vRtrV6Dhcpv6PdActiveRoutes)	long	The value of vRtrV6Dhcpv6PdActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6PdExclActiveRoutes [V6 Dhcpv 6 Pd Excl Active Routes] (vRtrV6Dhcpv6PdExclActiveRoutes)	long	The value of vRtrV6Dhcpv6PdExclActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdExclRoutes [V6 Dhcpv 6 Pd Excl Routes] (vRtrV6Dhcpv6PdExclRoutes)	long	The value of vRtrV6Dhcpv6PdExclRoutes indicates the current number of IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdRoutes [V6 Dhcpv 6 Pd Routes] (vRtrV6Dhcpv6PdRoutes)	long	The value of vRtrV6Dhcpv6PdRoutes indicates the current number of IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6TaActiveRoutes [V6 Dhcpv 6 Ta Active Routes] (vRtrV6Dhcpv6TaActiveRoutes)	long	The value of vRtrV6Dhcpv6TaActiveRoutes indicates the current number of active IPv6 DHCPv6 temporary address routes for this instance of the route table.
v6Dhcpv6TaRoutes [V6 Dhcpv 6 Ta Routes] (vRtrV6Dhcpv6TaRoutes)	long	The value of vRtrV6Dhcpv6TaRoutes indicates the current number of IPv6 DHCPv6 temporary address routes for this instance of the route table.
v6DirectActiveRoutes [V6 Direct Active Routes] (vRtrV6DirectActiveRoutes)	long	vRtrV6DirectActiveRoutes indicates the current number of v6 active direct routes for this instance of the route table.
v6DirectRoutes [V6 Direct Routes] (vRtrV6DirectRoutes)	long	vRtrV6DirectRoutes indicates the current number of v6 direct routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6HostActiveRoutes [V6 Host Active Routes] (vRtrV6HostActiveRoutes)	long	The value of vRtrV6HostActiveRoutes indicates the current number of v6 active direct routes with prefix value 128 for this instance of the route table.
v6HostRoutes [V6 Host Routes] (vRtrV6HostRoutes)	long	The value of vRtrV6HostRoutes indicates the current number of v6 direct routes with prefix value 128 for this instance of the route table.
v6IllegalLabelsReceived [V6 Illegal Labels Received] (vRtrV6StatIllegalLabels)	long	vRtrV6StatIllegalLabels indicates the number of illegally received v6 labels on this virtual router.
v6IsisActiveRoutes [V6 Isis Active Routes] (vRtrV6ISISActiveRoutes)	long	vRtrV6ISISActiveRoutes indicates the current number of v6 active isis routes for this instance of the route table.
v6IsisRoutes [V6 Isis Routes] (vRtrV6ISISRoutes)	long	vRtrV6ISISRoutes indicates the current number of v6 isis routes for this instance of the route table.
v6LdpActiveTunnels [V6 Ldp Active Tunnels] (vRtrV6StatActiveLdpTunnels)	long	vRtrV6StatActiveLdpTunnels indicates the current number of v6 rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'ldp'.
v6LdpTunnels [V6 Ldp Tunnels] (vRtrV6StatTotalLdpTunnels)	long	vRtrV6StatTotalLdpTunnels indicates the current number of both active and inactive v6 LDP tunnels.
v6ManagedActiveRoutes [V6 Managed Active Routes] (vRtrV6ManagedActiveRoutes)	long	The value of vRtrV6ManagedActiveRoutes indicates the total number of active IPv6 managed routes for the specified virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrV6ManagedRoutes)	long	The value of vRtrV6ManagedRoutes indicates the total number of active and inactive IPv6 managed routes for the specified virtual router.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6MulticastRoutes [V6 Multicast Routes] (vRtrV6MulticastRoutes)	long	vRtrV6MulticastRoutes indicates the current number of v6 rows in the vRtrPimNgGrpSrcTable.
v6MulticastStatBGPEvpnActiveRoutes [V6 Multicast Stat BGPEvpn Active Routes] (vRtrMcastIpv6StatBGPEvpnActvRts)	long	The value of vRtrMcastIpv6StatBGPEvpnActvRts indicates the total number of active IPv6 Multicast BGP EVPN route entries for the specified virtual router in the system.
v6MulticastStatBGPEvpnRoutes [V6 Multicast Stat BGPEvpn Routes] (vRtrMcastIpv6StatBGPEvpnRoutes)	long	The value of vRtrMcastIpv6StatBGPEvpnRoutes indicates the total number of IPv6 Multicast BGP EVPN route entries for the specified virtual router in the system.
v6NatActiveRoutes [V6 Nat Active Routes] (vRtrV6NatActiveRoutes)	long	The value of vRtrV6NatActiveRoutes indicates the current number of IPv6 active NAT routes for this instance of the route table.
v6NatRoutes [V6 Nat Routes] (vRtrV6NatRoutes)	long	The value of vRtrV6NatRoutes indicates the current number of IPv6 NAT routes for this instance of the route table.
v6OspfActiveRoutes [V6 Ospf Active Routes] (vRtrV6OSPFActiveRoutes)	long	vRtrV6OSPFActiveRoutes indicates the current number of v6 active ospf routes for this instance of the route table.
v6OspfRoutes [V6 Ospf Routes] (vRtrV6OSPFRoutes)	long	vRtrV6OSPFRoutes indicates the current number of v6 ospf routes for this instance of the route table.
v6PerActiveRoutes [V6 Per Active Routes] (vRtrV6PeriodicActiveRoutes)	long	The value of vRtrV6PeriodicActiveRoutes indicates the current number of active IPv6 periodic routes for this instance of the route table.
v6PerRoutes [V6 Per Routes] (vRtrV6PeriodicRoutes)	long	The value of vRtrV6PeriodicRoutes indicates the current number of IPv6 periodic routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6RipActiveRoutes [V6 Rip Active Routes] (vRtrV6RIPActiveRoutes)	long	vRtrV6RIPActiveRoutes indicates the current number of active v6 rip routes for this instance of the route table.
v6RipRoutes [V6 Rip Routes] (vRtrV6RIPRoutes)	long	vRtrV6RIPRoutes indicates the current number of v6 rip routes for this instance of the route table.
v6RouterInterfacesActive [V6 Router Interfaces Active] (vRtrV6StatActiveIifs)	long	vRtrV6StatActiveIifs indicates the current number of v6 router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
v6RouterInterfacesConfigured [V6 Router Interfaces Configured] (vRtrV6StatConfiguredIifs)	long	vRtrV6StatConfiguredIifs indicates the current number of v6 router interfaces configured on this virtual router.
v6RoutesInVrf [V6 Routes In Vrf] (vRtrV6StatCurrNumRoutes)	long	vRtrV6StatCurrNumRoutes indicates the current number of v6 routes in the VRF for this virtual router.
v6SdpActiveTunnels [V6 Sdp Active Tunnels] (vRtrV6StatActiveSdpTunnels)	long	vRtrV6StatActiveSdpTunnels indicates the current number of v6 rows in the vRtrInetTunnelTable where vRtrInetTunnelType has a value of 'sdp'.
v6SdpTunnels [V6 Sdp Tunnels] (vRtrV6StatTotalSdpTunnels)	long	vRtrV6StatTotalSdpTunnels indicates the current number of both active and inactive v6 SDP tunnels.
v6StatBGPEvpnActiveRoutes [V6 Stat BGPEvpn Active Routes] (vRtrV6StatBGPEvpnActiveRoutes)	long	The value of vRtrV6StatBGPEvpnActiveRoutes indicates the total number of active IPv6 BGP EVPN route entries for the specified virtual router in the system.
v6StatBGPEvpnRoutes [V6 Stat BGPEvpn Routes] (vRtrV6StatBGPEvpnRoutes)	long	The value of vRtrV6StatBGPEvpnRoutes indicates the total number of IPv6 BGP EVPN route entries for the specified virtual router in the system.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6StaticActiveRoutes [V6 Static Active Routes] (vRtrV6StaticActiveRoutes)	long	vRtrV6StaticActiveRoutes indicates the current number of v6 active static routes for this instance of the route table.
v6StaticRoutes [V6 Static Routes] (vRtrV6StaticRoutes)	long	vRtrV6StaticRoutes indicates the current number of v6 static routes for this instance of the route table.
v6SubMgmtActiveRoutes [V6 Sub Mgmt Active Routes] (vRtrV6SubMgmtActiveRoutes)	long	vRtrV6SubMgmtActiveRoutes indicates the current number of v6 active subscriber management routes for this instance of the route table.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrV6SubMgmtRoutes)	long	vRtrV6SubMgmtRoutes indicates the current number of v6 subscriber management routes for this instance of the route table.
v6TotalNbrEntries [V6 Total Nbr Entries] (vRtrV6StatTotalNbrEntries)	long	vRtrV6StatTotalNbrEntries indicates the total number of active and inactive v6 neighbor discovery entries for the specified virtual router in the system.
v6TotalRsvpTunnels [V6 Total Rsvp Tunnels] (vRtrV6StatTotalRsvpTunnels)	long	The value of vRtrV6StatTotalRsvpTunnels indicates the current number of both active and inactive IPv6 RSVP tunnels.
v6VpnLeakActiveRoutes [V6 Vpn Leak Active Routes] (vRtrV6VPNLeakActiveRoutes)	long	vRtrV6VPNLeakActiveRoutes indicates the current number of v6 active VPN Leak routes for this instance of the route table.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrV6VPNLeakRoutes)	long	vRtrV6VPNLeakRoutes indicates the current number of v6 VPN Leak routes for this instance of the route table.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VRtrIfDcpFpDynamicStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.NetworkInterface • vprn.NetworkInterface 		
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
detectionTime [Detection Time] (vRtrIfDcpFpDynDetectionTime)	long	The value of vRtrIfDcpFpDynDetectionTime indicates the detection time remaining for the dynamic policer for given protocol.
fpId [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
holdDown [Hold Down] (vRtrIfDcpFpDynHoldDown)	int	The value of vRtrIfDcpFpDynHoldDown indicates the remaining hold-down period for the dynamic policer for given protocol.
id [Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
ifIndex [If Index] (vRtrIfIndex)	long	The unique value which identifies this interface of this virtual router in the Tmnx system. This field provides an identifier for virtual router interfaces similar to the ifIndex values used in the mib-2 interfaces table for physical interfaces. The vRtrIfIndex values can be reused for different virtual routers, but are unique within those entries with the same vRtrID. The vRtrIfIndex value for each virtual interface must remain constant at least from one re-initialization of the system management processor to the next.
isAllocated [Is Allocated] (vRtrIfDcpFpDynAllocated)	boolean	The value of vRtrIfDcpFpDynAllocated indicates whether dynamic policer has been allocated for this protocol.
pktsExcd [Pkts Excd] (vRtrIfDcpFpDynExcdCount)	java.math.BigInteger	The value of vRtrIfDcpFpDynExcdCount indicates number of packets exceeding the policing parameters since the dynamic policer for a given protocol was previously declared as conformant or newly instantiated.
policerState [Policer State] (vRtrIfDcpFpDynState)	int	The value of vRtrIfDcpFpDynState indicates the state of the dynamic policer for a particular protocol configured on Distributed CPU Protection Policy.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protocolName [Protocol Name] (vRtrIfDcpFpProtocol)	int	The value of vRtrIfDcpFpProtocol specifies the protocol name to be monitored by Distributed CPU Protection Policy.
<p>VRtrIfDcpFpLocMonP1crStats MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.NetworkInterface • vprn.NetworkInterface 		
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.

policerName [Policer Name] (vRtrIfDcpFpStaticPlcrName)	String	The value of vRtrIfDcpFpStaticPlcrName specifies the static-policer name for Distributed CPU Protection Policy.
policerState [Policer State] (vRtrIfDcpFpStaticState)	int	The value of vRtrIfDcpFpStaticState indicates the state of the static-policer configured on Distributed CPU Protection Policy.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VirtualInterfaceIcmp6InStats</p> <p>MIB entry name: vRtrIfIcmp6Entry</p> <p>Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIfTable are created and deleted.</p> <p>Table description (for vRtrIfIcmp6Table): The vRtrIfIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
inDestinationUnreachable [In Destination Unreachable] (vRtrIfIcmp6InDestUnreachs)	long	The value of vRtrIfIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this interface.
inEchoReplies [In Echo Replies] (vRtrIfIcmp6InEchoReplies)	long	The value of vRtrIfIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this interface.
inEchoRequests [In Echo Requests] (vRtrIfIcmp6InEchos)	long	The value of vRtrIfIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this interface.
inErrors [In Errors] (vRtrIfIcmp6InErrors)	long	The value of vRtrIfIcmp6InErrors indicates the number of ICMP messages which this interface received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIfIcmp6InNbrAdvertisements)	long	The value of vRtrIfIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this interface.
inNeighborSolicits [In Neighbor Solicits] (vRtrIfIcmp6InNbrSolicits)	long	The value of vRtrIfIcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this interface.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inPacketTooBig [In Packet Too Big] (vRtrIflcmp6InPktTooBigs)	long	The value of vRtrIflcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this interface.
inRedirects [In Redirects] (vRtrIflcmp6InRedirects)	long	The value of vRtrIflcmp6InRedirects indicates number of ICMP Redirect messages received by this interface.
inRouterAdvertisements [In Router Advertisements] (vRtrIflcmp6InRtrAdvertisements)	long	The value of vRtrIflcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this interface.
inRouterSolicits [In Router Solicits] (vRtrIflcmp6InRtrSolicits)	long	The value of vRtrIflcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this interface.
inTimeExceeded [In Time Exceeded] (vRtrIflcmp6InTimeExcds)	long	The value of vRtrIflcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this interface.
inTotalMessages [In Total Messages] (vRtrIflcmp6InMsgs)	long	The value of vRtrIflcmp6InMsgs indicates the total number of ICMP messages received by this interface which includes all those counted by vRtrIflcmp6InErrors. Note that this interface is the interface to which the ICMP messages were addressed which may not be necessarily the input interface for the messages.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VirtualInterfaceIcmp6OutStats MIB entry name: vRtrIflcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIflTable are created and deleted. Table description (for vRtrIflcmp6Table): The vRtrIflcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIflcmp6OutDestUnreachs)	long	The value of vRtrIflcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this interface.
outEchoReplies [Out Echo Replies] (vRtrIflcmp6OutEchoReplies)	long	The value of vRtrIflcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this interface.
outEchoRequests [Out Echo Requests] (vRtrIflcmp6OutEchos)	long	The value of vRtrIflcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this interface.
outErrors [Out Errors] (vRtrIflcmp6OutErrors)	long	The value of vRtrIflcmp6OutErrors indicates the number of ICMP messages which this interface did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIflcmp6OutGrpMembQueries)	long	The value of vRtrIflcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this interface.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIfIcmp6OutGrpMembReductions)	long	The value of vRtrIfIcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this interface.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIfIcmp6OutGrpMembResponses)	long	The value of vRtrIfIcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this interface.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIfIcmp6OutNbrAdvertisements)	long	The value of vRtrIfIcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this interface.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIfIcmp6OutNbrSolicits)	long	The value of vRtrIfIcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this interface.
outPacketTooBig [Out Packet Too Big] (vRtrIfIcmp6OutPktTooBigs)	long	The value of vRtrIfIcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this interface.
outRedirects [Out Redirects] (vRtrIfIcmp6OutRedirects)	long	The value of vRtrIfIcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this interface.
outRouterAdvertisements [Out Router Advertisements] (vRtrIfIcmp6OutRtrAdvertisements)	long	The value of vRtrIfIcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this interface.
outRouterSolicits [Out Router Solicits] (vRtrIfIcmp6OutRtrSolicits)	long	The value of vRtrIfIcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this interface.
outTimeExceeded [Out Time Exceeded] (vRtrIfIcmp6OutTimeExcds)	long	The value of vRtrIfIcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this interface.

Table 287 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this interface attempted to send. Note that this counter includes all those counted by icmpOutErrors.
<p>VirtualRouterIcmp6InStats</p> <p>MIB entry name: vRtrIcmp6Entry</p> <p>Entry description: Each row entry represents the ICMP statistics of a virtual router instance. chliLastTime [Chli Last Time] (tmnxOamPmStsTcaLossChliLastTime)	String	The value of tmnxOamPmStsTcaLossChliLastTime indicates the UTC date and time at the start of the measurement interval which generated the most recent Consecutive High Loss Interval (CHLI) Raise or Clear TCA for the specified indices. Measurement interval start times are reported using tmnxOamPmStsBaseStartTime. The TCAs are tmnxOamPmThrRaise and tmnxOamPmThrClear. DateAndTime.year = 0 is returned if no CHLI TCAs have been generated for the specified indices since system start up.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hliActive [Hli Active] (tmnxOamPmStsTcaLossHliOperState)	int	The value of tmnxOamPmStsTcaLossHliOperState indicates the operational state of High Loss Interval (HLI) TCAs for the specified indices.
hliLastTime [Hli Last Time] (tmnxOamPmStsTcaLossHliLastTime)	String	The value of tmnxOamPmStsTcaLossHliLastTime indicates the UTC date and time at the start of the measurement interval which generated the most recent High Loss Interval (HLI) Raise or Clear TCA for the specified indices. Measurement interval start times are reported using tmnxOamPmStsBaseStartTime. The TCAs are tmnxOamPmThrRaise and tmnxOamPmThrClear. DateAndTime.year = 0 is returned if no HLI TCAs have been generated for the specified indices since system start up.
unavlIndActive [Unavl Ind Active] (tmnxOamPmStsTcaLossUnavlIndOprSt)	int	The value of tmnxOamPmStsTcaLossUnavlIndOprSt indicates the operational state of Unavailability Indicator TCAs for the specified indices.
unavlIndLastTime [Unavl Ind Last Time] (tmnxOamPmStsTcaLossUnavlIndLTime)	String	The value of tmnxOamPmStsTcaLossUnavlIndLTime indicates the UTC date and time at the start of the measurement interval which generated the most recent Unavailability Indicator Raise or Clear TCA for the specified indices. Measurement interval start times are reported using tmnxOamPmStsBaseStartTime. The TCAs are tmnxOamPmThrRaise and tmnxOamPmThrClear. DateAndTime.year = 0 is returned if no Unavailability Indicator TCAs have been generated for the specified indices since system start up.
undtAvlActive [Undt Avl Active] (tmnxOamPmStsTcaLossUndtAvlOperSt)	int	The value of tmnxOamPmStsTcaLossUndtAvlOperSt indicates the operational state of Undetermined Availability Indicator TCAs for the specified indices.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undtAvlLastTime [Undt Avl Last Time] (tmnxOamPmStsTcaLossUndtAvlLTime)	String	The value of tmnxOamPmStsTcaLossUndtAvlLTime indicates the UTC date and time at the start of the measurement interval which generated the most recent Undetermined Availability Indicator Raise or Clear TCA for the specified indices. Measurement interval start times are reported using tmnxOamPmStsBaseStartTime. The TCAs are tmnxOamPmThrRaise and tmnxOamPmThrClear. DateAndTime.year = 0 is returned if no Undetermined Availability Indicator TCAs have been generated for the specified indices since system start up.
undtUnavlActive [Undt Unavl Active] (tmnxOamPmStsTcaLossUndtUnavlOpSt)	int	The value of tmnxOamPmStsTcaLossUndtUnavlOpSt indicates the operational state of Undetermined Unavailability Indicator TCAs for the specified indices.
undtUnavlLastTime [Undt Unavl Last Time] (tmnxOamPmStsTcaLossUndtUnavlLTim)	String	The value of tmnxOamPmStsTcaLossUndtUnavlLTim indicates the UTC date and time at the start of the measurement interval which generated the most recent Undetermined Unavailability Indicator Raise or Clear TCA for the specified indices. Measurement interval start times are reported using tmnxOamPmStsBaseStartTime. The TCAs are tmnxOamPmThrRaise and tmnxOamPmThrClear. DateAndTime.year = 0 is returned if no Undetermined Unavailability Indicator TCAs have been generated for the specified indices since system start up.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LossTCAFwBwStats</p> <p>MIB entry name: tmnxOamPmStsTcaLossFwBwEntry</p> <p>Entry description: tmnxOamPmStsTcaLossFwBwEntry contains TCA statistics for the forward or backward direction of one OAM-PM loss test. For example, a row may contain TCA statistics for the forward direction for the SLM test belonging to OAM-PM session OAM_PM_Eth_session_1.</p> <p>Table description (for tmnxOamPmStsTcaLossFwBwTable): tmnxOamPmStsTcaLossFwBwTable contains statistics for loss-based OAM-PM Threshold Crossing Alerts (TCAs). The subset of the TCA loss statistics that are kept in the forward and backward directions is available using this table.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ethernetOam.CfmLmmSession • ethernetOam.CfmSlmSession • sas.TWLSession 		
flrActive [Flr Active] (tmnxOamPmStsTcaLossAvgFlrOperSt)	int	The value of tmnxOamPmStsTcaLossAvgFlrOperSt indicates the operational state of Average Frame Loss Ratio (FLR) TCAs for the specified indices.
flrLastTime [Flr Last Time] (tmnxOamPmStsTcaLossAvgFlrLstTime)	String	The value of tmnxOamPmStsTcaLossAvgFlrLstTime indicates the UTC date and time at the start of the measurement interval which generated the most recent Average Frame Loss Ratio (FLR) Raise or Clear TCA for the specified indices. Measurement interval start times are reported using tmnxOamPmStsBaseStartTime. The TCAs are tmnxOamPmThrRaise and tmnxOamPmThrClear. DateAndTime.year = 0 is returned if no Average FLR TCAs have been generated for the specified indices since system start up.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PmSessionBaseStats</p>		
<p>MIB entry name: tmnxOamPmStsBaseEntry</p>		
<p>Entry description: tmnxOamPmStsBaseEntry contains the base statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a test is started (e.g. using tmnxOamPmCfgDelayDmmAdminStatus and tmnxOamPmCfgDelayDmmOnDmndStatus). At that time, a row for the current interval (with the index value tmnxOamPmStsIntvlNum=1) is created for each row with a matching session name in tmnxOamPmCfgMeasIntvlTable. In addition, a row is created in this table for the test's 'miRaw(1)' interval. After that, the timed creation and destruction of rows in this table is explained using the following example. Suppose the configured number of intervals to be retained is as follows (where index columns are underlined with octothorpes, and 'tmnxOamPm' is abbreviated as '_'): <u>_CfgSessName</u> <u>_CfgMeasIntvlDuration</u> <u>_CfgMeasIntvlsStored</u> ##### ##### 'mySess1' 'mi15Minutes(2)' 3 Suppose statistics collection started at t = 0 (minutes). Suppose the following rows exist in tmnxOamPmStsBaseTable at t = 59 (minutes): <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 1 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 The interval numbers are assigned as follows: 1 - the historical interval ended at t = 15 minutes 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the current interval Then, after the next 15 minute interval ends (e.g. at t = 61 minutes), the following rows will exist: <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 5 The interval numbers are assigned as follows: 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the historical interval ended at t = 60 minutes 5 - the current interval The row with interval number 1 was destroyed, because tmnxOamPmCfgMeasIntvlsStored=3 specifies that at most three historical intervals be retained. Rows are also destroyed in this table when the corresponding tmnxOamPmCfgMeasIntvlTable row is destroyed. When the index value tmnxOamPmStsMeasIntvlDuration is 'miRaw(1)', only one interval is available (i.e. tmnxOamPmStsIntvlNum = 1). When a test is running, the measurement interval data set for a test's 'miRaw(1)' measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. The change to the objects in the specified row is as follows. Object Change on Clear Operation tmnxOamPmStsBaseOperStatus No change tmnxOamPmStsBaseSuspect Set to 'true(1)' tmnxOamPmStsBaseStartTime Set to UTC time of the clear operation tmnxOamPmStsBaseElapsedTime Set to zero tmnxOamPmStsBaseTestFramesTx Set to zero tmnxOamPmStsBaseTestFramesRx Set to zero Measurement interval data sets for measurement interval durations other than 'miRaw(1)' cannot be cleared.</p>		
<p>Table description (for tmnxOamPmStsBaseTable): tmnxOamPmStsBaseTable contains the base statistics for OAM Performance Monitoring Measurement Interval Data Sets. The statistics in this table are common to all test types (e.g. DMM and SLM tests).</p>		
<p>Supports realtime plotting</p>

<p>Monitored classes:</p>		
<ul style="list-style-type: none"> • ethernetoam.CfmDmmSession • ethernetoam.CfmLmmSession • ethernetoam.CfmSlmSession 		

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmStatsElapsedTime [Pm Stats Elapsed Time] (tmnxOamPmStsBaseElapsedTime)	long	The value of tmnxOamPmStsBaseElapsedTime indicates the time elapsed since data collection started for the specified measurement interval data set.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
pmStatsOperStatus [Pm Stats Oper Status] (tmnxOamPmStsBaseOperStatus)	int	The value of tmnxOamPmStsBaseOperStatus indicates the operational status of the specified measurement interval data set. If the interval is historical and the operational status is 'InProgress(1)', the interval is closing (i.e. waiting for a response for the final test request sent).
pmStatsPduRx [Pm Stats Pdu Rx] (tmnxOamPmStsBaseTestFramesRx)	long	The value of tmnxOamPmStsBaseTestFramesRx indicates the number of test frames received for the specified measurement interval data set.
pmStatsPduTx [Pm Stats Pdu Tx] (tmnxOamPmStsBaseTestFramesTx)	long	The value of tmnxOamPmStsBaseTestFramesTx indicates the number of test frames sent for the specified measurement interval data set.
pmStatsStartTime [Pm Stats Start Time] (tmnxOamPmStsBaseStartTime)	String	The value of tmnxOamPmStsBaseStartTime indicates the start time (in UTC) of the specified measurement interval data set.
pmStatsSuspect [Pm Stats Suspect] (tmnxOamPmStsBaseSuspect)	boolean	The value of tmnxOamPmStsBaseSuspect indicates whether or not the specified measurement interval data set contains suspect information.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmStatsTestType [Pm Stats Test Type] (tmnxOamPmStsBaseTestType)	int	The value of tmnxOamPmStsBaseTestType specifies the type of test for which statistics are to be read (e.g. 'dmm(1)').
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>PrefixSrvStats</p> <p>MIB entry name: tmnxTwampSrvPrefixEntry</p> <p>Entry description: tmnxTwampSrvPrefixEntry contains the TWAMP server configuration information for the IP prefix specified by the index values. Rows in this table are created and destroyed using the tmnxTwampSrvPrefixRowStatus object.</p> <p>Table description (for tmnxTwampSrvPrefixTable): tmnxTwampSrvPrefixTable contains per-prefix TWAMP server configuration information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
srvPfxConnCount [Srv Pfx Conn Count] (tmnxTwampSrvPfxConnCount)	long	The value of tmnxTwampSrvPfxConnCount indicates, for the prefix specified by the index values, the number of control connections currently managed by the TWAMP server.
srvPfxConnsRejected [Srv Pfx Conns Rejected] (tmnxTwampSrvPfxConnsRejected)	long	The value of tmnxTwampSrvPfxConnsRejected indicates, for the prefix specified by the index values, the number of control connection requests which have been rejected by the TWAMP server. An example reject reason: the prefix's limit on the number of active connections has been reached.
srvPfxSessionCount [Srv Pfx Session Count] (tmnxTwampSrvPfxSessionCount)	long	The value of tmnxTwampSrvPfxSessionCount indicates, for the prefix specified by the index values, the number of currently in-progress TWAMP test sessions.
srvPfxTestPacketsRx [Srv Pfx Test Packets Rx] (tmnxTwampSrvPfxTestPacketsRx)	long	The value of tmnxTwampSrvPfxTestPacketsRx indicates, for the prefix specified by the index values, the number of TWAMP test packets received by the TWAMP server.
srvPfxTestPacketsTx [Srv Pfx Test Packets Tx] (tmnxTwampSrvPfxTestPacketsTx)	long	The value of tmnxTwampSrvPfxTestPacketsTx indicates, for the prefix specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
srvPfxTestSessAbort [Srv Pfx Test Sess Abort] (tmnxTwampSrvPfxTestSessAbort)	long	The value of tmnxTwampSrvPfxTestSessAbort indicates, for the prefix specified by the index values, the number of test sessions aborted by the TWAMP server.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
srvPfxTestSessCompleted [Srv Pfx Test Sess Completed] (tmnxTwampSrvPfxTestSessCompleted)	long	The value of tmnxTwampSrvPfxTestSessCompleted indicates, for the prefix specified by the index values, the number of test sessions completed by the TWAMP server.
srvPfxTestSessRejected [Srv Pfx Test Sess Rejected] (tmnxTwampSrvPfxTestSessRejected)	long	The value of tmnxTwampSrvPfxTestSessRejected indicates, for the prefix specified by the index values, the number of test sessions rejected by the TWAMP server.
<p>SrvConnsStats</p> <p>MIB entry name: tmnxTwampSrvConnStatsEntry</p> <p>Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established.</p> <p>Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime indicates the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: settingUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.
<p>TWLBInStats</p> <p>MIB entry name: tmnxOamPmStsDelayTwlBinEntry</p> <p>Entry description: tmnxOamPmStsDelayTwlBinEntry contains the TWAMP-Light frame delay per-bin statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a corresponding row is created in tmnxOamPmStsDelayTwlTable. If the tmnxOamPmStsDelayTwlTable row is created with the index value tmnxOamPmCfgBinType = 'fd(1)', then the the number of rows created in this table is tmnxOamPmCfgBinGroupFdBinCount. Similarly, 'fdr(2)' and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsDelayTwlTable row is destroyed. When a test is running, the TWAMP-Light statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. A successful clear operation zeros the TWAMP-Light delay and TWAMP-Light loss raw statistics for the specified session..</p> <p>Table description (for tmnxOamPmStsDelayTwlBinTable): tmnxOamPmStsDelayTwlBinTable contains TWAMP-Light (Two-Way Active Measurement Protocol, Light) frame delay per-bin statistics. The frame delay per-bin statistics kept for TWAMP-Light tests are the same as the frame delay per-bin statistics specified for Ethernet DMM (Delay Measurement Message) tests in MEF-35 requirement R66.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TWLBIn</p>		

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayTwlBinBwdCount [Delay Twl Bin Bwd Count] (tmnxOamPmStsDelayTwlBinBwdCount)	long	The value of tmnxOamPmStsDelayTwlBinBwdCount indicates the number of TWAMP-Light frame delay measurements in the backward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'twlSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of TWAMP-Light frame delay measurements (in microseconds) in the backward direction in the first interval of 'twlSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayTwlBinFwdCount [Delay Twl Bin Fwd Count] (tmnxOamPmStsDelayTwlBinFwdCount)	long	The value of tmnxOamPmStsDelayTwlBinFwdCount indicates the number of TWAMP-Light frame delay measurements in the forward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'twlSess1' 'mi15Minutes(2)' 1 'fd(1)' 9 Then, the value of this object indicates the number of TWAMP-Light frame delay measurements (in microseconds) in the forward direction in the first interval of 'twlSess1' that fit in the highest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayTwlBinNum [Delay Twl Bin Num] (tmnxOamPmStsDelayTwlBinNum)	long	The value of tmnxOamPmStsDelayTwlBinNum specifies the bin number of the statistics to be read.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayTwlBintwowayCount [Delay Twl Bintwoway Count] (tmnxOamPmStsDelayTwlBin2wyCount)	long	The value of tmnxOamPmStsDelayTwlBin2wyCount indicates the number of TWAMP-Light two-way frame delay measurements that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### ##### 'twlSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of TWAMP-Light two-way frame delay measurements (in microseconds) in the first interval of 'twlSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TWLSessionStats</p> <p>MIB entry name: tmnxOamPmStsDelayTwlEntry</p> <p>Entry description: tmnxOamPmStsDelayTwlEntry contains the TWAMP-Light frame delay summary statistics for one OAM Performance Monitoring Measurement Interval Data Set. When a row is created in tmnxOamPmStsBaseTable with tmnxOamPmStsBaseTestType = 'twampLight(3)' (provided tmnxOamPmCfgTwampLtCollectStats is 'collectDelayStats(1)' or 'collectDelayAndLossStats(3)'), three rows are created in this table. The three rows have the following values in the tmnxOamPmCfgBinType index column: 'fd(1)', 'fdr(2)', and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. When a TWAMP-Light test is running, all the test's raw statistics can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. delayTwl2wyMax [Delay Twl 2 wy Max] (tmnxOamPmStsDelayTwl2wyMax)	long	The value of tmnxOamPmStsDelayTwl2wyMax indicates the maximum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwl2wyMin [Delay Twl 2 wy Min] (tmnxOamPmStsDelayTwl2wyMin)	long	The value of tmnxOamPmStsDelayTwl2wyMin indicates the minimum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayTwlBwdAvg [Delay Twl Bwd Avg] (tmnxOamPmStsDelayTwlBwdAvg)	long	The value of tmnxOamPmStsDelayTwlBwdAvg indicates the average delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlBwdMax [Delay Twl Bwd Max] (tmnxOamPmStsDelayTwlBwdMax)	long	The value of tmnxOamPmStsDelayTwlBwdMax indicates the maximum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlBwdMin [Delay Twl Bwd Min] (tmnxOamPmStsDelayTwlBwdMin)	long	The value of tmnxOamPmStsDelayTwlBwdMin indicates the minimum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlFwdAvg [Delay Twl Fwd Avg] (tmnxOamPmStsDelayTwlFwdAvg)	long	The value of tmnxOamPmStsDelayTwlFwdAvg indicates the average delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlFwdMax [Delay Twl Fwd Max] (tmnxOamPmStsDelayTwlFwdMax)	long	The value of tmnxOamPmStsDelayTwlFwdMax indicates the maximum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlFwdMin [Delay Twl Fwd Min] (tmnxOamPmStsDelayTwlFwdMin)	long	The value of tmnxOamPmStsDelayTwlFwdMin indicates the minimum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>TwampSrvSessionStats</p> <p>MIB entry name: tmnxTwampSrvSessStatsEntry</p> <p>Entry description: tmnxTwampSrvSessStatsEntry contains read-only information about a TWAMP test session known to the TWAMP server. A row is created when the TWAMP server accepts a session request. A row is destroyed when the session is fully torn down.</p> <p>Table description (for tmnxTwampSrvSessStatsTable): tmnxTwampSrvSessStatsTable contains read-only information about the TWAMP test sessions known to the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TwampSrvSession</p>		
operStat [Oper Stat] (tmnxTwampSrvSessOperState)	int	The value of tmnxTwampSrvSessOperState indicates the operational state of the specified session. Code points: create (1) - the session has been created, but it has not yet been started active (2) - the session is active (e.g. the Session-Sender is sending TWAMP-Test PDUs) stop (3) - the session is waiting to terminate (i.e. the Session-Reflector has received a TWAMP Stop-Sessions PDU, and is waiting for a timer expiry)
reflectorAddrType [Reflector Addr Type] (tmnxTwampSrvSessReflectorAddrTyp)	int	The value of tmnxTwampSrvSessReflectorAddrTyp indicates the address type of tmnxTwampSrvSessReflectorAddress.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
reflectorAddress [Reflector Address] (tmnxTwampSrvSessReflectorAddress)	String	The value of tmnxTwampSrvSessReflectorAddress indicates the address of the specified session's TWAMP Session-Reflector.
reflectorUDPPort [Reflector UDPPort] (tmnxTwampSrvSessReflectorUdpPort)	int	The value of tmnxTwampSrvSessReflectorUdpPort indicates the UDP listen port of the specified session's TWAMP Session-Reflector.
senderAddrType [Sender Addr Type] (tmnxTwampSrvSessSenderAddrType)	int	The value of tmnxTwampSrvSessSenderAddrType indicates the address type of tmnxTwampSrvSessSenderAddress.
senderAddress [Sender Address] (tmnxTwampSrvSessSenderAddress)	String	The value of tmnxTwampSrvSessSenderAddress indicates the address of the specified session's TWAMP Session-Sender.
senderUDPPort [Sender UDPPort] (tmnxTwampSrvSessSenderUdpPort)	int	The value of tmnxTwampSrvSessSenderUdpPort indicates the value present in the Source UDP port field of test packets sent by the specified session's TWAMP Session-Sender.
sessionId [Session Id] (tmnxTwampSrvSessID)	String	The value of tmnxTwampSrvSessID indicates the session identifier (SID) for the specified session.
sessionSequenceNumber [Session Sequence Number] (tmnxTwampSrvSessSeqNum)	long	The value of tmnxTwampSrvSessSeqNum specifies this TWAMP test session's sequence number. A client address, a connection sequence number, and a session sequence number identify a session. When the TWAMP server accepts the first session request from a particular client and connection, sequence number 1 is assigned to the session. The second session request accepted from the same client and connection is assigned sequence number 2, etc. The sequence number assigned after 4294967295 is 1.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
TwampSrvStats MIB entry name: tmnxTwampStatisticsScalarObjs Supports realtime plotting Supports scheduled collection Monitored class: sas.TwampSrv		
twampSrvConnectionCount [Twamp Srv Connection Count] (tmnxTwampSrvConnectionCount)	long	The value of tmnxTwampSrvConnectionCount indicates the number of control connections currently managed by the TWAMP server.
twampSrvConnectionsRejected [Twamp Srv Connections Rejected] (tmnxTwampSrvConnectionsRejected)	long	The value of tmnxTwampSrvConnectionsRejected indicates the total number of control connection requests which have been rejected by the TWAMP server. Example reject reasons: the server's limit on the number of active connections has been reached; the client's IP address does not match any of the prefixes configured on the TWAMP server.
twampSrvOperStat [Twamp Srv Oper Stat] (tmnxTwampSrvOperState)	long	The value of tmnxTwampSrvOperState indicates if the TWAMP server is operationally 'inService(2)', or 'outOfService(3)'.
twampSrvSessionCount [Twamp Srv Session Count] (tmnxTwampSrvSessionCount)	long	The value of tmnxTwampSrvSessionCount indicates the number of currently in-progress TWAMP test sessions.
twampSrvTestPacketsRx [Twamp Srv Test Packets Rx] (tmnxTwampSrvTestPacketsRx)	long	The value of tmnxTwampSrvTestPacketsRx indicates the total number of TWAMP test packets received by the TWAMP server.
twampSrvTestPacketsTx [Twamp Srv Test Packets Tx] (tmnxTwampSrvTestPacketsTx)	long	The value of tmnxTwampSrvTestPacketsTx indicates the total number of TWAMP test packets sent by the TWAMP server.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
twampSrvTestSessAborted [Twamp Srv Test Sess Aborted] (tmnxTwampSrvTestSessAborted)	long	The value of tmnxTwampSrvTestSessAborted indicates the total number of test sessions aborted by the TWAMP server.
twampSrvTestSessCompleted [Twamp Srv Test Sess Completed] (tmnxTwampSrvTestSessCompleted)	long	The value of tmnxTwampSrvTestSessCompleted indicates the total number of test sessions completed by the TWAMP server.
twampSrvTestSessRejected [Twamp Srv Test Sess Rejected] (tmnxTwampSrvTestSessRejected)	long	The value of tmnxTwampSrvTestSessRejected indicates the total number of test sessions rejected by the TWAMP server.
twampSrvUpTime [Twamp Srv Up Time] (tmnxTwampSrvUpTime)	long	The value of tmnxTwampSrvUpTime indicates the time elapsed, in seconds, since the most recent transition of tmnxTwampSrvOperState to 'inService(2)'. If tmnxTwampSrvOperState is not 'inService(2)', zero is returned.
<p>TwlLossSessionStats</p> <p>MIB entry name: tmnxOamPmStsLossTwlEntry</p> <p>Entry description: tmnxOamPmStsLossTwlEntry contains the TWAMP-Light loss test statistics for one OAM Performance Monitoring Measurement Interval Data Set. A row is created in this table when a tmnxOamPmStsBaseTable row is created with tmnxOamPmStsBaseTestType = 'twampLight(3)' (provided tmnxOamPmCfgTwampLtCollectStats is 'collectLossStats(2)' or 'collectDelayAndLossStats(3)'). A row is destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. When a TWAMP-Light test is running, all the test's raw statistics can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. A successful clear operation zeros the TWAMP-Light delay and TWAMP-Light loss raw statistics for the specified session.</p> <p>Table description (for tmnxOamPmStsLossTwlTable): tmnxOamPmStsLossTwlTable contains TWAMP-Light (Two-Way Active Measurement Protocol, Light) frame loss statistics. The frame loss statistics kept for TWAMP-Light tests are the same as the frame loss statistics specified for Ethernet SLM (Synthetic Loss Measurement) tests in MEF-35 section 10.2.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TWLSession</p>		

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmTwiAvailIndBwd [Pm Twi Avail Ind Bwd] (tmnxOamPmStsLossTwiAvailIndBwd)	long	The value of tmnxOamPmStsLossTwiAvailIndBwd indicates the number of availability indicators evaluated as Available in the backward direction for the specified measurement interval data set.
pmTwiAvailIndFwd [Pm Twi Avail Ind Fwd] (tmnxOamPmStsLossTwiAvailIndFwd)	long	The value of tmnxOamPmStsLossTwiAvailIndFwd indicates the number of availability indicators evaluated as Available in the forward direction for the specified measurement interval data set.
pmTwiAvgFlrBwd [Pm Twi Avg Flr Bwd] (tmnxOamPmStsLossTwiAvgFlrBwd)	float	The value of tmnxOamPmStsLossTwiAvgFlrBwd indicates the average Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmTwiAvgFlrFwd [Pm Twi Avg Flr Fwd] (tmnxOamPmStsLossTwiAvgFlrFwd)	float	The value of tmnxOamPmStsLossTwiAvgFlrFwd indicates the average Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmTwiChliBwd [Pm Twi Chli Bwd] (tmnxOamPmStsLossTwiChliBwd)	long	The value of tmnxOamPmStsLossTwiChliBwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the backward direction for the specified measurement interval data set.
pmTwiChliFwd [Pm Twi Chli Fwd] (tmnxOamPmStsLossTwiChliFwd)	long	The value of tmnxOamPmStsLossTwiChliFwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the forward direction for the specified measurement interval data set.
pmTwiHliBwd [Pm Twi Hli Bwd] (tmnxOamPmStsLossTwiHliBwd)	long	The value of tmnxOamPmStsLossTwiHliBwd indicates the number of High Loss Intervals (HLIs) in the backward direction for the specified measurement interval data set.
pmTwiHliFwd [Pm Twi Hli Fwd] (tmnxOamPmStsLossTwiHliFwd)	long	The value of tmnxOamPmStsLossTwiHliFwd indicates the number of High Loss Intervals (HLIs) in the forward direction for the specified measurement interval data set.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmTwlMaxFlrBwd [Pm Twl Max Flr Bwd] (tmnxOamPmStsLossTwlMaxFlrBwd)	float	The value of tmnxOamPmStsLossTwlMaxFlrBwd indicates the maximum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmTwlMaxFlrFwd [Pm Twl Max Flr Fwd] (tmnxOamPmStsLossTwlMaxFlrFwd)	float	The value of tmnxOamPmStsLossTwlMaxFlrFwd indicates the maximum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmTwlMinFlrBwd [Pm Twl Min Flr Bwd] (tmnxOamPmStsLossTwlMinFlrBwd)	float	The value of tmnxOamPmStsLossTwlMinFlrBwd indicates the minimum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmTwlMinFlrFwd [Pm Twl Min Flr Fwd] (tmnxOamPmStsLossTwlMinFlrFwd)	float	The value of tmnxOamPmStsLossTwlMinFlrFwd indicates the minimum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmTwlRxBwd [Pm Twl Rx Bwd] (tmnxOamPmStsLossTwlRxBwd)	long	The value of tmnxOamPmStsLossTwlRxBwd indicates the number of TWAMP-Light reply frames received in the backward direction for the specified measurement interval data set. A frame is counted if the TWAMP-Light Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.
pmTwlRxFwd [Pm Twl Rx Fwd] (tmnxOamPmStsLossTwlRxFwd)	long	The value of tmnxOamPmStsLossTwlRxFwd indicates the number of TWAMP-Light request frames received in the forward direction for the specified measurement interval data set. A frame is counted if the TWAMP-Light Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmTwtxBwd [Pm Twt Tx Bwd] (tmnxOamPmStsLossTwtxBwd)	long	The value of tmnxOamPmStsLossTwtxBwd indicates the number of TWAMP-Light reply frames transmitted in the backward direction for the specified measurement interval data set. A frame is counted if the TWAMP-Light Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmTwtxFwd [Pm Twt Tx Fwd] (tmnxOamPmStsLossTwtxFwd)	long	The value of tmnxOamPmStsLossTwtxFwd indicates the number of TWAMP-Light request frames transmitted in the forward direction for the specified measurement interval data set. A frame is counted if the TWAMP-Light Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmTwtUnavailIndBwd [Pm Twt Unavail Ind Bwd] (tmnxOamPmStsLossTwtUnavailIndBwd)	long	The value of tmnxOamPmStsLossTwtUnavailIndBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction for the specified measurement interval data set.
pmTwtUnavailIndFwd [Pm Twt Unavail Ind Fwd] (tmnxOamPmStsLossTwtUnavailIndFwd)	long	The value of tmnxOamPmStsLossTwtUnavailIndFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction for the specified measurement interval data set.
pmTwtUndtAvlBwd [Pm Twt Undt Avl Bwd] (tmnxOamPmStsLossTwtUndtAvlBwd)	long	The value of tmnxOamPmStsLossTwtUndtAvlBwd indicates the number of availability indicators evaluated as Available in the backward direction, based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmTwiUndtAvlFwd [Pm Twl Undt Avl Fwd] (tmnxOamPmStsLossTwiUndtAvlFwd)	long	The value of tmnxOamPmStsLossTwiUndtAvlFwd indicates the number of availability indicators evaluated as Available in the forward direction, based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmTwiUndtUnavlBwd [Pm Twl Undt Unavl Bwd] (tmnxOamPmStsLossTwiUndtUnavlBwd)	long	The value of tmnxOamPmStsLossTwiUndtUnavlBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction, based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmTwiUndtUnavlFwd [Pm Twl Undt Unavl Fwd] (tmnxOamPmStsLossTwiUndtUnavlFwd)	long	The value of tmnxOamPmStsLossTwiUndtUnavlFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction, based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 288 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>TwlReflectorStats</p> <p>MIB entry name: tmnxOamPmStsTwlRflEntry</p> <p>Entry description: tmnxOamPmStsTwlRflEntry contains the statistics for the specified OAM Performance Monitoring TWAMP-Light reflector. SROS creates a row in this table when a corresponding row is created in tmnxOamPmCfgTwlRflTable. SROS destroys a row in this table when a corresponding row is destroyed in tmnxOamPmCfgTwlRflTable. The encoding of the index is explained in the DESCRIPTION clause for tmnxOamPmCfgTwlRflEntry.</p> <p>Table description (for tmnxOamPmStsTwlRflTable): tmnxOamPmStsTwlRflTable contains the statistics for OAM Performance Monitoring TWAMP-Light reflectors.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TwlReflector</p>		
framesRx [Frames Rx] (tmnxOamPmStsTwlRflFramesRx)	long	The value of tmnxOamPmStsTwlRflFramesRx indicates the number of TWAMP-Test frames received by the specified reflector.
framesTx [Frames Tx] (tmnxOamPmStsTwlRflFramesTx)	long	The value of tmnxOamPmStsTwlRflFramesTx indicates the number of TWAMP-Test frames transmitted by the specified reflector.
upTime [Up Time] (tmnxOamPmStsTwlRflUpTime)	long	The value of tmnxOamPmStsTwlRflUpTime indicates the time elapsed since the most recent transition of the reflector's administrative status to 'enabled(1)'. Zero is returned if the reflector's administrative status is 'disabled(2)'.

Table 289 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CemSapStats MIB entry name: sapCemStatsEntry Entry description: Statistics for a specific CEM SAP. Table description (for sapCemStatsTable): A table that contains CEM SAP statistics. Supports realtime plotting Supports scheduled collection Monitored class: service.L2AccessInterface</p>		
cemStatsEgressDroppedPkts [Cem Stats Egress Dropped Pkts] (sapCemStatsEgressDroppedPkts)	long	The value of sapCemStatsEgressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsEgressESs [Cem Stats Egress ESs] (sapCemStatsEgressESs)	long	The value of sapCemStatsEgressESs indicates the number of Error Seconds (ESs) encountered. Any malformed packet, seq. error, LOPS and similar are considered as error seconds.
cemStatsEgressFailureCounts [Cem Stats Egress Failure Counts] (sapCemStatsEgressFailureCounts)	long	The value of sapCemStatsEgressFailureCounts indicates the number failure events. A failure event begins when the LOPS failure is declared, and ends when the failure is cleared.
cemStatsEgressForwardedPkts [Cem Stats Egress Forwarded Pkts] (sapCemStatsEgressForwardedPkts)	long	The value of sapCemStatsEgressForwardedPkts indicates the number of packets that were successfully forwarded.
cemStatsEgressJtrBfrDepth [Cem Stats Egress Jtr Bfr Depth] (sapCemStatsEgressJtrBfrDepth)	long	The value of sapCemStatsEgressJtrBfrDepth indicates the current packet depth of the jitter buffer.
cemStatsEgressJtrBfrOverruns [Cem Stats Egress Jtr Bfr Overruns] (sapCemStatsEgressJtrBfrOverruns)	long	The value of sapCemStatsEgressJtrBfrOverruns indicates the number of times a packet was dropped because it could not fit in the jitter buffer.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressJtrBfrUnderruns [Cem Stats Egress Jtr Bfr Underruns] (sapCemStatsEgressJtrBfrUnderruns)	long	The value of sapCemStatsEgressJtrBfrUnderruns indicates the number of times a packet needed to be played out and the jitter buffer was empty.
cemStatsEgressLBitDropped [Cem Stats Egress LBit Dropped] (sapCemStatsEgressLBitDropped)	long	The value of sapCemStatsEgressLBitDropped indicates the number of packets dropped due to the L bit set by the far end.
cemStatsEgressMalformedPkts [Cem Stats Egress Malformed Pkts] (sapCemStatsEgressMalformedPkts)	long	The value of sapCemStatsEgressMalformedPkts indicates the number of packets detected with unexpected size, or bad headers' stack.
cemStatsEgressMisOrderDropped [Cem Stats Egress Mis Order Dropped] (sapCemStatsEgressMisOrderDropped)	long	The value of sapCemStatsEgressMisOrderDropped indicates the number of packets detected out of order (via control word sequence numbers), and could not be re-ordered, or could not be placed in the jitter buffer because it was out of the current window.
cemStatsEgressMissingPkts [Cem Stats Egress Missing Pkts] (sapCemStatsEgressMissingPkts)	long	The value of sapCemStatsEgressMissingPkts indicates the number of missing packets (as detected via control word sequence number gaps).
cemStatsEgressMultipleDropped [Cem Stats Egress Multiple Dropped] (sapCemStatsEgressMultipleDropped)	long	The value of sapCemStatsEgressMultipleDropped indicates the number of packets dropped due to multiple sequence numbers.
cemStatsEgressOverrunCounts [Cem Stats Egress Overrun Counts] (sapCemStatsEgressOverrunCounts)	long	The value of sapCemStatsEgressOverrunCounts indicates the number of times the jitter buffer went into an overrun state.
cemStatsEgressPktsReOrder [Cem Stats Egress Pkts Re Order] (sapCemStatsEgressPktsReOrder)	long	The value of sapCemStatsEgressPktsReOrder indicates the number of packets detected out of sequence (via control word sequence number), but successfully re-ordered.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressSESSs [Cem Stats Egress SESSs] (sapCemStatsEgressSESSs)	long	The value of sapCemStatsEgressSESSs indicates the number of Severely Error Seconds (SESSs) encountered. This is when more than 30 percent of the packets within a one second window are missing.
cemStatsEgressUASs [Cem Stats Egress UASs] (sapCemStatsEgressUASs)	long	The value of sapCemStatsEgressUASs indicates the number of Unavailable Seconds (UASs) encountered. Any consecutive ten seconds of SESSs are counted as one UAS.
cemStatsEgressUnderrunCounts [Cem Stats Egress Underrun Counts] (sapCemStatsEgressUnderrunCounts)	long	The value of sapCemStatsEgressUnderrunCounts indicates the number of times the jitter buffer went into an underrun state.
cemStatsIngressDroppedPkts [Cem Stats Ingress Dropped Pkts] (sapCemStatsIngressDroppedPkts)	long	The value of sapCemStatsIngressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsIngressForwardedPkts [Cem Stats Ingress Forwarded Pkts] (sapCemStatsIngressForwardedPkts)	long	The value of sapCemStatsIngressForwardedPkts indicates the number of packets that were successfully forwarded.
<p>EgressAccessQDepthInfo</p> <p>MIB entry name: sapEgrQosQueueDepthInfoEntry</p> <p>Entry description: The value of sapEgrQosQueueDepthInfoEntry represents queue-depth monitoring information for SAP egress override queue for which the value of sapEgrQosQMonitorDepth is set to 'true (1)'.</p> <p>Table description (for sapEgrQosQueueDepthInfoTable): The value of sapEgrQosQueueDepthInfoTable has an entry for each SAP egress override queue for which the value of sapEgrQosQMonitorDepth is set to 'true (1)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.EgressAccessPolicyQueueOverride</p>		
depthAvgElpsdTme [Depth Avg Elpsd Time] (sapEgrQosQueueDepthAvgElpsdTme)	String	The value of sapEgrQosQueueDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthAvgPollPrctInterval [Depth Avg Poll Prct Interval] (sapEgrQosQueueDepthAvgPollInt)	long	The value of sapEgrQosQueueDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrct1 [Depth Poll Prct 1] (sapEgrQosQueueDepthPollPrct1)	double	The value of sapEgrQosQueueDepthPollPrct1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrct10 [Depth Poll Prct 10] (sapEgrQosQueueDepthPollPrct10)	double	The value of sapEgrQosQueueDepthPollPrct10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.
depthPollPrct2 [Depth Poll Prct 2] (sapEgrQosQueueDepthPollPrct2)	double	The value of sapEgrQosQueueDepthPollPrct2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.
depthPollPrct3 [Depth Poll Prct 3] (sapEgrQosQueueDepthPollPrct3)	double	The value of sapEgrQosQueueDepthPollPrct3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrct4 [Depth Poll Prct 4] (sapEgrQosQueueDepthPollPrct4)	double	The value of sapEgrQosQueueDepthPollPrct4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrct5 [Depth Poll Prct 5] (sapEgrQosQueueDepthPollPrct5)	double	The value of sapEgrQosQueueDepthPollPrct5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrct6 [Depth Poll Prct 6] (sapEgrQosQueueDepthPollPrct6)	double	The value of sapEgrQosQueueDepthPollPrct6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrnt7 [Depth Poll Prcnt 7] (sapEgrQosQueueDepthPollPrnt7)	double	The value of sapEgrQosQueueDepthPollPrnt7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt8 [Depth Poll Prcnt 8] (sapEgrQosQueueDepthPollPrnt8)	double	The value of sapEgrQosQueueDepthPollPrnt8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrnt9 [Depth Poll Prcnt 9] (sapEgrQosQueueDepthPollPrnt9)	double	The value of sapEgrQosQueueDepthPollPrnt9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.
<p>GroupInterfaceURPFStats MIB entry name: vRtrIfStatsEntry Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted. Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • vprn.GroupInterface 		
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailV6Bytes [URPFCheck Fail V6 Bytes] (vRtrIfV6uRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfV6uRPFCheckFailBytes indicates the number of bytes in IPv6 packets that fail uRPF check on this interface.
uRPFCheckFailV6BytesHigh32 [URPFCheck Fail V6 Bytes High 32] (vRtrIfV6uRPFCheckFailBytesHigh32)	long	The value of vRtrIfV6uRPFCheckFailBytesHigh32 indicates the high 32 bits word of the value of vRtrIfV6uRPFCheckFailBytes.
uRPFCheckFailV6BytesLow32 [URPFCheck Fail V6 Bytes Low 32] (vRtrIfV6uRPFCheckFailBytesLow32)	long	The value of vRtrIfV6uRPFCheckFailBytesLow32 indicates the lower 32 bits word of the value of vRtrIfV6uRPFCheckFailBytes.
uRPFCheckFailV6Pkts [URPFCheck Fail V6 Pkts] (vRtrIfV6uRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfV6uRPFCheckFailPkts indicates the number of IPv6 packets that fail uRPF check on this interface.
uRPFCheckFailV6PktsHigh32 [URPFCheck Fail V6 Pkts High 32] (vRtrIfV6uRPFCheckFailPktsHigh32)	long	The value of vRtrIfV6uRPFCheckFailPktsHigh32 indicates the high 32 bits word of the value of vRtrIfV6uRPFCheckFailPkts.
uRPFCheckFailV6PktsLow32 [URPFCheck Fail V6 Pkts Low 32] (vRtrIfV6uRPFCheckFailPktsLow32)	long	The value of vRtrIfV6uRPFCheckFailPktsLow32 indicates the lower 32 bits word of the value of vRtrIfV6uRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.
<p>IngressAccessQDepthInfo MIB entry name: sapIngQosQueueDepthInfoEntry Entry description: The value of sapIngQosQueueDepthInfoEntry represents queue-depth monitoring information for SAP ingress override queue for which the value of sapIngQosQMonitorDepth is set to 'true (1)'. Table description (for sapIngQosQueueDepthInfoTable): The value of sapIngQosQueueDepthInfoTable has an entry for each SAP ingress override queue for which the value of sapIngQosQMonitorDepth is set to 'true (1)'. Supports realtime plotting Supports scheduled collection Monitored class: service.IngressAccessPolicyQueueOverride</p>		
depthAvgElpsdTime [Depth Avg Elpsd Time] (sapIngQosQueueDepthAvgElpsdTme)	String	The value of sapIngQosQueueDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctInterval [Depth Avg Poll Prct Interval] (sapIngQosQueueDepthAvgPollInt)	long	The value of sapIngQosQueueDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrct1 [Depth Poll Prct 1] (sapIngQosQueueDepthPollPrct1)	double	The value of sapIngQosQueueDepthPollPrct1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrct10 [Depth Poll Prct 10] (sapIngQosQueueDepthPollPrct10)	double	The value of sapIngQosQueueDepthPollPrct10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrct2 [Depth Poll Prct 2] (sapIngQosQueueDepthPollPrct2)	double	The value of sapIngQosQueueDepthPollPrct2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.
depthPollPrct3 [Depth Poll Prct 3] (sapIngQosQueueDepthPollPrct3)	double	The value of sapIngQosQueueDepthPollPrct3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrct4 [Depth Poll Prct 4] (sapIngQosQueueDepthPollPrct4)	double	The value of sapIngQosQueueDepthPollPrct4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrct5 [Depth Poll Prct 5] (sapIngQosQueueDepthPollPrct5)	double	The value of sapIngQosQueueDepthPollPrct5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrct6 [Depth Poll Prct 6] (sapIngQosQueueDepthPollPrct6)	double	The value of sapIngQosQueueDepthPollPrct6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrct7 [Depth Poll Prct 7] (sapIngQosQueueDepthPollPrct7)	double	The value of sapIngQosQueueDepthPollPrct7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrct8 [Depth Poll Prct 8] (sapIngQosQueueDepthPollPrct8)	double	The value of sapIngQosQueueDepthPollPrct8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrct9 [Depth Poll Prct 9] (sapIngQosQueueDepthPollPrct9)	double	The value of sapIngQosQueueDepthPollPrct9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

uRPFCheckFailV6Pkts [URPFCheck Fail V6 Pkts] (vRtrIfV6uRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfV6uRPFCheckFailPkts indicates the number of IPv6 packets that fail uRPF check on this interface.
uRPFCheckFailV6PktsHigh32 [URPFCheck Fail V6 Pkts High 32] (vRtrIfV6uRPFCheckFailPktsHigh32)	long	The value of vRtrIfV6uRPFCheckFailPktsHigh32 indicates the high 32 bits word of the value of vRtrIfV6uRPFCheckFailPkts.
uRPFCheckFailV6PktsLow32 [URPFCheck Fail V6 Pkts Low 32] (vRtrIfV6uRPFCheckFailPktsLow32)	long	The value of vRtrIfV6uRPFCheckFailPktsLow32 indicates the lower 32 bits word of the value of vRtrIfV6uRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppoeSapStats MIB entry name: tmnxPppoeSapStatsEntry Entry description: PPPoE statistics about a SAP. Table description (for tmnxPppoeSapStatsTable): A table that contains statistics on PPPoE per SAP. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vpls.L2AccessInterface • vprn.ServiceAccessPoint 		
pppoeSapReceivedDropped [Pppoe Sap Received Dropped] (tmnxPppoeSapRxDropped)	long	The value of tmnxPppoeSapRxDropped indicates the number of dropped PPPoE packets.
pppoeSapReceivedInvalidAcCookie [Pppoe Sap Received Invalid Ac Cookie] (tmnxPppoeSapRxInvalidAcCookie)	long	The value of tmnxPppoeSapRxInvalidAcCookie indicates the number of PPPoE Active Discovery packets received with an invalid AC-Cookie tag.
pppoeSapReceivedInvalidCode [Pppoe Sap Received Invalid Code] (tmnxPppoeSapRxInvalidCode)	long	The value of tmnxPppoeSapRxInvalidCode indicates the number of PPPoE packets received with an invalid code field.
pppoeSapReceivedInvalidLen [Pppoe Sap Received Invalid Len] (tmnxPppoeSapRxInvalidLen)	long	The value of tmnxPppoeSapRxInvalidLen indicates the number of PPPoE packets received with an invalid length field.
pppoeSapReceivedInvalidMac [Pppoe Sap Received Invalid Mac] (tmnxPppoeSapRxInvalidMac)	long	The value of tmnxPppoeSapRxInvalidMac indicates the number of PPPoE packets received with an invalid MAC address.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppoeSapReceivedInvalidSession [Pppoe Sap Received Invalid Session] (tmnxPppoeSapRxInvalidSession)	long	The value of tmnxPppoeSapRxInvalidSession indicates the number of PPPoE packets received with an invalid session-id field.
pppoeSapReceivedInvalidTags [Pppoe Sap Received Invalid Tags] (tmnxPppoeSapRxInvalidTags)	long	The value of tmnxPppoeSapRxInvalidTags indicates the number of PPPoE Active Discovery packets received with invalid tags.
pppoeSapReceivedInvalidType [Pppoe Sap Received Invalid Type] (tmnxPppoeSapRxInvalidType)	long	The value of tmnxPppoeSapRxInvalidType indicates the number of PPPoE packets received with an invalid type field.
pppoeSapReceivedInvalidVersion [Pppoe Sap Received Invalid Version] (tmnxPppoeSapRxInvalidVersion)	long	The value of tmnxPppoeSapRxInvalidVersion indicates the number of PPPoE packets received with an invalid version field.
pppoeSapReceivedPADI [Pppoe Sap Received PADI] (tmnxPppoeSapRxPadi)	long	The value of tmnxPppoeSapRxPadi indicates the number of PADI (PPPoE Active Discovery Initiation) packets received on this SAP.
pppoeSapReceivedPADR [Pppoe Sap Received PADR] (tmnxPppoeSapRxPadr)	long	The value of tmnxPppoeSapRxPadr indicates the number of PADR (PPPoE Active Discovery Request) packets received on this SAP.
pppoeSapReceivedPADT [Pppoe Sap Received PADT] (tmnxPppoeSapRxPadt)	long	The value of tmnxPppoeSapRxPadt indicates the number of PADT (PPPoE Active Discovery Terminate) packets received on this SAP.
pppoeSapReceivedSession [Pppoe Sap Received Session] (tmnxPppoeSapRxSession)	long	The value of tmnxPppoeSapRxSession indicates the number packets received during the PPP session stage on this SAP.
pppoeSapTransmittedPADO [Pppoe Sap Transmitted PADO] (tmnxPppoeSapTxPado)	long	The value of tmnxPppoeSapTxPado indicates the number of PADO (PPPoE Active Discovery Offer) packets transmitted on this SAP.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppoeSapTransmittedPADS [Pppoe Sap Transmitted PADS] (tmnxPppoeSapTxPads)	long	The value of tmnxPppoeSapTxPads indicates the number of PADS (PPPoE Active Discovery Session) packets transmitted on this SAP.
pppoeSapTransmittedPADT [Pppoe Sap Transmitted PADT] (tmnxPppoeSapTxPadt)	long	The value of tmnxPppoeSapTxPadt indicates the number of PADT (PPPoE Active Discovery Terminate) packets transmitted on this SAP.
pppoeSapTransmittedSession [Pppoe Sap Transmitted Session] (tmnxPppoeSapTxSession)	long	The value of tmnxPppoeSapTxSession indicates the number packets transmitted during the PPP session stage on this SAP.
SapAtmPppStats MIB entry name: sapAtmPppStatsEntry Entry description: PPP statistics about a specific ATM SAP. Table description (for sapAtmPppStatsTable): A table that contains ATM SAP PPP statistics information. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vprn.ServiceAccessPoint 		
rxDropped [Rx Dropped] (sapAtmPppStatsRxDropped)	long	The value of sapAtmPppStatsRxDropped indicates the number of PPP packets dropped on this ATM SAP since the last re-initialization of the local network management subsystem, or the last time the statistics were cleared.
rxPackets [Rx Packets] (sapAtmPppStatsRxPackets)	long	The value of sapAtmPppStatsRxPackets indicates the number of PPP packets received on this ATM SAP since the last re-initialization of the local network management subsystem, or the last time the statistics were cleared.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txPackets [Tx Packets] (sapAtmPppStatsTxPackets)	long	The value of sapAtmPppStatsTxPackets indicates the number of PPP packets transmitted on this ATM SAP since the last re-initialization of the local network management subsystem, or the last time the statistics were cleared.
<p>SapBaseStats MIB entry name: sapBaseStatsEntry Entry description: Basic statistics about a specific SAP. Table description (for sapBaseStatsTable): A table that contains basic SAP statistics. In the descriptions below 'Pchip' refers to the Nokia SROS series Packet Processing chip, while 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface • service.ServiceAccessPoint 		
authenticationPacketsDiscarded [Authentication Packets Discarded] (sapBaseStatsAuthenticationPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
authenticationPacketsSuccessful [Authentication Packets Successful] (sapBaseStatsAuthenticationPktsSuccess)	long	The number of DHCP packets successfully authenticated.
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInte- ger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchip- DroppedPackets)	java. math. BigInte- ger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOf- feredHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOf- feredHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOf- feredLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOf- feredLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedUncoloredOctets [Ingress PChip Offered Uncolored Octets] (sapBaseStatsIngressPchipOf- feredUncoloredOctets)	java. math. BigInte- ger	The number of uncolored octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedUncoloredPackets [Ingress PChip Offered Uncolored Packets] (sapBaseStatsIngressPchipOf- feredUncoloredPackets)	java. math. BigInte- ger	The number of uncolored packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
ingressRcvdValidOcts [Ingress Rcvd Valid Octs] (sapBaseStatsIngPchipRcvdValidOct)	java. math. BigInte- ger	The value of sapBaseStatsIngPchipRcvdValidOct indicates number of received valid octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressRcvdValidPkts [Ingress Rcvd Valid Pkts] (sapBaseStatsIngPchipRcvdValidPkt)	java. math. BigInte- ger	The value of sapBaseStatsIngPchipRcvdValidPkt indicates number of received valid packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapDcpFpDynamicStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.L3AccessInterface • ies.ServiceAccessPoint • ipipe.L2AccessInterface • mvpls.IL2AccessInterface • mvpls.L2AccessInterface • vll.L2AccessInterface • vpls.IL2AccessInterface • vpls.L2AccessInterface • vprn.L3AccessInterface • vprn.ServiceAccessPoint 		
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detectionTime [Detection Time] (sapDcpFpDynDetectionTime)	long	The value of sapDcpFpDynDetectionTime indicates the detection time remaining for the dynamic policer for a given protocol.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
holdDown [Hold Down] (sapDcpFpDynHoldDown)	int	The value of sapDcpFpDynHoldDown indicates the remaining hold-down period for the dynamic policer for a given protocol.
isAllocated [Is Allocated] (sapDcpFpDynAllocated)	boolean	The value of sapDcpFpDynAllocated indicates whether dynamic policer has been allocated for this protocol.
pktsExcd [Pkts Excd] (sapDcpFpDynExcdCount)	java.math. BigInteger	The value of sapDcpFpDynExcdCount indicates number of packets exceeding the policing parameters since the dynamic policer for the given protocol was previously declared as conformant or newly instantiated.
policerState [Policer State] (sapDcpFpDynState)	int	The value of sapDcpFpDynState indicates the state of the dynamic policer for a particular protocol configured on Distributed CPU Protection Policy.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protocolName [Protocol Name] (sapDcpFpProtocol)	int	The value of sapDcpFpProtocol specifies the protocol name to be monitored by Distributed CPU Protection Policy.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>SapDcpFpLocMonPlcrStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.L3AccessInterface • ies.ServiceAccessPoint • ipipe.L2AccessInterface • mvpls.IL2AccessInterface • mvpls.L2AccessInterface • vll.L2AccessInterface • vpls.IL2AccessInterface • vpls.L2AccessInterface • vprn.L3AccessInterface • vprn.ServiceAccessPoint 		

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
isAllocated [Is Allocated] (sapDcpFpLocMonAllDynAlloc)	boolean	The value of sapDcpFpLocMonAllDynAlloc indicates whether all the dynamic policers associated with this local-monitor have been allocated.
pktsExcd [Pkts Excd] (sapDcpFpLocMonExcdCount)	java.math.BigInteger	The value of sapDcpFpLocMonExcdCount indicates number of packets exceeding the policing parameters since the given local-monitoring policer was previously declared as conformant or newly instantiated.
policerName [Policer Name] (sapDcpFpLocMonPlicrName)	String	The value of sapDcpFpLocMonPlicrName specifies the local monitoring policy name for Distributed CPU Protection Policy.
policerState [Policer State] (sapDcpFpLocMonState)	int	The value of sapDcpFpLocMonState indicates the state of the local-monitoring policer configured on Distributed CPU Protection Policy.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>SapDcpFpStaticStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
detectionTime [Detection Time] (sapDcpFpStaticDetectionTime)	long	The value of sapDcpFpStaticDetectionTime indicates the detection time remaining for a given static-policer.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
holdDown [Hold Down] (sapDcpFpStaticHoldDown)	int	The value of sapDcpFpStaticHoldDown indicates the remaining hold-down period for a given static-policer.
pktsExcd [Pkts Excd] (sapDcpFpStaticExcdCount)	java. math. BigInte- ger	The value of sapDcpFpStaticExcdCount indicates number of packets exceeding the policing parameters since the given static-policer was previously declared as conformant or newly instantiated.
policerName [Policer Name] (sapDcpFpStaticPlcrName)	String	The value of sapDcpFpStaticPlcrName specifies the static-policer name for Distributed CPU Protection Policy.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>policerState [Policer State] (sapDcpFpStaticState)</p>	int	The value of sapDcpFpStaticState indicates the state of the static-policer configured on Distributed CPU Protection Policy.
<p>portId [Port Id] (sapPortId)</p>	long	The ID of the access port where this SAP is defined.
<p>serviceId [Service Id] (svclId)</p>	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>SapEgrEGBaseStats MIB entry name: sapEgrEGBaseStEntry Entry description: Egress statistics about a specific Encap Group of a SAP. Table description (for sapEgrEGBaseStTable): The sapEgrEGBaseStTable contains egress Encap Group basic SAP statistics at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. In the descriptions below 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
<p>custId [Cust Id] (sapEgrEGBaseStCustId)</p>	long	The value of sapEgrEGBaseStCustId indicates the Customer ID for the associated service.
<p>dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGBaseStQcDpdInPfOcts)</p>	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdInPfOcts indicates the number of in-profile octets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGBaseStQcDpdInPfOctsH)	long	The value of sapEgrEGBaseStQcDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGBaseStQcDpdInPfOctsL)	long	The value of sapEgrEGBaseStQcDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGBaseStQcDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdInPfPkts indicates the number of in-profile packets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGBaseStQcDpdInPfPktsH)	long	The value of sapEgrEGBaseStQcDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGBaseStQcDpdInPfPktsL)	long	The value of sapEgrEGBaseStQcDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGBaseStQcDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGBaseStQcDpdOutPfOctsH)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGBaseStQcDpdOutPfOctsL)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGBaseStQcDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGBaseStQcDpdOutPfPktsH)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGBaseStQcDpdOutPfPktsL)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGBaseStQcFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGBaseStQcFwdInPfOctsH)	long	The value of sapEgrEGBaseStQcFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGBaseStQcFwdInPfOctsL)	long	The value of sapEgrEGBaseStQcFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGBaseStQcFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGBaseStQcFwdInPfPktsH)	long	The value of sapEgrEGBaseStQcFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfPkts.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGBaseStQcFwdInPfPktsL)	long	The value of sapEgrEGBaseStQcFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGBaseStQcFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGBaseStQcFwdOutPfOctsH)	long	The value of sapEgrEGBaseStQcFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGBaseStQcFwdOutPfOctsL)	long	The value of sapEgrEGBaseStQcFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGBaseStQcFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGBaseStQcFwdOutPfPktsH)	long	The value of sapEgrEGBaseStQcFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdOutPfPkts.
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGBaseStQcFwdOutPfPktsL)	long	The value of sapEgrEGBaseStQcFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdOutPfPkts.

Table 289 service statistics (continued)

fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGMbrQueueStFwdInPfPktsH)	long	The value of sapEgrEGMbrQueueStFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGMbrQueueStFwdInPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGMbrQueueStFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress queue.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGMbrQueueStFwdOutPfOctsH)	long	The value of sapEgrEGMbrQueueStFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGMbrQueueStFwdOutPfOctsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGMbrQueueStFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress queue.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGMbrQueueStFwdOutPfPktsH)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGMbrQueueStFwdOutPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
queueId [Queue Id] (sapEgrEGMbrQueueId)	long	The value of sapEgrEGMbrQueueId indicates the index of the egress QoS queue of this SAP.
<p>SapEgrEGMbrSchedStats MIB entry name: sapEgrEGMbrSchedStEntry Entry description: Egress statistics about a specific QoS scheduler instantiated per encapsulation group member of SAP. Table description (for sapEgrEGMbrSchedStTable): The sapEgrEGMbrSchedStTable contains egress encapsulation group QoS scheduler SAP per member. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGMbrSchedCustId)	long	The value of sapEgrEGMbrSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octs] (sapEgrEGMbrSchedStFwdOcts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdOcts indicates the number of octets forwarded by the egress QoS scheduler of this SAP.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOctsH [Fwd Octets H] (sapEgrEGMbrSchedStFwdOctsH)	long	The value of sapEgrEGMbrSchedStFwdOctsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdOctsL [Fwd Octets L] (sapEgrEGMbrSchedStFwdOctsL)	long	The value of sapEgrEGMbrSchedStFwdOctsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdPkts [Fwd Pkts] (sapEgrEGMbrSchedStFwdPkts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdPkts indicates the number of packets forwarded by the egress QoS scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapEgrEGMbrSchedStFwdPktsH)	long	The value of sapEgrEGMbrSchedStFwdPktsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
fwdPktsL [Fwd Pkts L] (sapEgrEGMbrSchedStFwdPktsL)	long	The value of sapEgrEGMbrSchedStFwdPktsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
schedName [Sched Name] (sapEgrEGMbrSchedStName)	String	The sapEgrEGMbrSchedStName specifies the name of the egress QoS scheduler of this SAP.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapEgrEGQueueStats</p> <p>MIB entry name: sapEgrEGQueueStEntry</p> <p>Entry description: Egress QoS queue statistics about a specific Encap group of a SAP.</p> <p>Table description (for sapEgrEGQueueStTable): The sapEgrEGQueueStTable contains egress Encap Group queue statistics at the Group level. Table description (for tmnxVdoSGSpliceStatusTable): The tmnxVdoSGSpliceStatusTable has an entry for each splice request received by the splicer. This table contains information about the splice request. Does not support realtime plotting Supports scheduled collection Monitored class: service.ZoneAdiChl</p>		
vdoSGSpliceAbortReason [Vdo SGSplice Abort Reason] (tmnxVdoSGSpliceAbortReason)	long	The value of tmnxVdoSGSpliceAbortReason indicates the reason if a splice operation has been aborted. If the value of this object is equal to 'none', then the splice has not been aborted.
vdoSGSpliceAdServerAddr [Vdo SGSplice Ad Server Addr] (tmnxVdoSGSpliceAdServerAddr)	String	The value of tmnxVdoSGSpliceAdServerAddr indicates the address of the Ad Insert (ADI) server that issued the splice request.
vdoSGSpliceAdServerAddrType [Vdo SGSplice Ad Server Addr Type] (tmnxVdoSGSpliceAdServerAddrType)	int	The value of tmnxVdoSGSpliceAdServerAddrType indicates the type of Ad Insert (ADI) server address represented by tmnxVdoSGSpliceAdServerAddr.
vdoSGSpliceBlkFramePTS [Vdo SGSplice Blk Frame PTS] (tmnxVdoSGSpliceBlkFramePTS)	String	The value of tmnxVdoSGSpliceBlkFramePTS indicates the Presentation Timestamp (PTS) of the first black frame.
vdoSGSpliceDurationPlayed [Vdo SGSplice Duration Played] (tmnxVdoSGSpliceDurationPlayed)	long	The value of tmnxVdoSGSpliceDurationPlayed indicates the splice duration, in seconds, played by the splicer.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGSpliceDurationReq [Vdo SGSsplice Duration Req] (tmnxVdoSGSpliceDurationReq)	long	The value of tmnxVdoSGSpliceDurationReq indicates the splice duration, in seconds, of the ad requested by the Ad Insert (ADI) server.
vdoSGSpliceMaxAdPTS [Vdo SGSsplice Max Ad PTS] (tmnxVdoSGSpliceMaxAdPTS)	String	The value of tmnxVdoSGSpliceMaxAdPTS indicates the maximum Presentation Timestamp (PTS) value of the last Group of Pictures (GOP) of ad stream (non-black frame).
vdoSGSpliceMinNwPTS [Vdo SGSsplice Min Nw PTS] (tmnxVdoSGSpliceMinNwPTS)	String	The value of tmnxVdoSGSpliceMinNwPTS indicates the minimum Presentation Timestamp (PTS) value from the first Group of Pictures (GOP) of the network stream after the splice out has occurred.
vdoSGSpliceNumBlkFrames [Vdo SGSsplice Num Blk Frames] (tmnxVdoSGSpliceNumBlkFrames)	long	The value of tmnxVdoSGSpliceNumBlkFrames indicates the number of black frames inserted.
vdoSGSplicePriorSessionId [Vdo SGSsplice Prior Session Id] (tmnxVdoSGSplicePriorSessionId)	long	The value of tmnxVdoSGSplicePriorSessionId indicates the prior session id of the ad. If the value of this object is not equal to 0xFFFFFFFF, then this splice is a back-to-back ad insertion.
vdoSGSpliceRate [Vdo SGSsplice Rate] (tmnxVdoSGSpliceRate)	long	The value of tmnxVdoSGSpliceRate indicates the rate of the ad stream, in kilo-bits per second (kbps), received by the splicer.
vdoSGSpliceSessionId [Vdo SGSsplice Session Id] (tmnxVdoSGSpliceSessionId)	long	The value of tmnxVdoSGSpliceSessionId indicates the session ID of the ad request.
vdoSGSpliceSpliceInSeqNum [Vdo SGSsplice Splice In Seq Num] (tmnxVdoSGSpliceSpliceInSeqNum)	long	The value of tmnxVdoSGSpliceSpliceInSeqNum indicates the sequence number at which the splice-in to the ad occurred.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGSpliceSpliceOutSeqNum [Vdo SGSplice Splice Out Seq Num] (tmnxVdoSGSpliceSpliceOutSeqNum)	long	The value of tmnxVdoSGSpliceSpliceOutSeqNum indicates the sequence number at which the splice-out to the ad occurred.
vdoSGSpliceStartTime [Vdo SGSplice Start Time] (tmnxVdoSGSpliceStartTime)	long	The value of tmnxVdoSGSpliceStartTime indicates the start time of splice in seconds.
vdoSGSpliceStatus [Vdo SGSplice Status] (tmnxVdoSGSpliceStatus)	long	The value of tmnxVdoSGSpliceStatus indicates the status of this splice request.
VdoGrpSrcStats MIB entry name: tmnxVdoGrpSrcStatEntry Entry description: An entry in the tmnxVdoGrpSrcStatTable. Each entry represents a source address for the corresponding multicast group. Table description (for tmnxVdoGrpSrcStatTable): tmnxVdoGrpSrcStatTable contains channel information and statistics for the multicast groups. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • service.AdiChl • service.ZoneAdiChl 		
vdoGrpSrcADIAAdminState [Vdo Grp Src ADIAAdmin State] (tmnxVdoGrpSrcADIAAdminState)	int	The value of tmnxVdoGrpSrcADIAAdminState indicates whether Ad Insertion is enabled on the video ISA.
vdoGrpSrcADICurrentState [Vdo Grp Src ADICurrent State] (tmnxVdoGrpSrcADICurrentState)	long	The value of tmnxVdoGrpSrcADICurrentState indicates whether the video ISA is transmitting network stream or ads.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcADIPATChanges [Vdo Grp Src ADIPATChanges] (tmnxVdoGrpSrcADIPATChanges)	long	The value of tmnxVdoGrpSrcADIPATChanges indicates the total number of Program Association Table (PAT) version changes.
vdoGrpSrcADIPATVersion [Vdo Grp Src ADIPATVersion] (tmnxVdoGrpSrcADIPATVersion)	long	The value of tmnxVdoGrpSrcADIPATVersion indicates the version of the Program Association Table (PAT).
vdoGrpSrcADIPMTChanges [Vdo Grp Src ADIPMTChanges] (tmnxVdoGrpSrcADIPMTChanges)	long	The value of tmnxVdoGrpSrcADIPMTChanges indicates the total number of Program Map Table (PMT) version changes.
vdoGrpSrcADIPMTVersion [Vdo Grp Src ADIPMTVersion] (tmnxVdoGrpSrcADIPMTVersion)	long	The value of tmnxVdoGrpSrcADIPMTVersion indicates the version of the Program Map Table (PMT).
vdoGrpSrcADIRxPackets [Vdo Grp Src ADIRx Packets] (tmnxVdoGrpSrcADIRxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcADIRxPackets indicates the total number of Ad Insert (ADI) packets received by the video ISA.
vdoGrpSrcADIRxSCTE35MsgDisc [Vdo Grp Src ADIRx SCTE35 Msg Disc] (tmnxVdoGrpSrcADIRxSCTE35MsgDisc)	long	The value of tmnxVdoGrpSrcADIRxSCTE35MsgDisc indicates the total number of Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA and discarded. SCTE-35 messages with unsupported commands and encrypted SCTE-35 messages are discarded.
vdoGrpSrcADIRxSCTE35MsgEnc [Vdo Grp Src ADIRx SCTE35 Msg Enc] (tmnxVdoGrpSrcADIRxSCTE35MsgEnc)	long	The value of tmnxVdoGrpSrcADIRxSCTE35MsgEnc indicates the total number of encrypted Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA.
vdoGrpSrcADIRxSCTE35MsgUnsup [Vdo Grp Src ADIRx SCTE35 Msg Unsup] (tmnxVdoGrpSrcADIRxSCTE35MsgUnsup)	long	The value of tmnxVdoGrpSrcADIRxSCTE35MsgUnsup indicates the total number of unsupported Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcADIRxSCTE35Msgs [Vdo Grp Src ADIRx SCTE35 Msgs] (tmnxVdoGrpSrcADIRxSCTE35Msgs)	long	The value of tmnxVdoGrpSrcADIRxSCTE35Msgs indicates the total number of Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA.
vdoGrpSrcADITxPackets [Vdo Grp Src ADITx Packets] (tmnxVdoGrpSrcADITxPackets)	java. math. BigInte- ger	The value of tmnxVdoGrpSrcADITxPackets indicates the total number of Ad Insert (ADI) packets sent by the video ISA.
vdoGrpSrcADIUnsuppTSLenPkts [Vdo Grp Src ADIUnsupp TSLen Pkts] (tmnxVdoGrpSrcADIUnsuppTSLenPkts)	long	The value of tmnxVdoGrpSrcADIUnsuppTSLenPkts indicates the total number of data packets received whose size is not equal to 188 bytes. The value of this object is valid only when the corresponding tmnxVdoGrpADIServerState value is set to 'true'.
vdoGrpSrcAdminBW [Vdo Grp Src Admin BW] (tmnxVdoGrpSrcAdminBW)	long	The value of tmnxVdoGrpSrcAdminBW indicates the administrative bandwidth of the multicast group.
vdoGrpSrcAdminRTBufferSize [Vdo Grp Src Admin RTBuffer Size] (tmnxVdoGrpSrcAdminRTBufferSize)	long	The value of tmnxVdoGrpSrcAdminRTBufferSize indicates the number of milliseconds worth of channel packets to store for the Retransmission (RT) server.
vdoGrpSrcBufferSize [Vdo Grp Src Buffer Size] (tmnxVdoGrpSrcBufferSize)	long	The value of tmnxVdoGrpSrcBufferSize indicates the number of milliseconds worth of channel packets stored by the Retransmission (RT) server or Fast Channel Change (FCC) server on this channel.
vdoGrpSrcDupSeqNumber [Vdo Grp Src Dup Seq Number] (tmnxVdoGrpSrcDupSeqNumber)	long	The value of tmnxVdoGrpSrcDupSeqNumber indicates the total number of Real-time Transport Protocol (RTP) packets detected with a duplicate sequence number.
vdoGrpSrcDupSsrc [Vdo Grp Src Dup Ssrc] (tmnxVdoGrpSrcDupSsrc)	long	The value of tmnxVdoGrpSrcDupSsrc indicates the number of packets detected with a duplicate synchronization source (SSRC) identifier.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcFCCSvrAdminState [Vdo Grp Src FCCSvr Admin State] (tmnxVdoGrpSrcFCCSvrAdminState)	int	The value of tmnxVdoGrpSrcFCCSvrAdminState indicates whether the Fast Channel Change (FCC) server is enabled on this channel.
vdoGrpSrcFCCSvrChnlType [Vdo Grp Src FCCSvr Chnl Type] (tmnxVdoGrpSrcFCCSvrChnlType)	int	The value of tmnxVdoGrpSrcFCCSvrChnlType indicates the type of channel served by the Fast Channel Change (FCC) server.
vdoGrpSrcFCCSvrRxFCCReq [Vdo Grp Src FCCSvr Rx FCCReq] (tmnxVdoGrpSrcFCCSvrRxFCCReq)	long	The value of tmnxVdoGrpSrcFCCSvrRxFCCReq indicates the total number of Fast Channel Change (FCC) requests received by the FCC server.
vdoGrpSrcFCCSvrRxFailedReq [Vdo Grp Src FCCSvr Rx Failed Req] (tmnxVdoGrpSrcFCCSvrRxFailedReq)	long	The value of tmnxVdoGrpSrcFCCSvrRxFailedReq indicates the total number of failed requests at the Fast Channel Change (FCC) server.
vdoGrpSrcFCCSvrTxBytes [Vdo Grp Src FCCSvr Tx Bytes] (tmnxVdoGrpSrcFCCSvrTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcFCCSvrTxBytes indicates the total number of bytes sent by the Fast Channel Change (FCC) server.
vdoGrpSrcFCCSvrTxFCCReplies [Vdo Grp Src FCCSvr Tx FCCReplies] (tmnxVdoGrpSrcFCCSvrTxFCCReplies)	long	The value of tmnxVdoGrpSrcFCCSvrTxFCCReplies indicates the total number of Fast Channel Change (FCC) replies sent by the FCC server.
vdoGrpSrcFCCSvrTxPackets [Vdo Grp Src FCCSvr Tx Packets] (tmnxVdoGrpSrcFCCSvrTxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcFCCSvrTxPackets indicates the total number of packets sent by the Fast Channel Change (FCC) server.
vdoGrpSrcGroupAddress [Vdo Grp Src Group Address] (tmnxVdoGrpSrcGroupAddress)	String	The value of tmnxVdoGrpSrcGroupAddress indicates the IP multicast group address for which this entry contains information.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcGrpAddrType [Vdo Grp Src Grp Addr Type] (tmnxVdoGrpSrcGrpAddrType)	int	The value of tmnxVdoGrpSrcGrpAddrType indicates the type of IP multicast group address represented by tmnxVdoGrpSrcGroupAddress.
vdoGrpSrcRTClientAdminState [Vdo Grp Src RTClient Admin State] (tmnxVdoGrpSrcRTClientAdminState)	int	The value of tmnxVdoGrpSrcRTClientAdminState indicates the administrative state of the retransmission client.
vdoGrpSrcRTClientFailedReq [Vdo Grp Src RTClient Failed Req] (tmnxVdoGrpSrcRTClientFailedReq)	long	The value of tmnxVdoGrpSrcRTClientFailedReq indicates the total number of Retransmission (RT) requests that could not be generated by the RT client due to gaps in the sequence numbers.
vdoGrpSrcRTClientGapsDetectd [Vdo Grp Src RTClient Gaps Detectd] (tmnxVdoGrpSrcRTClientGapsDetectd)	long	The value of tmnxVdoGrpSrcRTClientGapsDetectd indicates the total number of gaps in the sequence numbers detected by the Retransmission (RT) client.
vdoGrpSrcRTClientRTSvrPort [Vdo Grp Src RTClient RTSvr Port] (tmnxVdoGrpSrcRTClientRTSvrPort)	long	The value of tmnxVdoGrpSrcRTClientRTSvrPort indicates the Retransmission (RT) server port for this channel.
vdoGrpSrcRTClientRxReTxBytes [Vdo Grp Src RTClient Rx Re Tx Bytes] (tmnxVdoGrpSrcRTClientRxReTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcRTClientRxReTxBytes indicates the total number of retransmitted bytes received by the Retransmission (RT) client.
vdoGrpSrcRTClientRxReTxPkts [Vdo Grp Src RTClient Rx Re Tx Pkts] (tmnxVdoGrpSrcRTClientRxReTxPkts)	java. math. BigInteger	The value of tmnxVdoGrpSrcRTClientRxReTxPkts indicates the total number of retransmitted packets received by the Retransmission (RT) client.
vdoGrpSrcRTClientTxRTReq [Vdo Grp Src RTClient Tx RTReq] (tmnxVdoGrpSrcRTClientTxRTReq)	long	The value of tmnxVdoGrpSrcRTClientTxRTReq indicates the total number of Retransmission (RT) requests sent by the RT client.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcRTClientTxRTReqReTx [Vdo Grp Src RTClient Tx RTReq Re Tx] (tmnxVdoGrpSrcRTClientTxRTReqReTx)	long	The value of tmnxVdoGrpSrcRTClientTxRTReqReTx indicates the total number of repeat Retransmission (RT) requests attempted by the RT client.
vdoGrpSrcRTCIntRTSvrAddr [Vdo Grp Src RTCInt RTSvr Addr] (tmnxVdoGrpSrcRTCIntRTSvrAddr)	String	The value of tmnxVdoGrpSrcRTCIntRTSvrAddr indicates the address of the Retransmission (RT) server for this channel.
vdoGrpSrcRTCIntRTSvrAddrType [Vdo Grp Src RTCInt RTSvr Addr Type] (tmnxVdoGrpSrcRTCIntRTSvrAddrType)	int	The value of tmnxVdoGrpSrcRTCIntRTSvrAddrType indicates the type of address represented by tmnxVdoGrpSrcRTCIntRTSvrAddr.
vdoGrpSrcRTSvrAdminState [Vdo Grp Src RTSvr Admin State] (tmnxVdoGrpSrcRTSvrAdminState)	int	The value of tmnxVdoGrpSrcRTSvrAdminState indicates the administrative state of the Retransmission (RT) server.
vdoGrpSrcRTSvrRtpPktsReq [Vdo Grp Src RTSvr Rtp Pkts Req] (tmnxVdoGrpSrcRTSvrRtpPktsReq)	long	The value of tmnxVdoGrpSrcRTSvrRtpPktsReq indicates the total number of Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this channel.
vdoGrpSrcRTSvrRxFailedReq [Vdo Grp Src RTSvr Rx Failed Req] (tmnxVdoGrpSrcRTSvrRxFailedReq)	long	The value of tmnxVdoGrpSrcRTSvrRxFailedReq indicates the total number of failed requests at the Retransmission (RT) server due to congestion or lack of resources.
vdoGrpSrcRTSvrRxRTReq [Vdo Grp Src RTSvr Rx RTReq] (tmnxVdoGrpSrcRTSvrRxRTReq)	long	The value of tmnxVdoGrpSrcRTSvrRxRTReq indicates the total number of RT requests received by the Retransmission (RT) server.
vdoGrpSrcRTSvrTxBytes [Vdo Grp Src RTSvr Tx Bytes] (tmnxVdoGrpSrcRTSvrTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcRTSvrTxBytes indicates the total number of bytes sent by the Retransmission (RT) server.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcRTSrvrTxPackets [Vdo Grp Src RTSrvr Tx Packets] (tmnxVdoGrpSrcRTSrvrTxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcRTSrvrTxPackets indicates the total number of packets sent by the Retransmission (RT) server.
vdoGrpSrcRTSrvrTxRTReplies [Vdo Grp Src RTSrvr Tx RTReplies] (tmnxVdoGrpSrcRTSrvrTxRTReplies)	long	The value of tmnxVdoGrpSrcRTSrvrTxRTReplies indicates the total number of Retransmission (RT) replies sent by the RT server.
vdoGrpSrcRxBytes [Vdo Grp Src Rx Bytes] (tmnxVdoGrpSrcRxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcRxBytes indicates the total number of bytes received on this multicast channel.
vdoGrpSrcRxDupSsrcDrops [Vdo Grp Src Rx Dup Ssrc Drops] (tmnxVdoGrpSrcRxDupSsrcDrops)	long	The value of tmnxVdoGrpSrcRxDupSsrcDrops indicates the number of receive-packets dropped with a duplicate synchronization source (SSRC) identifier.
vdoGrpSrcRxInvalidPackets [Vdo Grp Src Rx Invalid Packets] (tmnxVdoGrpSrcRxInvalidPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcRxInvalidPackets indicates the total number of invalid packets received on this multicast channel.
vdoGrpSrcRxPackets [Vdo Grp Src Rx Packets] (tmnxVdoGrpSrcRxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcRxPackets indicates the total number of packets received on this multicast channel.
vdoGrpSrcSSRCId [Vdo Grp Src SSRCId] (tmnxVdoGrpSrcSSRCId)	long	The value of tmnxVdoGrpSrcSSRCId indicates the synchronization source (SSRC) identifier carried in the Real-time Transport Protocol (RTP) header to identify the source of a stream of RTP packets.
vdoGrpSrcSourceAddress [Vdo Grp Src Source Address] (tmnxVdoGrpSrcSourceAddress)	String	The value of tmnxVdoGrpSrcSourceAddress indicates the IP multicast source address for which this entry contains information.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcSrcAddrType [Vdo Grp Src Src Addr Type] (tmnxVdoGrpSrcSrcAddrType)	int	The value of tmnxVdoGrpSrcSrcAddrType indicates the type of IP multicast source address represented by tmnxVdoGrpSrcSourceAddress.
vdoGrpSrcStreamType [Vdo Grp Src Stream Type] (tmnxVdoGrpSrcStreamType)	long	The value of tmnxVdoGrpSrcStreamType indicates the type of stream being transmitted from the video ISA perspective. Network stream is the stream ingressing the video ISA and being stored by it. Zone stream is the stream egressing the video ISA into which AD streams will be inserted.
vdoGrpSrcTxBytes [Vdo Grp Src Tx Bytes] (tmnxVdoGrpSrcTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcTxBytes indicates the total number of bytes transmitted on this multicast channel.
vdoGrpSrcTxFailedPackets [Vdo Grp Src Tx Failed Packets] (tmnxVdoGrpSrcTxFailedPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcTxFailedPackets indicates the total number of failures during the transmission of packets on this multicast channel. Failure happens when the packet to be sent is not stored in the video cache.
vdoGrpSrcTxPackets [Vdo Grp Src Tx Packets] (tmnxVdoGrpSrcTxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcTxPackets indicates the total number of packets transmitted on this multicast channel.
vdoGrpSrcUDPDestPort [Vdo Grp Src UDPDest Port] (tmnxVdoGrpSrcUDPDestPort)	long	The value of tmnxVdoGrpSrcUDPDestPort indicates the UDP destination port in the received RTP multicast stream.
vdoGrpSrcUDPSrcPort [Vdo Grp Src UDPSrc Port] (tmnxVdoGrpSrcUDPSrcPort)	long	The value of tmnxVdoGrpSrcUDPSrcPort indicates the UDP source port in the received RTP multicast stream.
vdoGrpSrcUptime [Vdo Grp Src Uptime] (tmnxVdoGrpSrcUptime)	long	The value of tmnxVdoGrpSrcUptime indicates the time since this source group entry was created.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcVdoGrpId [Vdo Grp Src Vdo Grp Id] (tmnxVdoGrpSrcVdoGrpId)	long	The value of tmnxVdoGrpSrcVdoGrpId indicates the identifier of the video group.
<p>VdolfStats MIB entry name: tmnxVdolfStatEntry Entry description: An entry in the tmnxVdolfStatTable. Each row entry represents an IP address assigned to a video interface. Table description (for tmnxVdolfStatTable): tmnxVdolfStatTable contains information and statistics for each video interface configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: service.VideoflpAddress</p>		
vdolfScte30InitSessions [Vdo If Scte 30 Init Sessions] (tmnxVdolfScte30InitSessions)	long	The value of tmnxVdolfScte30InitSessions indicates the total number of scte30 init sessions with the Ad Insert (ADI) servers for this interface.
vdolfScte30TcpSessions [Vdo If Scte 30 Tcp Sessions] (tmnxVdolfScte30TcpSessions)	long	The value of tmnxVdolfScte30TcpSessions indicates the total number of scte30 tcp sessions with the Ad Insert (ADI) servers for this interface.
vdolfStatFCCSrRxHdFCCReq [Vdo If Stat FCCSr Rx Hd FCCReq] (tmnxVdolfStatFCCSrRxHdFCCReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxHdFCCReq indicates the total number of Fast Channel Change (FCC) requests received from High Definition (HD) channels on this interface.
vdolfStatFCCSrRxHdFailedReq [Vdo If Stat FCCSr Rx Hd Failed Req] (tmnxVdolfStatFCCSrRxHdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxHdFailedReq indicates the total number of failed Fast Channel Change (FCC) requests received from High Definition (HD) channels on this interface.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatFCCSrRxPipFCCReq [Vdo If Stat FCCSr Rx Pip FCCReq] (tmnxVdolfStatFCCSrRxPipFCCReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxPipFCCReq indicates the total number of Fast Channel Change (FCC) requests received from Picture-In-Picture (PIP) channels on this interface.
vdolfStatFCCSrRxPipFailedReq [Vdo If Stat FCCSr Rx Pip Failed Req] (tmnxVdolfStatFCCSrRxPipFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxPipFailedReq indicates the total number of failed Fast Channel Change (FCC) requests received from Picture-In-Picture (PIP) channels on this interface.
vdolfStatFCCSrRxSdFCCReq [Vdo If Stat FCCSr Rx Sd FCCReq] (tmnxVdolfStatFCCSrRxSdFCCReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxSdFCCReq indicates the total number of Fast Channel Change (FCC) requests received from Standard Definition (SD) channels on this interface.
vdolfStatFCCSrRxSdFailedReq [Vdo If Stat FCCSr Rx Sd Failed Req] (tmnxVdolfStatFCCSrRxSdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxSdFailedReq indicates the total number of failed Fast Channel Change (FCC) requests received from Standard Definition (SD) channels on this interface.
vdolfStatFCCSrTxHdBytes [Vdo If Stat FCCSr Tx Hd Bytes] (tmnxVdolfStatFCCSrTxHdBytes)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxHdBytes indicates the total number of High Definition (HD) channel bytes sent from this interface.
vdolfStatFCCSrTxHdFCCReplies [Vdo If Stat FCCSr Tx Hd FCCReplies] (tmnxVdolfStatFCCSrTxHdFCCReplies)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxHdFCCReplies indicates the total number of High Definition (HD) channel Fast Channel Change (FCC) replies sent from this interface.
vdolfStatFCCSrTxHdPackets [Vdo If Stat FCCSr Tx Hd Packets] (tmnxVdolfStatFCCSrTxHdPackets)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxHdPackets indicates the total number of High Definition (HD) channel packets sent from this interface.
vdolfStatFCCSrTxPipBytes [Vdo If Stat FCCSr Tx Pip Bytes] (tmnxVdolfStatFCCSrTxPipBytes)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxPipBytes indicates the total number of Picture-In-Picture (PIP) channel bytes sent from this interface.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatFCCSrTxPipFCCRplies [Vdo If Stat FCCSr Tx Pip FCCRplies] (tmnxVdolfStatFCCSrTxPipFCCRplies)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxPipFCCRplies indicates the total number of Picture-In-Picture (PIP) channel Fast Channel Change (FCC) replies sent from this interface.
vdolfStatFCCSrTxPipPackets [Vdo If Stat FCCSr Tx Pip Packets] (tmnxVdolfStatFCCSrTxPipPackets)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxPipPackets indicates the total number of Picture-In-Picture (PIP) channel packets sent from this interface.
vdolfStatFCCSrTxSdBytes [Vdo If Stat FCCSr Tx Sd Bytes] (tmnxVdolfStatFCCSrTxSdBytes)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxSdBytes indicates the total number of Standard Definition (SD) channel bytes sent from this interface.
vdolfStatFCCSrTxSdFCCReplies [Vdo If Stat FCCSr Tx Sd FCCReplies] (tmnxVdolfStatFCCSrTxSdFCCReplies)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxSdFCCReplies indicates the total number of Standard Definition (SD) channel Fast Channel Change (FCC) replies sent from this interface.
vdolfStatFCCSrTxSdPackets [Vdo If Stat FCCSr Tx Sd Packets] (tmnxVdolfStatFCCSrTxSdPackets)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxSdPackets indicates the total number of Standard Definition (SD) channel packets sent from this interface.
vdolfStatHdFCCServerMode [Vdo If Stat Hd FCCServer Mode] (tmnxVdolfStatHdFCCServerMode)	int	The value of tmnxVdolfStatHdFCCServerMode indicates the mode of the High Definition (HD) Fast Channel Change (FCC) server on this interface.
vdolfStatHdRTServerState [Vdo If Stat Hd RTServer State] (tmnxVdolfStatHdRTServerState)	boolean	The value of tmnxVdolfStatHdRTServerState indicates whether the High Definition (HD) retransmission server is enabled on this interface.
vdolfStatPipFCCServerMode [Vdo If Stat Pip FCCServer Mode] (tmnxVdolfStatPipFCCServerMode)	int	The value of tmnxVdolfStatPipFCCServerMode indicates the mode of the Picture-in-Picture (PIP) Fast Channel Change (FCC) server on this interface.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatPipRTServerState [Vdo If Stat Pip RTServer State] (tmnxVdolfStatPipRTServerState)	boolean	The value of tmnxVdolfStatPipRTServerState indicates whether the Picture-in-Picture (PIP) retransmission server is enabled on this interface.
vdolfStatRTSvrHdRtpPktsReq [Vdo If Stat RTSvr Hd Rtp Pkts Req] (tmnxVdolfStatRTSvrHdRtpPktsReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrHdRtpPktsReq indicates the total number of High Definition (HD) channel Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this interface.
vdolfStatRTSvrPipRtpPktsReq [Vdo If Stat RTSvr Pip Rtp Pkts Req] (tmnxVdolfStatRTSvrPipRtpPktsReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrPipRtpPktsReq indicates the total number of Picture-In-Picture (PIP) channel Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this interface.
vdolfStatRTSvrRxHdFailedReq [Vdo If Stat RTSvr Rx Hd Failed Req] (tmnxVdolfStatRTSvrRxHdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxHdFailedReq indicates the total number of failed Retransmission (RT) requests received from High Definition (HD) channels on this interface.
vdolfStatRTSvrRxHdRTReq [Vdo If Stat RTSvr Rx Hd RTReq] (tmnxVdolfStatRTSvrRxHdRTReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxHdRTReq indicates the total number of Retransmission (RT) requests received from High Definition (HD) channels on this interface.
vdolfStatRTSvrRxPipFailedReq [Vdo If Stat RTSvr Rx Pip Failed Req] (tmnxVdolfStatRTSvrRxPipFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxPipFailedReq indicates the total number of failed Retransmission (RT) requests received from Picture-In-Picture (PIP) channels on this interface.
vdolfStatRTSvrRxPipRTReq [Vdo If Stat RTSvr Rx Pip RTReq] (tmnxVdolfStatRTSvrRxPipRTReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxPipRTReq indicates the total number of Retransmission (RT) requests received from Picture-In-Picture (PIP) channels on this interface.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatRTSvrRxSdFailedReq [Vdo If Stat RTSvr Rx Sd Failed Req] (tmnxVdolfStatRTSvrRxSdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxSdFailedReq indicates the total number of failed Retransmission (RT) requests received from Standard Definition (SD) channels on this interface.
vdolfStatRTSvrRxSdRTReq [Vdo If Stat RTSvr Rx Sd RTReq] (tmnxVdolfStatRTSvrRxSdRTReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxSdRTReq indicates the total number of Retransmission (RT) requests received from Standard Definition (SD) channels on this interface.
vdolfStatRTSvrSdRtpPktsReq [Vdo If Stat RTSvr Sd Rtp Pkts Req] (tmnxVdolfStatRTSvrSdRtpPktsReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrSdRtpPktsReq indicates the total number of Standard Definition (SD) channel Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this interface.
vdolfStatRTSvrTxHdBytes [Vdo If Stat RTSvr Tx Hd Bytes] (tmnxVdolfStatRTSvrTxHdBytes)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxHdBytes indicates the total number of High Definition (HD) channel bytes sent from this interface.
vdolfStatRTSvrTxHdPackets [Vdo If Stat RTSvr Tx Hd Packets] (tmnxVdolfStatRTSvrTxHdPackets)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxHdPackets indicates the total number of High Definition (HD) channel packets sent from this interface.
vdolfStatRTSvrTxHdRTReplies [Vdo If Stat RTSvr Tx Hd RTReplies] (tmnxVdolfStatRTSvrTxHdRTReplies)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxHdRTReplies indicates the total number of High Definition (HD) channel Retransmission (RT) replies sent from this interface.
vdolfStatRTSvrTxPipBytes [Vdo If Stat RTSvr Tx Pip Bytes] (tmnxVdolfStatRTSvrTxPipBytes)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxPipBytes indicates the total number of Picture-In-Picture (PIP) channel bytes sent from this interface.

Table 289 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatRTSvrTxPipPackets [Vdo If Stat RTSvr Tx Pip Packets] (tmnxVdolfStatRTSvrTxPipPackets)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxPipPackets indicates the total number of Picture-In-Picture (PIP) channel packets sent from this interface.
vdolfStatRTSvrTxPipRTReplies [Vdo If Stat RTSvr Tx Pip RTReplies] (tmnxVdolfStatRTSvrTxPipRTReplies)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxPipRTReplies indicates the total number of Picture-In-Picture (PIP) channel Retransmission (RT) replies sent from this interface.
vdolfStatRTSvrTxSdBytes [Vdo If Stat RTSvr Tx Sd Bytes] (tmnxVdolfStatRTSvrTxSdBytes)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxSdBytes indicates the total number of Standard Definition (SD) channel bytes sent from this interface.
vdolfStatRTSvrTxSdPackets [Vdo If Stat RTSvr Tx Sd Packets] (tmnxVdolfStatRTSvrTxSdPackets)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxSdPackets indicates the total number of Standard Definition (SD) channel packets sent from this interface.
vdolfStatRTSvrTxSdRTReplies [Vdo If Stat RTSvr Tx Sd RTReplies] (tmnxVdolfStatRTSvrTxSdRTReplies)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxSdRTReplies indicates the total number of Standard Definition (SD) channel Retransmission (RT) replies sent from this interface.
vdolfStatSdFCCServerMode [Vdo If Stat Sd FCCServer Mode] (tmnxVdolfStatSdFCCServerMode)	int	The value of tmnxVdolfStatSdFCCServerMode indicates the mode of the Standard Definition (SD) Fast Channel Change (FCC) server on this interface.
vdolfStatSdRTServerState [Vdo If Stat Sd RTServer State] (tmnxVdolfStatSdRTServerState)	boolean	The value of tmnxVdolfStatSdRTServerState indicates whether the Standard Definition (SD) retransmission server is enabled on this interface.
vdolfStatTxFailedPackets [Vdo If Stat Tx Failed Packets] (tmnxVdolfStatTxFailedPackets)	java. math. BigInteger	The value of tmnxVdolfStatTxFailedPackets indicates the total number of failures during the transmission of packets from this video interface. Failure happens when the packet to be sent is not stored in the video cache.

Table 290 sitesec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmFilterQueueStats</p> <p>MIB entry name: tCpmFilterQueueStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmFilterQueueEntry indexed by the same tCpmFilterQueueId. Entries are created when tCpmFilterQueueEntry rows are created.</p> <p>Table description (for tCpmFilterQueueStatsTable): The tCpmFilterQueueStatsTable has a stats entry for each CPM filter queue configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmFilterQueue</p>		
droppedInOctets [Dropped In Octets] (tCpmFilterQInProfileDropOctets)	java. math. BigInteger	The value of tCpmFilterQInProfileDropOctets indicates the number of octets complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedInPackets [Dropped In Packets] (tCpmFilterQInProfileDropPkts)	java. math. BigInteger	The value of tCpmFilterQInProfileDropPkts indicates the number of packets complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedOutOctets [Dropped Out Octets] (tCpmFilterQOutProfileDropOctets)	java. math. BigInteger	The value of tCpmFilterQOutProfileDropOctets indicates the number of octets not complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedOutPackets [Dropped Out Packets] (tCpmFilterQOutProfileDropPkts)	java. math. BigInteger	The value of tCpmFilterQOutProfileDropPkts indicates the number of packets not complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
forwardedInOctets [Forwarded In Octets] (tCpmFilterQInProfileFwdOctets)	java. math. BigInteger	The value of tCpmFilterQInProfileFwdOctets indicates the number of octets complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.

Table 290 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedInPackets [Forwarded In Packets] (tCpmFilterQInProfileFwdPkts)	java. math. BigInteger	The value of tCpmFilterQInProfileFwdPkts indicates the number of packets complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
forwardedOutOctets [Forwarded Out Octets] (tCpmFilterQOutProfileFwdOctets)	java. math. BigInteger	The value of tCpmFilterQOutProfileFwdOctets indicates the number of octets not complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
forwardedOutPackets [Forwarded Out Packets] (tCpmFilterQOutProfileFwdPkts)	java. math. BigInteger	The value of tCpmFilterQOutProfileFwdPkts indicates the number of packets not complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
<p>CpmIPv6FilterStats MIB entry name: tCpmIPv6FilterStatsEntry Entry description: Each row entry represents the statistics related to the tCpmIPv6FilterEntry indexed by the same tCpmIPv6FilterEntryId. Entries are created when tCpmIPv6FilterEntry rows are created. Table description (for tCpmIPv6FilterStatsTable): The tCpmIPv6FilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'. Supports realtime plotting Supports scheduled collection Monitored class: sitesec.CpmIPv6FilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmIPv6FilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmIPv6FilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmIPv6FilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmIPv6FilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmIPv6FilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmIPv6FilterEntry with the same index.

Table 290 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmlpFilterStats</p> <p>MIB entry name: tCpmlpFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmlpFilterEntry indexed by the same tCpmlpFilterEntryId. Entries are created when tCpmlpFilterEntry rows are created.</p> <p>Table description (for tCpmlpFilterStatsTable): The tCpmlpFilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmlpFilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmlpFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmlpFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmlpFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmlpFilterEntry with the same index.
<p>CpmMacFilterStats</p> <p>MIB entry name: tCpmMacFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmMacFilterEntry indexed by the same tCpmMacFltrEntryId. Entries are created when tCpmMacFilterEntry rows are created.</p> <p>Table description (for tCpmMacFilterStatsTable): The tCpmMacFilterStatsTable has a stats entry of the CPM Mac filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmMacFilterEntry</p>		

Table 290 sitesecc statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmMacFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmMacFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmMacFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmMacFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criteria are applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesecc.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesecc.SiteSystemSecurityPublicKey</p>		

Table 290 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.
RadiusNotifyStats MIB entry name: tmnxSubRadNotifyStatsObjects Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
accepted [Accepted] (tmnxSubRadNotifyStatsAccepted)	long	The value of tmnxSubRadNotifyStatsAccepted indicates the number of notify Change-of-Authorization requests accepted.
badAuthentication [Bad Authentication] (tmnxSubRadNotifyStatsBadAuth)	long	The value of tmnxSubRadNotifyStatsBadAuth indicates the number of notify Change-of-Authorization requests rejected because of authentication failure.
invalidMsg [Invalid Msg] (tmnxSubRadNotifyStatsInvalidMsg)	long	The value of tmnxSubRadNotifyStatsInvalidMsg indicates the number of notify Change-of-Authorization requests rejected because of decode errors.
noNotification [No Notification] (tmnxSubRadNotifyStatsNoNotify)	long	The value of tmnxSubRadNotifyStatsNoNotify indicates the number of notify Change-of-Authorization requests rejected due to lack of notification process.

Table 290 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noResource [No Resource] (tmnxSubRadNotifyStatsNoResource)	long	The value of tmnxSubRadNotifyStatsNoResource indicates the number of notify Change-of-Authorization requests rejected due to lack of resources.
received [Received] (tmnxSubRadNotifyStatsReceived)	long	The value of tmnxSubRadNotifyStatsReceived indicates the number of notify Change-of-Authorization requests received.
rejected [Rejected] (tmnxSubRadNotifyStatsRejected)	long	The value of tmnxSubRadNotifyStatsRejected indicates the number of notify Change-of-Authorization requests rejected.
unknownHost [Unknown Host] (tmnxSubRadNotifyStatsUnknownHost)	long	The value of tmnxSubRadNotifyStatsUnknownHost indicates the number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id.

Table 291 slaprofile statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SLAProfileStats</p> <p>MIB entry name: tmnxSubMgmtSlaProfStatsEntry</p> <p>Entry description: Each row entry represents a set of subscriber mgmt SLA-profile statistics.</p> <p>Table description (for tmnxSubMgmtSlaProfStatsTable): The tmnxSubMgmtSlaProfStatsTable contains the subscriber mgmt SLA-profile statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: netw.NetworkElement</p>		
slaProfileCurrent [Sla Profile Current] (tmnxSubMgmtSlaProfStatsCurr)	long	The value of tmnxSubMgmtSlaProfStatsCurr indicates the number of instances currently present for this SLA-profile.
slaProfileName [Sla Profile Name] (tmnxSubMgmtSlaProfStatsName)	String	The value of tmnxSubMgmtSlaProfStatsName specifies the SLA-profile for these statistics.
slaProfilePeak [Sla Profile Peak] (tmnxSubMgmtSlaProfStatsPeak)	long	The value of tmnxSubMgmtSlaProfStatsPeak indicates the peak number of instances for this SLA-profile.
slaProfileTimeStamp [Sla Profile Time Stamp] (tmnxSubMgmtSlaProfStatsTimestamp)	long	The value of tmnxSubMgmtSlaProfStatsTimestamp indicates the timestamp when the peak number of instances for this SLA-profile was reached.

Table 292 sonetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SonetFarEndLineCurrentStats MIB entry name: sonetFarEndLineCurrentEntry Entry description: An entry in the SONET/SDH Far End Line Current table. Table description (for sonetFarEndLineCurrentTable): The SONET/SDH Far End Line Current table. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort		
codingViolations [Coding Violations] (sonetFarEndLineCurrentCVs)	long	The counter associated with the number of Far End Coding Violations reported via the far end block error count encountered by a SONET/SDH Medium/Section/Line interface in the current 15 minute interval.
erroredSeconds [Errored Seconds] (sonetFarEndLineCurrentESs)	long	The counter associated with the number of Far End Errored Seconds encountered by a SONET/SDH interface in the current 15 minute interval.
severelyErroredSeconds [Severely Errored Seconds] (sonetFarEndLineCurrentSESSs)	long	The counter associated with the number of Far End Severely Errored Seconds encountered by a SONET/SDH Medium/Section/Line interface in the current 15 minute interval.
unavailableSeconds [Unavailable Seconds] (sonetFarEndLineCurrentUASs)	long	The counter associated with the number of Far End Unavailable Seconds encountered by a SONET/SDH Medium/Section/Line interface in the current 15 minute interval.

Table 292 sonetequipment statistics (continued)

unavailableSeconds [Unavailable Seconds] (sonetLineIntervalUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a SONET/SDH Line in a particular 15-minute interval in the past 24 hours.

Table 292 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SonetPathCurrentStats MIB entry name: sonetPathCurrentEntry Entry description: An entry in the SONET/SDH Path Current table. Table description (for sonetPathCurrentTable): The SONET/SDH Path Current table. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • sonetequipment.Sts12Channel • sonetequipment.Sts192Channel • sonetequipment.Sts1Channel • sonetequipment.Sts3Channel • sonetequipment.Sts48Channel • sonetequipment.Tu3Channel 		
codingViolations [Coding Violations] (sonetPathCurrentCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH Path in the current 15 minute interval.
currentStatus [Current Status] (sonetPathCurrentStatus)	long	This variable indicates the status of the interface. The sonetPathCurrentStatus is a bit map represented as a sum, therefore, it can represent multiple defects simultaneously. The sonetPathNoDefect should be set if and only if no other flag is set. The various bit positions are: 1 sonetPathNoDefect 2 sonetPathSTSLOP 4 sonetPathSTSAIS 8 sonetPathSTSRDI 16 sonetPathUnequipped 32 sonetPathSignalLabelMismatch
currentWidth [Current Width] (sonetPathCurrentWidth)	int	A value that indicates the type of the SONET/SDH Path. For SONET, the assigned types are the STS-Nc SPEs, where N = 1, 3, 12, 24, 48, 192 and 768. STS-1 is equal to 51.84 Mbps. For SDH, the assigned types are the STM-Nc VCs, where N = 1, 4, 16, 64 and 256.

Table 292 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroredSeconds [Errored Seconds] (sonetPathCurrentESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH Path in the current 15 minute interval.
severelyErroredSeconds [Severely Errored Seconds] (sonetPathCurrentSEsS)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH Path in the current 15 minute interval.
unavailableSeconds [Unavailable Seconds] (sonetPathCurrentUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a Path in the current 15 minute interval.
<p>SonetPathIntervalStats MIB entry name: sonetPathIntervalEntry Entry description: An entry in the SONET/SDH Path Interval table. Table description (for sonetPathIntervalTable): The SONET/SDH Path Interval table. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • sonetequipment.Sts12Channel • sonetequipment.Sts192Channel • sonetequipment.Sts1Channel • sonetequipment.Sts3Channel • sonetequipment.Sts48Channel • sonetequipment.Tu3Channel 		
codingViolations [Coding Violations] (sonetPathIntervalCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH Path in a particular 15-minute interval in the past 24 hours.
erroredSeconds [Errored Seconds] (sonetPathIntervalESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH Path in a particular 15-minute interval in the past 24 hours.

Table 292 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalNumber [Interval Number] (sonetPathIntervalNumber)	int	A number between 1 and 96, which identifies the interval for which the set of statistics is available. The interval identified by 1 is the most recently completed 15 minute interval, and the interval identified by N is the interval immediately preceding the one identified by N-1.
severelyErroredSeconds [Severely Errored Seconds] (sonetPathIntervalSESS)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH Path in a particular 15-minute interval in the past 24 hours.
unavailableSeconds [Unavailable Seconds] (sonetPathIntervalUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a Path in a particular 15-minute interval in the past 24 hours.
SonetSectionCurrentStats MIB entry name: sonetSectionCurrentEntry Entry description: An entry in the SONET/SDH Section Current table. Table description (for sonetSectionCurrentTable): The SONET/SDH Section Current table. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort		
codingViolations [Coding Violations] (sonetSectionCurrentCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH Section in the current 15 minute interval.
currentStatus [Current Status] (sonetSectionCurrentStatus)	long	This variable indicates the status of the interface. The sonetSectionCurrentStatus is a bit map represented as a sum, therefore, it can represent multiple defects simultaneously. The sonetSectionNoDefect should be set if and only if no other flag is set. The various bit positions are: 1 sonetSectionNoDefect 2 sonetSectionLOS 4 sonetSectionLOF

Table 292 sonetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroredSeconds [Errored Seconds] (sonetSectionCurrentESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH Section in the current 15 minute interval.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (sonetSectionCurrentSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds encountered by a SONET/SDH Section in the current 15 minute interval.
severelyErroredSeconds [Severely Errored Seconds] (sonetSectionCurrentSESSs)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH Section in the current 15 minute interval.
SonetSectionIntervalStats MIB entry name: sonetSectionIntervalEntry Entry description: An entry in the SONET/SDH Section Interval table. Table description (for sonetSectionIntervalTable): The SONET/SDH Section Interval table. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort		
codingViolations [Coding Violations] (sonetSectionIntervalCVs)	long	The counter associated with the number of Coding Violations encountered by a SONET/SDH Section in a particular 15-minute interval in the past 24 hours.
erroredSeconds [Errored Seconds] (sonetSectionIntervalESs)	long	The counter associated with the number of Errored Seconds encountered by a SONET/SDH Section in a particular 15-minute interval in the past 24 hours.
intervalNumber [Interval Number] (sonetSectionIntervalNumber)	int	A number between 1 and 96, which identifies the interval for which the set of statistics is available. The interval identified by 1 is the most recently completed 15 minute interval, and the interval identified by N is the interval immediately preceding the one identified by N-1.

severelyErroredSeconds [Severely Errored Seconds] (sonetVTIntervalSESs)	long	The counter associated with the number of Severely Errored Seconds encountered by a SONET/SDH VT in a particular 15-minute interval in the past 24 hours.
unavailableSeconds [Unavailable Seconds] (sonetVTIntervalUASs)	long	The counter associated with the number of Unavailable Seconds encountered by a VT in a particular 15-minute interval in the past 24 hours.

Table 293 srrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceStats</p> <p>MIB entry name: tmnxSrrpStatsEntry</p> <p>Entry description: Each row entry represents the statistics for a particular SRRP instance tied to a service group interface. Entries are created/deleted in conjunction with entries in the tmnxSrrpOperTable</p> <p>Table description (for tmnxSrrpStatsTable): The tmnxSrrpStatsTable has an entry for each Subscriber Router Redundancy Protocol instance configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: srrp.Instance</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxSrrpStatsAdvIntDiscards)	long	The value for tmnxSrrpStatsAdvIntDiscards indicates the total number of SRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (tmnxSrrpStatsAdvIntErrors)	long	The value for tmnxSrrpStatsAdvIntErrors indicates the total number of SRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (tmnxSrrpStatsAdvRcvd)	long	The value for tmnxSrrpStatsAdvRcvd indicates the total number of SRRP advertisements received by this virtual router.
advertiseSent [Advertise Sent] (tmnxSrrpStatsAdvSent)	long	The value for tmnxSrrpStatsAdvSent indicates the total number of SRRP advertisements sent by this virtual router.
becomeBackupRouting [Become Backup Routing] (tmnxSrrpStatsBecomeBackupRouting)	long	The value for tmnxSrrpStatsBecomeBackupRouting indicates the total number of times that the virtual router's state has transitioned to backup routing state.

Table 293 srrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeBackupShunt [Become Backup Shunt] (tmnxSrrpStatsBecomeBackupShunt)	long	The value for tmnxSrrpStatsBecomeBackupShunt indicates the total number of times that the virtual router's state has transitioned to backup shunt.
becomeMaster [Become Master] (tmnxSrrpStatsBecomeMaster)	long	The value for tmnxSrrpStatsBecomeMaster indicates the total number of times that the virtual router's state has transitioned to master.
becomeNonMaster [Become Non Master] (tmnxSrrpStatsBecomeNonMaster)	long	The value for tmnxSrrpStatsBecomeNonMaster indicates the total number times that the virtual router's state has transitioned from master to a non-master state.
masterChanges [Master Changes] (tmnxSrrpStatsMasterChanges)	long	The value for tmnxSrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxSrrpStatsPreemptEvents)	long	The value for tmnxSrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tmnxSrrpStatsPreemptedEvents)	long	The value for tmnxSrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (tmnxSrrpStatsPriZeroPktsSent)	long	The value for tmnxSrrpStatsPriZeroPktsSent indicates the total number of SRRP packets sent by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (tmnxSrrpStatsPriZeroPktsRcvd)	long	The value for tmnxSrrpStatsPriZeroPktsRcvd indicates the total number of SRRP packets received by the virtual router with a priority of '0'.

Table 294 subscrauth statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicyStats</p> <p>MIB entry name: tmnxSubAuthPlcyStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a subscriber authentication policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAuthPlcyStatsTable): The tmnxSubAuthPlcyStatsTable has an entry for each subscriber authentication policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: subscrauth.Policy</p>		
rejectedAuthentications [Rejected Authentications] (tmnxSubAuthPlcyReject)	long	The value of tmnxSubAuthPlcyReject indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were rejected by the authentication. Note that not all requests are therefore forwarded to radius. If several requests are sent in a short timeframe, only the first one is sent to radius.
rejectedRadiusFallbackAuthentications [Rejected Radius Fallback Authentications] (tmnxSubAuthPlcyFallbackReject)	long	The value of tmnxSubAuthPlcyFallbackReject indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were rejected by the fallback mechanism.
successfulAuthentications [Successful Authentications] (tmnxSubAuthPlcySuccess)	long	The value of tmnxSubAuthPlcySuccess indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were authenticated successfully. Note that not all requests are therefore forwarded to radius. If several requests are sent in a short timeframe, only the first one is sent to radius.
successfulRadiusFallbackAuthentications [Successful Radius Fallback Authentications] (tmnxSubAuthPlcyFallbackSuccess)	long	The value of tmnxSubAuthPlcyFallbackSuccess indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were authenticated successfully by the fallback mechanism.

Table 294 subscrauth statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadiusEntryStats</p> <p>MIB entry name: tmnxSubAuthPlcyRadStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a specific radius server in a subscriber authentication policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAuthPlcyRadStatsTable): The tmnxSubAuthPlcyStatsTable has an entry for each subscriber authentication policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: subscrauth.RadiusEntry</p>		
failedAuthenticationOverloadRequests [Failed Authentication Overload Requests] (tmnxSubAuthPlcyRadOvrldSendFail)	long	The value of tmnxSubAuthPlcyRadOvrldSendFail indicates how many authentication requests failed because the packet could not be sent out while the RADIUS server was in overload.
failedAuthenticationRequests [Failed Authentication Requests] (tmnxSubAuthPlcyRadSendFail)	long	The value of tmnxSubAuthPlcyRadSendFail indicates how many authentication requests failed because the packet could not be sent out.
md5VerificationFailedRequests [Md 5 Verification Failed Requests] (tmnxSubAuthPlcyRadMd5Fail)	long	The value of tmnxSubAuthPlcyRadMd5Fail indicates how many times the MD5 verification failed on a msg from this radius server.
pendingAuthenticationRequest [Pending Authentication Request] (tmnxSubAuthPlcyRadPending)	long	The value of tmnxSubAuthPlcyRadPending indicates how many authentication requests are currently pending.
rejectedAuthenticationRequests [Rejected Authentication Requests] (tmnxSubAuthPlcyRadReject)	long	The value of tmnxSubAuthPlcyRadReject indicates how many authentication requests were rejected by this radius server.
successfulAuthenticationRequests [Successful Authentication Requests] (tmnxSubAuthPlcyRadSuccess)	long	The value of tmnxSubAuthPlcyRadSuccess indicates how many authentication requests were accepted by this radius server.

Table 294 subscrauth statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timedOutAuthenticationRequests [Timed Out Authentication Requests] (tmnxSubAuthPlcyRadTimeout)	long	The value of tmnxSubAuthPlcyRadTimeout indicates how many times this radius did not reply to an authentication request within the timeout.

Table 295 subscrprofile statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SubscriberProfileStats</p> <p>MIB entry name: tmnxSubMgmtSubProfStatsEntry</p> <p>Entry description: Each row entry represents a set of subscriber mgmt sub-profile statistics.</p> <p>Table description (for tmnxSubMgmtSubProfStatsTable): The tmnxSubMgmtSubProfStatsTable contains the subscriber mgmt sub-profile statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: netw.NetworkElement</p>		
subscrProfileCurrent [Subscr Profile Current] (tmnxSubMgmtSubProfStatsCurr)	long	The value of tmnxSubMgmtSubProfStatsCurr indicates the number of instances currently present for this sub-profile.
subscrProfileName [Subscr Profile Name] (tmnxSubMgmtSubProfStatsName)	String	The value of tmnxSubMgmtSubProfStatsName specifies the sub-profile for these statistics.
subscrProfilePeak [Subscr Profile Peak] (tmnxSubMgmtSubProfStatsPeak)	long	The value of tmnxSubMgmtSubProfStatsPeak indicates the peak number of instances for this sub-profile.
subscrProfileTimeStamp [Subscr Profile Time Stamp] (tmnxSubMgmtSubProfStatsTimestamp)	long	The value of tmnxSubMgmtSubProfStatsTimestamp indicates the timestamp when the peak number of instances for this sub-profile was reached.

Table 296 svq statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CustEgrQosPortIdArbiterStats MIB entry name: custEgrQosPortIdArbitStatsEntry Entry description: Each row entry represents the egress statistics for a customer multi-service-site egress arbiter. Table description (for custEgrQosPortIdArbitStatsTable): The custEgrQosPortIdArbitStatsTable contains egress QoS arbiter statistics for the customer multi service site. Does not support realtime plotting Supports scheduled collection Monitored class: svq.AggregationScheduler</p>		
arbiterName [Arbiter Name] (custEgrQosPortIdArbitName)	String	The value of custEgrQosPortIdArbitName is used as an index of the egress QoS arbiter of this customer multi service site.
custEgrQosPortIdArbitFwdOcts [Cust Egr Qos Port Id Arbit Fwd Octs] (custEgrQosPortIdArbitFwdOcts)	java. math. BigInteger	The value of custEgrQosPortIdArbitFwdOcts indicates the number of forwarded octets, as determined by the customer multi service site egress arbiter policy.
custEgrQosPortIdArbitFwdPkts [Cust Egr Qos Port Id Arbit Fwd Pkts] (custEgrQosPortIdArbitFwdPkts)	java. math. BigInteger	The value of custEgrQosPortIdArbitFwdPkts indicates the number of forwarded packets, as determined by the customer multi service site egress arbiter policy.
<p>CustIngQosPortIdArbiterStats MIB entry name: custIngQosPortIdArbitStatsEntry Entry description: Each entry represents the ingress statistics about a specific customer multi service site ingress arbiter. Table description (for custIngQosPortIdArbitStatsTable): The custIngQosPortIdArbitStatsTable contains ingress QoS arbiter statistics for the customer multi service site. Does not support realtime plotting Supports scheduled collection Monitored class: svq.AggregationScheduler</p>		

Table 296 svq statistics (continued)

Table 297 svt statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSpokeSdpBindingCustRecAppGrpStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: svt.SpokeSdpBinding</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSpokeSdpBindingCustRecAppStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: svt.SpokeSdpBinding</p>		
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCSHrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCSHrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.

activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubSdyActFlwsToSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubSdyHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctDnyFmSb.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
GRETunnelStats MIB entry name: tmnxIpTunnelStatsEntry Entry description: The tmnxIpTunnelStatsEntry contains statistics information for a single IP Tunnel. Table description (for tmnxIpTunnelStatsTable): The tmnxIpTunnelStatsTable contains statistics entries per IP tunnel. Supports realtime plotting Supports scheduled collection Monitored class: svt.GRETunnel		
bytesRx [Bytes Rx] (tmnxIpTunnelBytesRx)	java. math. BigInteger	The value of tmnxIpTunnelBytesRx indicates the number of bytes this IP Tunnel has received.
bytesRxHi [Bytes Rx Hi] (tmnxIpTunnelBytesRxHi)	long	The value of tmnxIpTunnelBytesRxHi indicates higher 32 bits of the value of tmnxIpTunnelBytesRx object.
bytesRxLo [Bytes Rx Lo] (tmnxIpTunnelBytesRxLo)	long	The value of tmnxIpTunnelBytesRxLo indicates lower 32 bits of the value of tmnxIpTunnelBytesRx object.
bytesTx [Bytes Tx] (tmnxIpTunnelBytesTx)	java. math. BigInteger	The value of tmnxIpTunnelBytesTx indicates the number of bytes this IP Tunnel has sent.
bytesTxHi [Bytes Tx Hi] (tmnxIpTunnelBytesTxHi)	long	The value of tmnxIpTunnelBytesTxHi indicates higher 32 bits of the value of tmnxIpTunnelBytesTx object.
bytesTxLo [Bytes Tx Lo] (tmnxIpTunnelBytesTxLo)	long	The value of tmnxIpTunnelBytesTxLo indicates lower 32 bits of the value of tmnxIpTunnelBytesTx object.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidChksumRx [Invalid Chksum Rx] (tmnxIpTunnelInvalidChksumRx)	java. math. BigInteger	The value of tmnxIpTunnelInvalidChksumRx indicates the number of packets this IP Tunnel received with invalid checksum and were dropped.
invalidChksumRxHi [Invalid Chksum Rx Hi] (tmnxIpTunnelInvalidChksumRxHi)	long	The value of tmnxIpTunnelInvalidChksumRxHi indicates higher 32 bits of the value of tmnxIpTunnelInvalidChksumRx object.
invalidChksumRxLo [Invalid Chksum Rx Lo] (tmnxIpTunnelInvalidChksumRxLo)	long	The value of tmnxIpTunnelInvalidChksumRxLo indicates lower 32 bits of the value of tmnxIpTunnelInvalidChksumRx object.
keyIgnoredRx [Key Ignored Rx] (tmnxIpTunnelKeyIgnoredRx)	java. math. BigInteger	The value of tmnxIpTunnelKeyIgnoredRx indicates the number of packets this IP Tunnel received and processed ignoring key field.
keyIgnoredRxHi [Key Ignored Rx Hi] (tmnxIpTunnelKeyIgnoredRxHi)	long	The value of tmnxIpTunnelKeyIgnoredRxHi indicates higher 32 bits of the value of tmnxIpTunnelKeyIgnoredRx object.
keyIgnoredRxLo [Key Ignored Rx Lo] (tmnxIpTunnelKeyIgnoredRxLo)	long	The value of tmnxIpTunnelKeyIgnoredRxLo indicates lower 32 bits of the value of tmnxIpTunnelKeyIgnoredRx object.
loopsRx [Loops Rx] (tmnxIpTunnelLoopsRx)	java. math. BigInteger	The value of tmnxIpTunnelLoopsRx indicates the number of packets this IP Tunnel received with payload with destination address which could result in a loop and were dropped.
loopsRxHi [Loops Rx Hi] (tmnxIpTunnelLoopsRxHi)	long	The value of tmnxIpTunnelLoopsRxHi indicates higher 32 bits of the value of tmnxIpTunnelLoopsRx object.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
loopsRxLo [Loops Rx Lo] (tmnxIpTunnelLoopsRxLo)	long	The value of tmnxIpTunnelLoopsRxLo indicates lower 32 bits of the value of tmnxIpTunnelLoopsRx object.
pktsRx [Pkts Rx] (tmnxIpTunnelPktsRx)	java. math. BigInteger	The value of tmnxIpTunnelPktsRx indicates the number of packets this IP Tunnel has received.
pktsRxHi [Pkts Rx Hi] (tmnxIpTunnelPktsRxHi)	long	The value of tmnxIpTunnelPktsRxHi indicates higher 32 bits of the value of tmnxIpTunnelPktsRx object.
pktsRxLo [Pkts Rx Lo] (tmnxIpTunnelPktsRxLo)	long	The value of tmnxIpTunnelPktsRxLo indicates lower 32 bits of the value of tmnxIpTunnelPktsRx object.
pktsTx [Pkts Tx] (tmnxIpTunnelPktsTx)	java. math. BigInteger	The value of tmnxIpTunnelPktsTx indicates the number of packets this IP Tunnel has sent.
pktsTxHi [Pkts Tx Hi] (tmnxIpTunnelPktsTxHi)	long	The value of tmnxIpTunnelPktsTxHi indicates higher 32 bits of the value of tmnxIpTunnelPktsTx object.
pktsTxLo [Pkts Tx Lo] (tmnxIpTunnelPktsTxLo)	long	The value of tmnxIpTunnelPktsTxLo indicates lower 32 bits of the value of tmnxIpTunnelPktsTx object.
rxErrors [Rx Errors] (tmnxIpTunnelRxErrors)	long	The value of tmnxIpTunnelRxErrors indicates the number of packet receive errors.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqIgnoredRx [Seq Ignored Rx] (tmnxIpTunnelSeqIgnoredRx)	java. math. BigInteger	The value of tmnxIpTunnelSeqIgnoredRx indicates the number of packets this IP Tunnel and processed ignoring sequence field.
seqIgnoredRxHi [Seq Ignored Rx Hi] (tmnxIpTunnelSeqIgnoredRxHi)	long	The value of tmnxIpTunnelSeqIgnoredRxHi indicates higher 32 bits of the value of tmnxIpTunnelSeqIgnoredRx object.
seqIgnoredRxLo [Seq Ignored Rx Lo] (tmnxIpTunnelSeqIgnoredRxLo)	long	The value of tmnxIpTunnelSeqIgnoredRxLo indicates lower 32 bits of the value of tmnxIpTunnelSeqIgnoredRx object.
tooBigTx [Too Big Tx] (tmnxIpTunnelTooBigTx)	java. math. BigInteger	The value of tmnxIpTunnelTooBigTx indicates the number of packets this IP Tunnel received which were too big to transmit.
tooBigTxHi [Too Big Tx Hi] (tmnxIpTunnelTooBigTxHi)	long	The value of tmnxIpTunnelTooBigTxHi indicates higher 32 bits of the value of tmnxIpTunnelTooBigTx object.
tooBigTxLo [Too Big Tx Lo] (tmnxIpTunnelTooBigTxLo)	long	The value of tmnxIpTunnelTooBigTxLo indicates lower 32 bits of the value of tmnxIpTunnelTooBigTx object.
txErrors [Tx Errors] (tmnxIpTunnelTxErrors)	long	The value of tmnxIpTunnelTxErrors indicates the number of packet transmit errors.
versUnsupRx [Vers Unsup Rx] (tmnxIpTunnelVersUnsupRx)	java. math. BigInteger	The value of tmnxIpTunnelVersUnsupRx indicates the number of packets this IP Tunnel received with unsupported IP version and were dropped.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
versUnsupRxHi [Vers Unsup Rx Hi] (tmnxIpTunnelVersUnsupRxHi)	long	The value of tmnxIpTunnelVersUnsupRxHi indicates higher 32 bits of the value of tmnxIpTunnelVersUnsupRx object.
versUnsupRxLo [Vers Unsup Rx Lo] (tmnxIpTunnelVersUnsupRxLo)	long	The value of tmnxIpTunnelVersUnsupRxLo indicates lower 32 bits of the value of tmnxIpTunnelVersUnsupRx object.

sdpBndIgmPsnpgFwdGenQueries [Sdp Bnd IgmP Snpg Fwd Gen Queries] (sdpBndIgmPsnpgFwdGenQueries)	long	The value of the object sdpBndIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdGrpSpecQueries [Sdp Bnd IgmP Snpg Fwd Grp Spec Queries] (sdpBndIgmPsnpgFwdGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdSrcSpecQueries [Sdp Bnd IgmP Snpg Fwd Src Spec Queries] (sdpBndIgmPsnpgFwdSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdUnknownType [Sdp Bnd IgmP Snpg Fwd Unknown Type] (sdpBndIgmPsnpgFwdUnknownType)	long	The value of the object sdpBndIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV1Reports [Sdp Bnd IgmP Snpg Fwd V1 Reports] (sdpBndIgmPsnpgFwdV1Reports)	long	The value of the object sdpBndIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Leaves [Sdp Bnd IgmP Snpg Fwd V2 Leaves] (sdpBndIgmPsnpgFwdV2Leaves)	long	The value of the object sdpBndIgmPsnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Reports [Sdp Bnd IgmP Snpg Fwd V2 Reports] (sdpBndIgmPsnpgFwdV2Reports)	long	The value of the object sdpBndIgmPsnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV3Reports [Sdp Bnd IgmP Snpg Fwd V3 Reports] (sdpBndIgmPsnpgFwdV3Reports)	long	The value of the object sdpBndIgmPsnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SDP Bind.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgRxGenQueries [Sdp Bnd Igm P Snpg Rx Gen Queries] (sdpBndIgmPsnpgRxGenQueries)	long	The value of the object sdpBndIgmPsnpgRxGenQueries indicates the number of IGMP General Queries received on this SDP Bind.
sdpBndIgmPsnpgRxGrpSpecQueries [Sdp Bnd Igm P Snpg Rx Grp Spec Queries] (sdpBndIgmPsnpgRxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SDP Bind.
sdpBndIgmPsnpgRxSrcSpecQueries [Sdp Bnd Igm P Snpg Rx Src Spec Queries] (sdpBndIgmPsnpgRxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndIgmPsnpgRxUnknownType [Sdp Bnd Igm P Snpg Rx Unknown Type] (sdpBndIgmPsnpgRxUnknownType)	long	The value of the object sdpBndIgmPsnpgRxUnknownType indicates the number of IGMP unknown type packets received on this SDP Bind.
sdpBndIgmPsnpgRxV1Reports [Sdp Bnd Igm P Snpg Rx V1 Reports] (sdpBndIgmPsnpgRxV1Reports)	long	The value of the object sdpBndIgmPsnpgRxV1Reports indicates the number of IGMPv1 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV2Leaves [Sdp Bnd Igm P Snpg Rx V2 Leaves] (sdpBndIgmPsnpgRxV2Leaves)	long	The value of the object sdpBndIgmPsnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this SDP Bind.
sdpBndIgmPsnpgRxV2Reports [Sdp Bnd Igm P Snpg Rx V2 Reports] (sdpBndIgmPsnpgRxV2Reports)	long	The value of the object sdpBndIgmPsnpgRxV2Reports indicates the number of IGMPv2 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV3Reports [Sdp Bnd Igm P Snpg Rx V3 Reports] (sdpBndIgmPsnpgRxV3Reports)	long	The value of the object sdpBndIgmPsnpgRxV3Reports indicates the number of IGMPv3 Reports received on this SDP Bind.
sdpBndIgmPsnpgTxGenQueries [Sdp Bnd Igm P Snpg Tx Gen Queries] (sdpBndIgmPsnpgTxGenQueries)	long	The value of the object sdpBndIgmPsnpgTxGenQueries indicates the number of IGMP General Queries transmitted on this SDP Bind.

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgTxGrpSpecQueries [Sdp Bnd IgmP Snpg Tx Grp Spec Queries] (sdpBndIgmPsnpgTxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxSrcSpecQueries [Sdp Bnd IgmP Snpg Tx Src Spec Queries] (sdpBndIgmPsnpgTxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV1Reports [Sdp Bnd IgmP Snpg Tx V1 Reports] (sdpBndIgmPsnpgTxV1Reports)	long	The value of the object sdpBndIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Leaves [Sdp Bnd IgmP Snpg Tx V2 Leaves] (sdpBndIgmPsnpgTxV2Leaves)	long	The value of the object sdpBndIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Reports [Sdp Bnd IgmP Snpg Tx V2 Reports] (sdpBndIgmPsnpgTxV2Reports)	long	The value of the object sdpBndIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV3Reports [Sdp Bnd IgmP Snpg Tx V3 Reports] (sdpBndIgmPsnpgTxV3Reports)	long	The value of the object sdpBndIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SDP Bind.
TunnelKeepAliveStats MIB entry name: sdpInfoEntry Entry description: Information about a specific SDP. Table description (for sdpInfoTable): A table that contains SDP information. Supports realtime plotting Supports scheduled collection Monitored class: svt.Tunnel		

Table 297 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lateHelloResponses [Late Hello Responses] (sdpKeepAliveNumLateHelloResponseMessages)	long	The number of SDP Echo Response messages received after the corresponding Request timeout timer expired.
receivedHelloMessages [Received Hello Messages] (sdpKeepAliveNumHelloResponseMessages)	long	The number of SDP Echo Response messages received since the keep-alive was administratively enabled or the counter was cleared.
transmittedHelloMessages [Transmitted Hello Messages] (sdpKeepAliveNumHelloRequestMessages)	long	The number of SDP Echo Request messages transmitted since the keep-alive was administratively enabled or the counter was cleared.

Table 298 tdmequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS1CurrentStats MIB entry name: dsx1CurrentEntry Entry description: An entry in the DS1 Current table. Table description (for dsx1CurrentTable): The DS1 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1CurrentBESs)	long	The number of Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1CurrentCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1CurrentDMs)	long	The number of Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1CurrentESs)	long	The number of Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx1CurrentLCVs)	long	The number of Line Code Violations (LCVs).
lineErroredSeconds [Line Errored Seconds] (dsx1CurrentLESs)	long	The number of Line Errored Seconds.

Table 298 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitCodingViolations [PBit Coding Violations] (dsx1CurrentPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1CurrentSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1CurrentSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1CurrentUASs)	long	The number of Unavailable Seconds.
DS1FarEndCurrentStats MIB entry name: dsx1FarEndCurrentEntry Entry description: An entry in the DS1 Far End Current table. Table description (for dsx1FarEndCurrentTable): The DS1 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end messages on the Facilities Data Link. The definitions are the same as described for the near-end information. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1FarEndCurrentBESs)	long	The number of Far End Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1FarEndCurrentCSSs)	long	The number of Far End Controlled Slip Seconds.

Table 298 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
degradedMinutes [Degraded Minutes] (dsx1FarEndCurrentDMs)	long	The number of Far End Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1FarEndCurrentESs)	long	The number of Far End Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx1FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx1FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
lineErroredSeconds [Line Errored Seconds] (dsx1FarEndCurrentLEsSs)	long	The number of Far End Line Errored Seconds.
pathCodingViolations [Path Coding Violations] (dsx1FarEndCurrentPCVs)	long	The number of Far End Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1FarEndCurrentSEFSs)	long	The number of Far End Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1FarEndCurrentSEsSs)	long	The number of Far End Severely Errored Seconds.
timeElapsed [Time Elapsed] (dsx1FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 298 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx1FarEndCurrentUASs)	long	The number of Unavailable Seconds.
validIntervals [Valid Intervals] (dsx1FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS1FarEndIntervalStats</p> <p>MIB entry name: dsx1FarEndIntervalEntry</p> <p>Entry description: An entry in the DS1 Far End Interval table.</p> <p>Table description (for dsx1FarEndIntervalTable): The DS1 Far End Interval Table contains various statistics collected by each DS1 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx1FarEndIntervalNumber) for one specific instance (identified by dsx1FarEndIntervalIndex).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1FarEndIntervalBESs)	long	The number of Far End Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1FarEndIntervalCSSs)	long	The number of Far End Controlled Slip Seconds.

Table 298 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
degradedMinutes [Degraded Minutes] (dsx1FarEndIntervalDMs)	long	The number of Far End Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1FarEndIntervalESs)	long	The number of Far End Errored Seconds.
intervalNumber [Interval Number] (dsx1FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
lineErroredSeconds [Line Errored Seconds] (dsx1FarEndIntervalLEsS)	long	The number of Far End Line Errored Seconds.
pathCodingViolations [Path Coding Violations] (dsx1FarEndIntervalPCVs)	long	The number of Far End Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1FarEndIntervalSEFSs)	long	The number of Far End Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1FarEndIntervalSEsS)	long	The number of Far End Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1FarEndIntervalUASs)	long	The number of Unavailable Seconds.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CircuitDhcpRelayCfgStats</p> <p>MIB entry name: sdpBindDhcpStatsEntry</p> <p>Entry description: DHCP statistics for a TLS spoke SDP or mesh SDP.</p> <p>Table description (for sdpBindDhcpStatsTable): sdpBindDhcpStatsTable contains DHCP statistics related to a TLS SDP Bind. A row will exist in this table for each spoke or mesh SDP in a Tls Service. Rows are created and deleted automatically by the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: svt.SdpBinding</p>		
sdpBindDhcpStatsClntDropdPckts [Sdp Bind Dhcp Stats Clnt Dropd Pckts] (sdpBindDhcpStatsClntDropdPckts)	long	The value of the object sdpBindDhcpStatsClntDropdPckts indicates the number of DHCP client packets that have been dropped on this SDP bind.
sdpBindDhcpStatsClntForwdPckts [Sdp Bind Dhcp Stats Clnt Forwd Pckts] (sdpBindDhcpStatsClntForwdPckts)	long	The value of the object sdpBindDhcpStatsClntForwdPckts indicates the number of DHCP client packets that have been forwarded on this SDP bind.
sdpBindDhcpStatsClntProxLSPckts [Sdp Bind Dhcp Stats Clnt Prox LSPckts] (sdpBindDhcpStatsClntProxLSPckts)	long	The value of the object sdpBindDhcpStatsClntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sdpBindDhcpStatsClntProxNqPckts [Sdp Bind Dhcp Stats Clnt Prox Nq Pckts] (sdpBindDhcpStatsClntProxNqPckts)	long	The value of the object sdpBindDhcpStatsClntProxNqPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on data received from a Diameter NASREQ server.
sdpBindDhcpStatsClntProxRadPckts [Sdp Bind Dhcp Stats Clnt Prox Rad Pckts] (sdpBindDhcpStatsClntProxRadPckts)	long	The value of the object sdpBindDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on data received from a RADIUS server.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBindDhcpStatsClntSnoopdPckts [Sdp Bind Dhcp Stats Clnt Snoopd Pckts] (sdpBindDhcpStatsClntSnoopdPckts)	long	The value of the object sdpBindDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SDP bind.
sdpBindDhcpStatsGenForceRenPckts [Sdp Bind Dhcp Stats Gen Force Ren Pckts] (sdpBindDhcpStatsGenForceRenPckts)	long	The value of the object sdpBindDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SDP bind to the DHCP clients.
sdpBindDhcpStatsGenReleasePckts [Sdp Bind Dhcp Stats Gen Release Pckts] (sdpBindDhcpStatsGenReleasePckts)	long	The value of the object sdpBindDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SDP bind to the DHCP server.
sdpBindDhcpStatsSvrDropdPckts [Sdp Bind Dhcp Stats Svr Dropd Pckts] (sdpBindDhcpStatsSvrDropdPckts)	long	The value of the object sdpBindDhcpStatsSvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SDP bind.
sdpBindDhcpStatsSvrForwdPckts [Sdp Bind Dhcp Stats Svr Forwd Pckts] (sdpBindDhcpStatsSvrForwdPckts)	long	The value of the object sdpBindDhcpStatsSvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SDP bind.
sdpBindDhcpStatsSvrSnoopdPckts [Sdp Bind Dhcp Stats Svr Snoopd Pckts] (sdpBindDhcpStatsSvrSnoopdPckts)	long	The value of the object sdpBindDhcpStatsSvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SDP bind.
<p>DynSvcCaptureSapDropStats</p> <p>MIB entry name: tmnxDynSvcCaptureSapDropEntry</p> <p>Entry description: Each conceptual row represents information about a specific drop reason. Rows are created and destroyed automatically by the system.</p> <p>Table description (for tmnxDynSvcCaptureSapDropTable): The tmnxDynSvcCaptureSapDropTable contains data-trigger related drop statistics about the capture SAPs of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.L2AccessInterface</p>		

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropNoDynamicSap [Drop No Dynamic Sap] (tmnxDynSvcCSapDropCounter)	long	The value of tmnxDynSvcCSapDropCounter indicates the amount of data-triggers dropped corresponding to this row.
statsId [Stats Id] (tmnxDynSvcCSapDropIndex)	long	The value of tmnxDynSvcCSapDropIndex specifies the index of this row.
<p>DynSvcCaptureSapStats MIB entry name: tmnxDynSvcCaptureSapStatsEntry Entry description: Each conceptual row represents statistics about a particular capture SAP. Rows are created and destroyed automatically by the system. Table description (for tmnxDynSvcCaptureSapStatsTable): The tmnxDynSvcCaptureSapStatsTable contains statistics about the capture SAPs of this system. Supports realtime plotting Supports scheduled collection Monitored class: vpls.L2AccessInterface</p>		
receivedPackets [Received Packets] (tmnxDynSvcCSapStatsRxPackets)	long	The value of tmnxDynSvcCSapStatsRxPackets indicates the total number of data packets received by this capture SAP.

eMplsIgmPsnpgImportPolicyDrops [EMpls IgmPsnpg Import Policy Drops] (eMplsIgmPsnpgImportPolicyDrops)	long	The value of the object eMplsIgmPsnpgImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this evpn-mpls.
eMplsIgmPsnpgMaxNumGroupsDrops [EMpls IgmPsnpg Max Num Groups Drops] (eMplsIgmPsnpgMaxNumGroupsDrops)	long	The value of the object eMplsIgmPsnpgMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this evpn-mpls.
eMplsIgmPsnpgMaxNumGrpSrcsDrops [EMpls IgmPsnpg Max Num Grp Srcs Drops] (eMplsIgmPsnpgMaxNumGrpSrcsDrops)	long	The value of the object eMplsIgmPsnpgMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this evpn-mpls.
eMplsIgmPsnpgMaxNumSourcesDrops [EMpls IgmPsnpg Max Num Sources Drops] (eMplsIgmPsnpgMaxNumSourcesDrops)	long	The value of the object eMplsIgmPsnpgMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this evpn-mpls.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgMcacPolicyDrops [EMpls IgmP Snpg Mcac Policy Drops] (eMplsIgmPsnpgMcacPolicyDrops)	long	The value of the object eMplsIgmPsnpgMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this evpn-mpls.
eMplsIgmPsnpgMcsFailures [EMpls IgmP Snpg Mcs Failures] (eMplsIgmPsnpgMcsFailures)	long	The value of the object eMplsIgmPsnpgMcsFailures indicates the number of times an IGMP Group on this evpn-mpls could not be synced to the MCS (multi-chassis synchronization) database.
eMplsIgmPsnpgRxBadEncodedPkts [EMpls IgmP Snpg Rx Bad Encoded Pkts] (eMplsIgmPsnpgRxBadEncodedPkts)	long	The value of the object eMplsIgmPsnpgRxBadEncodedPkts indicates the number of IGMP packets dropped on this evpn-mpls because of a bad encoding.
eMplsIgmPsnpgRxBadIgmPChkSmPkts [EMpls IgmP Snpg Rx Bad IgmP ChkSm Pkts] (eMplsIgmPsnpgRxBadIgmPChkSmPkts)	long	The value of the object eMplsIgmPsnpgRxBadIgmPChkSmPkts indicates the number of dropped IGMP packets on this evpn-mpls because of a bad IGMP header checksum.
eMplsIgmPsnpgRxBadIpChkSmPkts [EMpls IgmP Snpg Rx Bad Ip ChkSm Pkts] (eMplsIgmPsnpgRxBadIpChkSmPkts)	long	The value of the object eMplsIgmPsnpgRxBadIpChkSmPkts indicates the number of dropped IGMP packets on this evpn-mpls because of a bad IPv4 header checksum.
eMplsIgmPsnpgRxBadLenPkts [EMpls IgmP Snpg Rx Bad Len Pkts] (eMplsIgmPsnpgRxBadLenPkts)	long	The value of the object eMplsIgmPsnpgRxBadLenPkts indicates the number of IGMP packets dropped on this evpn-mpls because of a bad length.
eMplsIgmPsnpgRxLocalScopePkts [EMpls IgmP Snpg Rx Local Scope Pkts] (eMplsIgmPsnpgRxLocalScopePkts)	long	The value of the object eMplsIgmPsnpgRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv6 multicast address.
eMplsIgmPsnpgRxNoRtrAlertPkts [EMpls IgmP Snpg Rx No Rtr Alert Pkts] (eMplsIgmPsnpgRxNoRtrAlertPkts)	long	The value of the object eMplsIgmPsnpgRxNoRtrAlertPkts indicates the number of IGMP packets dropped on this evpn-mpls because the Router Alert Option in the IP packet is not set.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgRxRsvdScopePkts [EMpls IgmP Snpg Rx Rsvd Scope Pkts] (eMplsIgmPsnpgRxRsvdScopePkts)	long	The value of the object eMplsIgmPsnpgRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv6 multicast address.
eMplsIgmPsnpgRxWrongVersionPkts [EMpls IgmP Snpg Rx Wrong Version Pkts] (eMplsIgmPsnpgRxWrongVersionPkts)	long	The value of the object eMplsIgmPsnpgRxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this evpn-mpls.
eMplsIgmPsnpgRxZeroSrcAdrPkts [EMpls IgmP Snpg Rx Zero Src Adr Pkts] (eMplsIgmPsnpgRxZeroSrcAdrPkts)	long	The value of the object eMplsIgmPsnpgRxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this evpn-mpls because they contain a zero source IPv4 address.
eMplsIgmPsnpgSendQueryCfgDrops [EMpls IgmP Snpg Send Query Cfg Drops] (eMplsIgmPsnpgSendQueryCfgDrops)	long	The value of the object eMplsIgmPsnpgSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object sapIgmPsnpgCfgSendQueries for this evpn-mpls is set to 'enabled(1)'.
<p>EvpnMplsIgmPsnpgStats</p> <p>MIB entry name: eMplsIgmPsnpgStatsEntry</p> <p>Entry description: eMplsIgmPsnpgStatsEntry is an entry in the eMplsIgmPsnpgStatsTable. Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgFwdGrpSpecQueries [EMpls IgmP SnpG Fwd Grp Spec Queries] (eMplsIgmPsnpgFwdGrpSpecQueries)	long	The value of the object eMplsIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this evpn-mpls.
eMplsIgmPsnpgFwdSrcSpecQueries [EMpls IgmP SnpG Fwd Src Spec Queries] (eMplsIgmPsnpgFwdSrcSpecQueries)	long	The value of the object eMplsIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this evpn-mpls.
eMplsIgmPsnpgFwdUnknownType [EMpls IgmP SnpG Fwd Unknown Type] (eMplsIgmPsnpgFwdUnknownType)	long	The value of the object eMplsIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this evpn-mpls.
eMplsIgmPsnpgFwdV1Reports [EMpls IgmP SnpG Fwd V1 Reports] (eMplsIgmPsnpgFwdV1Reports)	long	The value of the object eMplsIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this evpn-mpls.
eMplsIgmPsnpgFwdV2Leaves [EMpls IgmP SnpG Fwd V2 Leaves] (eMplsIgmPsnpgFwdV2Leaves)	long	The value of the object eMplsIgmPsnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this evpn-mpls.
eMplsIgmPsnpgFwdV2Reports [EMpls IgmP SnpG Fwd V2 Reports] (eMplsIgmPsnpgFwdV2Reports)	long	The value of the object eMplsIgmPsnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this evpn-mpls.
eMplsIgmPsnpgFwdV3Reports [EMpls IgmP SnpG Fwd V3 Reports] (eMplsIgmPsnpgFwdV3Reports)	long	The value of the object eMplsIgmPsnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this evpn-mpls.
eMplsIgmPsnpgRxGenQueries [EMpls IgmP SnpG Rx Gen Queries] (eMplsIgmPsnpgRxGenQueries)	long	The value of the object eMplsIgmPsnpgRxGenQueries indicates the number of IGMP General Queries received on this evpn-mpls.
eMplsIgmPsnpgRxGrpSpecQueries [EMpls IgmP SnpG Rx Grp Spec Queries] (eMplsIgmPsnpgRxGrpSpecQueries)	long	The value of the object eMplsIgmPsnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this evpn-mpls.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmpSnpG Rx Src Spec Queries [EMpls Igmp SnpG Rx Src Spec Queries] (eMplsIgmpSnpG Rx Src Spec Queries)	long	The value of the object eMplsIgmpSnpG Rx Src Spec Queries indicates the number of IGMP Group-And-Source-Specific Queries received on this evpn-mpls.
eMplsIgmpSnpG Rx Unknown Type [EMpls Igmp SnpG Rx Unknown Type] (eMplsIgmpSnpG Rx Unknown Type)	long	The value of the object eMplsIgmpSnpG Rx Unknown Type indicates the number of IGMP unknown type packets received on this evpn-mpls.
eMplsIgmpSnpG Rx V1 Reports [EMpls Igmp SnpG Rx V1 Reports] (eMplsIgmpSnpG Rx V1 Reports)	long	The value of the object eMplsIgmpSnpG Rx V1 Reports indicates the number of IGMPv1 Reports received on this evpn-mpls.
eMplsIgmpSnpG Rx V2 Leaves [EMpls Igmp SnpG Rx V2 Leaves] (eMplsIgmpSnpG Rx V2 Leaves)	long	The value of the object eMplsIgmpSnpG Rx V2 Leaves indicates the number of IGMPv2 Leaves received on this evpn-mpls.
eMplsIgmpSnpG Rx V2 Reports [EMpls Igmp SnpG Rx V2 Reports] (eMplsIgmpSnpG Rx V2 Reports)	long	The value of the object eMplsIgmpSnpG Rx V2 Reports indicates the number of IGMPv2 Reports received on this evpn-mpls.
eMplsIgmpSnpG Rx V3 Reports [EMpls Igmp SnpG Rx V3 Reports] (eMplsIgmpSnpG Rx V3 Reports)	long	The value of the object eMplsIgmpSnpG Rx V3 Reports indicates the number of IGMPv3 Reports received on this evpn-mpls.
eMplsIgmpSnpG Tx Gen Queries [EMpls Igmp SnpG Tx Gen Queries] (eMplsIgmpSnpG Tx Gen Queries)	long	The value of the object eMplsIgmpSnpG Tx Gen Queries indicates the number of IGMP General Queries transmitted on this evpn-mpls.
eMplsIgmpSnpG Tx Grp Spec Queries [EMpls Igmp SnpG Tx Grp Spec Queries] (eMplsIgmpSnpG Tx Grp Spec Queries)	long	The value of the object eMplsIgmpSnpG Tx Grp Spec Queries indicates the number of IGMP Group-Specific Queries transmitted on this evpn-mpls.
eMplsIgmpSnpG Tx Src Spec Queries [EMpls Igmp SnpG Tx Src Spec Queries] (eMplsIgmpSnpG Tx Src Spec Queries)	long	The value of the object eMplsIgmpSnpG Tx Src Spec Queries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this evpn-mpls.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
eMplsIgmPsnpgTxV1Reports [EMpls Igmp Snpg Tx V1 Reports] (eMplsIgmPsnpgTxV1Reports)	long	The value of the object eMplsIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this evpn-mpls.
eMplsIgmPsnpgTxV2Leaves [EMpls Igmp Snpg Tx V2 Leaves] (eMplsIgmPsnpgTxV2Leaves)	long	The value of the object eMplsIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this evpn-mpls.
eMplsIgmPsnpgTxV2Reports [EMpls Igmp Snpg Tx V2 Reports] (eMplsIgmPsnpgTxV2Reports)	long	The value of the object eMplsIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this evpn-mpls.
eMplsIgmPsnpgTxV3Reports [EMpls Igmp Snpg Tx V3 Reports] (eMplsIgmPsnpgTxV3Reports)	long	The value of the object eMplsIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this evpn-mpls.
InterfacePimSnoopingStats MIB entry name: tmnxPimSnpgIfStatsEntry Entry description: An entry in the tmnxPimSnpgIfStatsTable. Table description (for tmnxPimSnpgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: vpls.InterfacePimSnooping		
tmnxPimSnpgIfJoinPolicyDrops [Tmnx Pim Snpg If Join Policy Drops] (tmnxPimSnpgIfJoinPolicyDrops)	long	The value of tmnxPimSnpgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message.
tmnxPimSnpgIfRxBadChecksumDscrd [Tmnx Pim Snpg If Rx Bad Checksum Dscrd] (tmnxPimSnpgIfRxBadChecksumDscrd)	long	The value of tmnxPimSnpgIfRxBadChecksumDscrd indicates the number of PIM messages received on this interface which were discarded because of bad checksum.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfSGTypes [Tmnx Pim Snpg If SGTypes] (tmnxPimSnpgIfSGTypes)	long	The value of tmnxPimSnpgIfSGTypes indicates the number of (S,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfStarGTypes [Tmnx Pim Snpg If Star GTypes] (tmnxPimSnpgIfStarGTypes)	long	The value of tmnxPimSnpgIfStarGTypes indicates the number of (*,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfTxJoinPrunes [Tmnx Pim Snpg If Tx Join Prunes] (tmnxPimSnpgIfTxJoinPrunes)	long	The value of tmnxPimSnpgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.
tmnxPimSnpgIfTxPkts [Tmnx Pim Snpg If Tx Pkts] (tmnxPimSnpgIfTxPkts)	long	The value of tmnxPimSnpgIfTxPkts indicates the number of multicast data packets transmitted on this interface.
L2AccessInterfaceIcmpSnpgErrorStats MIB entry name: saplgmpSnpgStatsEntry Entry description: saplgmpSnpgStatsEntry is an entry in the saplgmpSnpgStatsTable. Each entry contains IGMP snooping statics for a SAP in a TIs. Table description (for saplgmpSnpgStatsTable): saplgmpSnpgStatsTable contains statistics on IGMP snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • mvpls.IL2AccessInterface • vpls.AbstractL2AccessInterface • vpls.IL2AccessInterface 		
saplgmpSnpgImportPolicyDrops [Sap Igmp Snpg Import Policy Drops] (saplgmpSnpgImportPolicyDrops)	long	The value of the object saplgmpSnpgImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGMaxNumGroupsDrops [Sap Igmp SnpG Max Num Groups Drops] (saplgmpSnpGMaxNumGroupsDrops)	long	The value of the object saplgmpSnpGMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this SAP.
saplgmpSnpGMaxNumGrpSourcesDrops [Sap Igmp SnpG Max Num Grp Sources Drops] (saplgmpSnpGMaxNumGrpSrcsDrops)	long	The value of the object saplgmpSnpGMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this SAP.
saplgmpSnpGMaxNumSourcesDrops [Sap Igmp SnpG Max Num Sources Drops] (saplgmpSnpGMaxNumSourcesDrops)	long	The value of the object saplgmpSnpGMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this SAP.
saplgmpSnpGMcacPolicyDrops [Sap Igmp SnpG Mcac Policy Drops] (saplgmpSnpGMcacPolicyDrops)	long	The value of the object saplgmpSnpGMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this SAP.
saplgmpSnpGMcsFailures [Sap Igmp SnpG Mcs Failures] (saplgmpSnpGMcsFailures)	long	The value of the object saplgmpSnpGMcsFailures indicates the number of times an IGMP Group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
saplgmpSnpGRxBadEncodedPkts [Sap Igmp SnpG Rx Bad Encoded Pkts] (saplgmpSnpGRxBadEncodedPkts)	long	The value of the object saplgmpSnpGRxBadEncodedPkts indicates the number of IGMP packets dropped on this SAP because of a bad encoding.
saplgmpSnpGRxBadIgmpChksumPkts [Sap Igmp SnpG Rx Bad Igmp Chksum Pkts] (saplgmpSnpGRxBadIgmpChksumPkts)	long	The value of the object saplgmpSnpGRxBadIgmpChksumPkts indicates the number of dropped IGMP packets on this SAP because of a bad IGMP header checksum.
saplgmpSnpGRxBadIpChksumPkts [Sap Igmp SnpG Rx Bad Ip Chksum Pkts] (saplgmpSnpGRxBadIpChksumPkts)	long	The value of the object saplgmpSnpGRxBadIpChksumPkts indicates the number of dropped IGMP packets on this SAP because of a bad IPv4 header checksum.

saplgmpSnpGfwdGrpSpecQueries [Sap Igmp SnpG Fwd Grp Spec Queries] (saplgmpSnpGfwdGrpSpecQueries)	long	The value of the object saplgmpSnpGfwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SAP.
saplgmpSnpGfwdSrcSpecQueries [Sap Igmp SnpG Fwd Src Spec Queries] (saplgmpSnpGfwdSrcSpecQueries)	long	The value of the object saplgmpSnpGfwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SAP.
saplgmpSnpGfwdUnknownType [Sap Igmp SnpG Fwd Unknown Type] (saplgmpSnpGfwdUnknownType)	long	The value of the object saplgmpSnpGfwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SAP.
saplgmpSnpGfwdV1Reports [Sap Igmp SnpG Fwd V1 Reports] (saplgmpSnpGfwdV1Reports)	long	The value of the object saplgmpSnpGfwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SAP.
saplgmpSnpGfwdV2Leaves [Sap Igmp SnpG Fwd V2 Leaves] (saplgmpSnpGfwdV2Leaves)	long	The value of the object saplgmpSnpGfwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SAP.
saplgmpSnpGfwdV2Reports [Sap Igmp SnpG Fwd V2 Reports] (saplgmpSnpGfwdV2Reports)	long	The value of the object saplgmpSnpGfwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SAP.
saplgmpSnpGfwdV3Reports [Sap Igmp SnpG Fwd V3 Reports] (saplgmpSnpGfwdV3Reports)	long	The value of the object saplgmpSnpGfwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SAP.
saplgmpSnpGRxGenQueries [Sap Igmp SnpG Rx Gen Queries] (saplgmpSnpGRxGenQueries)	long	The value of the object saplgmpSnpGRxGenQueries indicates the number of IGMP General Queries received on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapIgmPsnPgRxGrpSpecQueries [Sap Igmp SnpG Rx Grp Spec Queries] (sapIgmPsnPgRxGrpSpecQueries)	long	The value of the object sapIgmPsnPgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SAP.
sapIgmPsnPgRxSrcSpecQueries [Sap Igmp SnpG Rx Src Spec Queries] (sapIgmPsnPgRxSrcSpecQueries)	long	The value of the object sapIgmPsnPgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SAP.
sapIgmPsnPgRxUnknownType [Sap Igmp SnpG Rx Unknown Type] (sapIgmPsnPgRxUnknownType)	long	The value of the object sapIgmPsnPgRxUnknownType indicates the number of IGMP unknown type packets received on this SAP.
sapIgmPsnPgRxV1Reports [Sap Igmp SnpG Rx V1 Reports] (sapIgmPsnPgRxV1Reports)	long	The value of the object sapIgmPsnPgRxV1Reports indicates the number of IGMPv1 Reports received on this SAP.
sapIgmPsnPgRxV2Leaves [Sap Igmp SnpG Rx V2 Leaves] (sapIgmPsnPgRxV2Leaves)	long	The value of the object sapIgmPsnPgRxV2Leaves indicates the number of IGMPv2 Leaves received on this SAP.
sapIgmPsnPgRxV2Reports [Sap Igmp SnpG Rx V2 Reports] (sapIgmPsnPgRxV2Reports)	long	The value of the object sapIgmPsnPgRxV2Reports indicates the number of IGMPv2 Reports received on this SAP.
sapIgmPsnPgRxV3Reports [Sap Igmp SnpG Rx V3 Reports] (sapIgmPsnPgRxV3Reports)	long	The value of the object sapIgmPsnPgRxV3Reports indicates the number of IGMPv3 Reports received on this SAP.
sapIgmPsnPgTxGenQueries [Sap Igmp SnpG Tx Gen Queries] (sapIgmPsnPgTxGenQueries)	long	The value of the object sapIgmPsnPgTxGenQueries indicates the number of IGMP General Queries transmitted on this SAP.
sapIgmPsnPgTxGrpSpecQueries [Sap Igmp SnpG Tx Grp Spec Queries] (sapIgmPsnPgTxGrpSpecQueries)	long	The value of the object sapIgmPsnPgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapIgmPsnpgTxSrcSpecQueries [Sap Igmp SnpG Tx Src Spec Queries] (sapIgmPsnpgTxSrcSpecQueries)	long	The value of the object sapIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SAP.
sapIgmPsnpgTxV1Reports [Sap Igmp SnpG Tx V1 Reports] (sapIgmPsnpgTxV1Reports)	long	The value of the object sapIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SAP.
sapIgmPsnpgTxV2Leaves [Sap Igmp SnpG Tx V2 Leaves] (sapIgmPsnpgTxV2Leaves)	long	The value of the object sapIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SAP.
sapIgmPsnpgTxV2Reports [Sap Igmp SnpG Tx V2 Reports] (sapIgmPsnpgTxV2Reports)	long	The value of the object sapIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SAP.
sapIgmPsnpgTxV3Reports [Sap Igmp SnpG Tx V3 Reports] (sapIgmPsnpgTxV3Reports)	long	The value of the object sapIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SAP.
<p>L2AccessInterfaceMldMvrStats MIB entry name: sapMldSnpGStatsEntry Entry description: sapMldSnpGStatsEntry is an entry in the sapMldSnpGStatsTable. Each entry contains MLD snooping statistics for a SAP in a TIs. Table description (for sapMldSnpGStatsTable): sapMldSnpGStatsTable contains statistics on MLD snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface</p>		
sapMldSnpGMvrFromVplsCfgDrops [Sap Mld SnpG Mvr From Vpls Cfg Drops] (sapMldSnpGMvrFromVplsCfgDrops)	long	The value of the object sapMldSnpGMvrFromVplsCfgDrops indicates the number of times an MLD group or Query is dropped because of applying the sapMldSnpGCfgMvrFromVplsId configuration on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgMvrToSapCfgDrops [Sap Mld Snpg Mvr To Sap Cfg Drops] (sapMldSnpgMvrToSapCfgDrops)	long	The value of the object sapMldSnpgMvrToSapCfgDrops indicates the number times an MLD Report or Query is dropped because of applying the sapMldSnpgCfgMvrToSapPortId and sapMldSnpgCfgMvrToSapEncapVal configuration on this SAP.
<p>L2AccessInterfaceMldSnpgErrorStats</p> <p>MIB entry name: sapMldSnpgStatsEntry</p> <p>Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. sapMldSnpgImportPolicyDrops [Sap Mld Snpg Import Policy Drops] (sapMldSnpgImportPolicyDrops)	long	The value of the object sapMldSnpgImportPolicyDrops indicates the number of times an MLD group or source is dropped because of applying an import policy on this SAP.
sapMldSnpgMaxNumGroupsDrops [Sap Mld Snpg Max Num Groups Drops] (sapMldSnpgMaxNumGroupsDrops)	long	The value of the object sapMldSnpgMaxNumGroupsDrops indicates the number of times an MLD group is dropped because of exceeding the configured maximum number of groups on this SAP.
sapMldSnpgMcsFailures [Sap Mld Snpg Mcs Failures] (sapMldSnpgMcsFailures)	long	The value of the object sapMldSnpgMcsFailures indicates the number of times an MLD group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
sapMldSnpgRxBadEncodedPkts [Sap Mld Snpg Rx Bad Encoded Pkts] (sapMldSnpgRxBadEncodedPkts)	long	The value of the object sapMldSnpgRxBadEncodedPkts indicates the number of MLD packets dropped on this SAP because of a bad encoding.
sapMldSnpgRxBadLenPkts [Sap Mld Snpg Rx Bad Len Pkts] (sapMldSnpgRxBadLenPkts)	long	The value of the object sapMldSnpgRxBadLenPkts indicates the number of MLD packets dropped on this SAP because of a bad length.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxBadMldChksmPkts [Sap Mld Snpg Rx Bad Mld Chksm Pkts] (sapMldSnpgRxBadMldChksmPkts)	long	The value of the object sapMldSnpgRxBadMldChksmPkts indicates the number of dropped MLD packets on this SAP because of a bad MLD header checksum.
sapMldSnpgRxNoRtrAlertPkts [Sap Mld Snpg Rx No Rtr Alert Pkts] (sapMldSnpgRxNoRtrAlertPkts)	long	The value of the object sapMldSnpgRxNoRtrAlertPkts indicates the number of MLD packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
sapMldSnpgRxWrongVersionPkts [Sap Mld Snpg Rx Wrong Version Pkts] (sapMldSnpgRxWrongVersionPkts)	long	The value of the object sapMldSnpgRxWrongVersionPkts indicates the total number of MLD packets with a wrong version received on this SAP.
sapMldSnpgRxZeroSrcAdrPkts [Sap Mld Snpg Rx Zero Src Adr Pkts] (sapMldSnpgRxZeroSrcAdrPkts)	long	The value of the object sapMldSnpgRxZeroSrcAdrPkts indicates the number of MLD packets dropped on this SAP because they contain a zero source IPv6 address.
sapMldSnpgSendQueryCfgDrops [Sap Mld Snpg Send Query Cfg Drops] (sapMldSnpgSendQueryCfgDrops)	long	The value of the object sapMldSnpgSendQueryCfgDrops indicates the number of times an MLD Query is dropped because the object sapMldSnpgCfgSendQueries for this SAP is set to 'inService(2)'. L2AccessInterfaceMldSnpgStats MIB entry name: sapMldSnpgStatsEntry Entry description: sapMldSnpgStatsEntry is an entry in the sapMldSnpgStatsTable. Each entry contains MLD snooping statics for a SAP in a TIs. Table description (for sapMldSnpgStatsTable): sapMldSnpgStatsTable contains statistics on MLD snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface
sapMldSnpgFwdGenQueries [Sap Mld Snpg Fwd Gen Queries] (sapMldSnpgFwdGenQueries)	long	The value of the object sapMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgFwdGrpSpecQueries [Sap Mld Snpg Fwd Grp Spec Queries] (sapMldSnpgFwdGrpSpecQueries)	long	The value of the object sapMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SAP.
sapMldSnpgFwdSrcSpecQueries [Sap Mld Snpg Fwd Src Spec Queries] (sapMldSnpgFwdSrcSpecQueries)	long	The value of the object sapMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SAP.
sapMldSnpgFwdUnknownType [Sap Mld Snpg Fwd Unknown Type] (sapMldSnpgFwdUnknownType)	long	The value of the object sapMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SAP.
sapMldSnpgFwdV1Leaves [Sap Mld Snpg Fwd V1 Leaves] (sapMldSnpgFwdV1Leaves)	long	The value of the object sapMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SAP.
sapMldSnpgFwdV1Reports [Sap Mld Snpg Fwd V1 Reports] (sapMldSnpgFwdV1Reports)	long	The value of the object sapMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SAP.
sapMldSnpgFwdV2Reports [Sap Mld Snpg Fwd V2 Reports] (sapMldSnpgFwdV2Reports)	long	The value of the object sapMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SAP.
sapMldSnpgRxGenQueries [Sap Mld Snpg Rx Gen Queries] (sapMldSnpgRxGenQueries)	long	The value of the object sapMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SAP.
sapMldSnpgRxGrpSpecQueries [Sap Mld Snpg Rx Grp Spec Queries] (sapMldSnpgRxGrpSpecQueries)	long	The value of the object sapMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SAP.
sapMldSnpgRxLocalScopePkts [Sap Mld Snpg Rx Local Scope Pkts] (sapMldSnpgRxLocalScopePkts)	long	The value of the object sapMldSnpgRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgRxRsvdScopePkts [Sap Mld Snpg Rx Rsvd Scope Pkts] (sapMldSnpgRxRsvdScopePkts)	long	The value of the object sapMldSnpgRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
sapMldSnpgRxSrcSpecQueries [Sap Mld Snpg Rx Src Spec Queries] (sapMldSnpgRxSrcSpecQueries)	long	The value of the object sapMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SAP.
sapMldSnpgRxUnknownType [Sap Mld Snpg Rx Unknown Type] (sapMldSnpgRxUnknownType)	long	The value of the object sapMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SAP.
sapMldSnpgRxV1Leaves [Sap Mld Snpg Rx V1 Leaves] (sapMldSnpgRxV1Leaves)	long	The value of the object sapMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SAP.
sapMldSnpgRxV1Reports [Sap Mld Snpg Rx V1 Reports] (sapMldSnpgRxV1Reports)	long	The value of the object sapMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SAP.
sapMldSnpgRxV2Reports [Sap Mld Snpg Rx V2 Reports] (sapMldSnpgRxV2Reports)	long	The value of the object sapMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SAP.
sapMldSnpgTxGenQueries [Sap Mld Snpg Tx Gen Queries] (sapMldSnpgTxGenQueries)	long	The value of the object sapMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SAP.
sapMldSnpgTxGrpSpecQueries [Sap Mld Snpg Tx Grp Spec Queries] (sapMldSnpgTxGrpSpecQueries)	long	The value of the object sapMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SAP.
sapMldSnpgTxSrcSpecQueries [Sap Mld Snpg Tx Src Spec Queries] (sapMldSnpgTxSrcSpecQueries)	long	The value of the object sapMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapMldSnpgTxV1Leaves [Sap Mld Snpg Tx V1 Leaves] (sapMldSnpgTxV1Leaves)	long	The value of the object sapMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SAP.
sapMldSnpgTxV1Reports [Sap Mld Snpg Tx V1 Reports] (sapMldSnpgTxV1Reports)	long	The value of the object sapMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SAP.
sapMldSnpgTxV2Reports [Sap Mld Snpg Tx V2 Reports] (sapMldSnpgTxV2Reports)	long	The value of the object sapMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SAP.
L2AccessInterfaceMvrStats MIB entry name: saplgmpSnpgStatsEntry Entry description: saplgmpSnpgStatsEntry is an entry in the saplgmpSnpgStatsTable. Each entry contains IGMP snooping statics for a SAP in a TIs. Table description (for saplgmpSnpgStatsTable): saplgmpSnpgStatsTable contains statistics on IGMP snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored class: vpls.AbstractL2AccessInterface		
saplgmpSnpgMvrFromVplsCfgDrops [Sap Igmp Snpg Mvr From Vpls Cfg Drops] (saplgmpSnpgMvrFromVplsCfgDrops)	long	The value of the object saplgmpSnpgMvrFromVplsCfgDrops indicates the number of times an IGMP Group or Query is dropped because of applying the saplgmpSnpgCfgMvrFromVplsId configuration on this SAP.
saplgmpSnpgMvrToSapCfgDrops [Sap Igmp Snpg Mvr To Sap Cfg Drops] (saplgmpSnpgMvrToSapCfgDrops)	long	The value of the object saplgmpSnpgMvrToSapCfgDrops indicates the number times an IGMP Report or Query is dropped because of applying the saplgmpSnpgCfgMvrToSapPortId and saplgmpSnpgCfgMvrToSapEncapVal configuration on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L2AccessIfDhcpRelayCfgStats</p> <p>MIB entry name: sapTlsDhcpStatsEntry</p> <p>Entry description: DHCP statistics for a TLS SAP.</p> <p>Table description (for sapTlsDhcpStatsTable): sapTlsDhcpStatsTable contains DHCP statistics related to a TLS SAP. This table complements sapTlsInfoTable, and contains an entry for each Tls SAP. Rows in this table are created and deleted automatically by the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.AbstractL2AccessInterface</p>		
sapTlsDhcpStatsCIntDropdPckts [Sap Tls Dhcp Stats CInt Dropd Pckts] (sapTlsDhcpStatsCIntDropdPckts)	long	The value of the object sapTlsDhcpStatsCIntDropdPckts indicates the number of DHCP client packets that have been dropped on this SAP.
sapTlsDhcpStatsCIntForwdPckts [Sap Tls Dhcp Stats CInt Forwd Pckts] (sapTlsDhcpStatsCIntForwdPckts)	long	The value of the object sapTlsDhcpStatsCIntForwdPckts indicates the number of DHCP client packets that have been forwarded on this SAP.
sapTlsDhcpStatsCIntProxLSPckts [Sap Tls Dhcp Stats CInt Prox LSPckts] (sapTlsDhcpStatsCIntProxLSPckts)	long	The value of the object sapTlsDhcpStatsCIntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SAP based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sapTlsDhcpStatsCIntProxLUDBPckts [Sap Tls Dhcp Stats CInt Prox LUDBPckts] (sapTlsDhcpStatsCIntProxLUDBPckts)	long	The value of the object sapTlsDhcpStatsCIntProxLUDBPckts indicates the number of DHCP client packets that have been proxied on this SAP based on the local user database.
sapTlsDhcpStatsCIntProxNqPckts [Sap Tls Dhcp Stats CInt Prox Nq Pckts] (sapTlsDhcpStatsCIntProxNqPckts)	long	The value of the object sapTlsDhcpStatsCIntProxNqPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a Diameter NASREQ server.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapTlsDhcpStatsClntProxRadPckts [Sap Tls Dhcp Stats Clnt Prox Rad Pckts] (sapTlsDhcpStatsClntProxRadPckts)	long	The value of the object sapTlsDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SAP based on data received from a RADIUS server.
sapTlsDhcpStatsClntSnoopdPckts [Sap Tls Dhcp Stats Clnt Snoopd Pckts] (sapTlsDhcpStatsClntSnoopdPckts)	long	The value of the object sapTlsDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SAP.
sapTlsDhcpStatsGenForceRenPckts [Sap Tls Dhcp Stats Gen Force Ren Pckts] (sapTlsDhcpStatsGenForceRenPckts)	long	The value of the object sapTlsDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SAP to the DHCP clients.
sapTlsDhcpStatsGenReleasePckts [Sap Tls Dhcp Stats Gen Release Pckts] (sapTlsDhcpStatsGenReleasePckts)	long	The value of the object sapTlsDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SAP to the DHCP server.
sapTlsDhcpStatsSrvrDropdPckts [Sap Tls Dhcp Stats Srvr Dropd Pckts] (sapTlsDhcpStatsSrvrDropdPckts)	long	The value of the object sapTlsDhcpStatsSrvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SAP.
sapTlsDhcpStatsSrvrForwdPckts [Sap Tls Dhcp Stats Srvr Forwd Pckts] (sapTlsDhcpStatsSrvrForwdPckts)	long	The value of the object sapTlsDhcpStatsSrvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SAP.
sapTlsDhcpStatsSrvrSnoopdPckts [Sap Tls Dhcp Stats Srvr Snoopd Pckts] (sapTlsDhcpStatsSrvrSnoopdPckts)	long	The value of the object sapTlsDhcpStatsSrvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SAP.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgFwdGenQueries [Sdp Bnd Mld Snpg Fwd Gen Queries] (sdpBndMldSnpgFwdGenQueries)	long	The value of the object sdpBndMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdGrpSpecQueries [Sdp Bnd Mld Snpg Fwd Grp Spec Queries] (sdpBndMldSnpgFwdGrpSpecQueries)	long	The value of the object sdpBndMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdSrcSpecQueries [Sdp Bnd Mld Snpg Fwd Src Spec Queries] (sdpBndMldSnpgFwdSrcSpecQueries)	long	The value of the object sdpBndMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdUnknownType [Sdp Bnd Mld Snpg Fwd Unknown Type] (sdpBndMldSnpgFwdUnknownType)	long	The value of the object sdpBndMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Leaves [Sdp Bnd Mld Snpg Fwd V1 Leaves] (sdpBndMldSnpgFwdV1Leaves)	long	The value of the object sdpBndMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Reports [Sdp Bnd Mld Snpg Fwd V1 Reports] (sdpBndMldSnpgFwdV1Reports)	long	The value of the object sdpBndMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SDP Bind.
sdpBndMldSnpgFwdV2Reports [Sdp Bnd Mld Snpg Fwd V2 Reports] (sdpBndMldSnpgFwdV2Reports)	long	The value of the object sdpBndMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SDP Bind.
sdpBndMldSnpgRxGenQueries [Sdp Bnd Mld Snpg Rx Gen Queries] (sdpBndMldSnpgRxGenQueries)	long	The value of the object sdpBndMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SDP Bind.
sdpBndMldSnpgRxGrpSpecQueries [Sdp Bnd Mld Snpg Rx Grp Spec Queries] (sdpBndMldSnpgRxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SDP Bind.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgRxSrcSpecQueries [Sdp Bnd Mld Snpg Rx Src Spec Queries] (sdpBndMldSnpgRxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndMldSnpgRxUnknownType [Sdp Bnd Mld Snpg Rx Unknown Type] (sdpBndMldSnpgRxUnknownType)	long	The value of the object sdpBndMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SDP Bind.
sdpBndMldSnpgRxV1Leaves [Sdp Bnd Mld Snpg Rx V1 Leaves] (sdpBndMldSnpgRxV1Leaves)	long	The value of the object sdpBndMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SDP Bind.
sdpBndMldSnpgRxV1Reports [Sdp Bnd Mld Snpg Rx V1 Reports] (sdpBndMldSnpgRxV1Reports)	long	The value of the object sdpBndMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SDP Bind.
sdpBndMldSnpgRxV2Reports [Sdp Bnd Mld Snpg Rx V2 Reports] (sdpBndMldSnpgRxV2Reports)	long	The value of the object sdpBndMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SDP Bind.
sdpBndMldSnpgTxGenQueries [Sdp Bnd Mld Snpg Tx Gen Queries] (sdpBndMldSnpgTxGenQueries)	long	The value of the object sdpBndMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxGrpSpecQueries [Sdp Bnd Mld Snpg Tx Grp Spec Queries] (sdpBndMldSnpgTxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxSrcSpecQueries [Sdp Bnd Mld Snpg Tx Src Spec Queries] (sdpBndMldSnpgTxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxV1Leaves [Sdp Bnd Mld Snpg Tx V1 Leaves] (sdpBndMldSnpgTxV1Leaves)	long	The value of the object sdpBndMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SDP Bind.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgTxV1Reports [Sdp Bnd Mld Snpg Tx V1 Reports] (sdpBndMldSnpgTxV1Reports)	long	The value of the object sdpBndMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SDP Bind.
sdpBndMldSnpgTxV2Reports [Sdp Bnd Mld Snpg Tx V2 Reports] (sdpBndMldSnpgTxV2Reports)	long	The value of the object sdpBndMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SDP Bind.
<p>SitePimSnoopingStats MIB entry name: tmnxPimSnpgGenStatsEntry Entry description: An entry in the tmnxPimSnpgGenStatsTable. Table description (for tmnxPimSnpgGenStatsTable): tmnxPimSnpgGenStatsTable lists PIM snooping statistics for a particular PIM snooping instance. Supports realtime plotting Supports scheduled collection Monitored class: vpls.SitePimSnooping</p>		
numSGTypes [Num SGTypes] (tmnxPimSnpgGenStatsSGTypes)	long	The value of tmnxPimSnpgGenStatsSGTypes indicates the number of entries in tmnxPimSnpgGrpSrcTable for which the source type is 'sg'.
numStarGTypes [Num Star GTypes] (tmnxPimSnpgGenStatsStarGTypes)	long	The value of tmnxPimSnpgGenStatsStarGTypes indicates the number of entries in tmnxPimSnpgGrpSrcTable for which the source type is 'starG'.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteSourceGroupRecordPimSnoopingStats</p> <p>MIB entry name: tmnxPimSnpGGrpSrcStatsEntry</p> <p>Entry description: An entry in the tmnxPimSnpGGrpSrcStatsTable.</p> <p>Table description (for tmnxPimSnpGGrpSrcStatsTable): tmnxPimSnpGGrpSrcStatsTable contains statistics for the entries in the tmnxPimSnpGGrpSrcTable. These statistics are collected by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • vpls.SitePimSnooping • vpls.SiteSourceGroupRecord 		
tmnxPimSnpGGrpSrcStatsFwdedOct [Tmnx Pim SnpG Grp Src Stats Fwded Oct] (tmnxPimSnpGGrpSrcStatsFwdedOct)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.
tmnxPimSnpGGrpSrcStatsFwdedPkts [Tmnx Pim SnpG Grp Src Stats Fwded Pkts] (tmnxPimSnpGGrpSrcStatsFwdedPkts)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.
<p>VxlanIcmpSnpGErrorStats</p> <p>MIB entry name: vxlanIcmpSnpGStatsEntry</p> <p>Entry description: vxlanIcmpSnpGStatsEntry is an entry in the vxlanIcmpSnpGStatsTable. Each entry contains IGMP snooping statics for a VXLAN in a TIs.</p> <p>Table description (for vxlanIcmpSnpGStatsTable): vxlanIcmpSnpGStatsTable contains statistics on IGMP snooping per VXLAN.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vpls.Site</p>		
vxlanIcmpSnpGImportPolicyDrops [Vxlan Icmp SnpG Import Policy Drops] (vxlanIcmpSnpGImportPolicyDrops)	long	The value of the object vxlanIcmpSnpGImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this VXLAN.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIgmpSnpGMaxNumGroupsDrops [Vxlan Igmp SnpG Max Num Groups Drops] (vxlanIgmpSnpGMaxNumGroupsDrops)	long	The value of the object vxlanIgmpSnpGMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this VXLAN.
vxlanIgmpSnpGMaxNumGrpSrcsDrops [Vxlan Igmp SnpG Max Num Grp Srcs Drops] (vxlanIgmpSnpGMaxNumGrpSrcsDrops)	long	The value of the object vxlanIgmpSnpGMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this VXLAN.
vxlanIgmpSnpGMaxNumSourcesDrops [Vxlan Igmp SnpG Max Num Sources Drops] (vxlanIgmpSnpGMaxNumSourcesDrops)	long	The value of the object vxlanIgmpSnpGMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this VXLAN.
vxlanIgmpSnpGMcacPolicyDrops [Vxlan Igmp SnpG Mcac Policy Drops] (vxlanIgmpSnpGMcacPolicyDrops)	long	The value of the object vxlanIgmpSnpGMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this VXLAN.
vxlanIgmpSnpGMcsFailures [Vxlan Igmp SnpG Mcs Failures] (vxlanIgmpSnpGMcsFailures)	long	The value of the object vxlanIgmpSnpGMcsFailures indicates the number of times an IGMP Group on this VXLAN could not be synced to the MCS (multi-chassis synchronization) database.
vxlanIgmpSnpGRxBadEncodedPkts [Vxlan Igmp SnpG Rx Bad Encoded Pkts] (vxlanIgmpSnpGRxBadEncodedPkts)	long	The value of the object vxlanIgmpSnpGRxBadEncodedPkts indicates the number of IGMP packets dropped on this VXLAN because of a bad encoding.
vxlanIgmpSnpGRxBadIgmpChkSmPkts [Vxlan Igmp SnpG Rx Bad Igmp ChkSm Pkts] (vxlanIgmpSnpGRxBadIgmpChkSmPkts)	long	The value of the object vxlanIgmpSnpGRxBadIgmpChkSmPkts indicates the number of dropped IGMP packets on this VXLAN because of a bad IGMP header checksum.
vxlanIgmpSnpGRxBadIpChkSmPkts [Vxlan Igmp SnpG Rx Bad Ip ChkSm Pkts] (vxlanIgmpSnpGRxBadIpChkSmPkts)	long	The value of the object vxlanIgmpSnpGRxBadIpChkSmPkts indicates the number of dropped IGMP packets on this VXLAN because of a bad IPv4 header checksum.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIgmpSnpgrxBadLenPkts [Vxlan Igmp Snpgrx Bad Len Pkts] (vxlanIgmpSnpgrxBadLenPkts)	long	The value of the object vxlanIgmpSnpgrxBadLenPkts indicates the number of IGMP packets dropped on this VXLAN because of a bad length.
vxlanIgmpSnpgrxLocalScopePkts [Vxlan Igmp Snpgrx Local Scope Pkts] (vxlanIgmpSnpgrxLocalScopePkts)	long	The value of the object vxlanIgmpSnpgrxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv6 multicast address.
vxlanIgmpSnpgrxNoRtrAlertPkts [Vxlan Igmp Snpgrx No Rtr Alert Pkts] (vxlanIgmpSnpgrxNoRtrAlertPkts)	long	The value of the object vxlanIgmpSnpgrxNoRtrAlertPkts indicates the number of IGMP packets dropped on this VXLAN because the Router Alert Option in the IP packet is not set.
vxlanIgmpSnpgrxRsvdScopePkts [Vxlan Igmp Snpgrx Rsvd Scope Pkts] (vxlanIgmpSnpgrxRsvdScopePkts)	long	The value of the object vxlanIgmpSnpgrxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv6 multicast address.
vxlanIgmpSnpgrxWrongVersionPkts [Vxlan Igmp Snpgrx Wrong Version Pkts] (vxlanIgmpSnpgrxWrongVersionPkts)	long	The value of the object vxlanIgmpSnpgrxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this VXLAN.
vxlanIgmpSnpgrxZeroSrcAdrPkts [Vxlan Igmp Snpgrx Zero Src Adr Pkts] (vxlanIgmpSnpgrxZeroSrcAdrPkts)	long	The value of the object vxlanIgmpSnpgrxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this VXLAN because they contain a zero source IPv4 address.
vxlanIgmpSnpgrxSendQueryCfgDrops [Vxlan Igmp Snpgrx Send Query Cfg Drops] (vxlanIgmpSnpgrxSendQueryCfgDrops)	long	The value of the object vxlanIgmpSnpgrxSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object sapIgmpSnpgrxCfgSendQueries for this VXLAN is set to 'enabled(1)'.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VxlanIgmPsnpgStats</p> <p>MIB entry name: vxlanIgmPsnpgStatsEntry</p> <p>Entry description: vxlanIgmPsnpgStatsEntry is an entry in the vxlanIgmPsnpgStatsTable. vxlanIgmPsnpgFwdGenQueries [Vxlan Igm Psnpg Fwd Gen Queries] (vxlanIgmPsnpgFwdGenQueries)	long	The value of the object vxlanIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this VXLAN.
vxlanIgmPsnpgFwdGrpSpecQueries [Vxlan Igm Psnpg Fwd Grp Spec Queries] (vxlanIgmPsnpgFwdGrpSpecQueries)	long	The value of the object vxlanIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this VXLAN.
vxlanIgmPsnpgFwdSrcSpecQueries [Vxlan Igm Psnpg Fwd Src Spec Queries] (vxlanIgmPsnpgFwdSrcSpecQueries)	long	The value of the object vxlanIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this VXLAN.
vxlanIgmPsnpgFwdUnknownType [Vxlan Igm Psnpg Fwd Unknown Type] (vxlanIgmPsnpgFwdUnknownType)	long	The value of the object vxlanIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this VXLAN.
vxlanIgmPsnpgFwdV1Reports [Vxlan Igm Psnpg Fwd V1 Reports] (vxlanIgmPsnpgFwdV1Reports)	long	The value of the object vxlanIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this VXLAN.
vxlanIgmPsnpgFwdV2Leaves [Vxlan Igm Psnpg Fwd V2 Leaves] (vxlanIgmPsnpgFwdV2Leaves)	long	The value of the object vxlanIgmPsnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this VXLAN.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIgmpSnpgFwdV2Reports [Vxlan Igmp Snpg Fwd V2 Reports] (vxlanIgmpSnpgFwdV2Reports)	long	The value of the object vxlanIgmpSnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this VXLAN.
vxlanIgmpSnpgFwdV3Reports [Vxlan Igmp Snpg Fwd V3 Reports] (vxlanIgmpSnpgFwdV3Reports)	long	The value of the object vxlanIgmpSnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this VXLAN.
vxlanIgmpSnpgRxGenQueries [Vxlan Igmp Snpg Rx Gen Queries] (vxlanIgmpSnpgRxGenQueries)	long	The value of the object vxlanIgmpSnpgRxGenQueries indicates the number of IGMP General Queries received on this VXLAN.
vxlanIgmpSnpgRxGrpSpecQueries [Vxlan Igmp Snpg Rx Grp Spec Queries] (vxlanIgmpSnpgRxGrpSpecQueries)	long	The value of the object vxlanIgmpSnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this VXLAN.
vxlanIgmpSnpgRxSrcSpecQueries [Vxlan Igmp Snpg Rx Src Spec Queries] (vxlanIgmpSnpgRxSrcSpecQueries)	long	The value of the object vxlanIgmpSnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this VXLAN.
vxlanIgmpSnpgRxUnknownType [Vxlan Igmp Snpg Rx Unknown Type] (vxlanIgmpSnpgRxUnknownType)	long	The value of the object vxlanIgmpSnpgRxUnknownType indicates the number of IGMP unknown type packets received on this VXLAN.
vxlanIgmpSnpgRxV1Reports [Vxlan Igmp Snpg Rx V1 Reports] (vxlanIgmpSnpgRxV1Reports)	long	The value of the object vxlanIgmpSnpgRxV1Reports indicates the number of IGMPv1 Reports received on this SAP.
vxlanIgmpSnpgRxV2Leaves [Vxlan Igmp Snpg Rx V2 Leaves] (vxlanIgmpSnpgRxV2Leaves)	long	The value of the object vxlanIgmpSnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this VXLAN.
vxlanIgmpSnpgRxV2Reports [Vxlan Igmp Snpg Rx V2 Reports] (vxlanIgmpSnpgRxV2Reports)	long	The value of the object vxlanIgmpSnpgRxV2Reports indicates the number of IGMPv2 Reports received on this VXLAN.

Table 299 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vxlanIcmpSnpgRxV3Reports [Vxlan Icmp Snpg Rx V3 Reports] (vxlanIcmpSnpgRxV3Reports)	long	The value of the object vxlanIcmpSnpgRxV3Reports indicates the number of IGMPv3 Reports received on this SAP.
vxlanIcmpSnpgTxGenQueries [Vxlan Icmp Snpg Tx Gen Queries] (vxlanIcmpSnpgTxGenQueries)	long	The value of the object vxlanIcmpSnpgTxGenQueries indicates the number of IGMP General Queries transmitted on this VXLAN.
vxlanIcmpSnpgTxGrpSpecQueries [Vxlan Icmp Snpg Tx Grp Spec Queries] (vxlanIcmpSnpgTxGrpSpecQueries)	long	The value of the object vxlanIcmpSnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this VXLAN.
vxlanIcmpSnpgTxSrcSpecQueries [Vxlan Icmp Snpg Tx Src Spec Queries] (vxlanIcmpSnpgTxSrcSpecQueries)	long	The value of the object vxlanIcmpSnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this VXLAN.
vxlanIcmpSnpgTxV1Reports [Vxlan Icmp Snpg Tx V1 Reports] (vxlanIcmpSnpgTxV1Reports)	long	The value of the object vxlanIcmpSnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this VXLAN.
vxlanIcmpSnpgTxV2Leaves [Vxlan Icmp Snpg Tx V2 Leaves] (vxlanIcmpSnpgTxV2Leaves)	long	The value of the object vxlanIcmpSnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this VXLAN.
vxlanIcmpSnpgTxV2Reports [Vxlan Icmp Snpg Tx V2 Reports] (vxlanIcmpSnpgTxV2Reports)	long	The value of the object vxlanIcmpSnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this VXLAN.
vxlanIcmpSnpgTxV3Reports [Vxlan Icmp Snpg Tx V3 Reports] (vxlanIcmpSnpgTxV3Reports)	long	The value of the object vxlanIcmpSnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this VXLAN.

Table 300 vprn statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapDataTrigStats</p> <p>MIB entry name: tmnxSapDataTrigStatsEntry</p> <p>Entry description: Each conceptual row contains detailed data trigger statistics information about a SAP. Entries in this table are created and removed automatically by the system. The system creates conceptual rows in this table only for SAP's where the value of sapStatHostMacLearnOptions is equal to 'dataTriggered'. The system does not create rows unless there is at least one non-zero counter.</p> <p>Table description (for tmnxSapDataTrigStatsTable): The tmnxSapDataTrigStatsTable contains detailed statistics information about the data triggers involved in creating data-triggered subscriber hosts. The typical usage of this table is to fill in the part of the index that identifies a SAP, and perform a partial walk to get all the statistics applicable to that SAP.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vprn.ServiceAccessPoint</p>		
dropUnsupportedProtocol [Drop Unsupported Protocol] (tmnxSapDataTrigStatsVal)	java. math. BigInteger	The value of the object tmnxSapDataTrigStatsVal indicates the value of the statistics contained in this conceptual row.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.

Table 300 vprn statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsId [Stats Id] (tmnxSapDataTrigStatsId)	long	The value of tmnxSapDataTrigStatsId indicates the identifier of the SAP data trigger statistics contained in this conceptual row. It is a meaningless number generated by this system.

Table 301 vrrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceAdditionalStats</p> <p>MIB entry name: tmnxVrrpRouterStatsEntry</p> <p>Entry description: Each row entry in the tmnxVrrpRouterStatsTable represents additional columns in the vrrpRouterStatsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tmnxVrrpRouterStatsTable): The tmnxVrrpRouterStatsTable provides an extension of the vrrpRouterStatsTable in the VRRP-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatsTable, and the augmenting table, tmnxVrrpRouterStatsTable. This in effect extends the vrrpRouterStatsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.Instance</p>		
addressListDiscards [Address List Discards] (tmnxVrrpStatsAddressListDiscards)	long	The total number of VRRP advertisement packets discarded because the address list did not match the locally configured list for the virtual router.
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxVrrpStatsAdvertiseIntervalDiscards)	long	The total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tmnxVrrpStatsAdvertiseSent)	long	The total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tmnxVrrpStatsMasterChanges)	long	The value for tmnxVrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxVrrpStatsPreemptEvents)	long	The value for tmnxVrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.

Table 301 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
preemptedEvents [Preempted Events] (tmnxVrrpStatsPreemptedEvents)	long	The value for tmnxVrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
totalDiscards [Total Discards] (tmnxVrrpStatsTotalDiscards)	long	The total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceStats MIB entry name: vrrpRouterStatsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.Instance		
addressListErrors [Address List Errors] (vrrpStatsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatsAdvertiseIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (vrrpStatsAdvertiseRcvd)	long	The total number of VRRP advertisements received by this virtual router.
authFailures [Auth Failures] (vrrpStatsAuthFailures)	long	The total number of VRRP packets received that do not pass the authentication check.

Table 301 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authTypeMismatch [Auth Type Mismatch] (vrrpStatsAuthTypeMismatch)	long	The total number of packets received with 'Auth Type' not equal to the locally configured authentication method ('vrrpOperAuthType').
becomeMaster [Become Master] (vrrpStatsBecomeMaster)	long	The total number of times that this virtual router's state has transitioned to MASTER.
invalidAuthType [Invalid Auth Type] (vrrpStatsInvalidAuthType)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatsInvalidTypePktsRcvd)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field.
ipTtlErrors [Ip Ttl Errors] (vrrpStatsIpTtlErrors)	long	The total number of VRRP packets received by the virtual router with IP TTL (Time-To-Live) not equal to 255.
packetLengthErrors [Packet Length Errors] (vrrpStatsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatsPriorityZeroPktsRcvd)	long	The total number of VRRP packets received by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatsPriorityZeroPktsSent)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'.

Table 301 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceV6AdditionalStats</p> <p>MIB entry name: tVrrpRtrStatisticsEntry</p> <p>Entry description: Each row entry in the tVrrpRtrStatisticsTable represents additional columns in the vrrpRouterStatisticsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tVrrpRtrStatisticsTable): The tVrrpRtrStatisticsTable provides an extension of the vrrpRouterStatisticsTable in the TIMETRA-VRRP-V3-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatisticsTable, and the augmenting table, tVrrpRtrStatisticsTable. This in effect extends the vrrpRouterStatisticsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.InstanceV6</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tVrrpStatAdvIntvlDiscards)	long	The value of tVrrpStatAdvIntvlDiscards indicates the total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tVrrpStatAdvertiseSent)	long	The value of tVrrpStatAdvertiseSent indicates the total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tVrrpStatMasterChanges)	long	The value for tVrrpStatMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tVrrpStatPreemptEvents)	long	The value for tVrrpStatPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tVrrpStatPreemptedEvents)	long	The value for tVrrpStatPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.

Table 301 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalDiscards [Total Discards] (tVrrpStatTotalDiscards)	long	The value of tVrrpStatTotalDiscards indicates the total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceV6Stats MIB entry name: vrrpRouterStatisticsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatisticsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.InstanceV6		
addressListErrors [Address List Errors] (vrrpStatisticsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatisticsAdvIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseRcvd [Advertise Rcvd] (vrrpStatisticsRcvdAdvertisements)	long	The total number of VRRP advertisements received by this virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 301 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeMaster [Become Master] (vrrpStatisticsMasterTransitions)	long	The total number of times that this virtual router's state has transitioned to MASTER. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
invalidAuthType [Invalid Auth Type] (vrrpStatisticsRcvdInvalidAuthentications)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatisticsRcvdInvalidTypePkts)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
ipTtlErrors [Ip Ttl Errors] (vrrpStatisticsIpTtlErrors)	long	The total number of VRRP packets received by the Virtual router with IPv4 TTL (for VRRP over IPv4) or IPv6 Hop Limit (for VRRP over IPv6) not equal to 255. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
packetLengthErrors [Packet Length Errors] (vrrpStatisticsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatisticsRcvdPriZeroPackets)	long	The total number of VRRP packets received by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 301 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatisticsSentPriZeroPackets)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 302 wpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WppPortalStats</p> <p>MIB entry name: tmnxWppPortalEntry</p> <p>Entry description: Each conceptual row represents information about a particular WPP portal. Entries in this table can be created or deleted via SNMP operations. In order to create a conceptual row in this table, a row in the tmnxWppTable with the same value of the object vRtrID must exist.</p> <p>Table description (for tmnxWppPortalTable): The tmnxWppPortalTable contains objects to configure the WPP portals of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wpp.Portal</p>		
portalName [Portal Name] (tmnxWppPortalName)	String	The value of tmnxWppPortalName specifies the name of this WPP portal.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
wppPortalStatsInstance [Wpp Portal Stats Instance] (tmnxWppPortalStatsInstance)	long	The value of the object tmnxWppPortalStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppPortalStatsType it indicates unambiguously what the value of tmnxWppPortalStatsVal means. For example: if the value of the object tmnxWppPortalStatsType is equal to 'event', the value of tmnxWppPortalStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppPortalStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.

Table 302 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppPortalStatsName [Wpp Portal Stats Name] (tmnxWppPortalStatsName)	String	The value of the object tmnxWppPortalStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppPortalStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppPortalStatsType [Wpp Portal Stats Type] (tmnxWppPortalStatsType)	int	The value of the object tmnxWppPortalStatsType indicates the type of WPP statistics contained in this conceptual row.
wppPortalStatsVal [Wpp Portal Stats Val] (tmnxWppPortalStatsVal)	long	The value of the object tmnxWppPortalStatsVal indicates the value of the statistics contained in this conceptual row.
<p>WppStats</p> <p>MIB entry name: vRtrConfEntry</p> <p>Entry description: Each row entry represents a virtual router in the system. Entries can be created and deleted via SNMP SET operations. Creation requires a SET request containing vRtrRowStatus, vRtrName and vRtrType. Note that rows in this table are usually created by the agent itself as a side affect of some other configuration; for example, when a service vprn is created by setting the appropriate objects in the TIMETRA-SERV-MIB. There will always be at least two row entries in this table, one of these entries represents the base or transport router and the other represents the management router. These entries are created when the system is initialized and can never be deleted.</p> <p>Table description (for vRtrConfTable): The vRtrConfTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wpp.Site</p>		
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 302 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppStatsInstance [Wpp Stats Instance] (tmnxWppStatsInstance)	long	The value of the object tmnxWppStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppStatsType it indicates unambiguously what the value of tmnxWppStatsVal means. For example: if the value of the object tmnxWppStatsType is equal to 'event', the value of tmnxWppStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.
wppStatsName [Wpp Stats Name] (tmnxWppStatsName)	String	The value of the object tmnxWppStatsName indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppStatsType [Wpp Stats Type] (tmnxWppStatsType)	int	The value of the object tmnxWppStatsType indicates the type of WPP statistics contained in this conceptual row.
wppStatsVal [Wpp Stats Val] (tmnxWppStatsVal)	long	The value of the object tmnxWppStatsVal indicates the value of the statistics contained in this conceptual row.

Table 303 acfilter statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HitCountStats</p> <p>MIB entry name: tIPFilterParamsEntry</p> <p>Entry description: Information about a particular IP Filter entry. Every IP Filter can have zero or more IP Filter match entries. a filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPFilterParamsTable): A table of all IP filter match entries for all IP filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.IpFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 303 acfilter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MacHitCountStats</p> <p>MIB entry name: tMacFilterParamsEntry</p> <p>Entry description: Information about a particular MAC Filter entry. Every MAC Filter can have zero or more MAC Filter match entries. A filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tMacFilterParamsTable): A table of all MAC filter match entries for all MAC filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.MacFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tMacFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tMacFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tMacFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tMacFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 304 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerAdditionalStats</p> <p>MIB entry name: bgpPeerEntry</p> <p>Entry description: Entry containing information about the connection with a BGP peer.</p> <p>Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.

Table 304 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
I2VpnActivePfxs [L2 Vpn Active Pfxs] (tBgpPeerNgOperI2VpnActivePfxs)	long	The value of tBgpPeerNgOperI2VpnActivePfxs indicates the number of active L2VPN prefixes from this peer.
I2VpnRecvPfxs [L2 Vpn Recv Pfxs] (tBgpPeerNgOperI2VpnRecvPfxs)	long	The value of tBgpPeerNgOperI2VpnRecvPfxs indicates the number L2VPN prefixes received from this peer.
I2VpnSentPfxs [L2 Vpn Sent Pfxs] (tBgpPeerNgOperI2VpnSentPfxs)	long	The value of tBgpPeerNgOperI2VpnSentPfxs indicates the number of L2VPN prefixes transmitted to this peer.
I2VpnSuppPfxDamp [L2 Vpn Supp Pfx Damp] (tBgpPeerNgOperI2VpnSuppPfxDamp)	long	The value of tBgpPeerNgOperI2VpnSuppPfxDamp indicates the number of L2VPN prefixes from this peer, which have been suppressed by damping.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.

Table 304 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.
mdtSafiActivePrefixes [Mdt Safi Active Prefixes] (tBgpPeerNgOperMdtSafiActivePfxs)	long	The value of tBgpPeerNgOperMdtSafiActivePfxs indicates the number of active MDT-SAFI prefixes from this peer.
mdtSafiPrefixesSuppressedByDamping [Mdt Safi Prefixes Suppressed By Damping] (tBgpPeerNgOperMdtSafiSuppPfxDamp)	long	The value of tBgpPeerNgOperMdtSafiSuppPfxDamp indicates the number of MDT-SAFI prefixes from this peer, which have been suppressed by damping.
mdtSafiReceivedPrefixes [Mdt Safi Received Prefixes] (tBgpPeerNgOperMdtSafiRecvPfxs)	long	The value of tBgpPeerNgOperMdtSafiRecvPfxs indicates the number of MDT-SAFI prefixes received from this peer.
mdtSafiSentPrefixes [Mdt Safi Sent Prefixes] (tBgpPeerNgOperMdtSafiSentPfxs)	long	The value of tBgpPeerNgOperMdtSafiSentPfxs indicates the number of MDT-SAFI prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.

Table 304 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.

Table 304 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.

Table 305 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CiscoHDLCStats MIB entry name: tmnxCiscoHDLCStatsEntry Entry description: An entry in the tmnxCiscoHDLCStatsTable. Table description (for tmnxCiscoHDLCStatsTable): The tmnxCiscoHDLCStatsTable has an entry for each port in the system that is configured for Cisco HDLC encapsulation. It contains Cisco HDLC protocol statistics for the particular port. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • tdmequipment.DS0ChannelGroup • tdmequipment.DS3E3Channel </p>		
discardStatInPkts [Discard Stat In Pkts] (tmnxCiscoHDLCDiscardStatInPkts)	long	tmnxCiscoHDLCDiscardStatInPkts indicates the number of inbound Cisco HDLC packets discarded.
discardStatOutPkts [Discard Stat Out Pkts] (tmnxCiscoHDLCDiscardStatOutPkts)	long	tmnxCiscoHDLCDiscardStatOutPkts indicates the number of outbound Cisco HDLC packets discarded.
statInOctets [Stat In Octets] (tmnxCiscoHDLCStatInOctets)	long	tmnxCiscoHDLCStatInOctets indicates the number of inbound Cisco HDLC octets.
statInPkts [Stat In Pkts] (tmnxCiscoHDLCStatInPkts)	long	tmnxCiscoHDLCStatInPkts indicates the number of inbound Cisco HDLC packets.
statOutOctets [Stat Out Octets] (tmnxCiscoHDLCStatOutOctets)	long	tmnxCiscoHDLCStatOutOctets indicates the number of outbound Cisco HDLC octets.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statOutPkts [Stat Out Pkts] (tmnxCiscoHDLCStatOutPkts)	long	tmnxCiscoHDLCStatOutPkts indicates the number of outbound Cisco HDLC packets.

This table contains additional objects for the interface table.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • bundle.Interface • ccag.CcagPathCcNetSap • ccag.CcagPathCcSapNet • ccag.CcagPathCcSapSap • equipment.ManagementPort • equipment.PhysicalPort • equipment.ScadaBranch • equipment.ScadaMddb • ies.L3AccessInterface • lag.Interface • pxc.PortCrossConnectSubPort • rtr.NetworkInterface • sonetequipment.Sts12Channel • sonetequipment.Sts192Channel • sonetequipment.Sts1Channel • sonetequipment.Sts3Channel • sonetequipment.Sts48Channel • sonetequipment.TributaryChannel • sonetequipment.Tu3Channel • tdmequipment.DS0ChannelGroup • tdmequipment.DS1E1Channel • tdmequipment.DS3E3Channel • vprn.L3AccessInterface 		

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: ifEntry</p> <p>Entry description: An entry containing management information applicable to a particular interface.</p> <p>Table description (for ifTable): A list of interface entries. Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependent-DropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHigh-CapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUC- astHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		

Table 305 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 306 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

packets128to255Octets [Packets 128 to 255 Octets] (etherStatsHighCapacityPkts128to255Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsHighCapacityPkts256to511Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsHighCapacityPkts512to1023Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernetets. If the network is a full-duplex ethernet and the medialIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting medialIndependentInPkts for etherStatsHighCapacityPkts, and medialIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting medialIndependentOutPkts for etherStatsHighCapacityPkts, and medialIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 306 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>QosDroppedOctetStats</p> <p>MIB entry name: tmnxPortIngrMdaQosStatEntry</p> <p>Entry description: Each row indicates the MDA QoS discard statistics on an ethernet or SONET/SDH port located on an oversubscribed MDA. NFM-P counter names: XML [displayed] (MIB)	Type	Description
lfaRuns [Lfa Runs] (tmnxIisisStatsLfaRuns)	long	The value of the object tmnxIisisStatsLfaRuns indicates the number of times loopfree-alternate calculations have been made.
lspRegenerations [Lsp Regenerations] (tmnxIisisStatsLSPRegenerations)	long	The value of the object tmnxIisisStatsLSPRegenerations indicates the count of LSP regenerations.
spfRuns [Spf Runs] (tmnxIisisStatsSpfRuns)	long	The value of the object tmnxIisisStatsSpfRuns indicates the number of times shortest path first calculations have been made.

Table 308 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmplnGetBulks [Sgi Snmp In Get Bulks] (sgiSnmplnGetBulks)	long	The value of sgiSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [Snmp In ASNParse Errs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmplnBadCommunityNames [Snmp In Bad Community Names] (snmplnBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 308 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 308 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 309 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
InterfaceStatusStats MIB entry name: tmnxOspfNgIfStatsEntry Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface. Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.Interface		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddrs)	long	The value of tmnxOspfNglfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNgIfBadNetworks)	long	The value of tmnxOspfNgIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNgIfBadOptions)	long	The value of tmnxOspfNgIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNgIfBadPacketTypes)	long	The value of tmnxOspfNgIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNgIfBadVersions)	long	The value of tmnxOspfNgIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNgIfBadVirtualLinks)	long	The value of tmnxOspfNgIfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNgIfDiscardPackets)	long	The value of tmnxOspfNgIfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNgIfRetransmitOuts)	long	The value of tmnxOspfNgIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceTransmitStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeighborGeneralStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ospf.Neighbor • ospf.OspfNeighbor 		
events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.

Table 309 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

Table 310 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'bgp'.
activeMplsTpTunnels [Active Mpls Tp Tunnels] (vRtrStatActiveMplsTpTunnels)	long	vRtrStatActiveMplsTpTunnels indicates the current number of active MPLS-TP tunnels.
activeRsvpTunnels [Active Rsvp Tunnels] (vRtrStatActiveRsvpTunnels)	long	The value of vRtrStatActiveRsvpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'rsvp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPAciveRoutes)	long	vRtrBGPAciveRoutes indicates the current number of active bgp routes for this instance of the route table.
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
dynamicArpEntries [Dynamic Arp Entries] (vRtrStatDynamicARPEntries)	long	The value of vRtrStatDynamicARPEntries indicates the total number of active and inactive dynamic ARP entries for the specified virtual router in the system.
hostActiveRoutes [Host Active Routes] (vRtrHostActiveRoutes)	long	The value of vRtrHostActiveRoutes indicates the current number of active direct routes with prefix value 32 for this instance of the route table.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hostRoutes [Host Routes] (vRtrHostRoutes)	long	The value of vRtrHostRoutes indicates the current number of direct routes with prefix value 32 for this instance of the route table.
iPsecActiveRoutes [IPsec Active Routes] (vRtrIPsecActiveRoutes)	long	The value of the object vRtrIPsecActiveRoutes indicates the current number of active IPsec routes for this instance of the route table.
iPsecRoutes [IPsec Routes] (vRtrIPsecRoutes)	long	The value of the object vRtrIPsecRoutes indicates the current number of IPsec routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
internalArpEntries [Internal Arp Entries] (vRtrStatInternalARPEntries)	long	The value of vRtrStatInternalARPEntries indicates the total number of active and inactive internal ARP entries for the specified virtual router in the system.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveRoutes [Ldp Active Routes] (vRtrLDPAciveRoutes)	long	vRtrLDPAciveRoutes indicates the current number of active ldp routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpRoutes [Ldp Routes] (vRtrLDPRoutes)	long	vRtrLDPRoutes indicates the current number of ldp routes for this instance of the route table.
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
localArpEntries [Local Arp Entries] (vRtrStatLocalARPEntries)	long	The value of vRtrStatLocalARPEntries indicates the total number of active and inactive local ARP entries for the specified virtual router in the system.
managedActiveRoutes [Managed Active Routes] (vRtrManagedActiveRoutes)	long	The value of vRtrManagedActiveRoutes indicates the total number of active managed routes for the specified virtual router in the system.
managedArpEntries [Managed Arp Entries] (vRtrStatManagedARPEntries)	long	The value of vRtrStatManagedARPEntries indicates the total number of active and inactive managed ARP entries for the specified virtual router in the system.
managedRoutes [Managed Routes] (vRtrManagedRoutes)	long	The value of vRtrManagedRoutes indicates the total number of active and inactive managed routes for the specified virtual router in the system.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
natActiveRoutes [Nat Active Routes] (vRtrNatActiveRoutes)	long	The value of vRtrNatActiveRoutes indicates the current number of IPv4 NAT routes for this instance of the route table.
natRoutes [Nat Routes] (vRtrNatRoutes)	long	The value of vRtrNatRoutes indicates the current number of IPv4 NAT (Network Address Translation) routes for this instance of the route table.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
perActiveRoutes [Per Active Routes] (vRtrPeriodicActiveRoutes)	long	The value of vRtrPeriodicActiveRoutes indicates the current number of active periodic routes for this instance of the route table.
perRoutes [Per Routes] (vRtrPeriodicRoutes)	long	The value of vRtrPeriodicRoutes indicates the current number of periodic routes for this instance of the route table.
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
statBGPEVPNARPEntries [Stat BGPEVPNARPEntries] (vRtrStatBGPEVPNARPEntries)	long	The value of vRtrStatBGPEVPNARPEntries indicates the total number of BGP EVPN ARP entries for the specified virtual router in the system.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.
staticArpEntries [Static Arp Entries] (vRtrStatStaticARPEntries)	long	The value of vRtrStatStaticARPEntries indicates the total number of active and inactive static ARP entries for the specified virtual router in the system.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
subMgmtActiveRoutes [Sub Mgmt Active Routes] (vRtrSubMgmtActiveRoutes)	long	The value of vRtrSubMgmtActiveRoutes indicates the number of active subscriber management routes.
subMgmtRoutes [Sub Mgmt Routes] (vRtrSubMgmtRoutes)	long	The value of vRtrSubMgmtRoutes indicates the total number of subscriber management routes in the route Table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.
totalMplsTpTunnels [Total Mpls Tp Tunnels] (vRtrStatTotalMplsTpTunnels)	long	vRtrStatTotalMplsTpTunnels indicates the current number of both active and inactive MPLS-TP tunnels.
totalRsvpTunnels [Total Rsvp Tunnels] (vRtrStatTotalRsvpTunnels)	long	The value of vRtrStatTotalRsvpTunnels indicates the current number of both active and inactive RSVP tunnels.
vpnLeakActiveRoutes [Vpn Leak Active Routes] (vRtrVPNLeakActiveRoutes)	long	vRtrVPNLeakActiveRoutes indicates the current number of active VPN Leak routes for this instance of the route table.
vpnLeakRoutes [Vpn Leak Routes] (vRtrVPNLeakRoutes)	long	vRtrVPNLeakRoutes indicates the current number of VPN Leak routes for this instance of the route table.
<p>VirtualRouterIcmp6InStats</p> <p>MIB entry name: vRtrIcmp6Entry</p> <p>Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Entries are created and deleted when entries in the vRtrConfEntry are created and deleted.</p> <p>Table description (for vRtrIcmp6Table): The vRtrIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDestinationUnreachable [In Destination Unreachable] (vRtrIcmp6InDestUnreachs)	long	The value of vRtrIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this router instance.
inEchoReplies [In Echo Replies] (vRtrIcmp6InEchoReplies)	long	The value of vRtrIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this router instance.
inEchoRequests [In Echo Requests] (vRtrIcmp6InEchos)	long	The value of vRtrIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this router instance.
inErrors [In Errors] (vRtrIcmp6InErrors)	long	The value of vRtrIcmp6InErrors indicates the number of ICMP messages which this router instance received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIcmp6InNbrAdvertisements)	long	The value of vRtrIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this router instance.
inNeighborSolicits [In Neighbor Solicits] (vRtrIcmp6InNbrSolicits)	long	The value of vRtrIcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this router instance.
inPacketTooBig [In Packet Too Big] (vRtrIcmp6InPktTooBigs)	long	The value of vRtrIcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this router instance.
inRedirects [In Redirects] (vRtrIcmp6InRedirects)	long	The value of vRtrIcmp6InRedirects indicates number of ICMP Redirect messages received by this router instance.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inRouterAdvertisements [In Router Advertisements] (vRtrIcmp6InRtrAdvertisements)	long	The value of vRtrIcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this router instance.
inRouterSolicits [In Router Solicits] (vRtrIcmp6InRtrSolicits)	long	The value of vRtrIcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this router instance.
inTimeExceeded [In Time Exceeded] (vRtrIcmp6InTimeExcds)	long	The value of vRtrIcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this router instance.
inTotalMessages [In Total Messages] (vRtrIcmp6InMsgs)	long	The value of vRtrIcmp6InMsgs indicates the total number of ICMP messages received by this router instance which includes all those counted by vRtrIcmp6InErrors.
VirtualRouterIcmp6OutStats MIB entry name: vRtrIcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router instance. Entries are created and deleted when entries in the vRtrConfEntry are created and deleted. Table description (for vRtrIcmp6Table): The vRtrIcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router instance. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIcmp6OutDestUnreachs)	long	The value of vRtrIcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this router instance.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outEchoReplies [Out Echo Replies] (vRtrIcmp6OutEchoReplies)	long	The value of vRtrIcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this router instance.
outEchoRequests [Out Echo Requests] (vRtrIcmp6OutEchos)	long	The value of vRtrIcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this router instance.
outErrors [Out Errors] (vRtrIcmp6OutErrors)	long	The value of vRtrIcmp6OutErrors indicates the number of ICMP messages which this router instance did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIcmp6OutGrpMembQueries)	long	The value of vRtrIcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this router instance.
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIcmp6OutGrpMembReductions)	long	The value of vRtrIcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this router instance.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIcmp6OutGrpMembResponses)	long	The value of vRtrIcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this router instance.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIcmp6OutNbrAdvertisements)	long	The value of vRtrIcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this router instance.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIcmp6OutNbrSolicits)	long	The value of vRtrIcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this router instance.

Table 310 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outPacketTooBig [Out Packet Too Big] (vRtrIcmp6OutPktTooBigs)	long	The value of vRtrIcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this router instance.
outRedirects [Out Redirects] (vRtrIcmp6OutRedirects)	long	The value of vRtrIcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this router instance.
outRouterAdvertisements [Out Router Advertisements] (vRtrIcmp6OutRtrAdvertisements)	long	The value of vRtrIcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this router instance.
outRouterSolicits [Out Router Solicits] (vRtrIcmp6OutRtrSolicits)	long	The value of vRtrIcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this router instance.
outTimeExceeded [Out Time Exceeded] (vRtrIcmp6OutTimeExcds)	long	The value of vRtrIcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this router instance.
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this router instance attempted to send. Note that this counter includes all those counted by icmpOutErrors.

Table 311 sitesec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmFilterQueueStats</p> <p>MIB entry name: tCpmFilterQueueStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmFilterQueueEntry indexed by the same tCpmFilterQueueId. Entries are created when tCpmFilterQueueEntry rows are created.</p> <p>Table description (for tCpmFilterQueueStatsTable): The tCpmFilterQueueStatsTable has a stats entry for each CPM filter queue configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmFilterQueue</p>		
droppedInOctets [Dropped In Octets] (tCpmFilterQInProfileDropOctets)	java. math. BigInteger	The value of tCpmFilterQInProfileDropOctets indicates the number of octets complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedInPackets [Dropped In Packets] (tCpmFilterQInProfileDropPkts)	java. math. BigInteger	The value of tCpmFilterQInProfileDropPkts indicates the number of packets complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedOutOctets [Dropped Out Octets] (tCpmFilterQOutProfileDropOctets)	java. math. BigInteger	The value of tCpmFilterQOutProfileDropOctets indicates the number of octets not complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedOutPackets [Dropped Out Packets] (tCpmFilterQOutProfileDropPkts)	java. math. BigInteger	The value of tCpmFilterQOutProfileDropPkts indicates the number of packets not complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
forwardedInOctets [Forwarded In Octets] (tCpmFilterQInProfileFwdOctets)	java. math. BigInteger	The value of tCpmFilterQInProfileFwdOctets indicates the number of octets complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.

Table 311 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedInPackets [Forwarded In Packets] (tCpmFilterQInProfileFwdPkts)	java. math. BigInteger	The value of tCpmFilterQInProfileFwdPkts indicates the number of packets complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
forwardedOutOctets [Forwarded Out Octets] (tCpmFilterQOutProfileFwdOctets)	java. math. BigInteger	The value of tCpmFilterQOutProfileFwdOctets indicates the number of octets not complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
forwardedOutPackets [Forwarded Out Packets] (tCpmFilterQOutProfileFwdPkts)	java. math. BigInteger	The value of tCpmFilterQOutProfileFwdPkts indicates the number of packets not complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
<p>CpmlpFilterStats</p> <p>MIB entry name: tCpmlpFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmlpFilterEntry indexed by the same tCpmlpFilterEntryId. Entries are created when tCpmlpFilterEntry rows are created.</p> <p>Table description (for tCpmlpFilterStatsTable): The tCpmlpFilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmlpFilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmlpFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmlpFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmlpFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmlpFilterEntry with the same index.

Table 311 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MafEntryStats</p> <p>MIB entry name: tmnxIPMafMatchEntry</p> <p>Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criterion is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable).</p> <p>Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>RadiusNotifyStats</p> <p>MIB entry name: tmnxSubRadNotifyStatsObjects</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: netw.NetworkElement</p>		
accepted [Accepted] (tmnxSubRadNotifyStatsAccepted)	long	The value of tmnxSubRadNotifyStatsAccepted indicates the number of notify Change-of-Authorization requests accepted.
badAuthentication [Bad Authentication] (tmnxSubRadNotifyStatsBadAuth)	long	The value of tmnxSubRadNotifyStatsBadAuth indicates the number of notify Change-of-Authorization requests rejected because of authentication failure.

Table 311 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidMsg [Invalid Msg] (tmnxSubRadNotifyStatsInvalidMsg)	long	The value of tmnxSubRadNotifyStatsInvalidMsg indicates the number of notify Change-of-Authorization requests rejected because of decode errors.
noNotification [No Notification] (tmnxSubRadNotifyStatsNoNotify)	long	The value of tmnxSubRadNotifyStatsNoNotify indicates the number of notify Change-of-Authorization requests rejected due to lack of notification process.
noResource [No Resource] (tmnxSubRadNotifyStatsNoResource)	long	The value of tmnxSubRadNotifyStatsNoResource indicates the number of notify Change-of-Authorization requests rejected due to lack of resources.
received [Received] (tmnxSubRadNotifyStatsReceived)	long	The value of tmnxSubRadNotifyStatsReceived indicates the number of notify Change-of-Authorization requests received.
rejected [Rejected] (tmnxSubRadNotifyStatsRejected)	long	The value of tmnxSubRadNotifyStatsRejected indicates the number of notify Change-of-Authorization requests rejected.
unknownHost [Unknown Host] (tmnxSubRadNotifyStatsUnknownHost)	long	The value of tmnxSubRadNotifyStatsUnknownHost indicates the number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id.

Table 312 topology statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BgpOriginatedAsStats</p> <p>MIB entry name: aluBgpInstanceOrigAsStatsEntry</p> <p>Entry description: An entry (conceptual row) in the aluBgpInstanceOrigAsStatsTable. each entry represents the BGP Stats for specific originated AS.</p> <p>Table description (for aluBgpInstanceOrigAsStatsTable): information about BGP Stats for originated Autonomous Systems.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: topology.BgpOriginatedAs</p>		
numberOfRouteAdded [Number Of Route Added] (aluBgpInstanceOrigAsNumRouteAdded)	long	The number of added BGP routes originated from Autonomous System aluBgpInstanceOrigAs.
numberOfRouteChurn [Number Of Route Churn] (aluBgpInstanceOrigAsNumRouteChurn)	long	The number of churn BGP routes (added or withdrawn) originated from Autonomous System aluBgpInstanceOrigAs.
numberOfRouteWithdrwan [Number Of Route Withdrwan] (aluBgpInstanceOrigAsNumRoute- Withdrawn)	long	The compliance statement for revision 4.0 of BGP Stats in the ALU-BGP-MIB.
totalOriginatingBgpRoutes [Total Originating Bgp Routes] (aluBgpInstanceOrigAsTotalOrigBgpRoutes)	long	The total number of BGP routes originated from Autonomous System aluBgpInstanceOrigAs.

Table 312 topology statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BgpRoutesNextHopStats</p> <p>MIB entry name: aluBgpInstanceBgpStatsEntry</p> <p>Entry description: An entry (conceptual row) in the aluBgpInstanceBgpStatsTable. each entry represents the BGP Stats for specific Route Target and next hop.</p> <p>Table description (for aluBgpInstanceBgpStatsTable): information about BGP Route Target and Next Hop Stats.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: topology.BgpRoutesNextHop</p>		
numberOfAsPathChange [Number Of As Path Change] (aluBgpInstanceNumAsPathChange)	long	The number of BGP routes received with different AS-PATH for specific Route Target and next hop.
numberOfCommunityChange [Number Of Community Change] (aluBgpInstanceNumCommunityChange)	long	The number of BGP routes received with different COMMUNITY for specific Route Target and next hop.
numberOfLocalPrefChange [Number Of Local Pref Change] (aluBgpInstanceNumLocalPrefChange)	long	The number of BGP routes received with different LOCAL-PREF for specific Route Target and next hop.
numberOfMedChange [Number Of Med Change] (aluBgpInstanceNumMedChange)	long	The number of BGP routes received with different MED for specific Route Target and next hop.
numberOfNextHopChange [Number Of Next Hop Change] (aluBgpInstanceNumNextHopChange)	long	The number of BGP routes received with different Next-Hop. It only applies when aluBgpInstanceNHAddr is zero.
numberOfRouteAdded [Number Of Route Added] (aluBgpInstanceNumRouteAdded)	long	The number of added BGP routes for specific Route Target and next hop.

Table 312 topology statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numberOfRouteChurn [Number Of Route Churn] (aluBgpInstanceNumRouteChurn)	long	The number of BGP routes churn (added or withdrawn) for specific Route Target and next hop.
numberOfRouteFlapped [Number Of Route Flapped] (aluBgpInstanceNumRouteFlapped)	long	The number of flapped BGP routes for specific Route Target and next hop.
numberOfRouteUpdated [Number Of Route Updated] (aluBgpInstanceNumRouteUpdated)	long	The number of updated BGP routes for specific Route Target and next hop.
numberOfRouteWithdrwan [Number Of Route Withdrwan] (aluBgpInstanceNumRouteWithdrawn)	long	The number of withdrawn BGP routes for specific Route Target and next hop.
totalBgpRoutes [Total Bgp Routes] (aluBgpInstanceTotalBgpRoutes)	long	The total number of BGP routes for specific Route Target and next hop.
totalConfedInternalRoutes [Total Confed Internal Routes] (aluBgpInstanceTotalConfedInternalRoutes)	long	The total number of confederation BGP internal routes for specific next hop. It only applies to global BGP (RT=0).
totalSubAsInternalRoutes [Total Sub As Internal Routes] (aluBgpInstanceTotalSubAsInternalRoutes)	long	The total number of Sub-AS BGP internal routes for specific next hop. It only applies to global BGP (RT=0).

egressHitCount [Egress Hit Count] (tMacFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tMacFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tMacFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 314 apipe statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapAGBaseStats MIB entry name: aluSapAGBaseStatsEntry Entry description: Basic statistics about a specific SAP Aggregation Group. Table description (for aluSapAGBaseStatsTable): A table that contains basic statistics of a SAP Aggregation Group. Supports realtime plotting Supports scheduled collection Monitored class: apipe.SapAggregationGroup</p>		
sapAGBaseStatsAuthentication- PktsDiscarded [Sap AGBase Stats Authentication Pkts Discarded] (aluSapAGBaseStatsAuthentica- tionPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
sapAGBaseStatsAuthentication- PktsSuccess [Sap AGBase Stats Authentication Pkts Success] (aluSapAGBaseStatsAuthentica- tionPktsSuccess)	long	The number of DHCP packets successfully authenticated.
sapAGBaseStatsCustId [Sap AGBase Stats Cust Id] (aluSapAGBaseStatsCustId)	long	The Customer ID for the associated service.
sapAGBaseStatsEgressDropped- InProfOctets [Sap AGBase Stats Egress Dropped In Prof Octets] (aluSapAGBaseStatsEgressDrop- pedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 314 apipe statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapAGBaseStatsEgressDropped- InProfPackets [Sap AGBase Stats Egress Dropped In Prof Packets] (aluSapAGBaseStatsEgressDrop- pedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets discarded due to: MBS exceeded, buffer pool limit exceeded, etc.
sapAGBaseStatsEgressDropped- OutProfOctets [Sap AGBase Stats Egress Dropped Out Prof Octets] (aluSapAGBaseStatsEgress- DroppedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets discarded due to: MBS exceeded, buffer pool limit exceeded, etc.
sapAGBaseStatsEgressDropped- OutProfPackets [Sap AGBase Stats Egress Dropped Out Prof Packets] (aluSapAGBaseStatsEgress- DroppedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets discarded due to: MBS exceeded, buffer pool limit exceeded, etc.
sapAGBaseStatsEgressForward- edInProfOctets [Sap AGBase Stats Egress Forwarded In Prof Octets] (aluSapAGBaseStatsEgressFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded.
sapAGBaseStatsEgressForward- edInProfPackets [Sap AGBase Stats Egress Forwarded In Prof Packets] (aluSapAGBaseStatsEgressFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded.

Table 314 apipe statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapAGBaseStatsEgressForwardedOutProfOctets [Sap AGBase Stats Egress Forwarded Out Prof Octets] (aluSapAGBaseStatsEgressForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded.
sapAGBaseStatsEgressForwardedOutProfPackets [Sap AGBase Stats Egress Forwarded Out Prof Packets] (aluSapAGBaseStatsEgressForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded.
sapAGBaseStatsIngressDroppedHiPrioOctets [Sap AGBase Stats Ingress Dropped Hi Prio Octets] (aluSapAGBaseStatsIngressDroppedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP Aggregation Group's ingress QoS policy, dropped due to: MBS exceeded, buffer pool limit exceeded, etc.
sapAGBaseStatsIngressDroppedHiPrioPackets [Sap AGBase Stats Ingress Dropped Hi Prio Packets] (aluSapAGBaseStatsIngressDroppedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP Aggregation Group's ingress QoS policy, dropped due to: MBS exceeded, buffer pool limit exceeded, etc.
sapAGBaseStatsIngressDroppedLoPrioOctets [Sap AGBase Stats Ingress Dropped Lo Prio Octets] (aluSapAGBaseStatsIngressDroppedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP Aggregation Group's ingress QoS policy, dropped due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 314 apipe statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapAGBaseStatsIngressDropped-LoPrioPackets [Sap AGBase Stats Ingress Dropped Lo Prio Packets] (aluSapAGBaseStatsIngress-DroppedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP Aggregation Group's ingress QoS policy, dropped due to: MBS exceeded, buffer pool limit exceeded, etc.
sapAGBaseStatsIngressDroppedOctets [Sap AGBase Stats Ingress Dropped Octets] (aluSapAGBaseStatsIngress-DroppedOctets)	java. math. BigInteger	The number of octets dropped in ingress due to: SAP state, bad checksum, etc.
sapAGBaseStatsIngressDroppedPackets [Sap AGBase Stats Ingress Dropped Packets] (aluSapAGBaseStatsIngress-DroppedPackets)	java. math. BigInteger	The number of packets dropped in ingress due to: SAP state, bad checksum, etc.
sapAGBaseStatsIngressForwardedInProfOctets [Sap AGBase Stats Ingress Forwarded In Prof Octets] (aluSapAGBaseStatsIngressForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded.
sapAGBaseStatsIngressForwardedInProfPackets [Sap AGBase Stats Ingress Forwarded In Prof Packets] (aluSapAGBaseStatsIngressForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded.

Table 314 apipe statistics (continued)

sapAGIngQosQStatsForwarded- OutProfPackets [Sap AGIng Qos QStats Forwarded Out Prof Packets] (aluSapAGIngQosQStatsForward- edOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded.

Table 314 apipe statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapAGIngQosQStatsOfferedHiPrioOctets [Sap AGIng Qos QStats Offered Hi Prio Octets] (aluSapAGIngQosQStatsOfferedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, offered as determined by the SAP Aggregation Group ingress QoS policy.
sapAGIngQosQStatsOfferedHiPrioPackets [Sap AGIng Qos QStats Offered Hi Prio Packets] (aluSapAGIngQosQStatsOfferedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, offered as determined by the SAP Aggregation Group ingress QoS policy.
sapAGIngQosQStatsOfferedLoPrioOctets [Sap AGIng Qos QStats Offered Lo Prio Octets] (aluSapAGIngQosQStatsOfferedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, offered as determined by the SAP Aggregation Group ingress QoS policy.
sapAGIngQosQStatsOfferedLoPrioPackets [Sap AGIng Qos QStats Offered Lo Prio Packets] (aluSapAGIngQosQStatsOfferedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, offered as determined by the SAP Aggregation Group ingress QoS policy.
sapAGIngQosQStatsUncoloredOctetsOffered [Sap AGIng Qos QStats Uncolored Octets Offered] (aluSapAGIngQosQStatsUncoloredOctetsOffered)	java. math. BigInteger	The number of uncolored octets offered to the ingress.

Table 314 apipe statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapAGIngQosQStatsUncolored- PacketsOffered [Sap AGIng Qos QStats Uncolored Packets Offered] (aluSapAGIngQosQStatsUncol- oredPacketsOffered)	java. math. BigInte- ger	The number of uncolored packets offered to the ingress.
sapAGIngQosQueueId [Sap AGIng Qos Queue Id] (aluSapAGIngQosQueueId)	long	The index of the ingress QoS queue of this SAP Aggregation Group.

Table 315 aps statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ApsChannelStats MIB entry name: apsChanStatusEntry Entry description: A conceptual row in the apsChanStatusTable. Table description (for apsChanStatusTable): This table contains status information for all SONET LTE interfaces that are included in APS groups. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsChannel</p>		
discontinuityTime [Discontinuity Time] (apsChanStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this channel's counters suffered a discontinuity. The relevant counters are the specific instances associated with this channel of any Counter32 object contained in apsChanStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.
lastSwitchover [Last Switchover] (apsChanStatusLastSwitchover)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the value of sysUpTime when this channel last completed a switch to the protection line. If this channel has never switched to the protection line, the value 0 will be returned. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the value of sysUpTime the last time that a working channel was switched back to the working line from this protection line. If no working channel has ever switched back to the working line from this protection line, the value 0 will be returned.

Table 315 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
signalDegrades [Signal Degrades] (apsChanStatusSignalDegrades)	long	A count of Signal Degrade conditions. This condition occurs when the line Bit Error Rate exceeds the currently configured value of the relevant instance of apsConfigSdBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
signalFailures [Signal Failures] (apsChanStatusSignalFailures)	long	A count of Signal Failure conditions that have been detected on the incoming signal. This condition occurs when a loss of signal, loss of frame, AIS-L or a Line bit error rate exceeding the currently configured value of the relevant instance of apsConfigSfBerThreshold. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
switchoverSeconds [Switchover Seconds] (apsChanStatusSwitchoverSeconds)	long	The cumulative Protection Switching Duration (PSD) time in seconds. For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled. The value 0 will be returned otherwise. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime. For example, if the value of an instance of apsChanStatusSwitchoverSeconds changes from a non-zero value to zero due to revertive switching being disabled, it is expected that the corresponding value of apsChanStatusDiscontinuityTime will be updated to reflect the time of the configuration change.

Table 315 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
switchovers [Switchovers] (apsChanStatusSwitchovers)	long	When queried with index value apsChanConfigNumber other than 0, this object will return the number of times this channel has switched to the protection line. When queried with index value apsChanConfigNumber set to 0, which is the protection line, this object will return the number of times that any working channel has been switched back to the working line from this protection line. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsChanStatusDiscontinuityTime.
<p>ApsGroupStats MIB entry name: apsStatusEntry Entry description: A conceptual row in the apsStatusTable. Table description (for apsStatusTable): This table provides status information about APS groups that have been configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: aps.ApsGroup</p>		
channelMismatches [Channel Mismatches] (apsStatusChannelMismatches)	long	A count of Channel Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
discontinuityTime [Discontinuity Time] (apsStatusDiscontinuityTime)	long	The value of sysUpTime on the most recent occasion at which any one or more of this APS group's counters suffered a discontinuity. The relevant counters are the specific instances associated with this APS group of any Counter32 object contained in apsStatusTable. If no such discontinuities have occurred since the last re-initialization of the local management subsystem, then this object contains a zero value.

Table 315 aps statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fEPLFs [fEPLFs] (apsStatusfEPLFs)	long	A count of Far-End Protection-Line Failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
modeMismatches [Mode Mismatches] (apsStatusModeMismatches)	long	A count of Mode Mismatch conditions. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.
pSBFs [PSBFs] (apsStatusPSBFs)	long	A count of Protection Switch Byte Failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected. An inconsistent APS byte occurs when no three consecutive K1 bytes of the last 12 successive frames are identical, starting with the last frame containing a previously consistent byte. An invalid code occurs when the incoming K1 byte contains an unused code or a code irrelevant for the specific switching operation (e.g., Reverse Request while no switching request is outstanding) in three consecutive frames. An invalid code also occurs when the incoming K1 byte contains an invalid channel number in three consecutive frames. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of apsStatusDiscontinuityTime.

Table 316 atm statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AtmOamVplStatistics</p> <p>MIB entry name: tAtmOamVplStatisticsEntry</p> <p>Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB.</p> <p>Table description (for tAtmOamVplStatisticsTable): The tAtmOamVplStatisticsTable is used to gather oam statistics on a particular VPL entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.VPConnection</p>		
tAtmOamVplStatsAISCellsRxd [TAtm Oam Vpl Stats AISCells Rxd] (tAtmOamVplStatsAISCellsRxd)	long	The value of tAtmOamVplStatsAISCellsRxd indicates the number of AIS cells received on this VPL for both end to end and segment.
tAtmOamVplStatsAISCellsTxd [TAtm Oam Vpl Stats AISCells Txd] (tAtmOamVplStatsAISCellsTxd)	long	The value of tAtmOamVplStatsAISCellsTxd indicates the number of AIS cells transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsCrc10Errors [TAtm Oam Vpl Stats Crc 10 Errors] (tAtmOamVplStatsCrc10Errors)	long	The value of tAtmOamVplStatsCrc10Errors indicates the number of OAM cells discarded on this VPL with CRC 10 errors.
tAtmOamVplStatsLoopbackCellsRxd [TAtm Oam Vpl Stats Loopback Cells Rxd] (tAtmOamVplStatsLoopbackCellsRxd)	long	The value of tAtmOamVplStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VPL for both end to end and segment.
tAtmOamVplStatsLoopbackCellsTxd [TAtm Oam Vpl Stats Loopback Cells Txd] (tAtmOamVplStatsLoopbackCellsTxd)	long	The value of tAtmOamVplStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VPL for both end to end and segment.
tAtmOamVplStatsOtherCellsRxd [TAtm Oam Vpl Stats Other Cells Rxd] (tAtmOamVplStatsOtherCellsRxd)	long	This value of tAtmOamVplStatsOtherCellsRxd indicates the number of OAM cells that are received on this VPL but not identified.

Table 316 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmOamVplStatsRDICellsRxd [TAtm Oam Vpl Stats RDICells Rxd] (tAtmOamVplStatsRDICellsRxd)	long	The value of tAtmOamVplStatsRDICellsRxd indicates the number of RDI cells received on this VPL for both end to end and segment.
tAtmOamVplStatsRDICellsTxd [TAtm Oam Vpl Stats RDICells Txd] (tAtmOamVplStatsRDICellsTxd)	long	The value of tAtmOamVplStatsRDICellsTxd indicates the number of RDI cells transmitted on this VPL for both end to end and segment.
<p>AtmVplStatistics MIB entry name: tAtmVplStatisticsEntry Entry description: An entry in the tAtmVplStatisticsTable containing statistics information applicable to a particular VPL entry in the AToM MIB. Table description (for tAtmVplStatisticsTable): The tAtmVplStatisticsTable is used to gather cell-level statistics on a particular VPL entry in the RFC 2515 AToM MIB. Supports realtime plotting Supports scheduled collection Monitored class: atm.VPConnection</p>		
tAtmVplStatsDrpCellsRxd [TAtm Vpl Stats Drp Cells Rxd] (tAtmVplStatsDrpCellsRxd)	long	The value of tAtmVplStatsDrpCellsRxd indicates the number of all policer cells discards (CLP=0+1) of the VPL. This excludes any buffer management discards (if applicable).
tAtmVplStatsDrpClp0CellsRxd [TAtm Vpl Stats Drp Clp 0 Cells Rxd] (tAtmVplStatsDrpClp0CellsRxd)	long	The value of tAtmVplStatsDrpClp0CellsRxd indicates the number of all policer CLP=0 cells discards of the VPL. This excludes any buffer management discards (if applicable).
tAtmVplStatsDrpClp0CellsTxd [TAtm Vpl Stats Drp Clp 0 Cells Txd] (tAtmVplStatsDrpClp0CellsTxd)	long	The value of tAtmVplStatsDrpClp0CellsTxd indicates the number of all CLP=0 cells discards of this VPL. This includes both discards due to buffer management and policer.
tAtmVplStatsTagCells [TAtm Vpl Stats Tag Cells] (tAtmVplStatsTagCells)	long	The value of tAtmVplStatsTagCells indicates the number of tagged CLP=0 cells of the VPL. The egress may or may not discard these cells.

Table 316 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tAtmVplStatsTotalBytesRxd [TAtm Vpl Stats Total Bytes Rxd] (tAtmVplStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmVplStatsTotalBytesRxd indicates the number of bytes received by this VPL. This is the number of tAtmVplStatsTotalCellsRxd multiplied by 53.
tAtmVplStatsTotalBytesTxd [TAtm Vpl Stats Total Bytes Txd] (tAtmVplStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmVplStatsTotalBytesTxd indicates the number of bytes transmitted by this VPL. This is the number of tAtmVplStatsTotalCellsTxd multiplied by 53.
tAtmVplStatsTotalCellsRxd [TAtm Vpl Stats Total Cells Rxd] (tAtmVplStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmVplStatsTotalCellsRxd indicates the number of valid ATM cells received by the VPL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVplStatsTotalCellsTxd [TAtm Vpl Stats Total Cells Txd] (tAtmVplStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmVplStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the VPL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVplStatsTotalClp0CellsRxd [TAtm Vpl Stats Total Clp 0 Cells Rxd] (tAtmVplStatsTotalClp0CellsRxd)	java. math. BigInteger	The value of tAtmVplStatsTotalClp0CellsRxd indicates the number of valid ATM CLP=0 cells received by the VPL. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmVplStatsTotalClp0CellsTxd [TAtm Vpl Stats Total Clp 0 Cells Txd] (tAtmVplStatsTotalClp0CellsTxd)	java. math. BigInteger	The value of tAtmVplStatsTotalClp0CellsTxd indicates the number of valid ATM CLP=0 cells transmitted by the VPL. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats MIB entry name: tAtmIntfStatsEntry Entry description: An entry in the tAtmIntfStatsEntry containing statistics information applicable to an ATM interface. Table description (for tAtmIntfStatsTable): The tAtmIntfStatsTable contains ATM interface stats at the ATM Layer. Supports realtime plotting Supports scheduled collection Monitored class: atm.Interface</p>		
tAtmInterfaceStatsTotalBytesRxd [TAtm Interface Stats Total Bytes Rxd] (tAtmIntfStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalBytesRxd indicates the number of bytes received on this interface. This is the number of tAtmIntfStatsTotalCellsRxd multiplied by 53.
tAtmInterfaceStatsTotalBytesTxd [TAtm Interface Stats Total Bytes Txd] (tAtmIntfStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalBytesTxd indicates the number of bytes transmitted on this interface. This is the number of tAtmIntfStatsTotalCellsTxd multiplied by 53.
tAtmInterfaceStatsTotalCellsRxd [TAtm Interface Stats Total Cells Rxd] (tAtmIntfStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalCellsRxd indicates the number of valid ATM cells received by the ATM interface including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
tAtmInterfaceStatsTotalCellsTxd [TAtm Interface Stats Total Cells Txd] (tAtmIntfStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmIntfStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the ATM interface including both CLP=0 and CLP=1 cells.
tAtmInterfaceStatsTotalUnknownCellsDropped [TAtm Interface Stats Total Unknown Cells Dropped] (tAtmIntfStatsTotalUnknCellsDrp)	long	The value of tAtmIntfStatsTotalUnknCellsDrp indicates the number of cells dropped due to an unknown VPI/VCI.

Table 316 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PvcConnectionAal5PerformanceStats</p> <p>MIB entry name: aal5VccEntry</p> <p>Entry description: This list contains the AAL5 VCC performance parameters and is indexed by ifIndex values of AAL5 interfaces and the associated VPI/VCI values.</p> <p>Table description (for aal5VccTable): This table contains AAL5 VCC performance parameters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		
aal5CrcErrors [Aal5 Crc Errors] (aal5VccCrcErrors)	long	The number of AAL5 CPCS PDUs received with CRC-32 errors on this AAL5 VCC at the interface associated with an AAL5 entity.
aal5OverSizedSDUs [Aal5 Over Sized SDUs] (aal5VccOverSizedSDUs)	long	The number of AAL5 CPCS PDUs discarded on this AAL5 VCC at the interface associated with an AAL5 entity because the AAL5 SDUs were too large.
aal5SarTimeOuts [Aal5 Sar Time Outs] (aal5VccSarTimeOuts)	long	The number of partially re-assembled AAL5 CPCS PDUs which were discarded on this AAL5 VCC at the interface associated with an AAL5 entity because they were not fully re-assembled within the required time period. If the re-assembly timer is not supported, then this object contains a zero value.
<p>PvcConnectionAal5Stats</p> <p>MIB entry name: tAal5VccStatisticsEntry</p> <p>Entry description: An entry in the tAal5VccStatisticsTable containing statistics information applicable to a particular AAL5 VCC entry in the AToM MIB.</p> <p>Table description (for tAal5VccStatisticsTable): tAal5VccStatisticsTable is used to gather AAL5-level statistics on a particular AAL5 VCC entry in the RFC 2515 AToM MIB.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.PvcConnection</p>		

Table 316 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aal5DroppedPacketsRxd [Aal5 Dropped Packets Rxd] (tAal5VccStatsDrpPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsRxd indicates the number of dropped AAL-5 SDUs that have been received on the AAL-5 VCC.
aal5DroppedPacketsTxd [Aal5 Dropped Packets Txd] (tAal5VccStatsDrpPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsDrpPacketsTxd indicates the number of dropped AAL-5 SDUs that would have been transmitted on the AAL-5 VCC.
aal5PacketsRxd [Aal5 Packets Rxd] (tAal5VccStatsPacketsRxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsRxd indicates the number of valid AAL-5 SDUs and AAL-5 SDUs with CRC-32 errors received by the AAL-5 VCC.
aal5PacketsTxd [Aal5 Packets Txd] (tAal5VccStatsPacketsTxd)	java. math. BigInteger	The value of tAal5VccStatsPacketsTxd indicates the number of AAL-5 SDUs transmitted by the AAL-5 VCC.
PvcConnectionOamStats MIB entry name: tAtmOamVclStatisticsEntry Entry description: An entry in the tAtmVclStatisticsTable containing statistics information applicable to a particular VCL entry in the AToM MIB. Table description (for tAtmOamVclStatisticsTable): The tAtmOamVclStatisticsTable is used to gather oam statistics on a particular VCL entry in the RFC 2515 AToM MIB. Supports realtime plotting Supports scheduled collection Monitored class: atm.PvcConnection		
oamAISCellsRxd [Oam AISCells Rxd] (tAtmOamVclStatsAISCellsRxd)	long	The value of tAtmOamVclStatsAISCellsRxd indicates the number of AIS cells received on this VC for both end to end and segment.

Table 316 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
oamAISCellsTxd [Oam AISCells Txd] (tAtmOamVclStatsAISCellsTxd)	long	The value of tAtmOamVclStatsAISCellsTxd indicates the number of AIS cells transmitted on this VC for both end to end and segment.
oamCrc10Errors [Oam Crc 10 Errors] (tAtmOamVclStatsCrc10Err)	long	The value of tAtmOamVclStatsCrc10Err indicates the number of oam cells discarded with CRC 10 Errors.
oamLoopbackCellsRxd [Oam Loopback Cells Rxd] (tAtmOamVclStatsLoopbackCellsRxd)	long	The value of tAtmOamVclStatsLoopbackCellsRxd indicates the number of loopback requests and responses received on this VC for both end to end and segment.
oamLoopbackCellsTxd [Oam Loopback Cells Txd] (tAtmOamVclStatsLoopbackCellsTxd)	long	The value of tAtmOamVclStatsLoopbackCellsTxd indicates the number of loopback requests and responses transmitted on this VC for both end to end and segment.
oamOtherCellsRxd [Oam Other Cells Rxd] (tAtmOamVclStatsOtherCellsRxd)	long	This value of tAtmOamVclStatsOtherCellsRxd indicates the number of oam cells that are received but not identified.
oamRDICellsRxd [Oam RDICells Rxd] (tAtmOamVclStatsRDICellsRxd)	long	The value of tAtmOamVclStatsRDICellsRxd indicates the number of RDI cells received on this VC for both end to end and segment.
oamRDICellsTxd [Oam RDICells Txd] (tAtmOamVclStatsRDICellsTxd)	long	The value of tAtmOamVclStatsRDICellsTxd indicates the number of RDI cells transmitted on this VC for both end to end and segment.

totalBytesRxd [Total Bytes Rxd] (tAtmVclStatsTotalBytesRxd)	java. math. BigInteger	The value of tAtmVclStatsTotalBytesRxd indicates the number of bytes received by this Vcl. This is the number of tAtmVclStatsTotalCellsRxd multiplied by 53.
totalBytesTxd [Total Bytes Txd] (tAtmVclStatsTotalBytesTxd)	java. math. BigInteger	The value of tAtmVclStatsTotalBytesTxd indicates the number of bytes transmitted by this Vcl. This is the number of tAtmVclStatsTotalCellsTxd multiplied by 53.
totalPacketsRxd [Total Packets Rxd] (tAtmVclStatsTotalCellsRxd)	java. math. BigInteger	The value of tAtmVclStatsTotalCellsRxd indicates the number of valid ATM cells received by the VCL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.
totalPacketsTxd [Total Packets Txd] (tAtmVclStatsTotalCellsTxd)	java. math. BigInteger	The value of tAtmVclStatsTotalCellsTxd indicates the number of valid ATM cells transmitted by the VCL including both CLP=0 and CLP=1 cells. If traffic policing is implemented, then cells are counted prior to the application of traffic policing.

Table 316 atm statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TCStats</p> <p>MIB entry name: atmInterfaceTCEntry</p> <p>Entry description: This list contains TC Sublayer parameters and state variables at the ATM interface and is indexed by the ifIndex value of the ATM interface.</p> <p>Table description (for atmInterfaceTCTable): This table contains ATM interface TC Sublayer parameters and state variables, one entry per ATM interface port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
ocdEvents [Ocd Events] (atmInterfaceOCDEvents)	long	The number of times the Out of Cell Delineation (OCD) events occur. If seven consecutive ATM cells have Header Error Control (HEC) violations, an OCD event occurs. A high number of OCD events may indicate a problem with the TC Sublayer.
<p>TCSubLayerStats</p> <p>MIB entry name: tAtmTCSublayerEntry</p> <p>Entry description: An entry in the tAtmTCSublayerEntry containing additional management information about the Transmission Coverage Sublayer.</p> <p>Table description (for tAtmTCSublayerTable): The tAtmTCSublayerTable contains the Transmission Convergence Sublayer data.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: atm.Interface</p>		
hecErrors [Hec Errors] (tAtmTCSublayerHecErrors)	long	The value of tAtmTCSublayerHecErrors indicates the number of cells with uncorrectable HEC Errors on this interface.
hecErrorsFixed [Hec Errors Fixed] (tAtmTCSublayerHecErrorsFixed)	long	The value of tAtmTCSublayerHecErrorsFixed indicates the number of cells with correctable HEC Errors on this interface.

Table 317 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerAdditionalStats</p> <p>MIB entry name: bgpPeerEntry</p> <p>Entry description: Entry containing information about the connection with a BGP peer.</p> <p>Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerRouteTargetStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 317 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.

Table 317 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
mvpnActivePrefixes [Mvpn Active Prefixes] (tBgpPeerNgOperMvpnV4ActivePfxs)	long	The value of tBgpPeerNgOperMvpnV4ActivePfxs indicates the number of active MVPN IPv4 prefixes from this peer.

Table 317 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mvpnPrefixesSuppressedByDamping [Mvpn Prefixes Suppressed By Damping] (tBgpPeerNgOperMvpnV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMvpnV4SuppPfxDamp indicates the number of MVPN IPv4 prefixes from this peer, which have been suppressed by damping.
mvpnReceivedPrefixes [Mvpn Received Prefixes] (tBgpPeerNgOperMvpnV4RecvPfxs)	long	The value of tBgpPeerNgOperMvpnV4RecvPfxs indicates the number of MVPN IPv4 prefixes received from this peer.
mvpnSentPrefixes [Mvpn Sent Prefixes] (tBgpPeerNgOperMvpnV4SentPfxs)	long	The value of tBgpPeerNgOperMvpnV4SentPfxs indicates the number of MVPN IPv4 prefixes transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.

Table 317 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.

Table 317 bgp statistics (continued)

vprnlpv6ActivePfxs [Vpn Ipv 6 Active Pfxs] (tBgpPeerNgOperVprnlpv6ActivePfxs)	long	The value of tBgpPeerNgOperVprnlpv6ActivePfxs indicates the number of active VPN IPv6 prefixes from this peer.
vprnlpv6RecvPfxs [Vpn Ipv 6 Recv Pfxs] (tBgpPeerNgOperVprnlpv6RecvPfxs)	long	The value of tBgpPeerNgOperVprnlpv6RecvPfxs indicates the number of VPN IPv6 prefixes received from this peer.
vprnlpv6SentPfxs [Vpn Ipv 6 Sent Pfxs] (tBgpPeerNgOperVprnlpv6SentPfxs)	long	The value of tBgpPeerNgOperVprnlpv6SentPfxs indicates the number of VPN IPv6 prefixes transmitted to this peer.
vprnlpv6SuppPfxDamp [Vpn Ipv 6 Supp Pfx Damp] (tBgpPeerNgOperVprnlpv6SuppPfxDamp)	long	The value of tBgpPeerNgOperVprnlpv6SuppPfxDamp indicates the number of VPN IPv6 prefixes from this peer, which have been suppressed by damping.

Table 318 bundle statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BundleStats</p> <p>MIB entry name: tmnxBundleEntry</p> <p>Entry description: Each row entry represents a multilink bundle on a MDA. Entries can be created and deleted via SNMP SET operations using the tmnxBundleRowStatus object. The tmnxBundleBundleID will contain the bundle number encoded in it. The bundle number is unique for a MDA. For each tmnxBundleEntry, there will be a corresponding entry in the tmnxPortTable and the ifTable.</p> <p>Table description (for tmnxBundleTable): The tmnxBundleTable has an entry for a bundle created on the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.Interface</p>		
inputDiscards [Input Discards] (tmnxBundleInputDiscards)	long	tmnxBundleInputDiscards indicates the number of LCP packets that were discarded. This object is only supported for a tmnxBundleType value of mlppp.
upTime [Up Time] (tmnxBundleUpTime)	long	tmnxBundleUpTime indicates the time since the bundle is operationally 'inService'.
<p>MultiClassMlpppStats</p> <p>MIB entry name: tmnxMcMlpppStatsEntry</p> <p>Entry description: Defines an entry in tmnxMcMlpppStatsTable. Entries are created and deleted by the system depending on the number of classes being used by a given MLPPP bundle.</p> <p>Table description (for tmnxMcMlpppStatsTable): Defines the Nokia SROS series Multiclass MLPPP statistics table for providing the capability of retrieving the traffic statistics for the physical queues being used for a class of a multiclass MLPPP bundle to forward the traffic.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.MultiClassMlpppSpecifics</p>		

Table 318 bundle statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcMlpppStatsEgressErrPkt [Mc Mlppp Stats Egress Err Pkt] (tmnxMcMlpppStatsEgressErrPkt)	long	The value of tmnxMcMlpppStatsEgressErrPkt indicates the total number of packets discarded due to segmentation errors on the bundle for the given class on egress.
mcMlpppStatsEgressOct [Mc Mlppp Stats Egress Oct] (tmnxMcMlpppStatsEgressOct)	long	The value of tmnxMcMlpppStatsEgressOct indicates the total number of octets in all packets received on the bundle for the given class on egress before segmentation.
mcMlpppStatsEgressPkt [Mc Mlppp Stats Egress Pkt] (tmnxMcMlpppStatsEgressPkt)	long	The value of tmnxMcMlpppStatsEgressPkt indicates the total number of packets forwarded on the bundle for the given class on egress towards the line.
mcMlpppStatsIngressErrPkt [Mc Mlppp Stats Ingress Err Pkt] (tmnxMcMlpppStatsIngressErrPkt)	long	The value of tmnxMcMlpppStatsIngressErrPkt indicates the total number of packets discarded due to reassembly errors on the bundle for the given class on ingress.
mcMlpppStatsIngressOct [Mc Mlppp Stats Ingress Oct] (tmnxMcMlpppStatsIngressOct)	long	The value of tmnxMcMlpppStatsIngressOct indicates the total number of octets in all packets received on the bundle for the given class on ingress before reassembly.
mcMlpppStatsIngressPkt [Mc Mlppp Stats Ingress Pkt] (tmnxMcMlpppStatsIngressPkt)	long	The value of tmnxMcMlpppStatsIngressPkt indicates the total number of packets forwarded on the bundle for the given class on ingress towards higher layer protocols.

Table 319 dhcp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LocalDhcp6ServerPoolStats</p> <p>MIB entry name: tmnxDhcpsPoolStats6Entry</p> <p>Entry description: Each row entry in the tmnxDhcpsPoolStats6Table represents additional columns of operational data for a pool that belongs to the specified DHCPv6 server instance. The value of these columns is only relevant if the value of the object tmnxDhcpsFoAdminState of this server is equal to 'inService (2)'.</p> <p>Table description (for tmnxDhcpsPoolStats6Table): The tmnxDhcpsPoolStats6Table has an entry for each pool that belongs to the specified DHCPv6 server instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Address6Pool</p>		
advertisedLeases [Advertised Leases] (tmnxDhcpsPoolStats6Advertise)	long	The value of tmnxDhcpsPoolStats6Advertise indicates the number of local leases in this pool that are in state 'advertised'.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpsPoolStats6HasExt)	boolean	The value of tmnxDhcpsPoolStats6HasExt indicates whether the extended statistics collection for this prefix is enabled. These extended statistics are only collected when the length of the configured subnet is between /32 en /64.
freeBlocks [Free Blocks] (tmnxDhcpsPoolStats6FreeBlk)	java.math.BigInteger	The value of tmnxDhcpsPoolStats6FreeBlk indicates the number of provisioned but unused /64 blocks.
highestValAdvertisedLeases [Highest Val Advertised Leases] (tmnxDhcpsPoolStats6AdvertP)	long	The value of tmnxDhcpsPoolStats6AdvertP indicates the highest value of tmnxDhcpsPoolStats6Advertise since the last reset of the extended statistics.
highestValPctBlocksInUse [Highest Val Pct Blocks In Use] (tmnxDhcpsPoolStats6UsedPctP)	int	The value of tmnxDhcpsPoolStats6UsedPctP indicates the highest value of tmnxDhcpsPoolStats6UsedPct since the last reset of the extended statistics.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highestValRemoteAdvertisedLeases [Highest Val Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertP)	long	The value of tmnxDhcpsPoolStats6FoAdvertP indicates the highest value of tmnxDhcpsPoolStats6FoAdvertise since the last reset of the extended statistics.
highestValRemotePctBlocksInUse [Highest Val Remote Pct Blocks In Use] (tmnxDhcpsPoolStats6FoUsedPctP)	int	The value of tmnxDhcpsPoolStats6FoUsedPctP indicates the highest value of tmnxDhcpsPoolStats6FoUsedPct since the last reset of the extended statistics.
highestValRemoteStableLeases [Highest Val Remote Stable Leases] (tmnxDhcpsPoolStats6FoStableP)	long	The value of tmnxDhcpsPoolStats6FoStableP indicates the highest value of tmnxDhcpsPoolStats6FoStable since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpsPoolStats6StableP)	long	The value of tmnxDhcpsPoolStats6StableP indicates the highest value of tmnxDhcpsPoolStats6Stable since the last reset of the extended statistics.
lowestValOfFreeBlocks [Lowest Val Of Free Blocks] (tmnxDhcpsPoolStats6FreeBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FreeBlkP indicates the lowest value of tmnxDhcpsPoolStats6FreeBlk since the last reset of the extended statistics.
lowestValOfUnusedBlocks [Lowest Val Of Unused Blocks] (tmnxDhcpsPoolStats6UsedBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6UsedBlkP indicates the lowest value of tmnxDhcpsPoolStats6UsedBlk since the last reset of the extended statistics.
lowestValPctBlocksUnused [Lowest Val Pct Blocks Unused] (tmnxDhcpsPoolStats6FreePctP)	int	The value of tmnxDhcpsPoolStats6FreePctP indicates the lowest value of tmnxDhcpsPoolStats6FreePct since the last reset of the extended statistics.
lowestValRemoteFreeBlocks [Lowest Val Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoFreeBlkP indicates the lowest value of tmnxDhcpsPoolStats6FoFreeBlk since the last reset of the extended statistics.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lowestValRemotePctBlocksUnused [Lowest Val Remote Pct Blocks Unused] (tmnxDhcpsPoolStats6FoFreePctP)	int	The value of tmnxDhcpsPoolStats6FoFreePctP indicates the lowest value of tmnxDhcpsPoolStats6FoFreePct since the last reset of the extended statistics.
lowestValRemoteUnusedBlocks [Lowest Val Remote Unused Blocks] (tmnxDhcpsPoolStats6FoUsedBlkP)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoUsedBlkP indicates the lowest value of tmnxDhcpsPoolStats6FoUsedBlk since the last reset of the extended statistics.
pctBlocksInUse [Pct Blocks In Use] (tmnxDhcpsPoolStats6UsedPct)	int	The value of tmnxDhcpsPoolStats6UsedPct indicates the percentage of /64 blocks currently in use.
pctBlocksUnused [Pct Blocks Unused] (tmnxDhcpsPoolStats6FreePct)	int	The value of tmnxDhcpsPoolStats6FreePct indicates the percentage of /64 blocks currently unused.
provisionedBlocks [Provisioned Blocks] (tmnxDhcpsPoolStats6ProvBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6ProvBlk indicates the number of provisioned /64 blocks.
remoteAdvertisedLeases [Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertise)	long	The value of tmnxDhcpsPoolStats6FoAdvertise indicates the number of remote leases in this pool that are in state 'advertised'.
remoteFreeBlocks [Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoFreeBlk indicates the remote number of provisioned but unused /64 blocks.
remotePctBlocksInUse [Remote Pct Blocks In Use] (tmnxDhcpsPoolStats6FoUsedPct)	int	The value of tmnxDhcpsPoolStats6FoUsedPct indicates the percentage of remote /64 blocks currently in use.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remotePctBlocksUnused [Remote Pct Blocks Unused] (tmnxDhcpsPoolStats6FoFreePct)	int	The value of tmnxDhcpsPoolStats6FoFreePct indicates the percentage of remote /64 blocks currently unused.
remoteProvisionedBlocks [Remote Provisioned Blocks] (tmnxDhcpsPoolStats6FoProvBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoProvBlk indicates the remote number of provisioned /64 blocks.
remoteStableLeases [Remote Stable Leases] (tmnxDhcpsPoolStats6FoStable)	long	The value of tmnxDhcpsPoolStats6FoStable indicates the number of remote leases in this pool that are in state 'stable'.
remoteUnusedBlocks [Remote Unused Blocks] (tmnxDhcpsPoolStats6FoUsedBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6FoUsedBlk indicates the remote number of provisioned but unused /64 blocks.
slaacPrefixInternalRequests [Slaac Prefix Internal Requests] (tmnxDhcpsPoolStats6IntNoPfxSlaa)	long	The value of tmnxDhcpsPoolStats6IntNoPfxSlaa indicates the number of times the following event occurred: an internal request for a SLAAC prefix (IA_PD (Identity Association for Prefix Delegation)) fails because the pool does not have a subnet available where the value of tmnxDhcpSvrSubnetPrefixType is equal to 'wan-host'. An internal request is triggered by some packet received by this system and translated into an internal API (Application Program Interface) request to the local DHCP server.
stableLeases [Stable Leases] (tmnxDhcpsPoolStats6Stable)	long	The value of tmnxDhcpsPoolStats6Stable indicates the number of leases in this pool that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpsPoolStats6ExtResetT)	long	The value of tmnxDhcpsPoolStats6ExtResetT indicates the sysUpTime at the last reset of the extended statistics.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastAdvertisedLeases [Time Since Last Advertised Leases] (tmnxDhcpsPoolStats6AdvertPT)	long	The value of tmnxDhcpsPoolStats6AdvertPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6AdvertPT.
timeSinceLastFreeBlocks [Time Since Last Free Blocks] (tmnxDhcpsPoolStats6FreeBlkPT)	long	The value of tmnxDhcpsPoolStats6FreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FreeBlkP.
timeSinceLastRemoteAdvertisedLeases [Time Since Last Remote Advertised Leases] (tmnxDhcpsPoolStats6FoAdvertPT)	long	The value of tmnxDhcpsPoolStats6FoAdvertPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoAdvertP.
timeSinceLastRemoteFreeBlocks [Time Since Last Remote Free Blocks] (tmnxDhcpsPoolStats6FoFreeBlkPT)	long	The value of tmnxDhcpsPoolStats6FoFreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoFreeBlkP.
timeSinceLastRemoteStableLeases [Time Since Last Remote Stable Leases] (tmnxDhcpsPoolStats6FoStablePT)	long	The value of tmnxDhcpsPoolStats6FoStablePT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6FoStableP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpsPoolStats6StablePT)	long	The value of tmnxDhcpsPoolStats6StablePT indicates the sysUpTime at the last change of tmnxDhcpsPoolStats6StableP.
unusedBlocks [Unused Blocks] (tmnxDhcpsPoolStats6UsedBlk)	java. math. BigInteger	The value of tmnxDhcpsPoolStats6UsedBlk indicates the number of provisioned but unused /64 blocks.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wanAddressInternalRequests [Wan Address Internal Requests] (tmnxDhcpSvrSubnetStats6IntNoPfxWan)	long	The value of tmnxDhcpSvrSubnetStats6IntNoPfxWan indicates the number of times the following event occurred: an internal request for a WAN address (IA_NA (Identity association for non-temporary addresses)) fails because the pool does not have a subnet available where the value of tmnxDhcpSvrSubnetPrefixType is equal to 'wan-host'. An internal request is triggered by some packet received by this system and translated into an internal API (Application Program Interface) request to the local DHCP server.
<p>LocalDhcp6ServerPrefixStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStats6Entry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStats6Table represents additional columns of operational data for a subnet that belongs to the specified DHCPv6 server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStats6Table): The tmnxDhcpSvrSubnetStats6Table has an entry for each subnet that belongs to the specified DHCPv6 server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Dhcp6AddressPrefix</p>		
advertisedLeases [Advertised Leases] (tmnxDhcpSvrSubnetStats6Advertise)	long	The value of tmnxDhcpSvrSubnetStats6Advertise indicates the number of leases in this subnet that are in state 'advertised'.
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStats6Declined)	long	The value of tmnxDhcpSvrSubnetStats6Declined indicates the number of addresses in this subnet that are declined.
extendedStatisticsEnabled [Extended Statistics Enabled] (tmnxDhcpSvrSubnetStats6HasExt)	boolean	The value of tmnxDhcpSvrSubnetStats6HasExt indicates whether the extended statistics collection for this prefix is enabled. These extended statistics are only collected when the length of the configured subnet is between /32 en /64.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
freeBlocks [Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6FreeBlk indicates the number of provisioned but unused /64 blocks.
highestValAdvertisedLeases [Highest Val Advertised Leases] (tmnxDhcpSvrSubnetStats6AdvertP)	long	The value of tmnxDhcpSvrSubnetStats6AdvertP indicates the highest value of tmnxDhcpSvrSubnetStats6Advertise since the last reset of the extended statistics.
highestValPctBlocksInUse [Highest Val Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPctP)	int	The value of tmnxDhcpSvrSubnetStats6UsedPctP indicates the highest value of tmnxDhcpSvrSubnetStats6UsedPct since the last reset of the extended statistics.
highestValStableLeases [Highest Val Stable Leases] (tmnxDhcpSvrSubnetStats6StableP)	long	The value of tmnxDhcpSvrSubnetStats6StableP indicates the highest value of tmnxDhcpSvrSubnetStats6Stable since the last reset of the extended statistics.
lowestValOfFreeBlocks [Lowest Val Of Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlkP)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6FreeBlkP indicates the lowest value of unused /64 blocks since the last reset of the extended statistics.
lowestValOfUnusedBlocks [Lowest Val Of Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlkP)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6UsedBlkP indicates the lowest value of unused /64 blocks since the last reset of the extended statistics.
lowestValPctBlocksUnused [Lowest Val Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePctP)	int	The value of tmnxDhcpSvrSubnetStats6FreePctP indicates the lowest value of tmnxDhcpSvrSubnetStats6FreePct since the last reset of the extended statistics.
pctBlocksInUse [Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPct)	int	The value of tmnxDhcpSvrSubnetStats6UsedPct indicates the percentage of /64 blocks currently in use.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pctBlocksUnused [Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePct)	int	The value of tmnxDhcpSvrSubnetStats6FreePct indicates the percentage of /64 blocks currently unused.
provisionedBlocks [Provisioned Blocks] (tmnxDhcpSvrSubnetStats6ProvBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6ProvBlk indicates the number of provisioned /64 blocks.
reconfigurePendingLeases [Reconfigure Pending Leases] (tmnxDhcpSvrSubnetStats6RCPending)	long	The value of tmnxDhcpSvrSubnetStats6RCPending indicates the number of leases in this subnet that are in state 'reconfigurePending'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStats6RmPending)	long	The value of tmnxDhcpSvrSubnetStats6RmPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStats6Stable)	long	The value of tmnxDhcpSvrSubnetStats6Stable indicates the number of leases in this subnet that are in state 'stable'.
timeSinceExtendedReset [Time Since Extended Reset] (tmnxDhcpSvrSubnetStats6ExtResetT)	long	The value of tmnxDhcpSvrSubnetStats6ExtResetT indicates the sysUpTime at the last reset of the extended statistics.
timeSinceLastAdvertisedLeases [Time Since Last Advertised Leases] (tmnxDhcpSvrSubnetStats6AdvertPT)	long	The value of tmnxDhcpSvrSubnetStats6AdvertPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6AdvertP.
timeSinceLastFreeBlocks [Time Since Last Free Blocks] (tmnxDhcpSvrSubnetStats6FreeBlkPT)	long	The value of tmnxDhcpSvrSubnetStats6FreeBlkPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6FreeBlkP.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPctBlocksInUse [Time Since Last Pct Blocks In Use] (tmnxDhcpSvrSubnetStats6UsedPctPT)	long	The value of tmnxDhcpSvrSubnetStats6UsedPctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6UsedPctP.
timeSinceLastPctBlocksUnused [Time Since Last Pct Blocks Unused] (tmnxDhcpSvrSubnetStats6FreePctPT)	long	The value of tmnxDhcpSvrSubnetStats6FreePctPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6FreePctP.
timeSinceLastStableLeases [Time Since Last Stable Leases] (tmnxDhcpSvrSubnetStats6StablePT)	long	The value of tmnxDhcpSvrSubnetStats6StablePT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6StableP.
timeSinceLastUnusedBlocks [Time Since Last Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlkPT)	long	The value of tmnxDhcpSvrSubnetStats6UsedBlkPT indicates the sysUpTime at the last change of tmnxDhcpSvrSubnetStats6UsedBlkP.
unusedBlocks [Unused Blocks] (tmnxDhcpSvrSubnetStats6UsedBlk)	java. math. BigInteger	The value of tmnxDhcpSvrSubnetStats6UsedBlk indicates the number of provisioned but unused /64 blocks.
<p>LocalDhcp6ServerStats MIB entry name: tmnxDhcpServerStats6Entry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStats6Table): The tmnxDhcpServerStats6Table contains basic statistics about the DHCPv6 server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcp6Server</p>		
clientIgnoredOffers [Client Ignored Offers] (tmnxDhcpSvrStats6OffersIgnore)	long	The value of tmnxDhcpSvrStats6OffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedBadPacket [Dropped Bad Packet] (tmnxDhcpSvrStats6DropBadPackets)	long	The value of tmnxDhcpSvrStats6DropBadPackets indicates the number of DHCP packets received which were corrupt.
droppedDestinedToOther [Dropped Destined To Other] (tmnxDhcpSvrStats6DropDestOther)	long	The value of tmnxDhcpSvrStats6DropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
droppedGenericError [Dropped Generic Error] (tmnxDhcpSvrStats6DropGenError)	long	The value of tmnxDhcpSvrStats6DropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
droppedInternalConflicts [Dropped Internal Conflicts] (tmnxDhcpSvrStats6DropIntWConflct)	long	The value of tmnxDhcpSvrStats6DropIntWConflct indicates a DHCP host is trying to acquire an IP address that was handed through the local address assignment infrastructure, or the local address assignment infrastructure tries to use an IP address that was handed out to a DHCP client.
droppedInternalFailover [Dropped Internal Failover] (tmnxDhcpSvrStats6DropIntWFO)	long	The value of tmnxDhcpSvrStats6DropIntWFO indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because failover is enabled for the server instance.
droppedInternalIntIdMap [Dropped Internal Int Id Map] (tmnxDhcpSvrStats6DropIntWIfldMap)	long	The value of tmnxDhcpSvrStats6DropIntWFO indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because interface ID mapping is enabled for the server instance.
droppedInternalUserIdent [Dropped Internal User Ident] (tmnxDhcpSvrStats6DropIntWUserld)	long	The value of tmnxDhcpSvrStats6DropIntWFO indicates the number of internal calls from the local address assignment infrastructure dropped by the DHCP server instance because tmnxDhcpServerCfgUserIdent is not set to duid (2) for the server instance.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedInvalidType [Dropped Invalid Type] (tmnxDhcpSvrStats6DropInvlTypes)	long	The value of tmnxDhcpSvrStats6DropInvlTypes indicates the number of DHCP packets received which had an invalid message type.
droppedLeaseNotReady [Dropped Lease Not Ready] (tmnxDhcpSvrStats6DropLseNotReady)	long	The value of tmnxDhcpSvrStats6DropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
droppedMaxLeasesReached [Dropped Max Leases Reached] (tmnxDhcpSvrStats6DropMaxReached)	long	The value of tmnxDhcpSvrStats6DropMaxReached indicates the number of DHCP packets dropped by the server instance because the maximum number of leases was reached. The maximum number of leases is indicated by the value of the object tmnxDhcpSvrMaxLeases.
droppedNotServingPool [Dropped Not Serving Pool] (tmnxDhcpSvrStats6DropNoSrvngPool)	long	The value of tmnxDhcpSvrStats6DropNoSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.
droppedOverload [Dropped Overload] (tmnxDhcpSvrStats6DropOverload)	long	The value of tmnxDhcpSvrStats6DropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.
droppedPersistenceOverload [Dropped Persistence Overload] (tmnxDhcpSvrStats6DropPerOverload)	long	The value of tmnxDhcpSvrStats6DropPerOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
droppedServerShutdown [Dropped Server Shutdown] (tmnxDhcpSvrStats6DropSvrDown)	long	The value of tmnxDhcpSvrStats6DropSvrDown indicates the number of DHCP packets dropped by the server instance during server instance shutdown (while the value of the object tmnxDhcpServerCfgAdminState in the corresponding row was set equal to 'outOfService').

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
duplicateRequestDropped [Duplicate Request Dropped] (tmnxDhcpSvrStats6DropDuplDiffRly)	long	The value of tmnxDhcpSvrStats6DropDuplDiffRly indicates the number of DHCP requests dropped by the server instance because they were received from a different Relay IP address within a timeframe of 10 seconds after a previous DHCPREQUEST.
leasesTimedOut [Leases Timed Out] (tmnxDhcpSvrStats6LeasesExpired)	long	The value of tmnxDhcpSvrStats6LeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
receivedConfirmPackets [Received Confirm Packets] (tmnxDhcpSvrStats6RxConfirms)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxConfirms indicates the number of confirm messages received by the DHCP server instance.
receivedDeclinePackets [Received Decline Packets] (tmnxDhcpSvrStats6RxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxDeclines indicates the number of decline messages received by the DHCP server instance.
receivedInformationRequestPackets [Received Information Request Packets] (tmnxDhcpSvrStats6RxInfRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxInfRequests indicates the number of information-request messages received by the DHCP server instance.
receivedIntIpoeWanRequests [Received Int Ipoe Wan Requests] (tmnxDhcpSvrStats6RxIntReqIpoeWan)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntReqIpoeWan indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for IPoE.
receivedIntPppSlaacRequests [Received Int Ppp Slaac Requests] (tmnxDhcpSvrStats6RxIntPppSlaac)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntPppSlaac indicates the number of internal request calls received by the DHCP server instance from the local address assignment infrastructure for PPP SLAAC (stateless autoconfiguration).

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedInternalReleases [Received Internal Releases] (tmnxDhcpSvrStats6RxIntReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxIntReleases indicates the number of internal release calls received by the DHCP server instance from the local address assignment infrastructure.
receivedRebindPackets [Received Rebind Packets] (tmnxDhcpSvrStats6RxRebinds)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxRebinds indicates the number of rebind messages received by the DHCP server instance.
receivedReleasePackets [Received Release Packets] (tmnxDhcpSvrStats6RxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxReleases indicates the number of release messages received by the DHCP server instance.
receivedRenewPackets [Received Renew Packets] (tmnxDhcpSvrStats6RxRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxRenews indicates the number of renew messages received by the DHCP server instance.
receivedRequestPackets [Received Request Packets] (tmnxDhcpSvrStats6RxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxAdvertises indicates the number of request messages received by the DHCP server instance.
receivedSolicitPackets [Received Solicit Packets] (tmnxDhcpSvrStats6RxSolicits)	java. math. BigInteger	The value of tmnxDhcpSvrStats6RxSolicits indicates the number of solicit messages received by the DHCP server instance.
sentAdvertisePackets [Sent Advertise Packets] (tmnxDhcpSvrStats6TxAdvertises)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxAdvertises indicates the number of advertise messages sent by the DHCP server instance.
sentReconfigurePackets [Sent Reconfigure Packets] (tmnxDhcpSvrStats6TxReconfigures)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxReconfigures indicates the number of reconfigure messages sent by the DHCP server instance.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sentReplyPackets [Sent Reply Packets] (tmnxDhcpSvrStats6TxReplies)	java. math. BigInteger	The value of tmnxDhcpSvrStats6TxReplies indicates the number of reply messages sent by the DHCP server instance.
<p>LocalDhcpServerStats MIB entry name: tmnxDhcpServerStatsEntry Entry description: Each row entry contains basic statistics about a particular DHCP server instance. Table description (for tmnxDhcpServerStatsTable): The tmnxDhcpServerStatsTable contains basic statistics about the DHCP server instances. Supports realtime plotting Supports scheduled collection Monitored class: dhcp.LocalDhcpServer</p>		
addressUnavailableDropped [Address Unavailable Dropped] (tmnxDhcpSvrStatsDropAddrUnavail)	long	The value of tmnxDhcpSvrStatsDropAddrUnavail indicates the number of DHCP requests dropped by the server instance because the requested address is not available.
corruptedPacketsDropped [Corrupted Packets Dropped] (tmnxDhcpSvrStatsDropBadPackets)	long	The value of tmnxDhcpSvrStatsDropBadPackets indicates the number of DHCP packets received which were corrupt.
destinedToOtherDropped [Destined To Other Dropped] (tmnxDhcpSvrStatsDropDestOther)	long	The value of tmnxDhcpSvrStatsDropDestOther indicates the number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server.
genericErrorDropped [Generic Error Dropped] (tmnxDhcpSvrStatsDropGenError)	long	The value of tmnxDhcpSvrStatsDropGenError indicates the number of DHCP packets dropped by the server instance because of a generic error.
invalidMessageTypesDropped [Invalid Message Types Dropped] (tmnxDhcpSvrStatsDropInvalidTypes)	long	The value of tmnxDhcpSvrStatsDropInvalidTypes indicates the number of DHCP packets received which had an invalid message type (option 53).

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
invalidUserDropped [Invalid User Dropped] (tmnxDhcpSvrStatsDropInvalidUsr)	long	The value of tmnxDhcpSvrStatsDropInvalidUsr indicates the number of DHCP packets dropped by the server instance because the MAC address of the sender or the option 82 didn't match the host lease state.
leaseNotFoundDropped [Lease Not Found Dropped] (tmnxDhcpSvrStatsDropNoLeaseFound)	long	The value of tmnxDhcpSvrStatsDropNoLeaseFound indicates the number of DHCP packets dropped by the server instance because no (valid) lease was found.
leaseNotReadyDropped [Lease Not Ready Dropped] (tmnxDhcpSvrStatsDropLseNotReady)	long	The value of tmnxDhcpSvrStatsDropLseNotReady indicates the number of DHCP packets dropped by the server instance before the lease database was ready.
leasesExpired [Leases Expired] (tmnxDhcpSvrStatsLeasesExpired)	long	The value of tmnxDhcpSvrStatsLeasesExpired indicates the number of DHCP leases that were expired (because no release was received).
localUserDbNotFoundDropped [Local User Db Not Found Dropped] (tmnxDhcpSvrStatsDropNoUsrDbFound)	long	The value of tmnxDhcpSvrStatsDropNoUsrDbFound indicates the number of DHCP packets dropped because the value of the object tmnxDhcpServerCfgUserDatabase of this server instance is not equal to the default value and a local user database with that name could not be found.
noFreeAddressesInPoolDropped [No Free Addresses In Pool Dropped] (tmnxDhcpSvrStatsDropNotSrvngPool)	long	The value of tmnxDhcpSvrStatsDropNotSrvngPool indicates the number of DHCP packets dropped by the server instance because there were no more free addresses in the pool.
offersIgnored [Offers Ignored] (tmnxDhcpSvrStatsOffersIgnore)	long	The value of tmnxDhcpSvrStatsOffersIgnore indicates the number of DHCP OFFER (option 52 with value 2) packets sent by the DHCP server instance that were ignored by the clients.
overloadDropped [Overload Dropped] (tmnxDhcpSvrStatsDropOverload)	long	The value of tmnxDhcpSvrStatsDropOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the server instance can handle.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
persistenceOverloadDropped [Persistence Overload Dropped] (tmnxDhcpSvrStatsDropPersOverload)	long	The value of tmnxDhcpSvrStatsDropPersOverload indicates the number of DHCP packets dropped by the server instance because they were received in excess of what the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
receivedDhcpDeclines [Received Dhcp Declines] (tmnxDhcpSvrStatsRxDeclines)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDeclines indicates the number of DHCPDECLINE (option 53 with value 4) packets received by the DHCP server instance.
receivedDhcpDiscovers [Received Dhcp Discovers] (tmnxDhcpSvrStatsRxDiscovers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxDiscovers indicates the number of DHCPDISCOVER (option 53 with value 1) packets received by the DHCP server instance.
receivedDhcpInforms [Received Dhcp Informs] (tmnxDhcpSvrStatsRxInforms)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxInforms indicates the number of DHCPINFORM (option 53 with value 8) packets received by the DHCP server instance.
receivedDhcpReleases [Received Dhcp Releases] (tmnxDhcpSvrStatsRxReleases)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxReleases indicates the number of DHCPRELEASE (option 53 with value 7) packets received by the DHCP server instance.
receivedDhcpRequests [Received Dhcp Requests] (tmnxDhcpSvrStatsRxRequests)	java. math. BigInteger	The value of tmnxDhcpSvrStatsRxRequests indicates the number of DHCPREQUEST (option 53 with value 3) packets received by the DHCP server instance.
sentDhcpAcks [Sent Dhcp Acks] (tmnxDhcpSvrStatsTxAcks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxAcks indicates the number of DHCPACK (option 53 with value 5) packets sent by the DHCP server instance.

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sentDhcpForceRenews [Sent Dhcp Force Renews] (tmnxDhcpSvrStatsTxForceRenews)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxForceRenews indicates the number of DHCPFORCERENEW (option 53 with value 9) packets sent by the DHCP server instance.
sentDhcpNaks [Sent Dhcp Naks] (tmnxDhcpSvrStatsTxNaks)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxNaks indicates the number of DHCPNAK (option 53 with value 6) packets sent by the DHCP server instance.
sentDhcpOffers [Sent Dhcp Offers] (tmnxDhcpSvrStatsTxOffers)	java. math. BigInteger	The value of tmnxDhcpSvrStatsTxOffers indicates the number of DHCPOFFER (option 53 with value 2) packets sent by the DHCP server instance.
unknownHostsDropped [Unknown Hosts Dropped] (tmnxDhcpSvrStatsDropUnknownHosts)	long	The value of tmnxDhcpSvrStatsDropUnknownHosts indicates the number of DHCP packets dropped from hosts which were not found in the user database when tmnxDhcpServerCfgUseGiAddress was disabled.
userNotAllowedDropped [User Not Allowed Dropped] (tmnxDhcpSvrStatsDropUserNotAllow)	long	The value of tmnxDhcpSvrStatsDropUserNotAllow indicates the number of DHCP packets dropped from hosts which are found in the user database, but which have no address or pool specified, nor has tmnxDhcpServerCfgUseGiAddress set to 'true'.
<p>LocalDhcpServerSubnetStats</p> <p>MIB entry name: tmnxDhcpSvrSubnetStatsEntry</p> <p>Entry description: Each row entry in the tmnxDhcpSvrSubnetStatsTable represents additional columns of operational data for a subnet that belongs to the specified DHCP server instance and pool.</p> <p>Table description (for tmnxDhcpSvrSubnetStatsTable): The tmnxDhcpSvrSubnetStatsTable has an entry for each subnet that belongs to the specified DHCP server instance and pool.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: dhcp.Subnet</p>		

Table 319 dhcp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
declinedAddresses [Declined Addresses] (tmnxDhcpSvrSubnetStatsDeclined)	long	The value of tmnxDhcpSvrSubnetStatsDeclined indicates the number of addresses in this subnet that are declined.
forceRenewPendingLeases [Force Renew Pending Leases] (tmnxDhcpSvrSubnetStatsFRPending)	long	The value of tmnxDhcpSvrSubnetStatsFRPending indicates the number of leases in this subnet that are in state 'forceRenewPending'.
freeAddresses [Free Addresses] (tmnxDhcpSvrSubnetStatsFree)	long	The value of tmnxDhcpSvrSubnetStatsFree indicates the number of addresses in this subnet that are free.
offeredLeases [Offered Leases] (tmnxDhcpSvrSubnetStatsOffered)	long	The value of tmnxDhcpSvrSubnetStatsOffered indicates the number of leases in this subnet that are in state 'offered'.
removePendingLeases [Remove Pending Leases] (tmnxDhcpSvrSubnetStatsRemPending)	long	The value of tmnxDhcpSvrSubnetStatsRemPending indicates the number of leases in this subnet that are in state 'removePending'.
stableLeases [Stable Leases] (tmnxDhcpSvrSubnetStatsStable)	long	The value of tmnxDhcpSvrSubnetStatsStable indicates the number of leases in this subnet that are in state 'stable'.

Table 320 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AccessPortControlStats</p> <p>MIB entry name: aluPortCtlStatsEntry</p> <p>Entry description: Defines an entry in aluPortCtlStatsTable. Entries are created and deleted by the system depending port configuration.</p> <p>Table description (for aluPortCtlStatsTable): Defines the Nokia SAR series port control statistics table for providing, via SNMP, the capability of retrieving the detailed control packet statistics for ports in access modes. This table is not applicable to ports in network or hybrid mode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
accessCtlEgressDroOcts [Access Ctl Egress Dro Octs] (aluPortAccessCtlEgrDroOcts)	java. math. BigInteger	aluPortAccessCtlEgrDroOcts indicates the number of CTL octets that get dropped on access port egress .
accessCtlEgressDroPkts [Access Ctl Egress Dro Pkts] (aluPortAccessCtlEgrDroPkts)	java. math. BigInteger	aluPortAccessCtlEgrDroPkts indicates the number of CTL packets that get dropped on access port egress .
accessCtlEgressFwdOcts [Access Ctl Egress Fwd Octs] (aluPortAccessCtlEgrFwdOcts)	java. math. BigInteger	aluPortAccessCtlEgrFwdOcts indicates the number of CTL octets that get forwarded on access port egress .
accessCtlIngressDroOcts [Access Ctl Ingress Dro Octs] (aluPortAccessCtlInDroOcts)	java. math. BigInteger	aluPortAccessCtlInDroOcts indicates the number of CTL octets that get dropped on access port ingress .
accessCtlIngressDroPkts [Access Ctl Ingress Dro Pkts] (aluPortAccessCtlInDroPkts)	java. math. BigInteger	aluPortAccessCtlInDroPkts indicates the number of CTL packets that get dropped on access port ingress .

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
accessCtlIngressFwdOcts [Access Ctl Ingress Fwd Octs] (aluPortAccessCtlInFwdOcts)	java. math. BigInteger	aluPortAccessCtlInFwdOcts indicates the number of CTL octets that get forwarded on access port ingress .
accessCtlIngressFwdPkts [Access Ctl Ingress Fwd Pkts] (aluPortAccessCtlInFwdPkts)	java. math. BigInteger	aluPortAccessCtlInFwdPkts indicates the number of CTL packets that get forwarded on access port ingress .
accessCtlEgressFwdPkts [Access Ctl Egress Fwd Pkts] (aluPortAccessCtlEgrFwdPkts)	java. math. BigInteger	aluPortAccessCtlEgrFwdPkts indicates the number of CTL packets that get forwarded on access port egress .
AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.
<p>CiscoHDLCStats MIB entry name: tmnxCiscoHDLCStatsEntry Entry description: An entry in the tmnxCiscoHDLCStatsTable. Table description (for tmnxCiscoHDLCStatsTable): The tmnxCiscoHDLCStatsTable has an entry for each port in the system that is configured for Cisco HDLC encapsulation. It contains Cisco HDLC protocol statistics for the particular port. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • tdmequipment.DS0ChannelGroup • tdmequipment.DS3E3Channel </p>		
discardStatInPkts [Discard Stat In Pkts] (tmnxCiscoHDLCDiscardStatInPkts)	long	tmnxCiscoHDLCDiscardStatInPkts indicates the number of inbound Cisco HDLC packets discarded.
discardStatOutPkts [Discard Stat Out Pkts] (tmnxCiscoHDLCDiscardStatOutPkts)	long	tmnxCiscoHDLCDiscardStatOutPkts indicates the number of outbound Cisco HDLC packets discarded.
statInOctets [Stat In Octets] (tmnxCiscoHDLCStatInOctets)	long	tmnxCiscoHDLCStatInOctets indicates the number of inbound Cisco HDLC octets.
statInPkts [Stat In Pkts] (tmnxCiscoHDLCStatInPkts)	long	tmnxCiscoHDLCStatInPkts indicates the number of inbound Cisco HDLC packets.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statOutOctets [Stat Out Octets] (tmnxCiscoHDLCStatOutOctets)	long	tmnxCiscoHDLCStatOutOctets indicates the number of outbound Cisco HDLC octets.
statOutPkts [Stat Out Pkts] (tmnxCiscoHDLCStatOutPkts)	long	tmnxCiscoHDLCStatOutPkts indicates the number of outbound Cisco HDLC packets.
<p>DDMStats</p> <p>MIB entry name: tmnxDigitalDiagMonitorEntry</p> <p>Entry description: Each row represents a particular SFF that supports Digital Diagnostic Monitoring. Entries are created and deleted internally by the system.</p> <p>Table description (for tmnxDigitalDiagMonitorTable): The tmnxDigitalDiagMonitorTable has an entry for each SFF in the system that supports Digital Diagnostic Monitoring (DDM). The table is indexed by TmnxPortID. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable SFF components.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DigitalDiagnosticMonitoring</p>		
aux1 [Aux 1] (tmnxDDMAux1)	float	The value of tmnxDDMAux1 indicates the Manufacturer specific Auxiliary 1 information of the XFP.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aux1Type [Aux 1 Type] (tmnxDDMAux1Type)	int	The value of tmnxDDMAux1Type indicates the measurement type of the Manufacturer specific Auxiliary 1 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
aux2 [Aux 2] (tmnxDDMAux2)	float	The value of tmnxDDMAux2 indicates the Manufacturer specific Auxiliary 2 information of the SFF.
aux2Type [Aux 2 Type] (tmnxDDMAux2Type)	int	The value of tmnxDDMAux2Type indicates the measurement type of the Manufacturer specific Auxiliary 2 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxOpticalPower [Rx Optical Power] (tmnxDDMRxOpticalPower)	float	The value of tmnxDDMRxOpticalPower indicates the current Received Optical Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalRxPower4, tmnxDDMExtCalRxPower3, tmnxDDMExtCalRxPower2, tmnxDDMExtCalRxPower1 and tmnxDDMExtCalRxPower0 affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMRxOpticalPowerType)	int	The value of tmnxDDMRxOpticalPowerType indicates whether the tmnxDDMRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).
supplyVoltage [Supply Voltage] (tmnxDDMSupplyVoltage)	float	The value of tmnxDDMSupplyVoltage indicates the current supply voltage of the SFF in 1/10000 of a Volt(V). If the SFF is externally calibrated, the objects tmnxDDMExtCalVoltageSlope and tmnxDDMExtCalVoltageOffset affect the voltage calculation. The formula for translating between the value of tmnxDDMSupplyVoltage and Voltage is: Internally Calibrated only: $\text{tmnxDDMSupplyVoltage} / 10000$ Externally Calibrated: $(\text{tmnxDDMSupplyVoltage} * (\text{tmnxDDMExtCalVoltageSlope} / 256) + \text{tmnxDDMExtCalVoltageOffset}) / 10000$ For example (internally calibrated SFF): The SNMP value 32851 is 3.2851 Volts (V).

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxDDMTemperature)	float	The value of tmnxDDMTemperature indicates the current temperature of the SFF in 1/256th degrees Celsius. If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the temperature calculation. The formula for translating between the value of tmnxDDMTemperature and degrees Celsius is: Internally Calibrated only: $\text{tmnxDDMTemperature} / 256$ Externally Calibrated: $(\text{tmnxDDMTemperature} * (\text{tmnxDDMExtCalTemperatureSlope} / 256) + \text{tmnxDDMExtCalTemperatureOffset}) / 256$ For example (internally calibrated SFF): The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMTxBiasCurrent)	float	The value of tmnxDDMTxBiasCurrent indicates the current Transmit Bias Current of the SFF in 1/500 milliamperes (mA). If the SFF is externally calibrated, the objects tmnxDDMExtCalTxLaserBiasSlope and tmnxDDMExtCalTxLaserBiasOffset affect the ampere calculation. The formula for translating between the value of tmnxDDMTxBiasCurrent and amperes is: Internally Calibrated only: $\text{tmnxDDMTxBiasCurrent} / 500$ Externally Calibrated: $(\text{tmnxDDMTxBiasCurrent} * (\text{tmnxDDMExtCalTxLaserBiasSlope} / 256) + \text{tmnxDDMExtCalTxLaserBiasOffset}) / 500$ For example (internally calibrated SFF): The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMTxOutputPower)	float	The value of tmnxDDMTxOutputPower indicates the current Output Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm

<p>DetailedPacketDiscardStats</p> <p>MIB entry name: aluPortDiscardsStatsEntry</p> <p>Entry description: Defines an entry in aluPortDiscardStatsTable. Entries are created and deleted by the system depending port configuration.</p> <p>Table description (for aluPortDiscardStatsTable): Defines the Nokia SAR series port packet discard statistics table for providing, via SNMP, the capability of retrieving the detailed packet discard statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • bundle.Interface • equipment.PhysicalPort • tdmequipment.DS0ChannelGroup 		
inCsmQHiPriDiscards [In Csm QHi Pri Discards] (aluPortInCsmQHiPriDiscards)	java. math. BigInteger	aluPortInCsmQHiPriDiscards indicates the number of packets discarded in the Ingress CSM High Priority Queue.
inCsmQLowPriDiscards [In Csm QLow Pri Discards] (aluPortInCsmQLowPriDiscards)	java. math. BigInteger	aluPortInCsmQLowPriDiscards indicates the number of packets discarded in the Ingress CSM Low Priority Queue.
inCsmQMediumPriDiscards [In Csm QMedium Pri Discards] (aluPortInCsmQMediumPriDiscards)	java. math. BigInteger	aluPortInCsmQMediumPriDiscards indicates the number of packets discarded in the Ingress CSM Medium Priority Queue.
inHdlcCrcDiscards [In Hdlc Crc Discards] (aluPortInHdlcCrcDiscards)	java. math. BigInteger	aluPortInHdlcCrcDiscards indicates the number of packets discarded due to the HDLC frame containing a CRC error. This statistic is only applicable to interfaces that have an encapsulation type of PPP-AUTO.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inIPAddrProtoDiscards [In IPAddr Proto Discards] (aluPortInIPAddrProtoDiscards)	java. math. BigInteger	aluPortInIPAddrProtoDiscards indicates the number of packets discarded that contained an invalid IP address or unsupported IP protocol.
inL2AddrProtoDiscards [In L2 Addr Proto Discards] (aluPortInL2AddrProtoDiscards)	java. math. BigInteger	aluPortInL2AddrProtoDiscards indicates the number of packets discarded that contained an unsupported type/protocol or unknown address at layer 2.
inMPLSLabelDiscards [In MPLSLabel Discards] (aluPortInMPLSLabelDiscards)	java. math. BigInteger	aluPortInMPLSLabelDiscards indicates the number of packets discarded that contained unknown mpls outer tunnels, unknown inner label or more than two unsupported labels.
inOtherDiscards [In Other Discards] (aluPortInOtherDiscards)	java. math. BigInteger	aluPortInOtherDiscards indicates the number of packets discarded at ingress for other reasons during processing.
outCsmQDiscards [Out Csm QDiscards] (aluPortOutCsmQDiscards)	java. math. BigInteger	aluPortOutCsmQDiscards indicates the number of packets discarded in the Egress CSM Queue.
outOtherDiscards [Out Other Discards] (aluPortOutOtherDiscards)	java. math. BigInteger	aluPortOutOtherDiscards indicates the number of packets discarded at egress for other reasons during processing.
outPortMtuDiscards [Out Port Mtu Discards] (aluPortOutPortMtuDiscards)	java. math. BigInteger	aluPortOutPortMtuDiscards indicates the number of packets discarded at egress due to the packet exceeding the configured port mtu.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FabricDeviceStats</p> <p>MIB entry name: aluFabricDeviceStatsEntry</p> <p>Entry description: An entry in the aluFabricDeviceStatsTable contains stats collected from fabric device itself, either traffic to a specific fabric port designated to an MDA, or global total traffic egress from the fabric device. aluFabricDeviceStatsIndex indicates the MDA number for the fabric port stats or 0 for global stats. Fabric Stats are not available on Nokia SAR-M platform, therefore all objects of aluFabricDeviceStatsEntry are set to 0.</p> <p>Table description (for aluFabricDeviceStatsTable): This table contains statistics collected from Fabric Device of the Nokia 7705 system</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.DaughterCardSlot • equipment.SystemStatsHolder 		
fabricDeviceStatsDroOcts [Fabric Device Stats Dro Octs] (aluFabricDeviceStatsDroOcts)	java. math. BigInteger	aluFabricDeviceStatsDroOcts indicates the number of octets from dropped packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsDroOcts indicates the total octets of all dropped packets at the fabric. aluFabricDeviceStatsDroOcts is not available on SAR-8 system, and is set to 0 in these cases.
fabricDeviceStatsDroPkts [Fabric Device Stats Dro Pkts] (aluFabricDeviceStatsDroPkts)	java. math. BigInteger	aluFabricDeviceStatsDroPkts indicates the number of dropped packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsDroPkts indicates the total of all dropped packets at the fabric.
fabricDeviceStatsFwdOcts [Fabric Device Stats Fwd Octs] (aluFabricDeviceStatsFwdOcts)	java. math. BigInteger	aluFabricDeviceStatsFwdOcts indicates the number of forwarded octets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsFwdOcts indicates the total octets forwarded by the fabric. aluFabricDeviceStatsFwdOcts is not available for global counter entry on SAR-8 system, and it is set to 0 in these cases.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fabricDeviceStatsFwdPkts [Fabric Device Stats Fwd Pkts] (aluFabricDeviceStatsFwdPkts)	java. math. BigInteger	aluFabricDeviceStatsFwdPkts indicates the number of forwarded packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsFwdPkts indicates the total of all forwarded packets from the fabric.
fabricDeviceStatsIndex [Fabric Device Stats Index] (aluFabricDeviceStatsIndex)	long	<p>aluFabricDeviceStatsIndex serves as the index that uniquely identify the fabric device counter. R2.x and R3.x of Nokia 7705 support two entries of fabric device counters as followed: 1) Entry with aluFabricDeviceStatsIndex = 0 is a global device counter which counts all egress traffic from the fabric. This is the sum of all fabric port traffic, including ports to all MDAs and ports to any other intalled cards such as inactive CSM. 2) Entry with aluFabricDeviceStatsIndex = 1 is a fabric port counter which counts all egress traffic toward the MDA that has aluExtTmnxMDAFabricStatsEnabled being TRUE in AluExtTmnxMDAEntry. Starting with R4.0, Nokia 7705 system supports multiple fabric port counters. One entry for each MDA, plus one entry for the global counters.</p> <p>aluFabricDeviceStatsIndex is numbered as followed: - Entry with aluFabricDeviceStatsIndex = 0 is a global device counter which counts all egress traffic from the fabric. This is the sum of all fabric port traffic, including ports to all MDAs and ports to any other intalled cards such as inactive CSM. - Otherwise aluFabricDeviceStatsIndex > 0 indicates the MDA slot number tmnxMDASlotNum. These entries contain fabric port counters of egress traffic from the fabric device to the MDA with slot number specified by aluFabricDeviceStatsIndex.</p> <p>aluExtTmnxMDAFabricStatsEnabled must be TRUE on the MDA for the stats to be valid. If aluExtTmnxMDAFabricStatsEnabled is FALSE, all stats in the entry are set to 0. Starting with release 7.0 Nokia 7705 uses entry with aluFabricDeviceStatsIndex = 0xff = 255 to contain counts of all firewall security traffic egress from the fabric.</p>

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fabricDeviceStatsMcastFwdPkts [Fabric Device Stats Mcast Fwd Pkts] (aluFabricDeviceStatsMcastFwdPkts)	java. math. BigInteger	aluFabricDeviceStatsMcastFwdPkts indicates the number of forwarded multicast packets (multipoint/broadcast/unknown traffic) from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsMcastFwdPkts indicates the total of all forwarded multicast packets from the fabric to all MDAs.
fabricDeviceStatsUcastFwdPkts [Fabric Device Stats Ucast Fwd Pkts] (aluFabricDeviceStatsUcastFwdPkts)	java. math. BigInteger	aluFabricDeviceStatsUcastFwdPkts indicates the number of forwarded unicast packets from the fabric to the indexed MDA. If the entry is a global counter then aluFabricDeviceStatsUcastFwdPkts indicates the total of all forwarded unicast packets from the fabric.
<p>FibNextHopStats</p> <p>MIB entry name: vRtrFibStatNextHopEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.
<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISISRoutes)	long	vRtrFibStatISISRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
<p>GponPortSpecificsStats MIB entry name: aluGponPortCurrentEntry Entry description: Defines an entry in aluGponPortCurrentTable. Entries are created and deleted by the system depending on port configuration. Table description (for aluGponPortCurrentTable): The aluGponPortCurrentTable contains various statistics being collected from the ONT for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
alignmentErr [Alignment Err] (aluGponPortCurrentAEs)	long	A count of frames having Alignment Errors.
badHeaders [Bad Headers] (aluGponPortCurrentBadHeaders)	long	A count of Received GEM Headers that are bad.
carrierSenseErr [Carrier Sense Err] (aluGponPortCurrentCSEs)	long	A count of Carrier Sense Errors.
deferredTx [Deferred Tx] (aluGponPortCurrentDTs)	long	A count of frames delayed due to Deferred Transmission.
dropFramesDn [Drop Frames Dn] (aluGponPortCurrentDropFrsDn)	long	A count of Dropped Frames Downstream.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropFramesUp [Drop Frames Up] (aluGponPortCurrentDropFrsUp)	long	A count of Dropped Frames Upstream.
excessiveCollisions [Excessive Collisions] (aluGponPortCurrentECs)	long	A count of Excessive Collisions.
fcsErrors [Fcs Errors] (aluGponPortCurrentFCSEs)	long	A count of Frame Check Sequence(FCS)Errors.
internalMacRxErr [Internal Mac Rx Err] (aluGponPortCurrentIMREs)	long	A count of unsuccessfully received frames due to Internal MAC Receive Error.
internalMacTxErr [Internal Mac Tx Err] (aluGponPortCurrentIMTEs)	long	A count of unsuccessfully transmitted frames due to Internal MAC Transmit Error.
lateCollisions [Late Collisions] (aluGponPortCurrentLCs)	long	A count of Late Collisions.
lostFrgsDn [Lost Frags Dn] (aluGponPortCurrentLostFrgsDn)	long	A count of Lost GEM Fragments (downstream).
lostFrgsUp [Lost Frags Up] (aluGponPortCurrentLostFrgsUp)	long	A count of Lost GEM Fragments (upstream).
multipleCollisionFrames [Multiple Collision Frames] (aluGponPortCurrentMCFs)	long	A count of successfully transmitted Multiple Collision Frames.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBufferOverflows [Rx Buffer Overflows] (aluGponPortCurrentRBOs)	long	A count of Receive Buffer Overflows.
rxEtherBytes [Rx Ether Bytes] (aluGponPortCurrentRxBytes)	long	A count of Received Ethernet Bytes.
rxEtherFrames [Rx Ether Frames] (aluGponPortCurrentRxFrames)	long	A count of Received Ethernet Frames.
rxFramesMcast [Rx Frames Mcast] (aluGponPortCurrentRxFrmsMcast)	long	A count of Received Multicast Ethernet Frames.
rxGemBlocks [Rx Gem Blocks] (aluGponPortCurrentRxBlocks)	long	A count of Received GEM Blocks.
rxGemFrag [Rx Gem Frags] (aluGponPortCurrentRxFrags)	long	A count of Received GEM Fragments.
singleCollisionFrames [Single Collision Frames] (aluGponPortCurrentSCFs)	long	A count of successfully transmitted Single Collision Frames.
sqeTestErrMsg [Sqe Test Err Msg] (aluGponPortCurrentSQEs)	long	A count of SQE Test Error messages generated.
tooLongFrames [Too Long Frames] (aluGponPortCurrentFTLs)	long	A count of Frames that are Too Long.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txBufferOverflows [Tx Buffer Overflows] (aluGponPortCurrentTBOs)	long	A count of Transmit Buffer Overflows.
txEtherBytes [Tx Ether Bytes] (aluGponPortCurrentTxBytes)	long	A count of Transmitted Ethernet Bytes.
txEtherFrames [Tx Ether Frames] (aluGponPortCurrentTxFrames)	long	A count of Transmitted Ethernet Frames.
txFramesMcast [Tx Frames Mcast] (aluGponPortCurrentTxFrsMcast)	long	A count of Transmitted Multicast Ethernet Frames.
txGemBlocks [Tx Gem Blocks] (aluGponPortCurrentTxBlocks)	long	A count of Transmitted GEM Blocks.
txGemFrag [Tx Gem Frags] (aluGponPortCurrentTxFrag)	long	A count of Transmitted GEM Fragments.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Nokia SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped: 32 25 24 17 16 9 8 1 +-----+-----+-----+-----+ TmnxHwClass 00000000 Slot number +-----+-----+-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Nokia SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
IpSecMDAStats MIB entry name: tmnxIPsecMdaDpStatsEntry Entry description: Information about a single IPsec Mda Data Path Statistics entry. Table description (for tmnxIPsecMdaDpStatsTable): Table to retrieve the IPsec Mda Data Path Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
decryptBytes [Decrypt Bytes] (tmnxIPsecMdaDpStatsDecryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptBytes indicates the number of bytes encrypted by the IPsec data path.
decryptPackets [Decrypt Packets] (tmnxIPsecMdaDpStatsDecryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptPkts indicates the number of packets encrypted by the IPsec data path.
dynamicIPsecTunnels [Dynamic IPsec Tunnels] (tmnxIPsecMdaDpDynIPsecTnls)	long	The value of tmnxIPsecMdaDpDynIPsecTnls indicates number of dynamic IPsec tunnels in use on the MDA.
encryptBytes [Encrypt Bytes] (tmnxIPsecMdaDpStatsEncryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptBytes indicates the number of bytes encrypted by the IPsec data path.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptPackets [Encrypt Packets] (tmnxIPsecMdaDpStatsEncryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptPkts indicates the number of packets encrypted by the IPsec data path.
inboundIPDropPackets [Inbound IPDrop Packets] (tmnxIPsecMdaDpStatsInBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the IPsec data path.
inboundIPDstSrcMismatches [Inbound IPDst Src Mismatches] (tmnxIPsecMdaDpStatsInBIP-DstSrcMismatches)	long	The value of tmnxIPsecMdaDpStatsInBIPDstSrcMismatches indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to the received packet's outer IP destination or source address does not match the Tunnel's local or peer gateway address.
inboundSaMisses [Inbound Sa Misses] (tmnxIPsecMdaDpStatsInBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBSAMisses indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to no SA (security association) present.
outboundIPDropPackets [Outbound IPDrop Packets] (tmnxIPsecMdaDpStatsOutBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the IPsec data path.
outboundPolicyEntryMisses [Outbound Policy Entry Misses] (tmnxIPsecMdaDpStatsOutBPoli- cyEntryMisses)	long	The value of tmnxIPsecMdaDpStatsOutBPolicyEntryMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no matching Policy Entry.
outboundSaMisses [Outbound Sa Misses] (tmnxIPsecMdaDpStatsOutBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBSAMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no SA (security association) present.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticIPsecTunnels [Static IPsec Tunnels] (tmnxIPsecMdaDpStaticIPsecTnls)	long	The value of tmnxIPsecMdaDpStaticIPsecTnls indicates number of configured static IPsec tunnels on the MDA.
transmitPacketErrors [Transmit Packet Errors] (tmnxIPsecMdaDpStatsTxPktErrs)	long	The value of tmnxIPsecMdaDpStatsTxPktErrs indicates the number of packets transmit failures by the IPsec data path.
IpSecQueueCtlStats MIB entry name: aluIPsecCtrlQueueStatsEntry Entry description: Each row entry contains statistics collected from IPsec encryption Control Queue for a specific MDA. Table description (for aluIPsecCtrlQueueStatsTable): This table contains statistics collected from IPsec encryption Control Queues of a specific MDA in the Nokia 7705 system. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
encryptionCtrlQueueDroppedBytes [Encryption Ctrl Queue Dropped Bytes] (aluIPsecCtrlQueueDroBytes)	java. math. BigInteger	aluIPsecCtrlQueueDroBytes indicates the number of bytes dropped from this control queue.
encryptionCtrlQueueDroppedPackets [Encryption Ctrl Queue Dropped Packets] (aluIPsecCtrlQueueDroPkts)	java. math. BigInteger	aluIPsecCtrlQueueDroPkts indicates the number of packets dropped from this control queue.
encryptionCtrlQueueFwdBytes [Encryption Ctrl Queue Fwd Bytes] (aluIPsecCtrlQueueFwdBytes)	java. math. BigInteger	aluIPsecCtrlQueueFwdBytes indicates the number of bytes forwarded from this control queue.
encryptionCtrlQueueFwdPackets [Encryption Ctrl Queue Fwd Packets] (aluIPsecCtrlQueueFwdPkts)	java. math. BigInteger	aluIPsecCtrlQueueFwdPkts indicates the number of packets forwarded from this control queue.

encryptionOutProfileDroppedBytes [Encryption Out Profile Dropped Bytes] (aluSecQueueDroOutProfBytes)	java. math. BigInteger	aluSecQueueDroOutProfBytes is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security bytes dropped from this queue.
encryptionOutProfileDroppedPackets [Encryption Out Profile Dropped Packets] (aluSecQueueDroOutProfPkts)	java. math. BigInteger	aluSecQueueDroInProfPkts is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security packets dropped from this queue.
encryptionOutProfileForwardedBytes [Encryption Out Profile Forwarded Bytes] (aluSecQueueFwdOutProfBytes)	java. math. BigInteger	aluSecQueueFwdOutProfBytes is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security bytes forwarded from this queue.
encryptionOutProfileForwardedPackets [Encryption Out Profile Forwarded Packets] (aluSecQueueFwdOutProfPkts)	java. math. BigInteger	aluSecQueueFwdOutProfPkts is only applicable and valid if aluSecQueueMode is profile. It indicates the number of out-profile security packets forwarded from this queue.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependentDropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHighCapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUCastHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

dropOctets [Drop Octets] (aluPortNetEgressControlDroOcts)	java. math. BigInteger	aluPortNetEgressControlDroOcts indicates the number of egress control octets dropped on this port.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropPackets [Drop Packets] (aluPortNetEgressControlDroPkts)	java. math. BigInteger	aluPortNetEgressControlDroPkts indicates the number of egress control packets dropped on this port.
fwdOctets [Fwd Octets] (aluPortNetEgressControlFwdOcts)	java. math. BigInteger	aluPortNetEgressControlFwdOcts indicates the number of egress control octets forwarded on this port.
fwdPackets [Fwd Packets] (aluPortNetEgressControlFwdPkts)	java. math. BigInteger	aluPortNetEgressControlFwdPkts indicates the number of egress control packets forwarded on this port.
<p>NetworkPortIngressControlStats MIB entry name: aluPortNetIngressControlStatsEntry Entry description: Defines an entry in aluPortNetIngressControlStatsTable. Entries are created and deleted by the system depending port configuration. Table description (for aluPortNetIngressControlStatsTable): Defines the Nokia SAR series port ingress control statistics table for providing, via SNMP, the capability of retrieving the ingress control traffic statistics for ports in network or hybrid modes. This table is not applicable to ports in access mode. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • bundle.Interface • equipment.PhysicalPort • tdmequipment.DS0ChannelGroup 		
dropOctets [Drop Octets] (aluPortNetIngressControlDroOcts)	java. math. BigInteger	aluPortNetIngressControlDroOcts indicates the number of ingress control octets dropped on this port.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropPackets [Drop Packets] (aluPortNetIngressControlDroPkts)	java. math. BigInteger	aluPortNetIngressControlDroPkts indicates the number of ingress control packets dropped on this port.
fwdOctets [Fwd Octets] (aluPortNetIngressControlFwdOcts)	java. math. BigInteger	aluPortNetIngressControlFwdOcts indicates the number of ingress control octets forwarded on this port.
fwdPackets [Fwd Packets] (aluPortNetIngressControlFwdPkts)	java. math. BigInteger	aluPortNetIngressControlFwdPkts indicates the number of ingress control packets forwarded on this port.
<p>NgeMdaStats MIB entry name: aluNgeMdaStatsEntry Entry description: Statistics for a single group encryption MDA. Table description (for aluNgeMdaStatsTable): Table to store group encryption MDA level statistics. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot</p>		
ngeMdaDecryptBytes [Nge Mda Decrypt Bytes] (aluNgeMdaDecryptBytes)	java. math. BigInteger	The value of aluNgeMdaDecryptBytes indicates the number of bytes successfully decrypted by the group encryption data path.
ngeMdaDecryptPackets [Nge Mda Decrypt Packets] (aluNgeMdaDecryptPkts)	java. math. BigInteger	The value of aluNgeMdaDecryptPkts indicates the number of packets successfully decrypted by the group encryption data path.
ngeMdaEncryptBytes [Nge Mda Encrypt Bytes] (aluNgeMdaEncryptBytes)	java. math. BigInteger	The value of aluNgeMdaEncryptBytes indicates the number of bytes successfully encrypted by the group encryption data path.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ngeMdaEncryptPackets [Nge Mda Encrypt Packets] (aluNgeMdaEncryptPkts)	java. math. BigInteger	The value of aluNgeMdaEncryptPkts indicates the number of packets successfully encrypted by the group encryption data path.
ngeMdaInDropAuthFailure [Nge Mda In Drop Auth Failure] (aluNgeMdaInDropAuthFailure)	long	The value of aluNgeMdaInDropAuthFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that authentication failed on the received packets.
ngeMdaInDropControlWordMismatch [Nge Mda In Drop Control Word Mismatch] (aluNgeMdaInDropControlWordMismatch)	long	The value of aluNgeMdaInDropControlWordMismatch indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that the decrypted control word does not match the outer control word.
ngeMdaInDropEnqueueError [Nge Mda In Drop Enqueue Error] (aluNgeMdaInDropEnqueueError)	long	The value of aluNgeMdaInDropEnqueueError indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that there are enqueue errors in the encryption engine.
ngeMdaInDropInvalidSpi [Nge Mda In Drop Invalid Spi] (aluNgeMdaInDropInvalidSpi)	long	The value of aluNgeMdaInDropInvalidSpi indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
ngeMdaInDropPackets [Nge Mda In Drop Packets] (aluNgeMdaInDropPkts)	long	The value of aluNgeMdaInDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ngeMdaInDropPaddingFailure [Nge Mda In Drop Padding Failure] (aluNgeMdaInDropPaddingFailure)	long	The value of aluNgeMdaInDropPaddingFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption data path. This implies that there are padding errors detected on the received packets.
ngeMdaOutDropEnqueueError [Nge Mda Out Drop Enqueue Error] (aluNgeMdaOutDropEnqueueError)	long	The value of aluNgeMdaDropOutEnqueueError indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption data path. This implies that there are enqueue errors in the encryption engine.
ngeMdaOutDropPackets [Nge Mda Out Drop Packets] (aluNgeMdaOutDropPkts)	long	The value of aluNgeMdaOutDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption data path.
ngeMdaOutDropUnsupportedUplink [Nge Mda Out Drop Unsupported Uplink] (aluNgeMdaOutDropUnsupportedUplink)	long	The value of aluNgeMdaOutDropUnsupportedUplink indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption data path. This implies that the resolved uplink does not support encryption.

bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxIcpCells [Bundle Member Ima Rx Icp Cells] (tmnxBundleMemberImaRxIcpCells)	long	tmnxBundleMemberImaRxIcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxIcpCells [Bundle Member Ima Tx Icp Cells] (tmnxBundleMemberImaTxIcpCells)	long	tmnxBundleMemberImaTxIcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.
<p>ShDslLineStats MIB entry name: aluShdslLineStatsEntry Entry description: Defines an entry in aluShdslLineStatsTable. Entries are created and deleted by the system depending on port configuration. Table description (for aluShdslLineStatsTable): The aluShdslLineStatsTable contains the SHDSL Performance statistics being collected from the Socrate-4e for each physical SHDSL line on the 'SHDSL' tmnxPortType port. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
shdslLineStatsCvError [Shdsl Line Stats CvError] (aluShdslLineStatsCvError)	java. math. BigInte- ger	Code Violation Error Counter (Network Side). It is updated every second when the link is active.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
shdslLineStatsES [Shdsl Line Stats ES] (aluShdslLineStatsES)	java. math. BigInteger	Erroneous Seconds Counter (Network Side). It is updated every second when the link is active.
shdslLineStatsInvalidDataFlag [Shdsl Line Stats Invalid Data Flag] (aluShdslLineStatsInvalidDataFlag)	long	It indicates the validity of the PM data. It is set to 0 when the counters are reliable, otherwise it indicates that the far-end counters are not reliable.
shdslLineStatsLOSWS [Shdsl Line Stats LOSWS] (aluShdslLineStatsLOSWS)	java. math. BigInteger	LOSWS Counter (Network Side). It is updated every second when the link is active.
shdslLineStatsLinkLoss [Shdsl Line Stats Link Loss] (aluShdslLineStatsLinkLoss)	java. math. BigInteger	Link Loss Counter (Network Side). This counter is only valid for the local STU-R and is not polled by the STU-C,
shdslLineStatsSES [Shdsl Line Stats SES] (aluShdslLineStatsSES)	java. math. BigInteger	Severely Erroneous Seconds Counter (Network Side). It is updated every second when the link is active.
shdslLineStatsUAS [Shdsl Line Stats UAS] (aluShdslLineStatsUAS)	java. math. BigInteger	Unavailable Seconds Counter (Network Side). It is updated every second when the link is active.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>XDSLLineStats</p> <p>MIB entry name: aluXdslLineStatsEntry</p> <p>Entry description: Defines an entry in aluXdslLineStatsTable. Entries are created and deleted by the system depending on port configuration.</p> <p>Table description (for aluXdslLineStatsTable): The aluXdslLineStatsTable contains various statistics being collected from the BCM6519 for each physical XDSL line on the 'XDSL' tmnxPortType port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
xdslLineStatsFarEndAS [Xdsl Line Stats Far End AS] (aluXdslLineStatsFarEndAS)	java. math. BigInteger	A count of Available Seconds - Far-End: Count of 1 second intervals for which the ADSL line is available.
xdslLineStatsFarEndES [Xdsl Line Stats Far End ES] (aluXdslLineStatsFarEndES)	java. math. BigInteger	A count of Errored Seconds - Far-End: Count of 1-second intervals with one or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsFarEndFECS [Xdsl Line Stats Far End FECS] (aluXdslLineStatsFarEndFECS)	java. math. BigInteger	A count of Forward Error Correction Seconds - Far-End: Count of 1-second intervals with one or more FEC corrections on either one of the active latencies at the far-end.
xdslLineStatsFarEndLEFTRS [Xdsl Line Stats Far End LEFTRS] (aluXdslLineStatsFarEndLEFTRS)	java. math. BigInteger	A count of Low Error-Free Troughput Rate Seconds - Far-End.
xdslLineStatsFarEndLOFS [Xdsl Line Stats Far End LOFS] (aluXdslLineStatsFarEndLOFS)	java. math. BigInteger	A count of Loss of Framing Seconds - Far-End: Count of 1-second intervals containing one or more SEF defects at the far-end.

Table 320 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
xdslLineStatsFarEndLOSS [Xdsl Line Stats Far End LOSS] (aluXdslLineStatsFarEndLOSS)	java. math. BigInteger	A count of Loss of Signal Seconds - Far-End: Count of 1-second intervals with one or more LOS defects present at the far-end.
xdslLineStatsFarEndLPRS [Xdsl Line Stats Far End LPRS] (aluXdslLineStatsFarEndLPRS)	java. math. BigInteger	A count of Loss of power Seconds - Far-End: Count of 1-second intervals containing one or more LPR defects at the far-end.
xdslLineStatsFarEndSES [Xdsl Line Stats Far End SES] (aluXdslLineStatsFarEndSES)	java. math. BigInteger	A count of Severely Errored Seconds - Far-End: Count of 1-second intervals with 18 or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsFarEndUAS [Xdsl Line Stats Far End UAS] (aluXdslLineStatsFarEndUAS)	java. math. BigInteger	A count of Unavailable Seconds - Far-End: Count of 1-second intervals for which the ADSL line is not available (the line becomes unavailable at the onset of 10 continuous SES).
xdslLineStatsNearEndAS [Xdsl Line Stats Near End AS] (aluXdslLineStatsNearEndAS)	java. math. BigInteger	A count of Available Seconds - Near-End: Count of 1 second intervals for which the ADSL line is available.
xdslLineStatsNearEndES [Xdsl Line Stats Near End ES] (aluXdslLineStatsNearEndES)	java. math. BigInteger	A count of Errored Seconds - Near-End: Count of 1-second intervals with one or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsNearEndFECS [Xdsl Line Stats Near End FECS] (aluXdslLineStatsNearEndFECS)	java. math. BigInteger	A count of Forward Error Correction Seconds - Near-End: Count of 1-second intervals with one or more FEC corrections on either one of the active latencies at the near-end.
xdslLineStatsNearEndLEFTRS [Xdsl Line Stats Near End LEFTRS] (aluXdslLineStatsNearEndLEFTRS)	java. math. BigInteger	A count of Low Error-Free Troughput Rate Seconds - Near-End.

Table 320 equipment statistics (continued)

xdslLineStatsNearEndLOFS [Xdsl Line Stats Near End LOFS] (aluXdslLineStatsNearEndLOFS)	java. math. BigInteger	A count of Loss of Framing Seconds - Near-End: Count of 1-second intervals containing one or more SEF defects at the near-end.
xdslLineStatsNearEndLOSS [Xdsl Line Stats Near End LOSS] (aluXdslLineStatsNearEndLOSS)	java. math. BigInteger	A count of Loss of Signal Seconds - Near-End: Count of 1-second intervals with one or more LOS defects present at the near-end.
xdslLineStatsNearEndLPRS [Xdsl Line Stats Near End LPRS] (aluXdslLineStatsNearEndLPRS)	java. math. BigInteger	A count of Loss of power Seconds - Near-End: Count of 1-second intervals containing one or more LPR defects at the near-end.
xdslLineStatsNearEndSES [Xdsl Line Stats Near End SES] (aluXdslLineStatsNearEndSES)	java. math. BigInteger	A count of Severely Errored Seconds - Near-End: Count of 1-second intervals with 18 or more FEBE anomalies, or 1 or more LOS defects, or one or more RDI defects.
xdslLineStatsNearEndUAS [Xdsl Line Stats Near End UAS] (aluXdslLineStatsNearEndUAS)	java. math. BigInteger	A count of Unavailable Seconds - Near-End: Count of 1-second intervals for which the ADSL line is not available (the line becomes unavailable at the onset of 10 continuous SES).
xdslLineStatsUpTime [Xdsl Line Stats Up Time] (aluXdslLineStatsUpTime)	long	A count of the number of seconds already in showtime.

Table 321 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsHighCapacityPkts1024to1518Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsHighCapacityPkts128to255Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsHighCapacityPkts256to511Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsHighCapacityPkts512to1023Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernet. If the network is a full-duplex ethernet and the mediaIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting mediaIndependentInPkts for etherStatsHighCapacityPkts, and mediaIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting mediaIndependentOutPkts for etherStatsHighCapacityPkts, and mediaIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 321 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 322 fr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: tmnxFRDlcmiEntry</p> <p>Entry description: The Parameters for a particular Data Link Connection Management Interface. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxFRDlcmiTable): The tmnxFRDlcmiTable has an entry for each port in the system that is configured for Frame Relay. It contains the parameters for the Data Link Connection Management Interface (DLCMI) for the frame relay service on this port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: fr.Interface</p>		
lmiDiscardedMessages [Lmi Discarded Messages] (tmnxFRDlcmiDiscardedMsgs)	long	tmnxFRDlcmiDiscardedMsgs indicates the number of times the LMI agent discarded a received message because it wasn't expecting it, the type of message was incorrect, or the contents of the message were invalid.
lmiInvalidRxSeqNumMessages [Lmi Invalid Rx Seq Num Messages] (tmnxFRDlcmiInvRxSeqNumMsgs)	long	tmnxFRDlcmiInvRxSeqNumMsgs indicates the number of times the LMI agent received a message with an invalid receive sequence number: i.e. a sequence number that does not match the last transmitted sequence number of the agent.
lmiRxStatusEnquiryMessages [Lmi Rx Status Enquiry Messages] (tmnxFRDlcmiRxStatusEnqMsgs)	long	tmnxFRDlcmiRxStatusEnqMsgs indicates the number of LMI Status Enquiry messages received on this Frame Relay interface.
lmiRxStatusMessages [Lmi Rx Status Messages] (tmnxFRDlcmiRxStatusMsgs)	long	tmnxFRDlcmiRxStatusMsgs indicates the number of LMI Status messages received on this Frame Relay interface.
lmiStatusEnquiryMsgTimeouts [Lmi Status Enquiry Msg Timeouts] (tmnxFRDlcmiStatusEnqMsgTimeouts)	long	tmnxFRDlcmiStatusEnqMsgTimeouts indicates the number of times the LMI agent did not receive a Status Enquiry message within the allotted time.

Table 322 fr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lmiStatusMsgTimeouts [Lmi Status Msg Timeouts] (tmnxFRDlcmiStatusMsgTimeouts)	long	tmnxFRDlcmiStatusMsgTimeouts indicates the number of times the LMI agent did not receive a Status message within the allotted time.
lmiTxStatusEnquiryMessages [Lmi Tx Status Enquiry Messages] (tmnxFRDlcmiTxStatusEnqMsgs)	long	tmnxFRDlcmiTxStatusEnqMsgs indicates the number of LMI Status Enquiry messages transmitted on this Frame Relay interface.
lmiTxStatusMessages [Lmi Tx Status Messages] (tmnxFRDlcmiTxStatusMsgs)	long	tmnxFRDlcmiTxStatusMsgs indicates the number of LMI Status messages transmitted on this Frame Relay interface.

Table 323 igmp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface</p>		
importPolicyDrops [Import Policy Drops] (vRtrIgmplfImportPolicyDrops)	long	The value of vRtrIgmplfImportPolicyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy vRtrIgmplfImportPolicy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrIgmplfStatsMcacPolicyDrops)	long	The value of the object vRtrIgmplfStatsMcacPolicyDrops indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy on this interface.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrIgmplfRxBadChecksumPkts)	long	The value of vRtrIgmplfRxBadChecksumPkts indicates the total number of IGMP packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmplfRxBadEncodings)	long	The value of vRtrIgmplfRxBadEncodings indicates the total number of IGMP packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmplfRxBadLenPkts)	long	The value of vRtrIgmplfRxBadLenPkts indicates the total number of IGMP packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrIgmplfRxBadReceiveIfPkts)	long	The value of vRtrIgmplfRxBadReceiveIfPkts indicates the total number of IGMP packets incorrectly received on this interface.

Table 323 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGenQueries [Rx Gen Queries] (vRtrIgmplfRxGenQueries)	long	The value of vRtrIgmplfRxGenQueries indicates the total number of IGMP General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrIgmplfRxGrpQueries)	long	The value of vRtrIgmplfRxGrpQueries indicates the number of IGMP Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmplfRxGrpSrcQueries)	long	The value of vRtrIgmplfRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrIgmplfRxLeaves)	long	The value of vRtrIgmplfRxLeaves indicates the total number of IGMP V2 Leaves received on this interface.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmplfRxNoRtrAlertPkts)	long	The value of vRtrIgmplfRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmplfRxNonLocal)	long	The value of vRtrIgmplfRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmplfRxPktDrops)	long	The value of vRtrIgmplfRxPktDrops indicates the total number of IGMP packets that were received on this interface but were dropped.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrIgmplfRxUnknownTypePkts)	long	The value of vRtrIgmplfRxUnknownTypePkts indicates the total number of IGMP packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrIgmplfRxV1Reports)	long	The value of vRtrIgmplfRxV1Reports indicates the total number of IGMP V1 Reports received on this interface.

Table 323 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV2Reports [Rx V2 Reports] (vRtrIgmplfRxV2Reports)	long	The value of vRtrIgmplfRxV2Reports indicates the total number of IGMP V2 Reports received on this interface.
rxV3Reports [Rx V3 Reports] (vRtrIgmplfRxV3Reports)	long	The value of vRtrIgmplfRxV3Reports indicates the total number of IGMP V3 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrIgmplfRxWrongVersions)	long	The value of vRtrIgmplfRxWrongVersions indicates the total number of IGMP packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrIgmplfStatsSGTypes)	long	The value of vRtrIgmplfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmplfStatsStarGTypes)	long	vRtrIgmplfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmplfTxErrors)	long	The value of vRtrIgmplfTxErrors indicates the total number of times there was an error transmitting IGMP packets on this interface..
txGenQueries [Tx Gen Queries] (vRtrIgmplfTxGenQueries)	long	The value of vRtrIgmplfTxGenQueries indicates the number of IGMP General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrIgmplfTxGrpQueries)	long	The value of vRtrIgmplfTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmplfTxGrpSrcQueries)	long	The value of vRtrIgmplfTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted on this interface.

Table 323 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrIgmplfTxLeaves)	long	The value of vRtrIgmplfTxLeaves indicates the total number of IGMP Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrIgmplfTxV1Reports)	long	The value of vRtrIgmplfTxV1Reports indicates the total number of IGMP V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrIgmplfTxV2Reports)	long	The value of vRtrIgmplfTxV2Reports indicates the total number of IGMP V2 Reports transmitted on this interface.
txV3Reports [Tx V3 Reports] (vRtrIgmplfTxV3Reports)	long	The value of vRtrIgmplfTxV3Reports indicates the total number of IGMP V3 Reports transmitted on this interface.
InterfaceStatsExtension MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmplfRxLocalScopePkts)	long	The value of the object vRtrIgmplfRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmplfRxRsvdScopePkts)	long	The value of the object vRtrIgmplfRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.

Table 324 ipsec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IPSecSASStats MIB entry name: tmnxIPsecSASStatsEntry Entry description: Information about a single IPsec SA Statistics entry. Table description (for tmnxIPsecSASStatsTable): Table to retrieve the IPsec SA Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecSecurityAssociation</p>		
bytesProcessed [Bytes Processed] (tmnxIPsecSASStatsBytesProcessed)	java. math. BigInteger	The value of tmnxIPsecSASStatsBytesProcessed indicates the number of bytes successfully processed for this SA.
cryptoErrors [Crypto Errors] (tmnxIPsecSASStatsCryptoErrors)	long	The value of tmnxIPsecSASStatsCryptoErrors indicates the number of crypto errors encountered on this SA. The crypto errors include errors on packets where protocol does not match or if the check on authentication header length failed.
pktsProcessed [Pkts Processed] (tmnxIPsecSASStatsPktsProcessed)	java. math. BigInteger	The value of tmnxIPsecSASStatsPktsProcessed indicates the number of packets successfully processed for this SA.
policyErrors [Policy Errors] (tmnxIPsecSASStatsPolicyErrors)	long	The value of tmnxIPsecSASStatsPolicyErrors indicates the number of policy errors encountered on this SA. The policy errors include bundled SA, selector check and policy direction error.
replayErrors [Replay Errors] (tmnxIPsecSASStatsReplayErrors)	long	The value of tmnxIPsecSASStatsReplayErrors indicates the number of replay errors encountered on this SA.

Table 324 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saErrors [Sa Errors] (tmnxIPsecSASStatsSAErrors)	long	The value of tmnxIPsecSASStatsSAErrors indicates the number of SA errors encountered on this SA. The SA errors include sequence number failure, invalid SA, ploicy version mismatch, illegal authentication algorithm, expanded packet too big, illegal configured algorithm and ttl decrement error.
IPSecTunnelStats MIB entry name: tmnxIPsecTunnelStatsEntry Entry description: Statistics for a single IPsec Tunnel. Table description (for tmnxIPsecTunnelStatsTable): Table to store IPsec Tunnel statistics Supports realtime plotting Supports scheduled collection Monitored class: ipsec.IPSecTunnel		
isakmpEstabTime [Isakmp Estab Time] (tmnxIPsecTunnellsakmpEstabTime)	long	The value of tmnxIPsecTunnellsakmpEstabTime indicates the sysUpTime at the time the IPsec phase 1 negotiation completed.
isakmpNegLifeTime [Isakmp Neg Life Time] (tmnxIPsecTunnellsakmpNegLifeTime)	long	The value of tmnxIPsecTunnellsakmpNegLifeTime indicates the lifetime negotiated for phase1 lke key.
isakmpState [Isakmp State] (tmnxIPsecTunnellsakmpState)	long	The value of tmnxIPsecTunnellsakmpState indicates the state of phase 1 IPsec negotiation.
numCtrlPktsRx [Num Ctrl Pkts Rx] (tmnxIPsecTunnelNumCtrlPktsRx)	long	The value of tmnxIPsecTunnelNumCtrlPktsRx indicates the number of control packets this IPsec Tunnel has received.
numCtrlPktsTx [Num Ctrl Pkts Tx] (tmnxIPsecTunnelNumCtrlPktsTx)	long	The value of tmnxIPsecTunnelNumCtrlPktsTx indicates the number of control packets this IPsec Tunnel has sent.

Table 324 ipsec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numCtrlRxErrors [Num Ctrl Rx Errors] (tmnxIPsecTunnelNumCtrlRxErrors)	long	The value of tmnxIPsecTunnelNumCtrlRxErrors indicates the number of control packet receive errors.
numCtrlTxErrors [Num Ctrl Tx Errors] (tmnxIPsecTunnelNumCtrlTxErrors)	long	The value of tmnxIPsecTunnelNumCtrlTxErrors indicates the number of control packet transmit errors.
numDpdAckRx [Num Dpd Ack Rx] (tmnxIPsecTunnelNumDpdAckRx)	long	The value of tmnxIPsecTunnelNumDpdAckRx indicates the number of Dead-Peer-Detection acknowledgement packets received.
numDpdAckTx [Num Dpd Ack Tx] (tmnxIPsecTunnelNumDpdAckTx)	long	The value of tmnxIPsecTunnelNumDpdAckTx indicates the number of Dead-Peer-Detection acknowledgement packets transmitted.
numDpdRx [Num Dpd Rx] (tmnxIPsecTunnelNumDpdRx)	long	The value of tmnxIPsecTunnelNumDpdRx indicates the number of Dead-Peer-Detection packets received.
numDpdTx [Num Dpd Tx] (tmnxIPsecTunnelNumDpdTx)	long	The value of tmnxIPsecTunnelNumDpdTx indicates the number of Dead-Peer-Detection packets transmitted.
numExpRx [Num Exp Rx] (tmnxIPsecTunnelNumExpRx)	long	The value of tmnxIPsecTunnelNumExpRx indicates the number of DPD R-U-THERE packets that have not been acknowledged.
numInvalidDpdRx [Num Invalid Dpd Rx] (tmnxIPsecTunnelNumInvalidDpdRx)	long	The value of tmnxIPsecTunnelNumInvalidDpdRx indicates the number of malformed DPD R-U-THERE acknowledgement packets received.

Table 325 isis statistics

timeSinceTopologyChange [Time Since Topology Change] (svcTlsStpTimeSinceTopologyChange)	long	The value of the object svcTlsStpTimeSinceTopologyChange indicates the time (in hundredths of a second) since the last time a topology change was detected by the Spanning Tree Protocol instance associated with this service.
topologyChanges [Topology Changes] (svcTlsStpTopologyChanges)	long	The value of the object svcTlsStpTopologyChanges indicates the total number of topology changes detected by the Spanning Tree Protocol instance associated with this service since the management entity was last reset or initialized.

Table 327 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. Each entry represents an active Link Aggregation Group.</p> <p>Table description (for tLagOperationTable): Operational information about each Link Aggregation Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lag.Interface</p>		
portThresholdFalling [Port Threshold Falling] (tLagPortThresholdFalling)	long	counts the number of linkDown or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being less than or equal to tLagPortThreshold value.
portThresholdRising [Port Threshold Rising] (tLagPortThresholdRising)	long	counts the number of linkUp or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being greater than tLagPortThreshold value.
<p>MultiChassisLagMemberStats</p> <p>MIB entry name: tmnxMcLagLagStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a lag that participates in a multi-chassis configuration with a given peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagLagStatsTable): The tmnxMcLagLagStatsTable has an entry for each lag that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lag.MultiChassisLagMember • multichassis.MultiChassisLagMember 		
configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 327 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 327 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 327 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 327 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 328 ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 328 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SessionStats</p> <p>MIB entry name: vRtrLdpSessionStatsEntry</p> <p>Entry description: A row in this table represents statistical information about a single session between an LDP entity and an LDP Peer.</p> <p>Table description (for vRtrLdpSessionStatsTable): vRtrLdpSessionStatsTable is a read-only table. The purpose of this table is to keep statistical information about a single session between an LDP entity and an LDP Peer. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpSessionTable, and the augmenting table, vRtrLdpSessionStatsTable. This in effect extends the vRtrLdpSessionTable with additional columns. Creation or deletion of a row in the vRtrLdpSessionTable results in the same fate for the row in the vRtrLdpSessionStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.Session</p>		
addressMessagesReceived [Address Messages Received] (vRtrLdpSessStatsAddrIn)	long	The value of vRtrLdpSessStatsAddrIn counts the number of Address Messages that have been received during this session.
addressMessagesSent [Address Messages Sent] (vRtrLdpSessStatsAddrOut)	long	The value of vRtrLdpSessStatsAddrOut counts the number of Address Messages that have been sent during this session.
addressWithdrawMessagesReceived [Address Withdraw Messages Received] (vRtrLdpSessStatsAddrWithdrawIn)	long	The value of vRtrLdpSessStatsAddrWithdrawIn counts the number of Address Withdraw Messages that have been received during this session.
addressWithdrawMessagesSent [Address Withdraw Messages Sent] (vRtrLdpSessStatsAddrWithdrawOut)	long	The value of vRtrLdpSessStatsAddrWithdrawOut counts the number of Address Withdraw Messages that have been sent during this session.
fecReceived [Fec Received] (vRtrLdpSessStatsFECRecv)	long	The value of vRtrLdpSessStatsFECRecv counts the number of FECs received for this session.

Table 328 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecSent [Fec Sent] (vRtrLdpSessStatsFECSent)	long	The value of vRtrLdpSessStatsFECSent counts the number of FECs sent for this session.
helloMessagesReceived [Hello Messages Received] (vRtrLdpSessStatsHelloIn)	long	The value of vRtrLdpSessStatsHelloIn counts the number of Hello Messages that have been received during this session.
helloMessagesSent [Hello Messages Sent] (vRtrLdpSessStatsHelloOut)	long	The value of vRtrLdpSessStatsHelloOut counts the number of Hello Messages that have been sent during this session.
initMessagesReceived [Init Messages Received] (vRtrLdpSessStatsInitIn)	long	The value of vRtrLdpSessStatsInitIn counts the number of Init Messages that have been received during this session.
initMessagesSent [Init Messages Sent] (vRtrLdpSessStatsInitOut)	long	The value of vRtrLdpSessStatsInitOut counts the number of Init Messages that have been sent during this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpSessStatsKeepaliveIn)	long	The value of vRtrLdpSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpSessStatsKeepaliveOut)	long	The value of vRtrLdpSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpSessStatsLabelAbortIn)	long	The value of vRtrLdpSessStatsLabelAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpSessStatsLabelAbortOut)	long	The value of vRtrLdpSessStatsLabelAbortOut counts the number of Label Abort Messages that have been sent during this session.

Table 328 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelMappingsReceived [Label Mappings Received] (vRtrLdpSessStatsLabelMappingIn)	long	The value of vRtrLdpSessStatsLabelMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpSessStatsLabelMappingOut)	long	The value of vRtrLdpSessStatsLabelMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpSessStatsLabelReleaseIn)	long	The value of vRtrLdpSessStatsLabelReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpSessStatsLabelReleaseOut)	long	The value of vRtrLdpSessStatsLabelReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpSessStatsLabelRequestIn)	long	The value of vRtrLdpSessStatsLabelRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpSessStatsLabelRequestOut)	long	The value of vRtrLdpSessStatsLabelRequestOut counts the number of Label Request Messages that have been sent during this session.
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpSessStatsLabelWithdrawIn)	long	The value of vRtrLdpSessStatsLabelWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpSessStatsLabelWithdrawOut)	long	The value of vRtrLdpSessStatsLabelWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpSessStatsLinkAdj)	long	The value of vRtrLdpSessStatsLinkAdj specifies the number of link adjacencies for this session.

Table 328 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
notificationMessagesReceived [Notification Messages Received] (vRtrLdpSessStatsNotificationIn)	long	The value of vRtrLdpSessStatsNotificationIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpSessStatsNotificationOut)	long	The value of vRtrLdpSessStatsNotificationOut counts the number of Notification Messages that have been sent during this session.
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpSessStatsTargAdj)	long	The value of vRtrLdpSessStatsTargAdj specifies the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vRtrLdpStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. This in effect extends the vRtrLdpGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpGeneralTable results in the same fate for the row in the vRtrLdpStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.Site</p>		
activeAdjacencies [Active Adjacencies] (vRtrLdpStatsActiveAdjacencies)	long	The value of vRtrLdpStatsActiveAdjacencies specifies the number of active adjacencies (i.e. established sessions) associated with the LDP instance.
activeInterfaces [Active Interfaces] (vRtrLdpStatsActiveInterfaces)	long	The value of vRtrLdpStatsActiveInterfaces specifies the number of active (i.e. operationally up) interfaces associated with the LDP instance.

Table 328 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeSessions [Active Sessions] (vRtrLdpStatsActiveSessions)	long	The value of vRtrLdpStatsActiveSessions specifies the number of active sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargetedSessions [Active Targeted Sessions] (vRtrLdpStatsActiveTargSessions)	long	The value of vRtrLdpStatsActiveTargSessions specifies the number of configured targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vRtrLdpStatsAddrFECRecv)	long	The value of vRtrLdpStatsAddrFECRecv specifies the number of Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vRtrLdpStatsAddrFECSent)	long	The value of vRtrLdpStatsAddrFECSent specifies the number of Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vRtrLdpStatsAttemptedSessions)	long	The value of vRtrLdpStatsAttemptedSessions specifies the total number of attempted sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vRtrLdpStatsBadLdpIdentifierErrors)	long	The value of vRtrLdpStatsBadLdpIdentifierErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vRtrLdpStatsBadMessageLengthErrors)	long	The value of vRtrLdpStatsBadMessageLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vRtrLdpStatsBadPduLengthErrors)	long	The value of vRtrLdpStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vRtrLdpStatsBadTlvLengthErrors)	long	The value of vRtrLdpStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.

Table 328 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrFecPfxCount [Egr Fec Pfx Count] (vRtrLdpStatsEgrFecPfxCount)	long	The value of vRtrLdpStatsEgrFecPfxCount indicates the number of egress FEC prefix statistics configured for this LDP instance.
inactiveInterfaces [Inactive Interfaces] (vRtrLdpStatsInactiveInterfaces)	long	The value of vRtrLdpStatsInactiveInterfaces specifies the number of inactive (i.e. operationally down) interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vRtrLdpStatsInactiveTargSessions)	long	The value of vRtrLdpStatsInactiveTargSessions specifies the number of inactive (i.e. operationally down) targeted sessions associated with the LDP instance.
keepAliveExpiredErrors [Keep Alive Expired Errors] (vRtrLdpStatsKeepAliveExpiredErrors)	long	The value of vRtrLdpStatsKeepAliveExpiredErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vRtrLdpStatsMalformedTlvValueErrors)	long	The value of vRtrLdpStatsMalformedTlvValueErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vRtrLdpStatsOperDownEvents)	long	The value of vRtrLdpStatsOperDownEvents specifies the number of times the LDP instance has gone operationally down since the instance was created.
serviceFECsReceived [Service FECs Received] (vRtrLdpStatsSvcFECRecv)	long	The value of vRtrLdpStatsSvcFECRecv specifies the number of Service FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vRtrLdpStatsSvcFECSent)	long	The value of vRtrLdpStatsSvcFECSent specifies the number of Service FECs sent by the LDP instance to its neighbors.

Table 328 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vRtrLdpStatsSessRejAdvErrors)	long	The value of vRtrLdpStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vRtrLdpStatsSessRejLabelRangeErrors)	long	The value of vRtrLdpStatsSessRejLabelRangeErrors gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vRtrLdpStatsSessRejMaxPduErrors)	long	The value of vRtrLdpStatsSessRejMaxPduErrors gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vRtrLdpStatsSessRejNoHelloErrors)	long	The value of vRtrLdpStatsSessRejNoHelloErrors gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vRtrLdpStatsShutdownNotifRecv)	long	The value of vRtrLdpStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vRtrLdpStatsShutdownNotifSent)	long	The value of vRtrLdpStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vRtrLdpStatsUnknownTlvErrors)	long	The value of vRtrLdpStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.

existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 329 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 329 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration</p>		

Table 329 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
IldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter is similar to IldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
IldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
IldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
IldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 329 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
IldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
IldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration</p>		
IldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
IldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 330 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>GroupSourceSummaryStats</p> <p>MIB entry name: vRtrMldGrpSrcSummaryEntry</p> <p>Entry description: An entry in the vRtrMldGrpSrcSummaryTable. Each entry represents the summary counters for each Group/Source combination.</p> <p>Table description (for vRtrMldGrpSrcSummaryTable): The table listing the IP multicast Group/Source summary counters.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Site</p>		
blockedGrpIntfSaps [Blocked Grp Intf Saps] (vRtrMldGrpSrcSummBlkGrpIfSaps)	long	vRtrMldGrpSrcSummBlkGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the blocking list.
blockedHosts [Blocked Hosts] (vRtrMldGrpSrcSummBlkHosts)	long	vRtrMldGrpSrcSummBlkHosts indicates the number of hosts having this Group/Source combination in the blocking list.
blockedInterfaces [Blocked Interfaces] (vRtrMldGrpSrcSummBlkInterfaces)	long	vRtrMldGrpSrcSummBlkInterfaces indicates the number of interfaces having this Group/Source combination in the blocking list.
fwdGrpIntfSaps [Fwd Grp Intf Saps] (vRtrMldGrpSrcSummFwdGrpIfSaps)	long	vRtrMldGrpSrcSummFwdGrpIfSaps indicates the number of Grp If SAP's having this Group/Source combination in the forwarding list.
fwdHosts [Fwd Hosts] (vRtrMldGrpSrcSummFwdHosts)	long	vRtrMldGrpSrcSummFwdHosts indicates the number of hosts having this Group/Source combination in the forwarding list.
fwdInterfaces [Fwd Interfaces] (vRtrMldGrpSrcSummFwdInterfaces)	long	vRtrMldGrpSrcSummFwdInterfaces indicates the number of interfaces having this Group/Source combination in the forwarding list.

Table 330 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
InterfaceStats MIB entry name: vRtrMldIfStatsEntry Entry description: An entry in the vRtrMldIfStatsTable. Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: mld.Interface		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.

Table 330 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv2 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.

Table 330 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.

Table 330 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.
SiteStats MIB entry name: vRtrMldGenStatsEntry Entry description: Each row entry represents statistics for an instance of the MLD protocol running within a virtual router. Table description (for vRtrMldGenStatsTable): The vRtrMldGenStatsTable contains objects for general statistics for the MLD protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mld.Site		
statsSGTypes [Stats SGTypes] (vRtrMldGenStatsSGTypes)	long	The value of vRtrMldGenStatsSGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'sg'.

Table 330 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statsStarGTypes [Stats Star GTypes] (vRtrMldGenStatsStarGTypes)	long	The value of vRtrMldGenStatsStarGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'starG'.

Table 331 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries specifies the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/ vRtrMplsLspAge * 100 %).

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats</p> <p>MIB entry name: vRtrMplsIfStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SarMplsInterfaceStats</p> <p>MIB entry name: aluVRtrMplsIfStatEntry</p> <p>Entry description: Information about the extensions of vRtrMplsIfStatTable which represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol.</p> <p>Table description (for aluVRtrMplsIfStatTable): Information about the Nokia 7705 SAR extensions to the vRtrMplsIfStatTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Interface</p>		
lastInvalidLabel [Last Invalid Label] (aluVRtrMplsIfLastInvalidLabel)	int	The value of aluVRtrMplsIfLastInvalidLabel indicates the last invalid MPLS label value.
lastInvalidPos [Last Invalid Pos] (aluVRtrMplsIfLastInvalidPos)	long	The value of aluVRtrMplsIfLastInvalidPos indicates the last invalid MPLS label position.
rxInvIpoMplsPkts [Rx Inv Ipo Mpls Pkts] (aluVRtrMplsIfRxInvIpoMplsPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxInvIpoMplsPkts indicates the total number of invalid IP over MPLS packets received on this interface.
rxInvLabels [Rx Inv Labels] (aluVRtrMplsIfRxInvLabels)	java. math. BigInteger	The value of aluVRtrMplsIfRxInvLabels indicates the total number of invalid MPLS labels received on this interface.
rxMoFRRBkupPathPkts [Rx Mo FRRBkup Path Pkts] (aluVRtrMplsIfRxMoFRRBkupPathPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxMoFRRBkupPathPkts indicates the total number of MPLS packets received on backup path for Multicast-only Fast ReRoute (MoFRR) on this interface.

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxMtuExceedPkts [Rx Mtu Exceed Pkts] (aluVRtrMplsIfRxMtuExceedPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxMtuExceedPkts indicates the total number of MPLS Mtu Exceeded packets received on this interface.
rxOtherDiscardPkts [Rx Other Discard Pkts] (aluVRtrMplsIfRxOtherDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxOtherDiscardPkts indicates the total number of discarded packets on this interface due to other reasons.
rxQueueDiscardPkts [Rx Queue Discard Pkts] (aluVRtrMplsIfRxQueueDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxQueueDiscardPkts indicates the total number of MPLS packets discarded due to queue congestion or maintenance action on this interface.
rxStackTooBigPkts [Rx Stack Too Big Pkts] (aluVRtrMplsIfRxStackTooBigPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxStackTooBigPkts indicates the total number of MPLS stack too big packets received on this interface. This is the number of MPLS labels greater than 5.
rxTTLExpiredPkts [Rx TTLExpired Pkts] (aluVRtrMplsIfRxTTLExpiredPkts)	java. math. BigInteger	The value of aluVRtrMplsIfRxTTLExpiredPkts indicates the total number of MPLS TTL expired packets received on this interface.
txMtuExceedPkts [Tx Mtu Exceed Pkts] (aluVRtrMplsIfTxMtuExceedPkts)	java. math. BigInteger	The value of aluVRtrMplsIfTxMtuExceedPkts indicates the total number of MPLS Mtu Exceeded packets transmitted on this interface.
txOtherDiscardPkts [Tx Other Discard Pkts] (aluVRtrMplsIfTxOtherDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfTxOtherDiscardPkts indicates the total number of discarded packets to be transmitted on this interface due to other reasons.
txQueueDiscardPkts [Tx Queue Discard Pkts] (aluVRtrMplsIfTxQueueDiscardPkts)	java. math. BigInteger	The value of aluVRtrMplsIfTxQueueDiscardPkts indicates the total number of MPLS transmitted packets discarded due to queue congestion or maintenance action on this interface.

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.

Table 331 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 332 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagPeerStatsTable): The tmnxMcLagPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • multichassis.PSSPeer • multichassis.Peer 		
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlId)	long	The value of tmnxMcLagPeerStatsDropTlvInvlId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvlSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvlSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.

Table 332 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblid)	long	The value of tmnxMcLagPeerStatsDropStateDsblid indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.

Table 332 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
statePacketsReceived [State Packets Received] (tmnxMcLagPeerStatsPktsRxState)	long	The value of tmnxMcLagPeerStatsPktsRxState indicates how many valid MC-Lag control packets of type lag state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagPeerStatsDropPktTooShrt)	long	The value of tmnxMcLagPeerStatsDropPktTooShrt indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagPeerStatsDropUnknownTlv)	long	The value of tmnxMcLagPeerStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>PeerSynchronizationProtocolStats</p> <p>MIB entry name: tmnxMcPeerSyncStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis synchronization protocol entry. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcPeerSyncStatsTable): The tmnxMcPeerSyncStatsTable has an entry for each multi-chassis peer synchronization protocol entry.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		
bodyDecodeErrorPacketsReceived [Body Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrBody)	long	The value of tmnxMcPeerSyncPktsRxErrBody indicates the number of packets with body decode errors received from the multi-chassis peer.
dataPacketsReceived [Data Packets Received] (tmnxMcPeerSyncPktsRxData)	long	The value of tmnxMcPeerSyncPktsRxData indicates the number of hello packets received from the multi-chassis peer.
dataPacketsTransmitted [Data Packets Transmitted] (tmnxMcPeerSyncPktsTxData)	long	The value of tmnxMcPeerSyncPktsTxData indicates the number of data packets transmitted to the multi-chassis peer.

Table 332 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
erroneousPacketsReceived [Erroneous Packets Received] (tmnxMcPeerSyncPktsRxErr)	long	The value of tmnxMcPeerSyncPktsRxErr indicates the number of erroneous packets received from the multi-chassis peer.
headerDecodeErrorPacketsReceived [Header Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrHeader)	long	The value of tmnxMcPeerSyncPktsRxErrHeader indicates the number of packets with header decode errors received from the multi-chassis peer.
helloPacketsReceived [Hello Packets Received] (tmnxMcPeerSyncPktsRxHello)	long	The value of tmnxMcPeerSyncPktsRxHello indicates the number of hello packets received from the multi-chassis peer.
helloPacketsTransmitted [Hello Packets Transmitted] (tmnxMcPeerSyncPktsTxHello)	long	The value of tmnxMcPeerSyncPktsTxHello indicates the number of hello packets transmitted to the multi-chassis peer.
otherPacketsReceived [Other Packets Received] (tmnxMcPeerSyncPktsRxOther)	long	The value of tmnxMcPeerSyncPktsRxOther indicates the number of all other packet types received from the multi-chassis peer.
otherPacketsTransmitted [Other Packets Transmitted] (tmnxMcPeerSyncPktsTxOther)	long	The value of tmnxMcPeerSyncPktsTxOther indicates the number of all other packet types transmitted to the multi-chassis peer.
packetTransmissionErrors [Packet Transmission Errors] (tmnxMcPeerSyncPktsTxErr)	long	The value of tmnxMcPeerSyncPktsTxErr indicates the number of packet transmission errors.
sequenceNumberErrorPacketsReceived [Sequence Number Error Packets Received] (tmnxMcPeerSyncPktsRxErrSeqNum)	long	The value of tmnxMcPeerSyncPktsRxErrSeqNum indicates the number of packets with sequence number errors received from the multi-chassis peer.

Table 332 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalPacketsReceived [Total Packets Received] (tmnxMcPeerSyncPktsRxAll)	long	The value of tmnxMcPeerSyncPktsRxAll indicates the total number of packets received from the multi-chassis peer.
totalPacketsTransmitted [Total Packets Transmitted] (tmnxMcPeerSyncPktsTxAll)	long	The value of tmnxMcPeerSyncPktsTxAll indicates the total number of packets transmitted to the multi-chassis peer.

Table 333 mwa statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MwLinkStats</p> <p>MIB entry name: aluMwLinkStatisticsEntry</p> <p>Entry description: Each row entry represents a Packet Microwave Link that is provisioned on the system.</p> <p>Table description (for aluMwLinkStatisticsTable): The aluMwLinkStatisticsTable has an entry for each Packet Microwave Link in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mwa.MwLink</p>		
mwLinkAggrDiscardedTx [Mw Link Aggr Discarded Tx] (aluMwLinkAggrDiscardedTx)	java. math. BigInteger	aluMwLinkAggrDiscardedTx specifies the number of frames discarded on the radio before transmission.
mwLinkAggrFramesTx [Mw Link Aggr Frames Tx] (aluMwLinkAggrFramesTx)	java. math. BigInteger	aluMwLinkAggrFramesTx specifies the number of ethernet frames to be transmitted over radio link.
mwLinkAggrOctetsTx [Mw Link Aggr Octets Tx] (aluMwLinkAggrOctetsTx)	java. math. BigInteger	aluMwLinkAggrOctetsTx specifies the number of octets to be transmitted over radio link.
mwLinkQueue1DiscardedTx [Mw Link Queue 1 Discarded Tx] (aluMwLinkQueue1DiscardedTx)	java. math. BigInteger	aluMwLinkQueue1DiscardedTx specifies the number of frames discarded on the radio from queue 1 before transmission.
mwLinkQueue1FramesTx [Mw Link Queue 1 Frames Tx] (aluMwLinkQueue1FramesTx)	java. math. BigInteger	aluMwLinkQueue1FramesTx specifies the number of ethernet frames to be transmitted from queue 1 over radio link.

Table 333 mwa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mwLinkQueue1OctetsTx [Mw Link Queue 1 Octets Tx] (aluMwLinkQueue1OctetsTx)	java. math. BigInteger	aluMwLinkQueue1OctetsTx specifies the number of octets to be transmitted from queue 1 over radio link.
mwLinkQueue2DiscardedTx [Mw Link Queue 2 Discarded Tx] (aluMwLinkQueue2DiscardedTx)	java. math. BigInteger	aluMwLinkQueue2DiscardedTx specifies the number of frames discarded on the radio from queue 2 before transmission.
mwLinkQueue2FramesTx [Mw Link Queue 2 Frames Tx] (aluMwLinkQueue2FramesTx)	java. math. BigInteger	aluMwLinkQueue2FramesTx specifies the number of ethernet frames to be transmitted from queue 2 over radio link.
mwLinkQueue2OctetsTx [Mw Link Queue 2 Octets Tx] (aluMwLinkQueue2OctetsTx)	java. math. BigInteger	aluMwLinkQueue2OctetsTx specifies the number of octets transmitted to be from queue 2 over radio link.
mwLinkQueue3DiscardedTx [Mw Link Queue 3 Discarded Tx] (aluMwLinkQueue3DiscardedTx)	java. math. BigInteger	aluMwLinkQueue3DiscardedTx specifies the number of frames discarded on the radio from queue 3 before transmission.
mwLinkQueue3FramesTx [Mw Link Queue 3 Frames Tx] (aluMwLinkQueue3FramesTx)	java. math. BigInteger	aluMwLinkQueue3FramesTx specifies the number of ethernet frames to be transmitted from queue 3 over radio link.
mwLinkQueue3OctetsTx [Mw Link Queue 3 Octets Tx] (aluMwLinkQueue3OctetsTx)	java. math. BigInteger	aluMwLinkQueue3OctetsTx specifies the number of octets to be transmitted from queue 3 over radio link.
mwLinkQueue4DiscardedTx [Mw Link Queue 4 Discarded Tx] (aluMwLinkQueue4DiscardedTx)	java. math. BigInteger	aluMwLinkQueue4DiscardedTx specifies the number of frames discarded on the radio from queue 4 before transmission.

Table 333 mwa statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mwLinkQueue4FramesTx [Mw Link Queue 4 Frames Tx] (aluMwLinkQueue4FramesTx)	java. math. BigInteger	aluMwLinkQueue4FramesTx specifies the number of ethernet frames to be transmitted from queue 4 over radio link.
mwLinkQueue4OctetsTx [Mw Link Queue 4 Octets Tx] (aluMwLinkQueue4OctetsTx)	java. math. BigInteger	aluMwLinkQueue4OctetsTx specifies the number of octets to be transmitted from queue 4 over radio link.
mwLinkQueue5DiscardedTx [Mw Link Queue 5 Discarded Tx] (aluMwLinkQueue5DiscardedTx)	java. math. BigInteger	aluMwLinkQueue5DiscardedTx specifies the number of frames discarded on the radio from queue 5 before transmission.
mwLinkQueue5FramesTx [Mw Link Queue 5 Frames Tx] (aluMwLinkQueue5FramesTx)	java. math. BigInteger	aluMwLinkQueue5FramesTx specifies the number of ethernet frames to be transmitted from queue 5 over radio link.
mwLinkQueue5OctetsTx [Mw Link Queue 5 Octets Tx] (aluMwLinkQueue5OctetsTx)	java. math. BigInteger	aluMwLinkQueue5OctetsTx specifies the number of octets to be transmitted from queue 5 over radio link.

Table 334 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SecurityEngineStats MIB entry name: aluSecEngineStatsEntry Entry description: Each row entry represents a security engine. Table description (for aluSecEngineStatsTable): The aluSecEngineStatsTable has an entry for security engine in the system. Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
engineDropPkts [Engine Drop Pkts] (aluSecEngineDropPkts)	java. math. BigInteger	Pkts dropped by Engine due to security policy.
engineId [Engine Id] (aluSecEngineId)	long	The value of aluSecEngineId specifies the identifier for security engine.
engineRxQueueCtrlPkts [Engine Rx Queue Ctrl Pkts] (aluSecEngineRxQueueCtrlPkts)	java. math. BigInteger	Control Pkts forwarded to Engine from Rx Queue.
engineRxQueueDataPkts [Engine Rx Queue Data Pkts] (aluSecEngineRxQueueDataPkts)	java. math. BigInteger	Session Data Pkts forwarded to Engine from Rx Queue.
engineRxQueueDropPkts [Engine Rx Queue Drop Pkts] (aluSecEngineRxQueueDropPkts)	java. math. BigInteger	Pkts dropped by Engine Rx Queue.

Table 334 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
engineUtilization [Engine Utilization] (aluSecEngineUtilization)	long	The value of aluSecEngineUtilization specifies the percentage of the processing capacity in use over the last second.
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmplnGetBulks [Sgi Snmp In Get Bulks] (sgiSnmplnGetBulks)	long	The value of sgiSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [Snmp In ASNParse Errs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmplnBadCommunityNames [Snmp In Bad Community Names] (snmplnBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 334 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 334 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 335 nge statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
KeyGroupSdpBindingStats MIB entry name: aluNgeKeygroupSdpBindStatsEntry Entry description: Information about a single NGE keygroup sdp binding statistics. Table description (for aluNgeKeygroupSdpBindStatsTable): Table to store the NGE keygroup sdp binding statistics. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • svt.MeshSdpBinding • svt.SpokeSdpBinding 		
decryptedBytes [Decrypted Bytes] (aluNgeKeygroupSdpBindDecryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindDecryptBytes indicates the number of bytes successfully decrypted by the sdp binding.
decryptedPackets [Decrypted Packets] (aluNgeKeygroupSdpBindDecryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindDecryptPkts indicates the number of packets successfully decrypted by the sdp binding.
encryptedBytes [Encrypted Bytes] (aluNgeKeygroupSdpBindEncryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindEncryptBytes indicates the number of bytes successfully encrypted by the sdp binding.
encryptedPackets [Encrypted Packets] (aluNgeKeygroupSdpBindEncryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSdpBindEncryptPkts indicates the number of packets successfully encrypted by the sdp binding.

Table 335 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDroppedInvalidSpi [In Dropped Invalid Spi] (aluNgeKeygroupSdpBindIngDropInvalidSpi)	long	The value of aluNgeKeygroupSdpBindIngDropInvalidSpi indicates the number of packets dropped before and during inbound (decryption) processing by the sdp binding. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
inDroppedOther [In Dropped Other] (aluNgeKeygroupSdpBindIngDropOtherPkts)	long	The value of aluNgeKeygroupSdpBindIngDropOtherPkts indicates the number of packets dropped before and during inbound (decryption) processing by the sdp binding for unspecified reasons.
outDroppedTotal [Out Dropped Total] (aluNgeKeygroupSdpBindEgDropPkts)	long	The value of aluNgeKeygroupSdpBindEgDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the sdp binding.
<p>KeyGroupSpiStats MIB entry name: aluNgeKeygroupSpiStatsEntry Entry description: Statistics for a single encryption keygroup SPI. Table description (for aluNgeKeygroupSpiStatsTable): Table to store group encryption keygroup SPI level statistics. Supports realtime plotting Supports scheduled collection Monitored class: nge.SecurityAssociation</p>		
decryptedBytes [Decrypted Bytes] (aluNgeKeygroupSpiDecryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSpiDecryptBytes indicates the number of bytes successfully decrypted by the group encryption keygroup SPI.
decryptedPackets [Decrypted Packets] (aluNgeKeygroupSpiDecryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSpiDecryptPkts indicates the number of packets successfully decrypted by the group encryption keygroup SPI.

Table 335 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptedBytes [Encrypted Bytes] (aluNgeKeygroupSpiEncryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupSpiEncryptBytes indicates the number of bytes successfully encrypted by the group encryption keygroup SPI.
encryptedPackets [Encrypted Packets] (aluNgeKeygroupSpiEncryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupSpiEncryptPkts indicates the number of packets successfully encrypted by the group encryption keygroup SPI.
inDroppedAuthenticationFailure [In Dropped Authentication Failure] (aluNgeKeygroupSpiInDropAuthFailure)	long	The value of aluNgeKeygroupSpiInDropAuthFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that authentication failed on the received packets.
inDroppedControlWordMismatch [In Dropped Control Word Mismatch] (aluNgeKeygroupSpiInDropControlWordMismatch)	long	The value of aluNgeKeygroupSpiInDropControlWordMismatch indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that the decrypted control word does not match the outer control word.
inDroppedEnqueueError [In Dropped Enqueue Error] (aluNgeKeygroupSpiInDropEnqueueError)	long	The value of aluNgeKeygroupSpiInDropEnqueueError indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that there are enqueue errors in the encryption engine.
inDroppedOther [In Dropped Other] (aluNgeKeygroupSpiInDropOther)	long	The value of aluNgeKeygroupSpiInDropOther indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI for unspecified reasons.
inDroppedPaddingFailure [In Dropped Padding Failure] (aluNgeKeygroupSpiInDropPaddingFailure)	long	The value of aluNgeKeygroupSpiInDropPaddingFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI. This implies that there are padding errors detected on the received packets.

Table 335 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDroppedTotal [In Dropped Total] (aluNgeKeygroupSpiInDropPkts)	long	The value of aluNgeKeygroupSpiInDropPkts indicates the total number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup SPI.
outDroppedEnqueueError [Out Dropped Enqueue Error] (aluNgeKeygroupSpiOutDropEnqueueError)	long	The value of aluNgeKeygroupSpiOutDropEnqueueError indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup SPI. This implies that there are enqueue errors in the encryption engine.
outDroppedOther [Out Dropped Other] (aluNgeKeygroupSpiOutDropOther)	long	The value of aluNgeKeygroupSpiOutDropOther indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup SPI for unspecified reasons.
outDroppedTotal [Out Dropped Total] (aluNgeKeygroupSpiOutDropPkts)	long	The value of aluNgeKeygroupSpiOutDropPkts indicates the total number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup SPI.
KeyGroupStats MIB entry name: aluNgeKeygroupStatsEntry Entry description: Statistics for a single group encryption keygroup. Table description (for aluNgeKeygroupStatsTable): Table to store group encryption keygroup level statistics. Supports realtime plotting Supports scheduled collection Monitored class: nge.KeyGroup		
decryptedBytes [Decrypted Bytes] (aluNgeKeygroupDecryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupDecryptBytes indicates the number of bytes successfully decrypted by the group encryption keygroup.

Table 335 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
decryptedPackets [Decrypted Packets] (aluNgeKeygroupDecryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupDecryptPkts indicates the number of packets successfully decrypted by the group encryption keygroup.
encryptedBytes [Encrypted Bytes] (aluNgeKeygroupEncryptBytes)	java. math. BigInteger	The value of aluNgeKeygroupEncryptBytes indicates the number of bytes successfully encrypted by the group encryption keygroup.
encryptedPackets [Encrypted Packets] (aluNgeKeygroupEncryptPkts)	java. math. BigInteger	The value of aluNgeKeygroupEncryptPkts indicates the number of packets successfully encrypted by the group encryption keygroup.
inDroppedAuthenticationFailure [In Dropped Authentication Failure] (aluNgeKeygroupInDropAuthFailure)	long	The value of aluNgeKeygroupInDropAuthFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that authentication failed on the received packets.
inDroppedControlWordMismatch [In Dropped Control Word Mismatch] (aluNgeKeygroupInDropControl- WordMismatch)	long	The value of aluNgeKeygroupInDropControlWordMismatch indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that the decrypted control word does not match the outer control word.
inDroppedEnqueueError [In Dropped Enqueue Error] (aluNgeKeygroupInDropEnqueueError)	long	The value of aluNgeKeygroupInDropEnqueueError indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that there are enqueue errors in the encryption engine.

Table 335 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inDroppedInvalidSpi [In Dropped Invalid Spi] (aluNgeKeygroupInDropInvalidSpi)	long	The value of aluNgeKeygroupInDropInvalidSpi indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that 1) the received SPI does not exist within the system 2) the received SPI is not part of the associated inbound keygroup 3) un-encrypted packet has been received on SDP with an associated inbound keygroup
inDroppedOther [In Dropped Other] (aluNgeKeygroupInDropOther)	long	The value of aluNgeKeygroupInDropOther indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup for unspecified reasons.
inDroppedPaddingFailure [In Dropped Padding Failure] (aluNgeKeygroupInDropPaddingFailure)	long	The value of aluNgeKeygroupInDropPaddingFailure indicates the number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup. This implies that there are padding errors detected on the received packets.
inDroppedTotal [In Dropped Total] (aluNgeKeygroupInDropPkts)	long	The value of aluNgeKeygroupInDropPkts indicates the total number of packets dropped before and during inbound (decryption) processing by the group encryption keygroup.
inLastDroppedSpi [In Last Dropped Spi] (aluNgeKeygroupInLastDropSpi)	long	The value of aluNgeKeygroupInLastDropSpi indicates the last SPI value of the packet dropped before and during inbound (decryption) processing by the group encryption keygroup. If 0x00000000 is received, it implies that no discard involving SPIs has occurred. If 0xFFFFFFFF is received, it implies that discards occurred involving unencrypted traffic without encryption label. Any other values should be interpreted as a normal SPI ID.
outDroppedEnqueueError [Out Dropped Enqueue Error] (aluNgeKeygroupOutDropEnqueueError)	long	The value of aluNgeKeygroupOutDropEnqueueError indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup. This implies that there are enqueue errors in the encryption engine.

Table 335 nge statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outDroppedOther [Out Dropped Other] (aluNgeKeygroupOutDropOther)	long	The value of aluNgeKeygroupOutDropOther indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup for unspecified reasons.
outDroppedTotal [Out Dropped Total] (aluNgeKeygroupOutDropPkts)	long	The value of aluNgeKeygroupOutDropPkts indicates the total number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup.
outDroppedUnsupportedUplink [Out Dropped Unsupported Uplink] (aluNgeKeygroupOutDropUnsup- portedUplink)	long	The value of aluNgeKeygroupOutDropUnsupportedUplink indicates the number of packets dropped before and during outbound (encryption) processing by the group encryption keygroup. This implies that the resolved uplink does not support encryption.

Table 336 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

Table 336 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
