badPackets [Bad Packets] (tmnxRipNgIfStatAllRcvBadPkts)	long	tmnxRipNgIfStatAllRcvBadPkts is the number of RIPv1/RIP-NG updates received on this interface that were discarded as invalid.
v1BadRoutes [V1 Bad Routes] (tmnxRipNgIfStatV1BadRoutes)	long	tmnxRipNgIfStatV1BadRoutes is the number of routes, in valid RIPv1/RIP-NG packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v1Requests [V1 Requests] (tmnxRipNgIfStatV1RcvRequests)	long	tmnxRipNgIfStatV1RcvRequests is the number of RIPv1/RIP-NG request packets received.
v1RequestsIgnored [V1 Requests Ignored] (tmnxRipNgIfStatV1BadRequests)	long	tmnxRipNgIfStatV1BadRequests is the number of RIPv1/RIP-NG request packets received that were subsequently discarded for any reason.
v1Updates [V1 Updates] (tmnxRipNgIfStatV1RcvUpdates)	long	tmnxRipNgIfStatV1RcvUpdates is the number of RIPv1/RIP-NG response packets received.
v1UpdatesIgnored [V1 Updates Ignored] (tmnxRipNgIfStatV1BadUpdates)	long	tmnxRipNgIfStatV1BadUpdates is the number of RIPv1/RIP-NG response packets received which were subsequently discarded for any reason.

Table 569 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v2AuthenticationErrors [V2 Authentication Errors] (tmnxRipNgIfStatAuthErrors)	long	tmnxRipNgIfStatAuthErrors is the number of RIPv2 packets received which were subsequently discarded because of an error authenticating the packet.
v2BadRoutes [V2 Bad Routes] (tmnxRipNgIfStatV2BadRoutes)	long	tmnxRipNgIfStatV2BadRoutes is the number of routes, in valid RIPv2 packets, which were ignored for any reason (e.g. unknown address family, or invalid metric).
v2Requests [V2 Requests] (tmnxRipNgIfStatV2RcvRequests)	long	tmnxRipNgIfStatV2RcvRequests is the number of RIPv2 request packets received.
v2RequestsIgnored [V2 Requests Ignored] (tmnxRipNgIfStatV2BadRequests)	long	tmnxRipNgIfStatV2BadRequests is the number of RIPv2 request packets received that were subsequently discarded for any reason.
v2Updates [V2 Updates] (tmnxRipNgIfStatV2RcvUpdates)	long	tmnxRipNgIfStatV2RcvUpdates is the number of RIPv2 response packets received.
v2UpdatesIgnored [V2 Updates Ignored] (tmnxRipNgIfStatV2BadUpdates)	long	tmnxRipNgIfStatV2BadUpdates is the number of RIPv2 response packets received which were subsequently discarded for any reason.
<p>InterfaceTransmitStats</p> <p>MIB entry name: tmnxRipNgIfStatEntry</p> <p>Entry description: tmnxRipNgIfStatEntry is an entry (conceptual row) in the tmnxRipNgIfStatTable. Each entry represents statistical information for a RIP/RIP-NG interface.</p> <p>Table description (for tmnxRipNgIfStatTable): tmnxRipNgIfStatTable is a read-only table which keeps statistical information about the interfaces monitoring RIP/RIP-NG.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rip.Interface</p>		

Table 569 rip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalUpdates [Total Updates] (tmnxRipNgIfStatAllSentUpdates)	long	tmnxRipNgIfStatAllSentUpdates is the number of all RIPv1/RIP-NG updates actually sent on this interface. This explicitly does include full updates sent containing new information.
triggeredUpdates [Triggered Updates] (tmnxRipNgIfStatAllTrigUpdates)	long	tmnxRipNgIfStatAllTrigUpdates is the number of triggered RIPv1/RIP-NG updates actually sent on this interface. This explicitly does include full updates sent containing new information.

Table 570 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
acks [Acks] (vRtrRsvplfStatRxAcks)	java. math. BigInteger	The total number of RSVP ACK messages received when refresh reduction is enabled on this RSVP interface.
bundles [Bundles] (vRtrRsvplfStatRxBundles)	java. math. BigInteger	The total number of RSVP bundled packets received on this RSVP interface. Bundled packets are sent when refresh reduction is enabled.
errorPackets [Error Packets] (vRtrRsvplfStatRxErrorPkts)	java. math. BigInteger	The total number of RSVP packets with errors received on this RSVP interface.
helloTimeout [Hello Timeout] (vRtrRsvplfStatHelloTimeout)	long	The total number of hello messages that timed out on this RSVP interface.
hellos [Hellos] (vRtrRsvplfStatRxHelloReqs)	java. math. BigInteger	The total number of RSVP HELLO REQ messages received on this RSVP interface.
packets [Packets] (vRtrRsvplfStatRxPkts)	java. math. BigInteger	The total number of error free RSVP packets received on this RSVP interface.
pathErrors [Path Errors] (vRtrRsvplfStatRxPathErrors)	java. math. BigInteger	The total number of RSVP PATH ERROR messages that have been transmitted on this RSVP interface.
pathTears [Path Tears] (vRtrRsvplfStatRxPathTears)	java. math. BigInteger	The total number of RSVP PATH TEAR messages that have been received on this RSVP interface.

Table 570 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
paths [Paths] (vRtrRsvplfStatRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages that have been received on this RSVP interface.
refreshes [Refreshes] (vRtrRsvplfStatRxSRefreshes)	java. math. BigInteger	The total number of RSVP summary refresh, SREFRESH, messages received on this RSVP interface.
reserveConfirms [Reserve Confirms] (vRtrRsvplfStatRxResvConfirms)	java. math. BigInteger	The total number of RSVP RESV CONFIRM messages that have been received on this RSVP interface.
reserveErrors [Reserve Errors] (vRtrRsvplfStatRxResvErrors)	java. math. BigInteger	The total number of RSVP RESV ERROR messages that have been received on this RSVP interface.
reserveTears [Reserve Tears] (vRtrRsvplfStatRxResvTears)	java. math. BigInteger	The total number of RSVP RESV TEAR messages that have been received on this RSVP interface.
reserves [Reserves] (vRtrRsvplfStatRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages that have been received on this RSVP interface.
totalPackets [Total Packets] (vRtrRsvplfStatRxTotalPkts)	java. math. BigInteger	The total number of RSVP packets, including errors, received on this RSVP interface.

Table 570 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
RsvpInterfaceStats MIB entry name: vRtrRsvplfEntry Entry description: Each row entry in the vRtrRsvplfTable represents additional columns for attributes specific to the Nokia 7x50 SR RSVP implementation. Table description (for vRtrRsvplfTable): The vRtrRsvplfTable provides an extension of the rsvplfTable in the RSVP-MIB. Supports realtime plotting Supports scheduled collection Monitored class: rsvp.Interface		
activeReservations [Active Reservations] (vRtrRsvplfActiveReservationCount)	long	The total number of active RSVP sessions that have reserved bandwidth.
activeSessions [Active Sessions] (vRtrRsvplfActiveSessionCount)	long	The total number of active RSVP sessions on this interface. This count includes sessions that have requested bandwidth as well as sessions that have not requested any bandwidth.
bandwidth [Bandwidth] (vRtrRsvplfBandwidth)	long	The value of vRtrRsvplfBandwidth indicates the interface bandwidth in mega-bits per second (Mbps) for the RSVP protocol on this interface. This is typically the port Speed.
reservedBandwidth [Reserved Bandwidth] (vRtrRsvplfReservedBandwidth)	long	The value of vRtrRsvplfReservedBandwidth specifies the amount of bandwidth in mega-bits per second (Mbps) to reserved by the RSVP sessions on this interface. A value of zero (0) indicates that no bandwidth is reserved.
totalSessions [Total Sessions] (vRtrRsvplfTotalSessionCount)	long	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signalled but a response has not yet been received.

dhcp6MsgTypeRelayReplyDrpPkts [Dhcp 6 Msg Type Relay Reply Drp Pkts] (vRtrDHCP6MsgStatsDropped)	long	The value of vRtrDHCP6MsgStatsDropped indicates the number of DHCP6 packets were dropped of the DHCP6 message type indicated by vRtrDHCP6MsgStatsMsgType.
dhcp6MsgTypeRelayReplyRxPkts [Dhcp 6 Msg Type Relay Reply Rx Pkts] (vRtrDHCP6MsgStatsRcvd)	long	The value of vRtrDHCP6MsgStatsRcvd indicates the number of DHCP6 packets were received of the DHCP6 message type indicated by vRtrDHCP6MsgStatsMsgType.
dhcp6MsgTypeRelayReplyTxPkts [Dhcp 6 Msg Type Relay Reply Tx Pkts] (vRtrDHCP6MsgStatsSent)	long	The value of vRtrDHCP6MsgStatsSent indicates the number of DHCP6 packets were sent of the DHCP6 message type indicated by vRtrDHCP6MsgStatsMsgType.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DhcpRelayStats</p> <p>MIB entry name: vRtrIfDHCPRelayStatsEntry</p> <p>Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrpIfDhcpRelayCfg • rtr.SubIfDhcpRelayCfg 		
authPktsDiscarded [Auth Pkts Discarded] (vRtrIfDHCPRelayAuthPktsDiscarded)	long	vRtrIfDHCPRelayAuthPktsDiscarded indicates the total number of packets discarded because authentication was not successful.
authPktsSuccess [Auth Pkts Success] (vRtrIfDHCPRelayAuthPktsSuccess)	long	vRtrIfDHCPRelayAuthPktsSuccess indicates the total number of packets for which authentication was successful.
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.
clientPktsProxLS [Client Pkts Prox LS] (vRtrIfDHCPRelayClientPktsProxLS)	long	vRtrIfDHCPRelayClientPktsProxLS indicates the total number of client packets proxied by the DHCP relay agent based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
clientPktsProxRad [Client Pkts Prox Rad] (vRtrIfDHCPRelayClientPktsProxRad)	long	vRtrIfDHCPRelayClientPktsProxRad indicates the total number of client packets proxied by the DHCP relay agent based on data received from a RADIUS server.
clientPktsProxUDB [Client Pkts Prox UDB] (vRtrIfDHCPRelayClientPktsProxUDB)	long	vRtrIfDHCPRelayClientPktsProxUDB indicates the total number of client packets proxied by the DHCP relay agent based on the local user database.
pktsGenForceRenew [Pkts Gen Force Renew] (vRtrIfDHCPRelayPktsGenForceRenew)	long	vRtrIfDHCPRelayPktsGenForceRenew indicates the total number of DHCP FORCERENEW messages spoofed by the DHCP relay agent to the DHCP clients.
pktsGenRelease [Pkts Gen Release] (vRtrIfDHCPRelayPktsGenRelease)	long	vRtrIfDHCPRelayPktsGenRelease indicates the total number of DHCP RELEASE messages spoofed by the DHCP relay agent to the DHCP server.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
serverPktsSnooped [Server Pkts Snooped] (vRtrIfDHCPRelayServerPktsSnooped)	long	vRtrIfDHCPRelayServerPktsSnooped indicates the total number of server packets snooped by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
<p>DhcpRelayV6Stats MIB entry name: svclfdHCP6MsgStatEntry Entry description: Each row entry represents a collection of counters for each DHCP6 message type for an interface in a service. Entries cannot be created and deleted via SNMP SET operations. Table description (for svclfdHCP6MsgStatTable): The vRtrDHCP6MsgStatTable has an entry for each interface defined in a service for which DHCP6 can be enabled. rxBytes [Rx Bytes] (vRtrIfRxBytes)	java. math. BigInteger	The value of vRtrIfRxBytes indicates the number of bytes in IPv4 and IPv6 packets received by this interface.
rxBytesHigh32 [Rx Bytes High 32] (vRtrIfRxBytesHigh32)	long	The value of vRtrIfRxBytesHigh32 indicates the high 32 bits of the value of vRtrIfRxBytes.
rxBytesLow32 [Rx Bytes Low 32] (vRtrIfRxBytesLow32)	long	The value of vRtrIfRxBytesLow32 indicates the lower 32 bits of the value of vRtrIfRxBytes.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxPkts [Rx Pkts] (vRtrIfRxPkts)	java. math. BigInteger	The value of vRtrIfRxPkts indicates the number of IPv4 packets received by this interface.
rxPktsHigh32 [Rx Pkts High 32] (vRtrIfRxPktsHigh32)	long	The value of vRtrIfRxPktsHigh32 indicates the high 32 bits of the value of vRtrIfRxPkts.
rxPktsLow32 [Rx Pkts Low 32] (vRtrIfRxPktsLow32)	long	The value of vRtrIfRxPktsLow32 indicates the lower 32 bits of the value of vRtrIfRxPkts.
txV4Bytes [Tx V4 Bytes] (vRtrIfTxV4Bytes)	java. math. BigInteger	The value of vRtrIfTxV4Bytes indicates the number of total IPv4 bytes sent from this interface.
txV4BytesHigh32 [Tx V4 Bytes High 32] (vRtrIfTxV4BytesHigh32)	long	The value of vRtrIfTxV4BytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV4Bytes.
txV4BytesLow32 [Tx V4 Bytes Low 32] (vRtrIfTxV4BytesLow32)	long	The value of vRtrIfTxV4BytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV4Bytes.
txV4DiscardBytes [Tx V4 Discard Bytes] (vRtrIfTxV4DiscardBytes)	java. math. BigInteger	The value of vRtrIfTxV4DiscardBytes indicates the number of total IPv4 transmit bytes discarded by this interface.
txV4DiscardBytesHigh32 [Tx V4 Discard Bytes High 32] (vRtrIfTxV4DiscardBytesHigh32)	long	The value of vRtrIfTxV4DiscardBytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV4DiscardBytes.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV4DiscardBytesLow32 [Tx V4 Discard Bytes Low 32] (vRtrIfTxV4DiscardBytesLow32)	long	The value of vRtrIfTxV4DiscardBytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV4DiscardBytes.
txV4DiscardPktsHigh32 [Tx V4 Discard Pkts High 32] (vRtrIfTxV4DiscardPktsHigh32)	long	The value of vRtrIfTxV4DiscardPktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV4DiscardPkts.
txV4DiscardPktsLow32 [Tx V4 Discard Pkts Low 32] (vRtrIfTxV4DiscardPktsLow32)	long	The value of vRtrIfTxV4DiscardPktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV4DiscardPkts.
txV4Pkts [Tx V4 Pkts] (vRtrIfTxV4Pkts)	java. math. BigInteger	The value of vRtrIfTxV4Pkts indicates the number of total IPv4 packets sent from this interface.
txV4PktsHigh32 [Tx V4 Pkts High 32] (vRtrIfTxV4PktsHigh32)	long	The value of vRtrIfTxV4PktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV4Pkts.
txV4PktsLow32 [Tx V4 Pkts Low 32] (vRtrIfTxV4PktsLow32)	long	The value of vRtrIfTxV4PktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV4Pkts.
txV6Bytes [Tx V6 Bytes] (vRtrIfTxV6Bytes)	java. math. BigInteger	The value of vRtrIfTxV6Bytes indicates the number of total IPv6 bytes sent from this interface.
txV6BytesHigh32 [Tx V6 Bytes High 32] (vRtrIfTxV6BytesHigh32)	long	The value of vRtrIfTxV6BytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV6Bytes.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV6BytesLow32 [Tx V6 Bytes Low 32] (vRtrIfTxV6BytesLow32)	long	The value of vRtrIfTxV6BytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV6Bytes.
txV6DiscardBytes [Tx V6 Discard Bytes] (vRtrIfTxV6DiscardBytes)	java. math. BigInteger	The value of vRtrIfTxV6DiscardBytes indicates the number of total IPv6 transmit bytes discarded by this interface.
txV6DiscardBytesHigh32 [Tx V6 Discard Bytes High 32] (vRtrIfTxV6DiscardBytesHigh32)	long	The value of vRtrIfTxV6DiscardBytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV6DiscardBytes.
txV6DiscardBytesLow32 [Tx V6 Discard Bytes Low 32] (vRtrIfTxV6DiscardBytesLow32)	long	The value of vRtrIfTxV6DiscardBytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV6DiscardBytes.
txV6DiscardPkts [Tx V6 Discard Pkts] (vRtrIfTxV6DiscardPkts)	java. math. BigInteger	The value of vRtrIfTxV6DiscardPkts indicates the number of total IPv6 transmit packets discarded by this interface.
txV6DiscardPktsHigh32 [Tx V6 Discard Pkts High 32] (vRtrIfTxV6DiscardPktsHigh32)	long	The value of vRtrIfTxV6DiscardPktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV6DiscardPkts.
txV6DiscardPktsLow32 [Tx V6 Discard Pkts Low 32] (vRtrIfTxV6DiscardPktsLow32)	long	The value of vRtrIfTxV6DiscardPktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV6DiscardPkts.
txV6Pkts [Tx V6 Pkts] (vRtrIfTxV6Pkts)	java. math. BigInteger	The value of vRtrIfTxV6Pkts indicates the number of total IPv6 packets sent from this interface.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV6PktsHigh32 [Tx V6 Pkts High 32] (vRtrIfTxV6PktsHigh32)	long	The value of vRtrIfTxV6PktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV6Pkts.
txV6PktsLow32 [Tx V6 Pkts Low 32] (vRtrIfTxV6PktsLow32)	long	The value of vRtrIfTxV6PktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV6Pkts.
<p>MacAccountingStats MIB entry name: vRtrIfMacAccountingStatsEntry Entry description: Each row entry represents the MAC statistics per virtual router interface. Table description (for vRtrIfMacAccountingStatsTable): The vRtrIfMacAccountingStatsTable table contains MAC statistics per virtual router interface. Does not support realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.NetworkInterface • service.L3AccessInterface </p>		
inFrames [In Frames] (vRtrIfMacAccountingInFrames)	java. math. BigInteger	The value of the object vRtrIfMacAccountingInFrames indicates the number of total frames received in this MAC Address.
inFramesHigh32 [In Frames High 32] (vRtrIfMacAccountingInFramesH)	long	The value of vRtrIfMacAccountingInFramesH indicates the higher 32 bits of vRtrIfMacAccountingInFrames.
inFramesLow32 [In Frames Low 32] (vRtrIfMacAccountingInFramesL)	long	The value of vRtrIfMacAccountingInFramesL indicates the lower 32 bits of vRtrIfMacAccountingInFrames.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inOctets [In Octets] (vRtrIfMacAccountingInOctets)	java. math. BigInteger	The value of the object vRtrIfMacAccountingInOctets indicates the number of total octets received in this MAC Address.
inOctetsHigh32 [In Octets High 32] (vRtrIfMacAccountingInOctetsH)	long	The value of vRtrIfMacAccountingInOctetsH indicates the higher 32 bits of vRtrIfMacAccountingInOctets.
inOctetsLow32 [In Octets Low 32] (vRtrIfMacAccountingInOctetsL)	long	The value of vRtrIfMacAccountingInOctetsL indicates the lower 32 bits of vRtrIfMacAccountingInOctets.
macAddress [Mac Address] (vRtrIfSourceMacAddress)	String	The value of the object vRtrIfSourceMacAddress indicates the source MAC address.
outFrames [Out Frames] (vRtrIfMacAccountingOutFrames)	java. math. BigInteger	The value of the object vRtrIfMacAccountingOutFrames indicates the number of total frames transmitted in this MAC Address.
outFramesHigh32 [Out Frames High 32] (vRtrIfMacAccountingOutFramesH)	long	The value of vRtrIfMacAccountingOutFramesH indicates the higher 32 bits of vRtrIfMacAccountingOutFrames.
outFramesLow32 [Out Frames Low 32] (vRtrIfMacAccountingOutFramesL)	long	The value of vRtrIfMacAccountingOutFramesL indicates the lower 32 bits of vRtrIfMacAccountingOutFrames.
outOctets [Out Octets] (vRtrIfMacAccountingOutOctets)	java. math. BigInteger	The value of the object vRtrIfMacAccountingOutOctets indicates the number of total octets transmitted in this MAC Address.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOctetsHigh32 [Out Octets High 32] (vRtrIfMacAccountingOutOctetsH)	long	The value of vRtrIfMacAccountingOutOctetsH indicates the higher 32 bits of vRtrIfMacAccountingOutOctets.
outOctetsLow32 [Out Octets Low 32] (vRtrIfMacAccountingOutOctetsL)	long	The value of vRtrIfMacAccountingOutOctetsL indicates the lower 32 bits of vRtrIfMacAccountingOutOctets.
<p>NetworkInterfaceReasStats MIB entry name: vRtrIfStatsEntry Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted. Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.NetworkInterface • vprn.L3AccessInterface </p>		
ipReasBytesRx [Ip Reas Bytes Rx] (vRtrIfIpReasBytesRx)	java. math. BigInteger	The value of vRtrIfIpReasBytesRx indicates the number of total bytes received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasBytesRxHigh32 [Ip Reas Bytes Rx High 32] (vRtrIfIpReasBytesRxHigh32)	long	The value of vRtrIfIpReasBytesRxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasBytesRx.
ipReasBytesRxLow32 [Ip Reas Bytes Rx Low 32] (vRtrIfIpReasBytesRxLow32)	long	The value of vRtrIfIpReasBytesRxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasBytesRx.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasBytesTx [Ip Reas Bytes Tx] (vRtrIfIpReasBytesTx)	java. math. BigInteger	The value of vRtrIfIpReasBytesTx indicates the number of total bytes sent from this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasBytesTxHigh32 [Ip Reas Bytes Tx High 32] (vRtrIfIpReasBytesTxHigh32)	long	The value of vRtrIfIpReasBytesTxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasBytesTx.
ipReasBytesTxLow32 [Ip Reas Bytes Tx Low 32] (vRtrIfIpReasBytesTxLow32)	long	The value of vRtrIfIpReasBytesTxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasBytesTx.
ipReasFragBytesRcvd [Ip Reas Frag Bytes Rcvd] (vRtrIfIpReasFragBytesRcvd)	java. math. BigInteger	The value of vRtrIfIpReasFragBytesRcvd indicates the number of fragmented bytes received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasFragBytesRcvdHigh32 [Ip Reas Frag Bytes Rcvd High 32] (vRtrIfIpReasFragBytesRcvdHigh32)	long	The value of vRtrIfIpReasFragBytesRcvdHigh32 indicates the high 32 bits of the value of vRtrIfIpReasFragBytesRcvd.
ipReasFragBytesRcvdLow32 [Ip Reas Frag Bytes Rcvd Low 32] (vRtrIfIpReasFragBytesRcvdLow32)	long	The value of vRtrIfIpReasFragBytesRcvdLow32 indicates the lower 32 bits of the value of vRtrIfIpReasFragBytesRcvd.
ipReasFragBytesReas [Ip Reas Frag Bytes Reas] (vRtrIfIpReasFragBytesReas)	java. math. BigInteger	The value of vRtrIfIpReasFragBytesReas indicates the number of fragmented bytes reassembled on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasFragBytesReasHigh32 [Ip Reas Frag Bytes Reas High 32] (vRtrIfIpReasFragBytesReasHigh32)	long	The value of vRtrIfIpReasFragBytesReasHigh32 indicates the high 32 bits of the value of vRtrIfIpReasFragBytesReas.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasFragBytesReasLow32 [Ip Reas Frag Bytes Reas Low 32] (vRtrIfIpReasFragBytesReasLow32)	long	The value of vRtrIfIpReasFragBytesReasLow32 indicates the lower 32 bits of the value of vRtrIfIpReasFragBytesReas.
ipReasFragDisc [Ip Reas Frag Disc] (vRtrIfIpReasFragDisc)	java. math. BigInteger	The value of vRtrIfIpReasFragDisc indicates the number of packets reassembly discarded due to the timeout on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasFragDiscHigh32 [Ip Reas Frag Disc High 32] (vRtrIfIpReasFragDiscHigh32)	long	The value of vRtrIfIpReasFragDiscHigh32 indicates the high 32 bits of the value of vRtrIfIpReasFragDisc.
ipReasFragDiscLow32 [Ip Reas Frag Disc Low 32] (vRtrIfIpReasFragDiscLow32)	long	The value of vRtrIfIpReasFragDiscLow32 indicates the lower 32 bits of the value of vRtrIfIpReasFragDisc.
ipReasFragPktsRcvd [Ip Reas Frag Pkts Rcvd] (vRtrIfIpReasFragPktsRcvd)	java. math. BigInteger	The value of vRtrIfIpReasFragPktsRcvd indicates the number of fragmented packets received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasFragPktsRcvdHigh32 [Ip Reas Frag Pkts Rcvd High 32] (vRtrIfIpReasFragPktsRcvdHigh32)	long	The value of vRtrIfIpReasFragPktsRcvdHigh32 indicates the high 32 bits of the value of vRtrIfIpReasFragPktsRcvd.
ipReasFragPktsRcvdLow32 [Ip Reas Frag Pkts Rcvd Low 32] (vRtrIfIpReasFragPktsRcvdLow32)	long	The value of vRtrIfIpReasFragPktsRcvdLow32 indicates the lower 32 bits of the value of vRtrIfIpReasFragPktsRcvd.
ipReasFragPktsReas [Ip Reas Frag Pkts Reas] (vRtrIfIpReasFragPktsReas)	java. math. BigInteger	The value of vRtrIfIpReasFragPktsReas indicates the number of fragmented packets reassembled on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasFragPktsReasHigh32 [Ip Reas Frag Pkts Reas High 32] (vRtrIfIpReasFragPktsReasHigh32)	long	The value of vRtrIfIpReasFragPktsReasHigh32 indicates the high 32 bits of the value of vRtrIfIpReasFragPktsRcvd.
ipReasFragPktsReasLow32 [Ip Reas Frag Pkts Reas Low 32] (vRtrIfIpReasFragPktsReasLow32)	long	The value of vRtrIfIpReasFragPktsReasLow32 indicates the lower 32 bits of the value of vRtrIfIpReasFragPktsReas.
ipReasFragReasErrors [Ip Reas Frag Reas Errors] (vRtrIfIpReasFragReasErrors)	java. math. BigInteger	The value of vRtrIfIpReasFragReasErrors indicates the number of reassembly errors ocured on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasFragReasErrorsHigh32 [Ip Reas Frag Reas Errors High 32] (vRtrIfIpReasFragReasErrorsHigh32)	long	The value of vRtrIfIpReasFragReasErrorsHigh32 indicates the high 32 bits of the value of vRtrIfIpReasFragReasErrors.
ipReasFragReasErrorsLow32 [Ip Reas Frag Reas Errors Low 32] (vRtrIfIpReasFragReasErrorsLow32)	long	The value of vRtrIfIpReasFragReasErrorsLow32 indicates the lower 32 bits of the value of vRtrIfIpReasFragReasErrors.
ipReasOutBufRes [Ip Reas Out Buf Res] (vRtrIfIpReasOutBufRes)	java. math. BigInteger	The value of vRtrIfIpReasOutBufRes indicates the number of times out of buffer resources happend while reassembly on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasOutBufResHigh32 [Ip Reas Out Buf Res High 32] (vRtrIfIpReasOutBufResHigh32)	long	The value of vRtrIfIpReasOutBufResHigh32 indicates the high 32 bits of the value of vRtrIfIpReasOutBufRes.
ipReasOutBufResLow32 [Ip Reas Out Buf Res Low 32] (vRtrIfIpReasOutBufResLow32)	long	The value of vRtrIfIpReasOutBufResLow32 indicates the lower 32 bits of the value of vRtrIfIpReasOutBufRes.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasPktsRx [Ip Reas Pkts Rx] (vRtrIfIpReasPktsRx)	java. math. BigInteger	The value of vRtrIfIpReasPktsRx indicates the number of total packets received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasPktsRxHigh32 [Ip Reas Pkts Rx High 32] (vRtrIfIpReasPktsRxHigh32)	long	The value of vRtrIfIpReasPktsRxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasPktsRx.
ipReasPktsRxLow32 [Ip Reas Pkts Rx Low 32] (vRtrIfIpReasPktsRxLow32)	long	The value of vRtrIfIpReasPktsRxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasPktsRx.
ipReasPktsTx [Ip Reas Pkts Tx] (vRtrIfIpReasPktsTx)	java. math. BigInteger	The value of vRtrIfIpReasPktsTx indicates the number of total packets sent from this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasPktsTxHigh32 [Ip Reas Pkts Tx High 32] (vRtrIfIpReasPktsTxHigh32)	long	The value of vRtrIfIpReasPktsTxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasPktsTx.
ipReasPktsTxLow32 [Ip Reas Pkts Tx Low 32] (vRtrIfIpReasPktsTxLow32)	long	The value of vRtrIfIpReasPktsTxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasPktsTx.
ipReasV6BytesRx [Ip Reas V6 Bytes Rx] (vRtrIfIpReasV6BytesRx)	java. math. BigInteger	The value of vRtrIfIpReasV6BytesRx indicates the number of total IPv6 bytes received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6BytesRxHigh32 [Ip Reas V6 Bytes Rx High 32] (vRtrIfIpReasV6BytesRxHigh32)	long	The value of vRtrIfIpReasV6BytesRxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6BytesRx.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasV6BytesRxLow32 [Ip Reas V6 Bytes Rx Low 32] (vRtrIfIpReasV6BytesRxLow32)	long	The value of vRtrIfIpReasV6BytesRxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6BytesRx.
ipReasV6BytesTx [Ip Reas V6 Bytes Tx] (vRtrIfIpReasV6BytesTx)	java. math. BigInteger	The value of vRtrIfIpReasV6BytesTx indicates the number of total IPv6 bytes sent from this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6BytesTxHigh32 [Ip Reas V6 Bytes Tx High 32] (vRtrIfIpReasV6BytesTxHigh32)	long	The value of vRtrIfIpReasV6BytesTxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6BytesTx.
ipReasV6BytesTxLow32 [Ip Reas V6 Bytes Tx Low 32] (vRtrIfIpReasV6BytesTxLow32)	long	The value of vRtrIfIpReasV6BytesTxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6BytesTx.
ipReasV6FragBytesRcvd [Ip Reas V6 Frag Bytes Rcvd] (vRtrIfIpReasV6FragBytesRcvd)	java. math. BigInteger	The value of vRtrIfIpReasV6FragBytesRcvd indicates the number of IPv6 fragmented bytes received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6FragBytesRcvdH32 [Ip Reas V6 Frag Bytes Rcvd H32] (vRtrIfIpReasV6FragBytesRcvdH32)	long	The value of vRtrIfIpReasV6FragBytesRcvdH32 indicates the high 32 bits of the value of vRtrIfIpReasV6FragBytesRcvd.
ipReasV6FragBytesRcvdL32 [Ip Reas V6 Frag Bytes Rcvd L32] (vRtrIfIpReasV6FragBytesRcvdL32)	long	The value of vRtrIfIpReasV6FragBytesRcvdL32 indicates the lower 32 bits of the value of vRtrIfIpReasV6FragBytesRcvd.
ipReasV6FragBytesReas [Ip Reas V6 Frag Bytes Reas] (vRtrIfIpReasV6FragBytesReas)	java. math. BigInteger	The value of vRtrIfIpReasV6FragBytesReas indicates the number of IPv6 fragmented bytes reassembled on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasV6FragBytesReasH32 [Ip Reas V6 Frag Bytes Reas H32] (vRtrIfIpReasV6FragBytesReasH32)	long	The value of vRtrIfIpReasV6FragBytesReasH32 indicates the high 32 bits of the value of vRtrIfIpReasV6FragBytesReas.
ipReasV6FragBytesReasL32 [Ip Reas V6 Frag Bytes Reas L32] (vRtrIfIpReasV6FragBytesReasL32)	long	The value of vRtrIfIpReasV6FragBytesReasL32 indicates the lower 32 bits of the value of vRtrIfIpReasV6FragBytesReas.
ipReasV6FragDisc [Ip Reas V6 Frag Disc] (vRtrIfIpReasV6FragDisc)	java. math. BigInteger	The value of vRtrIfIpReasV6FragDisc indicates the number of IPv6 packets reassembly discarded due to the timeout on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6FragDiscHigh32 [Ip Reas V6 Frag Disc High 32] (vRtrIfIpReasV6FragDiscHigh32)	long	The value of vRtrIfIpReasV6FragDiscHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6FragDisc.
ipReasV6FragDiscLow32 [Ip Reas V6 Frag Disc Low 32] (vRtrIfIpReasV6FragDiscLow32)	long	The value of vRtrIfIpReasV6FragDiscLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6FragDisc.
ipReasV6FragPktsRcvd [Ip Reas V6 Frag Pkts Rcvd] (vRtrIfIpReasV6FragPktsRcvd)	java. math. BigInteger	The value of vRtrIfIpReasV6FragPktsRcvd indicates the number of IPv6 fragmented packets received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6FragPktsRcvdHigh32 [Ip Reas V6 Frag Pkts Rcvd High 32] (vRtrIfIpReasV6FragPktsRcvdHigh32)	long	The value of vRtrIfIpReasV6FragPktsRcvdHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6FragPktsRcvd.
ipReasV6FragPktsRcvdLow32 [Ip Reas V6 Frag Pkts Rcvd Low 32] (vRtrIfIpReasV6FragPktsRcvdLow32)	long	The value of vRtrIfIpReasV6FragPktsRcvdLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6FragPktsRcvd.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasV6FragPktsReas [Ip Reas V6 Frag Pkts Reas] (vRtrIfIpReasV6FragPktsReas)	java. math. BigInteger	The value of vRtrIfIpReasV6FragPktsReas indicates the number of IPv6 fragmented packets reassembled on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6FragPktsReasHigh32 [Ip Reas V6 Frag Pkts Reas High 32] (vRtrIfIpReasV6FragPktsReasHigh32)	long	The value of vRtrIfIpReasV6FragPktsReasHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6FragPktsRcvd.
ipReasV6FragPktsReasLow32 [Ip Reas V6 Frag Pkts Reas Low 32] (vRtrIfIpReasV6FragPktsReasLow32)	long	The value of vRtrIfIpReasV6FragPktsReasLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6FragPktsReas.
ipReasV6FragReasErrors [Ip Reas V6 Frag Reas Errors] (vRtrIfIpReasV6FragReasErrors)	java. math. BigInteger	The value of vRtrIfIpReasV6FragReasErrors indicates the number of IPv6 reassembly errors occurred on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6FragReasErrorsH32 [Ip Reas V6 Frag Reas Errors H32] (vRtrIfIpReasV6FragReasErrorsH32)	long	The value of vRtrIfIpReasV6FragReasErrorsH32 indicates the high 32 bits of the value of vRtrIfIpReasV6FragReasErrors.
ipReasV6FragReasErrorsL32 [Ip Reas V6 Frag Reas Errors L32] (vRtrIfIpReasV6FragReasErrorsL32)	long	The value of vRtrIfIpReasV6FragReasErrorsL32 indicates the lower 32 bits of the value of vRtrIfIpReasV6FragReasErrors.
ipReasV6OutBufRes [Ip Reas V6 Out Buf Res] (vRtrIfIpReasV6OutBufRes)	java. math. BigInteger	The value of vRtrIfIpReasV6OutBufRes indicates the number of times out of buffer resources happened while IPv6 reassembly on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6OutBufResHigh32 [Ip Reas V6 Out Buf Res High 32] (vRtrIfIpReasV6OutBufResHigh32)	long	The value of vRtrIfIpReasV6OutBufResHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6OutBufRes.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipReasV6OutBufResLow32 [Ip Reas V6 Out Buf Res Low 32] (vRtrIfIpReasV6OutBufResLow32)	long	The value of vRtrIfIpReasV6OutBufResLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6OutBufRes.
ipReasV6PktsRx [Ip Reas V6 Pkts Rx] (vRtrIfIpReasV6PktsRx)	java. math. BigInteger	The value of vRtrIfIpReasV6PktsRx indicates the number of total IPv6 packets received on this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6PktsRxHigh32 [Ip Reas V6 Pkts Rx High 32] (vRtrIfIpReasV6PktsRxHigh32)	long	The value of vRtrIfIpReasV6PktsRxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6PktsRx.
ipReasV6PktsRxLow32 [Ip Reas V6 Pkts Rx Low 32] (vRtrIfIpReasV6PktsRxLow32)	long	The value of vRtrIfIpReasV6PktsRxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6PktsRx.
ipReasV6PktsTx [Ip Reas V6 Pkts Tx] (vRtrIfIpReasV6PktsTx)	java. math. BigInteger	The value of vRtrIfIpReasV6PktsTx indicates the number of total IPv6 packets sent from this interface. The value of the object is '0' if the MDA type is not 'isa-ip-reas'.
ipReasV6PktsTxHigh32 [Ip Reas V6 Pkts Tx High 32] (vRtrIfIpReasV6PktsTxHigh32)	long	The value of vRtrIfIpReasV6PktsTxHigh32 indicates the high 32 bits of the value of vRtrIfIpReasV6PktsTx.
ipReasV6PktsTxLow32 [Ip Reas V6 Pkts Tx Low 32] (vRtrIfIpReasV6PktsTxLow32)	long	The value of vRtrIfIpReasV6PktsTxLow32 indicates the lower 32 bits of the value of vRtrIfIpReasV6PktsTx.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NetworkInterfaceURPFStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted.</p> <p>Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.NetworkInterface • vprn.NetworkInterface 		
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.
<p>PolicyAccountInterfaceStats</p> <p>MIB entry name: vRtrPlcyAcctInterfaceStatsEntry</p> <p>Entry description: Each row entry in the vRtrPlcyAcctInterfaceStatsTable represents statistics related to the vRtrPlcyAcctSrcClassTable and vRtrPlcyAcctDestClassTable.</p> <p>Table description (for vRtrPlcyAcctInterfaceStatsTable): The vRtrPlcyAcctInterfaceStatsTable has stats for each source class and dest class associated with an interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • ies.IPsecInterface • ies.L3AccessInterface • rtr.NetworkInterface • vprn.GroupInterface • vprn.IPsecInterface • vprn.L3AccessInterface 		
forwardBytes [Forward Bytes] (vRtrPlcyAcctRxFwdBytes)	java. math. BigInteger	The value of the object vRtrPlcyAcctRxFwdBytes indicates the total number of bytes received for this vRtrPlcyAcctIndex associated with the interface.
forwardPackets [Forward Packets] (vRtrPlcyAcctRxFwdPkts)	java. math. BigInteger	The value of the object vRtrPlcyAcctRxFwdPkts indicates the total number of packets received for this vRtrPlcyAcctIndex associated with the interface.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
incompleteCount [Incomplete Count] (vRtrPlyAcctRxIncompleteCnt)	boolean	The value of the object vRtrPlyAcctRxIncompleteCnt indicates whether the count of vRtrPlyAcctRxFwdBytes and vRtrPlyAcctRxFwdPkts is incomplete or not. When the value of vRtrPlyAcctRxIncompleteCnt is 'true', both vRtrPlyAcctRxFwdBytes and vRtrPlyAcctRxFwdPkts will be incomplete.
RouteStats MIB entry name: vRtrStatEntry Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEnties [Active ARPEnties] (vRtrStatActiveARPEnties)	long	vRtrStatActiveARPEnties indicates the number of active ARP entries for the specified virtual router in the system.
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'bgp'.
activeMplsTpTunnels [Active Mpls Tp Tunnels] (vRtrStatActiveMplsTpTunnels)	long	vRtrStatActiveMplsTpTunnels indicates the current number of active MPLS-TP tunnels.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeRsvpTunnels [Active Rsvp Tunnels] (vRtrStatActiveRsvpTunnels)	long	The value of vRtrStatActiveRsvpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'rsvp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPAciveRoutes)	long	vRtrBGPAciveRoutes indicates the current number of active bgp routes for this instance of the route table.
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynamicArpEntries [Dynamic Arp Entries] (vRtrStatDynamicARPEntries)	long	The value of vRtrStatDynamicARPEntries indicates the total number of active and inactive dynamic ARP entries for the specified virtual router in the system.
hostActiveRoutes [Host Active Routes] (vRtrHostActiveRoutes)	long	The value of vRtrHostActiveRoutes indicates the current number of active direct routes with prefix value 32 for this instance of the route table.
hostRoutes [Host Routes] (vRtrHostRoutes)	long	The value of vRtrHostRoutes indicates the current number of direct routes with prefix value 32 for this instance of the route table.
iPsecActiveRoutes [IPsec Active Routes] (vRtrIPsecActiveRoutes)	long	The value of the object vRtrIPsecActiveRoutes indicates the current number of active IPsec routes for this instance of the route table.
iPsecRoutes [IPsec Routes] (vRtrIPsecRoutes)	long	The value of the object vRtrIPsecRoutes indicates the current number of IPsec routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
internalArpEntries [Internal Arp Entries] (vRtrStatInternalARPEntries)	long	The value of vRtrStatInternalARPEntries indicates the total number of active and inactive internal ARP entries for the specified virtual router in the system.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpActiveRoutes [Ldp Active Routes] (vRtrLDPActiveRoutes)	long	vRtrLDPActiveRoutes indicates the current number of active ldp routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.
ldpRoutes [Ldp Routes] (vRtrLDPRoutes)	long	vRtrLDPRoutes indicates the current number of ldp routes for this instance of the route table.
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
localArpEntries [Local Arp Entries] (vRtrStatLocalARPEntries)	long	The value of vRtrStatLocalARPEntries indicates the total number of active and inactive local ARP entries for the specified virtual router in the system.
managedActiveRoutes [Managed Active Routes] (vRtrManagedActiveRoutes)	long	The value of vRtrManagedActiveRoutes indicates the total number of active managed routes for the specified virtual router in the system.
managedArpEntries [Managed Arp Entries] (vRtrStatManagedARPEntries)	long	The value of vRtrStatManagedARPEntries indicates the total number of active and inactive managed ARP entries for the specified virtual router in the system.
managedRoutes [Managed Routes] (vRtrManagedRoutes)	long	The value of vRtrManagedRoutes indicates the total number of active and inactive managed routes for the specified virtual router in the system.
mcastIpv4StatBGPEvpnActvRts [Mcast Ipv 4 Stat BGPEvpn Actv Rts] (vRtrMcastIpv4StatBGPEvpnActvRts)	long	The value of vRtrMcastIpv4StatBGPEvpnActvRts indicates the total number of active IPv4 Multicast BGP EVPN route entries for the specified virtual router in the system.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcastIpv4StatBGPEvpnRoutes [Mcast Ipv 4 Stat BGPEvpn Routes] (vRtrMcastIpv4StatBGPEvpnRoutes)	long	The value of vRtrMcastIpv4StatBGPEvpnRoutes indicates the total number of IPv4 Multicast BGP EVPN route entries for the specified virtual router in the system.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
natActiveRoutes [Nat Active Routes] (vRtrNatActiveRoutes)	long	The value of vRtrNatActiveRoutes indicates the current number of IPv4 NAT routes for this instance of the route table.
natRoutes [Nat Routes] (vRtrNatRoutes)	long	The value of vRtrNatRoutes indicates the current number of IPv4 NAT (Network Address Translation) routes for this instance of the route table.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
perActiveRoutes [Per Active Routes] (vRtrPeriodicActiveRoutes)	long	The value of vRtrPeriodicActiveRoutes indicates the current number of active periodic routes for this instance of the route table.
perRoutes [Per Routes] (vRtrPeriodicRoutes)	long	The value of vRtrPeriodicRoutes indicates the current number of periodic routes for this instance of the route table.
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
statBGPEVPNARPEntries [Stat BGPEVPNARPEntries] (vRtrStatBGPEVPNARPEntries)	long	The value of vRtrStatBGPEVPNARPEntries indicates the total number of BGP EVPN ARP entries for the specified virtual router in the system.
statBGPEvpnActiveRoutes [Stat BGPEvpn Active Routes] (vRtrStatBGPEvpnActiveRoutes)	long	The value of vRtrStatBGPEvpnActiveRoutes indicates the total number of active IPv4 BGP EVPN route entries for the specified virtual router in the system.
statBGPEvpnRoutes [Stat BGPEvpn Routes] (vRtrStatBGPEvpnRoutes)	long	The value of vRtrStatBGPEvpnRoutes indicates the total number of IPv4 BGP EVPN route entries for the specified virtual router in the system.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.
staticArpEntries [Static Arp Entries] (vRtrStatStaticARPEntries)	long	The value of vRtrStatStaticARPEntries indicates the total number of active and inactive static ARP entries for the specified virtual router in the system.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
subMgmtActiveRoutes [Sub Mgmt Active Routes] (vRtrSubMgmtActiveRoutes)	long	The value of vRtrSubMgmtActiveRoutes indicates the number of active subscriber management routes.
subMgmtRoutes [Sub Mgmt Routes] (vRtrSubMgmtRoutes)	long	The value of vRtrSubMgmtRoutes indicates the total number of subscriber management routes in the route Table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.
totalMplsTpTunnels [Total Mpls Tp Tunnels] (vRtrStatTotalMplsTpTunnels)	long	vRtrStatTotalMplsTpTunnels indicates the current number of both active and inactive MPLS-TP tunnels.
totalRsvpTunnels [Total Rsvp Tunnels] (vRtrStatTotalRsvpTunnels)	long	The value of vRtrStatTotalRsvpTunnels indicates the current number of both active and inactive RSVP tunnels.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnLeakActiveRoutes [Vpn Leak Active Routes] (vRtrVPNLeakActiveRoutes)	long	vRtrVPNLeakActiveRoutes indicates the current number of active VPN Leak routes for this instance of the route table.
vpnLeakRoutes [Vpn Leak Routes] (vRtrVPNLeakRoutes)	long	vRtrVPNLeakRoutes indicates the current number of VPN Leak routes for this instance of the route table.
<p>V6RouteStats MIB entry name: vRtrStatEntry Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.RoutingInstanceSite • vprn.Site 		
v6ActiveNbrEntries [V6 Active Nbr Entries] (vRtrV6StatActiveNbrEntries)	long	vRtrV6StatActiveNbrEntries indicates the number of active V6 neighbor discovery entries for the specified virtual router in the system.
v6ActiveRsvpTunnels [V6 Active Rsvp Tunnels] (vRtrV6StatActiveRsvpTunnels)	long	The value of vRtrV6StatActiveRsvpTunnels indicates the current number of IPv6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'rsvp'.
v6AggregateActiveRoutes [V6 Aggregate Active Routes] (vRtrV6AggregateActiveRoutes)	long	vRtrV6AggregateActiveRoutes indicates the current number of active v6 aggregate routes for this instance of the route table.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6AggregateRoutes [V6 Aggregate Routes] (vRtrV6AggregateRoutes)	long	vRtrV6AggregateRoutes indicates the current number of v6 aggregate routes for this instance of the route table.
v6BgpActiveRoutes [V6 Bgp Active Routes] (vRtrV6BGPAActiveRoutes)	long	vRtrV6BGPAActiveRoutes indicates the current number of v6 active bgp routes for this instance of the route table.
v6BgpRoutes [V6 Bgp Routes] (vRtrV6BGPRoutes)	long	vRtrV6BGPRoutes indicates the current number of v6 bgp routes for this instance of the route table.
v6BgpVpnActiveRoutes [V6 Bgp Vpn Active Routes] (vRtrV6StatBGPVpnActiveRoutes)	long	vRtrV6StatBGPVpnActiveRoutes indicates the current number of active VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6BgpVpnRoutes [V6 Bgp Vpn Routes] (vRtrV6StatBGPVpnRoutes)	long	vRtrV6StatBGPVpnRoutes indicates the current number of VPN-IPV6 routes learned by MP-BGP for this virtual router.
v6Dhcpv6NaActiveRoutes [V6 Dhcpv 6 Na Active Routes] (vRtrV6Dhcpv6NaActiveRoutes)	long	The value of vRtrV6Dhcpv6NaActiveRoutes indicates the current number of active IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6NaRoutes [V6 Dhcpv 6 Na Routes] (vRtrV6Dhcpv6NaRoutes)	long	The value of vRtrV6Dhcpv6NaRoutes indicates the current number of IPv6 DHCPv6 non-temporary address routes for this instance of the route table.
v6Dhcpv6PdActiveRoutes [V6 Dhcpv 6 Pd Active Routes] (vRtrV6Dhcpv6PdActiveRoutes)	long	The value of vRtrV6Dhcpv6PdActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6PdExclActiveRoutes [V6 Dhcpv 6 Pd Excl Active Routes] (vRtrV6Dhcpv6PdExclActiveRoutes)	long	The value of vRtrV6Dhcpv6PdExclActiveRoutes indicates the current number of active IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6Dhcpv6PdExclRoutes [V6 Dhcpv 6 Pd Excl Routes] (vRtrV6Dhcpv6PdExclRoutes)	long	The value of vRtrV6Dhcpv6PdExclRoutes indicates the current number of IPv6 DHCPv6 delegated prefix exclude routes for this instance of the route table.
v6Dhcpv6PdRoutes [V6 Dhcpv 6 Pd Routes] (vRtrV6Dhcpv6PdRoutes)	long	The value of vRtrV6Dhcpv6PdRoutes indicates the current number of IPv6 DHCPv6 delegated prefix routes for this instance of the route table.
v6Dhcpv6TaActiveRoutes [V6 Dhcpv 6 Ta Active Routes] (vRtrV6Dhcpv6TaActiveRoutes)	long	The value of vRtrV6Dhcpv6TaActiveRoutes indicates the current number of active IPv6 DHCPv6 temporary address routes for this instance of the route table.
v6Dhcpv6TaRoutes [V6 Dhcpv 6 Ta Routes] (vRtrV6Dhcpv6TaRoutes)	long	The value of vRtrV6Dhcpv6TaRoutes indicates the current number of IPv6 DHCPv6 temporary address routes for this instance of the route table.
v6DirectActiveRoutes [V6 Direct Active Routes] (vRtrV6DirectActiveRoutes)	long	vRtrV6DirectActiveRoutes indicates the current number of v6 active direct routes for this instance of the route table.
v6DirectRoutes [V6 Direct Routes] (vRtrV6DirectRoutes)	long	vRtrV6DirectRoutes indicates the current number of v6 direct routes for this instance of the route table.
v6HostActiveRoutes [V6 Host Active Routes] (vRtrV6HostActiveRoutes)	long	The value of vRtrV6HostActiveRoutes indicates the current number of v6 active direct routes with prefix value 128 for this instance of the route table.
v6HostRoutes [V6 Host Routes] (vRtrV6HostRoutes)	long	The value of vRtrV6HostRoutes indicates the current number of v6 direct routes with prefix value 128 for this instance of the route table.
v6IllegalLabelsReceived [V6 Illegal Labels Received] (vRtrV6StatIllegalLabels)	long	vRtrV6StatIllegalLabels indicates the number of illegally received v6 labels on this virtual router.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6IsisActiveRoutes [V6 Isis Active Routes] (vRtrV6IsisActiveRoutes)	long	vRtrV6IsisActiveRoutes indicates the current number of v6 active isis routes for this instance of the route table.
v6IsisRoutes [V6 Isis Routes] (vRtrV6IsisRoutes)	long	vRtrV6IsisRoutes indicates the current number of v6 isis routes for this instance of the route table.
v6LdpActiveTunnels [V6 Ldp Active Tunnels] (vRtrV6StatActiveLdpTunnels)	long	vRtrV6StatActiveLdpTunnels indicates the current number of v6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.
v6LdpTunnels [V6 Ldp Tunnels] (vRtrV6StatTotalLdpTunnels)	long	vRtrV6StatTotalLdpTunnels indicates the current number of both active and inactive v6 LDP tunnels.
v6ManagedActiveRoutes [V6 Managed Active Routes] (vRtrV6ManagedActiveRoutes)	long	The value of vRtrV6ManagedActiveRoutes indicates the total number of active IPv6 managed routes for the specified virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrV6ManagedRoutes)	long	The value of vRtrV6ManagedRoutes indicates the total number of active and inactive IPv6 managed routes for the specified virtual router.
v6MulticastRoutes [V6 Multicast Routes] (vRtrV6MulticastRoutes)	long	vRtrV6MulticastRoutes indicates the current number of v6 rows in the vRtrPimNgGrpSrcTable.
v6MulticastStatBGPEvpnActiveRoutes [V6 Multicast Stat BGPEvpn Active Routes] (vRtrMcastIpv6StatBGPEvpnActvRts)	long	The value of vRtrMcastIpv6StatBGPEvpnActvRts indicates the total number of active IPv6 Multicast BGP EVPN route entries for the specified virtual router in the system.
v6MulticastStatBGPEvpnRoutes [V6 Multicast Stat BGPEvpn Routes] (vRtrMcastIpv6StatBGPEvpnRoutes)	long	The value of vRtrMcastIpv6StatBGPEvpnRoutes indicates the total number of IPv6 Multicast BGP EVPN route entries for the specified virtual router in the system.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6NatActiveRoutes [V6 Nat Active Routes] (vRtrV6NatActiveRoutes)	long	The value of vRtrV6NatActiveRoutes indicates the current number of IPv6 active NAT routes for this instance of the route table.
v6NatRoutes [V6 Nat Routes] (vRtrV6NatRoutes)	long	The value of vRtrV6NatRoutes indicates the current number of IPv6 NAT routes for this instance of the route table.
v6OspfActiveRoutes [V6 Ospf Active Routes] (vRtrV6OSPFActiveRoutes)	long	vRtrV6OSPFActiveRoutes indicates the current number of v6 active ospf routes for this instance of the route table.
v6OspfRoutes [V6 Ospf Routes] (vRtrV6OSPFRoutes)	long	vRtrV6OSPFRoutes indicates the current number of v6 ospf routes for this instance of the route table.
v6PerActiveRoutes [V6 Per Active Routes] (vRtrV6PeriodicActiveRoutes)	long	The value of vRtrV6PeriodicActiveRoutes indicates the current number of active IPv6 periodic routes for this instance of the route table.
v6PerRoutes [V6 Per Routes] (vRtrV6PeriodicRoutes)	long	The value of vRtrV6PeriodicRoutes indicates the current number of IPv6 periodic routes for this instance of the route table.
v6RipActiveRoutes [V6 Rip Active Routes] (vRtrV6RIPActiveRoutes)	long	vRtrV6RIPActiveRoutes indicates the current number of active v6 rip routes for this instance of the route table.
v6RipRoutes [V6 Rip Routes] (vRtrV6RIPRoutes)	long	vRtrV6RIPRoutes indicates the current number of v6 rip routes for this instance of the route table.
v6RouterInterfacesActive [V6 Router Interfaces Active] (vRtrV6StatActiveIfs)	long	vRtrV6StatActiveIfs indicates the current number of v6 router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6RouterInterfacesConfigured [V6 Router Interfaces Configured] (vRtrV6StatConfiguredIfs)	long	vRtrV6StatConfiguredIfs indicates the current number of v6 router interfaces configured on this virtual router.
v6RoutesInVrf [V6 Routes In Vrf] (vRtrV6StatCurrNumRoutes)	long	vRtrV6StatCurrNumRoutes indicates the current number of v6 routes in the VRF for this virtual router.
v6SdpActiveTunnels [V6 Sdp Active Tunnels] (vRtrV6StatActiveSdpTunnels)	long	vRtrV6StatActiveSdpTunnels indicates the current number of v6 rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
v6SdpTunnels [V6 Sdp Tunnels] (vRtrV6StatTotalSdpTunnels)	long	vRtrV6StatTotalSdpTunnels indicates the current number of both active and inactive v6 SDP tunnels.
v6StatBGPEvpnActiveRoutes [V6 Stat BGPEvpn Active Routes] (vRtrV6StatBGPEvpnActiveRoutes)	long	The value of vRtrV6StatBGPEvpnActiveRoutes indicates the total number of active IPv6 BGP EVPN route entries for the specified virtual router in the system.
v6StatBGPEvpnRoutes [V6 Stat BGPEvpn Routes] (vRtrV6StatBGPEvpnRoutes)	long	The value of vRtrV6StatBGPEvpnRoutes indicates the total number of IPv6 BGP EVPN route entries for the specified virtual router in the system.
v6StaticActiveRoutes [V6 Static Active Routes] (vRtrV6StaticActiveRoutes)	long	vRtrV6StaticActiveRoutes indicates the current number of v6 active static routes for this instance of the route table.
v6StaticRoutes [V6 Static Routes] (vRtrV6StaticRoutes)	long	vRtrV6StaticRoutes indicates the current number of v6 static routes for this instance of the route table.
v6SubMgmtActiveRoutes [V6 Sub Mgmt Active Routes] (vRtrV6SubMgmtActiveRoutes)	long	vRtrV6SubMgmtActiveRoutes indicates the current number of v6 active subscriber management routes for this instance of the route table.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrV6SubMgmtRoutes)	long	vRtrV6SubMgmtRoutes indicates the current number of v6 subscriber management routes for this instance of the route table.
v6TotalNbrEntries [V6 Total Nbr Entries] (vRtrV6StatTotalNbrEntries)	long	vRtrV6StatTotalNbrEntries indicates the total number of active and inactive v6 neighbor discovery entries for the specified virtual router in the system.
v6TotalRsvpTunnels [V6 Total Rsvp Tunnels] (vRtrV6StatTotalRsvpTunnels)	long	The value of vRtrV6StatTotalRsvpTunnels indicates the current number of both active and inactive IPv6 RSVP tunnels.
v6VpnLeakActiveRoutes [V6 Vpn Leak Active Routes] (vRtrV6VPNLeakActiveRoutes)	long	vRtrV6VPNLeakActiveRoutes indicates the current number of v6 active VPN Leak routes for this instance of the route table.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrV6VPNLeakRoutes)	long	vRtrV6VPNLeakRoutes indicates the current number of v6 VPN Leak routes for this instance of the route table.
<p>VRtrIfDcpFpDynamicStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.NetworkInterface • vprn.NetworkInterface 		

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
detectionTime [Detection Time] (vRtrIfDcpFpDynDetectionTime)	long	The value of vRtrIfDcpFpDynDetectionTime indicates the detection time remaining for the dynamic policer for given protocol.
fpId [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
holdDown [Hold Down] (vRtrIfDcpFpDynHoldDown)	int	The value of vRtrIfDcpFpDynHoldDown indicates the remaining hold-down period for the dynamic policer for given protocol.
id [Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ifIndex [If Index] (vRtrIfIndex)	long	The unique value which identifies this interface of this virtual router in the Tmrx system. This field provides an identifier for virtual router interfaces similar to the ifIndex values used in the mib-2 interfaces table for physical interfaces. The vRtrIfIndex values can be reused for different virtual routers, but are unique within those entries with the same vRtrID. The vRtrIfIndex value for each virtual interface must remain constant at least from one re-initialization of the system management processor to the next.
isAllocated [Is Allocated] (vRtrIfDcpFpDynAllocated)	boolean	The value of vRtrIfDcpFpDynAllocated indicates whether dynamic policer has been allocated for this protocol.
pktsExcd [Pkts Excd] (vRtrIfDcpFpDynExcdCount)	java. math. BigInteger	The value of vRtrIfDcpFpDynExcdCount indicates number of packets exceeding the policing parameters since the dynamic policer for a given protocol was previously declared as conformant or newly instantiated.
policerState [Policer State] (vRtrIfDcpFpDynState)	int	The value of vRtrIfDcpFpDynState indicates the state of the dynamic policer for a particular protocol configured on Distributed CPU Protection Policy.
protocolName [Protocol Name] (vRtrIfDcpFpProtocol)	int	The value of vRtrIfDcpFpProtocol specifies the protocol name to be monitored by Distributed CPU Protection Policy.

inDestinationUnreachable [In Destination Unreachable] (vRtrIfIcmp6InDestUnreachs)	long	The value of vRtrIfIcmp6InDestUnreachs indicates the number of ICMP Destination Unreachable messages received by this interface.
inEchoReplies [In Echo Replies] (vRtrIfIcmp6InEchoReplies)	long	The value of vRtrIfIcmp6InEchoReplies indicates the number of ICMP Echo Reply messages received by this interface.
inEchoRequests [In Echo Requests] (vRtrIfIcmp6InEchos)	long	The value of vRtrIfIcmp6InEchos indicates the number of ICMP Echo (request) messages received by this interface.
inErrors [In Errors] (vRtrIfIcmp6InErrors)	long	The value of vRtrIfIcmp6InErrors indicates the number of ICMP messages which this interface received but determined as having ICMP-specific errors (bad ICMP checksums, bad length , etc.).
inNeighborAdvertisements [In Neighbor Advertisements] (vRtrIfIcmp6InNbrAdvertisements)	long	The value of vRtrIfIcmp6InNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages received by this interface.
inNeighborSolicits [In Neighbor Solicits] (vRtrIfIcmp6InNbrSolicits)	long	The value of vRtrIfIcmp6InNbrSolicits indicates the number of ICMP Neighbor Solicit messages received by this interface.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
inPacketTooBig [In Packet Too Big] (vRtrIflcmp6InPktTooBigs)	long	The value of vRtrIflcmp6InPktTooBigs indicates the number of ICMP Packet Too Big messages received by this interface.
inRedirects [In Redirects] (vRtrIflcmp6InRedirects)	long	The value of vRtrIflcmp6InRedirects indicates number of ICMP Redirect messages received by this interface.
inRouterAdvertisements [In Router Advertisements] (vRtrIflcmp6InRtrAdvertisements)	long	The value of vRtrIflcmp6InRtrAdvertisements indicates the number of ICMP Router Advertisement messages received by this interface.
inRouterSolicits [In Router Solicits] (vRtrIflcmp6InRtrSolicits)	long	The value of vRtrIflcmp6InRtrSolicits indicates the number of ICMP Router Solicit messages received by this interface.
inTimeExceeded [In Time Exceeded] (vRtrIflcmp6InTimeExcds)	long	The value of vRtrIflcmp6InTimeExcds indicates the number of ICMP Time Exceeded messages received by this interface.
inTotalMessages [In Total Messages] (vRtrIflcmp6InMsgs)	long	The value of vRtrIflcmp6InMsgs indicates the total number of ICMP messages received by this interface which includes all those counted by vRtrIflcmp6InErrors. Note that this interface is the interface to which the ICMP messages were addressed which may not be necessarily the input interface for the messages.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VirtualInterfaceIcmp6OutStats MIB entry name: vRtrIflcmp6Entry Entry description: Each row entry represents the ICMP statistics of a virtual router interface. Entries are created and deleted when entries in the vRtrIflTable are created and deleted. Table description (for vRtrIflcmp6Table): The vRtrIflcmp6Table table contains statistics of ICMPv6 messages that are received and sourced by a router interface. Supports realtime plotting Supports scheduled collection Monitored class: rtr.VirtualInterfaceIcmp6Configuration</p>		
outDestinationUnreachable [Out Destination Unreachable] (vRtrIflcmp6OutDestUnreachs)	long	The value of vRtrIflcmp6OutDestUnreachs indicates the number of ICMP Destination Unreachable messages sent by this interface.
outEchoReplies [Out Echo Replies] (vRtrIflcmp6OutEchoReplies)	long	The value of vRtrIflcmp6OutEchoReplies indicates the number of ICMP Echo Reply messages sent by this interface.
outEchoRequests [Out Echo Requests] (vRtrIflcmp6OutEchos)	long	The value of vRtrIflcmp6OutEchos indicates the number of ICMP Echo Request messages sent by this interface.
outErrors [Out Errors] (vRtrIflcmp6OutErrors)	long	The value of vRtrIflcmp6OutErrors indicates the number of ICMP messages which this interface did not send due to problems discovered within ICMP such as a lack of buffers. This value should not include errors discovered outside the ICMP layer such as the inability of VRtr IPv6 to route the resultant datagram. In some implementations there may be no types of error which contribute to this counter's value.
outGrpMembQueries [Out Grp Memb Queries] (vRtrIflcmp6OutGrpMembQueries)	long	The value of vRtrIflcmp6OutGrpMembQueries indicates the number of ICMP Group Membership Query messages sent by this interface.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outGrpMembReductions [Out Grp Memb Reductions] (vRtrIflcmp6OutGrpMembReductions)	long	The value of vRtrIflcmp6OutGrpMembReductions indicates the number of ICMP Group Membership Reduction messages sent by this interface.
outGrpMembResponses [Out Grp Memb Responses] (vRtrIflcmp6OutGrpMembResponses)	long	The value of vRtrIflcmp6OutGrpMembResponses indicates the number of ICMP Group Membership Response messages sent by this interface.
outNeighborAdvertisements [Out Neighbor Advertisements] (vRtrIflcmp6OutNbrAdvertisements)	long	The value of vRtrIflcmp6OutNbrAdvertisements indicates the number of ICMP Neighbor Advertisement messages sent by this interface.
outNeighborSolicits [Out Neighbor Solicits] (vRtrIflcmp6OutNbrSolicits)	long	The value of vRtrIflcmp6OutNbrSolicits indicates the number of ICMP Neighbor Solicitation messages sent by this interface.
outPacketTooBig [Out Packet Too Big] (vRtrIflcmp6OutPktTooBigs)	long	The value of vRtrIflcmp6OutPktTooBigs indicates the number of ICMP Packet Too Big messages sent by this interface.
outRedirects [Out Redirects] (vRtrIflcmp6OutRedirects)	long	The value of vRtrIflcmp6OutRedirects indicates the number of ICMP Redirect messages sent by this interface.
outRouterAdvertisements [Out Router Advertisements] (vRtrIflcmp6OutRtrAdvertisements)	long	The value of vRtrIflcmp6OutRtrAdvertisements indicates the number of ICMP Router Advertisement messages sent by this interface.
outRouterSolicits [Out Router Solicits] (vRtrIflcmp6OutRtrSolicits)	long	The value of vRtrIflcmp6OutRtrSolicits indicates the number of ICMP Router Solicitation messages sent by this interface.
outTimeExceeded [Out Time Exceeded] (vRtrIflcmp6OutTimeExcds)	long	The value of vRtrIflcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this interface.

Table 571 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

outTimeExceeded [Out Time Exceeded] (vRtrIcmp6OutTimeExcds)	long	The value of vRtrIcmp6OutTimeExcds indicates the number of ICMP Time Exceeded messages sent by this router instance.
outTotalMessages [Out Total Messages] (vRtrIcmp6OutMsgs)	long	The value of vRtrIcmp6OutMsgs indicates the total number of ICMP messages which this router instance attempted to send. Note that this counter includes all those counted by icmpOutErrors.

Table 572 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PmSessionBaseStats</p> <p>MIB entry name: tmnxOamPmStsBaseEntry</p> <p>Entry description: tmnxOamPmStsBaseEntry contains the base statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a test is started (e.g. using tmnxOamPmCfgDelayDmmAdminStatus and tmnxOamPmCfgDelayDmmOnDmndStatus). At that time, a row for the current interval (with the index value tmnxOamPmStsIntvlNum=1) is created for each row with a matching session name in tmnxOamPmCfgMeasIntvlTable. In addition, a row is created in this table for the test's 'miRaw(1)' interval. After that, the timed creation and destruction of rows in this table is explained using the following example. Suppose the configured number of intervals to be retained is as follows (where index columns are underlined with octothorpes, and 'tmnxOamPm' is abbreviated as '_'): <u>_CfgSessName</u> <u>_CfgMeasIntvlDuration</u> <u>_CfgMeasIntvlStored</u> ##### ##### 'mySess1' 'mi15Minutes(2)' 3 Suppose statistics collection started at t = 0 (minutes). Suppose the following rows exist in tmnxOamPmStsBaseTable at t = 59 (minutes): <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 1 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 The interval numbers are assigned as follows: 1 - the historical interval ended at t = 15 minutes 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the current interval Then, after the next 15 minute interval ends (e.g. at t = 61 minutes), the following rows will exist: <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 5 The interval numbers are assigned as follows: 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the historical interval ended at t = 60 minutes 5 - the current interval The row with interval number 1 was destroyed, because tmnxOamPmCfgMeasIntvlStored=3 specifies that at most three historical intervals be retained. Rows are also destroyed in this table when the corresponding tmnxOamPmCfgMeasIntvlTable row is destroyed. When the index value tmnxOamPmStsMeasIntvlDuration is 'miRaw(1)', only one interval is available (i.e. tmnxOamPmStsIntvlNum = 1). When a test is running, the measurement interval data set for a test's 'miRaw(1)' measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. The change to the objects in the specified row is as follows. Object Change on Clear Operation tmnxOamPmStsBaseOperStatus No change tmnxOamPmStsBaseSuspect Set to 'true(1)' tmnxOamPmStsBaseStartTime Set to UTC time of the clear operation tmnxOamPmStsBaseElapsedTime Set to zero tmnxOamPmStsBaseTestFramesTx Set to zero tmnxOamPmStsBaseTestFramesRx Set to zero Measurement interval data sets for measurement interval durations other than 'miRaw(1)' cannot be cleared.</p> <p>Table description (for tmnxOamPmStsBaseTable): tmnxOamPmStsBaseTable contains the base statistics for OAM Performance Monitoring Measurement Interval Data Sets. The statistics in this table are common to all test types (e.g. Delay Measurement and Synthetic Loss Measurement tests).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ethernetoam.CfmDmmSession 		

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmStatsElapsedTime [Pm Stats Elapsed Time] (tmnxOamPmStsBaseElapsedTime)	long	The value of tmnxOamPmStsBaseElapsedTime indicates the time elapsed since data collection started for the specified measurement interval data set.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
pmStatsOperStatus [Pm Stats Oper Status] (tmnxOamPmStsBaseOperStatus)	int	The value of tmnxOamPmStsBaseOperStatus indicates the operational status of the specified measurement interval data set. If the interval is historical and the operational status is 'inprogress(1)', the interval is closing (i.e. waiting for a response for the final test request sent).
pmStatsPduRx [Pm Stats Pdu Rx] (tmnxOamPmStsBaseTestFramesRx)	long	The value of tmnxOamPmStsBaseTestFramesRx indicates the number of test frames received for the specified measurement interval data set.
pmStatsPduTx [Pm Stats Pdu Tx] (tmnxOamPmStsBaseTestFramesTx)	long	The value of tmnxOamPmStsBaseTestFramesTx indicates the number of test frames sent for the specified measurement interval data set.
pmStatsStartTime [Pm Stats Start Time] (tmnxOamPmStsBaseStartTime)	String	The value of tmnxOamPmStsBaseStartTime indicates the start time (in UTC) of the specified measurement interval data set.
pmStatsSuspect [Pm Stats Suspect] (tmnxOamPmStsBaseSuspect)	boolean	The value of tmnxOamPmStsBaseSuspect indicates whether or not the specified measurement interval data set contains suspect information.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmStatsTestType [Pm Stats Test Type] (tmnxOamPmStsBaseTestType)	int	The value of tmnxOamPmStsBaseTestType specifies the type of test for which statistics are to be read (e.g. 'dmm(1)').
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>PrefixSrvStats</p> <p>MIB entry name: tmnxTwampSrvPrefixEntry</p> <p>Entry description: tmnxTwampSrvPrefixEntry contains the TWAMP server configuration information for the IP prefix specified by the index values. Rows in this table are created and destroyed using the tmnxTwampSrvPrefixRowStatus object.</p> <p>Table description (for tmnxTwampSrvPrefixTable): tmnxTwampSrvPrefixTable contains per-prefix TWAMP server configuration information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
srvPfxConnCount [Srv Pfx Conn Count] (tmnxTwampSrvPfxConnCount)	long	The value of tmnxTwampSrvPfxConnCount indicates, for the prefix specified by the index values, the number of control connections currently managed by the TWAMP server.
srvPfxConnsRejected [Srv Pfx Conns Rejected] (tmnxTwampSrvPfxConnsRejected)	long	The value of tmnxTwampSrvPfxConnsRejected indicates, for the prefix specified by the index values, the number of control connection requests which have been rejected by the TWAMP server. An example reject reason: the prefix's limit on the number of active connections has been reached.
srvPfxSessionCount [Srv Pfx Session Count] (tmnxTwampSrvPfxSessionCount)	long	The value of tmnxTwampSrvPfxSessionCount indicates, for the prefix specified by the index values, the number of currently in-progress TWAMP test sessions.
srvPfxTestPacketsRx [Srv Pfx Test Packets Rx] (tmnxTwampSrvPfxTestPacketsRx)	long	The value of tmnxTwampSrvPfxTestPacketsRx indicates, for the prefix specified by the index values, the number of TWAMP test packets received by the TWAMP server.
srvPfxTestPacketsTx [Srv Pfx Test Packets Tx] (tmnxTwampSrvPfxTestPacketsTx)	long	The value of tmnxTwampSrvPfxTestPacketsTx indicates, for the prefix specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
srvPfxTestSessAbort [Srv Pfx Test Sess Abort] (tmnxTwampSrvPfxTestSessAbort)	long	The value of tmnxTwampSrvPfxTestSessAbort indicates, for the prefix specified by the index values, the number of test sessions aborted by the TWAMP server.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
srvPfxTestSessCompleted [Srv Pfx Test Sess Completed] (tmnxTwampSrvPfxTestSessCompleted)	long	The value of tmnxTwampSrvPfxTestSessCompleted indicates, for the prefix specified by the index values, the number of test sessions completed by the TWAMP server.
srvPfxTestSessRejected [Srv Pfx Test Sess Rejected] (tmnxTwampSrvPfxTestSessRejected)	long	The value of tmnxTwampSrvPfxTestSessRejected indicates, for the prefix specified by the index values, the number of test sessions rejected by the TWAMP server.
<p>SrvConnsStats</p> <p>MIB entry name: tmnxTwampSrvConnStatsEntry</p> <p>Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established.</p> <p>Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: setUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.
<p>TWLBInStats</p> <p>MIB entry name: tmnxOamPmStsDelayTwlBinEntry</p> <p>Entry description: tmnxOamPmStsDelayTwlBinEntry contains the TWAMP-Light frame delay per-bin statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a corresponding row is created in tmnxOamPmStsDelayTwlTable. If the tmnxOamPmStsDelayTwlTable row is created with the index value tmnxOamPmCfgBinType = 'fd(1)', then the the number of rows created in this table is tmnxOamPmCfgBinGroupFdBinCount. Similarly, 'fdr(2)' and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsDelayTwlTable row is destroyed. When a test is running, the TWAMP-Light statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. A successful clear operation zeros all the statistics in the specified rows in this table.</p> <p>Table description (for tmnxOamPmStsDelayTwlBinTable): tmnxOamPmStsDelayTwlBinTable contains TWAMP-Light (Two-Way Active Measurement Protocol, Light) frame delay per-bin statistics. The frame delay per-bin statistics kept for TWAMP-Light tests are the same as the frame delay per-bin statistics specified for Ethernet DMM (Delay Measurement Message) tests in MEF-35 requirement R66.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TWLBIn</p>		

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayTwlBinBwdCount [Delay Twl Bin Bwd Count] (tmnxOamPmStsDelayTwlBinBwdCount)	long	The value of tmnxOamPmStsDelayTwlBinBwdCount indicates the number of TWAMP-Light frame delay measurements in the backward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'twlSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of TWAMP-Light frame delay measurements (in microseconds) in the backward direction in the first interval of 'twlSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayTwlBinFwdCount [Delay Twl Bin Fwd Count] (tmnxOamPmStsDelayTwlBinFwdCount)	long	The value of tmnxOamPmStsDelayTwlBinFwdCount indicates the number of TWAMP-Light frame delay measurements in the forward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'twlSess1' 'mi15Minutes(2)' 1 'fd(1)' 9 Then, the value of this object indicates the number of TWAMP-Light frame delay measurements (in microseconds) in the forward direction in the first interval of 'twlSess1' that fit in the highest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayTwlBinNum [Delay Twl Bin Num] (tmnxOamPmStsDelayTwlBinNum)	long	The value of tmnxOamPmStsDelayTwlBinNum specifies the bin number of the statistics to be read.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayTwbIntwowayCount [Delay Twl Bintwoway Count] (tmnxOamPmStsDelayTwlBin2wyCount)	long	The value of tmnxOamPmStsDelayTwlBin2wyCount indicates the number of TWAMP-Light two-way frame delay measurements that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### ##### 'twlSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of TWAMP-Light two-way frame delay measurements (in microseconds) in the first interval of 'twlSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TWLSessionStats</p> <p>MIB entry name: tmnxOamPmStsDelayTwlEntry</p> <p>Entry description: tmnxOamPmStsDelayTwlEntry contains the TWAMP-Light frame delay summary statistics for one OAM Performance Monitoring Measurement Interval Data Set. When a row is created in tmnxOamPmStsBaseTable with tmnxOamPmStsBaseTestType = 'twampLight(3)', three rows are created in this table. The three rows have the following values in the tmnxOamPmCfgBinType index column: 'fd(1)', 'fdr(2)', and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. When a test is running, the TWAMP-Light statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction. A successful clear operation zeros all the statistics in the specified rows in this table.</p> <p>Table description (for tmnxOamPmStsDelayTwlTable): tmnxOamPmStsDelayTwlTable contains TWAMP-Light (Two-Way Active Measurement Protocol, Light) frame delay summary statistics. delayTwl2wyAvg [Delay Twl 2 wy Avg] (tmnxOamPmStsDelayTwl2wyAvg)	long	The value of tmnxOamPmStsDelayTwl2wyAvg indicates the average two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwl2wyMax [Delay Twl 2 wy Max] (tmnxOamPmStsDelayTwl2wyMax)	long	The value of tmnxOamPmStsDelayTwl2wyMax indicates the maximum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwl2wyMin [Delay Twl 2 wy Min] (tmnxOamPmStsDelayTwl2wyMin)	long	The value of tmnxOamPmStsDelayTwl2wyMin indicates the minimum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlBwdAvg [Delay Twl Bwd Avg] (tmnxOamPmStsDelayTwlBwdAvg)	long	The value of tmnxOamPmStsDelayTwlBwdAvg indicates the average delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayTwlBwdMax [Delay Twl Bwd Max] (tmnxOamPmStsDelayTwlBwdMax)	long	The value of tmnxOamPmStsDelayTwlBwdMax indicates the maximum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlBwdMin [Delay Twl Bwd Min] (tmnxOamPmStsDelayTwlBwdMin)	long	The value of tmnxOamPmStsDelayTwlBwdMin indicates the minimum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlFwdAvg [Delay Twl Fwd Avg] (tmnxOamPmStsDelayTwlFwdAvg)	long	The value of tmnxOamPmStsDelayTwlFwdAvg indicates the average delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlFwdMax [Delay Twl Fwd Max] (tmnxOamPmStsDelayTwlFwdMax)	long	The value of tmnxOamPmStsDelayTwlFwdMax indicates the maximum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayTwlFwdMin [Delay Twl Fwd Min] (tmnxOamPmStsDelayTwlFwdMin)	long	The value of tmnxOamPmStsDelayTwlFwdMin indicates the minimum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
TwampSrvStats MIB entry name: tmnxTwampStatisticsScalarObjs Supports realtime plotting Supports scheduled collection Monitored class: sas.TwampSrv		
twampSrvConnectionCount [Twamp Srv Connection Count] (tmnxTwampSrvConnectionCount)	long	The value of tmnxTwampSrvConnectionCount indicates the number of control connections currently managed by the TWAMP server.
twampSrvConnectionsRejected [Twamp Srv Connections Rejected] (tmnxTwampSrvConnectionsRejected)	long	The value of tmnxTwampSrvConnectionsRejected indicates the total number of control connection requests which have been rejected by the TWAMP server. Example reject reasons: the server's limit on the number of active connections has been reached; the client's IP address does not match any of the prefixes configured on the TWAMP server.
twampSrvOperStat [Twamp Srv Oper Stat] (tmnxTwampSrvOperState)	long	The value of tmnxTwampSrvOperState indicates if the TWAMP server is operationally 'inService(2)', or 'outOfService(3)'.
twampSrvSessionCount [Twamp Srv Session Count] (tmnxTwampSrvSessionCount)	long	The value of tmnxTwampSrvSessionCount indicates the number of currently in-progress TWAMP test sessions.
twampSrvTestPacketsRx [Twamp Srv Test Packets Rx] (tmnxTwampSrvTestPacketsRx)	long	The value of tmnxTwampSrvTestPacketsRx indicates the total number of TWAMP test packets received by the TWAMP server.

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
twampSrvTestPacketsTx [Twamp Srv Test Packets Tx] (tmnxTwampSrvTestPacketsTx)	long	The value of tmnxTwampSrvTestPacketsTx indicates the total number of TWAMP test packets sent by the TWAMP server.
twampSrvTestSessAborted [Twamp Srv Test Sess Aborted] (tmnxTwampSrvTestSessAborted)	long	The value of tmnxTwampSrvTestSessAborted indicates the total number of test sessions aborted by the TWAMP server.
twampSrvTestSessCompleted [Twamp Srv Test Sess Completed] (tmnxTwampSrvTestSessCompleted)	long	The value of tmnxTwampSrvTestSessCompleted indicates the total number of test sessions completed by the TWAMP server.
twampSrvTestSessRejected [Twamp Srv Test Sess Rejected] (tmnxTwampSrvTestSessRejected)	long	The value of tmnxTwampSrvTestSessRejected indicates the total number of test sessions rejected by the TWAMP server.
twampSrvUpTime [Twamp Srv Up Time] (tmnxTwampSrvUpTime)	long	The value of tmnxTwampSrvUpTime indicates the time elapsed, in seconds, since the most recent transition of tmnxTwampSrvOperState to 'inService(2)'. If tmnxTwampSrvOperState is not 'inService(2)', zero is returned.
<p>TwlReflectorStats</p> <p>MIB entry name: tmnxOamPmStsTwlRflEntry</p> <p>Entry description: tmnxOamPmStsTwlRflEntry contains the statistics for the specified OAM Performance Monitoring TWAMP-Light reflector. SROS creates a row in this table when a corresponding row is created in tmnxOamPmCfgTwlRflTable. SROS destroys a row in this table when a corresponding row is destroyed in tmnxOamPmCfgTwlRflTable. The encoding of the index is explained in the DESCRIPTION clause for tmnxOamPmCfgTwlRflEntry.</p> <p>Table description (for tmnxOamPmStsTwlRflTable): tmnxOamPmStsTwlRflTable contains the statistics for OAM Performance Monitoring TWAMP-Light reflectors.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.TwlReflector</p>		

Table 572 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
framesRx [Frames Rx] (tmnxOamPmStsTwIRflFramesRx)	long	The value of tmnxOamPmStsTwIRflFramesRx indicates the number of TWAMP-Test frames received by the specified reflector.
framesTx [Frames Tx] (tmnxOamPmStsTwIRflFramesTx)	long	The value of tmnxOamPmStsTwIRflFramesTx indicates the number of TWAMP-Test frames transmitted by the specified reflector.
upTime [Up Time] (tmnxOamPmStsTwIRflUpTime)	long	The value of tmnxOamPmStsTwIRflUpTime indicates the time elapsed since the most recent transition of the reflector's administrative status to 'enabled(1)'. Zero is returned if the reflector's administrative status is 'disabled(2)'.

Table 573 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CemSapStats MIB entry name: sapCemStatsEntry Entry description: Statistics for a specific CEM SAP. Table description (for sapCemStatsTable): A table that contains CEM SAP statistics. Supports realtime plotting Supports scheduled collection Monitored class: service.L2AccessInterface</p>		
cemStatsEgressDroppedPkts [Cem Stats Egress Dropped Pkts] (sapCemStatsEgressDroppedPkts)	long	The value of sapCemStatsEgressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsEgressESs [Cem Stats Egress ESs] (sapCemStatsEgressESs)	long	The value of sapCemStatsEgressESs indicates the number of Error Seconds (ESs) encountered. Any malformed packet, seq. error, LOPS and similar are considered as error seconds.
cemStatsEgressFailureCounts [Cem Stats Egress Failure Counts] (sapCemStatsEgressFailureCounts)	long	The value of sapCemStatsEgressFailureCounts indicates the number failure events. A failure event begins when the LOPS failure is declared, and ends when the failure is cleared.
cemStatsEgressForwardedPkts [Cem Stats Egress Forwarded Pkts] (sapCemStatsEgressForwardedPkts)	long	The value of sapCemStatsEgressForwardedPkts indicates the number of packets that were successfully forwarded.
cemStatsEgressJtrBfrDepth [Cem Stats Egress Jtr Bfr Depth] (sapCemStatsEgressJtrBfrDepth)	long	The value of sapCemStatsEgressJtrBfrDepth indicates the current packet depth of the jitter buffer.
cemStatsEgressJtrBfrOverruns [Cem Stats Egress Jtr Bfr Overruns] (sapCemStatsEgressJtrBfrOverruns)	long	The value of sapCemStatsEgressJtrBfrOverruns indicates the number of times a packet was dropped because it could not fit in the jitter buffer.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressJtrBfrUnderruns [Cem Stats Egress Jtr Bfr Underruns] (sapCemStatsEgressJtrBfrUnderruns)	long	The value of sapCemStatsEgressJtrBfrUnderruns indicates the number of times a packet needed to be played out and the jitter buffer was empty.
cemStatsEgressLBitDropped [Cem Stats Egress LBit Dropped] (sapCemStatsEgressLBitDropped)	long	The value of sapCemStatsEgressLBitDropped indicates the number of packets dropped due to the L bit set by the far end.
cemStatsEgressMalformedPkts [Cem Stats Egress Malformed Pkts] (sapCemStatsEgressMalformedPkts)	long	The value of sapCemStatsEgressMalformedPkts indicates the number of packets detected with unexpected size, or bad headers' stack.
cemStatsEgressMisOrderDropped [Cem Stats Egress Mis Order Dropped] (sapCemStatsEgressMisOrderDropped)	long	The value of sapCemStatsEgressMisOrderDropped indicates the number of packets detected out of order (via control word sequence numbers), and could not be re-ordered, or could not be placed in the jitter buffer because it was out of the current window.
cemStatsEgressMissingPkts [Cem Stats Egress Missing Pkts] (sapCemStatsEgressMissingPkts)	long	The value of sapCemStatsEgressMissingPkts indicates the number of missing packets (as detected via control word sequence number gaps).
cemStatsEgressMultipleDropped [Cem Stats Egress Multiple Dropped] (sapCemStatsEgressMultipleDropped)	long	The value of sapCemStatsEgressMultipleDropped indicates the number of packets dropped due to multiple sequence numbers.
cemStatsEgressOverrunCounts [Cem Stats Egress Overrun Counts] (sapCemStatsEgressOverrunCounts)	long	The value of sapCemStatsEgressOverrunCounts indicates the number of times the jitter buffer went into an overrun state.
cemStatsEgressPktsReOrder [Cem Stats Egress Pkts Re Order] (sapCemStatsEgressPktsReOrder)	long	The value of sapCemStatsEgressPktsReOrder indicates the number of packets detected out of sequence (via control word sequence number), but successfully re-ordered.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cemStatsEgressSESSs [Cem Stats Egress SESSs] (sapCemStatsEgressSESSs)	long	The value of sapCemStatsEgressSESSs indicates the number of Severely Error Seconds (SESSs) encountered. This is when more than 30 percent of the packets within a one second window are missing.
cemStatsEgressUASs [Cem Stats Egress UASs] (sapCemStatsEgressUASs)	long	The value of sapCemStatsEgressUASs indicates the number of Unavailable Seconds (UASs) encountered. Any consecutive ten seconds of SESSs are counted as one UAS.
cemStatsEgressUnderrunCounts [Cem Stats Egress Underrun Counts] (sapCemStatsEgressUnderrunCounts)	long	The value of sapCemStatsEgressUnderrunCounts indicates the number of times the jitter buffer went into an underrun state.
cemStatsIngressDroppedPkts [Cem Stats Ingress Dropped Pkts] (sapCemStatsIngressDroppedPkts)	long	The value of sapCemStatsIngressDroppedPkts indicates the total number of packets that were dropped due to errors.
cemStatsIngressForwardedPkts [Cem Stats Ingress Forwarded Pkts] (sapCemStatsIngressForwardedPkts)	long	The value of sapCemStatsIngressForwardedPkts indicates the number of packets that were successfully forwarded.

uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PppoeSapStats MIB entry name: tmnxPppoeSapStatsEntry Entry description: PPPoE statistics about a SAP. Table description (for tmnxPppoeSapStatsTable): A table that contains statistics on PPPoE per SAP. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vpls.L2AccessInterface • vprn.ServiceAccessPoint 		
pppoeSapReceivedDropped [Pppoe Sap Received Dropped] (tmnxPppoeSapRxDropped)	long	The value of tmnxPppoeSapRxDropped indicates the number of dropped PPPoE packets.
pppoeSapReceivedInvalidAcCookie [Pppoe Sap Received Invalid Ac Cookie] (tmnxPppoeSapRxInvalidAcCookie)	long	The value of tmnxPppoeSapRxInvalidAcCookie indicates the number of PPPoE Active Discovery packets received with an invalid AC-Cookie tag.
pppoeSapReceivedInvalidCode [Pppoe Sap Received Invalid Code] (tmnxPppoeSapRxInvalidCode)	long	The value of tmnxPppoeSapRxInvalidCode indicates the number of PPPoE packets received with an invalid code field.
pppoeSapReceivedInvalidLen [Pppoe Sap Received Invalid Len] (tmnxPppoeSapRxInvalidLen)	long	The value of tmnxPppoeSapRxInvalidLen indicates the number of PPPoE packets received with an invalid length field.
pppoeSapReceivedInvalidMac [Pppoe Sap Received Invalid Mac] (tmnxPppoeSapRxInvalidMac)	long	The value of tmnxPppoeSapRxInvalidMac indicates the number of PPPoE packets received with an invalid MAC address.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppoeSapReceivedInvalidSession [Pppoe Sap Received Invalid Session] (tmnxPppoeSapRxInvalidSession)	long	The value of tmnxPppoeSapRxInvalidSession indicates the number of PPPoE packets received with an invalid session-id field.
pppoeSapReceivedInvalidTags [Pppoe Sap Received Invalid Tags] (tmnxPppoeSapRxInvalidTags)	long	The value of tmnxPppoeSapRxInvalidTags indicates the number of PPPoE Active Discovery packets received with invalid tags.
pppoeSapReceivedInvalidType [Pppoe Sap Received Invalid Type] (tmnxPppoeSapRxInvalidType)	long	The value of tmnxPppoeSapRxInvalidType indicates the number of PPPoE packets received with an invalid type field.
pppoeSapReceivedInvalidVersion [Pppoe Sap Received Invalid Version] (tmnxPppoeSapRxInvalidVersion)	long	The value of tmnxPppoeSapRxInvalidVersion indicates the number of PPPoE packets received with an invalid version field.
pppoeSapReceivedPADI [Pppoe Sap Received PADI] (tmnxPppoeSapRxPadi)	long	The value of tmnxPppoeSapRxPadi indicates the number of PADI (PPPoE Active Discovery Initiation) packets received on this SAP.
pppoeSapReceivedPADR [Pppoe Sap Received PADR] (tmnxPppoeSapRxPadr)	long	The value of tmnxPppoeSapRxPadr indicates the number of PADR (PPPoE Active Discovery Request) packets received on this SAP.
pppoeSapReceivedPADT [Pppoe Sap Received PADT] (tmnxPppoeSapRxPadt)	long	The value of tmnxPppoeSapRxPadt indicates the number of PADT (PPPoE Active Discovery Terminate) packets received on this SAP.
pppoeSapReceivedSession [Pppoe Sap Received Session] (tmnxPppoeSapRxSession)	long	The value of tmnxPppoeSapRxSession indicates the number packets received during the PPP session stage on this SAP.
pppoeSapTransmittedPADO [Pppoe Sap Transmitted PADO] (tmnxPppoeSapTxPado)	long	The value of tmnxPppoeSapTxPado indicates the number of PADO (PPPoE Active Discovery Offer) packets transmitted on this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pppoeSapTransmittedPADS [Pppoe Sap Transmitted PADS] (tmnxPppoeSapTxPads)	long	The value of tmnxPppoeSapTxPads indicates the number of PADS (PPPoE Active Discovery Session) packets transmitted on this SAP.
pppoeSapTransmittedPADT [Pppoe Sap Transmitted PADT] (tmnxPppoeSapTxPadt)	long	The value of tmnxPppoeSapTxPadt indicates the number of PADT (PPPoE Active Discovery Terminate) packets transmitted on this SAP.
pppoeSapTransmittedSession [Pppoe Sap Transmitted Session] (tmnxPppoeSapTxSession)	long	The value of tmnxPppoeSapTxSession indicates the number packets transmitted during the PPP session stage on this SAP.
SapAtmPppStats MIB entry name: sapAtmPppStatsEntry Entry description: PPP statistics about a specific ATM SAP. Table description (for sapAtmPppStatsTable): A table that contains ATM SAP PPP statistics information. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • ies.ServiceAccessPoint • vprn.ServiceAccessPoint 		
rxDropped [Rx Dropped] (sapAtmPppStatsRxDropped)	long	The value of sapAtmPppStatsRxDropped indicates the number of PPP packets dropped on this ATM SAP since the last re-initialization of the local network management subsystem, or the last time the statistics were cleared.
rxPackets [Rx Packets] (sapAtmPppStatsRxPackets)	long	The value of sapAtmPppStatsRxPackets indicates the number of PPP packets received on this ATM SAP since the last re-initialization of the local network management subsystem, or the last time the statistics were cleared.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txPackets [Tx Packets] (sapAtmPppStatsTxPackets)	long	The value of sapAtmPppStatsRxPackets indicates the number of PPP packets transmitted on this ATM SAP since the last re-initialization of the local network management subsystem, or the last time the statistics were cleared.
<p>SapBaseStats MIB entry name: sapBaseStatsEntry Entry description: Basic statistics about a specific SAP. Table description (for sapBaseStatsTable): A table that contains basic SAP statistics. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface • service.ServiceAccessPoint 		
authenticationPacketsDiscarded [Authentication Packets Discarded] (sapBaseStatsAuthenticationPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
authenticationPacketsSuccessful [Authentication Packets Successful] (sapBaseStatsAuthenticationPktsSuccess)	long	The number of DHCP packets successfully authenticated.
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInte- ger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchip- DroppedPackets)	java. math. BigInte- ger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOf- feredHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOf- feredHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOf- feredLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOf- feredLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedUncoloredOctets [Ingress PChip Offered Uncolored Octets] (sapBaseStatsIngressPchipOf- feredUncoloredOctets)	java. math. BigInte- ger	The number of uncolored octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedUncoloredPackets [Ingress PChip Offered Uncolored Packets] (sapBaseStatsIngressPchipOf- feredUncoloredPackets)	java. math. BigInte- ger	The number of uncolored packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapDcpFpDynamicStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.L3AccessInterface • ies.ServiceAccessPoint • ipipe.L2AccessInterface • mvpls.IL2AccessInterface • mvpls.L2AccessInterface • vll.L2AccessInterface • vpls.IL2AccessInterface • vpls.L2AccessInterface • vprn.L3AccessInterface • vprn.ServiceAccessPoint 		
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detectionTime [Detection Time] (sapDcpFpDynDetectionTime)	long	The value of sapDcpFpDynDetectionTime indicates the detection time remaining for the dynamic policer for a given protocol.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
holdDown [Hold Down] (sapDcpFpDynHoldDown)	int	The value of sapDcpFpDynHoldDown indicates the remaining hold-down period for the dynamic policer for a given protocol.
isAllocated [Is Allocated] (sapDcpFpDynAllocated)	boolean	The value of sapDcpFpDynAllocated indicates whether dynamic policer has been allocated for this protocol.
pktsExcd [Pkts Excd] (sapDcpFpDynExcdCount)	java.math. BigInteger	The value of sapDcpFpDynExcdCount indicates number of packets exceeding the policing parameters since the dynamic policer for the given protocol was previously declared as conformant or newly instantiated.
policerState [Policer State] (sapDcpFpDynState)	int	The value of sapDcpFpDynState indicates the state of the dynamic policer for a particular protocol configured on Distributed CPU Protection Policy.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
protocolName [Protocol Name] (sapDcpFpProtocol)	int	The value of sapDcpFpProtocol specifies the protocol name to be monitored by Distributed CPU Protection Policy.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>SapDcpFpLocMonPlcrStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
isAllocated [Is Allocated] (sapDcpFpLocMonAllDynAlloc)	boolean	The value of sapDcpFpLocMonAllDynAlloc indicates whether all the dynamic policers associated with this local-monitor have been allocated.
pktsExcd [Pkts Excd] (sapDcpFpLocMonExcdCount)	java.math.BigInteger	The value of sapDcpFpLocMonExcdCount indicates number of packets exceeding the policing parameters since the given local-monitoring policer was previously declared as conformant or newly instantiated.
policerName [Policer Name] (sapDcpFpLocMonPlicrName)	String	The value of sapDcpFpLocMonPlicrName specifies the local monitoring policy name for Distributed CPU Protection Policy.
policerState [Policer State] (sapDcpFpLocMonState)	int	The value of sapDcpFpLocMonState indicates the state of the local-monitoring policer configured on Distributed CPU Protection Policy.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
serviceId [Service Id] (svclId)	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>SapDcpFpStaticStats</p> <p>MIB entry name: tmnxCardEntry</p> <p>Entry description: Each row entry represents an IOM card slot in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. When a tmnxChassisEntry is created, a tmnxCardEntry is created for each IOM card slot in that chassis. Before a tmnxChassisEntry can be deleted, each tmnxCardEntry for that chassis must be in the proper state for removal.</p> <p>Table description (for tmnxCardTable): The tmnxCardTable has an entry for each IOM card slot in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.L3AccessInterface • ies.ServiceAccessPoint • ipipe.L2AccessInterface • mvpls.IL2AccessInterface • mvpls.L2AccessInterface • vll.L2AccessInterface • vpls.IL2AccessInterface • vpls.L2AccessInterface • vprn.L3AccessInterface • vprn.ServiceAccessPoint 		

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassis-Index are used to identify different physical chassis (eg. in an XRS-40 system) in tmnxPhysChassisTable.
detectionTime [Detection Time] (sapDcpFpStaticDetectionTime)	long	The value of sapDcpFpStaticDetectionTime indicates the detection time remaining for a given static-policer.
encapValue [Encap Value] (sapEncapValue)	long	The value of the label used to identify this SAP on the access port specified by sapPortId.
fpld [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
holdDown [Hold Down] (sapDcpFpStaticHoldDown)	int	The value of sapDcpFpStaticHoldDown indicates the remaining hold-down period for a given static-policer.
pktsExcd [Pkts Excd] (sapDcpFpStaticExcdCount)	java. math. BigInte- ger	The value of sapDcpFpStaticExcdCount indicates number of packets exceeding the policing parameters since the given static-policer was previously declared as conformant or newly instantiated.
policerName [Policer Name] (sapDcpFpStaticPlcrName)	String	The value of sapDcpFpStaticPlcrName specifies the static-policer name for Distributed CPU Protection Policy.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>policerState [Policer State] (sapDcpFpStaticState)</p>	int	The value of sapDcpFpStaticState indicates the state of the static-policer configured on Distributed CPU Protection Policy.
<p>portId [Port Id] (sapPortId)</p>	long	The ID of the access port where this SAP is defined.
<p>serviceId [Service Id] (svclId)</p>	long	The value of the object svclId specifies the Service identifier. This value should be unique within the service domain.
<p>SapEgrEGBaseStats MIB entry name: sapEgrEGBaseStEntry Entry description: Egress statistics about a specific Encap Group of a SAP. Table description (for sapEgrEGBaseStTable): The sapEgrEGBaseStTable contains egress Encap Group basic SAP statistics at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. In the descriptions below 'Qchip' refers to the Nokia SROS series QoS Queueing Engine chip. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
<p>custId [Cust Id] (sapEgrEGBaseStCustId)</p>	long	The value of sapEgrEGBaseStCustId indicates the Customer ID for the associated service.
<p>dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGBaseStQcDpdInPfOcts)</p>	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdInPfOcts indicates the number of in-profile octets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGBaseStQcDpdInPfOctsH)	long	The value of sapEgrEGBaseStQcDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGBaseStQcDpdInPfOctsL)	long	The value of sapEgrEGBaseStQcDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGBaseStQcDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdInPfPkts indicates the number of in-profile packets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGBaseStQcDpdInPfPktsH)	long	The value of sapEgrEGBaseStQcDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGBaseStQcDpdInPfPktsL)	long	The value of sapEgrEGBaseStQcDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGBaseStQcDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGBaseStQcDpdOutPfOctsH)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGBaseStQcDpdOutPfOctsL)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGBaseStQcDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGBaseStQcDpdOutPfPktsH)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGBaseStQcDpdOutPfPktsL)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGBaseStQcFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGBaseStQcFwdInPfOctsH)	long	The value of sapEgrEGBaseStQcFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGBaseStQcFwdInPfOctsL)	long	The value of sapEgrEGBaseStQcFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGBaseStQcFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGBaseStQcFwdInPfPktsH)	long	The value of sapEgrEGBaseStQcFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfPkts.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGBaseStQcFwdInPfPktsL)	long	The value of sapEgrEGBaseStQcFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGBaseStQcFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGBaseStQcFwdOutPfOctsH)	long	The value of sapEgrEGBaseStQcFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGBaseStQcFwdOutPfOctsL)	long	The value of sapEgrEGBaseStQcFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGBaseStQcFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGBaseStQcFwdOutPfPktsH)	long	The value of sapEgrEGBaseStQcFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdOutPfPkts.
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGBaseStQcFwdOutPfPktsL)	long	The value of sapEgrEGBaseStQcFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdOutPfPkts.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGMbrQueueStFwdOutPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
queueId [Queue Id] (sapEgrEGMbrQueueId)	long	The value of sapEgrEGMbrQueueId indicates the index of the egress QoS queue of this SAP.
<p>SapEgrEGMbrSchedStats MIB entry name: sapEgrEGMbrSchedStEntry Entry description: Egress statistics about a specific QoS scheduler instantiated per encapsulation group member of SAP. Table description (for sapEgrEGMbrSchedStTable): The sapEgrEGMbrSchedStTable contains egress encapsulation group QoS scheduler SAP per member. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGMbrSchedCustId)	long	The value of sapEgrEGMbrSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octs] (sapEgrEGMbrSchedStFwdOcts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdOcts indicates the number of octets forwarded by the egress QoS scheduler of this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOctsH [Fwd Octets H] (sapEgrEGMbrSchedStFwdOctsH)	long	The value of sapEgrEGMbrSchedStFwdOctsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdOctsL [Fwd Octets L] (sapEgrEGMbrSchedStFwdOctsL)	long	The value of sapEgrEGMbrSchedStFwdOctsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdPkts [Fwd Pkts] (sapEgrEGMbrSchedStFwdPkts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdPkts indicates the number of packets forwarded by the egress QoS scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapEgrEGMbrSchedStFwdPktsH)	long	The value of sapEgrEGMbrSchedStFwdPktsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
fwdPktsL [Fwd Pkts L] (sapEgrEGMbrSchedStFwdPktsL)	long	The value of sapEgrEGMbrSchedStFwdPktsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
schedName [Sched Name] (sapEgrEGMbrSchedStName)	String	The sapEgrEGMbrSchedStName specifies the name of the egress QoS scheduler of this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapEgrEGQueueStats</p> <p>MIB entry name: sapEgrEGQueueStEntry</p> <p>Entry description: Egress QoS queue statistics about a specific Encap group of a SAP.</p> <p>Table description (for sapEgrEGQueueStTable): The sapEgrEGQueueStTable contains egress Encap Group queue statistics at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGCustId)	long	The value of sapEgrEGCustId indicates the Customer ID for the associated service.
dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGQueueStDpdInPfOcts)	java. math. BigInteger	The value of sapEgrEGQueueStDpdInPfOcts indicates the number of in-profile octets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded etc.
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGQueueStDpdInPfOctsH)	long	The value of sapEgrEGQueueStDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGQueueStDpdInPfOcts.
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGQueueStDpdInPfOctsL)	long	The value of sapEgrEGQueueStDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGQueueStDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGQueueStDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGQueueStDpdInPfPkts indicates the number of in-profile packets discarded by the egress Queue due to: MBS exceeded, buffer pool limit exceeded etc.
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGQueueStDpdInPfPktsH)	long	The value of sapEgrEGQueueStDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGQueueStDpdInPfPkts.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGQueueStDpdInPfPktsL)	long	The value of sapEgrEGQueueStDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGQueueStDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGQueueStDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGQueueStDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGQueueStDpdOutPfOctsH)	long	The value of sapEgrEGQueueStDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGQueueStDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGQueueStDpdOutPfOctsL)	long	The value of sapEgrEGQueueStDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGQueueStDpdOutPfOcts.
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGQueueStDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGQueueStDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded etc.
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGQueueStDpdOutPfPktsH)	long	The value of sapEgrEGQueueStDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGQueueStDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGQueueStDpdOutPfPktsL)	long	The value of sapEgrEGQueueStDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGQueueStDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGQueueStFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress queue.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGQueueStFwdInPfOctsH)	long	The value of sapEgrEGQueueStFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGQueueStFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGQueueStFwdInPfOctsL)	long	The value of sapEgrEGQueueStFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGQueueStFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress queue.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGQueueStFwdInPfPktsH)	long	The value of sapEgrEGQueueStFwdInPfPktsL indicates the higher 32 bits of the value of sapEgrEGQueueStFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGQueueStFwdInPfPktsL)	long	The value of sapEgrEGQueueStFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGQueueStFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress queue.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGQueueStFwdOutPfOctsH)	long	The value of sapEgrEGQueueStFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGQueueStFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGQueueStFwdOutPfOctsL)	long	The value of sapEgrEGQueueStFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdOutPfOcts.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGQueueStFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress queue.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGQueueStFwdOutPfPktsH)	long	The value of sapEgrEGQueueStFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGQueueStFwdOutPfPkts.
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGQueueStFwdOutPfPktsL)	long	The value of sapEgrEGQueueStFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdOutPfPkts.
queueId [Queue Id] (sapEgrEGQueueId)	long	The value of sapEgrEGQueueId indicates the index of the egress QoS queue of this SAP.
<p>SapEgrEGSchedStats</p> <p>MIB entry name: sapEgrEGSchedStEntry</p> <p>Entry description: Egress statistics about a specific QoS scheduler instantiated per encapsulation group of SAP.</p> <p>Table description (for sapEgrEGSchedStTable): The sapEgrEGSchedStTable contains egress encapsulation group QoS scheduler SAP at the Group level. Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
arbiterName [Arbiter Name] (sapEgrQosArbitStatsName)	String	The value of sapEgrQosArbitStatsName specifies the egress QoS arbiter of this SAP.
sapEgrQosArbitStatsFwdOcts [Sap Egr Qos Arbit Stats Fwd Octs] (sapEgrQosArbitStatsFwdOcts)	java. math. BigInteger	The value of sapEgrQosArbitStatsFwdOcts indicates the number of forwarded octets, as determined by the SAP egress policer control policy, offered by the Pchip to the Qchip.
sapEgrQosArbitStatsFwdPkts [Sap Egr Qos Arbit Stats Fwd Pkts] (sapEgrQosArbitStatsFwdPkts)	java. math. BigInteger	The value of sapEgrQosArbitStatsFwdPkts indicates the number of forwarded packets, as determined by the SAP egress policer control policy, offered by the Pchip to the Qchip.
<p>SapEgrQosHsmdaCntrStats</p> <p>MIB entry name: sapEgrQosHsmdaCntrStatsEntry</p> <p>Entry description: Egress statistics about a specific SAP's QoS HSMDA counter.</p> <p>Table description (for sapEgrQosHsmdaCntrStatsTable): A table that contains egress QoS HSMDA counter SAP statistics.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface • service.ServiceAccessPoint 		
sapEgrHsmdaCntrStCounterId [Sap Egr Hsmda Cntr St Counter Id] (sapEgrHsmdaCntrStCntrId)	long	The value of sapEgrHsmdaCntrStCntrId indicates the counter ID for the statistics.
sapEgrHsmdaCntrStCustomerId [Sap Egr Hsmda Cntr St Customer Id] (sapEgrHsmdaCntrStCustId)	long	The value of sapEgrHsmdaCntrStCustId indicates the customer ID for the statistics.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEgrHsmdaCntrStInProfOctetsDropped [Sap Egr Hsmda Cntr St In Prof Octets Dropped] (sapEgrHsmdaCntrStInProfOctDrop)	java. math. BigInteger	The value of sapEgrHsmdaCntrStInProfOctDrop indicates the number of out-of-profile packets dropped for the egress counter, specified by the index sapIngHsmdaCntrStCntrlId, on this SAP.
sapEgrHsmdaCntrStInProfileOctetsFwd [Sap Egr Hsmda Cntr St In Profile Octets Fwd] (sapEgrHsmdaCntrStInProfOctFwd)	java. math. BigInteger	The value of sapEgrHsmdaCntrStInProfOctFwd indicates the number of out-of-profile packets forwarded for the egress counter, specified by the index sapIngHsmdaCntrStCntrlId, on this SAP.
sapEgrHsmdaCntrStInProfilePacketsDropped [Sap Egr Hsmda Cntr St In Profile Packets Dropped] (sapEgrHsmdaCntrStInProfPktDrop)	java. math. BigInteger	The value of sapEgrHsmdaCntrStInProfPktDrop indicates the number of in-profile packets dropped for the egress counter, specified by the index sapIngHsmdaCntrStCntrlId, on this SAP.
sapEgrHsmdaCntrStInProfilePacketsFwd [Sap Egr Hsmda Cntr St In Profile Packets Fwd] (sapEgrHsmdaCntrStInProfPktFwd)	java. math. BigInteger	The value of sapEgrHsmdaCntrStInProfPktFwd indicates the number of in-profile packets forwarded for the egress counter, specified by the index sapIngHsmdaCntrStCntrlId, on this SAP.
sapEgrHsmdaCntrStOutProfileOctetsDropped [Sap Egr Hsmda Cntr St Out Profile Octets Dropped] (sapEgrHsmdaCntrStOutProfOctDrop)	java. math. BigInteger	The value of sapEgrHsmdaCntrStOutProfOctDrop indicates the number of out-of-profile packets dropped for the egress counter, specified by the index sapIngHsmdaCntrStCntrlId, on this SAP.
sapEgrHsmdaCntrStOutProfileOctetsFwd [Sap Egr Hsmda Cntr St Out Profile Octets Fwd] (sapEgrHsmdaCntrStOutProfOctFwd)	java. math. BigInteger	The value of sapEgrHsmdaCntrStOutProfOctFwd indicates the number of out-of-profile packets forwarded for the egress counter, specified by the index sapIngHsmdaCntrStCntrlId, on this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEgrHsmdaCntrStOutProfilePacketsDropped [Sap Egr Hsmda Cntr St Out Profile Packets Dropped] (sapEgrHsmdaCntrStOutProfPktDrop)	java. math. BigInteger	The value of sapEgrHsmdaCntrStOutProfPktDrop indicates the number of out-of-profile packets dropped for the egress counter, specified by the index sapInHsmdaCntrStCntrlId, on this SAP.
sapEgrHsmdaCntrStOutProfilePacketsFwd [Sap Egr Hsmda Cntr St Out Profile Packets Fwd] (sapEgrHsmdaCntrStOutProfPktFwd)	java. math. BigInteger	The value of sapEgrHsmdaCntrStOutProfPktFwd indicates the number of out-of-profile packets forwarded for the egress counter, specified by the index sapInHsmdaCntrStCntrlId, on this SAP.
<p>SapEgrQosHsmdaQueueStats</p> <p>MIB entry name: sapEgrQosHsmdaQueueStatsEntry</p> <p>Entry description: Egress statistics about a specific SAP's QoS HSMDA queue.</p> <p>Table description (for sapEgrQosHsmdaQueueStatsTable): A table that contains egress QoS HSMDA queue SAP statistics.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface • service.ServiceAccessPoint 		
sapEgrHsmdaQStatCustomerId [Sap Egr Hsmda QStat Customer Id] (sapEgrHsmdaQStatCustId)	long	The value of sapEgrHsmdaQStatCustId indicates the customer ID for the statistics.
sapEgrHsmdaQStatInProfileOctetsDropped [Sap Egr Hsmda QStat In Profile Octets Dropped] (sapEgrHsmdaQStatInProfOctDropd)	java. math. BigInteger	The value of sapEgrHsmdaQStatInProfOctDropd indicates the number of out-of-profile packets dropped on egress on this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEgrHsmdaQStatInProfileOctetsFwd [Sap Egr Hsmda QStat In Profile Octets Fwd] (sapEgrHsmdaQStatInProfOctFwd)	java. math. BigInteger	The value of sapEgrHsmdaQStatInProfOctFwd indicates the number of out-of-profile packets forwarded on egress on this SAP.
sapEgrHsmdaQStatInProfilePacketsDropped [Sap Egr Hsmda QStat In Profile Packets Dropped] (sapEgrHsmdaQStatInProfPktDropd)	java. math. BigInteger	The value of sapEgrHsmdaQStatInProfPktDropd indicates the number of in-profile packets dropped on egress on this SAP.
sapEgrHsmdaQStatInProfilePacketsFwd [Sap Egr Hsmda QStat In Profile Packets Fwd] (sapEgrHsmdaQStatInProfPktFwd)	java. math. BigInteger	The value of sapEgrHsmdaQStatInProfPktFwd indicates the number of in-profile packets forwarded on egress on this SAP.
sapEgrHsmdaQStatOutProfileOctetsDropped [Sap Egr Hsmda QStat Out Profile Octets Dropped] (sapEgrHsmdaQStatOutProfOctDropd)	java. math. BigInteger	The value of sapEgrHsmdaQStatOutProfOctDropd indicates the number of out-of-profile packets dropped on egress on this SAP.
sapEgrHsmdaQStatOutProfileOctetsFwd [Sap Egr Hsmda QStat Out Profile Octets Fwd] (sapEgrHsmdaQStatOutProfOctFwd)	java. math. BigInteger	The value of sapEgrHsmdaQStatOutProfOctFwd indicates the number of out-of-profile packets forwarded on egress on this SAP.
sapEgrHsmdaQStatOutProfilePacketsDropped [Sap Egr Hsmda QStat Out Profile Packets Dropped] (sapEgrHsmdaQStatOutProfPktDropd)	java. math. BigInteger	The value of sapEgrHsmdaQStatOutProfPktDropd indicates the number of out-of-profile packets dropped on egress on this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEgrHsmdaQStatOutProfilePacketsFwd [Sap Egr Hsmda QStat Out Profile Packets Fwd] (sapEgrHsmdaQStatOutProfPktFwd)	java. math. BigInteger	The value of sapEgrHsmdaQStatOutProfPktFwd indicates the number of out-of-profile packets forwarded on egress on this SAP.
sapEgrHsmdaQStatQueueId [Sap Egr Hsmda QStat Queue Id] (sapEgrQosHsmdaQueueId)	long	The value of sapEgrQosHsmdaQueueId index specifies the Hsmda egress queue which this override record will affect.
<p>SapEgrQosPlcyQueueStats</p> <p>MIB entry name: sapEgrQosPlcyQueueStatsEntry</p> <p>Entry description: Egress statistics about a specific SAP's QoS queue for a given QoS policy.</p> <p>Table description (for sapEgrQosPlcyQueueStatsTable): A table that contains egress QoS queue SAP statistics per Egress QoS Policy the queue was used by. Conceptual rows in this table are automatically created by the system. No row will be created for a SAP if the value of the object sapTodSuite is equal to the empty string.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
droppedInProfOctets [Dropped In Prof Octets] (sapEgQosPlcyQueueStatsDroppedInProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedInProfOctets indicates the number in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedInProfPackets [Dropped In Prof Packets] (sapEgQosPlcyQueueStatsDroppedInProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedInProfPackets indicates the number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedOutProfOctets [Dropped Out Prof Octets] (sapEgQosPlcyQueueStatsDroppedOutProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedOutProfOctets indicates the number out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfPackets [Dropped Out Prof Packets] (sapEgQosPlcyQueueStatsDroppedOutProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedOutProfPackets indicates the number out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
forwardedInProfOctets [Forwarded In Prof Octets] (sapEgQosPlcyQueueStatsForwardedInProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
forwardedInProfPackets [Forwarded In Prof Packets] (sapEgQosPlcyQueueStatsForwardedInProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedInProfPackets indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
forwardedOutProfOctets [Forwarded Out Prof Octets] (sapEgQosPlcyQueueStatsForwardedOutProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
forwardedOutProfPackets [Forwarded Out Prof Packets] (sapEgQosPlcyQueueStatsForwardedOutProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedOutProfPackets indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
policyId [Policy Id] (sapEgQosPlcyQueuePolicyId)	long	The row index in the tSapEgressTable corresponding to this egress QoS policy.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
queueId [Queue Id] (sapEgQosPlcyQueueId)	long	The value of sapEgQosPlcyQueueId indicates index of the egress QoS queue of this SAP.
<p>SapEgrQosPlcyStats</p> <p>MIB entry name: sapEgrQosPlcyStatsEntry</p> <p>Entry description: Statistics about a specific Egress Qos Policy applied on a specific SAP.</p> <p>Table description (for sapEgrQosPlcyStatsTable): A table that contains Egress Qos policy related statistics for a SAP. Conceptual rows in this table are automatically created by the system. No row will be created for a SAP if the value of the object sapTodSuite is equal to the empty string.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
droppedInProfOctets [Dropped In Prof Octets] (sapEgQosPlcyDroppedInProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedInProfOctets indicates the number of in-profile octets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedInProfPackets [Dropped In Prof Packets] (sapEgQosPlcyDroppedInProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedInProfPackets indicates the number of in-profile packets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfOctets [Dropped Out Prof Octets] (sapEgQosPlcyDroppedOutProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedOutProfOctets indicates the number of out-profile octets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedOutProfPackets [Dropped Out Prof Packets] (sapEgQosPlcyDroppedOutProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedOutProfPackets indicates the number of out-profile packets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
forwardedInProfOctets [Forwarded In Prof Octets] (sapEgQosPlcyForwardedInProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
forwardedInProfPackets [Forwarded In Prof Packets] (sapEgQosPlcyForwardedInProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedInProfPackets indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
forwardedOutProfOctets [Forwarded Out Prof Octets] (sapEgQosPlcyForwardedOutProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
forwardedOutProfPackets [Forwarded Out Prof Packets] (sapEgQosPlcyForwardedOutProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedOutProfPackets indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
policyId [Policy Id] (sapEgQosPlcyId)	long	The value of the object sapEgQosPlcyId indicates the row index in the tSapEgressTable corresponding to this egress QoS policy, or one if no policy is specified.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapPortIdEgrEGMbrSchedStats</p> <p>MIB entry name: sapPortIdEgrEGMbrSchedStEntry</p> <p>Entry description: Egress statistics about a specific Encap Group member QoS scheduler port of a SAP. Entries are created when a scheduler policy is applied to an Encap Group.</p> <p>Table description (for sapPortIdEgrEGMbrSchedStTable): The sapPortIdEgrEGMbrSchedStTable contains egress QoS scheduler SAP statistics per port. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember. This table fetches statistics per member. This table is used when the Encap Group's SAP is a CCAG or LAG in 'link' mode or an APS.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapPortIdEgrEGMbrSchedCustId)	long	The value of sapPortIdEgrEGMbrSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octs] (sapPortIdEgrEGMbrSchedFwdOcts)	java. math. BigInteger	The value sapPortIdEgrEGMbrSchedFwdOcts indicates the number of octets forwarded by the egress port scheduler of this SAP.
fwdOctsH [Fwd Octs H] (sapPortIdEgrEGMbrSchedFwdOctsH)	long	The value sapPortIdEgrEGMbrSchedFwdOctsH indicates the higher 32 bits of the value of sapPortIdEgrEGMbrSchedFwdOcts.
fwdOctsL [Fwd Octs L] (sapPortIdEgrEGMbrSchedFwdOctsL)	long	The value of sapPortIdEgrEGMbrSchedFwdOctsL indicates the lower 32 bits of the value of sapPortIdEgrEGMbrSchedFwdOcts.
fwdPkts [Fwd Pkts] (sapPortIdEgrEGMbrSchedFwdPkts)	java. math. BigInteger	The value of sapPortIdEgrEGMbrSchedFwdPkts indicates the number of packets forwarded by the egress port scheduler of this SAP.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdPktsH [Fwd Pkts H] (sapPortIdEgrEGMbrSchedFwdPktsH)	long	The value sapPortIdEgrEGMbrSchedFwdPktsH indicates the higher 32 bits of the value of sapPortIdEgrEGMbrSchedFwdPkts.
fwdPktsL [Fwd Pkts L] (sapPortIdEgrEGMbrSchedFwdPktsL)	long	The value of sapPortIdEgrEGMbrSchedFwdPktsL indicates the lower 32 bits of the value of sapPortIdEgrEGMbrSchedFwdPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.
schedName [Sched Name] (sapPortIdEgrEGMbrSchedStName)	String	The sapPortIdEgrEGMbrSchedStName specifies the name of the egress encapsulation group QoS port scheduler of this SAP.
SapPortIdEgrEGSchedStats MIB entry name: sapPortIdEgrEGSchedStEntry Entry description: Egress statistics about a specific Encap Group's QoS scheduler port of a SAP. Entries are created when a scheduler policy is applied to an Encap Group. Table description (for sapPortIdEgrEGSchedStTable): The sapPortIdEgrEGSchedStTable contains egress QoS scheduler SAP statistics per port at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. This table is used when the encap group's SAP is a CCAG or LAG in 'link' mode or an APS. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup		

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
custId [Cust Id] (sapPortIdEgrEGSchedCustId)	long	The value of sapPortIdEgrEGSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octs] (sapPortIdEgrEGSchedFwdOcts)	java. math. BigInteger	The value sapPortIdEgrEGSchedFwdOcts indicates the number of octets forwarded by the egress port scheduler of this SAP.
fwdOctsH [Fwd Octs H] (sapPortIdEgrEGSchedFwdOctsH)	long	The value sapPortIdEgrEGSchedFwdOctsH indicates the higher 32 bits of the value of sapPortIdEgrEGSchedFwdOcts.
fwdOctsL [Fwd Octs L] (sapPortIdEgrEGSchedFwdOctsL)	long	The value of sapPortIdEgrEGSchedFwdOctsL indicates the lower 32 bits of the value of sapPortIdEgrEGSchedFwdOcts.
fwdPkts [Fwd Pkts] (sapPortIdEgrEGSchedFwdPkts)	java. math. BigInteger	The value of sapPortIdEgrEGSchedFwdPkts indicates the number of packets forwarded by the egress port scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapPortIdEgrEGSchedFwdPktsH)	long	The value sapPortIdEgrEGSchedFwdPktsH indicates the higher 32 bits of the value of sapPortIdEgrEGSchedFwdPkts.
fwdPktsL [Fwd Pkts L] (sapPortIdEgrEGSchedFwdPktsL)	long	The value of sapPortIdEgrEGSchedFwdPktsL indicates the lower 32 bits of the value of sapPortIdEgrEGSchedFwdPkts.
portId [Port Id] (sapPortId)	long	The ID of the access port where this SAP is defined.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
schedName [Sched Name] (sapPortIdEgrEGSchedStName)	String	The sapPortIdEgrEGSchedStName specifies the name of the egress encapsulation group port scheduler of this SAP.
TmsInterfaceAdditionalStats MIB entry name: vRtrIfStatsExtEntry Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted. Table description (for vRtrIfStatsExtTable): The vRtrIfStatsExtTable table contains statistics per virtual router interface. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • ies.TmsInterface • vprn.TmsInterface 		
txBytes [Tx Bytes] (vRtrIfTxBytes)	java. math. BigInteger	The value of vRtrIfTxBytes indicates the number of total bytes sent by this interface.
txPkts [Tx Pkts] (vRtrIfTxPkts)	java. math. BigInteger	The value of vRtrIfTxPkts indicates the number of total packets sent by this interface.

Table 573 service statistics (continued)

rxBytes [Rx Bytes] (vRtrIfRxBytes)	java. math. BigInteger	The value of vRtrIfRxBytes indicates the number of bytes in IPv4 and IPv6 packets received by this interface.
rxPkts [Rx Pkts] (vRtrIfRxPkts)	java. math. BigInteger	The value of vRtrIfRxPkts indicates the number of IPv4 packets received by this interface.
txDiscardPkts [Tx Discard Pkts] (vRtrIfTxV4DiscardPkts)	java. math. BigInteger	The value of vRtrIfTxV4DiscardPkts indicates the number of total IPv4 transmit packets discarded by this interface.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>VdoGrpSrcAdiStats</p> <p>MIB entry name: tmnxVdoSGAdiStatEntry</p> <p>Entry description: An entry in the tmnxVdoSGAdiStatTable. Each entry represents a Ad Insert (ADI) server for the corresponding multicast group.</p> <p>Table description (for tmnxVdoSGAdiStatTable): The tmnxVdoSGAdiStatTable has an entry for each Ad Insert (ADI) server on the channel. This table contains ad server information and statistics.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.ZoneAdiChl</p>		
vdoSGAdiAbortReq [Vdo SGAdi Abort Req] (tmnxVdoSGAdiAbortReq)	long	The value of tmnxVdoSGAdiAbortReq indicates the total number of abort requests received from the Ad Insert (ADI) server.
vdoSGAdiAliveReq [Vdo SGAdi Alive Req] (tmnxVdoSGAdiAliveReq)	long	The value of tmnxVdoSGAdiAliveReq indicates the total number of alive messages received from the Ad Insert (ADI) server.
vdoSGAdiCueReq [Vdo SGAdi Cue Req] (tmnxVdoSGAdiCueReq)	long	The value of tmnxVdoSGAdiCueReq indicates the total number of total number of cue requests sent to the Ad Insert (ADI) server.
vdoSGAdiInitReq [Vdo SGAdi Init Req] (tmnxVdoSGAdiInitReq)	long	The value of tmnxVdoSGAdiInitReq indicates the total number of init requests received from the Ad Insert (ADI) server.
vdoSGAdiMaxPort [Vdo SGAdi Max Port] (tmnxVdoSGAdiMaxPort)	long	The value of tmnxVdoSGAdiMinPort indicates the maximum ip port number where the Ad Insert (ADI) server's insertion stream is connected.
vdoSGAdiMinPort [Vdo SGAdi Min Port] (tmnxVdoSGAdiMinPort)	long	The value of tmnxVdoSGAdiMinPort indicates the minimum ip port number where the Ad Insert (ADI) server's insertion stream is connected.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGAdiServerAddr [Vdo SGAdi Server Addr] (tmnxVdoSGAdiServerAddr)	String	The value of tmnxVdoSGAdiServerAddr indicates the address of Ad Insert (ADI) server on this channel.
vdoSGAdiServerAddrType [Vdo SGAdi Server Addr Type] (tmnxVdoSGAdiServerAddrType)	int	The value of tmnxVdoSGAdiServerAddrType indicates the type of Ad Insert (ADI) server address represented by tmnxVdoSGAdiServerAddr.
vdoSGAdiServerUptime [Vdo SGAdi Server Uptime] (tmnxVdoSGAdiServerUptime)	long	The value of tmnxVdoSGAdiServerUptime indicates the time in seconds since the connection with Ad Insert (ADI) server was established.
vdoSGAdiSpliceReq [Vdo SGAdi Splice Req] (tmnxVdoSGAdiSpliceReq)	long	The value of tmnxVdoSGAdiSpliceReq indicates the total number of splice requests received from the Ad Insert (ADI) server.
vdoSGAdiSucAbortResp [Vdo SGAdi Suc Abort Resp] (tmnxVdoSGAdiSucAbortResp)	long	The value of tmnxVdoSGAdiSucAbortResp indicates the total number of successful abort responses sent to the Ad Insert (ADI) server.
vdoSGAdiSucAliveResp [Vdo SGAdi Suc Alive Resp] (tmnxVdoSGAdiSucAliveResp)	long	The value of tmnxVdoSGAdiSucAliveResp indicates the total number of successful alive messages sent to the Ad Insert (ADI) server.
vdoSGAdiSucCueResp [Vdo SGAdi Suc Cue Resp] (tmnxVdoSGAdiSucCueResp)	long	The value of tmnxVdoSGAdiSucCueResp indicates the total number of successful cue responses received from the Ad Insert (ADI) server.
vdoSGAdiSucInitResp [Vdo SGAdi Suc Init Resp] (tmnxVdoSGAdiSucInitResp)	long	The value of tmnxVdoSGAdiSucInitResp indicates the total number of successful init responses sent to the Ad Insert (ADI) server.
vdoSGAdiSucSpliceInCompResp [Vdo SGAdi Suc Splice In Comp Resp] (tmnxVdoSGAdiSucSpliceInCompResp)	long	The value of tmnxVdoSGAdiSucSpliceInCompResp indicates the total number of successful splice-in complete responses sent to the Ad Insert (ADI) server.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGAdiSucSpliceOutCompResp [Vdo SGAdi Suc Splice Out Comp Resp] (tmnxVdoSGAdiSucSpliceOutCompResp)	long	The value of tmnxVdoSGAdiSucSpliceOutCompResp indicates the total number of successful splice-out complete responses sent to the Ad Insert (ADI) server.
vdoSGAdiSucSpliceResp [Vdo SGAdi Suc Splice Resp] (tmnxVdoSGAdiSucSpliceResp)	long	The value of tmnxVdoSGAdiSucSpliceResp indicates the total number of successful splice responses sent to the Ad Insert (ADI) server.
vdoSGAdiUnSucAliveResp [Vdo SGAdi Un Suc Alive Resp] (tmnxVdoSGAdiUnSucAliveResp)	long	The value of tmnxVdoSGAdiUnSucAliveResp indicates the total number of unsuccessful alive messages sent to the Ad Insert (ADI) server.
vdoSGAdiUnknownSCTE30Req [Vdo SGAdi Unknown SCTE30 Req] (tmnxVdoSGAdiUnknownSCTE30Req)	long	The value of tmnxVdoSGAdiUnknownSCTE30Req indicates the total number of invalid Society of Cable Telecommunications Engineers 30 (SCTE-30) requests received from the Ad Insert (ADI) server.
vdoSGAdiUnsucAbortResp [Vdo SGAdi Unsuc Abort Resp] (tmnxVdoSGAdiUnsucAbortResp)	long	The value of tmnxVdoSGAdiUnsucAbortResp indicates the total number of unsuccessful abort responses sent to the Ad Insert (ADI) server.
vdoSGAdiUnsucCueResp [Vdo SGAdi Unsuc Cue Resp] (tmnxVdoSGAdiUnsucCueResp)	long	The value of tmnxVdoSGAdiUnsucCueResp indicates the total number of unsuccessful cue responses received from the Ad Insert (ADI) server.
vdoSGAdiUnsucInitResp [Vdo SGAdi Unsuc Init Resp] (tmnxVdoSGAdiUnsucInitResp)	long	The value of tmnxVdoSGAdiUnsucInitResp indicates the total number of unsuccessful init responses sent to the Ad Insert (ADI) server.
vdoSGAdiUnsucSpliceOutComRes [Vdo SGAdi Unsuc Splice Out Com Res] (tmnxVdoSGAdiUnsucSpliceOutComRes)	long	The value of tmnxVdoSGAdiUnsucSpliceOutComRes indicates the total number of unsuccessful splice-out complete responses sent to the Ad Insert (ADI) server.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGAdiUnsucSpliceResp [Vdo SGAdi Unsuc Splice Resp] (tmnxVdoSGAdiUnsucSpliceResp)	long	The value of tmnxVdoSGAdiUnsucSpliceResp indicates the total number of unsuccessful splice responses sent to the Ad Insert (ADI) server.
<p>VdoGrpSrcSpliceStats</p> <p>MIB entry name: tmnxVdoSGSpliceStatusEntry</p> <p>Entry description: An entry in the tmnxVdoSGSpliceStatusEntry. Each entry represents a splice request received by the splicer.</p> <p>Table description (for tmnxVdoSGSpliceStatusTable): The tmnxVdoSGSpliceStatusTable has an entry for each splice request received by the splicer. This table contains information about the splice request.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.ZoneAdiChl</p>		
vdoSGSpliceAbortReason [Vdo SGSsplice Abort Reason] (tmnxVdoSGSpliceAbortReason)	long	The value of tmnxVdoSGSpliceAbortReason indicates the reason if a splice operation has been aborted. If the value of this object is equal to 'none', then the splice has not been aborted.
vdoSGSpliceAdServerAddr [Vdo SGSsplice Ad Server Addr] (tmnxVdoSGSpliceAdServerAddr)	String	The value of tmnxVdoSGSpliceAdServerAddr indicates the address of the Ad Insert (ADI) server that issued the splice request.
vdoSGSpliceAdServerAddrType [Vdo SGSsplice Ad Server Addr Type] (tmnxVdoSGSpliceAdServerAddrType)	int	The value of tmnxVdoSGSpliceAdServerAddrType indicates the type of Ad Insert (ADI) server address represented by tmnxVdoSGSpliceAdServerAddr.
vdoSGSpliceBlkFramePTS [Vdo SGSsplice Blk Frame PTS] (tmnxVdoSGSpliceBlkFramePTS)	String	The value of tmnxVdoSGSpliceBlkFramePTS indicates the Presentation Timestamp (PTS) of the first black frame.
vdoSGSpliceDurationPlayed [Vdo SGSsplice Duration Played] (tmnxVdoSGSpliceDurationPlayed)	long	The value of tmnxVdoSGSpliceDurationPlayed indicates the splice duration, in seconds, played by the splicer.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGSpliceDurationReq [Vdo SGSplice Duration Req] (tmnxVdoSGSpliceDurationReq)	long	The value of tmnxVdoSGSpliceDurationReq indicates the splice duration, in seconds, of the ad requested by the Ad Insert (ADI) server.
vdoSGSpliceMaxAdPTS [Vdo SGSplice Max Ad PTS] (tmnxVdoSGSpliceMaxAdPTS)	String	The value of tmnxVdoSGSpliceMaxAdPTS indicates the maximum Presentation Timestamp (PTS) value of the last Group of Pictures (GOP) of ad stream (non-black frame).
vdoSGSpliceMinNwPTS [Vdo SGSplice Min Nw PTS] (tmnxVdoSGSpliceMinNwPTS)	String	The value of tmnxVdoSGSpliceMinNwPTS indicates the minimum Presentation Timestamp (PTS) value from the first Group of Pictures (GOP) of the network stream after the splice out has occurred.
vdoSGSpliceNumBlkFrames [Vdo SGSplice Num Blk Frames] (tmnxVdoSGSpliceNumBlkFrames)	long	The value of tmnxVdoSGSpliceNumBlkFrames indicates the number of black frames inserted.
vdoSGSplicePriorSessionId [Vdo SGSplice Prior Session Id] (tmnxVdoSGSplicePriorSessionId)	long	The value of tmnxVdoSGSplicePriorSessionId indicates the prior session id of the ad. If the value of this object is not equal to 0xFFFFFFFF, then this splice is a back-to-back ad insertion.
vdoSGSpliceRate [Vdo SGSplice Rate] (tmnxVdoSGSpliceRate)	long	The value of tmnxVdoSGSpliceRate indicates the rate of the ad stream, in kilo-bits per second (kbps), received by the splicer.
vdoSGSpliceSessionId [Vdo SGSplice Session Id] (tmnxVdoSGSpliceSessionId)	long	The value of tmnxVdoSGSpliceSessionId indicates the session ID of the ad request.
vdoSGSpliceSpliceInSeqNum [Vdo SGSplice Splice In Seq Num] (tmnxVdoSGSpliceSpliceInSeqNum)	long	The value of tmnxVdoSGSpliceSpliceInSeqNum indicates the sequence number at which the splice-in to the ad occurred.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoSGSpliceSpliceOutSeqNum [Vdo SGSsplice Splice Out Seq Num] (tmnxVdoSGSpliceSpliceOutSeqNum)	long	The value of tmnxVdoSGSpliceSpliceOutSeqNum indicates the sequence number at which the splice-out to the ad occurred.
vdoSGSpliceStartTime [Vdo SGSsplice Start Time] (tmnxVdoSGSpliceStartTime)	long	The value of tmnxVdoSGSpliceStartTime indicates the start time of splice in seconds.
vdoSGSpliceStatus [Vdo SGSsplice Status] (tmnxVdoSGSpliceStatus)	long	The value of tmnxVdoSGSpliceStatus indicates the status of this splice request.
<p>VdoGrpSrcStats</p> <p>MIB entry name: tmnxVdoGrpSrcStatEntry</p> <p>Entry description: An entry in the tmnxVdoGrpSrcStatTable. Each entry represents a source address for the corresponding multicast group.</p> <p>Table description (for tmnxVdoGrpSrcStatTable): tmnxVdoGrpSrcStatTable contains channel information and statistics for the multicast groups.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.AdiChI • service.ZoneAdiChI 		
vdoGrpSrcADIAAdminState [Vdo Grp Src ADIAAdmin State] (tmnxVdoGrpSrcADIAAdminState)	int	The value of tmnxVdoGrpSrcADIAAdminState indicates whether Ad Insertion is enabled on the video ISA.
vdoGrpSrcADICurrentState [Vdo Grp Src ADICurrent State] (tmnxVdoGrpSrcADICurrentState)	long	The value of tmnxVdoGrpSrcADICurrentState indicates whether the video ISA is transmitting network stream or ads.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcADIPATChanges [Vdo Grp Src ADIPATChanges] (tmnxVdoGrpSrcADIPATChanges)	long	The value of tmnxVdoGrpSrcADIPATChanges indicates the total number of Program Association Table (PAT) version changes.
vdoGrpSrcADIPATVersion [Vdo Grp Src ADIPATVersion] (tmnxVdoGrpSrcADIPATVersion)	long	The value of tmnxVdoGrpSrcADIPATVersion indicates the version of the Program Association Table (PAT).
vdoGrpSrcADIPMTChanges [Vdo Grp Src ADIPMTChanges] (tmnxVdoGrpSrcADIPMTChanges)	long	The value of tmnxVdoGrpSrcADIPMTChanges indicates the total number of Program Map Table (PMT) version changes.
vdoGrpSrcADIPMTVersion [Vdo Grp Src ADIPMTVersion] (tmnxVdoGrpSrcADIPMTVersion)	long	The value of tmnxVdoGrpSrcADIPMTVersion indicates the version of the Program Map Table (PMT).
vdoGrpSrcADIRxPackets [Vdo Grp Src ADIRx Packets] (tmnxVdoGrpSrcADIRxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcADIRxPackets indicates the total number of Ad Insert (ADI) packets received by the video ISA.
vdoGrpSrcADIRxSCTE35MsgDisc [Vdo Grp Src ADIRx SCTE35 Msg Disc] (tmnxVdoGrpSrcADIRxSCTE35MsgDisc)	long	The value of tmnxVdoGrpSrcADIRxSCTE35MsgDisc indicates the total number of Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA and discarded. SCTE-35 messages with unsupported commands and encrypted SCTE-35 messages are discarded.
vdoGrpSrcADIRxSCTE35MsgEnc [Vdo Grp Src ADIRx SCTE35 Msg Enc] (tmnxVdoGrpSrcADIRxSCTE35MsgEnc)	long	The value of tmnxVdoGrpSrcADIRxSCTE35MsgEnc indicates the total number of encrypted Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA.
vdoGrpSrcADIRxSCTE35MsgUnsup [Vdo Grp Src ADIRx SCTE35 Msg Unsup] (tmnxVdoGrpSrcADIRxSCTE35MsgUnsup)	long	The value of tmnxVdoGrpSrcADIRxSCTE35MsgUnsup indicates the total number of unsupported Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcADIRxSCTE35Msgs [Vdo Grp Src ADIRx SCTE35 Msgs] (tmnxVdoGrpSrcADIRxSCTE35Msgs)	long	The value of tmnxVdoGrpSrcADIRxSCTE35Msgs indicates the total number of Society of Cable Telecommunications Engineers (SCTE-35) messages received by the video ISA.
vdoGrpSrcADITxPackets [Vdo Grp Src ADITx Packets] (tmnxVdoGrpSrcADITxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcADITxPackets indicates the total number of Ad Insert (ADI) packets sent by the video ISA.
vdoGrpSrcADIUnsuppTSLenPkts [Vdo Grp Src ADIUnsupp TSLen Pkts] (tmnxVdoGrpSrcADIUnsuppTSLenPkts)	long	The value of tmnxVdoGrpSrcADIUnsuppTSLenPkts indicates the total number of data packets received whose size is not equal to 188 bytes. The value of this object is valid only when the corresponding tmnxVdoGrpADIServerState value is set to 'true'.
vdoGrpSrcAdminBW [Vdo Grp Src Admin BW] (tmnxVdoGrpSrcAdminBW)	long	The value of tmnxVdoGrpSrcAdminBW indicates the administrative bandwidth of the multicast group.
vdoGrpSrcAdminRTBufferSize [Vdo Grp Src Admin RTBuffer Size] (tmnxVdoGrpSrcAdminRTBufferSize)	long	The value of tmnxVdoGrpSrcAdminRTBufferSize indicates the number of milliseconds worth of channel packets to store for the Retransmission (RT) server.
vdoGrpSrcBufferSize [Vdo Grp Src Buffer Size] (tmnxVdoGrpSrcBufferSize)	long	The value of tmnxVdoGrpSrcBufferSize indicates the number of milliseconds worth of channel packets stored by the Retransmission (RT) server or Fast Channel Change (FCC) server on this channel.
vdoGrpSrcDupSeqNumber [Vdo Grp Src Dup Seq Number] (tmnxVdoGrpSrcDupSeqNumber)	long	The value of tmnxVdoGrpSrcDupSeqNumber indicates the total number of Real-time Transport Protocol (RTP) packets detected with a duplicate sequence number.
vdoGrpSrcDupSsrc [Vdo Grp Src Dup Ssrc] (tmnxVdoGrpSrcDupSsrc)	long	The value of tmnxVdoGrpSrcDupSsrc indicates the number of packets detected with a duplicate synchronization source (SSRC) identifier.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcFCCSvrAdminState [Vdo Grp Src FCCSvr Admin State] (tmnxVdoGrpSrcFCCSvrAdminState)	int	The value of tmnxVdoGrpSrcFCCSvrAdminState indicates whether the Fast Channel Change (FCC) server is enabled on this channel.
vdoGrpSrcFCCSvrChnlType [Vdo Grp Src FCCSvr Chnl Type] (tmnxVdoGrpSrcFCCSvrChnlType)	int	The value of tmnxVdoGrpSrcFCCSvrChnlType indicates the type of channel served by the Fast Channel Change (FCC) server.
vdoGrpSrcFCCSvrRxFCCReq [Vdo Grp Src FCCSvr Rx FCCReq] (tmnxVdoGrpSrcFCCSvrRxFCCReq)	long	The value of tmnxVdoGrpSrcFCCSvrRxFCCReq indicates the total number of Fast Channel Change (FCC) requests received by the FCC server.
vdoGrpSrcFCCSvrRxFailedReq [Vdo Grp Src FCCSvr Rx Failed Req] (tmnxVdoGrpSrcFCCSvrRxFailedReq)	long	The value of tmnxVdoGrpSrcFCCSvrRxFailedReq indicates the total number of failed requests at the Fast Channel Change (FCC) server.
vdoGrpSrcFCCSvrTxBytes [Vdo Grp Src FCCSvr Tx Bytes] (tmnxVdoGrpSrcFCCSvrTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcFCCSvrTxBytes indicates the total number of bytes sent by the Fast Channel Change (FCC) server.
vdoGrpSrcFCCSvrTxFCCReplies [Vdo Grp Src FCCSvr Tx FCCReplies] (tmnxVdoGrpSrcFCCSvrTxFCCReplies)	long	The value of tmnxVdoGrpSrcFCCSvrTxFCCReplies indicates the total number of Fast Channel Change (FCC) replies sent by the FCC server.
vdoGrpSrcFCCSvrTxPackets [Vdo Grp Src FCCSvr Tx Packets] (tmnxVdoGrpSrcFCCSvrTxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcFCCSvrTxPackets indicates the total number of packets sent by the Fast Channel Change (FCC) server.
vdoGrpSrcGroupAddress [Vdo Grp Src Group Address] (tmnxVdoGrpSrcGroupAddress)	String	The value of tmnxVdoGrpSrcGroupAddress indicates the IP multicast group address for which this entry contains information.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcGrpAddrType [Vdo Grp Src Grp Addr Type] (tmnxVdoGrpSrcGrpAddrType)	int	The value of tmnxVdoGrpSrcGrpAddrType indicates the type of IP multicast group address represented by tmnxVdoGrpSrcGroupAddress.
vdoGrpSrcRTClientAdminState [Vdo Grp Src RTClient Admin State] (tmnxVdoGrpSrcRTClientAdminState)	int	The value of tmnxVdoGrpSrcRTClientAdminState indicates the administrative state of the retransmission client.
vdoGrpSrcRTClientFailedReq [Vdo Grp Src RTClient Failed Req] (tmnxVdoGrpSrcRTClientFailedReq)	long	The value of tmnxVdoGrpSrcRTClientFailedReq indicates the total number of Retransmission (RT) requests that could not be generated by the RT client due to gaps in the sequence numbers.
vdoGrpSrcRTClientGapsDetectd [Vdo Grp Src RTClient Gaps Detectd] (tmnxVdoGrpSrcRTClientGapsDetectd)	long	The value of tmnxVdoGrpSrcRTClientGapsDetectd indicates the total number of gaps in the sequence numbers detected by the Retransmission (RT) client.
vdoGrpSrcRTClientRTSvrPort [Vdo Grp Src RTClient RTSvr Port] (tmnxVdoGrpSrcRTClientRTSvrPort)	long	The value of tmnxVdoGrpSrcRTClientRTSvrPort indicates the Retransmission (RT) server port for this channel.
vdoGrpSrcRTClientRxReTxBytes [Vdo Grp Src RTClient Rx Re Tx Bytes] (tmnxVdoGrpSrcRTClientRxReTxBytes)	java. math. BigInte- ger	The value of tmnxVdoGrpSrcRTClientRxReTxBytes indicates the total number of retransmitted bytes received by the Retransmission (RT) client.
vdoGrpSrcRTClientRxReTxPkts [Vdo Grp Src RTClient Rx Re Tx Pkts] (tmnxVdoGrpSrcRTClientRxReTxPkts)	java. math. BigInte- ger	The value of tmnxVdoGrpSrcRTClientRxReTxPkts indicates the total number of retransmitted packets received by the Retransmission (RT) client.
vdoGrpSrcRTClientTxRTReq [Vdo Grp Src RTClient Tx RTReq] (tmnxVdoGrpSrcRTClientTxRTReq)	long	The value of tmnxVdoGrpSrcRTClientTxRTReq indicates the total number of Retransmission (RT) requests sent by the RT client.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcRTClientTxRTReqReTx [Vdo Grp Src RTClient Tx RTReq Re Tx] (tmnxVdoGrpSrcRTClientTxRTReqReTx)	long	The value of tmnxVdoGrpSrcRTClientTxRTReqReTx indicates the total number of repeat Retransmission (RT) requests attempted by the RT client.
vdoGrpSrcRTCIntRTSvrAddr [Vdo Grp Src RTCInt RTSvr Addr] (tmnxVdoGrpSrcRTCIntRTSvrAddr)	String	The value of tmnxVdoGrpSrcRTCIntRTSvrAddr indicates the address of the Retransmission (RT) server for this channel.
vdoGrpSrcRTCIntRTSvrAddrType [Vdo Grp Src RTCInt RTSvr Addr Type] (tmnxVdoGrpSrcRTCIntRTSvrAddrType)	int	The value of tmnxVdoGrpSrcRTCIntRTSvrAddrType indicates the type of address represented by tmnxVdoGrpSrcRTCIntRTSvrAddr.
vdoGrpSrcRTSvrAdminState [Vdo Grp Src RTSvr Admin State] (tmnxVdoGrpSrcRTSvrAdminState)	int	The value of tmnxVdoGrpSrcRTSvrAdminState indicates the administrative state of the Retransmission (RT) server.
vdoGrpSrcRTSvrRtpPktsReq [Vdo Grp Src RTSvr Rtp Pkts Req] (tmnxVdoGrpSrcRTSvrRtpPktsReq)	long	The value of tmnxVdoGrpSrcRTSvrRtpPktsReq indicates the total number of Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this channel.
vdoGrpSrcRTSvrRxFailedReq [Vdo Grp Src RTSvr Rx Failed Req] (tmnxVdoGrpSrcRTSvrRxFailedReq)	long	The value of tmnxVdoGrpSrcRTSvrRxFailedReq indicates the total number of failed requests at the Retransmission (RT) server due to congestion or lack of resources.
vdoGrpSrcRTSvrRxRTReq [Vdo Grp Src RTSvr Rx RTReq] (tmnxVdoGrpSrcRTSvrRxRTReq)	long	The value of tmnxVdoGrpSrcRTSvrRxRTReq indicates the total number of RT requests received by the Retransmission (RT) server.
vdoGrpSrcRTSvrTxBytes [Vdo Grp Src RTSvr Tx Bytes] (tmnxVdoGrpSrcRTSvrTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcRTSvrTxBytes indicates the total number of bytes sent by the Retransmission (RT) server.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcRTSrvrTxPackets [Vdo Grp Src RTSrvr Tx Packets] (tmnxVdoGrpSrcRTSrvrTxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcRTSrvrTxPackets indicates the total number of packets sent by the Retransmission (RT) server.
vdoGrpSrcRTSrvrTxRTReplies [Vdo Grp Src RTSrvr Tx RTReplies] (tmnxVdoGrpSrcRTSrvrTxRTReplies)	long	The value of tmnxVdoGrpSrcRTSrvrTxRTReplies indicates the total number of Retransmission (RT) replies sent by the RT server.
vdoGrpSrcRxBytes [Vdo Grp Src Rx Bytes] (tmnxVdoGrpSrcRxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcRxBytes indicates the total number of bytes received on this multicast channel.
vdoGrpSrcRxDupSsrcDrops [Vdo Grp Src Rx Dup Ssrc Drops] (tmnxVdoGrpSrcRxDupSsrcDrops)	long	The value of tmnxVdoGrpSrcRxDupSsrcDrops indicates the number of receive-packets dropped with a duplicate synchronization source (SSRC) identifier.
vdoGrpSrcRxInvalidPackets [Vdo Grp Src Rx Invalid Packets] (tmnxVdoGrpSrcRxInvalidPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcRxInvalidPackets indicates the total number of invalid packets received on this multicast channel.
vdoGrpSrcRxPackets [Vdo Grp Src Rx Packets] (tmnxVdoGrpSrcRxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcRxPackets indicates the total number of packets received on this multicast channel.
vdoGrpSrcSSRCId [Vdo Grp Src SSRCId] (tmnxVdoGrpSrcSSRCId)	long	The value of tmnxVdoGrpSrcSSRCId indicates the synchronization source (SSRC) identifier carried in the Real-time Transport Protocol (RTP) header to identify the source of a stream of RTP packets.
vdoGrpSrcSourceAddress [Vdo Grp Src Source Address] (tmnxVdoGrpSrcSourceAddress)	String	The value of tmnxVdoGrpSrcSourceAddress indicates the IP multicast source address for which this entry contains information.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcSrcAddrType [Vdo Grp Src Src Addr Type] (tmnxVdoGrpSrcSrcAddrType)	int	The value of tmnxVdoGrpSrcSrcAddrType indicates the type of IP multicast source address represented by tmnxVdoGrpSrcSourceAddress.
vdoGrpSrcStreamType [Vdo Grp Src Stream Type] (tmnxVdoGrpSrcStreamType)	long	The value of tmnxVdoGrpSrcStreamType indicates the type of stream being transmitted from the video ISA perspective. Network stream is the stream ingressing the video ISA and being stored by it. Zone stream is the stream egressing the video ISA into which AD streams will be inserted.
vdoGrpSrcTxBytes [Vdo Grp Src Tx Bytes] (tmnxVdoGrpSrcTxBytes)	java. math. BigInteger	The value of tmnxVdoGrpSrcTxBytes indicates the total number of bytes transmitted on this multicast channel.
vdoGrpSrcTxFailedPackets [Vdo Grp Src Tx Failed Packets] (tmnxVdoGrpSrcTxFailedPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcTxFailedPackets indicates the total number of failures during the transmission of packets on this multicast channel. Failure happens when the packet to be sent is not stored in the video cache.
vdoGrpSrcTxPackets [Vdo Grp Src Tx Packets] (tmnxVdoGrpSrcTxPackets)	java. math. BigInteger	The value of tmnxVdoGrpSrcTxPackets indicates the total number of packets transmitted on this multicast channel.
vdoGrpSrcUDPDestPort [Vdo Grp Src UDPDest Port] (tmnxVdoGrpSrcUDPDestPort)	long	The value of tmnxVdoGrpSrcUDPDestPort indicates the UDP destination port in the received RTP multicast stream.
vdoGrpSrcUDPSrcPort [Vdo Grp Src UDPSrc Port] (tmnxVdoGrpSrcUDPSrcPort)	long	The value of tmnxVdoGrpSrcUDPSrcPort indicates the UDP source port in the received RTP multicast stream.
vdoGrpSrcUptime [Vdo Grp Src Uptime] (tmnxVdoGrpSrcUptime)	long	The value of tmnxVdoGrpSrcUptime indicates the time since this source group entry was created.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdoGrpSrcVdoGrpId [Vdo Grp Src Vdo Grp Id] (tmnxVdoGrpSrcVdoGrpId)	long	The value of tmnxVdoGrpSrcVdoGrpId indicates the identifier of the video group.
<p>VdolfStats MIB entry name: tmnxVdolfStatEntry Entry description: An entry in the tmnxVdolfStatTable. Each row entry represents an IP address assigned to a video interface. Table description (for tmnxVdolfStatTable): tmnxVdolfStatTable contains information and statistics for each video interface configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: service.VideoflpAddress</p>		
vdolfScte30InitSessions [Vdo If Scte 30 Init Sessions] (tmnxVdolfScte30InitSessions)	long	The value of tmnxVdolfScte30InitSessions indicates the total number of scte30 init sessions with the Ad Insert (ADI) servers for this interface.
vdolfScte30TcpSessions [Vdo If Scte 30 Tcp Sessions] (tmnxVdolfScte30TcpSessions)	long	The value of tmnxVdolfScte30TcpSessions indicates the total number of scte30 tcp sessions with the Ad Insert (ADI) servers for this interface.
vdolfStatFCCSrRxHdFCCReq [Vdo If Stat FCCSr Rx Hd FCCReq] (tmnxVdolfStatFCCSrRxHdFCCReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxHdFCCReq indicates the total number of Fast Channel Change (FCC) requests received from High Definition (HD) channels on this interface.
vdolfStatFCCSrRxHdFailedReq [Vdo If Stat FCCSr Rx Hd Failed Req] (tmnxVdolfStatFCCSrRxHdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxHdFailedReq indicates the total number of failed Fast Channel Change (FCC) requests received from High Definition (HD) channels on this interface.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatFCCSrRxPipFCCReq [Vdo If Stat FCCSr Rx Pip FCCReq] (tmnxVdolfStatFCCSrRxPipFCCReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxPipFCCReq indicates the total number of Fast Channel Change (FCC) requests received from Picture-In-Picture (PIP) channels on this interface.
vdolfStatFCCSrRxPipFailedReq [Vdo If Stat FCCSr Rx Pip Failed Req] (tmnxVdolfStatFCCSrRxPipFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxPipFailedReq indicates the total number of failed Fast Channel Change (FCC) requests received from Picture-In-Picture (PIP) channels on this interface.
vdolfStatFCCSrRxSdFCCReq [Vdo If Stat FCCSr Rx Sd FCCReq] (tmnxVdolfStatFCCSrRxSdFCCReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxSdFCCReq indicates the total number of Fast Channel Change (FCC) requests received from Standard Definition (SD) channels on this interface.
vdolfStatFCCSrRxSdFailedReq [Vdo If Stat FCCSr Rx Sd Failed Req] (tmnxVdolfStatFCCSrRxSdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrRxSdFailedReq indicates the total number of failed Fast Channel Change (FCC) requests received from Standard Definition (SD) channels on this interface.
vdolfStatFCCSrTxHdBytes [Vdo If Stat FCCSr Tx Hd Bytes] (tmnxVdolfStatFCCSrTxHdBytes)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxHdBytes indicates the total number of High Definition (HD) channel bytes sent from this interface.
vdolfStatFCCSrTxHdFCCReplies [Vdo If Stat FCCSr Tx Hd FCCReplies] (tmnxVdolfStatFCCSrTxHdFCCReplies)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxHdFCCReplies indicates the total number of High Definition (HD) channel Fast Channel Change (FCC) replies sent from this interface.
vdolfStatFCCSrTxHdPackets [Vdo If Stat FCCSr Tx Hd Packets] (tmnxVdolfStatFCCSrTxHdPackets)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxHdPackets indicates the total number of High Definition (HD) channel packets sent from this interface.
vdolfStatFCCSrTxPipBytes [Vdo If Stat FCCSr Tx Pip Bytes] (tmnxVdolfStatFCCSrTxPipBytes)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxPipBytes indicates the total number of Picture-In-Picture (PIP) channel bytes sent from this interface.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatFCCSrTxPipFCCRplies [Vdo If Stat FCCSr Tx Pip FCCRplies] (tmnxVdolfStatFCCSrTxPipFCCRplies)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxPipFCCRplies indicates the total number of Picture-In-Picture (PIP) channel Fast Channel Change (FCC) replies sent from this interface.
vdolfStatFCCSrTxPipPackets [Vdo If Stat FCCSr Tx Pip Packets] (tmnxVdolfStatFCCSrTxPipPackets)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxPipPackets indicates the total number of Picture-In-Picture (PIP) channel packets sent from this interface.
vdolfStatFCCSrTxSdBytes [Vdo If Stat FCCSr Tx Sd Bytes] (tmnxVdolfStatFCCSrTxSdBytes)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxSdBytes indicates the total number of Standard Definition (SD) channel bytes sent from this interface.
vdolfStatFCCSrTxSdFCCReplies [Vdo If Stat FCCSr Tx Sd FCCReplies] (tmnxVdolfStatFCCSrTxSdFCCReplies)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxSdFCCReplies indicates the total number of Standard Definition (SD) channel Fast Channel Change (FCC) replies sent from this interface.
vdolfStatFCCSrTxSdPackets [Vdo If Stat FCCSr Tx Sd Packets] (tmnxVdolfStatFCCSrTxSdPackets)	java. math. BigInteger	The value of tmnxVdolfStatFCCSrTxSdPackets indicates the total number of Standard Definition (SD) channel packets sent from this interface.
vdolfStatHdFCCServerMode [Vdo If Stat Hd FCCServer Mode] (tmnxVdolfStatHdFCCServerMode)	int	The value of tmnxVdolfStatHdFCCServerMode indicates the mode of the High Definition (HD) Fast Channel Change (FCC) server on this interface.
vdolfStatHdRTServerState [Vdo If Stat Hd RTServer State] (tmnxVdolfStatHdRTServerState)	boolean	The value of tmnxVdolfStatHdRTServerState indicates whether the High Definition (HD) retransmission server is enabled on this interface.
vdolfStatPipFCCServerMode [Vdo If Stat Pip FCCServer Mode] (tmnxVdolfStatPipFCCServerMode)	int	The value of tmnxVdolfStatPipFCCServerMode indicates the mode of the Picture-in-Picture (PIP) Fast Channel Change (FCC) server on this interface.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatPipRTServerState [Vdo If Stat Pip RTServer State] (tmnxVdolfStatPipRTServerState)	boolean	The value of tmnxVdolfStatPipRTServerState indicates whether the Picture-in-Picture (PIP) retransmission server is enabled on this interface.
vdolfStatRTSvrHdRtpPktsReq [Vdo If Stat RTSvr Hd Rtp Pkts Req] (tmnxVdolfStatRTSvrHdRtpPktsReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrHdRtpPktsReq indicates the total number of High Definition (HD) channel Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this interface.
vdolfStatRTSvrPipRtpPktsReq [Vdo If Stat RTSvr Pip Rtp Pkts Req] (tmnxVdolfStatRTSvrPipRtpPktsReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrPipRtpPktsReq indicates the total number of Picture-In-Picture (PIP) channel Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this interface.
vdolfStatRTSvrRxHdFailedReq [Vdo If Stat RTSvr Rx Hd Failed Req] (tmnxVdolfStatRTSvrRxHdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxHdFailedReq indicates the total number of failed Retransmission (RT) requests received from High Definition (HD) channels on this interface.
vdolfStatRTSvrRxHdRTReq [Vdo If Stat RTSvr Rx Hd RTReq] (tmnxVdolfStatRTSvrRxHdRTReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxHdRTReq indicates the total number of Retransmission (RT) requests received from High Definition (HD) channels on this interface.
vdolfStatRTSvrRxPipFailedReq [Vdo If Stat RTSvr Rx Pip Failed Req] (tmnxVdolfStatRTSvrRxPipFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxPipFailedReq indicates the total number of failed Retransmission (RT) requests received from Picture-In-Picture (PIP) channels on this interface.
vdolfStatRTSvrRxPipRTReq [Vdo If Stat RTSvr Rx Pip RTReq] (tmnxVdolfStatRTSvrRxPipRTReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxPipRTReq indicates the total number of Retransmission (RT) requests received from Picture-In-Picture (PIP) channels on this interface.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatRTSvrRxSdFailedReq [Vdo If Stat RTSvr Rx Sd Failed Req] (tmnxVdolfStatRTSvrRxSdFailedReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxSdFailedReq indicates the total number of failed Retransmission (RT) requests received from Standard Definition (SD) channels on this interface.
vdolfStatRTSvrRxSdRTReq [Vdo If Stat RTSvr Rx Sd RTReq] (tmnxVdolfStatRTSvrRxSdRTReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrRxSdRTReq indicates the total number of Retransmission (RT) requests received from Standard Definition (SD) channels on this interface.
vdolfStatRTSvrSdRtpPktsReq [Vdo If Stat RTSvr Sd Rtp Pkts Req] (tmnxVdolfStatRTSvrSdRtpPktsReq)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrSdRtpPktsReq indicates the total number of Standard Definition (SD) channel Real-time Transport Protocol (RTP) packets requested in the Real-time Transport Control Protocol (RTCP) feedback (FB) messages received on this interface.
vdolfStatRTSvrTxHdBytes [Vdo If Stat RTSvr Tx Hd Bytes] (tmnxVdolfStatRTSvrTxHdBytes)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxHdBytes indicates the total number of High Definition (HD) channel bytes sent from this interface.
vdolfStatRTSvrTxHdPackets [Vdo If Stat RTSvr Tx Hd Packets] (tmnxVdolfStatRTSvrTxHdPackets)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxHdPackets indicates the total number of High Definition (HD) channel packets sent from this interface.
vdolfStatRTSvrTxHdRTReplies [Vdo If Stat RTSvr Tx Hd RTReplies] (tmnxVdolfStatRTSvrTxHdRTReplies)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxHdRTReplies indicates the total number of High Definition (HD) channel Retransmission (RT) replies sent from this interface.
vdolfStatRTSvrTxPipBytes [Vdo If Stat RTSvr Tx Pip Bytes] (tmnxVdolfStatRTSvrTxPipBytes)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxPipBytes indicates the total number of Picture-In-Picture (PIP) channel bytes sent from this interface.

Table 573 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vdolfStatRTSvrTxPipPackets [Vdo If Stat RTSvr Tx Pip Packets] (tmnxVdolfStatRTSvrTxPipPackets)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxPipPackets indicates the total number of Picture-In-Picture (PIP) channel packets sent from this interface.
vdolfStatRTSvrTxPipRTReplies [Vdo If Stat RTSvr Tx Pip RTReplies] (tmnxVdolfStatRTSvrTxPipRTReplies)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxPipRTReplies indicates the total number of Picture-In-Picture (PIP) channel Retransmission (RT) replies sent from this interface.
vdolfStatRTSvrTxSdBytes [Vdo If Stat RTSvr Tx Sd Bytes] (tmnxVdolfStatRTSvrTxSdBytes)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxSdBytes indicates the total number of Standard Definition (SD) channel bytes sent from this interface.
vdolfStatRTSvrTxSdPackets [Vdo If Stat RTSvr Tx Sd Packets] (tmnxVdolfStatRTSvrTxSdPackets)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxSdPackets indicates the total number of Standard Definition (SD) channel packets sent from this interface.
vdolfStatRTSvrTxSdRTReplies [Vdo If Stat RTSvr Tx Sd RTReplies] (tmnxVdolfStatRTSvrTxSdRTReplies)	java. math. BigInteger	The value of tmnxVdolfStatRTSvrTxSdRTReplies indicates the total number of Standard Definition (SD) channel Retransmission (RT) replies sent from this interface.
vdolfStatSdFCCServerMode [Vdo If Stat Sd FCCServer Mode] (tmnxVdolfStatSdFCCServerMode)	int	The value of tmnxVdolfStatSdFCCServerMode indicates the mode of the Standard Definition (SD) Fast Channel Change (FCC) server on this interface.
vdolfStatSdRTServerState [Vdo If Stat Sd RTServer State] (tmnxVdolfStatSdRTServerState)	boolean	The value of tmnxVdolfStatSdRTServerState indicates whether the Standard Definition (SD) retransmission server is enabled on this interface.
vdolfStatTxFailedPackets [Vdo If Stat Tx Failed Packets] (tmnxVdolfStatTxFailedPackets)	java. math. BigInteger	The value of tmnxVdolfStatTxFailedPackets indicates the total number of failures during the transmission of packets from this video interface. Failure happens when the packet to be sent is not stored in the video cache.

Table 574 sitesec statistics

droppedPackets [Dropped Packets] (tCpmlpFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmlpFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmlpFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmlpFilterEntry with the same index.
<p>CpmMacFilterStats</p> <p>MIB entry name: tCpmMacFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmMacFilterEntry indexed by the same tCpmMacFilterEntryId. Entries are created when tCpmMacFilterEntry rows are created.</p> <p>Table description (for tCpmMacFilterStatsTable): The tCpmMacFilterStatsTable has a stats entry of the CPM Mac filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmMacFilterEntry</p>		

Table 574 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmMacFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmMacFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmMacFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmMacFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criter is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesec.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesec.SiteSystemSecurityPublicKey</p>		

Table 574 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.
RadiusNotifyStats MIB entry name: tmnxSubRadNotifyStatsObjects Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
accepted [Accepted] (tmnxSubRadNotifyStatsAccepted)	long	The value of tmnxSubRadNotifyStatsAccepted indicates the number of notify Change-of-Authorization requests accepted.
badAuthentication [Bad Authentication] (tmnxSubRadNotifyStatsBadAuth)	long	The value of tmnxSubRadNotifyStatsBadAuth indicates the number of notify Change-of-Authorization requests rejected because of authentication failure.
invalidMsg [Invalid Msg] (tmnxSubRadNotifyStatsInvalidMsg)	long	The value of tmnxSubRadNotifyStatsInvalidMsg indicates the number of notify Change-of-Authorization requests rejected because of decode errors.
noNotification [No Notification] (tmnxSubRadNotifyStatsNoNotify)	long	The value of tmnxSubRadNotifyStatsNoNotify indicates the number of notify Change-of-Authorization requests rejected due to lack of notification process.

Table 574 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noResource [No Resource] (tmnxSubRadNotifyStatsNoResource)	long	The value of tmnxSubRadNotifyStatsNoResource indicates the number of notify Change-of-Authorization requests rejected due to lack of resources.
received [Received] (tmnxSubRadNotifyStatsReceived)	long	The value of tmnxSubRadNotifyStatsReceived indicates the number of notify Change-of-Authorization requests received.
rejected [Rejected] (tmnxSubRadNotifyStatsRejected)	long	The value of tmnxSubRadNotifyStatsRejected indicates the number of notify Change-of-Authorization requests rejected.
unknownHost [Unknown Host] (tmnxSubRadNotifyStatsUnknownHost)	long	The value of tmnxSubRadNotifyStatsUnknownHost indicates the number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id.

Table 576 srrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceStats</p> <p>MIB entry name: tmnxSrrpStatsEntry</p> <p>Entry description: Each row entry represents the statistics for a particular SRRP instance tied to a service group interface. Entries are created/deleted in conjunction with entries in the tmnxSrrpOperTable</p> <p>Table description (for tmnxSrrpStatsTable): The tmnxSrrpStatsTable has an entry for each Subscriber Router Redundancy Protocol instance configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: srrp.Instance</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxSrrpStatsAdvIntDiscards)	long	The value for tmnxSrrpStatsAdvIntDiscards indicates the total number of SRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (tmnxSrrpStatsAdvIntErrors)	long	The value for tmnxSrrpStatsAdvIntErrors indicates the total number of SRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (tmnxSrrpStatsAdvRcvd)	long	The value for tmnxSrrpStatsAdvRcvd indicates the total number of SRRP advertisements received by this virtual router.
advertiseSent [Advertise Sent] (tmnxSrrpStatsAdvSent)	long	The value for tmnxSrrpStatsAdvSent indicates the total number of SRRP advertisements sent by this virtual router.
becomeBackupRouting [Become Backup Routing] (tmnxSrrpStatsBecomeBackupRouting)	long	The value for tmnxSrrpStatsBecomeBackupRouting indicates the total number of times that the virtual router's state has transitioned to backup routing state.

Table 576 srrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeBackupShunt [Become Backup Shunt] (tmnxSrrpStatsBecomeBackupShunt)	long	The value for tmnxSrrpStatsBecomeBackupShunt indicates the total number of times that the virtual router's state has transitioned to backup shunt.
becomeMaster [Become Master] (tmnxSrrpStatsBecomeMaster)	long	The value for tmnxSrrpStatsBecomeMaster indicates the total number of times that the virtual router's state has transitioned to master.
becomeNonMaster [Become Non Master] (tmnxSrrpStatsBecomeNonMaster)	long	The value for tmnxSrrpStatsBecomeNonMaster indicates the total number times that the virtual router's state has transitioned from master to a non-master state.
masterChanges [Master Changes] (tmnxSrrpStatsMasterChanges)	long	The value for tmnxSrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxSrrpStatsPreemptEvents)	long	The value for tmnxSrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tmnxSrrpStatsPreemptedEvents)	long	The value for tmnxSrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (tmnxSrrpStatsPriZeroPktsSent)	long	The value for tmnxSrrpStatsPriZeroPktsSent indicates the total number of SRRP packets sent by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (tmnxSrrpStatsPriZeroPktsRcvd)	long	The value for tmnxSrrpStatsPriZeroPktsRcvd indicates the total number of SRRP packets received by the virtual router with a priority of '0'.

Table 577 subscrauth statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PolicyStats</p> <p>MIB entry name: tmnxSubAuthPlcyStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a subscriber authentication policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAuthPlcyStatsTable): The tmnxSubAuthPlcyStatsTable has an entry for each subscriber authentication policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: subscrauth.Policy</p>		
rejectedAuthentications [Rejected Authentications] (tmnxSubAuthPlcyReject)	long	The value of tmnxSubAuthPlcyReject indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were rejected by the authentication. Note that not all requests are therefore forwarded to radius. If several requests are sent in a short timeframe, only the first one is sent to radius.
rejectedRadiusFallbackAuthentications [Rejected Radius Fallback Authentications] (tmnxSubAuthPlcyFallbackReject)	long	The value of tmnxSubAuthPlcyReject indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were rejected by the fallback mechanism.
successfulAuthentications [Successful Authentications] (tmnxSubAuthPlcySuccess)	long	The value of tmnxSubAuthPlcySuccess indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were authenticated successfully. Note that not all requests are therefore forwarded to radius. If several requests are sent in a short timeframe, only the first one is sent to radius.
successfulRadiusFallbackAuthentications [Successful Radius Fallback Authentications] (tmnxSubAuthPlcyFallbackSuccess)	long	The value of tmnxSubAuthPlcySuccess indicates how many subscriber messages (e.g. DHCP, PPPoE, ...) were authenticated successfully by the fallback mechanism.

Table 577 subscrauth statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RadiusEntryStats</p> <p>MIB entry name: tmnxSubAuthPlcyRadStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a specific radius server in a subscriber authentication policy in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxSubAuthPlcyRadStatsTable): The tmnxSubAuthPlcyStatsTable has an entry for each subscriber authentication policy configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: subscrauth.RadiusEntry</p>		
failedAuthenticationOverloadRequests [Failed Authentication Overload Requests] (tmnxSubAuthPlcyRadOvrlSendFail)	long	The value of tmnxSubAuthPlcyRadOvrlSendFail indicates how many authentication requests failed because the packet could not be sent out while the RADIUS server was in overload.
failedAuthenticationRequests [Failed Authentication Requests] (tmnxSubAuthPlcyRadSendFail)	long	The value of tmnxSubAuthPlcyRadSendFail indicates how many authentication requests failed because the packet could not be sent out.
md5VerificationFailedRequests [Md 5 Verification Failed Requests] (tmnxSubAuthPlcyRadMd5Fail)	long	The value of tmnxSubAuthPlcyRadMd5Fail indicates how many times the MD5 verification failed on a msg from this radius server.
pendingAuthenticationRequest [Pending Authentication Request] (tmnxSubAuthPlcyRadPending)	long	The value of tmnxSubAuthPlcyRadPending indicates how many authentication requests are currently pending.
rejectedAuthenticationRequests [Rejected Authentication Requests] (tmnxSubAuthPlcyRadReject)	long	The value of tmnxSubAuthPlcyRadReject indicates how many authentication requests were rejected by this radius server.
successfulAuthenticationRequests [Successful Authentication Requests] (tmnxSubAuthPlcyRadSuccess)	long	The value of tmnxSubAuthPlcyRadSuccess indicates how many authentication requests were accepted by this radius server.

Table 577 subscrauth statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timedOutAuthenticationRequests [Timed Out Authentication Requests] (tmnxSubAuthPlcyRadTimeout)	long	The value of tmnxSubAuthPlcyRadTimeout indicates how many times this radius did not reply to an authentication request within the timeout.

Table 578 svq statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CustMultiSvcSiteEgrAggrScdrPlcyStats</p> <p>MIB entry name: custMultiSvcSiteEgrStatsEntry</p> <p>Entry description: Egress statistics about a specific customer multi service site egress scheduler.</p> <p>Table description (for custMultiSvcSiteEgrStatsTable): A table that contains egress QoS scheduler statistics for the customer multi service site.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: svq.AggregationScheduler</p>		
forwardedOctets [Forwarded Octets] (custEgrQoSStatsForwardedOctets)	java. math. BigInteger	The value of the object custEgrQoSStatsForwardedOctets indicates the number of forwarded octets, as determined by the customer multi service site egress scheduler policy.
forwardedPackets [Forwarded Packets] (custEgrQoSStatsForwardedPackets)	java. math. BigInteger	The value of the object custEgrQoSStatsForwardedPackets indicates number of forwarded packets, as determined by the customer multi service site egress scheduler policy.
schedulerName [Scheduler Name] (custEgrQoSStatsName)	String	The index of the egress QoS scheduler of this customer multi service site.
<p>CustMultiSvcSiteEgrSchedPlcyPortStats</p> <p>MIB entry name: custMultiSvcSiteEgrSchedPlcyPortStatsEntry</p> <p>Entry description: Each entry represents the egress statistics about a specific customer multi service site egress scheduler. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>BsxSpokeSdpBindingCustRecProtStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. Each row contains the application assurance per-subscriber statistics collected for the subscriber. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: svt.SpokeSdpBinding</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubActFlwsFmSb)	long	The value of tmnxBsxStatAaSubActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubActFlwsToSb)	long	The value of tmnxBsxStatAaSubActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubLngDurFlws.
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubMedDurFlws.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubHCFIwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubHCFIwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubHCFIwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubHCFIwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCFIwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is the 64-bit version of tmnxBsxStatAaSubFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmFmSb.
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyFmSb.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.
statsInterval [Stats Interval] (tmnxBsxAaSubStatsInterval)	int	The tmnxBsxAaSubStatsInterval specifies the interval for the retrieval of application assurance subscriber statistics.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlwDur.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlows [Term Flows] (tmnxBsxStatAaSubHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubTermFlws.
<p>BsxSpokeSdpBindingStudyAppStats</p> <p>MIB entry name: tmnxBsxStatAaSubEntry</p> <p>Entry description: Each tmnxBsxStatAaSubEntry contains the application assurance per-subscriber statistics for a combination of group, partition, statistics interval, subscriber, statistics type, and statistics name.</p> <p>Table description (for tmnxBsxStatAaSubTable): The tmnxBsxStatAaSubTable contains an entry for each application-assurance subscriber for each statistics type within a group, partition and statistics interval. A subscriber is uniquely identified by a tmnxBsxAaSubscriberType and tmnxBsxAaSubscriber.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: svt.SpokeSdpBinding</p>		
aaSubscriber [Aa Subscriber] (tmnxBsxAaSubscriber)	String	The Application Assurance Subscriber identifier. The format of this object is determined by the value of the tmnxBsxAaSubscriberType.
activeFlowsFromSub [Active Flows From Sub] (tmnxBsxStatAaSubSdyActFlwsFmSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsFmSb indicates the number of allowed flows in the subscriber to network direction that are active.
activeFlowsToSub [Active Flows To Sub] (tmnxBsxStatAaSubSdyActFlwsToSb)	long	The value of tmnxBsxStatAaSubSdyActFlwsToSb indicates the number of allowed flows in the network to subscriber direction that are active.
durationFlowsLong [Duration Flows Long] (tmnxBsxStatAaSubSdyHCLngDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCLngDurFlws indicates the total number of flows with a duration greater than 180 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyLNgDurFlws.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
durationFlowsMedium [Duration Flows Medium] (tmnxBsxStatAaSubSdyHCMedDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCMedDurFlws indicates the total number of flows with a duration less than or equal to 180 seconds, but greater than 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyMedDurFlws.
durationFlowsShort [Duration Flows Short] (tmnxBsxStatAaSubSdyHCShrtDurFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCShrtDurFlws indicates the total number of flows with a duration less than or equal to 30 seconds, that have completed. This object is a 64-bit version of tmnxBsxStatAaSubSdyShrtDurFlws.
flowsAdmitFromSub [Flows Admit From Sub] (tmnxBsxStatAaSubSdyHCFlwsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsAdmFmSb indicates the total number of flows permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmFmSb.
flowsAdmitToSub [Flows Admit To Sub] (tmnxBsxStatAaSubSdyHCFlwsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsAdmToSb indicates the total number of flows permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsAdmToSb.
flowsDenyFromSub [Flows Deny From Sub] (tmnxBsxStatAaSubSdyHCFlwsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsDnyFmSb indicates the total number of flows that dropped subsequent packets in the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyFmSb.
flowsDenyToSub [Flows Deny To Sub] (tmnxBsxStatAaSubSdyHCFlwsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCFlwsDnyToSb indicates the total number of flows that dropped subsequent packets in the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyFlwsDnyToSb.
octsAdmitFromSub [Octs Admit From Sub] (tmnxBsxStatAaSubSdyHCOctsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmFmSb indicates the total number of bytes permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmFmSb.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
octsAdmitToSub [Octs Admit To Sub] (tmnxBsxStatAaSubSdyHCOctsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsAdmToSb indicates the total number of bytes permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsAdmToSb.
octsDenyFromSub [Octs Deny From Sub] (tmnxBsxStatAaSubSdyHCOctsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyFmSb indicates the total number of bytes dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyFmSb.
octsDenyToSub [Octs Deny To Sub] (tmnxBsxStatAaSubSdyHCOctsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCOctsDnyToSb indicates the total number of bytes dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyOctsDnyToSb.
pktsAdmitFromSub [Pkts Admit From Sub] (tmnxBsxStatAaSubSdyHCPktsAdmFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmFmSb indicates the total number of packets permitted for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmFmSb.
pktsAdmitToSub [Pkts Admit To Sub] (tmnxBsxStatAaSubSdyHCPktsAdmToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsAdmToSb indicates the total number of packets permitted for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsAdmToSb.
pktsDenyFromSub [Pkts Deny From Sub] (tmnxBsxStatAaSubSdyHCPktsDnyFmSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyFmSb indicates the total number of packets dropped for the subscriber to network direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyFmSb.
pktsDenyToSub [Pkts Deny To Sub] (tmnxBsxStatAaSubSdyHCPktsDnyToSb)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCPktsDnyToSb indicates the total number of packets dropped for the network to subscriber direction. This object is a 64-bit version of tmnxBsxStatAaSubSdyPktsDnyToSb.
protName [Prot Name] (tmnxBsxStatAaName)	String	The value of tmnxBsxStatAaName specifies either the ISA-AA protocol, application or app-group name for which statistics are requested. The tmnxBsxStatAaType is used to determine the statistics type.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
termFlowDuration [Term Flow Duration] (tmnxBsxStatAaSubSdyHCTermFlwDur)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlwDur indicates the sum of all flow durations from first packet seen to last packet seen for flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlwDur.
termFlows [Term Flows] (tmnxBsxStatAaSubSdyHCTermFlws)	java. math. BigInteger	The value of tmnxBsxStatAaSubSdyHCTermFlws indicates the total number of allowed flows that have terminated. This object is a 64-bit version of tmnxBsxStatAaSubSdyTermFlws.
GRE Tunnel Stats MIB entry name: tmnxIpTunnelStatsEntry Entry description: The tmnxIpTunnelStatsEntry contains statistics information for a single IP Tunnel. Table description (for tmnxIpTunnelStatsTable): The tmnxIpTunnelStatsTable contains statistics entries per IP tunnel. Supports realtime plotting Supports scheduled collection Monitored class: svt.GRETunnel		
bytesRx [Bytes Rx] (tmnxIpTunnelBytesRx)	java. math. BigInteger	The value of tmnxIpTunnelBytesRx indicates the number of bytes this IP Tunnel has received.
bytesRxHi [Bytes Rx Hi] (tmnxIpTunnelBytesRxHi)	long	The value of tmnxIpTunnelBytesRxHi indicates higher 32 bits of the value of tmnxIpTunnelBytesRx object.
bytesRxLo [Bytes Rx Lo] (tmnxIpTunnelBytesRxLo)	long	The value of tmnxIpTunnelBytesRxLo indicates lower 32 bits of the value of tmnxIpTunnelBytesRx object.
bytesTx [Bytes Tx] (tmnxIpTunnelBytesTx)	java. math. BigInteger	The value of tmnxIpTunnelBytesTx indicates the number of bytes this IP Tunnel has sent.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bytesTxHi [Bytes Tx Hi] (tmnxIpTunnelBytesTxHi)	long	The value of tmnxIpTunnelBytesTxHi indicates higher 32 bits of the value of tmnxIpTunnelBytesTx object.
bytesTxLo [Bytes Tx Lo] (tmnxIpTunnelBytesTxLo)	long	The value of tmnxIpTunnelBytesTxLo indicates lower 32 bits of the value of tmnxIpTunnelBytesTx object.
invalidChksumRx [Invalid Chksum Rx] (tmnxIpTunnelInvalidChksumRx)	java. math. BigInteger	The value of tmnxIpTunnelInvalidChksumRx indicates the number of packets this IP Tunnel received with invalid checksum and were dropped.
invalidChksumRxHi [Invalid Chksum Rx Hi] (tmnxIpTunnelInvalidChksumRxHi)	long	The value of tmnxIpTunnelInvalidChksumRxHi indicates higher 32 bits of the value of tmnxIpTunnelInvalidChksumRx object.
invalidChksumRxLo [Invalid Chksum Rx Lo] (tmnxIpTunnelInvalidChksumRxLo)	long	The value of tmnxIpTunnelInvalidChksumRxLo indicates lower 32 bits of the value of tmnxIpTunnelInvalidChksumRx object.
keyIgnoredRx [Key Ignored Rx] (tmnxIpTunnelKeyIgnoredRx)	java. math. BigInteger	The value of tmnxIpTunnelKeyIgnoredRx indicates the number of packets this IP Tunnel received and processed ignoring key field.
keyIgnoredRxHi [Key Ignored Rx Hi] (tmnxIpTunnelKeyIgnoredRxHi)	long	The value of tmnxIpTunnelKeyIgnoredRxHi indicates higher 32 bits of the value of tmnxIpTunnelKeyIgnoredRx object.
keyIgnoredRxLo [Key Ignored Rx Lo] (tmnxIpTunnelKeyIgnoredRxLo)	long	The value of tmnxIpTunnelKeyIgnoredRxLo indicates lower 32 bits of the value of tmnxIpTunnelKeyIgnoredRx object.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
loopsRx [Loops Rx] (tmnxIpTunnelLoopsRx)	java. math. BigInteger	The value of tmnxIpTunnelLoopsRx indicates the number of packets this IP Tunnel received with payload with destination address which could result in a loop and were dropped.
loopsRxHi [Loops Rx Hi] (tmnxIpTunnelLoopsRxHi)	long	The value of tmnxIpTunnelLoopsRxHi indicates higher 32 bits of the value of tmnxIpTunnelLoopsRx object.
loopsRxLo [Loops Rx Lo] (tmnxIpTunnelLoopsRxLo)	long	The value of tmnxIpTunnelLoopsRxLo indicates lower 32 bits of the value of tmnxIpTunnelLoopsRx object.
pktsRx [Pkts Rx] (tmnxIpTunnelPktsRx)	java. math. BigInteger	The value of tmnxIpTunnelPktsRx indicates the number of packets this IP Tunnel has received.
pktsRxHi [Pkts Rx Hi] (tmnxIpTunnelPktsRxHi)	long	The value of tmnxIpTunnelPktsRxHi indicates higher 32 bits of the value of tmnxIpTunnelPktsRx object.
pktsRxLo [Pkts Rx Lo] (tmnxIpTunnelPktsRxLo)	long	The value of tmnxIpTunnelPktsRxLo indicates lower 32 bits of the value of tmnxIpTunnelPktsRx object.
pktsTx [Pkts Tx] (tmnxIpTunnelPktsTx)	java. math. BigInteger	The value of tmnxIpTunnelPktsTx indicates the number of packets this IP Tunnel has sent.
pktsTxHi [Pkts Tx Hi] (tmnxIpTunnelPktsTxHi)	long	The value of tmnxIpTunnelPktsTxHi indicates higher 32 bits of the value of tmnxIpTunnelPktsTx object.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pktsTxLo [Pkts Tx Lo] (tmnxIpTunnelPktsTxLo)	long	The value of tmnxIpTunnelPktsTxLo indicates lower 32 bits of the value of tmnxIpTunnelPktsTx object.
rxErrors [Rx Errors] (tmnxIpTunnelRxErrors)	long	The value of tmnxIpTunnelRxErrors indicates the number of packet receive errors.
seqIgnoredRx [Seq Ignored Rx] (tmnxIpTunnelSeqIgnoredRx)	java. math. BigInteger	The value of tmnxIpTunnelSeqIgnoredRx indicates the number of packets this IP Tunnel and processed ignoring sequence field.
seqIgnoredRxHi [Seq Ignored Rx Hi] (tmnxIpTunnelSeqIgnoredRxHi)	long	The value of tmnxIpTunnelSeqIgnoredRxHi indicates higher 32 bits of the value of tmnxIpTunnelSeqIgnoredRx object.
seqIgnoredRxLo [Seq Ignored Rx Lo] (tmnxIpTunnelSeqIgnoredRxLo)	long	The value of tmnxIpTunnelSeqIgnoredRxLo indicates lower 32 bits of the value of tmnxIpTunnelSeqIgnoredRx object.
tooBigTx [Too Big Tx] (tmnxIpTunnelTooBigTx)	java. math. BigInteger	The value of tmnxIpTunnelTooBigTx indicates the number of packets this IP Tunnel received which were too big to transmit.
tooBigTxHi [Too Big Tx Hi] (tmnxIpTunnelTooBigTxHi)	long	The value of tmnxIpTunnelTooBigTxHi indicates higher 32 bits of the value of tmnxIpTunnelTooBigTx object.
tooBigTxLo [Too Big Tx Lo] (tmnxIpTunnelTooBigTxLo)	long	The value of tmnxIpTunnelTooBigTxLo indicates lower 32 bits of the value of tmnxIpTunnelTooBigTx object.

Table 579 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txErrors [Tx Errors] (tmnxIpTunnelTxErrors)	long	The value of tmnxIpTunnelTxErrors indicates the number of packet transmit errors.
versUnsupRx [Vers Unsup Rx] (tmnxIpTunnelVersUnsupRx)	java. math. BigInteger	The value of tmnxIpTunnelVersUnsupRx indicates the number of packets this IP Tunnel received with unsupported IP version and were dropped.
versUnsupRxHi [Vers Unsup Rx Hi] (tmnxIpTunnelVersUnsupRxHi)	long	The value of tmnxIpTunnelVersUnsupRxHi indicates higher 32 bits of the value of tmnxIpTunnelVersUnsupRx object.
versUnsupRxLo [Vers Unsup Rx Lo] (tmnxIpTunnelVersUnsupRxLo)	long	The value of tmnxIpTunnelVersUnsupRxLo indicates lower 32 bits of the value of tmnxIpTunnelVersUnsupRx object.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgTxV3Reports [Sdp Bnd IgmP Snpg Tx V3 Reports] (sdpBndIgmPsnpgTxV3Reports)	long	The value of the object sdpBndIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SDP Bind.
TunnelKeepAliveStats MIB entry name: sdpInfoEntry Entry description: Information about a specific SDP. Table description (for sdpInfoTable): A table that contains SDP information. Supports realtime plotting Supports scheduled collection Monitored class: svt.Tunnel		
lateHelloResponses [Late Hello Responses] (sdpKeepAliveNumLateHelloR- esponseMessages)	long	The number of SDP Echo Response messages received after the corresponding Request timeout timer expired.
receivedHelloMessages [Received Hello Messages] (sdpKeepAliveNumHelloRespon- seMessages)	long	The number of SDP Echo Response messages received since the keep-alive was administratively enabled or the counter was cleared.
transmittedHelloMessages [Transmitted Hello Messages] (sdpKeepAliveNumHelloRequestMessages)	long	The number of SDP Echo Request messages transmitted since the keep-alive was administratively enabled or the counter was cleared.

Table 580 tdmequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS1CurrentStats MIB entry name: dsx1CurrentEntry Entry description: An entry in the DS1 Current table. Table description (for dsx1CurrentTable): The DS1 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1CurrentBESs)	long	The number of Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1CurrentCSSs)	long	The number of Controlled Slip Seconds.
degradedMinutes [Degraded Minutes] (dsx1CurrentDMs)	long	The number of Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1CurrentESs)	long	The number of Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx1CurrentLCVs)	long	The number of Line Code Violations (LCVs).
lineErroredSeconds [Line Errored Seconds] (dsx1CurrentLESSs)	long	The number of Line Errored Seconds.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitCodingViolations [PBit Coding Violations] (dsx1CurrentPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1CurrentSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1CurrentSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1CurrentUASs)	long	The number of Unavailable Seconds.
DS1FarEndCurrentStats MIB entry name: dsx1FarEndCurrentEntry Entry description: An entry in the DS1 Far End Current table. Table description (for dsx1FarEndCurrentTable): The DS1 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end messages on the Facilities Data Link. The definitions are the same as described for the near-end information. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1FarEndCurrentBESs)	long	The number of Far End Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1FarEndCurrentCSSs)	long	The number of Far End Controlled Slip Seconds.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
degradedMinutes [Degraded Minutes] (dsx1FarEndCurrentDMs)	long	The number of Far End Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1FarEndCurrentESs)	long	The number of Far End Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx1FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx1FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
lineErroredSeconds [Line Errored Seconds] (dsx1FarEndCurrentLEsSs)	long	The number of Far End Line Errored Seconds.
pathCodingViolations [Path Coding Violations] (dsx1FarEndCurrentPCVs)	long	The number of Far End Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1FarEndCurrentSEFSs)	long	The number of Far End Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1FarEndCurrentSEsSs)	long	The number of Far End Severely Errored Seconds.
timeElapsed [Time Elapsed] (dsx1FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx1FarEndCurrentUASs)	long	The number of Unavailable Seconds.
validIntervals [Valid Intervals] (dsx1FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS1FarEndIntervalStats MIB entry name: dsx1FarEndIntervalEntry Entry description: An entry in the DS1 Far End Interval table. Table description (for dsx1FarEndIntervalTable): The DS1 Far End Interval Table contains various statistics collected by each DS1 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx1FarEndIntervalNumber) for one specific instance (identified by dsx1FarEndIntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel</p>		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1FarEndIntervalBESs)	long	The number of Far End Bursty Errored Seconds.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1FarEndIntervalCSSs)	long	The number of Far End Controlled Slip Seconds.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
degradedMinutes [Degraded Minutes] (dsx1FarEndIntervalDMs)	long	The number of Far End Degraded Minutes.
erroredSeconds [Errored Seconds] (dsx1FarEndIntervalESS)	long	The number of Far End Errored Seconds.
intervalNumber [Interval Number] (dsx1FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
lineErroredSeconds [Line Errored Seconds] (dsx1FarEndIntervalLESS)	long	The number of Far End Line Errored Seconds.
pathCodingViolations [Path Coding Violations] (dsx1FarEndIntervalPCVs)	long	The number of Far End Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1FarEndIntervalSEFSS)	long	The number of Far End Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1FarEndIntervalSESS)	long	The number of Far End Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1FarEndIntervalUASs)	long	The number of Unavailable Seconds.

pBitCodingViolations [PBit Coding Violations] (dsx1IntervalPCVs)	long	The number of Path Coding Violations.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1IntervalSEFSs)	long	The number of Severely Errored Framing Seconds.
severelyErroredSeconds [Severely Errored Seconds] (dsx1IntervalSESSs)	long	The number of Severely Errored Seconds.
unavailableSeconds [Unavailable Seconds] (dsx1IntervalUASs)	long	The number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS1TotalStats MIB entry name: dsx1TotalEntry Entry description: An entry in the DS1 Total table. Table description (for dsx1TotalTable): The DS1 Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS1E1Channel		
burstyErroredSeconds [Bursty Errored Seconds] (dsx1TotalBESs)	long	The number of Bursty Errored Seconds (BESs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
controlledSlipSeconds [Controlled Slip Seconds] (dsx1TotalCSSs)	long	The number of Controlled Slip Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
degradedMinutes [Degraded Minutes] (dsx1TotalDMs)	long	The number of Degraded Minutes (DMs) encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
erroredSeconds [Errored Seconds] (dsx1TotalESs)	long	The sum of Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
lineCodingViolations [Line Coding Violations] (dsx1TotalLCVs)	long	The number of Line Code Violations (LCVs) encountered by a DS1 interface in the current 15 minute interval. Invalid 15 minute intervals count as 0.
lineErroredSeconds [Line Errored Seconds] (dsx1TotalLESs)	long	The number of Line Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pBitCodingViolations [PBit Coding Violations] (dsx1TotalPCVs)	long	The number of Path Coding Violations encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx1TotalSEFSs)	long	The number of Severely Errored Framing Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
severelyErroredSeconds [Severely Errored Seconds] (dsx1TotalSESSs)	long	The number of Severely Errored Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
unavailableSeconds [Unavailable Seconds] (dsx1TotalUASs)	long	The number of Unavailable Seconds encountered by a DS1 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
DS3CurrentStats MIB entry name: dsx3CurrentEntry Entry description: An entry in the DS3/E3 Current table. Table description (for dsx3CurrentTable): The DS3/E3 current table contains various statistics being collected for the current 15 minute interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3CurrentCCVs)	long	The number of C-bit Coding Violations.
cBitErroredSeconds [CBit Errored Seconds] (dsx3CurrentCESSs)	long	The number of C-bit Errored Seconds.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3CurrentCSEs)	long	The number of C-bit Severely Errored Seconds.
lineCodingViolations [Line Coding Violations] (dsx3CurrentLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3CurrentLESs)	long	The number of Line Errored Seconds.
pBitCodingViolations [PBit Coding Violations] (dsx3CurrentPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3CurrentPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3CurrentPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3CurrentSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3CurrentUASs)	long	The counter associated with the number of Unavailable Seconds.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
DS3FarEndCurrentStats MIB entry name: dsx3FarEndCurrentEntry Entry description: An entry in the DS3 Far End Current table. Table description (for dsx3FarEndCurrentTable): The DS3 Far End Current table contains various statistics being collected for the current 15 minute interval. The statistics are collected from the far end block error code within the C-bits. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndCurrentCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndCurrentCESS)	long	The counter associated with the number of Far End C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndCurrentCSESS)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
invalidIntervals [Invalid Intervals] (dsx3FarEndInvalidIntervals)	int	The number of intervals in the range from 0 to dsx3FarEndValidIntervals for which no data is available. This object will typically be zero except in cases where the data for some intervals are not available (e.g., in proxy situations).
timeElapsed [Time Elapsed] (dsx3FarEndTimeElapsed)	int	The number of seconds that have elapsed since the beginning of the far end current error-measurement period. If, for some reason, such as an adjustment in the system's time-of-day clock, the current interval exceeds the maximum value, the agent will return the maximum value.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndCurrentUASs)	long	The counter associated with the number of Far End unavailable seconds.
validIntervals [Valid Intervals] (dsx3FarEndValidIntervals)	int	The number of previous far end intervals for which data was collected. The value will be 96 unless the interface was brought online within the last 24 hours, in which case the value will be the number of complete 15 minute far end intervals since the interface has been online. In the case where the agent is a proxy, it is possible that some intervals are unavailable. In this case, this interval is the maximum interval number for which data is available.
<p>DS3FarEndIntervalStats</p> <p>MIB entry name: dsx3FarEndIntervalEntry</p> <p>Entry description: An entry in the DS3 Far End Interval table.</p> <p>Table description (for dsx3FarEndIntervalTable): The DS3 Far End Interval Table contains various statistics collected by each DS3 interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: tdmequipment.DS3E3Channel</p>		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndIntervalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndIntervalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in one of the previous 96, individual 15 minute, intervals. In the case where the agent is a proxy and data is not available, return noSuchInstance.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndIntervalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3FarEndIntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.
unavailableSeconds [Unavailable Seconds] (dsx3FarEndIntervalUASs)	long	The counter associated with the number of Far End unavailable seconds.
DS3FarEndTotalStats MIB entry name: dsx3FarEndTotalEntry Entry description: An entry in the DS3 Far End Total table. Table description (for dsx3FarEndTotalTable): The DS3 Far End Total Table contains the cumulative sum of the various statistics for the 24 hour period preceding the current interval. Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3FarEndTotalCCVs)	long	The counter associated with the number of Far End C-bit Coding Violations reported via the far end block error count encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitErroredSeconds [CBit Errored Seconds] (dsx3FarEndTotalCESs)	long	The counter associated with the number of Far End C-bit Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3FarEndTotalCSESSs)	long	The counter associated with the number of Far End C-bit Severely Errored Seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unavailableSeconds [Unavailable Seconds] (dsx3FarEndTotalUASs)	long	The counter associated with the number of Far End unavailable seconds encountered by a DS3 interface in the previous 24 hour interval. Invalid 15 minute intervals count as 0.
DS3IntervalStats MIB entry name: dsx3IntervalEntry Entry description: An entry in the DS3/E3 Interval table. Table description (for dsx3IntervalTable): The DS3/E3 Interval Table contains various statistics collected by each DS3/E3 Interface over the previous 24 hours of operation. The past 24 hours are broken into 96 completed 15 minute intervals. Each row in this table represents one such interval (identified by dsx3IntervalNumber) and for one specific interface (identified by dsx3IntervalIndex). Supports realtime plotting Supports scheduled collection Monitored class: tdmequipment.DS3E3Channel		
cBitCodingViolations [CBit Coding Violations] (dsx3IntervalCCVs)	long	The number of C-bit Coding Violations.
cBitErroredSeconds [CBit Errored Seconds] (dsx3IntervalCESSs)	long	The number of C-bit Errored Seconds.
cBitSeverelyErroredSeconds [CBit Severely Errored Seconds] (dsx3IntervalCSESSs)	long	The number of C-bit Severely Errored Seconds.
intervalNumber [Interval Number] (dsx3IntervalNumber)	int	A number between 1 and 96, where 1 is the most recently completed 15 minute interval and 96 is the 15 minutes interval completed 23 hours and 45 minutes prior to interval 1.

Table 580 tdmequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lineCodingViolations [Line Coding Violations] (dsx3IntervalLCVs)	long	The counter associated with the number of Line Coding Violations.
lineErroredSeconds [Line Errored Seconds] (dsx3IntervalLESSs)	long	The number of Line Errored Seconds (BPVs or illegal zero sequences).
pBitCodingViolations [PBit Coding Violations] (dsx3IntervalPCVs)	long	The counter associated with the number of P-bit Coding Violations.
pBitErroredSeconds [PBit Errored Seconds] (dsx3IntervalPESs)	long	The counter associated with the number of P-bit Errored Seconds.
pBitSeverelyErroredSeconds [PBit Severely Errored Seconds] (dsx3IntervalPSESs)	long	The counter associated with the number of P-bit Severely Errored Seconds.
severelyErroredFramingSeconds [Severely Errored Framing Seconds] (dsx3IntervalSEFSs)	long	The counter associated with the number of Severely Errored Framing Seconds.
unavailableSeconds [Unavailable Seconds] (dsx3IntervalUASs)	long	The counter associated with the number of Unavailable Seconds. This object may decrease if the occurrence of unavailable seconds occurs across an interval boundary.

<p>CircuitDhcpRelayCfgStats</p> <p>MIB entry name: sdpBindDhcpStatsEntry</p> <p>Entry description: DHCP statistics for a TLS spoke SDP or mesh SDP.</p> <p>Table description (for sdpBindDhcpStatsTable): sdpBindDhcpStatsTable contains DHCP statistics related to a TLS SDP Bind. A row will exist in this table for each spoke or mesh SDP in a TIs Service. Rows are created and deleted automatically by the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: svt.SdpBinding</p>		
sdpBindDhcpStatsClntDropdPckts [Sdp Bind Dhcp Stats Clnt Dropd Pckts] (sdpBindDhcpStatsClntDropdPckts)	long	The value of the object sdpBindDhcpStatsClntDropdPckts indicates the number of DHCP client packets that have been dropped on this SDP bind.
sdpBindDhcpStatsClntForwdPckts [Sdp Bind Dhcp Stats Clnt Forwd Pckts] (sdpBindDhcpStatsClntForwdPckts)	long	The value of the object sdpBindDhcpStatsClntForwdPckts indicates the number of DHCP client packets that have been forwarded on this SDP bind.
sdpBindDhcpStatsClntProxLSPckts [Sdp Bind Dhcp Stats Clnt Prox LSPckts] (sdpBindDhcpStatsClntProxLSPckts)	long	The value of the object sdpBindDhcpStatsClntProxLSPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
sdpBindDhcpStatsClntProxRadPckts [Sdp Bind Dhcp Stats Clnt Prox Rad Pckts] (sdpBindDhcpStatsClntProxRadPckts)	long	The value of the object sdpBindDhcpStatsClntProxRadPckts indicates the number of DHCP client packets that have been proxied on this SDP bind based on data received from a RADIUS server.
sdpBindDhcpStatsClntSnoopdPckts [Sdp Bind Dhcp Stats Clnt Snoopd Pckts] (sdpBindDhcpStatsClntSnoopdPckts)	long	The value of the object sdpBindDhcpStatsClntSnoopdPckts indicates the number of DHCP client packets that have been snooped on this SDP bind.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBindDhcpStatsGenForceRenPckts [Sdp Bind Dhcp Stats Gen Force Ren Pckts] (sdpBindDhcpStatsGenForceRenPckts)	long	The value of the object sdpBindDhcpStatsGenForceRenPckts indicates the number of DHCP FORCERENEW messages spoofed on this SDP bind to the DHCP clients.
sdpBindDhcpStatsGenReleasePckts [Sdp Bind Dhcp Stats Gen Release Pckts] (sdpBindDhcpStatsGenReleasePckts)	long	The value of the object sdpBindDhcpStatsGenReleasePckts indicates the number of DHCP RELEASE messages spoofed on this SDP bind to the DHCP server.
sdpBindDhcpStatsSvrDropdPckts [Sdp Bind Dhcp Stats Svr Dropd Pckts] (sdpBindDhcpStatsSvrDropdPckts)	long	The value of the object sdpBindDhcpStatsSvrDropdPckts indicates the number of DHCP server packets that have been dropped on this SDP bind.
sdpBindDhcpStatsSvrForwdPckts [Sdp Bind Dhcp Stats Svr Forwd Pckts] (sdpBindDhcpStatsSvrForwdPckts)	long	The value of the object sdpBindDhcpStatsSvrForwdPckts indicates the number of DHCP server packets that have been forwarded on this SDP bind.
sdpBindDhcpStatsSvrSnoopdPckts [Sdp Bind Dhcp Stats Svr Snoopd Pckts] (sdpBindDhcpStatsSvrSnoopdPckts)	long	The value of the object sdpBindDhcpStatsSvrSnoopdPckts indicates the number of DHCP server packets that have been snooped on this SDP bind.
InterfacePimSnoopingStats MIB entry name: tmnxPimSnpgIfStatsEntry Entry description: An entry in the tmnxPimSnpgIfStatsTable. Table description (for tmnxPimSnpgIfStatsTable): The table listing the PIM statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: vpls.InterfacePimSnooping		
tmnxPimSnpgIfJoinPolicyDrops [Tmnx Pim Snpg If Join Policy Drops] (tmnxPimSnpgIfJoinPolicyDrops)	long	The value of tmnxPimSnpgIfJoinPolicyDrops indicates the number of times the join policy match resulted in dropping PIM Join-Prune Message or one of the source group contained in the message.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfRxBadChecksumDscrd [Tmnx Pim Snpg If Rx Bad Checksum Dscrd] (tmnxPimSnpgIfRxBadChecksumDscrd)	long	The value of tmnxPimSnpgIfRxBadChecksumDscrd indicates the number of PIM messages received on this interface which were discarded because of bad checksum.
tmnxPimSnpgIfRxBadEncodings [Tmnx Pim Snpg If Rx Bad Encodings] (tmnxPimSnpgIfRxBadEncodings)	long	The value of tmnxPimSnpgIfRxBadEncodings indicates the number of PIM messages with bad encodings received on this interface.
tmnxPimSnpgIfRxBadVersionDscrd [Tmnx Pim Snpg If Rx Bad Version Dscrd] (tmnxPimSnpgIfRxBadVersionDscrd)	long	The value of tmnxPimSnpgIfRxBadVersionDscrd indicates the number of PIM messages with bad versions received on this interface.
tmnxPimSnpgIfRxHellos [Tmnx Pim Snpg If Rx Hellos] (tmnxPimSnpgIfRxHellos)	long	The value of tmnxPimSnpgIfRxHellos indicates the number of PIM hello messages received on this interface.
tmnxPimSnpgIfRxHellosDropped [Tmnx Pim Snpg If Rx Hellos Dropped] (tmnxPimSnpgIfRxHellosDropped)	long	The value of tmnxPimSnpgIfRxHellosDropped indicates the number of PIM Hello messages which were received on this interface but were dropped.
tmnxPimSnpgIfRxJoinPruneErrs [Tmnx Pim Snpg If Rx Join Prune Errs] (tmnxPimSnpgIfRxJoinPruneErrs)	long	The value of tmnxPimSnpgIfRxJoinPruneErrs indicates the number of errors while processing Join-Prune messages received on this interface.
tmnxPimSnpgIfRxJoinPrunes [Tmnx Pim Snpg If Rx Join Prunes] (tmnxPimSnpgIfRxJoinPrunes)	long	The value of tmnxPimSnpgIfRxJoinPrunes indicates the number of PIM Join Prune messages received on this interface.
tmnxPimSnpgIfRxNbrUnknown [Tmnx Pim Snpg If Rx Nbr Unknown] (tmnxPimSnpgIfRxNbrUnknown)	long	The value of tmnxPimSnpgIfRxNbrUnknown indicates the number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxPimSnpgIfRxPkts [Tmnx Pim Snpg If Rx Pkts] (tmnxPimSnpgIfRxPkts)	long	The value of tmnxPimSnpgIfRxPkts indicates the number of multicast data packets received on this interface.
tmnxPimSnpgIfSGTypes [Tmnx Pim Snpg If SGTypes] (tmnxPimSnpgIfSGTypes)	long	The value of tmnxPimSnpgIfSGTypes indicates the number of (S,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfStarGTypes [Tmnx Pim Snpg If Star GTypes] (tmnxPimSnpgIfStarGTypes)	long	The value of tmnxPimSnpgIfStarGTypes indicates the number of (*,G) entries in tmnxPimSnpgIfGrpSrcTable.
tmnxPimSnpgIfTxJoinPrunes [Tmnx Pim Snpg If Tx Join Prunes] (tmnxPimSnpgIfTxJoinPrunes)	long	The value of tmnxPimSnpgIfTxJoinPrunes indicates the number of PIM Join Prune messages transmitted on this interface.
tmnxPimSnpgIfTxPkts [Tmnx Pim Snpg If Tx Pkts] (tmnxPimSnpgIfTxPkts)	long	The value of tmnxPimSnpgIfTxPkts indicates the number of multicast data packets transmitted on this interface.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGImportPolicyDrops [Sap Igmp SnpG Import Policy Drops] (saplgmpSnpGImportPolicyDrops)	long	The value of the object saplgmpSnpGImportPolicyDrops indicates the number of times an IGMP Group or Source is dropped because of applying an import policy on this SAP.
saplgmpSnpGMaxNumGroupsDrops [Sap Igmp SnpG Max Num Groups Drops] (saplgmpSnpGMaxNumGroupsDrops)	long	The value of the object saplgmpSnpGMaxNumGroupsDrops indicates the number of times an IGMP Group is dropped because of exceeding the configured maximum number of groups on this SAP.
saplgmpSnpGMaxNumGrpSrcsDrops [Sap Igmp SnpG Max Num Grp Sources Drops] (saplgmpSnpGMaxNumGrpSrcsDrops)	long	The value of the object saplgmpSnpGMaxNumGrpSrcsDrops indicates the number of times an IGMP Group Source is dropped because of exceeding the configured maximum number of group sources per group on this SAP.
saplgmpSnpGMaxNumSourcesDrops [Sap Igmp SnpG Max Num Sources Drops] (saplgmpSnpGMaxNumSourcesDrops)	long	The value of the object saplgmpSnpGMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this SAP.
saplgmpSnpGMcacPolicyDrops [Sap Igmp SnpG Mcac Policy Drops] (saplgmpSnpGMcacPolicyDrops)	long	The value of the object saplgmpSnpGMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this SAP.
saplgmpSnpGMcsFailures [Sap Igmp SnpG Mcs Failures] (saplgmpSnpGMcsFailures)	long	The value of the object saplgmpSnpGMcsFailures indicates the number of times an IGMP Group on this SAP could not be synced to the MCS (multi-chassis synchronization) database.
saplgmpSnpGRxBadEncodedPkts [Sap Igmp SnpG Rx Bad Encoded Pkts] (saplgmpSnpGRxBadEncodedPkts)	long	The value of the object saplgmpSnpGRxBadEncodedPkts indicates the number of IGMP packets dropped on this SAP because of a bad encoding.
saplgmpSnpGRxBadIgmpChksmPkts [Sap Igmp SnpG Rx Bad Igmp Chksm Pkts] (saplgmpSnpGRxBadIgmpChksmPkts)	long	The value of the object saplgmpSnpGRxBadIgmpChksmPkts indicates the number of dropped IGMP packets on this SAP because of a bad IGMP header checksum.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpgrxBadIpChksmPkts [Sap IgmP SnpG Rx Bad Ip Chksm Pkts] (saplgmpSnpgrxBadIpChksmPkts)	long	The value of the object saplgmpSnpgrxBadIpChksmPkts indicates the number of dropped IGMP packets on this SAP because of a bad IPv4 header checksum.
saplgmpSnpgrxBadLenPkts [Sap IgmP SnpG Rx Bad Len Pkts] (saplgmpSnpgrxBadLenPkts)	long	The value of the object saplgmpSnpgrxBadLenPkts indicates the number of IGMP packets dropped on this SAP because of a bad length.
saplgmpSnpgrxNoRtrAlertPkts [Sap IgmP SnpG Rx No Rtr Alert Pkts] (saplgmpSnpgrxNoRtrAlertPkts)	long	The value of the object saplgmpSnpgrxNoRtrAlertPkts indicates the number of IGMP packets dropped on this SAP because the Router Alert Option in the IP packet is not set.
saplgmpSnpgrxWrongVersionPkts [Sap IgmP SnpG Rx Wrong Version Pkts] (saplgmpSnpgrxWrongVersionPkts)	long	The value of the object saplgmpSnpgrxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this SAP.
saplgmpSnpgrxZeroSrcAdrPkts [Sap IgmP SnpG Rx Zero Src Adr Pkts] (saplgmpSnpgrxZeroSrcAdrPkts)	long	The value of the object saplgmpSnpgrxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this SAP because they contain a zero source IPv4 address.
saplgmpSnpGSendQueryCfgDrops [Sap IgmP SnpG Send Query Cfg Drops] (saplgmpSnpGSendQueryCfgDrops)	long	The value of the object saplgmpSnpGSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object saplgmpSnpGCfgSendQueries for this SAP is set to 'enabled(1)'.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
L2AccessInterfaceIgmPsnpgStats MIB entry name: sapIgmPsnpgStatsEntry Entry description: sapIgmPsnpgStatsEntry is an entry in the sapIgmPsnpgStatsTable. Each entry contains IGMP snooping statistics for a SAP in a TIs. Table description (for sapIgmPsnpgStatsTable): sapIgmPsnpgStatsTable contains statistics on IGMP snooping per SAP. Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • mvpls.IL2AccessInterface • vpls.AbstractL2AccessInterface • vpls.IL2AccessInterface 		
sapIgmPsnpgFwdGenQueries [Sap Igmp Snpg Fwd Gen Queries] (sapIgmPsnpgFwdGenQueries)	long	The value of the object sapIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this SAP.
sapIgmPsnpgFwdGrpSpecQueries [Sap Igmp Snpg Fwd Grp Spec Queries] (sapIgmPsnpgFwdGrpSpecQueries)	long	The value of the object sapIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SAP.
sapIgmPsnpgFwdSrcSpecQueries [Sap Igmp Snpg Fwd Src Spec Queries] (sapIgmPsnpgFwdSrcSpecQueries)	long	The value of the object sapIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SAP.
sapIgmPsnpgFwdUnknownType [Sap Igmp Snpg Fwd Unknown Type] (sapIgmPsnpgFwdUnknownType)	long	The value of the object sapIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SAP.
sapIgmPsnpgFwdV1Reports [Sap Igmp Snpg Fwd V1 Reports] (sapIgmPsnpgFwdV1Reports)	long	The value of the object sapIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SAP.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saplgmpSnpGfwdV2Leaves [Sap Igmp SnpG Fwd V2 Leaves] (saplgmpSnpGfwdV2Leaves)	long	The value of the object saplgmpSnpGfwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SAP.
saplgmpSnpGfwdV2Reports [Sap Igmp SnpG Fwd V2 Reports] (saplgmpSnpGfwdV2Reports)	long	The value of the object saplgmpSnpGfwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SAP.
saplgmpSnpGfwdV3Reports [Sap Igmp SnpG Fwd V3 Reports] (saplgmpSnpGfwdV3Reports)	long	The value of the object saplgmpSnpGfwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SAP.
saplgmpSnpGRxGenQueries [Sap Igmp SnpG Rx Gen Queries] (saplgmpSnpGRxGenQueries)	long	The value of the object saplgmpSnpGRxGenQueries indicates the number of IGMP General Queries received on this SAP.
saplgmpSnpGRxGrpSpecQueries [Sap Igmp SnpG Rx Grp Spec Queries] (saplgmpSnpGRxGrpSpecQueries)	long	The value of the object saplgmpSnpGRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SAP.
saplgmpSnpGRxSrcSpecQueries [Sap Igmp SnpG Rx Src Spec Queries] (saplgmpSnpGRxSrcSpecQueries)	long	The value of the object saplgmpSnpGRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SAP.
saplgmpSnpGRxUnknownType [Sap Igmp SnpG Rx Unknown Type] (saplgmpSnpGRxUnknownType)	long	The value of the object saplgmpSnpGRxUnknownType indicates the number of IGMP unknown type packets received on this SAP.
saplgmpSnpGRxV1Reports [Sap Igmp SnpG Rx V1 Reports] (saplgmpSnpGRxV1Reports)	long	The value of the object saplgmpSnpGRxV1Reports indicates the number of IGMPv1 Reports received on this SAP.
saplgmpSnpGRxV2Leaves [Sap Igmp SnpG Rx V2 Leaves] (saplgmpSnpGRxV2Leaves)	long	The value of the object saplgmpSnpGRxV2Leaves indicates the number of IGMPv2 Leaves received on this SAP.

sdpBndMldSnpgFwdGenQueries [Sdp Bnd Mld Snpg Fwd Gen Queries] (sdpBndMldSnpgFwdGenQueries)	long	The value of the object sdpBndMldSnpgFwdGenQueries indicates the number of MLD General Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdGrpSpecQueries [Sdp Bnd Mld Snpg Fwd Grp Spec Queries] (sdpBndMldSnpgFwdGrpSpecQueries)	long	The value of the object sdpBndMldSnpgFwdGrpSpecQueries indicates the number of MLD Group-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdSrcSpecQueries [Sdp Bnd Mld Snpg Fwd Src Spec Queries] (sdpBndMldSnpgFwdSrcSpecQueries)	long	The value of the object sdpBndMldSnpgFwdSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndMldSnpgFwdUnknownType [Sdp Bnd Mld Snpg Fwd Unknown Type] (sdpBndMldSnpgFwdUnknownType)	long	The value of the object sdpBndMldSnpgFwdUnknownType indicates the number of MLD unknown type packets forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Leaves [Sdp Bnd Mld Snpg Fwd V1 Leaves] (sdpBndMldSnpgFwdV1Leaves)	long	The value of the object sdpBndMldSnpgFwdV1Leaves indicates the number of MLDv1 Leaves forwarded on this SDP Bind.
sdpBndMldSnpgFwdV1Reports [Sdp Bnd Mld Snpg Fwd V1 Reports] (sdpBndMldSnpgFwdV1Reports)	long	The value of the object sdpBndMldSnpgFwdV1Reports indicates the number of MLDv1 Reports forwarded on this SDP Bind.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgFwdV2Reports [Sdp Bnd Mld Snpg Fwd V2 Reports] (sdpBndMldSnpgFwdV2Reports)	long	The value of the object sdpBndMldSnpgFwdV2Reports indicates the number of MLDv2 Reports forwarded on this SDP Bind.
sdpBndMldSnpgRxGenQueries [Sdp Bnd Mld Snpg Rx Gen Queries] (sdpBndMldSnpgRxGenQueries)	long	The value of the object sdpBndMldSnpgRxGenQueries indicates the number of MLD General Queries received on this SDP Bind.
sdpBndMldSnpgRxGrpSpecQueries [Sdp Bnd Mld Snpg Rx Grp Spec Queries] (sdpBndMldSnpgRxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgRxGrpSpecQueries indicates the number of MLD Group-Specific Queries received on this SDP Bind.
sdpBndMldSnpgRxSrcSpecQueries [Sdp Bnd Mld Snpg Rx Src Spec Queries] (sdpBndMldSnpgRxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgRxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndMldSnpgRxUnknownType [Sdp Bnd Mld Snpg Rx Unknown Type] (sdpBndMldSnpgRxUnknownType)	long	The value of the object sdpBndMldSnpgRxUnknownType indicates the number of MLD unknown type packets received on this SDP Bind.
sdpBndMldSnpgRxV1Leaves [Sdp Bnd Mld Snpg Rx V1 Leaves] (sdpBndMldSnpgRxV1Leaves)	long	The value of the object sdpBndMldSnpgRxV1Leaves indicates the number of MLDv1 Leaves received on this SDP Bind.
sdpBndMldSnpgRxV1Reports [Sdp Bnd Mld Snpg Rx V1 Reports] (sdpBndMldSnpgRxV1Reports)	long	The value of the object sdpBndMldSnpgRxV1Reports indicates the number of MLDv1 Reports received on this SDP Bind.
sdpBndMldSnpgRxV2Reports [Sdp Bnd Mld Snpg Rx V2 Reports] (sdpBndMldSnpgRxV2Reports)	long	The value of the object sdpBndMldSnpgRxV2Reports indicates the number of MLDv2 Reports received on this SDP Bind.
sdpBndMldSnpgTxGenQueries [Sdp Bnd Mld Snpg Tx Gen Queries] (sdpBndMldSnpgTxGenQueries)	long	The value of the object sdpBndMldSnpgTxGenQueries indicates the number of MLD General Queries transmitted on this SDP Bind.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndMldSnpgTxGrpSpecQueries [Sdp Bnd Mld Snpg Tx Grp Spec Queries] (sdpBndMldSnpgTxGrpSpecQueries)	long	The value of the object sdpBndMldSnpgTxGrpSpecQueries indicates the number of MLD Group-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxSrcSpecQueries [Sdp Bnd Mld Snpg Tx Src Spec Queries] (sdpBndMldSnpgTxSrcSpecQueries)	long	The value of the object sdpBndMldSnpgTxSrcSpecQueries indicates the number of MLD Group-And-Source-Specific Queries transmitted on this SDP Bind.
sdpBndMldSnpgTxV1Leaves [Sdp Bnd Mld Snpg Tx V1 Leaves] (sdpBndMldSnpgTxV1Leaves)	long	The value of the object sdpBndMldSnpgTxV1Leaves indicates the number of MLDv1 Leaves transmitted on this SDP Bind.
sdpBndMldSnpgTxV1Reports [Sdp Bnd Mld Snpg Tx V1 Reports] (sdpBndMldSnpgTxV1Reports)	long	The value of the object sdpBndMldSnpgTxV1Reports indicates the number of MLDv1 Reports transmitted on this SDP Bind.
sdpBndMldSnpgTxV2Reports [Sdp Bnd Mld Snpg Tx V2 Reports] (sdpBndMldSnpgTxV2Reports)	long	The value of the object sdpBndMldSnpgTxV2Reports indicates the number of MLDv2 Reports transmitted on this SDP Bind.
SitePimSnoopingStats MIB entry name: tmnxPimSnpgGenStatsEntry Entry description: An entry in the tmnxPimSnpgGenStatsTable. Table description (for tmnxPimSnpgGenStatsTable): tmnxPimSnpgGenStatsTable lists PIM snooping statistics for a particular PIM snooping instance. Supports realtime plotting Supports scheduled collection Monitored class: vpls.SitePimSnooping		
numSGTypes [Num SGTypes] (tmnxPimSnpgGenStatsSGTypes)	long	The value of tmnxPimSnpgGenStatsSGTypes indicates the number of entries in tmnxPimSnpgGrpSrcTable for which the source type is 'sg'.

Table 581 vpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
numStarGTypes [Num Star GTypes] (tmnxPimSnpGGenStatsStarGTypes)	long	The value of tmnxPimSnpGGenStatsStarGTypes indicates the number of entries in tmnxPimSnpGGrpSrcTable for which the source type is 'starG'.
<p>SiteSourceGroupRecordPimSnoopingStats MIB entry name: tmnxPimSnpGGrpSrcStatsEntry Entry description: An entry in the tmnxPimSnpGGrpSrcStatsTable. Table description (for tmnxPimSnpGGrpSrcStatsTable): tmnxPimSnpGGrpSrcStatsTable contains statistics for the entries in the tmnxPimSnpGGrpSrcTable. These statistics are collected by the forwarding engine. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • vpls.SitePimSnooping • vpls.SiteSourceGroupRecord 		
tmnxPimSnpGGrpSrcStatsFwdedOct [Tmnx Pim SnpG Grp Src Stats Fwded Oct] (tmnxPimSnpGGrpSrcStatsFwdedOct)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedOct indicates the number of multicast octets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.
tmnxPimSnpGGrpSrcStatsFwdedPkts [Tmnx Pim SnpG Grp Src Stats Fwded Pkts] (tmnxPimSnpGGrpSrcStatsFwdedPkts)	long	The value of tmnxPimSnpGGrpSrcStatsFwdedPkts indicates the number of multicast packets that were forwarded to the interfaces in the outgoing interface list. tmnxPimSnpGGrpSrcClfTable lists all the interfaces in the outgoing interface list.

Table 582 vrrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceAdditionalStats</p> <p>MIB entry name: tmnxVrrpRouterStatsEntry</p> <p>Entry description: Each row entry in the tmnxVrrpRouterStatsTable represents additional columns in the vrrpRouterStatsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tmnxVrrpRouterStatsTable): The tmnxVrrpRouterStatsTable provides an extension of the vrrpRouterStatsTable in the VRRP-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatsTable, and the augmenting table, tmnxVrrpRouterStatsTable. This in effect extends the vrrpRouterStatsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.Instance</p>		
addressListDiscards [Address List Discards] (tmnxVrrpStatsAddressListDiscards)	long	The total number of VRRP advertisement packets discarded because the address list did not match the locally configured list for the virtual router.
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxVrrpStatsAdvertiseIntervalDiscards)	long	The total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tmnxVrrpStatsAdvertiseSent)	long	The total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tmnxVrrpStatsMasterChanges)	long	The value for tmnxVrrpStatsMasterChanges specifies the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxVrrpStatsPreemptEvents)	long	The value for tmnxVrrpStatsPreemptEvents specifies the total number of times the virtual router has preempted another non-owner master with lower priority.

Table 582 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
preemptedEvents [Preempted Events] (tmnxVrrpStatsPreemptedEvents)	long	The value for tmnxVrrpStatsPreemptedEvents specifies the total number of times the virtual router has been preempted by another non-owner master with higher priority.
totalDiscards [Total Discards] (tmnxVrrpStatsTotalDiscards)	long	The total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
<p>InstanceStats MIB entry name: vrrpRouterStatsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.Instance</p>		
addressListErrors [Address List Errors] (vrrpStatsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatsAdvertiseIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (vrrpStatsAdvertiseRcvd)	long	The total number of VRRP advertisements received by this virtual router.
authFailures [Auth Failures] (vrrpStatsAuthFailures)	long	The total number of VRRP packets received that do not pass the authentication check.

Table 582 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
authTypeMismatch [Auth Type Mismatch] (vrrpStatsAuthTypeMismatch)	long	The total number of packets received with 'Auth Type' not equal to the locally configured authentication method ('vrrpOperAuthType').
becomeMaster [Become Master] (vrrpStatsBecomeMaster)	long	The total number of times that this virtual router's state has transitioned to MASTER.
invalidAuthType [Invalid Auth Type] (vrrpStatsInvalidAuthType)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatsInvalidTypePktsRcvd)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field.
ipTtlErrors [Ip Ttl Errors] (vrrpStatsIpTtlErrors)	long	The total number of VRRP packets received by the virtual router with IP TTL (Time-To-Live) not equal to 255.
packetLengthErrors [Packet Length Errors] (vrrpStatsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatsPriorityZeroPktsRcvd)	long	The total number of VRRP packets received by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatsPriorityZeroPktsSent)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'.

Table 582 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceV6AdditionalStats</p> <p>MIB entry name: tVrrpRtrStatisticsEntry</p> <p>Entry description: Each row entry in the tVrrpRtrStatisticsTable represents additional columns in the vrrpRouterStatisticsTable for statistics specific to the Nokia SROS series VRRP implementation.</p> <p>Table description (for tVrrpRtrStatisticsTable): The tVrrpRtrStatisticsTable provides an extension of the vrrpRouterStatisticsTable in the TIMETRA-VRRP-V3-MIB. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vrrpRouterStatisticsTable, and the augmenting table, tVrrpRtrStatisticsTable. This in effect extends the vrrpRouterStatisticsTable with additional columns.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: vrrp.InstanceV6</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tVrrpStatAdvIntvlDiscards)	long	The value of tVrrpStatAdvIntvlDiscards indicates the total number of VRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseSent [Advertise Sent] (tVrrpStatAdvertiseSent)	long	The value of tVrrpStatAdvertiseSent indicates the total number of VRRP advertisements sent by this virtual router.
masterChanges [Master Changes] (tVrrpStatMasterChanges)	long	The value for tVrrpStatMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tVrrpStatPreemptEvents)	long	The value for tVrrpStatPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tVrrpStatPreemptedEvents)	long	The value for tVrrpStatPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.

Table 582 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalDiscards [Total Discards] (tVrrpStatTotalDiscards)	long	The value of tVrrpStatTotalDiscards indicates the total number of VRRP advertisement packets discarded for any reason. This includes the packets discarded due to advertise interval mismatch and address list mismatch.
InstanceV6Stats MIB entry name: vrrpRouterStatisticsEntry Entry description: An entry in the table, containing statistics information about a given virtual router. Table description (for vrrpRouterStatisticsTable): Table of virtual router statistics. Supports realtime plotting Supports scheduled collection Monitored class: vrrp.InstanceV6		
addressListErrors [Address List Errors] (vrrpStatisticsAddressListErrors)	long	The total number of packets received for which the address list does not match the locally configured list for the virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseIntervalErrors [Advertise Interval Errors] (vrrpStatisticsAdvIntervalErrors)	long	The total number of VRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
advertiseRcvd [Advertise Rcvd] (vrrpStatisticsRcvdAdvertisements)	long	The total number of VRRP advertisements received by this virtual router. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 582 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeMaster [Become Master] (vrrpStatisticsMasterTransitions)	long	The total number of times that this virtual router's state has transitioned to MASTER. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
invalidAuthType [Invalid Auth Type] (vrrpStatisticsRcvdInvalidAuthentications)	long	The total number of packets received with an unknown authentication type.
invalidTypePktsRcvd [Invalid Type Pkts Rcvd] (vrrpStatisticsRcvdInvalidTypePkts)	long	The number of VRRP packets received by the virtual router with an invalid value in the 'type' field. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
ipTtlErrors [Ip Ttl Errors] (vrrpStatisticsIpTtlErrors)	long	The total number of VRRP packets received by the Virtual router with IPv4 TTL (for VRRP over IPv4) or IPv6 Hop Limit (for VRRP over IPv6) not equal to 255. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
packetLengthErrors [Packet Length Errors] (vrrpStatisticsPacketLengthErrors)	long	The total number of packets received with a packet length less than the length of the VRRP header. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (vrrpStatisticsRcvdPriZeroPackets)	long	The total number of VRRP packets received by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 582 vrrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
priorityZeroPktsSent [Priority Zero Pkts Sent] (vrrpStatisticsSentPriZeroPackets)	long	The total number of VRRP packets sent by the virtual router with a priority of '0'. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of vrrpStatisticsDiscontinuityTime.

Table 583 wpp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>WppPortalStats</p> <p>MIB entry name: tmnxWppPortalEntry</p> <p>Entry description: Each conceptual row represents information about a particular WPP portal. Entries in this table can be created or deleted via SNMP operations. In order to create a conceptual row in this table, a row in the tmnxWppTable with the same value of the object vRtrID must exist.</p> <p>Table description (for tmnxWppPortalTable): The tmnxWppPortalTable contains objects to configure the WPP portals of this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: wpp.Portal</p>		
portalName [Portal Name] (tmnxWppPortalName)	String	The value of tmnxWppPortalName specifies the name of this WPP portal.
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.
wppPortalStatsInstance [Wpp Portal Stats Instance] (tmnxWppPortalStatsInstance)	long	The value of the object tmnxWppPortalStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppPortalStatsType it indicates unambiguously what the value of tmnxWppPortalStatsVal means. For example: if the value of the object tmnxWppPortalStatsType is equal to 'event', the value of tmnxWppPortalStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppPortalStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.

Table 583 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppPortalStatsName [Wpp Portal Stats Name] (tmnxWppPortalStatsName)	String	The value of the object tmnxWppPortalStatsType indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppPortalStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppPortalStatsType [Wpp Portal Stats Type] (tmnxWppPortalStatsType)	int	The value of the object tmnxWppPortalStatsType indicates the type of WPP statistics contained in this conceptual row.
wppPortalStatsVal [Wpp Portal Stats Val] (tmnxWppPortalStatsVal)	long	The value of the object tmnxWppPortalStatsType indicates the value of the statistics contained in this conceptual row.
<p>WppStats MIB entry name: vRtrConfEntry Entry description: Each row entry represents a virtual router in the system. Entries can be created and deleted via SNMP SET operations. Creation requires a SET request containing vRtrRowStatus, vRtrName and vRtrType. Note that rows in this table are usually created by the agent itself as a side affect of some other configuration; for example, when a service vprn is created by setting the appropriate objects in the TIMETRA-SERV-MIB. There will always be at least two row entries in this table, one of these entries represents the base or transport router and the other represents the management router. These entries are created when the system is initialized and can never be deleted. Table description (for vRtrConfTable): The vRtrConfTable has an entry for each virtual router configured in the system. Supports realtime plotting Supports scheduled collection Monitored class: wpp.Site</p>		
routerId [Router Id] (vRtrID)	int	The unique value which identifies this virtual router in the Tmnx system. The vRtrID value for each virtual router must remain constant at least from one re-initialization of the system management processor (CPM) to the next. There will always be at least one router entry defined by the agent with vRtrID=1 which represents the transport router.

Table 583 wpp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
wppStatsInstance [Wpp Stats Instance] (tmnxWppStatsInstance)	long	The value of the object tmnxWppStatsInstance indicates the instance identifier of the statistics contained in this conceptual row. Together with the value of tmnxWppStatsType it indicates unambiguously what the value of tmnxWppStatsVal means. For example: if the value of the object tmnxWppStatsType is equal to 'event', the value of tmnxWppStatsInstance indicates the identifier of the type of event that this conceptual row refers to, for example 'noResources', and the value of tmnxWppStatsVal indicates the number of times a 'no resources' event occurred for this WPP portal.
wppStatsName [Wpp Stats Name] (tmnxWppStatsName)	String	The value of the object tmnxWppStatsType indicates the human-readable identifier of the statistics contained in this conceptual row. In the same example, the value of tmnxWppStatsName is '(SCCRP) Start-Control-Connection-Reply'.
wppStatsType [Wpp Stats Type] (tmnxWppStatsType)	int	The value of the object tmnxWppStatsType indicates the type of WPP statistics contained in this conceptual row.
wppStatsVal [Wpp Stats Val] (tmnxWppStatsVal)	long	The value of the object tmnxWppStatsType indicates the value of the statistics contained in this conceptual row.

Every MAC Filter can have zero or more MAC Filter match entries. a filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tMacFilterParamsTable): A table of all MAC filter match entries for all MAC filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.MacFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tMacFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tMacFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tMacFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tMacFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 585 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerAdditionalStats MIB entry name: bgpPeerEntry Entry description: Entry containing information about the connection with a BGP peer. Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers. Supports realtime plotting Supports scheduled collection Monitored class: bgp.Peer</p>		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerRouteTargetStats MIB entry name: tBgpPeerNgOperEntry Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable. Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information. Supports realtime plotting Supports scheduled collection Monitored class: bgp.Peer</p>		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 585 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
l2VpnActivePfxs [L2 Vpn Active Pfxs] (tBgpPeerNgOperl2VpnActivePfxs)	long	The value of tBgpPeerNgOperl2VpnActivePfxs indicates the number of active L2VPN prefixes from this peer.
l2VpnRecvPfxs [L2 Vpn Recv Pfxs] (tBgpPeerNgOperl2VpnRecvPfxs)	long	The value of tBgpPeerNgOperl2VpnRecvPfxs indicates the number L2VPN prefixes received from this peer.

Table 585 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
I2VpnSentPfxs [L2 Vpn Sent Pfxs] (tBgpPeerNgOperI2VpnSentPfxs)	long	The value of tBgpPeerNgOperI2VpnSentPfxs indicates the number of L2VPN prefixes transmitted to this peer.
I2VpnSuppPfxDamp [L2 Vpn Supp Pfx Damp] (tBgpPeerNgOperI2VpnSuppPfxDamp)	long	The value of tBgpPeerNgOperI2VpnSuppPfxDamp indicates the number of L2VPN prefixes from this peer, which have been suppressed by damping.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.

Table 585 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdtSafiActivePrefixes [Mdt Safi Active Prefixes] (tBgpPeerNgOperMdtSafiActivePfxs)	long	The value of tBgpPeerNgOperMdtSafiActivePfxs indicates the number of active MDT-SAFI prefixes from this peer.
mdtSafiPrefixesSuppressedByDamping [Mdt Safi Prefixes Suppressed By Damping] (tBgpPeerNgOperMdtSafiSuppPfxDamp)	long	The value of tBgpPeerNgOperMdtSafiSuppPfxDamp indicates the number of MDT-SAFI prefixes from this peer, which have been suppressed by damping.
mdtSafiReceivedPrefixes [Mdt Safi Received Prefixes] (tBgpPeerNgOperMdtSafiRecvPfxs)	long	The value of tBgpPeerNgOperMdtSafiRecvPfxs indicates the number of MDT-SAFI prefixes received from this peer.
mdtSafiSentPrefixes [Mdt Safi Sent Prefixes] (tBgpPeerNgOperMdtSafiSentPfxs)	long	The value of tBgpPeerNgOperMdtSafiSentPfxs indicates the number of MDT-SAFI prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.

Table 585 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.

Table 585 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.
<p>PeerVprnlpv6Stats MIB entry name: tBgpPeerNgOperEntry Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. NFM-P counter names: XML [displayed] (MIB)	Type	Description
helloRx [Hello Rx] (tmnxDCvShelloRx)	java. math. BigInteger	The value of tmnxDCvShelloRx indicates the total number of hello packets received.
helloTx [Hello Tx] (tmnxDCvShelloTx)	java. math. BigInteger	The value of tmnxDCvShelloTx indicates the total number of hello packets transmitted.
statsReqRx [Stats Req Rx] (tmnxDCvSstatsReqRx)	java. math. BigInteger	The value of tmnxDCvSstatsReqRx indicates the total number of stats-req packets received.
statsReqTx [Stats Req Tx] (tmnxDCvSstatsReqTx)	java. math. BigInteger	The value of tmnxDCvSstatsReqTx indicates the total number of stats-req packets transmitted.
statsRespRx [Stats Resp Rx] (tmnxDCvSstatsRespRx)	java. math. BigInteger	The value of tmnxDCvSstatsRespRx indicates the total number of stats-req packets received.
statsRespTx [Stats Resp Tx] (tmnxDCvSstatsRespTx)	java. math. BigInteger	The value of tmnxDCvSstatsRespTx indicates the total number of stats-req packets transmitted.

Table 588 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
<p>AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.

<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISISRoutes)	long	vRtrFibStatISISRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
natRoutes [Nat Routes] (vRtrFibStatNatRoutes)	long	vRtrFibStatNatRoutes indicates current NAT route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6AggrRoutes [V6 Aggr Routes] (vRtrFibStatV6AggrRoutes)	long	vRtrFibStatV6AggrRoutes indicates current aggregate route counts for the virtual router.
v6BGPRoutes [V6 BGP Routes] (vRtrFibStatV6BGPRoutes)	long	vRtrFibStatV6BGPRoutes indicates current BGP route counts for the virtual router.
v6BGPVpnRoutes [V6 BGPVpn Routes] (vRtrFibStatV6BGPVpnRoutes)	long	vRtrFibStatV6BGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
v6DirectRoutes [V6 Direct Routes] (vRtrFibStatV6DirectRoutes)	long	vRtrFibStatV6DirectRoutes indicates current direct route counts for the virtual router.
v6HostRoutes [V6 Host Routes] (vRtrFibStatV6HostRoutes)	long	vRtrFibStatV6HostRoutes indicates current host route counts for the virtual router.
v6ISISRoutes [V6 ISIS Routes] (vRtrFibStatV6ISISRoutes)	long	vRtrFibStatV6ISISRoutes indicates current ISIS route counts for the virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrFibStatV6ManagedRoutes)	long	vRtrFibStatV6ManagedRoutes indicates current managed route counts for the virtual router.
v6NatRoutes [V6 Nat Routes] (vRtrFibStatV6NatRoutes)	long	vRtrFibStatV6NatRoutes indicates current NAT IPv6 route counts for the virtual router.

Table 588 equipment statistics (continued)

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
IpSecMDAStats MIB entry name: tmnxIPsecMdaDpStatsEntry Entry description: Information about a single IPsec Mda Data Path Statistics entry. Table description (for tmnxIPsecMdaDpStatsTable): Table to retrieve the IPsec Mda Data Path Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
decryptBytes [Decrypt Bytes] (tmnxIPsecMdaDpStatsDecryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptBytes indicates the number of bytes encrypted by the IPsec data path.
decryptPackets [Decrypt Packets] (tmnxIPsecMdaDpStatsDecryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptPkts indicates the number of packets encrypted by the IPsec data path.
dynamicIPsecTunnels [Dynamic IPsec Tunnels] (tmnxIPsecMdaDpDynIPsecTnls)	long	The value of tmnxIPsecMdaDpDynIPsecTnls indicates number of dynamic IPsec tunnels in use on the MDA.
encryptBytes [Encrypt Bytes] (tmnxIPsecMdaDpStatsEncryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptBytes indicates the number of bytes encrypted by the IPsec data path.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptPackets [Encrypt Packets] (tmnxIPsecMdaDpStatsEncryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptPkts indicates the number of packets encrypted by the IPsec data path.
inboundIPDropPackets [Inbound IPDrop Packets] (tmnxIPsecMdaDpStatsInBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the IPsec data path.
inboundIPDstSrcMismatches [Inbound IPDst Src Mismatches] (tmnxIPsecMdaDpStatsInBIP-DstSrcMismatches)	long	The value of tmnxIPsecMdaDpStatsInBIPDstSrcMismatches indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to the received packet's outer IP destination or source address does not match the Tunnel's local or peer gateway address.
inboundSaMisses [Inbound Sa Misses] (tmnxIPsecMdaDpStatsInBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBSAMisses indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to no SA (security association) present.
outboundIPDropPackets [Outbound IPDrop Packets] (tmnxIPsecMdaDpStatsOutBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the IPsec data path.
outboundPolicyEntryMisses [Outbound Policy Entry Misses] (tmnxIPsecMdaDpStatsOutBPolicyEntryMisses)	long	The value of tmnxIPsecMdaDpStatsOutBPolicyEntryMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no matching Policy Entry.
outboundSaMisses [Outbound Sa Misses] (tmnxIPsecMdaDpStatsOutBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBSAMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no SA (security association) present.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticIPsecTunnels [Static IPsec Tunnels] (tmnxIPsecMdaDpStaticIPsecTnls)	long	The value of tmnxIPsecMdaDpStaticIPsecTnls indicates number of configured static IPsec tunnels on the MDA.
transmitPacketErrors [Transmit Packet Errors] (tmnxIPsecMdaDpStatsTxPktErrs)	long	The value of tmnxIPsecMdaDpStatsTxPktErrs indicates the number of packets transmit failures by the IPsec data path.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependent-DropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHigh-CapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUC- astHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 588 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 589 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernet. If the network is a full-duplex ethernet and the mediaIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting mediaIndependentInPkts for etherStatsHighCapacityPkts, and mediaIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting mediaIndependentOutPkts for etherStatsHighCapacityPkts, and mediaIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>OtulfStats MIB entry name: tmnxOtulfRawStatsEntry Entry description: The tmnxOtulfRawStatsEntry stores the statistics for an individual OTU interface. tmnxOtulfRawStatsEntry rows are created and destroyed by the system when rows are added or removed in the tmnxOtulfTable. Table description (for tmnxOtulfRawStatsTable): The tmnxOtulfRawStatsTable consists of the raw statistics associated with the OTU interfaces contained in the tmnxOtulfTable. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
elapsedSec [Elapsed Sec] (tmnxOtulfRawStatsElapsedSec)	long	The value of tmnxOtulfRawStatsElapsedSec indicates the number of Elapsed seconds since the last OTU raw statistics clearing.
feCes [Fe Ces] (tmnxOtulfRawStatsFECES)	long	The value of tmnxOtulfRawStatsFECES indicates the number of Forward Error Correction (FEC) Errors Seconds (ES).
fecCorrOnes [Fec Corr Ones] (tmnxOtulfRawStatsFECCorrOnes)	long	The value of tmnxOtulfRawStatsFECCorrOnes indicates the number of Forward Error Correction (FEC) corrected ones.
fecCorrZeros [Fec Corr Zeros] (tmnxOtulfRawStatsFECCorrZeros)	long	The value of tmnxOtulfRawStatsFECCorrZeros indicates the number of Forward Error Correction (FEC) corrected zeros.
fecSes [Fec Ses] (tmnxOtulfRawStatsFECSES)	long	The value of tmnxOtulfRawStatsFECSES indicates the number of Forward Error Correction (FEC) Severely Errors Seconds (SES).

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecUas [Fec Uas] (tmnxOtuIfRawStatsFECUAS)	long	The value of tmnxOtuIfRawStatsFECUAS indicates the number of Forward Error Correction (FEC) Unavailable Seconds (UAS).
fecUncorrSr [Fec Uncorr Sr] (tmnxOtuIfRawStatsFECUncorrSR)	long	The value of tmnxOtuIfRawStatsFECUncorrSR indicates the number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcFecCorrOnes [Hc Fec Corr Ones] (tmnxOtuIfRawStatsHCFECCorrOnes)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrOnes indicates the High Capacity number of Forward Error Correction (FEC) corrected ones.
hcFecCorrZeros [Hc Fec Corr Zeros] (tmnxOtuIfRawStatsHCFECCorrZeros)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrZeros indicates the High Capacity number of Forward Error Correction (FEC) corrected zeros.
hcFecUncorrSr [Hc Fec Uncorr Sr] (tmnxOtuIfRawStatsHCFECUncorrSR)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECUncorrSR indicates the High Capacity number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcPmBei [Hc Pm Bei] (tmnxOtuIfRawStatsHCPMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsPMBEI indicates the High Capacity number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
hcPmBip8 [Hc Pm Bip 8] (tmnxOtuIfRawStatsHCPMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBIP8 indicates the High Capacity number of Path Monitoring (PM) BIP8 errors.
hcSmBei [Hc Sm Bei] (tmnxOtuIfRawStatsHCSMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBEI indicates the High Capacity number of Section Monitoring (SM) Backward Error Indication (BEI) errors.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hcSmBip8 [Hc Sm Bip 8] (tmnxOtuIfRawStatsHCSMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBIP8 indicates the High Capacity number of Section Monitoring (SM) BIP8 errors.
npj [Npj] (tmnxOtuIfRawStatsNPJ)	long	The value of tmnxOtuIfRawStatsNPJ indicates the number of Negative Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
ofFecCorrOnes [Of Fec Corr Ones] (tmnxOtuIfRawStatsOFFECCorrOnes)	long	The value of tmnxOtuIfRawStatsFECCorrOnes indicates the number of times the tmnxOtuIfRawStatsFECCorrOnes overflowed.
ofFecCorrZeros [Of Fec Corr Zeros] (tmnxOtuIfRawStatsOFFECCorrZeros)	long	The value of tmnxOtuIfRawStatsOFFECCorrZeros indicates the number of times the tmnxOtuIfRawStatsFECCorrZeros overflowed.
ofFecUncorrSr [Of Fec Uncorr Sr] (tmnxOtuIfRawStatsOFFECUncorrSR)	long	The value of tmnxOtuIfRawStatsOFFECUncorrSR indicates the number of times the tmnxOtuIfRawStatsFECUncorrSR overflowed.
ofPmBei [Of Pm Bei] (tmnxOtuIfRawStatsOFPMBEI)	long	The value of tmnxOtuIfRawStatsOFPMBEI indicates the number of times tmnxOtuIfRawStatsPMBEI overflowed.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls1StFwdOcts [Port Egr Exp Shaper Cls 1 St Fwd Octs] (tPortEgrExpShaperCls1StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StFwdOcts indicates the number of octets forwarded by the class '1' egress expanded shaper.
portEgrExpShaperCls1StFwdPkts [Port Egr Exp Shaper Cls 1 St Fwd Pkts] (tPortEgrExpShaperCls1StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StFwdPkts indicates the number of packets forwarded by the class '1' egress expanded shaper.
portEgrExpShaperCls1StMonOvrOct [Port Egr Exp Shaper Cls 1 St Mon Ovr Oct] (tPortEgrExpShaperCls1StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '1' egress expanded shaper.
portEgrExpShaperCls2StFwdOcts [Port Egr Exp Shaper Cls 2 St Fwd Octs] (tPortEgrExpShaperCls2StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StFwdOcts indicates the number of octets forwarded by the class '2' egress expanded shaper.
portEgrExpShaperCls2StFwdPkts [Port Egr Exp Shaper Cls 2 St Fwd Pkts] (tPortEgrExpShaperCls2StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StFwdPkts indicates the number of packets forwarded by the class '2' egress expanded shaper.
portEgrExpShaperCls2StMonOvrOct [Port Egr Exp Shaper Cls 2 St Mon Ovr Oct] (tPortEgrExpShaperCls2StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '2' egress expanded shaper.
portEgrExpShaperCls3StFwdOcts [Port Egr Exp Shaper Cls 3 St Fwd Octs] (tPortEgrExpShaperCls3StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StFwdOcts indicates the number of octets forwarded by the class '3' egress expanded shaper.
portEgrExpShaperCls3StFwdPkts [Port Egr Exp Shaper Cls 3 St Fwd Pkts] (tPortEgrExpShaperCls3StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StFwdPkts indicates the number of packets forwarded by the class '3' egress expanded shaper.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls3StMonOvrOct [Port Egr Exp Shaper Cls 3 St Mon Ovr Oct] (tPortEgrExpShaperCls3StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '3' egress expanded shaper.
portEgrExpShaperCls4StFwdOcts [Port Egr Exp Shaper Cls 4 St Fwd Octs] (tPortEgrExpShaperCls4StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StFwdOcts indicates the number of octets forwarded by the class '4' egress expanded shaper.
portEgrExpShaperCls4StFwdPkts [Port Egr Exp Shaper Cls 4 St Fwd Pkts] (tPortEgrExpShaperCls4StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StFwdPkts indicates the number of packets forwarded by the class '4' egress expanded shaper.
portEgrExpShaperCls4StMonOvrOct [Port Egr Exp Shaper Cls 4 St Mon Ovr Oct] (tPortEgrExpShaperCls4StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '4' egress expanded shaper.
portEgrExpShaperCls5StFwdOcts [Port Egr Exp Shaper Cls 5 St Fwd Octs] (tPortEgrExpShaperCls5StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StFwdOcts indicates the number of octets forwarded by the class '5' egress expanded shaper.
portEgrExpShaperCls5StFwdPkts [Port Egr Exp Shaper Cls 5 St Fwd Pkts] (tPortEgrExpShaperCls5StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StFwdPkts indicates the number of packets forwarded by the class '5' egress expanded shaper.
portEgrExpShaperCls5StMonOvrOct [Port Egr Exp Shaper Cls 5 St Mon Ovr Oct] (tPortEgrExpShaperCls5StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '5' egress expanded shaper.
portEgrExpShaperCls6StFwdOcts [Port Egr Exp Shaper Cls 6 St Fwd Octs] (tPortEgrExpShaperCls6StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StFwdOcts indicates the number of octets forwarded by the class '6' egress expanded shaper.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls6StFwdPkts [Port Egr Exp Shaper Cls 6 St Fwd Pkts] (tPortEgrExpShaperCls6StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StFwdPkts indicates the number of packets forwarded by the class '6' egress expanded shaper.
portEgrExpShaperCls6StMonOvrOct [Port Egr Exp Shaper Cls 6 St Mon Ovr Oct] (tPortEgrExpShaperCls6StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '6' egress expanded shaper.
portEgrExpShaperCls7StFwdOcts [Port Egr Exp Shaper Cls 7 St Fwd Octs] (tPortEgrExpShaperCls7StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StFwdOcts indicates the number of octets forwarded by the class '7' egress expanded shaper.
portEgrExpShaperCls7StFwdPkts [Port Egr Exp Shaper Cls 7 St Fwd Pkts] (tPortEgrExpShaperCls7StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StFwdPkts indicates the number of packets forwarded by the class '7' egress expanded shaper.
portEgrExpShaperCls7StMonOvrOct [Port Egr Exp Shaper Cls 7 St Mon Ovr Oct] (tPortEgrExpShaperCls7StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '7' egress expanded shaper.
portEgrExpShaperCls8StFwdOcts [Port Egr Exp Shaper Cls 8 St Fwd Octs] (tPortEgrExpShaperCls8StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StFwdOcts indicates the number of octets forwarded by the class '8' egress expanded shaper.
portEgrExpShaperCls8StFwdPkts [Port Egr Exp Shaper Cls 8 St Fwd Pkts] (tPortEgrExpShaperCls8StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StFwdPkts indicates the number of packets forwarded by the class '8' egress expanded shaper.
portEgrExpShaperCls8StMonOvrOct [Port Egr Exp Shaper Cls 8 St Mon Ovr Oct] (tPortEgrExpShaperCls8StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '8' egress expanded shaper.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortIngQosQueueStat MIB entry name: tmnxPortIngQosQStatEntry Entry description: Ingress statistics about a specific port's QoS queue-group queue. Table description (for tmnxPortIngQosQStatTable): A table that contains ingress QoS queue-group queue port statistics. Supports realtime plotting Does not support scheduled collection Monitored class: ethernetequipment.AccessIngrQGroup</p>		
portIngQosQStatDpdHiPrioOcts [Port Ing Qos QStat Dpd Hi Prio Octs] (tmnxPortIngQosQStatDpdHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdHiPrioPkts [Port Ing Qos QStat Dpd Hi Prio Pkts] (tmnxPortIngQosQStatDpdHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioOcts [Port Ing Qos QStat Dpd Lo Prio Octs] (tmnxPortIngQosQStatDpdLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioPkts [Port Ing Qos QStat Dpd Lo Prio Pkts] (tmnxPortIngQosQStatDpdLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatFwdInProfOcts [Port Ing Qos QStat Fwd In Prof Octs] (tmnxPortIngQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdInProfPkts [Port Ing Qos QStat Fwd In Prof Pkts] (tmnxPortIngQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatFwdOutProfOcts [Port Ing Qos QStat Fwd Out Prof Octs] (tmnxPortIngQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfPkts [Port Ing Qos QStat Fwd Out Prof Pkts] (tmnxPortIngQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatOffHiPrioOcts [Port Ing Qos QStat Off Hi Prio Octs] (tmnxPortIngQosQStatOffHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffHiPrioPkts [Port Ing Qos QStat Off Hi Prio Pkts] (tmnxPortIngQosQStatOffHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioOcts [Port Ing Qos QStat Off Lo Prio Octs] (tmnxPortIngQosQStatOffLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioPkts [Port Ing Qos QStat Off Lo Prio Pkts] (tmnxPortIngQosQStatOffLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatQueueId [Port Ing Qos QStat Queue Id] (tmnxPortIngQosQStatQueueId)	long	The value of tmnxPortIngQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
portIngQosQStatUncolOctsOff [Port Ing Qos QStat Uncol Octs Off] (tmnxPortIngQosQStatUncolOctsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolOctsOff indicates the number of uncolored octets offered to the ingress Qchip.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatUncolPktsOff [Port Ing Qos QStat Uncol Pkts Off] (tmnxPortIngQosQStatUncolPktsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolPktsOff indicates the number of uncolored packets offered to the ingress Qchip.
<p>PortNetEgrQGrpArbitStat</p> <p>MIB entry name: tPortNetEgrQGrpArbitStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpArbitStatEntry defines an entry in the tPortNetEgrQGrpArbitStatTable. portNetEgrQGrpPStOffInProfPkt [Port Net Egr QGrp PSt Off In Prof Pkt] (tPortNetEgrQGrpPStOffInProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffInProfPkt indicates the number of in-profile packets (rate below CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffInProfPktH [Port Net Egr QGrp PSt Off In Prof Pkt H] (tPortNetEgrQGrpPStOffInProfPktH)	long	The value of tPortNetEgrQGrpPStOffInProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffInProfPkt.
portNetEgrQGrpPStOffInProfPktL [Port Net Egr QGrp PSt Off In Prof Pkt L] (tPortNetEgrQGrpPStOffInProfPktL)	long	The value of tPortNetEgrQGrpPStOffInProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffInProfPkt.
portNetEgrQGrpPStOffOutProfOct [Port Net Egr QGrp PSt Off Out Prof Oct] (tPortNetEgrQGrpPStOffOutProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfOct indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStOffOutProfOctH [Port Net Egr QGrp PSt Off Out Prof Oct H] (tPortNetEgrQGrpPStOffOutProfOctH)	long	The value of tPortNetEgrQGrpPStOffOutProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfOctL [Port Net Egr QGrp PSt Off Out Prof Oct L] (tPortNetEgrQGrpPStOffOutProfOctL)	long	The value of tPortNetEgrQGrpPStOffOutProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfPkt [Port Net Egr QGrp PSt Off Out Prof Pkt] (tPortNetEgrQGrpPStOffOutProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfPkt indicates the number of out-of-profile packets (rate above CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffOutProfPktH [Port Net Egr QGrp PSt Off Out Prof Pkt H] (tPortNetEgrQGrpPStOffOutProfPktH)	long	The value of tPortNetEgrQGrpPStOffOutProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStOffOutProfPktL [Port Net Egr QGrp PSt Off Out Prof Pkt L] (tPortNetEgrQGrpPStOffOutProfPktL)	long	The value of tPortNetEgrQGrpPStOffOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStUncolOctOff [Port Net Egr QGrp PSt Uncol Oct Off] (tPortNetEgrQGrpPStUncolOctOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolOctOff indicates the number of uncolored octets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolOctOffH [Port Net Egr QGrp PSt Uncol Oct Off H] (tPortNetEgrQGrpPStUncolOctOffH)	long	The value of tPortNetEgrQGrpPStUncolOctOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolOctOffL [Port Net Egr QGrp PSt Uncol Oct Off L] (tPortNetEgrQGrpPStUncolOctOffL)	long	The value of tPortNetEgrQGrpPStUncolOctOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolPktOff [Port Net Egr QGrp PSt Uncol Pkt Off] (tPortNetEgrQGrpPStUncolPktOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolPktOff indicates the number of uncolored packets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolPktOffH [Port Net Egr QGrp PSt Uncol Pkt Off H] (tPortNetEgrQGrpPStUncolPktOffH)	long	The value of tPortNetEgrQGrpPStUncolPktOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStUncolPktOffL [Port Net Egr QGrp PSt Uncol Pkt Off L] (tPortNetEgrQGrpPStUncolPktOffL)	long	The value of tPortNetEgrQGrpPStUncolPktOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStatMode [Port Net Egr QGrp PStat Mode] (tPortNetEgrQGrpPStatMode)	int	The value of tPortNetEgrQGrpPStatMode indicates the stat mode used by this policer.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStatQosPolicerId [Port Net Egr QGrp PStat Qos Policer Id] (tPortNetEgrQGrpPStatQosPolicerId)	long	The value of tPortNetEgrQGrpPStatQosPolicerId specifies the index of the egress QoS policer queue group on network port.
<p>PortNetEgrQueueStat</p> <p>MIB entry name: tmnxPortNetEgrQStatEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgrQStatTable. Entries are created and deleted by the system depending on the queue policy being used at the specific port. In release 10.0 tPortNetEgrQGrpInstanceId is added as another index before tmnxPortEgrQosQStatQueueId for this tmnxPortNetEgrQStatTable.</p> <p>Table description (for tmnxPortNetEgrQStatTable): Defines the Alcatel-Lucent SROS series network port egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the queue-group queues being used for the ports to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQDroInProfOcts [Port Net Egr QDro In Prof Octs] (tmnxPortNetEgrQDroInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfOcts indicates the number of conforming network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroInProfPkts [Port Net Egr QDro In Prof Pkts] (tmnxPortNetEgrQDroInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfPkts indicates the number of conforming network egress packets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfOcts [Port Net Egr QDro Out Prof Octs] (tmnxPortNetEgrQDroOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfOcts indicates the number of exceeding network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfPkts [Port Net Egr QDro Out Prof Pkts] (tmnxPortNetEgrQDroOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfPkts indicates the number of exceeding network egress packets dropped on this port using this queue-group queue.

Table 589 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQFwdInProfOcts [Port Net Egr QFwd In Prof Octs] (tmnxPortNetEgrQFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfOcts indicates the number of conforming network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdInProfPkts [Port Net Egr QFwd In Prof Pkts] (tmnxPortNetEgrQFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfPkts indicates the number of conforming network egress packets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfOcts [Port Net Egr QFwd Out Prof Octs] (tmnxPortNetEgrQFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfPkts [Port Net Egr QFwd Out Prof Pkts] (tmnxPortNetEgrQFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this port using this queue-group queue.
portNetEgrQStatQueueId [Port Net Egr QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.

Table 590 ethernetoam statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmComponentLimitStats</p> <p>MIB entry name: tmnxDot1agCfmComponentLimitEntry</p> <p>Entry description: The tmnxDot1agCfmComponentLimitEntry consists of the resource limits for a particular component of ETH-CFM. Rows are managed by the system and can not be created or destroyed using SNMP set requests.</p> <p>Table description (for tmnxDot1agCfmComponentLimitTable): The tmnxDot1agCfmComponentLimitTable stores the current resource counts as well as their resource limits for Ethernet Connectivity Fault Management (ETH-CFM) components in the SROS series system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmComponentLimit</p>		
compName [Comp Name] (tmnxDot1agCfmCompName)	String	The value of tmnxDot1agCfmCompName indicates the name of the ETH-CFM component.
compResourceLimit [Comp Resource Limit] (tmnxDot1agCfmCompResourceLimit)	long	The value of tmnxDot1agCfmCompResourceLimit indicates the maximum resource usage limit for the ETH-CFM component for the SROS series system.
compResourceUsage [Comp Resource Usage] (tmnxDot1agCfmCompResourceUsage)	long	The value of tmnxDot1agCfmCompResourceUsage indicates the current resource usage for the ETH-CFM component.
majorIndex [Major Index] (tmnxDot1agCfmCompMajorIndex)	long	The value of tmnxDot1agCfmCompMajorIndex specifies the major identifier of the ETH-CFM component.
minorIndex [Minor Index] (tmnxDot1agCfmCompMinorIndex)	long	The value of tmnxDot1agCfmCompMinorIndex specifies the minor identifier of the ETH-CFM component.

Table 590 ethernetOam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OamPerfReqTypesStats</p> <p>MIB entry name: tmnxOamSysPerfReqTypeEntry</p> <p>Entry description: Rows in tmnxOamSysPerfReqTypeTable are system-generated at CPM restart. Rows cannot be created or destroyed using SNMP.</p> <p>Table description (for tmnxOamSysPerfReqTypeTable): tmnxOamSysPerfReqTypeTable has a row for each relevant OAM echo request packet type. Each row contains packet counters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetOam.OamPerfReqTypes</p>		
oamTypeName [Oam Type Name] (tmnxOamSysPerfReqTypeName)	String	The value of tmnxOamSysPerfReqTypeName specifies the name of an echo request packet type (e.g. 'ICMP'). The name is the index for the row.
rxPackets [Rx Packets] (tmnxOamSysPerfReqTypeRemoteTstRx)	long	The value of tmnxOamSysPerfReqTypeRemoteTstRx indicates the number of echo request packets received from remotely initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
txPackets [Tx Packets] (tmnxOamSysPerfReqTypeLocalTestTx)	long	The value of tmnxOamSysPerfReqTypeLocalTestTx indicates the number of echo request packets transmitted by locally initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.

Table 591 isis statistics

CircuitStpStats MIB entry name: sdpBindTlsEntry Entry description: TLS specific information about an SDP Bind. Table description (for sdpBindTlsTable): A table that contains TLS spoke SDP Bind information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.CircuitStp		
forwardTransitions [Forward Transitions] (sdpBindTlsStpForwardTransitions)	long	The value of the object sdpBindTlsStpForwardTransitions indicates the number of times this port has transitioned from the Learning state to the Forwarding state.
inBadBpdus [In Bad Bpdus] (sdpBindTlsStpInBadBpdus)	long	The value of the object sdpBindTlsStpInBadBpdus indicates the number of bad BPDUs received on this SDP Bind.
inConfigBpdus [In Config Bpdus] (sdpBindTlsStpInConfigBpdus)	long	The value of the object sdpBindTlsStpInConfigBpdus indicates the number of Configuration BPDUs received on this SDP Bind.
inRapidSpanningTreeBpdus [In Rapid Spanning Tree Bpdus] (sdpBindTlsStpInRstBpdus)	long	The value of the object sdpBindTlsStpInRstBpdus indicates the number of Rapid Spanning Tree (Rst) BPDUs received on this SDP.
inTcnBpdus [In Tcn Bpdus] (sdpBindTlsStpInTcnBpdus)	long	The value of the object sdpBindTlsStpInTcnBpdus indicates the number of Topology Change Notification BPDUs received on this SDP Bind.
outConfigBpdus [Out Config Bpdus] (sdpBindTlsStpOutConfigBpdus)	long	The value of the object sdpBindTlsStpOutConfigBpdus indicates the number of Configuration BPDUs sent out this SDP Bind.

Table 593 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outRapidSpanningTreeBpdus [Out Rapid Spanning Tree Bpdus] (sdpBindTlsStpOutRstBpdus)	long	The value of the object sdpBindTlsStpOutRstBpdus indicates the number of Rapid Spanning Tree (Rstp) BPDUs sent out on this SDP.
outTcnBpdus [Out Tcn Bpdus] (sdpBindTlsStpOutTcnBpdus)	long	The value of the object sdpBindTlsStpOutTcnBpdus indicates the number of Topology Change Notification BPDUs sent out this SDP Bind.
<p>PipStpInfoStats</p> <p>MIB entry name: tlsPipInfoEntry</p> <p>Entry description: TLS specific information about PIP uplink.</p> <p>Table description (for tlsPipInfoTable): A table that contains TLS PIP (Provider Internal Port) uplink information. PIP is the virtual link between I and B components of PBB (Provider Backbone Bridging) model. I component refers to a service with svcVplsType set to 'iVpls (3)' and B component refers to a service with svcVplsType set to 'bVpls (2)'. When any form of STP is enabled in the iVpls domain, the PIP uplink is modeled as a regular STP port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2fwd.PipStpInfo</p>		
pipInTcBitBpdus [Pip In Tc Bit Bpdus] (tlsPipInTcBitBpdus)	long	The value of the object tlsPipInTcBitBpdus indicates the number of BPDUs received on this PIP uplink with the Topology Change bit set.
pipOutTcBitBpdus [Pip Out Tc Bit Bpdus] (tlsPipOutTcBitBpdus)	long	This object specifies the number of BPDUs sent out this PIP uplink with the Topology Change bit set.
pipStpForwardTransitions [Pip Stp Forward Transitions] (tlsPipStpForwardTransitions)	long	The value of the object tlsPipStpForwardTransitions indicates the number of times this port has transitioned from the Learning state to the Forwarding state.
pipStpInBadBpdus [Pip Stp In Bad Bpdus] (tlsPipStpInBadBpdus)	long	This object specifies the number of bad BPDUs received on this PIP uplink.

Table 593 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pipStpInConfigBpdus [Pip Stp In Config Bpdus] (tlsPipStpInConfigBpdus)	long	The value of the object tlsPipStpInConfigBpdus indicates the number of Configuration BPDUs received on this PIP uplink.
pipStpInMstBpdus [Pip Stp In Mst Bpdus] (tlsPipStpInMstBpdus)	long	The value of the object tlsPipStpInMstBpdus indicates the number of Multiple Spanning Tree (MST) BPDUs received on this PIP uplink.
pipStpInRstBpdus [Pip Stp In Rst Bpdus] (tlsPipStpInRstBpdus)	long	The value of the object tlsPipStpInRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs received on this PIP uplink.
pipStpInTcnBpdus [Pip Stp In Tcn Bpdus] (tlsPipStpInTcnBpdus)	long	The value of the object tlsPipStpInTcnBpdus indicates the number of Topology Change Notification BPDUs received on this PIP uplink.
pipStpOutConfigBpdus [Pip Stp Out Config Bpdus] (tlsPipStpOutConfigBpdus)	long	The value of the object tlsPipStpOutConfigBpdus indicates the number of Configuration BPDUs sent out this PIP uplink.
pipStpOutMstBpdus [Pip Stp Out Mst Bpdus] (tlsPipStpOutMstBpdus)	long	The value of the object tlsPipStpOutMstBpdus indicates the number of Multiple Spanning Tree (MST) BPDUs sent out on this PIP uplink.
pipStpOutRstBpdus [Pip Stp Out Rst Bpdus] (tlsPipStpOutRstBpdus)	long	The value of the object tlsPipStpOutRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs sent out on this PIP uplink.
pipStpOutTcnBpdus [Pip Stp Out Tcn Bpdus] (tlsPipStpOutTcnBpdus)	long	This object specifies the number of Topology Change Notification BPDUs sent out this PIP uplink.

Table 593 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteFibStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteFib</p>		
entries [Entries] (svcTlsFdbNumEntries)	long	The value of the object svcTlsFdbNumEntries indicates the current number of entries in the FDB of this service.
provisionedSize [Provisioned Size] (svcTlsFdbTableSize)	long	The value of the object svcTlsFdbTableSize specifies the maximum number of learned and static entries allowed in the FDB of this service. The maximum value of svcTlsFdbTableSize is '511999', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'd'. The maximum value of svcTlsFdbTableSize is '196607', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'c'. In other cases, the maximum value of svcTlsFdbTableSize is '131071'.
staticEntries [Static Entries] (svcTlsFdbNumStaticEntries)	long	The value of the object svcTlsFdbNumStaticEntries indicates the current number of static entries in the FDB of this service.

Table 594 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 594 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 594 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 594 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 594 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 595 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.
<p>LdpEgressStats</p> <p>MIB entry name: vRtrLdpEgrStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrLdpEgrStatisticsTable): The vRtrLdpEgrStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ldp.AccountingFecPrefix</p>		

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpInProfileOctetsFc0 [Ldp In Profile Octets Fc 0] (vRtrLdpInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
ldpInProfileOctetsFc1 [Ldp In Profile Octets Fc 1] (vRtrLdpInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
ldpInProfileOctetsFc2 [Ldp In Profile Octets Fc 2] (vRtrLdpInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
ldpInProfileOctetsFc3 [Ldp In Profile Octets Fc 3] (vRtrLdpInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
ldpInProfileOctetsFc4 [Ldp In Profile Octets Fc 4] (vRtrLdpInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
ldpInProfileOctetsFc5 [Ldp In Profile Octets Fc 5] (vRtrLdpInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
ldpInProfileOctetsFc6 [Ldp In Profile Octets Fc 6] (vRtrLdpInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
ldpInProfileOctetsFc7 [Ldp In Profile Octets Fc 7] (vRtrLdpInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpInProfilePktsFc0 [Ldp In Profile Pkts Fc 0] (vRtrLdpInProfilePktsFc0)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
ldpInProfilePktsFc1 [Ldp In Profile Pkts Fc 1] (vRtrLdpInProfilePktsFc1)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
ldpInProfilePktsFc2 [Ldp In Profile Pkts Fc 2] (vRtrLdpInProfilePktsFc2)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.
ldpInProfilePktsFc3 [Ldp In Profile Pkts Fc 3] (vRtrLdpInProfilePktsFc3)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
ldpInProfilePktsFc4 [Ldp In Profile Pkts Fc 4] (vRtrLdpInProfilePktsFc4)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
ldpInProfilePktsFc5 [Ldp In Profile Pkts Fc 5] (vRtrLdpInProfilePktsFc5)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
ldpInProfilePktsFc6 [Ldp In Profile Pkts Fc 6] (vRtrLdpInProfilePktsFc6)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
ldpInProfilePktsFc7 [Ldp In Profile Pkts Fc 7] (vRtrLdpInProfilePktsFc7)	java. math. BigInteger	The value of vRtrLdpInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpOutOfProfOctetsFc0 [Ldp Out Of Prof Octets Fc 0] (vRtrLdpOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
ldpOutOfProfOctetsFc1 [Ldp Out Of Prof Octets Fc 1] (vRtrLdpOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
ldpOutOfProfOctetsFc2 [Ldp Out Of Prof Octets Fc 2] (vRtrLdpOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
ldpOutOfProfOctetsFc3 [Ldp Out Of Prof Octets Fc 3] (vRtrLdpOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
ldpOutOfProfOctetsFc4 [Ldp Out Of Prof Octets Fc 4] (vRtrLdpOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
ldpOutOfProfOctetsFc5 [Ldp Out Of Prof Octets Fc 5] (vRtrLdpOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
ldpOutOfProfOctetsFc6 [Ldp Out Of Prof Octets Fc 6] (vRtrLdpOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
ldpOutOfProfOctetsFc7 [Ldp Out Of Prof Octets Fc 7] (vRtrLdpOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrLdpOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpOutOfProfPktsFc0 [Ldp Out Of Prof Pkts Fc 0] (vRtrLdpOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
ldpOutOfProfPktsFc1 [Ldp Out Of Prof Pkts Fc 1] (vRtrLdpOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
ldpOutOfProfPktsFc2 [Ldp Out Of Prof Pkts Fc 2] (vRtrLdpOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
ldpOutOfProfPktsFc3 [Ldp Out Of Prof Pkts Fc 3] (vRtrLdpOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
ldpOutOfProfPktsFc4 [Ldp Out Of Prof Pkts Fc 4] (vRtrLdpOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
ldpOutOfProfPktsFc5 [Ldp Out Of Prof Pkts Fc 5] (vRtrLdpOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
ldpOutOfProfPktsFc6 [Ldp Out Of Prof Pkts Fc 6] (vRtrLdpOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
ldpOutOfProfPktsFc7 [Ldp Out Of Prof Pkts Fc 7] (vRtrLdpOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrLdpOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SessionStats</p> <p>MIB entry name: vRtrLdpSessionStatsEntry</p> <p>Entry description: A row in this table represents statistical information about a single session between an LDP entity and an LDP Peer.</p> <p>Table description (for vRtrLdpSessionStatsTable): vRtrLdpSessionStatsTable is a read-only table. The purpose of this table is to keep statistical information about a single session between an LDP entity and an LDP Peer. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpSessionTable, and the augmenting table, vRtrLdpSessionStatsTable. This in effect extends the vRtrLdpSessionTable with additional columns. addressMessagesReceived [Address Messages Received] (vRtrLdpSessStatsAddrIn)	long	The value of vRtrLdpSessStatsAddrIn counts the number of Address Messages that have been received during this session.
addressMessagesSent [Address Messages Sent] (vRtrLdpSessStatsAddrOut)	long	The value of vRtrLdpSessStatsAddrOut counts the number of Address Messages that have been sent during this session.
addressWithdrawMessagesReceived [Address Withdraw Messages Received] (vRtrLdpSessStatsAddrWithdrawIn)	long	The value of vRtrLdpSessStatsAddrWithdrawIn counts the number of Address Withdraw Messages that have been received during this session.
addressWithdrawMessagesSent [Address Withdraw Messages Sent] (vRtrLdpSessStatsAddrWithdrawOut)	long	The value of vRtrLdpSessStatsAddrWithdrawOut counts the number of Address Withdraw Messages that have been sent during this session.
fecReceived [Fec Received] (vRtrLdpSessStatsFECRecv)	long	The value of vRtrLdpSessStatsFECRecv counts the number of FECs received for this session.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecSent [Fec Sent] (vRtrLdpSessStatsFECSent)	long	The value of vRtrLdpSessStatsFECSent counts the number of FECs sent for this session.
helloMessagesReceived [Hello Messages Received] (vRtrLdpSessStatsHelloIn)	long	The value of vRtrLdpSessStatsHelloIn counts the number of Hello Messages that have been received during this session.
helloMessagesSent [Hello Messages Sent] (vRtrLdpSessStatsHelloOut)	long	The value of vRtrLdpSessStatsHelloOut counts the number of Hello Messages that have been sent during this session.
initMessagesReceived [Init Messages Received] (vRtrLdpSessStatsInitIn)	long	The value of vRtrLdpSessStatsInitIn counts the number of Init Messages that have been received during this session.
initMessagesSent [Init Messages Sent] (vRtrLdpSessStatsInitOut)	long	The value of vRtrLdpSessStatsInitOut counts the number of Init Messages that have been sent during this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpSessStatsKeepaliveIn)	long	The value of vRtrLdpSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpSessStatsKeepaliveOut)	long	The value of vRtrLdpSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpSessStatsLabelAbortIn)	long	The value of vRtrLdpSessStatsLabelAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpSessStatsLabelAbortOut)	long	The value of vRtrLdpSessStatsLabelAbortOut counts the number of Label Abort Messages that have been sent during this session.

Table 595 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelMappingsReceived [Label Mappings Received] (vRtrLdpSessStatsLabelMappingIn)	long	The value of vRtrLdpSessStatsLabelMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpSessStatsLabelMappingOut)	long	The value of vRtrLdpSessStatsLabelMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpSessStatsLabelReleaseIn)	long	The value of vRtrLdpSessStatsLabelReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpSessStatsLabelReleaseOut)	long	The value of vRtrLdpSessStatsLabelReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpSessStatsLabelRequestIn)	long	The value of vRtrLdpSessStatsLabelRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpSessStatsLabelRequestOut)	long	The value of vRtrLdpSessStatsLabelRequestOut counts the number of Label Request Messages that have been sent during this session.
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpSessStatsLabelWithdrawIn)	long	The value of vRtrLdpSessStatsLabelWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpSessStatsLabelWithdrawOut)	long	The value of vRtrLdpSessStatsLabelWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpSessStatsLinkAdj)	long	The value of vRtrLdpSessStatsLinkAdj specifies the number of link adjacencies for this session.

Table 595 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
notificationMessagesReceived [Notification Messages Received] (vRtrLdpSessStatsNotificationIn)	long	The value of vRtrLdpSessStatsNotificationIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpSessStatsNotificationOut)	long	The value of vRtrLdpSessStatsNotificationOut counts the number of Notification Messages that have been sent during this session.
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpSessStatsTargAdj)	long	The value of vRtrLdpSessStatsTargAdj specifies the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vRtrLdpStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. This in effect extends the vRtrLdpGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpGeneralTable results in the same fate for the row in the vRtrLdpStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Site</p>		
activeAdjacencies [Active Adjacencies] (vRtrLdpStatsActiveAdjacencies)	long	The value of vRtrLdpStatsActiveAdjacencies specifies the number of active adjacencies (i.e. established sessions) associated with the LDP instance.
activeInterfaces [Active Interfaces] (vRtrLdpStatsActiveInterfaces)	long	The value of vRtrLdpStatsActiveInterfaces specifies the number of active (i.e. operationally up) interfaces associated with the LDP instance.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeSessions [Active Sessions] (vRtrLdpStatsActiveSessions)	long	The value of vRtrLdpStatsActiveSessions specifies the number of active sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargetedSessions [Active Targeted Sessions] (vRtrLdpStatsActiveTargSessions)	long	The value of vRtrLdpStatsActiveTargSessions specifies the number of configured targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vRtrLdpStatsAddrFECRecv)	long	The value of vRtrLdpStatsAddrFECRecv specifies the number of Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vRtrLdpStatsAddrFECSent)	long	The value of vRtrLdpStatsAddrFECSent specifies the number of Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vRtrLdpStatsAttemptedSessions)	long	The value of vRtrLdpStatsAttemptedSessions specifies the total number of attempted sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vRtrLdpStatsBadLdpIdentifierErrors)	long	The value of vRtrLdpStatsBadLdpIdentifierErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vRtrLdpStatsBadMessageLengthErrors)	long	The value of vRtrLdpStatsBadMessageLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vRtrLdpStatsBadPduLengthErrors)	long	The value of vRtrLdpStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vRtrLdpStatsBadTlvLengthErrors)	long	The value of vRtrLdpStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrFecPfxCount [Egr Fec Pfx Count] (vRtrLdpStatsEgrFecPfxCount)	long	The value of vRtrLdpStatsEgrFecPfxCount indicates the number of egress FEC prefix statistics configured for this LDP instance.
inactiveInterfaces [Inactive Interfaces] (vRtrLdpStatsInactiveInterfaces)	long	The value of vRtrLdpStatsInactiveInterfaces specifies the number of inactive (i.e. operationally down) interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vRtrLdpStatsInactiveTargSessions)	long	The value of vRtrLdpStatsInactiveTargSessions specifies the number of inactive (i.e. operationally down) targeted sessions associated with the LDP instance.
keepAliveExpiredErrors [Keep Alive Expired Errors] (vRtrLdpStatsKeepAliveExpiredErrors)	long	The value of vRtrLdpStatsKeepAliveExpiredErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vRtrLdpStatsMalformedTlvValueErrors)	long	The value of vRtrLdpStatsMalformedTlvValueErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vRtrLdpStatsOperDownEvents)	long	The value of vRtrLdpStatsOperDownEvents specifies the number of times the LDP instance has gone operationally down since the instance was created.
serviceFECsReceived [Service FECs Received] (vRtrLdpStatsSvcFECRecv)	long	The value of vRtrLdpStatsSvcFECRecv specifies the number of Service FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vRtrLdpStatsSvcFECSent)	long	The value of vRtrLdpStatsSvcFECSent specifies the number of Service FECs sent by the LDP instance to its neighbors.

Table 595 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vRtrLdpStatsSessRejAdvErrors)	long	The value of vRtrLdpStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vRtrLdpStatsSessRejLabelRangeErrors)	long	The value of vRtrLdpStatsSessRejLabelRangeErrors gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vRtrLdpStatsSessRejMaxPduErrors)	long	The value of vRtrLdpStatsSessRejMaxPduErrors gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vRtrLdpStatsSessRejNoHelloErrors)	long	The value of vRtrLdpStatsSessRejNoHelloErrors gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vRtrLdpStatsShutdownNotifRecv)	long	The value of vRtrLdpStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vRtrLdpStatsShutdownNotifSent)	long	The value of vRtrLdpStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vRtrLdpStatsUnknownTlvErrors)	long	The value of vRtrLdpStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.

existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 596 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 596 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPPortConfiguration</p>		

Table 596 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
IldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter is similar to IldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
IldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
IldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
IldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 596 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
lldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lldp.LLDPPortConfiguration</p>		
lldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
lldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 597 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrMldIfStatsEntry</p> <p>Entry description: An entry in the vRtrMldIfStatsTable.</p> <p>Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Interface</p>		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.

Table 597 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.

Table 597 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.

Table 597 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.

Table 598 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries specifies the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/vRtrMplsLspAge * 100 %).

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats MIB entry name: vRtrMplsIfStatEntry Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system. Supports realtime plotting Supports scheduled collection Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
<p>MplsLspIngressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.IngStatsPolicy</p>		
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.

Table 598 mpls statistics (continued)

mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>P2MPInstanceStats</p> <p>MIB entry name: vRtrMplsP2mplInstStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsP2mplInstStatTable): The vRtrMplsP2mplInstStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.P2MPInstance</p>		
configuredS2Is [Configured S2 Is] (vRtrMplsP2mplInstStatConfiguredS2Is)	long	The value of vRtrMplsP2mplInstStatConfiguredS2Is indicates the number of S2Is configured for this P2MP LSP.
lastS2IChange [Last S2 I Change] (vRtrMplsP2mplInstStatLastS2IChange)	long	The value of vRtrMplsP2mplInstStatLastS2IChange indicates the time since the last change occurred on this P2MP LSP.
lastS2ITimeDown [Last S2 I Time Down] (vRtrMplsP2mplInstStatLastS2ITimeDown)	long	The value of vRtrMplsP2mplInstStatLastS2ITimeDown indicates the total time that this S2I has not been operational.
lastTrans [Last Trans] (vRtrMplsP2mplInstStatLastTrans)	long	The value of vRtrMplsP2mplInstStatLastTrans indicates the time since the last transition occurred on this P2mp instance.
operationalS2Is [Operational S2 Is] (vRtrMplsP2mplInstStatOperationalS2Is)	long	The value of vRtrMplsP2mplInstStatOperationalS2Is indicates the number of operational S2Is for this P2MP LSP. This includes the S2Is currently active.
s2IChanges [S2 I Changes] (vRtrMplsP2mplInstStatS2IChanges)	long	The value of vRtrMplsP2mplInstStatS2IChanges indicates the number of S2I changes this P2MP LSP has had. For every S2I change (S2I down, S2I up, S2I change), a corresponding syslog/trap (if enabled) is generated for it.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2lTimeUp [S2l Time Up] (vRtrMplsP2mplInstStatLastS2lTimeUp)	long	The value of vRtrMplsP2mplInstStatLastS2lTimeUp indicates the total time that this S2l has been operational.
timeDown [Time Down] (vRtrMplsP2mplInstStatTimeDown)	long	The value of vRtrMplsP2mplInstStatTimeDown indicates the total time that this P2MP instance has not been operational.
timeUp [Time Up] (vRtrMplsP2mplInstStatTimeUp)	long	The value of vRtrMplsP2mplInstStatTimeUp indicates the total time that this P2MP instance has been operational.
transitions [Transitions] (vRtrMplsP2mplInstStatTransitions)	long	The The value of vRtrMplsP2mplInstStatTransitions indicates the number of state transitions (up -> down and down -> up) this P2mp instance has undergone.
<p>S2LPathStats</p> <p>MIB entry name: vRtrMplsS2lSubLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Source to Leaf (S2L) Sub Labeled Switch Path (LSP) configured for a i virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsS2lSubLspStatTable): The vRtrMplsS2lSubLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.S2LPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsS2lSubLspCspfQueries)	long	The value of vRtrMplsS2lSubLspCspfQueries indicates the number of CSPF queries that have been made for this LSP S2l.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retryAttempts [Retry Attempts] (vRtrMplsS2ISubLspRetryAttempts)	long	The value of vRtrMplsS2ISubLspRetryAttempts indicates the number of unsuccessful attempts which have been made to signal this S2I. As soon as the S2I gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsS2ISubLspTimeDown)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has not been operational.
timeUp [Time Up] (vRtrMplsS2ISubLspTimeUp)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsS2ISubLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitionCount [Transition Count] (vRtrMplsS2ISubLspTransitionCount)	long	The value of vRtrMplsS2ISubLspTransitionCount indicates the number of transitions that have occurred for this LSP.
SiteStats MIB entry name: vRtrMplsGeneralStatEntry Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mpls.Site		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.

Table 598 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 599 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MultiChassisPeerRingStats</p> <p>MIB entry name: tmnxMcrPeerStatsEntry</p> <p>Entry description: Each row entry in the tmnxMcrPeerStatsTable represents additional columns of operational data for a multi-chassis peer.</p> <p>Table description (for tmnxMcrPeerStatsTable): The tmnxMcrPeerStatsTable has an entry for each multi-chassis peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
keepAlivePacketsTransmitted [Keep Alive Packets Transmitted] (tmnxMcrPeerStatsTxKeepAlive)	long	The value of tmnxMcrPeerStatsTxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were transmitted to the peer.
mcsIdRequestPacketsReceived [Mcs Id Request Packets Received] (tmnxMcrPeerStatsRxMcsIdReq)	long	The value of tmnxMcrPeerStatsRxMcsIdReq indicates how many valid MCS ID requests were received from the peer.
mcsIdRequestPacketsTransmitted [Mcs Id Request Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdReq)	long	The value of tmnxMcrPeerStatsTxMcsIdReq indicates how many valid MCS ID requests were transmitted to the peer.
mcsIdResponsePacketsReceived [Mcs Id Response Packets Received] (tmnxMcrPeerStatsRxMcsIdRsp)	long	The value of tmnxMcrPeerStatsRxMcsIdRsp indicates how many valid MCS ID responses were received from the peer.
mcsIdResponsePacketsTransmitted [Mcs Id Response Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdRsp)	long	The value of tmnxMcrPeerStatsTxMcsIdRsp indicates how many valid MCS ID responses were transmitted to the peer.
ringExistsRequestPacketsReceived [Ring Exists Request Packets Received] (tmnxMcrPeerStatsRxRingExistsReq)	long	The value of tmnxMcrPeerStatsRxRingExistsReq indicates how many valid 'ring exists' requests were received from the peer.

Table 599 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ringExistsRequestPacketsTransmitted [Ring Exists Request Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsReq)	long	The value of tmnxMcrPeerStatsTxRingExistsReq indicates how many valid 'ring exists' requests were transmitted to the peer.
ringExistsResponsePacketsReceived [Ring Exists Response Packets Received] (tmnxMcrPeerStatsRxRingExistsRsp)	long	The value of tmnxMcrPeerStatsRxRingExistsRsp indicates how many valid 'ring exists' responses were received from the peer.
ringExistsResponsePacketsTransmitted [Ring Exists Response Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsRsp)	long	The value of tmnxMcrPeerStatsTxRingExistsRsp indicates how many valid 'ring exists' responses were transmitted to the peer.
ringKeepAlivePacketsReceived [Ring Keep Alive Packets Received] (tmnxMcrPeerStatsRxKeepAlive)	long	The value of tmnxMcrPeerStatsRxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were received from the peer.
ringSignallingPacketsReceived [Ring Signalling Packets Received] (tmnxMcrPeerStatsRx)	long	The value of tmnxMcrPeerStatsRx indicates how many valid MC-Ring signalling messages were received from the peer.
ringSignallingPacketsTransmitted [Ring Signalling Packets Transmitted] (tmnxMcrPeerStatsTx)	long	The value of tmnxMcrPeerStatsTx indicates how many valid MC-Ring signalling messages were transmitted to the peer.
MultiChassisRingGlobalStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
deliveredToPeerPacketsReceived [Delivered To Peer Packets Received] (tmnxMcrStatsRxDelivrdToPeer)	long	The value of tmnxMcrStatsRxDelivrdToPeer indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their peer.

Table 599 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
deliveredToRingNodePacketsReceived [Delivered To Ring Node Packets Received] (tmnxMcrStatsRxDelivrdToRingNode)	long	The value of tmnxMcrStatsRxDelivrdToRingNode indicates how many MC-R signalling packets were received by this system that were correctly delivered to their ring node.
deliveredToRingPacketsReceived [Delivered To Ring Packets Received] (tmnxMcrStatsRxDelivrdToRing)	long	The value of tmnxMcrStatsRxDelivrdToRing indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their ring.
incompletePacketsReceived [Incomplete Packets Received] (tmnxMcrStatsRxIncomplete)	long	The value of tmnxMcrStatsRxIncomplete indicates how many MC-Ring signalling packets were received by this system that were incomplete.
invalidTlvPacketsReceived [Invalid Tlv Packets Received] (tmnxMcrStatsRxInvalidTlv)	long	The value of tmnxMcrStatsRxInvalidTlv indicates how many MC-Ring signalling packets were received by this system with invalid TLV.
missedBfdEvents [Missed Bfd Events] (tmnxMcrStatsMissedBfdEvent)	long	The value of tmnxMcrStatsMissedBfdEvent indicates the number of missed BFD events on this system.
missedConfigEvents [Missed Config Events] (tmnxMcrStatsMissedConfigEvent)	long	The value of tmnxMcrStatsMissedConfigEvent indicates the number of missed configuration events on this system.
noBufferPacketsNotTransmitted [No Buffer Packets Not Transmitted] (tmnxMcrStatsTxNoBuffer)	long	The value of tmnxMcrStatsTxNoBuffer indicates how many MC-Ring signalling packets could not be transmitted by this system due to a lack of packet buffers.
signallingPacketsNotTransmitted [Signalling Packets Not Transmitted] (tmnxMcrStatsTxTransmitFailed)	long	The value of tmnxMcrStatsTxTransmitFailed indicates how many MC-Ring signalling packets could not be transmitted by this system due to a transmission failure.
signallingPacketsReceived [Signalling Packets Received] (tmnxMcrStatsRx)	long	The value of tmnxMcrStatsRx indicates how many MC-Ring signalling packets were received by this system.

Table 599 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
signallingPacketsTransmitted [Signalling Packets Transmitted] (tmnxMcrStatsTx)	long	The value of tmnxMcrStatsTx indicates how many MC-Ring signalling packets were transmitted by this system.
tooShortPacketsReceived [Too Short Packets Received] (tmnxMcrStatsRxTooShort)	long	The value of tmnxMcrStatsRxTooShort indicates how many MC-Ring signalling packets were received by this system that were too short.
unknownDestinationPacketsDropped [Unknown Destination Packets Dropped] (tmnxMcrStatsTxUnknownDest)	long	The value of tmnxMcrStatsTxUnknownDest indicates how many MC-R signalling packets were dropped because the destination was unknown.
unknownPeerPacketsReceived [Unknown Peer Packets Received] (tmnxMcrStatsRxUnknownPeer)	long	The value of tmnxMcrStatsRxUnknownPeer indicates how many MC-Ring signalling packets were received by this system that were related to an unknown peer.
unknownRingNodePacketsReceived [Unknown Ring Node Packets Received] (tmnxMcrStatsRxUnknownRingNode)	long	The value of tmnxMcrStatsRxUnknownRingNode indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring node.
unknownRingPacketsReceived [Unknown Ring Packets Received] (tmnxMcrStatsRxUnknownRing)	long	The value of tmnxMcrStatsRxUnknownRing indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMcrStatsRxUnknownType)	long	The value of tmnxMcrStatsRxUnknownType indicates how many MC-Ring signalling packets were received by this system that were of unknown type.
wrongAuthenticationPacketsReceived [Wrong Authentication Packets Received] (tmnxMcrStatsRxWrongAuth)	long	The value of tmnxMcrStatsRxWrongAuth indicates how many MC-Ring signalling packets were received by this system with invalid authentication.

Table 599 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MultiChassisRingNodeStats</p> <p>MIB entry name: tmnxMcrRingNodeStatsEntry</p> <p>Entry description: Each row entry represents statistics related to an access node that participates in a multi-chassis ring configuration with a given peer. Rows are created or removed automatically by the system.</p> <p>Table description (for tmnxMcrRingNodeStatsTable): The tmnxMcrRingNodeStatsTable has an entry for each access node that participates in a multi-chassis ring configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisRingNode</p>		
detectedPacketsAcknowledged [Detected Packets Acknowledged] (tmnxMcrRingNodeStatsTxDetectAck)	long	The value of tmnxMcrRingNodeStatsTxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged to the peer for this multi-chassis ring node.
detectedPacketsPeerAcknowledged [Detected Packets Peer Acknowledged] (tmnxMcrRingNodeStatsRxDetectAck)	long	The value of tmnxMcrRingNodeStatsRxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged by the peer for this multi-chassis ring node.
detectedPacketsReceived [Detected Packets Received] (tmnxMcrRingNodeStatsRxDetect)	long	The value of tmnxMcrRingNodeStatsRxDetect indicates how many valid 'detected ring node' signalling messages were received from the peer for this multi-chassis ring node.
detectedPacketsTransmitted [Detected Packets Transmitted] (tmnxMcrRingNodeStatsTxDetect)	long	The value of tmnxMcrRingNodeStatsTxDetect indicates how many valid 'detected ring node' signalling messages were transmitted to the peer for this multi-chassis ring node.
rncvPacketsReceived [Rncv Packets Received] (tmnxMcrRingNodeStatsRncvRxResp)	long	The value of tmnxMcrRingNodeStatsRncvRxResp indicates how many valid connectivity verification messages were received from this multi-chassis ring node.

Table 599 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rcvPacketsRoundTripTime [Rcv Packets Round Trip Time] (tmnxMcrRingNodeStatsRncvRtTime)	long	The value of tmnxMcrRingNodeStatsRncvRtTime indicates the round-trip-time of the last successful connectivity verification for this multi-chassis ring node. If there has not been a successful connectivity verification, the value of tmnxMcrRingNodeStatsRncvRtTime is zero.
rcvPacketsTransmitted [Rcv Packets Transmitted] (tmnxMcrRingNodeStatsRncvTxReq)	long	The value of tmnxMcrRingNodeStatsRncvTxReq indicates how many valid connectivity verification messages were transmitted to this multi-chassis ring node.
<p>MultiChassisRingStats MIB entry name: tmnxMcrRingStatsEntry Entry description: Each row entry in the tmnxMcrRingStatsTable represents additional columns of operational data for a ring that participates in a multi-chassis operation with a given peer. Table description (for tmnxMcrRingStatsTable): The tmnxMcrRingStatsTable has an entry for each multi-chassis ring that participates in a multi-chassis configuration for the indicated peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRing</p>		
opaquePacketsReceivedDelivered [Opaque Packets Received Delivered] (tmnxMcrRingStatsRxOpaqueDelivrd)	long	The value of tmnxMcrRingStatsRxOpaqueDelivrd indicates how many valid opaque signalling messages were received from the peer and delivered for this multi-chassis ring.
opaquePacketsReceivedNoDestination [Opaque Packets Received No Destination] (tmnxMcrRingStatsRxOpaqueNoDest)	long	The value of tmnxMcrRingStatsRxOpaqueNoDest indicates how many valid opaque signalling messages were received from the peer and for which no destination could be found.
opaquePacketsTransmitted [Opaque Packets Transmitted] (tmnxMcrRingStatsTxOpaque)	long	The value of tmnxMcrRingStatsTxOpaque indicates how many valid opaque signalling messages were transmitted to the peer for this multi-chassis ring.

Table 599 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapsChangedPacketsReceived [Saps Changed Packets Received] (tmnxMcrRingStatsRxSapsChanged)	long	The value of tmnxMcrRingStatsRxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were received from the peer for this multi-chassis ring.
sapsChangedPacketsTransmitted [Saps Changed Packets Transmitted] (tmnxMcrRingStatsTxSapsChanged)	long	The value of tmnxMcrRingStatsTxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were transmitted to the peer for this multi-chassis ring.

Table 600 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmplnGetBulks [Sgi Snmp In Get Bulks] (sgiSnmplnGetBulks)	long	The value of sgiSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [Snmp In ASNParse Errs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmplnBadCommunityNames [Snmp In Bad Community Names] (snmplnBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 600 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 600 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 601 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
<p>InterfaceStatusStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddr)	long	The value of tmnxOspfNglfBadDstAddr indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNglfBadNetworks)	long	The value of tmnxOspfNglfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNglfBadOptions)	long	The value of tmnxOspfNglfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNglfBadPacketTypes)	long	The value of tmnxOspfNglfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNglfBadVersions)	long	The value of tmnxOspfNglfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNglfBadVirtualLinks)	long	The value of tmnxOspfNglfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNglfDiscardPackets)	long	The value of tmnxOspfNglfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNglfRetransmitOuts)	long	The value of tmnxOspfNglfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceTransmitStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
ShamLinkGeneralStats MIB entry name: tmnxOspfShamLfStatsEntry Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink		
events [Events] (tmnxOspfShamLfEvents)	long	The value of tmnxOspfShamLfEvents indicates the number of state changes or error events on this sham link.
ShamLinkNeighborGeneralStats MIB entry name: tmnxOspfShamNbrStatsEntry Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor. Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLinkNeighbor		
events [Events] (tmnxOspfShamNbrEvents)	long	The value of tmnxOspfShamNbrEvents indicates the number of times this sham link has changed its state, or an error has occurred.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfShamNbrLsRetransQLen)	long	The value of tmnxOspfShamNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>ShamLinkNeighborStatusStats MIB entry name: tmnxOspfShamNbrStatsEntry Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor. Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLinkNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfShamNbrBadMTUs)	long	The value of tmnxOspfShamNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfShamNbrBadPackets)	long	The value of tmnxOspfShamNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfShamNbrBadSeqNums)	long	The value of tmnxOspfShamNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfShamNbrBadNbrStates)	long	The value of tmnxOspfShamNbrBadNbrStates indicates the total number of OSPF packets received when the sham link neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
duplicates [Duplicates] (tmnxOspfShamNbrDuplicates)	long	The value of tmnxOspfShamNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfShamNbrLsaInstallFail)	long	The value of tmnxOspfShamNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfShamNbrLsaNotInLsdb)	long	The value of tmnxOspfShamNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfShamNbrNumRestarts)	long	The value of tmnxOspfShamNbrNumRestarts indicates the number of times the sham link neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfShamNbrOptionMismatch)	long	The value of tmnxOspfShamNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkReceiveStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfShamIfRxBadChecksums)	long	The value of tmnxOspfShamIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ShamLinkStatusStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfShamIfAuthFailures)	long	The value of tmnxOspfShamIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.
badAreas [Bad Areas] (tmnxOspfShamIfBadAreas)	long	The value of tmnxOspfShamIfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfShamIfBadAuthTypes)	long	The value of tmnxOspfShamIfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfShamIfBadDeadIntervals)	long	The value of tmnxOspfShamIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfShamIfBadDstAddrs)	long	The value of tmnxOspfShamIfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badHelloIntervals [Bad Hello Intervals] (tmnxOspfShamIfBadHelloIntervals)	long	The value of tmnxOspfShamIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfShamIfBadLengths)	long	The value of tmnxOspfShamIfBadLengths indicates the total number of OSPF packets received on this sham link with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfShamIfBadNeighbors)	long	The value of tmnxOspfShamIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.
badNetworks [Bad Networks] (tmnxOspfShamIfBadNetworks)	long	The value of tmnxOspfShamIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfShamIfBadOptions)	long	The value of tmnxOspfShamIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this sham link or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfShamIfBadPacketTypes)	long	The value of tmnxOspfShamIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfShamIfBadVersions)	long	The value of tmnxOspfShamIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
discardPackets [Discard Packets] (tmnxOspfShamIfDiscardPackets)	long	The value of tmnxOspfShamIfDiscardPackets indicates the total number of OSPF packets discarded on this sham link since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfShamIfRetransmitOuts)	long	The value of tmnxOspfShamIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkTransmitStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

Table 601 ospf statistics (continued)

<p>VirtualLinkGeneralStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
events [Events] (tmnxOspfVirtIfEvents)	long	The value of tmnxOspfVirtIfEvents indicates the number of state changes or error events on this Virtual Link
<p>VirtualLinkReceiveStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualLinkStatusStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAddrs)	long	The value of tmnxOspfVirtIfBadDstAddrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervals)	long	The value of tmnxOspfVirtIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualNeighborGeneralStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor		

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 601 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 602 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 602 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 602 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 602 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes: • equipment.ManagementPort • equipment.PhysicalPort</p>		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

Table 602 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthSessionOctetsTx [Dot 1 x Auth Session Octets Tx] (dot1xAuthSessionOctetsTx)	java. math. BigInteger	The number of octets transmitted in user data frames on this Port during the session.
dot1xAuthSessionTerminateCause [Dot 1 x Auth Session Terminate Cause] (dot1xAuthSessionTerminateCause)	int	The reason for the session termination.
dot1xAuthSessionTime [Dot 1 x Auth Session Time] (dot1xAuthSessionTime)	long	The duration of the session in seconds.
<p>PaePortAuthenticatorStats MIB entry name: dot1xAuthStatsEntry Entry description: The statistics information for an Authenticator PAE. Table description (for dot1xAuthStatsTable): A table that contains the statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 602 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 603 rsvp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpSessionStats</p> <p>MIB entry name: vRtrRsvpSessionStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an RSVP session. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrRsvpSessionStatTable): The vRtrRsvpSessionStatTable contains statistics for an RSVP session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Session</p>		
detourAge [Detour Age] (vRtrRsvpSessionDetourAge)	long	vRtrRsvpSessionDetourAge is the age (i.e., time from creation till now) of this detour LSP in 10-millisecond periods.
detourTimeUp [Detour Time Up] (vRtrRsvpSessionDetourTimeUp)	long	vRtrRsvpSessionDetourTimeUp is the total time in 10-millisecond units that the detour LSP has been operational.
pathsReceived [Paths Received] (vRtrRsvpSessionRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages received for this RSVP session.
pathsTransmitted [Paths Transmitted] (vRtrRsvpSessionTxPaths)	java. math. BigInteger	The total number of RSVP PATH messages transmitted for this RSVP session.
refreshPathsReceived [Refresh Paths Received] (vRtrRsvpSessionRxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshPaths indicates the number of times PATH was refreshed using message ID from full PATH refresh or Srefresh message for this RSVP session.

Table 603 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
refreshPathsTransmitted [Refresh Paths Transmitted] (vRtrRsvpSessionTxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshPaths indicates the number of times PATH refresh for the session was sent as a part of a Srefresh message.
refreshReservesReceived [Refresh Reserves Received] (vRtrRsvpSessionRxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshResvs indicates the number of times RESV was refreshed using message ID from full RESV refresh or Srefresh message for this RSVP session.
refreshReservesTransmitted [Refresh Reserves Transmitted] (vRtrRsvpSessionTxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshResvs indicates the number of times RESV refresh for the session was sent as a part of a Srefresh message.
reservesReceived [Reserves Received] (vRtrRsvpSessionRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages received for this RSVP session.
reservesTransmitted [Reserves Transmitted] (vRtrRsvpSessionTxResvs)	java. math. BigInteger	The total number of RSVP RESV messages transmitted for this RSVP session.

Table 604 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpeCheckStats</p> <p>MIB entry name: vRtrInetStatRteCpeChkStatsEntry</p> <p>Entry description: Each row entry represents a collection of Customer-Provided Equipment (CPE) availability statistics for a virtual router static route in the system with non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrInetStatRteCpeChkStatsTable): The vRtrInetStatRteCpeChkStatsTable has an entry for each entry in the vRtrInetStaticRouteTable that has a non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.StaticRoute</p>		
downTransitions [Down Transitions] (vRtrInetStatRteCpeChkDownTrans)	long	The value of vRtrInetStatRteCpeChkDownTrans indicates the number of times the CPE has transitioned to the unavailable state.
echoReplyPacketsReceived [Echo Reply Packets Received] (vRtrInetStatRteCpeChkInPktCnt)	long	The value of vRtrInetStatRteCpeChkInPktCnt indicates the number of echo-reply packets received.
echoRequestPacketsSent [Echo Request Packets Sent] (vRtrInetStatRteCpeChkOutPktCnt)	long	The value of vRtrInetStatRteCpeChkOutPktCnt indicates the number of echo-request packets sent.
hostUpDownTime [Host Up Down Time] (vRtrInetStatRteCpeChkUpTime)	long	The value of vRtrInetStatRteCpeChkUpTime indicates how long (in hundredths of a second) that the CPE has been available.
ttl [Ttl] (vRtrInetStatRteCpeChkTTL)	long	The value of vRtrInetStatRteCpeChkTTL indicates the time, in seconds, before the CPE will be declared down. Upon receipt of an echo reply, it has the value of vRtrInetStaticRouteCpeInterval * vRtrInetStaticRouteCpeDropCnt and is decremented by 1 every second.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
upTransitions [Up Transitions] (vRtrInetStatRteCpeChkUpTrans)	long	The value of vRtrInetStatRteCpeChkUpTrans indicates the number of times the CPE has transitioned to the available state.
<p>DhcpRelayStats MIB entry name: vRtrIfDHCPRelayStatsEntry Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrpIfDhcpRelayCfg • rtr.SubIfDhcpRelayCfg 		
authPktsDiscarded [Auth Pkts Discarded] (vRtrIfDHCPRelayAuthPktsDiscarded)	long	vRtrIfDHCPRelayAuthPktsDiscarded indicates the total number of packets discarded because authentication was not successful.
authPktsSuccess [Auth Pkts Success] (vRtrIfDHCPRelayAuthPktsSuccess)	long	vRtrIfDHCPRelayAuthPktsSuccess indicates the total number of packets for which authentication was successful.
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
clientPktsProxLS [Client Pkts Prox LS] (vRtrIfDHCPRelayClientPktsProxLS)	long	vRtrIfDHCPRelayClientPktsProxLS indicates the total number of client packets proxied by the DHCP relay agent based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
clientPktsProxRad [Client Pkts Prox Rad] (vRtrIfDHCPRelayClientPktsProxRad)	long	vRtrIfDHCPRelayClientPktsProxRad indicates the total number of client packets proxied by the DHCP relay agent based on data received from a RADIUS server.
pktsGenForceRenew [Pkts Gen Force Renew] (vRtrIfDHCPRelayPktsGenForceRenew)	long	vRtrIfDHCPRelayPktsGenForceRenew indicates the total number of DHCP FORCERENEW messages spoofed by the DHCP relay agent to the DHCP clients.
pktsGenRelease [Pkts Gen Release] (vRtrIfDHCPRelayPktsGenRelease)	long	vRtrIfDHCPRelayPktsGenRelease indicates the total number of DHCP RELEASE messages spoofed by the DHCP relay agent to the DHCP server.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.
serverPktsSnooped [Server Pkts Snooped] (vRtrIfDHCPRelayServerPktsSnooped)	long	vRtrIfDHCPRelayServerPktsSnooped indicates the total number of server packets snooped by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
<p>IpInterfaceStats MIB entry name: vRtrIfStatsEntry Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted. Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • rtr.NetworkInterface • service.L3AccessInterface • vprn.GroupInterface • vprn.NetworkInterface 		
ifSpeed [If Speed] (vRtrIfSpeed)	java. math. BigInteger	The value of vRtrIfSpeed indicates an estimate of the current bandwidth in bits per second for this interface.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBytes [Rx Bytes] (vRtrIfRxBytes)	java. math. BigInteger	The value of vRtrIfRxBytes indicates the number of total bytes received by this interface.
rxBytesHigh32 [Rx Bytes High 32] (vRtrIfRxBytesHigh32)	long	The value of vRtrIfRxBytesHigh32 indicates the high 32 bits of the value of vRtrIfRxBytes.
rxBytesLow32 [Rx Bytes Low 32] (vRtrIfRxBytesLow32)	long	The value of vRtrIfRxBytesLow32 indicates the lower 32 bits of the value of vRtrIfRxBytes.
rxPkts [Rx Pkts] (vRtrIfRxPkts)	java. math. BigInteger	The value of vRtrIfRxPkts indicates the number of total packets received by this interface.
rxPktsHigh32 [Rx Pkts High 32] (vRtrIfRxPktsHigh32)	long	The value of vRtrIfRxPktsHigh32 indicates the high 32 bits of the value of vRtrIfRxPkts.
rxPktsLow32 [Rx Pkts Low 32] (vRtrIfRxPktsLow32)	long	The value of vRtrIfRxPktsLow32 indicates the lower 32 bits of the value of vRtrIfRxPkts.
txV4Bytes [Tx V4 Bytes] (vRtrIfTxV4Bytes)	java. math. BigInteger	The value of vRtrIfTxV4Bytes indicates the number of total IPv4 bytes sent from this interface.
txV4BytesHigh32 [Tx V4 Bytes High 32] (vRtrIfTxV4BytesHigh32)	long	The value of vRtrIfTxV4BytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV4Bytes.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV4BytesLow32 [Tx V4 Bytes Low 32] (vRtrIfTxV4BytesLow32)	long	The value of vRtrIfTxV4BytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV4Bytes.
txV4DiscardBytes [Tx V4 Discard Bytes] (vRtrIfTxV4DiscardBytes)	java. math. BigInteger	The value of vRtrIfTxV4DiscardBytes indicates the number of total IPv4 transmit bytes discarded by this interface.
txV4DiscardBytesHigh32 [Tx V4 Discard Bytes High 32] (vRtrIfTxV4DiscardBytesHigh32)	long	The value of vRtrIfTxV4DiscardBytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV4DiscardBytes.
txV4DiscardBytesLow32 [Tx V4 Discard Bytes Low 32] (vRtrIfTxV4DiscardBytesLow32)	long	The value of vRtrIfTxV4DiscardBytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV4DiscardBytes.
txV4DiscardPktsHigh32 [Tx V4 Discard Pkts High 32] (vRtrIfTxV4DiscardPktsHigh32)	long	The value of vRtrIfTxV4DiscardPktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV4DiscardPkts.
txV4DiscardPktsLow32 [Tx V4 Discard Pkts Low 32] (vRtrIfTxV4DiscardPktsLow32)	long	The value of vRtrIfTxV4DiscardPktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV4DiscardPkts.
txV4Pkts [Tx V4 Pkts] (vRtrIfTxV4Pkts)	java. math. BigInteger	The value of vRtrIfTxV4Pkts indicates the number of total IPv4 packets sent from this interface.
txV4PktsHigh32 [Tx V4 Pkts High 32] (vRtrIfTxV4PktsHigh32)	long	The value of vRtrIfTxV4PktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV4Pkts.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV4PktsLow32 [Tx V4 Pkts Low 32] (vRtrIfTxV4PktsLow32)	long	The value of vRtrIfTxV4PktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV4Pkts.
txV6Bytes [Tx V6 Bytes] (vRtrIfTxV6Bytes)	java. math. BigInteger	The value of vRtrIfTxV6Bytes indicates the number of total IPv6 bytes sent from this interface.
txV6BytesHigh32 [Tx V6 Bytes High 32] (vRtrIfTxV6BytesHigh32)	long	The value of vRtrIfTxV6BytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV6Bytes.
txV6BytesLow32 [Tx V6 Bytes Low 32] (vRtrIfTxV6BytesLow32)	long	The value of vRtrIfTxV6BytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV6Bytes.
txV6DiscardBytes [Tx V6 Discard Bytes] (vRtrIfTxV6DiscardBytes)	java. math. BigInteger	The value of vRtrIfTxV6DiscardBytes indicates the number of total IPv6 transmit bytes discarded by this interface.
txV6DiscardBytesHigh32 [Tx V6 Discard Bytes High 32] (vRtrIfTxV6DiscardBytesHigh32)	long	The value of vRtrIfTxV6DiscardBytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV6DiscardBytes.
txV6DiscardBytesLow32 [Tx V6 Discard Bytes Low 32] (vRtrIfTxV6DiscardBytesLow32)	long	The value of vRtrIfTxV6DiscardBytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV6DiscardBytes.
txV6DiscardPkts [Tx V6 Discard Pkts] (vRtrIfTxV6DiscardPkts)	java. math. BigInteger	The value of vRtrIfTxV6DiscardPkts indicates the number of total IPv6 transmit packets discarded by this interface.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV6DiscardPktsHigh32 [Tx V6 Discard Pkts High 32] (vRtrIfTxV6DiscardPktsHigh32)	long	The value of vRtrIfTxV6DiscardPktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV6DiscardPkts.
txV6DiscardPktsLow32 [Tx V6 Discard Pkts Low 32] (vRtrIfTxV6DiscardPktsLow32)	long	The value of vRtrIfTxV6DiscardPktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV6DiscardPkts.
txV6Pkts [Tx V6 Pkts] (vRtrIfTxV6Pkts)	java. math. BigInteger	The value of vRtrIfTxV6Pkts indicates the number of total IPv6 packets sent from this interface.
txV6PktsHigh32 [Tx V6 Pkts High 32] (vRtrIfTxV6PktsHigh32)	long	The value of vRtrIfTxV6PktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV6Pkts.
txV6PktsLow32 [Tx V6 Pkts Low 32] (vRtrIfTxV6PktsLow32)	long	The value of vRtrIfTxV6PktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV6Pkts.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'bgp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPActiveRoutes)	long	vRtrBGPActiveRoutes indicates the current number of active bgp routes for this instance of the route table.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.

Table 604 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.

Table 605 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SrvConnsStats</p> <p>MIB entry name: tmnxTwampSrvConnStatsEntry</p> <p>Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established.</p> <p>Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: setUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.

Table 605 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.

Table 605 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.

Table 606 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L3AccessInterfaceURPFStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted.</p> <p>Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.L3AccessInterface</p>		
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

<p>SapBaseStats</p> <p>MIB entry name: sapBaseStatsEntry</p> <p>Entry description: Basic statistics about a specific SAP.</p> <p>Table description (for sapBaseStatsTable): A table that contains basic SAP statistics. In the descriptions below 'Pchip' refers to the Alcatel-Lucent SROS series Packet Processing chip, while 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface • service.ServiceAccessPoint 		
authenticationPacketsDiscarded [Authentication Packets Discarded] (sapBaseStatsAuthenticationPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
authenticationPacketsSuccessful [Authentication Packets Successful] (sapBaseStatsAuthenticationPktsSuccess)	long	The number of DHCP packets successfully authenticated.
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInteger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchipDroppedPackets)	java. math. BigInteger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOfferedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOfferedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOfferedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOfferedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedUncoloredOctets [Ingress PChip Offered Uncolored Octets] (sapBaseStatsIngressPchipOfferedUncoloredOctets)	java. math. BigInteger	The number of uncolored octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedUncoloredPackets [Ingress PChip Offered Uncolored Packets] (sapBaseStatsIngressPchipOf- feredUncoloredPackets)	java. math. BigInte- ger	The number of uncolored packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
<p>SapEgrEGBaseStats MIB entry name: sapEgrEGBaseStEntry Entry description: Egress statistics about a specific Encap Group of a SAP. Table description (for sapEgrEGBaseStTable): The sapEgrEGBaseStTable contains egress Encap Group basic SAP statistics at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. In the descriptions below 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGBaseStCustId)	long	The value of sapEgrEGBaseStCustId indicates the Customer ID for the associated service.
dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGBaseStQcDpdInPfOcts)	java. math. BigInte- ger	The value of sapEgrEGBaseStQcDpdInPfOcts indicates the number of in-profile octets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGBaseStQcDpdInPfOctsH)	long	The value of sapEgrEGBaseStQcDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGBaseStQcDpdInPfOctsL)	long	The value of sapEgrEGBaseStQcDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGBaseStQcDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdInPfPkts indicates the number of in-profile packets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGBaseStQcDpdInPfPktsH)	long	The value of sapEgrEGBaseStQcDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGBaseStQcDpdInPfPktsL)	long	The value of sapEgrEGBaseStQcDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGBaseStQcDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGBaseStQcDpdOutPfOctsH)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGBaseStQcDpdOutPfOctsL)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGBaseStQcDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGBaseStQcDpdOutPfPktsH)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGBaseStQcDpdOutPfPktsL)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGBaseStQcFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGBaseStQcFwdInPfOctsH)	long	The value of sapEgrEGBaseStQcFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGBaseStQcFwdInPfOctsL)	long	The value of sapEgrEGBaseStQcFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.

fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGMbrBaseStQcFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGMbrBaseStQcFwdInPfOctsH)	long	The value of sapEgrEGMbrBaseStQcFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGMbrBaseStQcFwdInPfOctsL)	long	The value of sapEgrEGMbrBaseStQcFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGMbrBaseStQcFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGMbrBaseStQcFwdInPfPktsH)	long	The value of sapEgrEGMbrBaseStQcFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGMbrBaseStQcFwdInPfPktsL)	long	The value of sapEgrEGMbrBaseStQcFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGMbrBaseStQcFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGMbrBaseStQcFwdOutPfOctsH)	long	The value of sapEgrEGMbrBaseStQcFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdOutPfOcts.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGMbrBaseStQcFwdOutPfOctsL)	long	The value of sapEgrEGMbrBaseStQcFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGMbrBaseStQcFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGMbrBaseStQcFwdOutPfPktsH)	long	The value of sapEgrEGMbrBaseStQcFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdOutPfPkts.
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGMbrBaseStQcFwdOutPfPktsL)	long	The value of sapEgrEGMbrBaseStQcFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcFwdOutPfPkts.
lastClearedTime [Last Cleared Time] (sapEgrEGMbrBaseStLstClearedTime)	String	The value of sapEgrEGMbrBaseStLstClearedTime indicates the sysUpTime when the counters in this table were last cleared.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
<p>SapEgrEGMbrQueueStats</p> <p>MIB entry name: sapEgrEGMbrQueueStEntry</p> <p>Entry description: Egress QoS queue statistics about a specific Encap group member of a SAP.</p> <p>Table description (for sapEgrEGMbrQueueStTable): The sapEgrEGMbrQueueStTable contains egress Encap Group member queue statistics per member. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
custId [Cust Id] (sapEgrEGMbrQueueCustId)	long	The value of sapEgrEGMbrQueueCustId indicates the Customer ID for the associated service.
dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGMbrQueueStDpdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdInPfOcts indicates the number of in-profile octets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGMbrQueueStDpdInPfOctsH)	long	The value of sapEgrEGMbrQueueStDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdInPfOcts.
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGMbrQueueStDpdInPfOctsL)	long	The value of sapEgrEGMbrQueueStDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGMbrQueueStDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdInPfPkts indicates the number of in-profile packets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGMbrQueueStDpdInPfPktsH)	long	The value of sapEgrEGMbrQueueStDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdInPfPkts.
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGMbrQueueStDpdInPfPktsL)	long	The value of sapEgrEGMbrQueueStDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGMbrQueueStDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGMbrQueueStDpdOutPfOctsH)	long	The value of sapEgrEGMbrQueueStDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGMbrQueueStDpdOutPfOctsL)	long	The value of sapEgrEGMbrQueueStDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfOcts.
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGMbrQueueStDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGMbrQueueStDpdOutPfPktsH)	long	The value of sapEgrEGMbrQueueStDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGMbrQueueStDpdOutPfPktsL)	long	The value of sapEgrEGMbrQueueStDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGMbrQueueStFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress queue.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGMbrQueueStFwdInPfOctsH)	long	The value of sapEgrEGMbrQueueStFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGMbrQueueStFwdInPfOctsL)	long	The value of sapEgrEGMbrQueueStFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdInPfOcts.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGMbrQueueStFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress queue.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGMbrQueueStFwdInPfPktsH)	long	The value of sapEgrEGMbrQueueStFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGMbrQueueStFwdInPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGMbrQueueStFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress queue.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGMbrQueueStFwdOutPfOctsH)	long	The value of sapEgrEGMbrQueueStFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGMbrQueueStFwdOutPfOctsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGMbrQueueStFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress queue.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGMbrQueueStFwdOutPfPktsH)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGMbrQueueStFwdOutPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
queueId [Queue Id] (sapEgrEGMbrQueueId)	long	The value of sapEgrEGMbrQueueId indicates the index of the egress QoS queue of this SAP.
<p>SapEgrEGMbrSchedStats MIB entry name: sapEgrEGMbrSchedStEntry Entry description: Egress statistics about a specific QoS scheduler instantiated per encapsulation group member of SAP. Table description (for sapEgrEGMbrSchedStTable): The sapEgrEGMbrSchedStTable contains egress encapsulation group QoS scheduler SAP per member. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGMbrSchedCustId)	long	The value of sapEgrEGMbrSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octets] (sapEgrEGMbrSchedStFwdOcts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdOcts indicates the number of octets forwarded by the egress QoS scheduler of this SAP.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOctsH [Fwd Octets H] (sapEgrEGMbrSchedStFwdOctsH)	long	The value of sapEgrEGMbrSchedStFwdOctsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdOctsL [Fwd Octets L] (sapEgrEGMbrSchedStFwdOctsL)	long	The value of sapEgrEGMbrSchedStFwdOctsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdPkts [Fwd Pkts] (sapEgrEGMbrSchedStFwdPkts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdPkts indicates the number of packets forwarded by the egress QoS scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapEgrEGMbrSchedStFwdPktsH)	long	The value of sapEgrEGMbrSchedStFwdPktsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
fwdPktsL [Fwd Pkts L] (sapEgrEGMbrSchedStFwdPktsL)	long	The value of sapEgrEGMbrSchedStFwdPktsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
schedName [Sched Name] (sapEgrEGMbrSchedStName)	String	The sapEgrEGMbrSchedStName specifies the name of the egress QoS scheduler of this SAP.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedInProfOctets [Dropped In Prof Octets] (sapEgQosPlcyQueueStatsDroppedInProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedInProfOctets indicates the number in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedInProfPackets [Dropped In Prof Packets] (sapEgQosPlcyQueueStatsDroppedInProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedInProfPackets indicates the number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfOctets [Dropped Out Prof Octets] (sapEgQosPlcyQueueStatsDroppedOutProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedOutProfOctets indicates the number out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfPackets [Dropped Out Prof Packets] (sapEgQosPlcyQueueStatsDroppedOutProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsDroppedOutProfPackets indicates the number out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
forwardedInProfOctets [Forwarded In Prof Octets] (sapEgQosPlcyQueueStatsForwardedInProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
forwardedInProfPackets [Forwarded In Prof Packets] (sapEgQosPlcyQueueStatsForwardedInProfPackets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedInProfPackets indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
forwardedOutProfOctets [Forwarded Out Prof Octets] (sapEgQosPlcyQueueStatsForwardedOutProfOctets)	java. math. BigInteger	The value of sapEgQosPlcyQueueStatsForwardedOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedOutProfPackets [Forwarded Out Prof Packets] (sapEgQosPlcyQueueStatsFor- wardedOutProfPackets)	java. math. BigInte- ger	The value of sapEgQosPlcyQueueStatsFor- wardedOutProfPackets indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
policyId [Policy Id] (sapEgQosPlcyQueuePlcyId)	long	The row index in the tSapEgressTable corresponding to this egress QoS policy.
queueId [Queue Id] (sapEgQosPlcyQueueId)	long	The value of sapEgQosPlcyQueueId indicates index of the egress QoS queue of this SAP.
<p>SapEgrQosPlcyStats MIB entry name: sapEgrQosPlcyStatsEntry Entry description: Statistics about a specific Egress Qos Policy applied on a specific SAP. Table description (for sapEgrQosPlcyStatsTable): A table that contains Egress Qos policy related statistics for a SAP. Conceptual rows in this table are automatically created by the system. No row will be created for a SAP if the value of the object sapTodSuite is equal to the empty string. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
droppedInProfOctets [Dropped In Prof Octets] (sapEgQosPlcyDroppedInProfOctets)	java. math. BigInte- ger	The value of the object sapEgQosPlcyDroppedInProfOctets indicates the number of in-profile octets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedInProfPackets [Dropped In Prof Packets] (sapEgQosPlcyDroppedInProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedInProfPackets indicates the number of in-profile packets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfOctets [Dropped Out Prof Octets] (sapEgQosPlcyDroppedOutProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedOutProfOctets indicates the number of out-profile octets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
droppedOutProfPackets [Dropped Out Prof Packets] (sapEgQosPlcyDroppedOutProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyDroppedOutProfPackets indicates the number of out-profile packets, as determined by the SAP egress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
forwardedInProfOctets [Forwarded In Prof Octets] (sapEgQosPlcyForwardedInProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedInProfOctets indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
forwardedInProfPackets [Forwarded In Prof Packets] (sapEgQosPlcyForwardedInProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedInProfPackets indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
forwardedOutProfOctets [Forwarded Out Prof Octets] (sapEgQosPlcyForwardedOutProfOctets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedOutProfOctets indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
forwardedOutProfPackets [Forwarded Out Prof Packets] (sapEgQosPlcyForwardedOutProfPackets)	java. math. BigInteger	The value of the object sapEgQosPlcyForwardedOutProfPackets indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
policyId [Policy Id] (sapEgQosPlcyId)	long	The value of the object sapEgQosPlcyId indicates the row index in the tSapEgressTable corresponding to this egress QoS policy, or one if no policy is specified.

Table 606 service statistics (continued)

This table is used when the Encap Group's SAP is a CCAG or LAG in 'link' mode or an APS.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapPortIdEgrEGMbrSchedCustId)	long	The value of sapPortIdEgrEGMbrSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octs] (sapPortIdEgrEGMbrSchedFwdOcts)	java. math. BigInteger	The value sapPortIdEgrEGMbrSchedFwdOcts indicates the number of octets forwarded by the egress port scheduler of this SAP.
fwdOctsH [Fwd Octs H] (sapPortIdEgrEGMbrSchedFwdOctsH)	long	The value sapPortIdEgrEGMbrSchedFwdOctsH indicates the higher 32 bits of the value of sapPortIdEgrEGMbrSchedFwdOcts.
fwdOctsL [Fwd Octs L] (sapPortIdEgrEGMbrSchedFwdOctsL)	long	The value of sapPortIdEgrEGMbrSchedFwdOctsL indicates the lower 32 bits of the value of sapPortIdEgrEGMbrSchedFwdOcts.
fwdPkts [Fwd Pkts] (sapPortIdEgrEGMbrSchedFwdPkts)	java. math. BigInteger	The value of sapPortIdEgrEGMbrSchedFwdPkts indicates the number of packets forwarded by the egress port scheduler of this SAP.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdPktsH [Fwd Pkts H] (sapPortIdEgrEGMbrSchedFwdPktsH)	long	The value sapPortIdEgrEGMbrSchedFwdPktsH indicates the higher 32 bits of the value of sapPortIdEgrEGMbrSchedFwdPkts.
fwdPktsL [Fwd Pkts L] (sapPortIdEgrEGMbrSchedFwdPktsL)	long	The value of sapPortIdEgrEGMbrSchedFwdPktsL indicates the lower 32 bits of the value of sapPortIdEgrEGMbrSchedFwdPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
schedName [Sched Name] (sapPortIdEgrEGMbrSchedStName)	String	The sapPortIdEgrEGMbrSchedStName specifies the name of the egress encapsulation group QoS port scheduler of this SAP.
<p>SapPortIdEgrEGSchedStats</p> <p>MIB entry name: sapPortIdEgrEGSchedStEntry</p> <p>Entry description: Egress statistics about a specific Encap Group's QoS scheduler port of a SAP. Entries are created when a scheduler policy is applied to an Encap Group.</p> <p>Table description (for sapPortIdEgrEGSchedStTable): The sapPortIdEgrEGSchedStTable contains egress QoS scheduler SAP statistics per port at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. This table is used when the encap group's SAP is a CCAG or LAG in 'link' mode or an APS.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapPortIdEgrEGSchedCustId)	long	The value of sapPortIdEgrEGSchedCustId indicates the Customer ID for the associated service.

Table 606 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOcts [Fwd Octets] (sapPortIdEgrEGSchedFwdOcts)	java. math. BigInteger	The value sapPortIdEgrEGSchedFwdOcts indicates the number of octets forwarded by the egress port scheduler of this SAP.
fwdOctsH [Fwd Octets H] (sapPortIdEgrEGSchedFwdOctsH)	long	The value sapPortIdEgrEGSchedFwdOctsH indicates the higher 32 bits of the value of sapPortIdEgrEGSchedFwdOcts.
fwdOctsL [Fwd Octets L] (sapPortIdEgrEGSchedFwdOctsL)	long	The value of sapPortIdEgrEGSchedFwdOctsL indicates the lower 32 bits of the value of sapPortIdEgrEGSchedFwdOcts.
fwdPkts [Fwd Pkts] (sapPortIdEgrEGSchedFwdPkts)	java. math. BigInteger	The value of sapPortIdEgrEGSchedFwdPkts indicates the number of packets forwarded by the egress port scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapPortIdEgrEGSchedFwdPktsH)	long	The value sapPortIdEgrEGSchedFwdPktsH indicates the higher 32 bits of the value of sapPortIdEgrEGSchedFwdPkts.
fwdPktsL [Fwd Pkts L] (sapPortIdEgrEGSchedFwdPktsL)	long	The value of sapPortIdEgrEGSchedFwdPktsL indicates the lower 32 bits of the value of sapPortIdEgrEGSchedFwdPkts.
portId [Port Id] (sapPortIdEgrPortId)	long	The value of sapPortIdEgrPortId is used as an index of the egress QoS scheduler of this SAP. When the SAP is an aps/ccag/lag in 'link' mode, this object is the TmnxPortID of the member-port on which the scheduler is applied.
schedName [Sched Name] (sapPortIdEgrEGSchedStName)	String	The sapPortIdEgrEGSchedStName specifies the name of the egress encapsulation group port scheduler of this SAP.

Table 607 sitesec statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmFilterQueueStats</p> <p>MIB entry name: tCpmFilterQueueStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmFilterQueueEntry indexed by the same tCpmFilterQueueId. Entries are created when tCpmFilterQueueEntry rows are created.</p> <p>Table description (for tCpmFilterQueueStatsTable): The tCpmFilterQueueStatsTable has a stats entry for each CPM filter queue configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmFilterQueue</p>		
droppedInOctets [Dropped In Octets] (tCpmFilterQInProfileDropOctets)	java. math. BigInteger	The value of tCpmFilterQInProfileDropOctets indicates the number of octets complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedInPackets [Dropped In Packets] (tCpmFilterQInProfileDropPkts)	java. math. BigInteger	The value of tCpmFilterQInProfileDropPkts indicates the number of packets complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedOutOctets [Dropped Out Octets] (tCpmFilterQOutProfileDropOctets)	java. math. BigInteger	The value of tCpmFilterQOutProfileDropOctets indicates the number of octets not complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
droppedOutPackets [Dropped Out Packets] (tCpmFilterQOutProfileDropPkts)	java. math. BigInteger	The value of tCpmFilterQOutProfileDropPkts indicates the number of packets not complying to the queue Qos profile dropped from the tCpmFilterQueueEntry with the same index.
forwardedInOctets [Forwarded In Octets] (tCpmFilterQInProfileFwdOctets)	java. math. BigInteger	The value of tCpmFilterQInProfileFwdOctets indicates the number of octets complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.

Table 607 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
forwardedInPackets [Forwarded In Packets] (tCpmFilterQInProfileFwdPkts)	java. math. BigInteger	The value of tCpmFilterQInProfileFwdPkts indicates the number of packets complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
forwardedOutOctets [Forwarded Out Octets] (tCpmFilterQOutProfileFwdOctets)	java. math. BigInteger	The value of tCpmFilterQOutProfileFwdOctets indicates the number of octets not complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
forwardedOutPackets [Forwarded Out Packets] (tCpmFilterQOutProfileFwdPkts)	java. math. BigInteger	The value of tCpmFilterQOutProfileFwdPkts indicates the number of packets not complying to the queue Qos profile forwarded from the tCpmFilterQueueEntry with the same index.
<p>CpmIPv6FilterStats</p> <p>MIB entry name: tCpmIPv6FilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmIPv6FilterEntry indexed by the same tCpmIPv6FilterEntryId. Entries are created when tCpmIPv6FilterEntry rows are created.</p> <p>Table description (for tCpmIPv6FilterStatsTable): The tCpmIPv6FilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmIPv6FilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmIPv6FilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmIPv6FilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmIPv6FilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmIPv6FilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmIPv6FilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmIPv6FilterEntry with the same index.

Table 607 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpmlpFilterStats</p> <p>MIB entry name: tCpmlpFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmlpFilterEntry indexed by the same tCpmlpFilterEntryId. Entries are created when tCpmlpFilterEntry rows are created.</p> <p>Table description (for tCpmlpFilterStatsTable): The tCpmlpFilterStatsTable has a stats entry for each entry in each CPM filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmlpFilterEntry</p>		
droppedPackets [Dropped Packets] (tCpmlpFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmlpFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmlpFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmlpFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmlpFilterEntry with the same index.
<p>CpmMacFilterStats</p> <p>MIB entry name: tCpmMacFilterStatsEntry</p> <p>Entry description: Each row entry represents the statistics related to the tCpmMacFilterEntry indexed by the same tCpmMacFltrEntryId. Entries are created when tCpmMacFilterEntry rows are created.</p> <p>Table description (for tCpmMacFilterStatsTable): The tCpmMacFilterStatsTable has a stats entry of the CPM Mac filter configured on this system. This table is not supported on SR-1 and ESS-1, where the value of TIMETRA-CHASSIS-MIB::tmnxChassisType is '5'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sitesec.CpmMacFilterEntry</p>		

Table 607 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmMacFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmMacFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmMacFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmMacFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criter is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesec.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesec.SiteSystemSecurityPublicKey</p>		

Table 607 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.
RadiusNotifyStats MIB entry name: tmnxSubRadNotifyStatsObjects Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
accepted [Accepted] (tmnxSubRadNotifyStatsAccepted)	long	The value of tmnxSubRadNotifyStatsAccepted indicates the number of notify Change-of-Authorization requests accepted.
badAuthentication [Bad Authentication] (tmnxSubRadNotifyStatsBadAuth)	long	The value of tmnxSubRadNotifyStatsBadAuth indicates the number of notify Change-of-Authorization requests rejected because of authentication failure.
invalidMsg [Invalid Msg] (tmnxSubRadNotifyStatsInvalidMsg)	long	The value of tmnxSubRadNotifyStatsInvalidMsg indicates the number of notify Change-of-Authorization requests rejected because of decode errors.
noNotification [No Notification] (tmnxSubRadNotifyStatsNoNotify)	long	The value of tmnxSubRadNotifyStatsNoNotify indicates the number of notify Change-of-Authorization requests rejected due to lack of notification process.

Table 607 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noResource [No Resource] (tmnxSubRadNotifyStatsNoResource)	long	The value of tmnxSubRadNotifyStatsNoResource indicates the number of notify Change-of-Authorization requests rejected due to lack of resources.
received [Received] (tmnxSubRadNotifyStatsReceived)	long	The value of tmnxSubRadNotifyStatsReceived indicates the number of notify Change-of-Authorization requests received.
rejected [Rejected] (tmnxSubRadNotifyStatsRejected)	long	The value of tmnxSubRadNotifyStatsRejected indicates the number of notify Change-of-Authorization requests rejected.
unknownHost [Unknown Host] (tmnxSubRadNotifyStatsUnknownHost)	long	The value of tmnxSubRadNotifyStatsUnknownHost indicates the number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id.

Table 608 srrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceStats</p> <p>MIB entry name: tmnxSrrpStatsEntry</p> <p>Entry description: Each row entry represents the statistics for a particular SRRP instance tied to a service group interface. Entries are created/deleted in conjunction with entries in the tmnxSrrpOperTable</p> <p>Table description (for tmnxSrrpStatsTable): The tmnxSrrpStatsTable has an entry for each Subscriber Router Redundancy Protocol instance configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: srrp.Instance</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxSrrpStatsAdvIntDiscards)	long	The value for tmnxSrrpStatsAdvIntDiscards indicates the total number of SRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (tmnxSrrpStatsAdvIntErrors)	long	The value for tmnxSrrpStatsAdvIntErrors indicates the total number of SRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (tmnxSrrpStatsAdvRcvd)	long	The value for tmnxSrrpStatsAdvRcvd indicates the total number of SRRP advertisements received by this virtual router.
advertiseSent [Advertise Sent] (tmnxSrrpStatsAdvSent)	long	The value for tmnxSrrpStatsAdvSent indicates the total number of SRRP advertisements sent by this virtual router.
becomeBackupRouting [Become Backup Routing] (tmnxSrrpStatsBecomeBackupRouting)	long	The value for tmnxSrrpStatsBecomeBackupRouting indicates the total number of times that the virtual router's state has transitioned to backup routing state.

Table 608 srrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeBackupShunt [Become Backup Shunt] (tmnxSrrpStatsBecomeBackupShunt)	long	The value for tmnxSrrpStatsBecomeBackupShunt indicates the total number of times that the virtual router's state has transitioned to backup shunt.
becomeMaster [Become Master] (tmnxSrrpStatsBecomeMaster)	long	The value for tmnxSrrpStatsBecomeMaster indicates the total number of times that the virtual router's state has transitioned to master.
becomeNonMaster [Become Non Master] (tmnxSrrpStatsBecomeNonMaster)	long	The value for tmnxSrrpStatsBecomeNonMaster indicates the total number times that the virtual router's state has transitioned from master to a non-master state.
masterChanges [Master Changes] (tmnxSrrpStatsMasterChanges)	long	The value for tmnxSrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxSrrpStatsPreemptEvents)	long	The value for tmnxSrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tmnxSrrpStatsPreemptedEvents)	long	The value for tmnxSrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (tmnxSrrpStatsPriZeroPktsSent)	long	The value for tmnxSrrpStatsPriZeroPktsSent indicates the total number of SRRP packets sent by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (tmnxSrrpStatsPriZeroPktsRcvd)	long	The value for tmnxSrrpStatsPriZeroPktsRcvd indicates the total number of SRRP packets received by the virtual router with a priority of '0'.

sdpBndIgmPsnpgFwdGenQueries [Sdp Bnd IgmP Snpg Fwd Gen Queries] (sdpBndIgmPsnpgFwdGenQueries)	long	The value of the object sdpBndIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdGrpSpecQueries [Sdp Bnd IgmP Snpg Fwd Grp Spec Queries] (sdpBndIgmPsnpgFwdGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SDP Bind.

Table 609 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgFwdSrcSpecQueries [Sdp Bnd IgmP Snpg Fwd Src Spec Queries] (sdpBndIgmPsnpgFwdSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdUnknownType [Sdp Bnd IgmP Snpg Fwd Unknown Type] (sdpBndIgmPsnpgFwdUnknownType)	long	The value of the object sdpBndIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV1Reports [Sdp Bnd IgmP Snpg Fwd V1 Reports] (sdpBndIgmPsnpgFwdV1Reports)	long	The value of the object sdpBndIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Leaves [Sdp Bnd IgmP Snpg Fwd V2 Leaves] (sdpBndIgmPsnpgFwdV2Leaves)	long	The value of the object sdpBndIgmPsnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Reports [Sdp Bnd IgmP Snpg Fwd V2 Reports] (sdpBndIgmPsnpgFwdV2Reports)	long	The value of the object sdpBndIgmPsnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV3Reports [Sdp Bnd IgmP Snpg Fwd V3 Reports] (sdpBndIgmPsnpgFwdV3Reports)	long	The value of the object sdpBndIgmPsnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgRxGenQueries [Sdp Bnd IgmP Snpg Rx Gen Queries] (sdpBndIgmPsnpgRxGenQueries)	long	The value of the object sdpBndIgmPsnpgRxGenQueries indicates the number of IGMP General Queries received on this SDP Bind.
sdpBndIgmPsnpgRxGrpSpecQueries [Sdp Bnd IgmP Snpg Rx Grp Spec Queries] (sdpBndIgmPsnpgRxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SDP Bind.

Table 609 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgRxSrcSpecQueries [Sdp Bnd IgmP Snpg Rx Src Spec Queries] (sdpBndIgmPsnpgRxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndIgmPsnpgRxUnknownType [Sdp Bnd IgmP Snpg Rx Unknown Type] (sdpBndIgmPsnpgRxUnknownType)	long	The value of the object sdpBndIgmPsnpgRxUnknownType indicates the number of IGMP unknown type packets received on this SDP Bind.
sdpBndIgmPsnpgRxV1Reports [Sdp Bnd IgmP Snpg Rx V1 Reports] (sdpBndIgmPsnpgRxV1Reports)	long	The value of the object sdpBndIgmPsnpgRxV1Reports indicates the number of IGMPv1 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV2Leaves [Sdp Bnd IgmP Snpg Rx V2 Leaves] (sdpBndIgmPsnpgRxV2Leaves)	long	The value of the object sdpBndIgmPsnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this SDP Bind.
sdpBndIgmPsnpgRxV2Reports [Sdp Bnd IgmP Snpg Rx V2 Reports] (sdpBndIgmPsnpgRxV2Reports)	long	The value of the object sdpBndIgmPsnpgRxV2Reports indicates the number of IGMPv2 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV3Reports [Sdp Bnd IgmP Snpg Rx V3 Reports] (sdpBndIgmPsnpgRxV3Reports)	long	The value of the object sdpBndIgmPsnpgRxV3Reports indicates the number of IGMPv3 Reports received on this SDP Bind.
sdpBndIgmPsnpgTxGenQueries [Sdp Bnd IgmP Snpg Tx Gen Queries] (sdpBndIgmPsnpgTxGenQueries)	long	The value of the object sdpBndIgmPsnpgTxGenQueries indicates the number of IGMP General Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxGrpSpecQueries [Sdp Bnd IgmP Snpg Tx Grp Spec Queries] (sdpBndIgmPsnpgTxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxSrcSpecQueries [Sdp Bnd IgmP Snpg Tx Src Spec Queries] (sdpBndIgmPsnpgTxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SDP Bind.

Table 609 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgTxV1Reports [Sdp Bnd IgmP Snpg Tx V1 Reports] (sdpBndIgmPsnpgTxV1Reports)	long	The value of the object sdpBndIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Leaves [Sdp Bnd IgmP Snpg Tx V2 Leaves] (sdpBndIgmPsnpgTxV2Leaves)	long	The value of the object sdpBndIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Reports [Sdp Bnd IgmP Snpg Tx V2 Reports] (sdpBndIgmPsnpgTxV2Reports)	long	The value of the object sdpBndIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV3Reports [Sdp Bnd IgmP Snpg Tx V3 Reports] (sdpBndIgmPsnpgTxV3Reports)	long	The value of the object sdpBndIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SDP Bind.
TunnelKeepAliveStats MIB entry name: sdpInfoEntry Entry description: Information about a specific SDP. Table description (for sdpInfoTable): A table that contains SDP information. Supports realtime plotting Supports scheduled collection Monitored class: svt.Tunnel		
lateHelloResponses [Late Hello Responses] (sdpKeepAliveNumLateHelloR- esponseMessages)	long	The number of SDP Echo Response messages received after the corresponding Request timeout timer expired.
receivedHelloMessages [Received Hello Messages] (sdpKeepAliveNumHelloRespon- seMessages)	long	The number of SDP Echo Response messages received since the keep-alive was administratively enabled or the counter was cleared.

Table 609 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedHelloMessages [Transmitted Hello Messages] (sdpKeepAliveNumHelloRequestMessages)	long	The number of SDP Echo Request messages transmitted since the keep-alive was administratively enabled or the counter was cleared.

<p>MacHitCountStats</p> <p>MIB entry name: tMacFilterParamsEntry</p> <p>Entry description: Information about a particular MAC Filter entry. Every MAC Filter can have zero or more MAC Filter match entries. a filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tMacFilterParamsTable): A table of all MAC filter match entries for all MAC filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.MacFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tMacFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tMacFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tMacFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tMacFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 611 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerAdditionalStats</p> <p>MIB entry name: bgpPeerEntry</p> <p>Entry description: Entry containing information about the connection with a BGP peer.</p> <p>Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the Established state or how long since this peer was last in the Established state. It is set to zero when a new peer is configured or the router is booted.
<p>PeerRouteTargetStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 611 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
l2VpnActivePfxs [L2 Vpn Active Pfxs] (tBgpPeerNgOperl2VpnActivePfxs)	long	The value of tBgpPeerNgOperl2VpnActivePfxs indicates the number of active L2VPN prefixes from this peer.
l2VpnRecvPfxs [L2 Vpn Recv Pfxs] (tBgpPeerNgOperl2VpnRecvPfxs)	long	The value of tBgpPeerNgOperl2VpnRecvPfxs indicates the number L2VPN prefixes received from this peer.

Table 611 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
I2VpnSentPfxs [L2 Vpn Sent Pfxs] (tBgpPeerNgOperI2VpnSentPfxs)	long	The value of tBgpPeerNgOperI2VpnSentPfxs indicates the number of L2VPN prefixes transmitted to this peer.
I2VpnSuppPfxDamp [L2 Vpn Supp Pfx Damp] (tBgpPeerNgOperI2VpnSuppPfxDamp)	long	The value of tBgpPeerNgOperI2VpnSuppPfxDamp indicates the number of L2VPN prefixes from this peer, which have been suppressed by damping.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SuppPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SuppPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.

Table 611 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdtSafiActivePrefixes [Mdt Safi Active Prefixes] (tBgpPeerNgOperMdtSafiActivePfxs)	long	The value of tBgpPeerNgOperMdtSafiActivePfxs indicates the number of active MDT-SAFI prefixes from this peer.
mdtSafiPrefixesSuppressedByDamping [Mdt Safi Prefixes Suppressed By Damping] (tBgpPeerNgOperMdtSafiSuppPfxDamp)	long	The value of tBgpPeerNgOperMdtSafiSuppPfxDamp indicates the number of MDT-SAFI prefixes from this peer, which have been suppressed by damping.
mdtSafiReceivedPrefixes [Mdt Safi Received Prefixes] (tBgpPeerNgOperMdtSafiRecvPfxs)	long	The value of tBgpPeerNgOperMdtSafiRecvPfxs indicates the number of MDT-SAFI prefixes received from this peer.
mdtSafiSentPrefixes [Mdt Safi Sent Prefixes] (tBgpPeerNgOperMdtSafiSentPfxs)	long	The value of tBgpPeerNgOperMdtSafiSentPfxs indicates the number of MDT-SAFI prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.

Table 611 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.

Table 611 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.
<p>PeerVprnlpv6Stats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
vpnIpv6ActivePfxs [Vpn Ipv 6 Active Pfxs] (tBgpPeerNgOperVpnIpv6ActivePfxs)	long	The value of tBgpPeerNgOperVpnIpv6ActivePfxs indicates the number of active VPN IPv6 prefixes from this peer.
vpnIpv6RecvPfxs [Vpn Ipv 6 Recv Pfxs] (tBgpPeerNgOperVpnIpv6RecvPfxs)	long	The value of tBgpPeerNgOperVpnIpv6RecvPfxs indicates the number of VPN IPv6 prefixes received from this peer.

Table 611 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnIpv6SentPfxs [Vpn Ipv 6 Sent Pfxs] (tBgpPeerNgOperVpnIpv6SentPfxs)	long	The value of tBgpPeerNgOperVpnIpv6SentPfxs indicates the number of VPN IPv6 prefixes transmitted to this peer.
vpnIpv6SuppPfxDamp [Vpn Ipv 6 Supp Pfx Damp] (tBgpPeerNgOperVpnIpv6SuppPfxDamp)	long	The value of tBgpPeerNgOperVpnIpv6SuppPfxDamp indicates the number of VPN IPv6 prefixes from this peer, which have been suppressed by damping.

Table 612 cflowd statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeCflowdStats</p> <p>MIB entry name: tmnxCflowdVersionStatsEntry</p> <p>Entry description: The tmnxCflowdVersionStatsEntry contains the information pertaining to the system wide statistics for the specified version index.</p> <p>Table description (for tmnxCflowdVersionStatsTable): The tmnxCflowdVersionStatsTable consists of the overall statistics based on collector version.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
packetErrors [Packet Errors] (tmnxCflowdVersionErrors)	long	The value of tmnxCflowdVersionErrors indicates the number of errored packets for the specified version.
packetsOpen [Packets Open] (tmnxCflowdVersionOpen)	long	The value of tmnxCflowdVersionOpen indicates the number of open packets pending for the specified version.
packetsSent [Packets Sent] (tmnxCflowdVersionSent)	long	The value of tmnxCflowdVersionSent indicates the number of packets transmitted for the specified version.
version [Version] (tmnxCflowdVersionIndex)	long	The value of tmnxCflowdVersionIndex specifies the row in the tmnxCflowdVersionStatsTable that pertains to the cflowd collector version.
versionStatus [Version Status] (tmnxCflowdVersionStatus)	int	The value of tmnxCflowdVersionStatus indicates whether or not the version is in use in the system.

Table 612 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeCollectorV10Stats</p> <p>MIB entry name: tmnxCflowdTemplateStatsEntry</p> <p>Entry description: The tmnxCflowdTemplateStatsEntry contains the information pertaining to the remote collector host statistics for the specified template index.</p> <p>Table description (for tmnxCflowdTemplateStatsTable): The tmnxCflowdTemplateStatsTable consists of the overall statistics based on template flows for a specified remote collector host entry. The use of this table should be restricted in favor of tmnxCFHostCollTemplStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
templateErrors [Template Errors] (tmnxCflowdTemplateErrors)	long	The value of tmnxCflowdTemplateErrors indicates the number of errored packets for the specified Template type.
templateFlowIndex [Template Flow Index] (tmnxCflowdTemplateFlowIndex)	int	The value of tmnxCflowdTemplateFlowIndex specifies the row in the tmnxCflowdTemplateStatsTable that pertains to the cflowd collector Template type.
templateOpen [Template Open] (tmnxCflowdTemplateOpen)	long	The value of tmnxCflowdTemplateOpen indicates the number of open packets pending for the specified Template type.
templateSent [Template Sent] (tmnxCflowdTemplateSent)	long	The value of tmnxCflowdTemplateSent indicates the number of packets transmitted for the specified Template type.
transmitTime [Transmit Time] (tmnxCflowdTemplateLastTxTime)	long	The value of tmnxCflowdTemplateLastTxTime indicates the time, since system startup, when the specified template was last transmitted.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
helloRx [Hello Rx] (tmnxDCvShelloRx)	java. math. BigInteger	The value of tmnxDCvShelloRx indicates the total number of hello packets received.
helloTx [Hello Tx] (tmnxDCvShelloTx)	java. math. BigInteger	The value of tmnxDCvShelloTx indicates the total number of hello packets transmitted.
statsReqRx [Stats Req Rx] (tmnxDCvSstatsReqRx)	java. math. BigInteger	The value of tmnxDCvSstatsReqRx indicates the total number of stats-req packets received.
statsReqTx [Stats Req Tx] (tmnxDCvSstatsReqTx)	java. math. BigInteger	The value of tmnxDCvSstatsReqTx indicates the total number of stats-req packets transmitted.
statsRespRx [Stats Resp Rx] (tmnxDCvSstatsRespRx)	java. math. BigInteger	The value of tmnxDCvSstatsRespRx indicates the total number of stats-req packets received.
statsRespTx [Stats Resp Tx] (tmnxDCvSstatsRespTx)	java. math. BigInteger	The value of tmnxDCvSstatsRespTx indicates the total number of stats-req packets transmitted.

Table 614 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
<p>AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FPNwIngQGrpArbiterStats</p> <p>MIB entry name: tFPNetIngQGrpArbitStatEntry</p> <p>Entry description: The value of tFPNetIngQGrpArbitStatEntry defines an entry in the tFPNetIngQGrpArbitStatTable. It represents statistics about a specific QoS ingress queue group arbiter.</p> <p>Table description (for tFPNetIngQGrpArbitStatTable): The value of tFPNetIngQGrpArbitStatTable contains forwarding-plane ingress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.FPNwIngQGrpEntry</p>		
fpNetIngQGrpArbitStatFwdOcts [Fp Net Ing QGrp Arbit Stat Fwd Octs] (tFPNetIngQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tFPNetIngQGrpArbitStatFwdOcts indicates the number of forwarded octets by the ingress queue group arbiter Pchip.
fpNetIngQGrpArbitStatFwdOctsH [Fp Net Ing QGrp Arbit Stat Fwd Octs H] (tFPNetIngQGrpArbitStatFwdOctsH)	long	The value of tFPNetIngQGrpArbitStatFwdOctsH indicates the upper 32 bits of tFPNetIngQGrpArbitStatFwdOcts.
fpNetIngQGrpArbitStatFwdOctsL [Fp Net Ing QGrp Arbit Stat Fwd Octs L] (tFPNetIngQGrpArbitStatFwdOctsL)	long	The value of tFPNetIngQGrpArbitStatFwdOctsL indicates the lower 32 bits of tFPNetIngQGrpArbitStatFwdOcts.
fpNetIngQGrpArbitStatFwdPkts [Fp Net Ing QGrp Arbit Stat Fwd Pkts] (tFPNetIngQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tFPNetIngQGrpArbitStatFwdPkts indicates the number of forwarded packets by the ingress queue group arbiter Pchip.
fpNetIngQGrpArbitStatFwdPktsH [Fp Net Ing QGrp Arbit Stat Fwd Pkts H] (tFPNetIngQGrpArbitStatFwdPktsH)	long	The value of tFPNetIngQGrpArbitStatFwdPktsH indicates the upper 32 bits of tFPNetIngQGrpArbitStatFwdPkts.
fpNetIngQGrpArbitStatFwdPktsL [Fp Net Ing QGrp Arbit Stat Fwd Pkts L] (tFPNetIngQGrpArbitStatFwdPktsL)	long	The value of tFPNetIngQGrpArbitStatFwdPktsL indicates the lower 32 bits of tFPNetIngQGrpArbitStatFwdPkts.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQGrpArbitStatName [Fp Net Ing QGrp Arbit Stat Name] (tFPNetIngQGrpArbitStatName)	String	The value of tFPNetIngQGrpArbitStatName specifies the name of the ingress QoS arbiter of this forwarding-plane queue group on network.
<p>FibNextHopStats</p> <p>MIB entry name: vRtrFibStatNextHopEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISISRoutes)	long	vRtrFibStatISISRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
natRoutes [Nat Routes] (vRtrFibStatNatRoutes)	long	vRtrFibStatNatRoutes indicates current NAT route counts for the virtual router.
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6AggrRoutes [V6 Aggr Routes] (vRtrFibStatV6AggrRoutes)	long	vRtrFibStatV6AggrRoutes indicates current aggregate route counts for the virtual router.
v6BGPRoutes [V6 BGP Routes] (vRtrFibStatV6BGPRoutes)	long	vRtrFibStatV6BGPRoutes indicates current BGP route counts for the virtual router.
v6BGPVpnRoutes [V6 BGPVpn Routes] (vRtrFibStatV6BGPVpnRoutes)	long	vRtrFibStatV6BGPVpnRoutes indicates current BGP VPN route counts for the virtual router.
v6DirectRoutes [V6 Direct Routes] (vRtrFibStatV6DirectRoutes)	long	vRtrFibStatV6DirectRoutes indicates current direct route counts for the virtual router.
v6HostRoutes [V6 Host Routes] (vRtrFibStatV6HostRoutes)	long	vRtrFibStatV6HostRoutes indicates current host route counts for the virtual router.
v6ISISRoutes [V6 ISIS Routes] (vRtrFibStatV6ISISRoutes)	long	vRtrFibStatV6ISISRoutes indicates current ISIS route counts for the virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrFibStatV6ManagedRoutes)	long	vRtrFibStatV6ManagedRoutes indicates current managed route counts for the virtual router.
v6NatRoutes [V6 Nat Routes] (vRtrFibStatV6NatRoutes)	long	vRtrFibStatV6NatRoutes indicates current NAT IPv6 route counts for the virtual router.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6OSPFRoutes [V6 OSPFRoutes] (vRtrFibStatV6OSPFRoutes)	long	vRtrFibStatV6OSPFRoutes indicates current OSPF route counts for the virtual router.
v6RIPRoutes [V6 RIPRoutes] (vRtrFibStatV6RIPRoutes)	long	vRtrFibStatV6RIPRoutes indicates current RIP route counts for the virtual router.
v6StaticRoutes [V6 Static Routes] (vRtrFibStatV6StaticRoutes)	long	vRtrFibStatV6StaticRoutes indicates current static route counts for the virtual router.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrFibStatV6SubMgmtRoutes)	long	vRtrFibStatV6SubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrFibStatV6VPNLeakRoutes)	long	vRtrFibStatV6VPNLeakRoutes indicates current IPv6 VPN Leak route counts for the virtual router.
vpnLeakRoutes [Vpn Leak Routes] (vRtrFibStatVPNLeakRoutes)	long	vRtrFibStatVPNLeakRoutes indicates current VPN Leak route counts for the virtual router.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Alcatel-Lucent SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped: 32 25 24 17 16 9 8 1 +-----+-----+-----+-----+ TmnxHwClass 00000000 Slot number +-----+-----+-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Alcatel-Lucent SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
IpSecMDAStats MIB entry name: tmnxIPsecMdaDpStatsEntry Entry description: Information about a single IPsec Mda Data Path Statistics entry. Table description (for tmnxIPsecMdaDpStatsTable): Table to retrieve the IPsec Mda Data Path Statistics entries. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
decryptBytes [Decrypt Bytes] (tmnxIPsecMdaDpStatsDecryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptBytes indicates the number of bytes encrypted by the IPsec data path.
decryptPackets [Decrypt Packets] (tmnxIPsecMdaDpStatsDecryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsDecryptPkts indicates the number of packets encrypted by the IPsec data path.
dynamicIPsecTunnels [Dynamic IPsec Tunnels] (tmnxIPsecMdaDpDynIPsecTnls)	long	The value of tmnxIPsecMdaDpDynIPsecTnls indicates number of dynamic IPsec tunnels in use on the MDA.
encryptBytes [Encrypt Bytes] (tmnxIPsecMdaDpStatsEncryptBytes)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptBytes indicates the number of bytes encrypted by the IPsec data path.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encryptPackets [Encrypt Packets] (tmnxIPsecMdaDpStatsEncryptPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsEncryptPkts indicates the number of packets encrypted by the IPsec data path.
inboundIPDropPackets [Inbound IPDrop Packets] (tmnxIPsecMdaDpStatsInBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBDropPkts indicates the number of packets dropped before and during inbound (decryption) processing by the IPsec data path.
inboundIPDstSrcMismatches [Inbound IPDst Src Mismatches] (tmnxIPsecMdaDpStatsInBIP-DstSrcMismatches)	long	The value of tmnxIPsecMdaDpStatsInBIPDstSrcMismatches indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to the received packet's outer IP destination or source address does not match the Tunnel's local or peer gateway address.
inboundSaMisses [Inbound Sa Misses] (tmnxIPsecMdaDpStatsInBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsInBSAMisses indicates the number of packets dropped before inbound (decryption) processing by the IPsec data path due to no SA (security association) present.
outboundIPDropPackets [Outbound IPDrop Packets] (tmnxIPsecMdaDpStatsOutBDropPkts)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBDropPkts indicates the number of packets dropped before and during outbound (encryption) processing by the IPsec data path.
outboundPolicyEntryMisses [Outbound Policy Entry Misses] (tmnxIPsecMdaDpStatsOutBPoli- cyEntryMisses)	long	The value of tmnxIPsecMdaDpStatsOutBPolicyEntryMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no matching Policy Entry.
outboundSaMisses [Outbound Sa Misses] (tmnxIPsecMdaDpStatsOutBSAMisses)	java. math. BigInteger	The value of tmnxIPsecMdaDpStatsOutBSAMisses indicates the number of packets dropped before outbound (encryption) processing by the IPsec data path due to no SA (security association) present.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
staticIPsecTunnels [Static IPsec Tunnels] (tmnxIPsecMdaDpStaticIPsecTnls)	long	The value of tmnxIPsecMdaDpStaticIPsecTnls indicates number of configured static IPsec tunnels on the MDA.
transmitPacketErrors [Transmit Packet Errors] (tmnxIPsecMdaDpStatsTxPktErrs)	long	The value of tmnxIPsecMdaDpStatsTxPktErrs indicates the number of packets transmit failures by the IPsec data path.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependent-DropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHigh-CapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUC- astHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 614 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 615 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 615 ethernet equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernet. If the network is a full-duplex ethernet and the mediaIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting mediaIndependentInPkts for etherStatsHighCapacityPkts, and mediaIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting mediaIndependentOutPkts for etherStatsHighCapacityPkts, and mediaIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>OtulfStats MIB entry name: tmnxOtulfRawStatsEntry Entry description: The tmnxOtulfRawStatsEntry stores the statistics for an individual OTU interface. tmnxOtulfRawStatsEntry rows are created and destroyed by the system when rows are added or removed in the tmnxOtulfTable. Table description (for tmnxOtulfRawStatsTable): The tmnxOtulfRawStatsTable consists of the raw statistics associated with the OTU interfaces contained in the tmnxOtulfTable. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
elapsedSec [Elapsed Sec] (tmnxOtulfRawStatsElapsedSec)	long	The value of tmnxOtulfRawStatsElapsedSec indicates the number of Elapsed seconds since the last OTU raw statistics clearing.
feCes [Fe Ces] (tmnxOtulfRawStatsFECES)	long	The value of tmnxOtulfRawStatsFECES indicates the number of Forward Error Correction (FEC) Errors Seconds (ES).
fecCorrOnes [Fec Corr Ones] (tmnxOtulfRawStatsFECCorrOnes)	long	The value of tmnxOtulfRawStatsFECCorrOnes indicates the number of Forward Error Correction (FEC) corrected ones.
fecCorrZeros [Fec Corr Zeros] (tmnxOtulfRawStatsFECCorrZeros)	long	The value of tmnxOtulfRawStatsFECCorrZeros indicates the number of Forward Error Correction (FEC) corrected zeros.
fecSes [Fec Ses] (tmnxOtulfRawStatsFECSES)	long	The value of tmnxOtulfRawStatsFECSES indicates the number of Forward Error Correction (FEC) Severely Errors Seconds (SES).

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrQosQStatDpdOutProfOcts [Port Egr Qos QStat Dpd Out Prof Octs] (tmnxPortEgrQosQStatDpdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdOutProfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatDpdOutProfPkts [Port Egr Qos QStat Dpd Out Prof Pkts] (tmnxPortEgrQosQStatDpdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatDpdOutProfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portEgrQosQStatFwdInProfOcts [Port Egr Qos QStat Fwd In Prof Octs] (tmnxPortEgrQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdInProfPkts [Port Egr Qos QStat Fwd In Prof Pkts] (tmnxPortEgrQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdOutProfOcts [Port Egr Qos QStat Fwd Out Prof Octs] (tmnxPortEgrQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
portEgrQosQStatFwdOutProfPkts [Port Egr Qos QStat Fwd Out Prof Pkts] (tmnxPortEgrQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortEgrQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
portEgrQosQStatQueueId [Port Egr Qos QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatFwdOutProfOcts [Port Ing Qos QStat Fwd Out Prof Octs] (tmnxPortIngQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfPkts [Port Ing Qos QStat Fwd Out Prof Pkts] (tmnxPortIngQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatOffHiPrioOcts [Port Ing Qos QStat Off Hi Prio Octs] (tmnxPortIngQosQStatOffHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffHiPrioPkts [Port Ing Qos QStat Off Hi Prio Pkts] (tmnxPortIngQosQStatOffHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioOcts [Port Ing Qos QStat Off Lo Prio Octs] (tmnxPortIngQosQStatOffLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioPkts [Port Ing Qos QStat Off Lo Prio Pkts] (tmnxPortIngQosQStatOffLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatQueueId [Port Ing Qos QStat Queue Id] (tmnxPortIngQosQStatQueueId)	long	The value of tmnxPortIngQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
portIngQosQStatUncolOctsOff [Port Ing Qos QStat Uncol Octs Off] (tmnxPortIngQosQStatUncolOctsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolOctsOff indicates the number of uncolored octets offered to the ingress Qchip.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatUncolPktsOff [Port Ing Qos QStat Uncol Pkts Off] (tmnxPortIngQosQStatUncolPktsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolPktsOff indicates the number of uncolored packets offered to the ingress Qchip.
<p>PortNetEgrQGrpArbitStat</p> <p>MIB entry name: tPortNetEgrQGrpArbitStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpArbitStatEntry defines an entry in the tPortNetEgrQGrpArbitStatTable. It represents statistics about a specific QoS egress queue group arbiter.</p> <p>Table description (for tPortNetEgrQGrpArbitStatTable): The value of tPortNetEgrQGrpArbitStatTable contains egress QoS queue group arbiter statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQGrpArbitStatFwdOcts [Port Net Egr QGrp Arbit Stat Fwd Octs] (tPortNetEgrQGrpArbitStatFwdOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdOcts indicates the number of forwarded octets by the egress queue group arbiter Pchip.
portNetEgrQGrpArbitStatFwdOctsH [Port Net Egr QGrp Arbit Stat Fwd Octs H] (tPortNetEgrQGrpArbitStatFwdOctsH)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdOctsL [Port Net Egr QGrp Arbit Stat Fwd Octs L] (tPortNetEgrQGrpArbitStatFwdOctsL)	long	The value of tPortNetEgrQGrpArbitStatFwdOctsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdOcts.
portNetEgrQGrpArbitStatFwdPkts [Port Net Egr QGrp Arbit Stat Fwd Pkts] (tPortNetEgrQGrpArbitStatFwdPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpArbitStatFwdPkts indicates the number of forwarded packets by the egress queue group arbiter Pchip.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpArbitStatFwdPktsH [Port Net Egr QGrp Arbit Stat Fwd Pkts H] (tPortNetEgrQGrpArbitStatFwdPktsH)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsH indicates the upper 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatFwdPktsL [Port Net Egr QGrp Arbit Stat Fwd Pkts L] (tPortNetEgrQGrpArbitStatFwdPktsL)	long	The value of tPortNetEgrQGrpArbitStatFwdPktsL indicates the lower 32 bits of tPortNetEgrQGrpArbitStatFwdPkts.
portNetEgrQGrpArbitStatName [Port Net Egr QGrp Arbit Stat Name] (tPortNetEgrQGrpArbitStatName)	String	The value of tPortNetEgrQGrpArbitStatName specifies the name of the egress QoS arbiter of this port network queue group.
<p>PortNetEgrQGrpPStat</p> <p>MIB entry name: tPortNetEgrQGrpPStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpPStatEntry defines an entry in the tPortNetEgrQGrpPStatTable. It represents statistics about a specific QoS egress queue group policer on the specified port.</p> <p>Table description (for tPortNetEgrQGrpPStatTable): The value of tPortNetEgrQGrpPStatTable contains port egress queue group policer statistics on network side.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQGrpPStDrpInProfOct [Port Net Egr QGrp PSt Drp In Prof Oct] (tPortNetEgrQGrpPStDrpInProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStDrpInProfOct indicates the number of in-profile octets discarded by the egress Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portNetEgrQGrpPStDrpInProfOctH [Port Net Egr QGrp PSt Drp In Prof Oct H] (tPortNetEgrQGrpPStDrpInProfOctH)	long	The value of tPortNetEgrQGrpPStDrpInProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStDrpInProfOct.
portNetEgrQGrpPStDrpInProfOctL [Port Net Egr QGrp PSt Drp In Prof Oct L] (tPortNetEgrQGrpPStDrpInProfOctL)	long	The value of tPortNetEgrQGrpPStDrpInProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStDrpInProfOct.

portNetEgrQGrpPStOffInProfPktH [Port Net Egr QGrp PSt Off In Prof Pkt H] (tPortNetEgrQGrpPStOffInProfPktH)	long	The value of tPortNetEgrQGrpPStOffInProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffInProfPkt.
portNetEgrQGrpPStOffInProfPktL [Port Net Egr QGrp PSt Off In Prof Pkt L] (tPortNetEgrQGrpPStOffInProfPktL)	long	The value of tPortNetEgrQGrpPStOffInProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffInProfPkt.
portNetEgrQGrpPStOffOutProfOct [Port Net Egr QGrp PSt Off Out Prof Oct] (tPortNetEgrQGrpPStOffOutProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfOct indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStOffOutProfOctH [Port Net Egr QGrp PSt Off Out Prof Oct H] (tPortNetEgrQGrpPStOffOutProfOctH)	long	The value of tPortNetEgrQGrpPStOffOutProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfOctL [Port Net Egr QGrp PSt Off Out Prof Oct L] (tPortNetEgrQGrpPStOffOutProfOctL)	long	The value of tPortNetEgrQGrpPStOffOutProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfPkt [Port Net Egr QGrp PSt Off Out Prof Pkt] (tPortNetEgrQGrpPStOffOutProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfPkt indicates the number of out-of-profile packets (rate above CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffOutProfPktH [Port Net Egr QGrp PSt Off Out Prof Pkt H] (tPortNetEgrQGrpPStOffOutProfPktH)	long	The value of tPortNetEgrQGrpPStOffOutProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStOffOutProfPktL [Port Net Egr QGrp PSt Off Out Prof Pkt L] (tPortNetEgrQGrpPStOffOutProfPktL)	long	The value of tPortNetEgrQGrpPStOffOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStUncolOctOff [Port Net Egr QGrp PSt Uncol Oct Off] (tPortNetEgrQGrpPStUncolOctOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolOctOff indicates the number of uncolored octets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolOctOffH [Port Net Egr QGrp PSt Uncol Oct Off H] (tPortNetEgrQGrpPStUncolOctOffH)	long	The value of tPortNetEgrQGrpPStUncolOctOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolOctOffL [Port Net Egr QGrp PSt Uncol Oct Off L] (tPortNetEgrQGrpPStUncolOctOffL)	long	The value of tPortNetEgrQGrpPStUncolOctOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolPktOff [Port Net Egr QGrp PSt Uncol Pkt Off] (tPortNetEgrQGrpPStUncolPktOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolPktOff indicates the number of uncolored packets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolPktOffH [Port Net Egr QGrp PSt Uncol Pkt Off H] (tPortNetEgrQGrpPStUncolPktOffH)	long	The value of tPortNetEgrQGrpPStUncolPktOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStUncolPktOffL [Port Net Egr QGrp PSt Uncol Pkt Off L] (tPortNetEgrQGrpPStUncolPktOffL)	long	The value of tPortNetEgrQGrpPStUncolPktOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStatMode [Port Net Egr QGrp PStat Mode] (tPortNetEgrQGrpPStatMode)	int	The value of tPortNetEgrQGrpPStatMode indicates the stat mode used by this policer.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStatQosPolicerId [Port Net Egr QGrp PStat Qos Policer Id] (tPortNetEgrQGrpPStatQosPolicerId)	long	The value of tPortNetEgrQGrpPStatQosPolicerId specifies the index of the egress QoS policer queue group on network port.
<p>PortNetEgrQueueStat</p> <p>MIB entry name: tmnxPortNetEgrQStatEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgrQStatTable. Entries are created and deleted by the system depending on the queue policy being used at the specific port. In release 10.0 tPortNetEgrQGrpInstanceId is added as another index before tmnxPortEgrQosQStatQueueId for this tmnxPortNetEgrQStatTable.</p> <p>Table description (for tmnxPortNetEgrQStatTable): Defines the Alcatel-Lucent SROS series network port egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the queue-group queues being used for the ports to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQDroInProfOcts [Port Net Egr QDro In Prof Octs] (tmnxPortNetEgrQDroInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfOcts indicates the number of conforming network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroInProfPkts [Port Net Egr QDro In Prof Pkts] (tmnxPortNetEgrQDroInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfPkts indicates the number of conforming network egress packets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfOcts [Port Net Egr QDro Out Prof Octs] (tmnxPortNetEgrQDroOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfOcts indicates the number of exceeding network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfPkts [Port Net Egr QDro Out Prof Pkts] (tmnxPortNetEgrQDroOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfPkts indicates the number of exceeding network egress packets dropped on this port using this queue-group queue.

Table 615 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQFwdInProfOcts [Port Net Egr QFwd In Prof Octs] (tmnxPortNetEgrQFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfOcts indicates the number of conforming network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdInProfPkts [Port Net Egr QFwd In Prof Pkts] (tmnxPortNetEgrQFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfPkts indicates the number of conforming network egress packets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfOcts [Port Net Egr QFwd Out Prof Octs] (tmnxPortNetEgrQFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfPkts [Port Net Egr QFwd Out Prof Pkts] (tmnxPortNetEgrQFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this port using this queue-group queue.
portNetEgrQStatQueueId [Port Net Egr QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outRapidSpanningTreeBpdus [Out Rapid Spanning Tree Bpdus] (sdpBindTlsStpOutRstBpdus)	long	The value of the object sdpBindTlsStpOutRstBpdus indicates the number of Rapid Spanning Tree (Rstp) BPDUs sent out on this SDP.
outTcnBpdus [Out Tcn Bpdus] (sdpBindTlsStpOutTcnBpdus)	long	The value of the object sdpBindTlsStpOutTcnBpdus indicates the number of Topology Change Notification BPDUs sent out this SDP Bind.
<p>PipStpInfoStats</p> <p>MIB entry name: tlsPipInfoEntry</p> <p>Entry description: TLS specific information about PIP uplink.</p> <p>Table description (for tlsPipInfoTable): A table that contains TLS PIP (Provider Internal Port) uplink information. PIP is the virtual link between I and B components of PBB (Provider Backbone Bridging) model. I component refers to a service with svcVplsType set to 'iVpls (3)' and B component refers to a service with svcVplsType set to 'bVpls (2)'. When any form of STP is enabled in the iVpls domain, the PIP uplink is modeled as a regular STP port.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: I2fwd.PipStpInfo</p>		
pipInTcBitBpdus [Pip In Tc Bit Bpdus] (tlsPipInTcBitBpdus)	long	The value of the object tlsPipInTcBitBpdus indicates the number of BPDUs received on this PIP uplink with the Topology Change bit set.
pipOutTcBitBpdus [Pip Out Tc Bit Bpdus] (tlsPipOutTcBitBpdus)	long	This object specifies the number of BPDUs sent out this PIP uplink with the Topology Change bit set.
pipStpForwardTransitions [Pip Stp Forward Transitions] (tlsPipStpForwardTransitions)	long	The value of the object tlsPipStpForwardTransitions indicates the number of times this port has transitioned from the Learning state to the Forwarding state.
pipStpInBadBpdus [Pip Stp In Bad Bpdus] (tlsPipStpInBadBpdus)	long	This object specifies the number of bad BPDUs received on this PIP uplink.

Table 619 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pipStpInConfigBpdus [Pip Stp In Config Bpdus] (tlsPipStpInConfigBpdus)	long	The value of the object tlsPipStpInConfigBpdus indicates the number of Configuration BPDUs received on this PIP uplink.
pipStpInMstBpdus [Pip Stp In Mst Bpdus] (tlsPipStpInMstBpdus)	long	The value of the object tlsPipStpInMstBpdus indicates the number of Multiple Spanning Tree (MST) BPDUs received on this PIP uplink.
pipStpInRstBpdus [Pip Stp In Rst Bpdus] (tlsPipStpInRstBpdus)	long	The value of the object tlsPipStpInRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs received on this PIP uplink.
pipStpInTcnBpdus [Pip Stp In Tcn Bpdus] (tlsPipStpInTcnBpdus)	long	The value of the object tlsPipStpInTcnBpdus indicates the number of Topology Change Notification BPDUs received on this PIP uplink.
pipStpOutConfigBpdus [Pip Stp Out Config Bpdus] (tlsPipStpOutConfigBpdus)	long	The value of the object tlsPipStpOutConfigBpdus indicates the number of Configuration BPDUs sent out this PIP uplink.
pipStpOutMstBpdus [Pip Stp Out Mst Bpdus] (tlsPipStpOutMstBpdus)	long	The value of the object tlsPipStpOutMstBpdus indicates the number of Multiple Spanning Tree (MST) BPDUs sent out on this PIP uplink.
pipStpOutRstBpdus [Pip Stp Out Rst Bpdus] (tlsPipStpOutRstBpdus)	long	The value of the object tlsPipStpOutRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs sent out on this PIP uplink.
pipStpOutTcnBpdus [Pip Stp Out Tcn Bpdus] (tlsPipStpOutTcnBpdus)	long	This object specifies the number of Topology Change Notification BPDUs sent out this PIP uplink.

Table 619 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SiteFibStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteFib</p>		
entries [Entries] (svcTlsFdbNumEntries)	long	The value of the object svcTlsFdbNumEntries indicates the current number of entries in the FDB of this service.
provisionedSize [Provisioned Size] (svcTlsFdbTableSize)	long	The value of the object svcTlsFdbTableSize specifies the maximum number of learned and static entries allowed in the FDB of this service. The maximum value of svcTlsFdbTableSize is '511999', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'd'. The maximum value of svcTlsFdbTableSize is '196607', when the the value of TIMETRA-CHASSIS-MIB::tmnxChassisOperMode is 'c'. In other cases, the maximum value of svcTlsFdbTableSize is '131071'.
staticEntries [Static Entries] (svcTlsFdbNumStaticEntries)	long	The value of the object svcTlsFdbNumStaticEntries indicates the current number of static entries in the FDB of this service.

Table 620 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. Each entry represents an active Link Aggregation Group.</p> <p>Table description (for tLagOperationTable): Operational information about each Link Aggregation Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lag.Interface</p>		
portThresholdFalling [Port Threshold Falling] (tLagPortThresholdFalling)	long	counts the number of linkDown or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being less than or equal to tLagPortThreshold value.
portThresholdRising [Port Threshold Rising] (tLagPortThresholdRising)	long	counts the number of linkUp or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being greater than tLagPortThreshold value.
<p>MultiChassisLagMemberStats</p> <p>MIB entry name: tmnxMcLagLagStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a lag that participates in a multi-chassis configuration with a given peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagLagStatsTable): The tmnxMcLagLagStatsTable has an entry for each lag that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lag.MultiChassisLagMember • multichassis.MultiChassisLagMember 		
configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 620 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 620 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlIdLagId)	long	The value of tmnxMcLagStatsDropTlvInvlIdLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 620 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 620 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 621 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.
<p>LdpEgressStats</p> <p>MIB entry name: vRtrLdpEgrStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrLdpEgrStatisticsTable): The vRtrLdpEgrStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ldp.AccountingFecPrefix</p>

labelRequestsSent [Label Requests Sent] (vRtrLdpSessStatsLabelRequestOut)	long	The value of vRtrLdpSessStatsLabelRequestOut counts the number of Label Request Messages that have been sent during this session.
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpSessStatsLabelWithdrawIn)	long	The value of vRtrLdpSessStatsLabelWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpSessStatsLabelWithdrawOut)	long	The value of vRtrLdpSessStatsLabelWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpSessStatsLinkAdj)	long	The value of vRtrLdpSessStatsLinkAdj specifies the number of link adjacencies for this session.

Table 621 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
notificationMessagesReceived [Notification Messages Received] (vRtrLdpSessStatsNotificationIn)	long	The value of vRtrLdpSessStatsNotificationIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpSessStatsNotificationOut)	long	The value of vRtrLdpSessStatsNotificationOut counts the number of Notification Messages that have been sent during this session.
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpSessStatsTargAdj)	long	The value of vRtrLdpSessStatsTargAdj specifies the number of targeted adjacencies for this session.
<p>SiteStats MIB entry name: vRtrLdpStatsEntry Entry description: A row in this table represents statistical information about an LDP instance. Table description (for vRtrLdpStatsTable): vRtrLdpStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpGeneralTable, and the augmenting table, vRtrLdpStatsTable. This in effect extends the vRtrLdpGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpGeneralTable results in the same fate for the row in the vRtrLdpStatsTable. Supports realtime plotting Supports scheduled collection Monitored class: ldp.Site</p>		
activeAdjacencies [Active Adjacencies] (vRtrLdpStatsActiveAdjacencies)	long	The value of vRtrLdpStatsActiveAdjacencies specifies the number of active adjacencies (i.e. established sessions) associated with the LDP instance.
activeInterfaces [Active Interfaces] (vRtrLdpStatsActiveInterfaces)	long	The value of vRtrLdpStatsActiveInterfaces specifies the number of active (i.e. operationally up) interfaces associated with the LDP instance.

Table 621 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeSessions [Active Sessions] (vRtrLdpStatsActiveSessions)	long	The value of vRtrLdpStatsActiveSessions specifies the number of active sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargetedSessions [Active Targeted Sessions] (vRtrLdpStatsActiveTargSessions)	long	The value of vRtrLdpStatsActiveTargSessions specifies the number of configured targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vRtrLdpStatsAddrFECRecv)	long	The value of vRtrLdpStatsAddrFECRecv specifies the number of Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vRtrLdpStatsAddrFECSent)	long	The value of vRtrLdpStatsAddrFECSent specifies the number of Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vRtrLdpStatsAttemptedSessions)	long	The value of vRtrLdpStatsAttemptedSessions specifies the total number of attempted sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vRtrLdpStatsBadLdpIdentifierErrors)	long	The value of vRtrLdpStatsBadLdpIdentifierErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vRtrLdpStatsBadMessageLengthErrors)	long	The value of vRtrLdpStatsBadMessageLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vRtrLdpStatsBadPduLengthErrors)	long	The value of vRtrLdpStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vRtrLdpStatsBadTlvLengthErrors)	long	The value of vRtrLdpStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.

Table 621 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrFecPfxCount [Egr Fec Pfx Count] (vRtrLdpStatsEgrFecPfxCount)	long	The value of vRtrLdpStatsEgrFecPfxCount indicates the number of egress FEC prefix statistics configured for this LDP instance.
inactiveInterfaces [Inactive Interfaces] (vRtrLdpStatsInactiveInterfaces)	long	The value of vRtrLdpStatsInactiveInterfaces specifies the number of inactive (i.e. operationally down) interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vRtrLdpStatsInactiveTargSessions)	long	The value of vRtrLdpStatsInactiveTargSessions specifies the number of inactive (i.e. operationally down) targeted sessions associated with the LDP instance.
keepAliveExpiredErrors [Keep Alive Expired Errors] (vRtrLdpStatsKeepAliveExpiredErrors)	long	The value of vRtrLdpStatsKeepAliveExpiredErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vRtrLdpStatsMalformedTlvValueErrors)	long	The value of vRtrLdpStatsMalformedTlvValueErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vRtrLdpStatsOperDownEvents)	long	The value of vRtrLdpStatsOperDownEvents specifies the number of times the LDP instance has gone operationally down since the instance was created.
serviceFECsReceived [Service FECs Received] (vRtrLdpStatsSvcFECRecv)	long	The value of vRtrLdpStatsSvcFECRecv specifies the number of Service FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vRtrLdpStatsSvcFECSent)	long	The value of vRtrLdpStatsSvcFECSent specifies the number of Service FECs sent by the LDP instance to its neighbors.

Table 621 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vRtrLdpStatsSessRejAdvErrors)	long	The value of vRtrLdpStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vRtrLdpStatsSessRejLabelRangeErrors)	long	The value of vRtrLdpStatsSessRejLabelRangeErrors gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vRtrLdpStatsSessRejMaxPduErrors)	long	The value of vRtrLdpStatsSessRejMaxPduErrors gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vRtrLdpStatsSessRejNoHelloErrors)	long	The value of vRtrLdpStatsSessRejNoHelloErrors gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vRtrLdpStatsShutdownNotifRecv)	long	The value of vRtrLdpStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vRtrLdpStatsShutdownNotifSent)	long	The value of vRtrLdpStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vRtrLdpStatsUnknownTlvErrors)	long	The value of vRtrLdpStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.

Table 621 Ldp statistics (continued)

p2mpFecReceived [P2 mp Fec Received] (vRtrLdpStatsP2MPFECRecv)	long	The value of vRtrLdpStatsP2MPFECRecv specifies the number of P2MP FECs received by the LDP instance from its neighbors.
p2mpFecSent [P2 mp Fec Sent] (vRtrLdpStatsP2MPFECSent)	long	The value of vRtrLdpStatsP2MPFECSent specifies the number of P2MP FECs sent by the LDP instance to its neighbors.

Table 621 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TargetedPeerStats</p> <p>MIB entry name: vRtrLdpIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface or Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpSessionStatsEntry.</p> <p>Table description (for vRtrLdpIfStatsTable): vRtrLdpIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces and Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpIfTable, and the augmenting table, vRtrLdpIfStatsTable. This in effect extends the vRtrLdpIfTable with additional columns. Creation or deletion of a row in the vRtrLdpIfTable results in the same fate for the row in the vRtrLdpIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.TargetedPeer</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpIfExistingAdjacencies)	long	The value of vRtrLdpIfExistingAdjacencies gives a count of the total active adjacencies on this LDP interface or with this targeted peer.

Table 622 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 622 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPPortConfiguration</p>		

Table 622 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and lldpExtensions objects because the information timeliness interval has expired. This counter is similar to lldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
lldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
lldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
lldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 622 lldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
lldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats</p> <p>MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lldp.LLDPPortConfiguration</p>		
lldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
lldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 623 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceStats</p> <p>MIB entry name: vRtrMldIfStatsEntry</p> <p>Entry description: An entry in the vRtrMldIfStatsTable.</p> <p>Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mld.Interface</p>		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.

Table 623 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.

Table 623 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.

Table 623 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.

Table 624 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries specifies the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/vRtrMplsLspAge * 100 %).

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats MIB entry name: vRtrMplsIfStatEntry Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system. Supports realtime plotting Supports scheduled collection Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>P2MPInstanceStats</p> <p>MIB entry name: vRtrMplsP2mplInstStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsP2mplInstStatTable): The vRtrMplsP2mplInstStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.P2MPInstance</p>		
configuredS2Is [Configured S2 Is] (vRtrMplsP2mplInstStatConfiguredS2Is)	long	The value of vRtrMplsP2mplInstStatConfiguredS2Is indicates the number of S2Is configured for this P2MP LSP.
lastS2IChange [Last S2 I Change] (vRtrMplsP2mplInstStatLastS2IChange)	long	The value of vRtrMplsP2mplInstStatLastS2IChange indicates the time since the last change occurred on this P2MP LSP.
lastS2ITimeDown [Last S2 I Time Down] (vRtrMplsP2mplInstStatLastS2ITimeDown)	long	The value of vRtrMplsP2mplInstStatLastS2ITimeDown indicates the total time that this S2I has not been operational.
lastTrans [Last Trans] (vRtrMplsP2mplInstStatLastTrans)	long	The value of vRtrMplsP2mplInstStatLastTrans indicates the time since the last transition occurred on this P2mp instance.
operationalS2Is [Operational S2 Is] (vRtrMplsP2mplInstStatOperationalS2Is)	long	The value of vRtrMplsP2mplInstStatOperationalS2Is indicates the number of operational S2Is for this P2MP LSP. This includes the S2Is currently active.
s2IChanges [S2 I Changes] (vRtrMplsP2mplInstStatS2IChanges)	long	The value of vRtrMplsP2mplInstStatS2IChanges indicates the number of S2I changes this P2MP LSP has had. For every S2I change (S2I down, S2I up, S2I change), a corresponding syslog/trap (if enabled) is generated for it.

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2lTimeUp [S2 l Time Up] (vRtrMplsP2mplInstStatLastS2lTimeUp)	long	The value of vRtrMplsP2mplInstStatLastS2lTimeUp indicates the total time that this S2l has been operational.
timeDown [Time Down] (vRtrMplsP2mplInstStatTimeDown)	long	The value of vRtrMplsP2mplInstStatTimeDown indicates the total time that this P2MP instance has not been operational.
timeUp [Time Up] (vRtrMplsP2mplInstStatTimeUp)	long	The value of vRtrMplsP2mplInstStatTimeUp indicates the total time that this P2MP instance has been operational.
transitions [Transitions] (vRtrMplsP2mplInstStatTransitions)	long	The The value of vRtrMplsP2mplInstStatTransitions indicates the number of state transitions (up -> down and down -> up) this P2mp instance has undergone.
<p>S2LPathStats</p> <p>MIB entry name: vRtrMplsS2lSubLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Source to Leaf (S2L) Sub Labeled Switch Path (LSP) configured for a i virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsS2lSubLspStatTable): The vRtrMplsS2lSubLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.S2LPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsS2lSubLspCspfQueries)	long	The value of vRtrMplsS2lSubLspCspfQueries indicates the number of CSPF queries that have been made for this LSP S2l.

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retryAttempts [Retry Attempts] (vRtrMplsS2ISubLspRetryAttempts)	long	The value of vRtrMplsS2ISubLspRetryAttempts indicates the number of unsuccessful attempts which have been made to signal this S2I. As soon as the S2I gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsS2ISubLspTimeDown)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has not been operational.
timeUp [Time Up] (vRtrMplsS2ISubLspTimeUp)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsS2ISubLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitionCount [Transition Count] (vRtrMplsS2ISubLspTransitionCount)	long	The value of vRtrMplsS2ISubLspTransitionCount indicates the number of transitions that have occurred for this LSP.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.

Table 624 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 625 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McEPPeerStats</p> <p>MIB entry name: tmnxMcEPPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcEPPeerStatsTable): The tmnxMcEPPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisEndpoint</p>		
configPacketsReceived [Config Packets Received] (tmnxMcEPPeerStatsPktsRxConfig)	long	The value of tmnxMcEPPeerStatsPktsRxConfig indicates how many valid MC-Endpoint control packets of type end-point config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcEPPeerStatsDropMD5)	long	The value of tmnxMcEPPeerStatsDropMD5 indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcEPPeerStatsPktsTxFailed)	long	The value of tmnxMcEPPeerStatsPktsTxFailed indicates how many MC-Endpoint control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlId)	long	The value of tmnxMcEPPeerStatsDropTlvInvlId indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis end-point.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlSz)	long	The value of tmnxMcEPPeerStatsDropTlvInvlSz indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet size was invalid.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcEPPeerStatsPktsRxKpalive)	long	The value of tmnxMcEPPeerStatsPktsRxKpalive indicates how many valid MC-Endpoint control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcEPPeerStatsPktsTxKpalive)	long	The value of tmnxMcEPPeerStatsPktsTxKpalive indicates how many MC-Endpoint control packets of type keepalive were transmitted from this system to the peer.
noEpPeerPacketsDropped [No Ep Peer Packets Dropped] (tmnxMcEPPeerStatsDropEpNoPeer)	long	The value of tmnxMcEPPeerStatsDropEpNoPeer indicates how many pkts were dropped because MC-Endpoint does not have a MC-peer assigned yet or MC-Endpoint is attached to a different peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcEPPeerStatsDropOutOfSeq)	long	The value of tmnxMcEPPeerStatsDropOutOfSeq indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcEPPeerStatsPktsRx)	long	The value of tmnxMcEPPeerStatsPktsRx indicates how many valid MC-Endpoint control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcEPPeerStatsPktsTx)	long	The value of tmnxMcEPPeerStatsPktsTx indicates how many MC-Endpoint control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcEPPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsRxPeerCfg indicates how many valid MC-Endpoint control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcEPPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsTxPeerCfg indicates how many MC-Endpoint control packets of type peer config were transmitted from this system to the peer.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcEPPeerStatsDropStateDsbl)	long	The value of tmnxMcEPPeerStatsDropStateDsbl indicates how many MC-Endpoint control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcEPPeerStatsPktsRxState)	long	The value of tmnxMcEPPeerStatsPktsRxState indicates how many valid MC-Endpoint control packets of type end-point state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcEPPeerStatsDropPktTooShrt)	long	The value of tmnxMcEPPeerStatsDropPktTooShrt indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcEPPeerStatsDropUnknownTlv)	long	The value of tmnxMcEPPeerStatsDropUnknownTlv indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>MultiChassisPeerRingStats</p> <p>MIB entry name: tmnxMcrPeerStatsEntry</p> <p>Entry description: Each row entry in the tmnxMcrPeerStatsTable represents additional columns of operational data for a multi-chassis peer.</p> <p>Table description (for tmnxMcrPeerStatsTable): The tmnxMcrPeerStatsTable has an entry for each multi-chassis peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.Peer</p>		
keepAlivePacketsTransmitted [Keep Alive Packets Transmitted] (tmnxMcrPeerStatsTxKeepAlive)	long	The value of tmnxMcrPeerStatsTxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were transmitted to the peer.
mcsIdRequestPacketsReceived [Mcs Id Request Packets Received] (tmnxMcrPeerStatsRxMcsIdReq)	long	The value of tmnxMcrPeerStatsRxMcsIdReq indicates how many valid MCS ID requests were received from the peer.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcsIdRequestPacketsTransmitted [Mcs Id Request Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdReq)	long	The value of tmnxMcrPeerStatsTxMcsIdReq indicates how many valid MCS ID requests were transmitted to the peer.
mcsIdResponsePacketsReceived [Mcs Id Response Packets Received] (tmnxMcrPeerStatsRxMcsIdRsp)	long	The value of tmnxMcrPeerStatsRxMcsIdRsp indicates how many valid MCS ID responses were received from the peer.
mcsIdResponsePacketsTransmitted [Mcs Id Response Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdRsp)	long	The value of tmnxMcrPeerStatsTxMcsIdRsp indicates how many valid MCS ID responses were transmitted to the peer.
ringExistsRequestPacketsReceived [Ring Exists Request Packets Received] (tmnxMcrPeerStatsRxRingExistsReq)	long	The value of tmnxMcrPeerStatsRxRingExistsReq indicates how many valid 'ring exists' requests were received from the peer.
ringExistsRequestPacketsTransmitted [Ring Exists Request Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsReq)	long	The value of tmnxMcrPeerStatsTxRingExistsReq indicates how many valid 'ring exists' requests were transmitted to the peer.
ringExistsResponsePacketsReceived [Ring Exists Response Packets Received] (tmnxMcrPeerStatsRxRingExistsRsp)	long	The value of tmnxMcrPeerStatsRxRingExistsRsp indicates how many valid 'ring exists' responses were received from the peer.
ringExistsResponsePacketsTransmitted [Ring Exists Response Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsRsp)	long	The value of tmnxMcrPeerStatsTxRingExistsRsp indicates how many valid 'ring exists' responses were transmitted to the peer.
ringKeepAlivePacketsReceived [Ring Keep Alive Packets Received] (tmnxMcrPeerStatsRxKeepAlive)	long	The value of tmnxMcrPeerStatsRxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were received from the peer.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ringSignallingPacketsReceived [Ring Signalling Packets Received] (tmnxMcrPeerStatsRx)	long	The value of tmnxMcrPeerStatsRx indicates how many valid MC-Ring signalling messages were received from the peer.
ringSignallingPacketsTransmitted [Ring Signalling Packets Transmitted] (tmnxMcrPeerStatsTx)	long	The value of tmnxMcrPeerStatsTx indicates how many valid MC-Ring signalling messages were transmitted to the peer.
MultiChassisRingGlobalStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
deliveredToPeerPacketsReceived [Delivered To Peer Packets Received] (tmnxMcrStatsRxDelivrdToPeer)	long	The value of tmnxMcrStatsRxDelivrdToPeer indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their peer.
deliveredToRingNodePacketsReceived [Delivered To Ring Node Packets Received] (tmnxMcrStatsRxDelivrdToRingNode)	long	The value of tmnxMcrStatsRxDelivrdToRingNode indicates how many MC-R signalling packets were received by this system that were correctly delivered to their ring node.
deliveredToRingPacketsReceived [Delivered To Ring Packets Received] (tmnxMcrStatsRxDelivrdToRing)	long	The value of tmnxMcrStatsRxDelivrdToRing indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their ring.
incompletePacketsReceived [Incomplete Packets Received] (tmnxMcrStatsRxIncomplete)	long	The value of tmnxMcrStatsRxIncomplete indicates how many MC-Ring signalling packets were received by this system that were incomplete.
invalidTlvPacketsReceived [Invalid Tlv Packets Received] (tmnxMcrStatsRxInvalidTlv)	long	The value of tmnxMcrStatsRxInvalidTlv indicates how many MC-Ring signalling packets were received by this system with invalid TLV.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
missedBfdEvents [Missed Bfd Events] (tmnxMcrStatsMissedBfdEvent)	long	The value of tmnxMcrStatsMissedBfdEvent indicates the number of missed BFD events on this system.
missedConfigEvents [Missed Config Events] (tmnxMcrStatsMissedConfigEvent)	long	The value of tmnxMcrStatsMissedConfigEvent indicates the number of missed configuration events on this system.
noBufferPacketsNotTransmitted [No Buffer Packets Not Transmitted] (tmnxMcrStatsTxNoBuffer)	long	The value of tmnxMcrStatsTxNoBuffer indicates how many MC-Ring signalling packets could not be transmitted by this system due to a lack of packet buffers.
signallingPacketsNotTransmitted [Signalling Packets Not Transmitted] (tmnxMcrStatsTxTransmitFailed)	long	The value of tmnxMcrStatsTxTransmitFailed indicates how many MC-Ring signalling packets could not be transmitted by this system due to a transmission failure.
signallingPacketsReceived [Signalling Packets Received] (tmnxMcrStatsRx)	long	The value of tmnxMcrStatsRx indicates how many MC-Ring signalling packets were received by this system.
signallingPacketsTransmitted [Signalling Packets Transmitted] (tmnxMcrStatsTx)	long	The value of tmnxMcrStatsTx indicates how many MC-Ring signalling packets were transmitted by this system.
tooShortPacketsReceived [Too Short Packets Received] (tmnxMcrStatsRxTooShort)	long	The value of tmnxMcrStatsRxTooShort indicates how many MC-Ring signalling packets were received by this system that were too short.
unknownDestinationPacketsDropped [Unknown Destination Packets Dropped] (tmnxMcrStatsTxUnknownDest)	long	The value of tmnxMcrStatsTxUnknownDest indicates how many MC-R signalling packets were dropped because the destination was unknown.
unknownPeerPacketsReceived [Unknown Peer Packets Received] (tmnxMcrStatsRxUnknownPeer)	long	The value of tmnxMcrStatsRxUnknownPeer indicates how many MC-Ring signalling packets were received by this system that were related to an unknown peer.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownRingNodePacketsReceived [Unknown Ring Node Packets Received] (tmnxMcrStatsRxUnknownRingNode)	long	The value of tmnxMcrStatsRxUnknownRingNode indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring node.
unknownRingPacketsReceived [Unknown Ring Packets Received] (tmnxMcrStatsRxUnknownRing)	long	The value of tmnxMcrStatsRxUnknownRing indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMcrStatsRxUnknownType)	long	The value of tmnxMcrStatsRxUnknownType indicates how many MC-Ring signalling packets were received by this system that were of unknown type.
wrongAuthenticationPacketsReceived [Wrong Authentication Packets Received] (tmnxMcrStatsRxWrongAuth)	long	The value of tmnxMcrStatsRxWrongAuth indicates how many MC-Ring signalling packets were received by this system with invalid authentication.
<p>MultiChassisRingNodeStats MIB entry name: tmnxMcrRingNodeStatsEntry Entry description: Each row entry represents statistics related to an access node that participates in a multi-chassis ring configuration with a given peer. Rows are created or removed automatically by the system. Table description (for tmnxMcrRingNodeStatsTable): The tmnxMcrRingNodeStatsTable has an entry for each access node that participates in a multi-chassis ring configuration for the indicated peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRingNode</p>		
detectedPacketsAcknowledged [Detected Packets Acknowledged] (tmnxMcrRingNodeStatsTxDetectAck)	long	The value of tmnxMcrRingNodeStatsTxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged to the peer for this multi-chassis ring node.
detectedPacketsPeerAcknowledged [Detected Packets Peer Acknowledged] (tmnxMcrRingNodeStatsRxDetectAck)	long	The value of tmnxMcrRingNodeStatsRxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged by the peer for this multi-chassis ring node.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detectedPacketsReceived [Detected Packets Received] (tmnxMcrRingNodeStatsRxDetect)	long	The value of tmnxMcrRingNodeStatsRxDetect indicates how many valid 'detected ring node' signalling messages were received from the peer for this multi-chassis ring node.
detectedPacketsTransmitted [Detected Packets Transmitted] (tmnxMcrRingNodeStatsTxDetect)	long	The value of tmnxMcrRingNodeStatsTxDetect indicates how many valid 'detected ring node' signalling messages were transmitted to the peer for this multi-chassis ring node.
rncvPacketsReceived [Rncv Packets Received] (tmnxMcrRingNodeStatsRncvRxResp)	long	The value of tmnxMcrRingNodeStatsRncvRxResp indicates how many valid connectivity verification messages were received from this multi-chassis ring node.
rncvPacketsRoundTripTime [Rncv Packets Round Trip Time] (tmnxMcrRingNodeStatsRncvRtTime)	long	The value of tmnxMcrRingNodeStatsRncvRtTime indicates the round-trip-time of the last successful connectivity verification for this multi-chassis ring node. If there has not been a successful connectivity verification, the value of tmnxMcrRingNodeStatsRncvRtTime is zero.
rncvPacketsTransmitted [Rncv Packets Transmitted] (tmnxMcrRingNodeStatsRncvTxReq)	long	The value of tmnxMcrRingNodeStatsRncvTxReq indicates how many valid connectivity verification messages were transmitted to this multi-chassis ring node.
<p>MultiChassisRingStats MIB entry name: tmnxMcrRingStatsEntry Entry description: Each row entry in the tmnxMcrRingStatsTable represents additional columns of operational data for a ring that participates in a multi-chassis operation with a given peer. Table description (for tmnxMcrRingStatsTable): The tmnxMcrRingStatsTable has an entry for each multi-chassis ring that participates in a multi-chassis configuration for the indicated peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRing</p>		

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
opaquePacketsReceivedDelivered [Opaque Packets Received Delivered] (tmnxMcrRingStatsRxOpaqueDelivrd)	long	The value of tmnxMcrRingStatsRxOpaqueDelivrd indicates how many valid opaque signalling messages were received from the peer and delivered for this multi-chassis ring.
opaquePacketsReceivedNoDestination [Opaque Packets Received No Destination] (tmnxMcrRingStatsRxOpaqueNoDest)	long	The value of tmnxMcrRingStatsRxOpaqueNoDest indicates how many valid opaque signalling messages were received from the peer and for which no destination could be found.
opaquePacketsTransmitted [Opaque Packets Transmitted] (tmnxMcrRingStatsTxOpaque)	long	The value of tmnxMcrRingStatsTxOpaque indicates how many valid opaque signalling messages were transmitted to the peer for this multi-chassis ring.
sapsChangedPacketsReceived [Saps Changed Packets Received] (tmnxMcrRingStatsRxSapsChanged)	long	The value of tmnxMcrRingStatsRxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were received from the peer for this multi-chassis ring.
sapsChangedPacketsTransmitted [Saps Changed Packets Transmitted] (tmnxMcrRingStatsTxSapsChanged)	long	The value of tmnxMcrRingStatsTxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were transmitted to the peer for this multi-chassis ring.
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagPeerStatsTable): The tmnxMcLagPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • multichassis.PSSPeer • multichassis.Peer 		

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvldId)	long	The value of tmnxMcLagPeerStatsDropTlvInvldId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvldSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvldSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblD)	long	The value of tmnxMcLagPeerStatsDropStateDsblD indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcLagPeerStatsPktsRxState)	long	The value of tmnxMcLagPeerStatsPktsRxState indicates how many valid MC-Lag control packets of type lag state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagPeerStatsDropPktTooShrt)	long	The value of tmnxMcLagPeerStatsDropPktTooShrt indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagPeerStatsDropUnknownTlv)	long	The value of tmnxMcLagPeerStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system from the peer because the packet contained an unknown TLV.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerSynchronizationProtocolStats</p> <p>MIB entry name: tmnxMcPeerSyncStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis synchronization protocol entry. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcPeerSyncStatsTable): The tmnxMcPeerSyncStatsTable has an entry for each multi-chassis peer synchronization protocol entry.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.PeerSynchronizationProtocol</p>		
bodyDecodeErrorPacketsReceived [Body Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrBody)	long	The value of tmnxMcPeerSyncPktsRxErrBody indicates the number of packets with body decode errors received from the multi-chassis peer.
dataPacketsReceived [Data Packets Received] (tmnxMcPeerSyncPktsRxData)	long	The value of tmnxMcPeerSyncPktsRxData indicates the number of hello packets received from the multi-chassis peer.
dataPacketsTransmitted [Data Packets Transmitted] (tmnxMcPeerSyncPktsTxData)	long	The value of tmnxMcPeerSyncPktsTxData indicates the number of data packets transmitted to the multi-chassis peer.
erroneousPacketsReceived [Erroneous Packets Received] (tmnxMcPeerSyncPktsRxErr)	long	The value of tmnxMcPeerSyncPktsRxErr indicates the number of erroneous packets received from the multi-chassis peer.
headerDecodeErrorPacketsReceived [Header Decode Error Packets Received] (tmnxMcPeerSyncPktsRxErrHeader)	long	The value of tmnxMcPeerSyncPktsRxErrHeader indicates the number of packets with header decode errors received from the multi-chassis peer.
helloPacketsReceived [Hello Packets Received] (tmnxMcPeerSyncPktsRxHello)	long	The value of tmnxMcPeerSyncPktsRxHello indicates the number of hello packets received from the multi-chassis peer.

Table 625 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
helloPacketsTransmitted [Hello Packets Transmitted] (tmnxMcPeerSyncPktsTxHello)	long	The value of tmnxMcPeerSyncPktsTxHello indicates the number of hello packets transmitted to the multi-chassis peer.
otherPacketsReceived [Other Packets Received] (tmnxMcPeerSyncPktsRxOther)	long	The value of tmnxMcPeerSyncPktsRxOther indicates the number of all other packet types received from the multi-chassis peer.
otherPacketsTransmitted [Other Packets Transmitted] (tmnxMcPeerSyncPktsTxOther)	long	The value of tmnxMcPeerSyncPktsTxOther indicates the number of all other packet types transmitted to the multi-chassis peer.
packetTransmissionErrors [Packet Transmission Errors] (tmnxMcPeerSyncPktsTxErr)	long	The value of tmnxMcPeerSyncPktsTxErr indicates the number of packet transmission errors.
sequenceNumberErrorPacketsReceived [Sequence Number Error Packets Received] (tmnxMcPeerSyncPktsRxErrSeqNum)	long	The value of tmnxMcPeerSyncPktsRxErrSeqNum indicates the number of packets with sequence number errors received from the multi-chassis peer.
totalPacketsReceived [Total Packets Received] (tmnxMcPeerSyncPktsRxAll)	long	The value of tmnxMcPeerSyncPktsRxAll indicates the total number of packets received from the multi-chassis peer.
totalPacketsTransmitted [Total Packets Transmitted] (tmnxMcPeerSyncPktsTxAll)	long	The value of tmnxMcPeerSyncPktsTxAll indicates the total number of packets transmitted to the multi-chassis peer.

Table 626 netw statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
SnmpAgentStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
sgiSnmplnGetBulks [Sgi Snmp In Get Bulks] (sgiSnmplnGetBulks)	long	The value of sgiSnmplnGetBulks indicates the total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.
snmplnASNParseErrs [Snmp In ASNParse Errs] (snmplnASNParseErrs)	long	The total number of ASN.1 or BER errors encountered by the SNMP entity when decoding received SNMP messages.
snmplnBadCommunityNames [Snmp In Bad Community Names] (snmplnBadCommunityNames)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which used an SNMP community name not known to said entity. Also, implementations which authenticate community-based SNMP messages using check(s) in addition to matching the community name (for example, by also checking whether the message originated from a transport address allowed to use a specified community name) MAY include in this value the number of messages which failed the additional check(s). It is strongly RECOMMENDED that the documentation for any security model which is used to authenticate community-based SNMP messages specify the precise conditions that contribute to this value.

Table 626 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpInBadCommunityUses [Snmp In Bad Community Uses] (snmpInBadCommunityUses)	long	The total number of community-based SNMP messages (for example, SNMPv1) delivered to the SNMP entity which represented an SNMP operation that was not allowed for the SNMP community named in the message. The precise conditions under which this counter is incremented (if at all) depend on how the SNMP entity implements its access control mechanism and how its applications interact with that access control mechanism. It is strongly RECOMMENDED that the documentation for any access control mechanism which is used to control access to and visibility of MIB instrumentation specify the precise conditions that contribute to this value.
snmpInBadVersions [Snmp In Bad Versions] (snmpInBadVersions)	long	The total number of SNMP messages which were delivered to the SNMP entity and were for an unsupported SNMP version.
snmpInPkts [Snmp In Pkts] (snmpInPkts)	long	The total number of messages delivered to the SNMP entity from the transport service.
snmpProxyDrops [Snmp Proxy Drops] (snmpProxyDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the transmission of the (possibly translated) message to a proxy target failed in a manner (other than a time-out) such that no Response Class PDU (such as a Response-PDU) could be returned.

Table 626 netw statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
snmpSilentDrops [Snmp Silent Drops] (snmpSilentDrops)	long	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.

Table 627 ospf statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaBasicStats</p> <p>MIB entry name: tmnxOspfAreaEntry</p> <p>Entry description: The tmnxOspfAreaEntry contains information describing the configured parameters and cumulative statistics of one of the router's attached areas.</p> <p>Table description (for tmnxOspfAreaTable): The tmnxOspfAreaTable contains information describing the configured parameters and cumulative statistics of the router's attached areas.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
nssaTranslatorEvents [Nssa Translator Events] (tmnxOspfAreaNssaTranslatorEvents)	long	The value of tmnxOspfAreaNssaTranslatorEvents indicates the number of Translator State changes that have occurred since the last boot-up.
totalLSACount [Total LSACount] (tmnxOspfAreaScopeLsaCount)	long	The value of tmnxOspfAreaScopeLsaCount indicates the total number of Area-Scope link state advertisements in this area's link-state database.
totalSpfRuns [Total Spf Runs] (tmnxOspfAreaSpfRuns)	long	The value of tmnxOspfAreaSpfRuns indicates the number of times that the intra-area route table has been calculated using this area's link-state database. This is typically done using Dijkstra's algorithm.
totalUnknownLSACount [Total Unknown LSACount] (tmnxOspfAreaScopeUnkLsaCount)	long	The value of tmnxOspfAreaScopeUnkLsaCount indicates the total number of unknown Area-Scope link-state advertisements in this area's link-state database.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AreaSiteLfaStats</p> <p>MIB entry name: tmnxOspfLfaStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfLfaStatsTable represents information on LFA coverage for a given OSPF area</p> <p>Table description (for tmnxOspfLfaStatsTable): The tmnxOspfLfaStatsTable maintains information on loopfree-alternate (LFA) coverage for each instance of OSPF protocol.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.AreaSite</p>		
ospfLfaCoverage [Ospf Lfa Coverage] (tmnxOspfLfaCoverage)	long	The value of tmnxOspfLfaCoverage indicates how much LFA coverage is being obtained for the set of available LFA eligible nodes.
ospfLfaNodesCovered [Ospf Lfa Nodes Covered] (tmnxOspfLfaNodesCovered)	long	The value of tmnxOspfLfaNodesCovered indicates in absolute numbers the number of nodes for which an LFA is found.
ospfLfaPrefixCoverage [Ospf Lfa Prefix Coverage] (tmnxOspfLfaPfxCoverage)	long	The value of tmnxOspfLfaPfxCoverage indicates how much LFA prefix coverage is being obtained for the set of available LFA eligible prefixes.
ospfLfaPrefixCovered [Ospf Lfa Prefix Covered] (tmnxOspfLfaPfxCovered)	long	The value of tmnxOspfLfaPfxCovered indicates in absolute numbers the number of prefixes for which an LFA is found.
ospfLfaTotalNodes [Ospf Lfa Total Nodes] (tmnxOspfLfaTotalNodes)	long	The value of tmnxOspfLfaTotalNodes indicates in absolute numbers the number of nodes eligible for LFA calculation.
ospfLfaTotalPrefix [Ospf Lfa Total Prefix] (tmnxOspfLfaTotalPfx)	long	The value of tmnxOspfLfaTotalPfx indicates in absolute numbers the number of prefixes eligible for LFA calculation.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceGeneralStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
events [Events] (tmnxOspfNgIfEvents)	long	The value of tmnxOspfNgIfEvents indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<p>InterfaceReceiveStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfNgIfRxBadChecksums)	long	The value of tmnxOspfNgIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
InterfaceStatusStats MIB entry name: tmnxOspfNgIfStatsEntry Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface. Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface. Supports realtime plotting Supports scheduled collection Monitored class: ospf.Interface		
authorizationFailures [Authorization Failures] (tmnxOspfNgIfAuthFailures)	long	The value of tmnxOspfNgIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfNglfBadAreas)	long	The value of tmnxOspfNglfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfNglfBadAuthTypes)	long	The value of tmnxOspfNglfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfNglfBadDeadIntervals)	long	The value of tmnxOspfNglfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfNglfBadDstAddrs)	long	The value of tmnxOspfNglfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfNglfBadHelloIntervals)	long	The value of tmnxOspfNglfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfNglfBadLengths)	long	The value of tmnxOspfNglfBadLengths indicates the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfNglfBadNeighbors)	long	The value of tmnxOspfNglfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badNetworks [Bad Networks] (tmnxOspfNglfBadNetworks)	long	The value of tmnxOspfNglfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfNglfBadOptions)	long	The value of tmnxOspfNglfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this interface or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfNglfBadPacketTypes)	long	The value of tmnxOspfNglfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfNglfBadVersions)	long	The value of tmnxOspfNglfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.
badVirtualLinks [Bad Virtual Links] (tmnxOspfNglfBadVirtualLinks)	long	The value of tmnxOspfNglfBadVirtualLinks indicates the total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since tmnxOspfAdminState was last set to 'enabled'.
discardPackets [Discard Packets] (tmnxOspfNglfDiscardPackets)	long	The value of tmnxOspfNglfDiscardPackets indicates the total number of OSPF packets discarded on this interface since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfNglfRetransmitOuts)	long	The value of tmnxOspfNglfRetransmitOuts indicates the total number of OSPF Retransmits sent on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InterfaceTransmitStats</p> <p>MIB entry name: tmnxOspfNgIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgIfStatsTable represents additional columns for statistics for an OSPF interface.</p> <p>Table description (for tmnxOspfNgIfStatsTable): The tmnxOspfNgIfStatsTable provides an extension of the tmnxOspfNgIfTable for statistics for an OSPF interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Interface</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfNgIfRxDBDs)	long	The value of tmnxOspfNgIfRxDBDs indicates the total number of OSPF Database Description packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfNgIfRxHellos)	long	The value of tmnxOspfNgIfRxHellos indicates the total number of OSPF Hello packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfNgIfRxLSAcks)	long	The value of tmnxOspfNgIfRxLSAcks indicates the total number of Link State Acknowledgements received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfNgIfRxLSRs)	long	The value of tmnxOspfNgIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfNgIfRxLSUs)	long	The value of tmnxOspfNgIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this interface since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfNgIfRxPackets)	long	The value of tmnxOspfNgIfRxPackets indicates the total number of OSPF packets received on this interface since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeighborGeneralStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ospf.Neighbor • ospf.OspfNeighbor 		
events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkGeneralStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
events [Events] (tmnxOspfShamLfEvents)	long	The value of tmnxOspfShamLfEvents indicates the number of state changes or error events on this sham link.
<p>ShamLinkNeighborGeneralStats</p> <p>MIB entry name: tmnxOspfShamNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor.</p> <p>Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLinkNeighbor</p>		
events [Events] (tmnxOspfShamNbrEvents)	long	The value of tmnxOspfShamNbrEvents indicates the number of times this sham link has changed its state, or an error has occurred.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfShamNbrLsRetransQLen)	long	The value of tmnxOspfShamNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>ShamLinkNeighborStatusStats</p> <p>MIB entry name: tmnxOspfShamNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor.</p> <p>Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLinkNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfShamNbrBadMTUs)	long	The value of tmnxOspfShamNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfShamNbrBadPackets)	long	The value of tmnxOspfShamNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfShamNbrBadSeqNums)	long	The value of tmnxOspfShamNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfShamNbrBadNbrStates)	long	The value of tmnxOspfShamNbrBadNbrStates indicates the total number of OSPF packets received when the sham link neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
duplicates [Duplicates] (tmnxOspfShamNbrDuplicates)	long	The value of tmnxOspfShamNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfShamNbrLsaInstallFail)	long	The value of tmnxOspfShamNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfShamNbrLsaNotInLsdb)	long	The value of tmnxOspfShamNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfShamNbrNumRestarts)	long	The value of tmnxOspfShamNbrNumRestarts indicates the number of times the sham link neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfShamNbrOptionMismatch)	long	The value of tmnxOspfShamNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkReceiveStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfShamIfRxBadChecksums)	long	The value of tmnxOspfShamIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ShamLinkStatusStats</p> <p>MIB entry name: tmnxOspfShamIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfShamIfAuthFailures)	long	The value of tmnxOspfShamIfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.
badAreas [Bad Areas] (tmnxOspfShamIfBadAreas)	long	The value of tmnxOspfShamIfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfShamIfBadAuthTypes)	long	The value of tmnxOspfShamIfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfShamIfBadDeadIntervals)	long	The value of tmnxOspfShamIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfShamIfBadDstAddrs)	long	The value of tmnxOspfShamIfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badHelloIntervals [Bad Hello Intervals] (tmnxOspfShamIfBadHelloIntervals)	long	The value of tmnxOspfShamIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfShamIfBadLengths)	long	The value of tmnxOspfShamIfBadLengths indicates the total number of OSPF packets received on this sham link with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfShamIfBadNeighbors)	long	The value of tmnxOspfShamIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.
badNetworks [Bad Networks] (tmnxOspfShamIfBadNetworks)	long	The value of tmnxOspfShamIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfShamIfBadOptions)	long	The value of tmnxOspfShamIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this sham link or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfShamIfBadPacketTypes)	long	The value of tmnxOspfShamIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfShamIfBadVersions)	long	The value of tmnxOspfShamIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
discardPackets [Discard Packets] (tmnxOspfShamIfDiscardPackets)	long	The value of tmnxOspfShamIfDiscardPackets indicates the total number of OSPF packets discarded on this sham link since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfShamIfRetransmitOuts)	long	The value of tmnxOspfShamIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkTransmitStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

events [Events] (tmnxOspfVirtIfEvents)	long	The value of tmnxOspfVirtIfEvents indicates the number of state changes or error events on this Virtual Link
<p>VirtualLinkReceiveStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfVirtIfRxBadChecksums)	long	The value of tmnxOspfVirtIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualLinkStatusStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAddrs)	long	The value of tmnxOspfVirtIfBadDstAddrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervals)	long	The value of tmnxOspfVirtIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats</p> <p>MIB entry name: tmnxOspfVirtIfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface.</p> <p>Table description (for tmnxOspfVirtIfStatsTable): The tmnxOspfVirtIfStatsTable provides an extension of the tmnxOspfVirtIfTable for statistics for an OSPF virtual interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualLink</p>		

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
VirtualNeighborGeneralStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor		

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 627 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 628 pae802_1x statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PaePortAuthenticatorDiagStats</p> <p>MIB entry name: dot1xAuthDiagEntry</p> <p>Entry description: The diagnostics information for an Authenticator PAE.</p> <p>Table description (for dot1xAuthDiagTable): A table that contains the diagnostics objects for the Authenticator PAE associated with each Port. dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 628 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 628 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 628 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

Table 628 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthSessionOctetsTx [Dot 1 x Auth Session Octets Tx] (dot1xAuthSessionOctetsTx)	java. math. BigInteger	The number of octets transmitted in user data frames on this Port during the session.
dot1xAuthSessionTerminateCause [Dot 1 x Auth Session Terminate Cause] (dot1xAuthSessionTerminateCause)	int	The reason for the session termination.
dot1xAuthSessionTime [Dot 1 x Auth Session Time] (dot1xAuthSessionTime)	long	The duration of the session in seconds.
<p>PaePortAuthenticatorStats MIB entry name: dot1xAuthStatsEntry Entry description: The statistics information for an Authenticator PAE. Table description (for dot1xAuthStatsTable): A table that contains the statistics objects for the Authenticator PAE associated with each Port. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 628 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 629 rsvp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpSessionStats</p> <p>MIB entry name: vRtrRsvpSessionStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an RSVP session. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrRsvpSessionStatTable): The vRtrRsvpSessionStatTable contains statistics for an RSVP session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Session</p>		
detourAge [Detour Age] (vRtrRsvpSessionDetourAge)	long	vRtrRsvpSessionDetourAge is the age (i.e., time from creation till now) of this detour LSP in 10-millisecond periods.
detourTimeUp [Detour Time Up] (vRtrRsvpSessionDetourTimeUp)	long	vRtrRsvpSessionDetourTimeUp is the total time in 10-millisecond units that the detour LSP has been operational.
pathsReceived [Paths Received] (vRtrRsvpSessionRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages received for this RSVP session.
pathsTransmitted [Paths Transmitted] (vRtrRsvpSessionTxPaths)	java. math. BigInteger	The total number of RSVP PATH messages transmitted for this RSVP session.
refreshPathsReceived [Refresh Paths Received] (vRtrRsvpSessionRxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshPaths indicates the number of times PATH was refreshed using message ID from full PATH refresh or Srefresh message for this RSVP session.

Table 629 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
refreshPathsTransmitted [Refresh Paths Transmitted] (vRtrRsvpSessionTxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshPaths indicates the number of times PATH refresh for the session was sent as a part of a Srefresh message.
refreshReservesReceived [Refresh Reserves Received] (vRtrRsvpSessionRxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshResvs indicates the number of times RESV was refreshed using message ID from full RESV refresh or Srefresh message for this RSVP session.
refreshReservesTransmitted [Refresh Reserves Transmitted] (vRtrRsvpSessionTxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshResvs indicates the number of times RESV refresh for the session was sent as a part of a Srefresh message.
reservesReceived [Reserves Received] (vRtrRsvpSessionRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages received for this RSVP session.
reservesTransmitted [Reserves Transmitted] (vRtrRsvpSessionTxResvs)	java. math. BigInteger	The total number of RSVP RESV messages transmitted for this RSVP session.

Table 630 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpeCheckStats</p> <p>MIB entry name: vRtrInetStatRteCpeChkStatsEntry</p> <p>Entry description: Each row entry represents a collection of Customer-Provided Equipment (CPE) availability statistics for a virtual router static route in the system with non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrInetStatRteCpeChkStatsTable): The vRtrInetStatRteCpeChkStatsTable has an entry for each entry in the vRtrInetStaticRouteTable that has a non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.StaticRoute</p>		
downTransitions [Down Transitions] (vRtrInetStatRteCpeChkDownTrans)	long	The value of vRtrInetStatRteCpeChkDownTrans indicates the number of times the CPE has transitioned to the unavailable state.
echoReplyPacketsReceived [Echo Reply Packets Received] (vRtrInetStatRteCpeChkInPktCnt)	long	The value of vRtrInetStatRteCpeChkInPktCnt indicates the number of echo-reply packets received.
echoRequestPacketsSent [Echo Request Packets Sent] (vRtrInetStatRteCpeChkOutPktCnt)	long	The value of vRtrInetStatRteCpeChkOutPktCnt indicates the number of echo-request packets sent.
hostUpDownTime [Host Up Down Time] (vRtrInetStatRteCpeChkUpTime)	long	The value of vRtrInetStatRteCpeChkUpTime indicates how long (in hundredths of a second) that the CPE has been available.
ttl [Ttl] (vRtrInetStatRteCpeChkTTL)	long	The value of vRtrInetStatRteCpeChkTTL indicates the time, in seconds, before the CPE will be declared down. Upon receipt of an echo reply, it has the value of vRtrInetStaticRouteCpeInterval * vRtrInetStaticRouteCpeDropCnt and is decremented by 1 every second.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
upTransitions [Up Transitions] (vRtrInetStatRteCpeChkUpTrans)	long	The value of vRtrInetStatRteCpeChkUpTrans indicates the number of times the CPE has transitioned to the available state.
<p>DhcpRelayStats MIB entry name: vRtrIfDHCPRelayStatsEntry Entry description: Each row entry represents information related to DHCP Relay statistics for a virtual router interface in the system. Entries cannot be created and deleted via SNMP SET operations. Table description (for vRtrIfDHCPRelayStatsTable): The vRtrIfDHCPRelayStatsTable contains the statistics for the DHCP Relay agent. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • rtr.DhcpRelayConfiguration • rtr.GrpIfDhcpRelayCfg • rtr.SubIfDhcpRelayCfg 		
authPktsDiscarded [Auth Pkts Discarded] (vRtrIfDHCPRelayAuthPktsDiscarded)	long	vRtrIfDHCPRelayAuthPktsDiscarded indicates the total number of packets discarded because authentication was not successful.
authPktsSuccess [Auth Pkts Success] (vRtrIfDHCPRelayAuthPktsSuccess)	long	vRtrIfDHCPRelayAuthPktsSuccess indicates the total number of packets for which authentication was successful.
clientPacketsDiscarded [Client Packets Discarded] (vRtrIfDHCPRelayClientPktsDiscarded)	long	vRtrIfDHCPRelayClientPktsDiscarded indicates the total number of client packets discarded by the DHCP relay agent.
clientPacketsRelayed [Client Packets Relayed] (vRtrIfDHCPRelayClientPktsRelayed)	long	vRtrIfDHCPRelayClientPktsRelayed indicates the total number of client packets relayed by the DHCP relay agent.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
clientPktsProxLS [Client Pkts Prox LS] (vRtrIfDHCPRelayClientPktsProxLS)	long	vRtrIfDHCPRelayClientPktsProxLS indicates the total number of client packets proxied by the DHCP relay agent based on a lease state. The lease itself can have been obtained from a DHCP or RADIUS server. This is the so called lease split functionality.
clientPktsProxRad [Client Pkts Prox Rad] (vRtrIfDHCPRelayClientPktsProxRad)	long	vRtrIfDHCPRelayClientPktsProxRad indicates the total number of client packets proxied by the DHCP relay agent based on data received from a RADIUS server.
pktsGenForceRenew [Pkts Gen Force Renew] (vRtrIfDHCPRelayPktsGenForceRenew)	long	vRtrIfDHCPRelayPktsGenForceRenew indicates the total number of DHCP FORCERENEW messages spoofed by the DHCP relay agent to the DHCP clients.
pktsGenRelease [Pkts Gen Release] (vRtrIfDHCPRelayPktsGenRelease)	long	vRtrIfDHCPRelayPktsGenRelease indicates the total number of DHCP RELEASE messages spoofed by the DHCP relay agent to the DHCP server.
receivedMalformedPackets [Received Malformed Packets] (vRtrIfDHCPRelayRxMalformedPkts)	long	vRtrIfDHCPRelayRxMalformedPkts indicates the total number of malformed packets received by the DHCP relay agent.
receivedPackets [Received Packets] (vRtrIfDHCPRelayRxPkts)	long	vRtrIfDHCPRelayRxPkts indicates the total number of packets received by the DHCP relay agent.
receivedUntrustedPackets [Received Untrusted Packets] (vRtrIfDHCPRelayRxUntrustedPkts)	long	vRtrIfDHCPRelayRxUntrustedPkts indicates the total number of untrusted packets received by the DHCP relay agent.
serverPacketsDiscarded [Server Packets Discarded] (vRtrIfDHCPRelayServerPktsDiscarded)	long	vRtrIfDHCPRelayServerPktsDiscarded indicates the total number of server packets discarded by the DHCP relay agent.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
serverPacketsRelayed [Server Packets Relayed] (vRtrIfDHCPRelayServerPktsRelayed)	long	vRtrIfDHCPRelayServerPktsRelayed indicates the total number of server packets relayed by the DHCP relay agent.
serverPktsSnooped [Server Pkts Snooped] (vRtrIfDHCPRelayServerPktsSnooped)	long	vRtrIfDHCPRelayServerPktsSnooped indicates the total number of server packets snooped by the DHCP relay agent.
transmittedPackets [Transmitted Packets] (vRtrIfDHCPRelayTxPkts)	long	vRtrIfDHCPRelayTxPkts indicates the total number of packets transmitted by the DHCP relay agent.
<p>IpInterfaceStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted.</p> <p>Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • ies.GroupInterface • rtr.NetworkInterface • service.L3AccessInterface • vprn.GroupInterface • vprn.NetworkInterface 		
ifSpeed [If Speed] (vRtrIfSpeed)	java. math. BigInteger	The value of vRtrIfSpeed indicates an estimate of the current bandwidth in bits per second for this interface.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxBytes [Rx Bytes] (vRtrIfRxBytes)	java. math. BigInteger	The value of vRtrIfRxBytes indicates the number of total bytes received by this interface.
rxBytesHigh32 [Rx Bytes High 32] (vRtrIfRxBytesHigh32)	long	The value of vRtrIfRxBytesHigh32 indicates the high 32 bits of the value of vRtrIfRxBytes.
rxBytesLow32 [Rx Bytes Low 32] (vRtrIfRxBytesLow32)	long	The value of vRtrIfRxBytesLow32 indicates the lower 32 bits of the value of vRtrIfRxBytes.
rxPkts [Rx Pkts] (vRtrIfRxPkts)	java. math. BigInteger	The value of vRtrIfRxPkts indicates the number of total packets received by this interface.
rxPktsHigh32 [Rx Pkts High 32] (vRtrIfRxPktsHigh32)	long	The value of vRtrIfRxPktsHigh32 indicates the high 32 bits of the value of vRtrIfRxPkts.
rxPktsLow32 [Rx Pkts Low 32] (vRtrIfRxPktsLow32)	long	The value of vRtrIfRxPktsLow32 indicates the lower 32 bits of the value of vRtrIfRxPkts.
txV4Bytes [Tx V4 Bytes] (vRtrIfTxV4Bytes)	java. math. BigInteger	The value of vRtrIfTxV4Bytes indicates the number of total IPv4 bytes sent from this interface.
txV4BytesHigh32 [Tx V4 Bytes High 32] (vRtrIfTxV4BytesHigh32)	long	The value of vRtrIfTxV4BytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV4Bytes.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV4BytesLow32 [Tx V4 Bytes Low 32] (vRtrIfTxV4BytesLow32)	long	The value of vRtrIfTxV4BytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV4Bytes.
txV4DiscardBytes [Tx V4 Discard Bytes] (vRtrIfTxV4DiscardBytes)	java. math. BigInteger	The value of vRtrIfTxV4DiscardBytes indicates the number of total IPv4 transmit bytes discarded by this interface.
txV4DiscardBytesHigh32 [Tx V4 Discard Bytes High 32] (vRtrIfTxV4DiscardBytesHigh32)	long	The value of vRtrIfTxV4DiscardBytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV4DiscardBytes.
txV4DiscardBytesLow32 [Tx V4 Discard Bytes Low 32] (vRtrIfTxV4DiscardBytesLow32)	long	The value of vRtrIfTxV4DiscardBytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV4DiscardBytes.
txV4DiscardPktsHigh32 [Tx V4 Discard Pkts High 32] (vRtrIfTxV4DiscardPktsHigh32)	long	The value of vRtrIfTxV4DiscardPktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV4DiscardPkts.
txV4DiscardPktsLow32 [Tx V4 Discard Pkts Low 32] (vRtrIfTxV4DiscardPktsLow32)	long	The value of vRtrIfTxV4DiscardPktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV4DiscardPkts.
txV4Pkts [Tx V4 Pkts] (vRtrIfTxV4Pkts)	java. math. BigInteger	The value of vRtrIfTxV4Pkts indicates the number of total IPv4 packets sent from this interface.
txV4PktsHigh32 [Tx V4 Pkts High 32] (vRtrIfTxV4PktsHigh32)	long	The value of vRtrIfTxV4PktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV4Pkts.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV4PktsLow32 [Tx V4 Pkts Low 32] (vRtrIfTxV4PktsLow32)	long	The value of vRtrIfTxV4PktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV4Pkts.
txV6Bytes [Tx V6 Bytes] (vRtrIfTxV6Bytes)	java. math. BigInteger	The value of vRtrIfTxV6Bytes indicates the number of total IPv6 bytes sent from this interface.
txV6BytesHigh32 [Tx V6 Bytes High 32] (vRtrIfTxV6BytesHigh32)	long	The value of vRtrIfTxV6BytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV6Bytes.
txV6BytesLow32 [Tx V6 Bytes Low 32] (vRtrIfTxV6BytesLow32)	long	The value of vRtrIfTxV6BytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV6Bytes.
txV6DiscardBytes [Tx V6 Discard Bytes] (vRtrIfTxV6DiscardBytes)	java. math. BigInteger	The value of vRtrIfTxV6DiscardBytes indicates the number of total IPv6 transmit bytes discarded by this interface.
txV6DiscardBytesHigh32 [Tx V6 Discard Bytes High 32] (vRtrIfTxV6DiscardBytesHigh32)	long	The value of vRtrIfTxV6DiscardBytesHigh32 indicates the high 32 bits of the value of vRtrIfTxV6DiscardBytes.
txV6DiscardBytesLow32 [Tx V6 Discard Bytes Low 32] (vRtrIfTxV6DiscardBytesLow32)	long	The value of vRtrIfTxV6DiscardBytesLow32 indicates the lower 32 bits of the value of vRtrIfTxV6DiscardBytes.
txV6DiscardPkts [Tx V6 Discard Pkts] (vRtrIfTxV6DiscardPkts)	java. math. BigInteger	The value of vRtrIfTxV6DiscardPkts indicates the number of total IPv6 transmit packets discarded by this interface.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txV6DiscardPktsHigh32 [Tx V6 Discard Pkts High 32] (vRtrIfTxV6DiscardPktsHigh32)	long	The value of vRtrIfTxV6DiscardPktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV6DiscardPkts.
txV6DiscardPktsLow32 [Tx V6 Discard Pkts Low 32] (vRtrIfTxV6DiscardPktsLow32)	long	The value of vRtrIfTxV6DiscardPktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV6DiscardPkts.
txV6Pkts [Tx V6 Pkts] (vRtrIfTxV6Pkts)	java. math. BigInteger	The value of vRtrIfTxV6Pkts indicates the number of total IPv6 packets sent from this interface.
txV6PktsHigh32 [Tx V6 Pkts High 32] (vRtrIfTxV6PktsHigh32)	long	The value of vRtrIfTxV6PktsHigh32 indicates the high 32 bits of the value of vRtrIfTxV6Pkts.
txV6PktsLow32 [Tx V6 Pkts Low 32] (vRtrIfTxV6PktsLow32)	long	The value of vRtrIfTxV6PktsLow32 indicates the lower 32 bits of the value of vRtrIfTxV6Pkts.
<p>NetworkInterfaceURPFStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RouteStats</p> <p>MIB entry name: vRtrStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrStatTable): The vRtrStatTable has an entry for each virtual router configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • rtr.VirtualRouter • vprn.DVRSSite • vprn.RoutingInstanceSite • vprn.Site 		
activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'bgp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPActiveRoutes)	long	vRtrBGPActiveRoutes indicates the current number of active bgp routes for this instance of the route table.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.

Table 630 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.

Table 631 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SrvConnsStats</p> <p>MIB entry name: tmnxTwampSrvConnStatsEntry</p> <p>Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established.</p> <p>Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: setUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.

Table 631 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.

Table 631 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.

Table 632 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L3AccessInterfaceURPFStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted.</p> <p>Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.L3AccessInterface</p>		
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

authenticationPacketsDiscarded [Authentication Packets Discarded] (sapBaseStatsAuthenticationPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
authenticationPacketsSuccessful [Authentication Packets Successful] (sapBaseStatsAuthenticationPktsSuccess)	long	The number of DHCP packets successfully authenticated.
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInteger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchipDroppedPackets)	java. math. BigInteger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOfferedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOfferedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOfferedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOfferedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedUncoloredOctets [Ingress PChip Offered Uncolored Octets] (sapBaseStatsIngressPchipOfferedUncoloredOctets)	java. math. BigInteger	The number of uncolored octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedUncoloredPackets [Ingress PChip Offered Uncolored Packets] (sapBaseStatsIngressPchipOf- feredUncoloredPackets)	java. math. BigInte- ger	The number of uncolored packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressQChipForwardedOutProfOctets [Ingress QChip Forwarded Out Prof Octets] (sapBaseStatsIngressQchipFor- wardedOutProfOctets)	java. math. BigInte- ger	The number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
<p>SapEgrEGBaseStats MIB entry name: sapEgrEGBaseStEntry Entry description: Egress statistics about a specific Encap Group of a SAP. Table description (for sapEgrEGBaseStTable): The sapEgrEGBaseStTable contains egress Encap Group basic SAP statistics at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. In the descriptions below 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGBaseStCustId)	long	The value of sapEgrEGBaseStCustId indicates the Customer ID for the associated service.
dPdInPfOcts [Dpd In Pf Octs] (sapEgrEGBaseStQcDpdInPfOcts)	java. math. BigInte- ger	The value of sapEgrEGBaseStQcDpdInPfOcts indicates the number of in-profile octets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dPdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGBaseStQcDpdInPfOctsH)	long	The value of sapEgrEGBaseStQcDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
custId [Cust Id] (sapEgrEGMbrQueueCustId)	long	The value of sapEgrEGMbrQueueCustId indicates the Customer ID for the associated service.
dPdInPfOcts [Dpd In Pf Octs] (sapEgrEGMbrQueueStDpdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdInPfOcts indicates the number of in-profile octets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dPdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGMbrQueueStDpdInPfOctsH)	long	The value of sapEgrEGMbrQueueStDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdInPfOcts.
dPdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGMbrQueueStDpdInPfOctsL)	long	The value of sapEgrEGMbrQueueStDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdInPfOcts.
dPdInPfPkts [Dpd In Pf Pkts] (sapEgrEGMbrQueueStDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdInPfPkts indicates the number of in-profile packets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dPdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGMbrQueueStDpdInPfPktsH)	long	The value of sapEgrEGMbrQueueStDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdInPfPkts.
dPdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGMbrQueueStDpdInPfPktsL)	long	The value of sapEgrEGMbrQueueStDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdInPfPkts.
dPdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGMbrQueueStDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGMbrQueueStDpdOutPfOctsH)	long	The value of sapEgrEGMbrQueueStDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGMbrQueueStDpdOutPfOctsL)	long	The value of sapEgrEGMbrQueueStDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfOcts.
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGMbrQueueStDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress queue due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGMbrQueueStDpdOutPfPktsH)	long	The value of sapEgrEGMbrQueueStDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGMbrQueueStDpdOutPfPktsL)	long	The value of sapEgrEGMbrQueueStDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGMbrQueueStFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress queue.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGMbrQueueStFwdInPfOctsH)	long	The value of sapEgrEGMbrQueueStFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGMbrQueueStFwdInPfOctsL)	long	The value of sapEgrEGMbrQueueStFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdInPfOcts.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGMbrQueueStFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress queue.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGMbrQueueStFwdInPfPktsH)	long	The value of sapEgrEGMbrQueueStFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGMbrQueueStFwdInPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGMbrQueueStFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress queue.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGMbrQueueStFwdOutPfOctsH)	long	The value of sapEgrEGMbrQueueStFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGMbrQueueStFwdOutPfOctsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGMbrQueueStFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrQueueStFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress queue.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGMbrQueueStFwdOutPfPktsH)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGMbrQueueStFwdOutPfPktsL)	long	The value of sapEgrEGMbrQueueStFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrQueueStFwdOutPfPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
queueId [Queue Id] (sapEgrEGMbrQueueId)	long	The value of sapEgrEGMbrQueueId indicates the index of the egress QoS queue of this SAP.
<p>SapEgrEGMbrSchedStats</p> <p>MIB entry name: sapEgrEGMbrSchedStEntry</p> <p>Entry description: Egress statistics about a specific QoS scheduler instantiated per encapsulation group member of SAP.</p> <p>Table description (for sapEgrEGMbrSchedStTable): The sapEgrEGMbrSchedStTable contains egress encapsulation group QoS scheduler SAP per member. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGMbrSchedCustId)	long	The value of sapEgrEGMbrSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octets] (sapEgrEGMbrSchedStFwdOcts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdOcts indicates the number of octets forwarded by the egress QoS scheduler of this SAP.

Table 632 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOctsH [Fwd Octets H] (sapEgrEGMbrSchedStFwdOctsH)	long	The value of sapEgrEGMbrSchedStFwdOctsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdOctsL [Fwd Octets L] (sapEgrEGMbrSchedStFwdOctsL)	long	The value of sapEgrEGMbrSchedStFwdOctsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdOcts.
fwdPkts [Fwd Pkts] (sapEgrEGMbrSchedStFwdPkts)	java. math. BigInteger	The value of sapEgrEGMbrSchedStFwdPkts indicates the number of packets forwarded by the egress QoS scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapEgrEGMbrSchedStFwdPktsH)	long	The value of sapEgrEGMbrSchedStFwdPktsH indicates the higher 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
fwdPktsL [Fwd Pkts L] (sapEgrEGMbrSchedStFwdPktsL)	long	The value of sapEgrEGMbrSchedStFwdPktsL indicates the lower 32 bits of the value of sapEgrEGMbrSchedStFwdPkts.
memberId [Member Id] (sapEgrEncapGrpMember)	long	The value of sapEgrEncapGrpMember indicates the encapsulation member identifier of the SAP on the egress side.
schedName [Sched Name] (sapEgrEGMbrSchedStName)	String	The sapEgrEGMbrSchedStName specifies the name of the egress QoS scheduler of this SAP.

Table 632 service statistics (continued)

Table 633 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmMacFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmMacFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmMacFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmMacFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criter is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesec.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesec.SiteSystemSecurityPublicKey</p>		

Table 633 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.
RadiusNotifyStats MIB entry name: tmnxSubRadNotifyStatsObjects Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
accepted [Accepted] (tmnxSubRadNotifyStatsAccepted)	long	The value of tmnxSubRadNotifyStatsAccepted indicates the number of notify Change-of-Authorization requests accepted.
badAuthentication [Bad Authentication] (tmnxSubRadNotifyStatsBadAuth)	long	The value of tmnxSubRadNotifyStatsBadAuth indicates the number of notify Change-of-Authorization requests rejected because of authentication failure.
invalidMsg [Invalid Msg] (tmnxSubRadNotifyStatsInvalidMsg)	long	The value of tmnxSubRadNotifyStatsInvalidMsg indicates the number of notify Change-of-Authorization requests rejected because of decode errors.
noNotification [No Notification] (tmnxSubRadNotifyStatsNoNotify)	long	The value of tmnxSubRadNotifyStatsNoNotify indicates the number of notify Change-of-Authorization requests rejected due to lack of notification process.

Table 633 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noResource [No Resource] (tmnxSubRadNotifyStatsNoResource)	long	The value of tmnxSubRadNotifyStatsNoResource indicates the number of notify Change-of-Authorization requests rejected due to lack of resources.
received [Received] (tmnxSubRadNotifyStatsReceived)	long	The value of tmnxSubRadNotifyStatsReceived indicates the number of notify Change-of-Authorization requests received.
rejected [Rejected] (tmnxSubRadNotifyStatsRejected)	long	The value of tmnxSubRadNotifyStatsRejected indicates the number of notify Change-of-Authorization requests rejected.
unknownHost [Unknown Host] (tmnxSubRadNotifyStatsUnknownHost)	long	The value of tmnxSubRadNotifyStatsUnknownHost indicates the number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id.

Table 634 srrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceStats</p> <p>MIB entry name: tmnxSrrpStatsEntry</p> <p>Entry description: Each row entry represents the statistics for a particular SRRP instance tied to a service group interface. Entries are created/deleted in conjunction with entries in the tmnxSrrpOperTable</p> <p>Table description (for tmnxSrrpStatsTable): The tmnxSrrpStatsTable has an entry for each Subscriber Router Redundancy Protocol instance configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: srrp.Instance</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxSrrpStatsAdvIntDiscards)	long	The value for tmnxSrrpStatsAdvIntDiscards indicates the total number of SRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (tmnxSrrpStatsAdvIntErrors)	long	The value for tmnxSrrpStatsAdvIntErrors indicates the total number of SRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (tmnxSrrpStatsAdvRcvd)	long	The value for tmnxSrrpStatsAdvRcvd indicates the total number of SRRP advertisements received by this virtual router.
advertiseSent [Advertise Sent] (tmnxSrrpStatsAdvSent)	long	The value for tmnxSrrpStatsAdvSent indicates the total number of SRRP advertisements sent by this virtual router.
becomeBackupRouting [Become Backup Routing] (tmnxSrrpStatsBecomeBackupRouting)	long	The value for tmnxSrrpStatsBecomeBackupRouting indicates the total number of times that the virtual router's state has transitioned to backup routing state.

Table 634 srrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeBackupShunt [Become Backup Shunt] (tmnxSrrpStatsBecomeBackupShunt)	long	The value for tmnxSrrpStatsBecomeBackupShunt indicates the total number of times that the virtual router's state has transitioned to backup shunt.
becomeMaster [Become Master] (tmnxSrrpStatsBecomeMaster)	long	The value for tmnxSrrpStatsBecomeMaster indicates the total number of times that the virtual router's state has transitioned to master.
becomeNonMaster [Become Non Master] (tmnxSrrpStatsBecomeNonMaster)	long	The value for tmnxSrrpStatsBecomeNonMaster indicates the total number times that the virtual router's state has transitioned from master to a non-master state.
masterChanges [Master Changes] (tmnxSrrpStatsMasterChanges)	long	The value for tmnxSrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxSrrpStatsPreemptEvents)	long	The value for tmnxSrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tmnxSrrpStatsPreemptedEvents)	long	The value for tmnxSrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (tmnxSrrpStatsPriZeroPktsSent)	long	The value for tmnxSrrpStatsPriZeroPktsSent indicates the total number of SRRP packets sent by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (tmnxSrrpStatsPriZeroPktsRcvd)	long	The value for tmnxSrrpStatsPriZeroPktsRcvd indicates the total number of SRRP packets received by the virtual router with a priority of '0'.

Table 636 acfilter statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HitCountStats</p> <p>MIB entry name: tIPFilterParamsEntry</p> <p>Entry description: Information about a particular IP Filter entry. Every IP Filter can have zero or more IP Filter match entries. A filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. Additional parameters can be found in tIPFilterParamsExtTable. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPFilterParamsTable): A table of all IP filter match entries for all IP filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.IpFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 636 acfilter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Ipv6HitCountStats</p> <p>MIB entry name: tIPv6FilterParamsEntry</p> <p>Entry description: Information about a particular IPv6 Filter entry. Every IPv6 Filter can have zero or more IPv6 Filter match entries. A filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. Additional match criteria can be found in tIPv6FilterParamsExtTable. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tIPv6FilterParamsTable): A table of all IPv6 filter match entries for all IPv6 filters</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.Ipv6FilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tIPv6FilterParamsEgrHitByteCount)	java. math. BigInteger	This tIPv6FilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tIPv6FilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tIPv6FilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tIPv6FilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tIPv6FilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 636 acfilter statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MacHitCountStats</p> <p>MIB entry name: tMacFilterParamsEntry</p> <p>Entry description: Information about a particular MAC Filter entry. Every MAC Filter can have zero or more MAC Filter match entries. A filter entry with no match criteria set will match every packet, and the entry action will be taken. Entries are created/deleted by user. There is no StorageType object, entries have a presumed StorageType of nonVolatile.</p> <p>Table description (for tMacFilterParamsTable): A table of all MAC filter match entries for all MAC filters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: acfilter.MacFilterEntry</p>		
egressHitByteCount [Egress Hit Byte Count] (tMacFilterParamsEgrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsEgrHitByteCount indicates the number of bytes of all egress packets that matched this entry.
egressHitCount [Egress Hit Count] (tMacFilterParamsEgressHitCount)	java. math. BigInteger	This object indicates the number of times an egress packet matched this entry.
ingressHitByteCount [Ingress Hit Byte Count] (tMacFilterParamsIngrHitByteCount)	java. math. BigInteger	The value of tMacFilterParamsIngrHitByteCount indicates the number of bytes of all ingress packets that matched this entry.
ingressHitCount [Ingress Hit Count] (tMacFilterParamsIngressHitCount)	java. math. BigInteger	This object indicates the number of times an ingress packet matched this entry.

Table 637 bgp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
PeerAdditionalStats MIB entry name: bgpPeerEntry Entry description: Entry containing information about the connection with a BGP peer. Table description (for bgpPeerTable): BGP peer table. This table contains, one entry per BGP peer, information about the connections with BGP peers. Supports realtime plotting Supports scheduled collection Monitored class: bgp.Peer		
fsmEstablishedTime [Fsm Established Time] (bgpPeerFsmEstablishedTime)	long	This timer indicates how long (in seconds) this peer has been in the established state or how long since this peer was last in the established state. It is set to zero when a new peer is configured or when the router is booted.
PeerRouteTargetStats MIB entry name: tBgpPeerNgOperEntry Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable. Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information. Supports realtime plotting Supports scheduled collection Monitored class: bgp.Peer		
rtActivePfxs [Rt Active Pfxs] (tBgpPeerNgOperRtTgtActivePfxs)	long	The value of tBgpPeerNgOperRtTgtActivePfxs indicates the number of active route target prefixes from this peer.
rtRecvPfxs [Rt Recv Pfxs] (tBgpPeerNgOperRtTgtRecvPfxs)	long	The value of tBgpPeerNgOperRtTgtRecvPfxs indicates the number of route target prefixes received from this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rtSentPfxs [Rt Sent Pfxs] (tBgpPeerNgOperRtTgtSentPfxs)	long	The value of tBgpPeerNgOperRtTgtSentPfxs indicates the number of route target prefixes transmitted to this peer.
rtSuppPfxDamp [Rt Supp Pfx Damp] (tBgpPeerNgOperRtTgtSuppPfxDamp)	long	The value of tBgpPeerNgOperRtTgtSuppPfxDamp indicates the number of route target prefixes from this peer, which have been suppressed by damping.
<p>PeerStats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
bgpLsActivePfxs [Bgp Ls Active Pfxs] (tBgpPeerNgOperBgpLsActivePfxs)	long	The value of tBgpPeerNgOperBgpLsActivePfxs indicates the number of active bgp-ls prefixes from this peer.
bgpLsRecvPfxs [Bgp Ls Recv Pfxs] (tBgpPeerNgOperBgpLsRecvPfxs)	long	The value of tBgpPeerNgOperBgpLsRecvPfxs indicates the number of bgp-ls prefixes received from this peer.
bgpLsRejPfxs [Bgp Ls Rej Pfxs] (tBgpPeerNgOperBgpLsRejPfxs)	long	The value of tBgpPeerNgOperBgpLsRejPfxs indicates the number of bgp-ls prefixes rejected from this peer.
bgpLsSentPfxs [Bgp Ls Sent Pfxs] (tBgpPeerNgOperBgpLsSentPfxs)	long	The value of tBgpPeerNgOperBgpLsSentPfxs indicates the number of bgp-ls prefixes transmitted to this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bgpLsSupPfxDamp [Bgp Ls Sup Pfx Damp] (tBgpPeerNgOperBgpLsSupPfxDamp)	long	The value of tBgpPeerNgOperBgpLsSupPfxDamp indicates the number of bgp-ls prefixes from this peer, which have been suppressed by damping
flaps [Flaps] (tBgpPeerNgOperFlaps)	long	The value of tBgpPeerNgOperFlaps indicates the number of flaps of updates from this peer.
inputQueueMessages [Input Queue Messages] (tBgpPeerNgOperInputQueueMsgs)	long	The value of tBgpPeerNgOperInputQueueMsgs indicates the number of unprocessed messages in the queue, from this peer.
I2VpnActivePfxs [L2 Vpn Active Pfxs] (tBgpPeerNgOperI2VpnActivePfxs)	long	The value of tBgpPeerNgOperI2VpnActivePfxs indicates the number of active L2VPN prefixes from this peer.
I2VpnRecvPfxs [L2 Vpn Recv Pfxs] (tBgpPeerNgOperI2VpnRecvPfxs)	long	The value of tBgpPeerNgOperI2VpnRecvPfxs indicates the number L2VPN prefixes received from this peer.
I2VpnSentPfxs [L2 Vpn Sent Pfxs] (tBgpPeerNgOperI2VpnSentPfxs)	long	The value of tBgpPeerNgOperI2VpnSentPfxs indicates the number of L2VPN prefixes transmitted to this peer.
I2VpnSuppPfxDamp [L2 Vpn Supp Pfx Damp] (tBgpPeerNgOperI2VpnSuppPfxDamp)	long	The value of tBgpPeerNgOperI2VpnSuppPfxDamp indicates the number of L2VPN prefixes from this peer, which have been suppressed by damping.
labelV4ActivePfxs [Label V4 Active Pfxs] (tBgpPeerNgOperLabelV4ActivePfxs)	long	The value of tBgpPeerNgOperLabelV4ActivePfxs indicates the number of active label-ipv4 prefixes from this peer.
labelV4BackupPfxs [Label V4 Backup Pfxs] (tBgpPeerNgOperLabelV4BackupPfxs)	long	The value of tBgpPeerNgOperLabelV4BackupPfxs indicates the number of label-ipv4 routes selected as backup from this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelV4RecvPfxs [Label V4 Recv Pfxs] (tBgpPeerNgOperLabelV4RecvPfxs)	long	The value of tBgpPeerNgOperLabelV4RecvPfxs indicates the number of label-ipv4 prefixes received from this peer.
labelV4RejPfxs [Label V4 Rej Pfxs] (tBgpPeerNgOperLabelV4RejPfxs)	long	The value of tBgpPeerNgOperLabelV4RejPfxs indicates the number of label-ipv4 prefixes rejected from this peer.
labelV4SentPfxs [Label V4 Sent Pfxs] (tBgpPeerNgOperLabelV4SentPfxs)	long	The value of tBgpPeerNgOperLabelV4SentPfxs indicates the number of label-ipv4 prefixes transmitted to this peer.
labelV4SupPfxDamp [Label V4 Sup Pfx Damp] (tBgpPeerNgOperLabelV4SupPfxDamp)	long	The value of tBgpPeerNgOperLabelV4SupPfxDamp indicates the number of label-ipv4 prefixes from this peer, which have been suppressed by damping.
labelV6ActivePfxs [Label V6 Active Pfxs] (tBgpPeerNgOperLabelV6ActivePfxs)	long	The value of tBgpPeerNgOperLabelV6ActivePfxs indicates the number of active label-ipv6 prefixes from this peer.
labelV6BackupPfxs [Label V6 Backup Pfxs] (tBgpPeerNgOperLabelV6BackupPfxs)	long	The value of tBgpPeerNgOperLabelV6BackupPfxs indicates the number of label-ipv6 routes selected as backup from this peer.
labelV6RecvPfxs [Label V6 Recv Pfxs] (tBgpPeerNgOperLabelV6RecvPfxs)	long	The value of tBgpPeerNgOperLabelV6RecvPfxs indicates the number of label-ipv6 prefixes received from this peer.
labelV6RejPfxs [Label V6 Rej Pfxs] (tBgpPeerNgOperLabelV6RejPfxs)	long	The value of tBgpPeerNgOperLabelV6RejPfxs indicates the number of label-ipv6 prefixes rejected from this peer.
labelV6SentPfxs [Label V6 Sent Pfxs] (tBgpPeerNgOperLabelV6SentPfxs)	long	The value of tBgpPeerNgOperLabelV6SentPfxs indicates the number of label-ipv6 prefixes transmitted to this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelV6SupPfxDamp [Label V6 Sup Pfx Damp] (tBgpPeerNgOperLabelV6SupPfxDamp)	long	The value of tBgpPeerNgOperLabelV6SupPfxDamp indicates the number of label-ipv6 prefixes from this peer, which have been suppressed by damping.
lastEvent [Last Event] (tBgpPeerNgOperLastEvent)	long	The value of tBgpPeerNgOperLastEvent indicates the last BGP event of this peer.
lastRestartTime [Last Restart Time] (tBgpPeerNgOperLastRestartTime)	long	The value of tBgpPeerNgOperLastRestartTime indicates the last time the peer attempted restart.
lastState [Last State] (tBgpPeerNgOperLastState)	long	The value of tBgpPeerNgOperLastState indicates the last BGP state of this peer.
mcastActivePrefixes [Mcast Active Prefixes] (tBgpPeerNgOperMCastV4ActivePfxs)	long	The value of tBgpPeerNgOperMCastV4ActivePfxs indicates the number of active IPv4 multicast prefixes from this peer.
mcastPrefixesSuppressedByDamping [Mcast Prefixes Suppressed By Damping] (tBgpPeerNgOperMCastV4SupPfxDamp)	long	The value of tBgpPeerNgOperMCastV4SupPfxDamp indicates the number of IPv4 multicast prefixes from this peer, which have been suppressed by damping.
mcastReceivedPrefixes [Mcast Received Prefixes] (tBgpPeerNgOperMCastV4RecvPfxs)	long	The value of tBgpPeerNgOperMCastV4RecvPfxs indicates the number of IPv4 multicast prefixes received from this peer.
mcastSentPrefixes [Mcast Sent Prefixes] (tBgpPeerNgOperMCastV4SentPfxs)	long	The value of tBgpPeerNgOperMCastV4SentPfxs indicates the number of IPv4 multicast prefixes transmitted to this peer.
mdtSafiActivePrefixes [Mdt Safi Active Prefixes] (tBgpPeerNgOperMdtSafiActivePfxs)	long	The value of tBgpPeerNgOperMdtSafiActivePfxs indicates the number of active MDT-SAFI prefixes from this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mdtSafiPrefixesSuppressedByDamping [Mdt Safi Prefixes Suppressed By Damping] (tBgpPeerNgOperMdtSafiSuppPfxDamp)	long	The value of tBgpPeerNgOperMdtSafiSuppPfxDamp indicates the number of MDT-SAFI prefixes from this peer, which have been suppressed by damping.
mdtSafiReceivedPrefixes [Mdt Safi Received Prefixes] (tBgpPeerNgOperMdtSafiRecvPfxs)	long	The value of tBgpPeerNgOperMdtSafiRecvPfxs indicates the number of MDT-SAFI prefixes received from this peer.
mdtSafiSentPrefixes [Mdt Safi Sent Prefixes] (tBgpPeerNgOperMdtSafiSentPfxs)	long	The value of tBgpPeerNgOperMdtSafiSentPfxs indicates the number of MDT-SAFI prefixes transmitted to this peer.
messageOctetsReceived [Message Octets Received] (tBgpPeerNgOperMsgOctetsRcvd)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsRcvd indicates the number of octets received from this peer.
messageOctetsSent [Message Octets Sent] (tBgpPeerNgOperMsgOctetsSent)	java. math. BigInteger	The value of tBgpPeerNgOperMsgOctetsSent indicates the number of octets transmitted to this peer.
numberOfRestarts [Number Of Restarts] (tBgpPeerNgOperNumRestarts)	long	The value of tBgpPeerNgOperNumRestarts indicates the number of times the peer has attempted restart.
outputQueueMessages [Output Queue Messages] (tBgpPeerNgOperOutputQueueMsgs)	long	The value of tBgpPeerNgOperOutputQueueMsgs indicates the number of untransmitted messages in the queue, to this peer.
pathsReceived [Paths Received] (tBgpPeerNgOperReceivedPaths)	long	The value of tBgpPeerNgOperReceivedPaths indicates the number of paths received from this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
prefixesActive [Prefixes Active] (tBgpPeerNgOperActivePrefixes)	long	The value of tBgpPeerNgOperActivePrefixes indicates the number of active prefixes from this peer.
prefixesReceived [Prefixes Received] (tBgpPeerNgOperReceivedPrefixes)	long	The value of tBgpPeerNgOperReceivedPrefixes indicates the number of prefixes received from this peer.
prefixesSent [Prefixes Sent] (tBgpPeerNgOperSentPrefixes)	long	The value of tBgpPeerNgOperSentPrefixes indicates the number of prefixes transmitted to this peer.
prefixesSuppressedByDamping [Prefixes Suppressed By Damping] (tBgpPeerNgOperV4SuppPfxDamp)	long	The value of tBgpPeerNgOperV4SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ActivePrefixes [V6 Active Prefixes] (tBgpPeerNgOperV6ActivePrefixes)	long	The value of tBgpPeerNgOperV6ActivePrefixes indicates the number of active IPv6 prefixes from this peer.
v6PrefixesSuppressedByDamping [V6 Prefixes Suppressed By Damping] (tBgpPeerNgOperV6SuppPfxDamp)	long	The value of tBgpPeerNgOperV6SuppPfxDamp indicates the number of IPv6 prefixes from this peer, which have been suppressed by damping.
v6ReceivedPrefixes [V6 Received Prefixes] (tBgpPeerNgOperV6ReceivedPrefixes)	long	The value of tBgpPeerNgOperV6ReceivedPrefixes indicates the number of IPv6 prefixes received from this peer.
v6SentPrefixes [V6 Sent Prefixes] (tBgpPeerNgOperV6SentPrefixes)	long	The value of tBgpPeerNgOperV6SentPrefixes indicates the number of IPv6 prefixes transmitted to this peer.
vpnActivePrefixes [Vpn Active Prefixes] (tBgpPeerNgOperVpnActivePrefixes)	long	The value of tBgpPeerNgOperVpnActivePrefixes indicates the number of active VPN prefixes from this BGP peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnPrefixesSuppressedByDamping [Vpn Prefixes Suppressed By Damping] (tBgpPeerNgOperVpnSuppPfxDamp)	long	The value of tBgpPeerNgOperVpnSuppPfxDamp indicates the number of VPN IPv4 prefixes from this peer, which have been suppressed by damping.
vpnReceivedPrefixes [Vpn Received Prefixes] (tBgpPeerNgOperVpnRecvPrefixes)	long	The value of tBgpPeerNgOperVpnRecvPrefixes indicates the number of received VPN prefixes.
vpnSentPrefixes [Vpn Sent Prefixes] (tBgpPeerNgOperVpnSentPrefixes)	long	The value of tBgpPeerNgOperVpnSentPrefixes indicates the number of transmitted VPN prefixes.
<p>PeerVprnlpv6Stats</p> <p>MIB entry name: tBgpPeerNgOperEntry</p> <p>Entry description: Defines an entry (conceptual row) in the tBgpPeerNgOperTable. Entries in tBgpPeerNgOperTable are created when entries are created in tBgpPeerNgTable.</p> <p>Table description (for tBgpPeerNgOperTable): The tBgpPeerNgOperTable is the list of configured BGP Peers and their operational status information.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bgp.Peer</p>		
vpnIpv6ActivePfxs [Vpn Ipv 6 Active Pfxs] (tBgpPeerNgOperVpnIpv6ActivePfxs)	long	The value of tBgpPeerNgOperVpnIpv6ActivePfxs indicates the number of active VPN IPv6 prefixes from this peer.
vpnIpv6RecvPfxs [Vpn Ipv 6 Recv Pfxs] (tBgpPeerNgOperVpnIpv6RecvPfxs)	long	The value of tBgpPeerNgOperVpnIpv6RecvPfxs indicates the number of VPN IPv6 prefixes received from this peer.
vpnIpv6SentPfxs [Vpn Ipv 6 Sent Pfxs] (tBgpPeerNgOperVpnIpv6SentPfxs)	long	The value of tBgpPeerNgOperVpnIpv6SentPfxs indicates the number of VPN IPv6 prefixes transmitted to this peer.

Table 637 bgp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
vpnIpv6SuppPfxDamp [Vpn Ipv 6 Supp Pfx Damp] (tBgpPeerNgOperVpnIpv6SuppPfxDamp)	long	The value of tBgpPeerNgOperVpnIpv6SuppPfxDamp indicates the number of VPN IPv6 prefixes from this peer, which have been suppressed by damping.

Table 638 cflowd statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
CflowdGeneralStats MIB entry name: tmnxCflowdGeneralObjs Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCflowd		
activeFlows [Active Flows] (tmnxCflowdActiveFlows)	long	The value of tmnxCflowdActiveFlows is a gauge that indicates the current number of active flows being collected.
droppedFlows [Dropped Flows] (tmnxCflowdGenDroppedFlows)	long	The value of tmnxCflowdGenDroppedFlows indicates the number of times a flow was dropped. Data from dropped flows are not reported to any collector.
genAggrFlowsCreated [Gen Aggr Flows Created] (tmnxCflowdGenAggrFlowsCreated)	long	The value of tmnxCflowdGenAggrFlowsCreated indicates the number of aggregate flows created by system.
genAggrFlowsFlushed [Gen Aggr Flows Flushed] (tmnxCflowdGenAggrFlowsFlushed)	long	The value of tmnxCflowdGenAggrFlowsFlushed indicates the number of aggregate flows flushed.
genAggrFlowsMatched [Gen Aggr Flows Matched] (tmnxCflowdGenAggrFlowsMatched)	long	The value of tmnxCflowdGenAggrFlowsMatched indicates the number of packets matched to an existing aggregate flow.
genRawFlowsCreated [Gen Raw Flows Created] (tmnxCflowdGenRawFlowsCreated)	long	The value of tmnxCflowdGenRawFlowsCreated indicates the number of raw flows created by system.
genRawFlowsFlushed [Gen Raw Flows Flushed] (tmnxCflowdGenRawFlowsFlushed)	long	The value of tmnxCflowdGenRawFlowsFlushed indicates the number of raw flows flushed.

Table 638 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
genRawFlowsMatched [Gen Raw Flows Matched] (tmnxCflowdGenRawFlowsMatched)	long	The value of tmnxCflowdGenRawFlowsMatched indicates the number of raw packets matched to an existing raw flow.
overflowEvents [Overflow Events] (tmnxCflowdGenOverflowEvents)	long	The value of tmnxCflowdGenOverflowEvents indicates the number of times the flow cache has entered the overflow state.
totalPktsDropped [Total Pkts Dropped] (tmnxCflowdTotalPktsDropped)	long	The value of tmnxCflowdTotalPktsDropped indicates the total number of packets dropped for Cflowd.
totalPktsRcvd [Total Pkts Rcvd] (tmnxCflowdTotalPktsRcvd)	long	The value of tmnxCflowdTotalPktsRcvd indicates the total number of packets received for Cflowd.
NeCflowdStats MIB entry name: tmnxCflowdVersionStatsEntry Entry description: The tmnxCflowdVersionStatsEntry contains the information pertaining to the system wide statistics for the specified version index. Table description (for tmnxCflowdVersionStatsTable): The tmnxCflowdVersionStatsTable consists of the overall statistics based on collector version. Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCollector		
packetErrors [Packet Errors] (tmnxCflowdVersionErrors)	long	The value of tmnxCflowdVersionErrors indicates the number of errored packets for the specified version.
packetsOpen [Packets Open] (tmnxCflowdVersionOpen)	long	The value of tmnxCflowdVersionOpen indicates the number of open packets pending for the specified version.

Table 638 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsSent [Packets Sent] (tmnxCflowdVersionSent)	long	The value of tmnxCflowdVersionSent indicates the number of packets transmitted for the specified version.
version [Version] (tmnxCflowdVersionIndex)	long	The value of tmnxCflowdVersionIndex specifies the row in the tmnxCflowdVersionStatsTable that pertains to the cflowd collector version.
versionStatus [Version Status] (tmnxCflowdVersionStatus)	int	The value of tmnxCflowdVersionStatus indicates whether or not the version is in use in the system.
<p>NeCollectorV10Stats MIB entry name: tmnxCFHostCollTemplStatsEntry Entry description: The tmnxCFHostCollTemplStatsEntry contains the information pertaining to the remote collector host statistics for the specified template index. Table description (for tmnxCFHostCollTemplStatsTable): The tmnxCFHostCollTemplStatsTable consists of the overall statistics based on template flows for a specified remote collector host entry. This table replaces the tmnxCflowdTemplateStatsTable as it includes support for IPv6 addresses. Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCollector</p>		
templateErrors [Template Errors] (tmnxCFHostCollTemplErrorPackets)	long	The value of tmnxCFHostCollTemplErrorPackets indicates the number of errored packets for the specified Template type.
templateFlowIndex [Template Flow Index] (tmnxCFHostCollTemplFlowIndex)	int	The value of tmnxCFHostCollTemplFlowIndex specifies the row in the tmnxCflowdTemplateStatsTable that pertains to the cflowd collector Template type. Values: ipv4 (1) - IPv4 unicast/multicast sampling mpls (2) - MPLS ipv6 (3) - IPv6 unicast/multicast sampling l2 (4) - Layer 2

Table 638 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
templateOpen [Template Open] (tmnxCFHostCollTemplOpenPackets)	long	The value of tmnxCFHostCollTemplOpenPackets indicates the number of open packets pending for the specified Template type.
templateSent [Template Sent] (tmnxCFHostCollTemplSentPackets)	long	The value of tmnxCFHostCollTemplSentPackets indicates the number of packets transmitted for the specified Template type.
transmitTime [Transmit Time] (tmnxCFHostCollTemplLastTxTime)	long	The value of tmnxCFHostCollTemplLastTxTime indicates the time, since system startup, when the specified template was last transmitted.
<p>NeCollectorV5Stats MIB entry name: tmnxCFHostCollV5StatsEntry Entry description: The tmnxCFHostCollV5StatsEntry contains the statistics information pertaining to the specified remote collector host. Table description (for tmnxCFHostCollV5StatsTable): The tmnxCFHostCollV5StatsTable consists of the version 5 statistics for a particular remote collector host. This table replaces tmnxCflowdV5StatsTable as it includes support for IPv6 addresses. Supports realtime plotting Supports scheduled collection Monitored class: cflowd.NeCollector</p>		
v5PacketErrors [V5 Packet Errors] (tmnxCFHostCollV5ErrorPackets)	long	The value of tmnxCFHostCollV5ErrorPackets indicates the number of errored packets for the specified remote collector host.
v5PacketOpen [V5 Packet Open] (tmnxCFHostCollV5OpenPackets)	long	The value of tmnxCFHostCollV5OpenPackets indicates the number of open packets pending for the specified remote collector host.
v5PacketSent [V5 Packet Sent] (tmnxCFHostCollV5SentPackets)	long	The value of tmnxCFHostCollV5SentPackets indicates the number of packets transmitted for the specified remote collector host.

<p>NeCollectorV8Stats</p> <p>MIB entry name: tmnxCFHostCollAggrStatsEntry</p> <p>Entry description: The tmnxCFHostCollAggrStatsEntry contains the information pertaining to the remote collector host statistics for the specified aggregation index.</p> <p>Table description (for tmnxCFHostCollAggrStatsTable): The tmnxCFHostCollAggrStatsTable consists of the overall statistics for a remote collector host based on aggregation type. This table replaces tmnxCflowdAggregationStatsTable as it includes support for IPv6 addresses.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
aggPacketErrors [Agg Packet Errors] (tmnxCFHostCollAggrErrorPackets)	long	The value of tmnxCFHostCollAggrErrorPackets indicates the number of errored packets for the specified aggregation type.
aggPacketOpen [Agg Packet Open] (tmnxCFHostCollAggrOpenPackets)	long	The value of tmnxCFHostCollAggrOpenPackets indicates the number of open packets pending for the specified aggregation type.
aggPacketSent [Agg Packet Sent] (tmnxCFHostCollAggrSentPackets)	long	The value of tmnxCFHostCollAggrSentPackets indicates the number of packets transmitted for the specified aggregation type.
aggregationIndex [Aggregation Index] (tmnxCFHostCollAggrIndex)	int	The value of tmnxCFHostCollAggrIndex specifies the row in the tmnxCFHostCollAggrStatsTable that pertains to the cflowd collector aggregation type.
aggregationStatus [Aggregation Status] (tmnxCFHostCollAggrStatus)	int	The value of tmnxCFHostCollAggrStatus indicates whether or not the aggregation is in use in the remote collector host entry.

Table 638 cflowd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>NeCollectorV9Stats</p> <p>MIB entry name: tmnxCFHostCollTemplStatsEntry</p> <p>Entry description: The tmnxCFHostCollTemplStatsEntry contains the information pertaining to the remote collector host statistics for the specified template index.</p> <p>Table description (for tmnxCFHostCollTemplStatsTable): The tmnxCFHostCollTemplStatsTable consists of the overall statistics based on template flows for a specified remote collector host entry. This table replaces the tmnxCflowdTemplateStatsTable as it includes support for IPv6 addresses.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: cflowd.NeCollector</p>		
templateErrors [Template Errors] (tmnxCFHostCollTemplErrorPackets)	long	The value of tmnxCFHostCollTemplErrorPackets indicates the number of errored packets for the specified Template type.
templateFlowIndex [Template Flow Index] (tmnxCFHostCollTemplFlowIndex)	int	The value of tmnxCFHostCollTemplFlowIndex specifies the row in the tmnxCflowdTemplateStatsTable that pertains to the cflowd collector Template type. Values: ipv4 (1) - IPv4 unicast/multicast sampling mpls (2) - MPLS ipv6 (3) - IPv6 unicast/multicast sampling I2 (4) - Layer 2
templateOpen [Template Open] (tmnxCFHostCollTemplOpenPackets)	long	The value of tmnxCFHostCollTemplOpenPackets indicates the number of open packets pending for the specified Template type.
templateSent [Template Sent] (tmnxCFHostCollTemplSentPackets)	long	The value of tmnxCFHostCollTemplSentPackets indicates the number of packets transmitted for the specified Template type.
transmitTime [Transmit Time] (tmnxCFHostCollTemplLastTxTime)	long	The value of tmnxCFHostCollTemplLastTxTime indicates the time, since system startup, when the specified template was last transmitted.

Table 639 equipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AllocatedMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
allocatedMemory [Allocated Memory] (sgiMemoryPoolAllocated)	long	The value of sgiMemoryPoolAllocated indicates the total memory currently allocated in memory-pools on the system. This memory may or may not be currently in use, but is pre-allocated should the software need to use it. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryPoolAllocated must be used to determine the total memory allocated in memory-pools.
<p>AvailableMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
availableMemory [Available Memory] (sgiMemoryAvailable)	long	The value of sgiMemoryAvailable indicates the amount of free memory in the overall system that is not allocated to memory pools, but is available in case a memory pool needs to grow.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CardResourceStats</p> <p>MIB entry name: tCardResEntry</p> <p>Entry description: The value of tCardResEntry represents card specific system resource information.</p> <p>Table description (for tCardResTable): The value of tCardResTable represents system resource information that are specific to a particular card on a given chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
fPIngQGrpInstAlloc [FPIng QGrp Inst Alloc] (tCardResFPIngQGrpInstAlloc)	long	The value of tCardResFPIngQGrpInstAlloc represents the total number of forwarding-plane (FP) ingress queue-group instances across all FP on this card including access and network instances that are currently provisioned.
fPIngQGrpInstTotal [FPIng QGrp Inst Total] (tCardResFPIngQGrpInstTotal)	long	The value of tCardResFPIngQGrpInstTotal represents the total number of forwarding-plane (FP) ingress queue-group instances across all FP on this card including access and network instances that are allowed to be provisioned. When the value of tCardResFPIngQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
hsmdaQOvrAlloc [Hsmda QOvr Alloc] (tCardResHsmdaQOvrAlloc)	long	The value of tCardResHsmdaQOvrAlloc represents the total number of HSMDA queue overrides that are currently allocated on this card.
hsmdaQOvrTotal [Hsmda QOvr Total] (tCardResHsmdaQOvrTotal)	long	The value of tCardResHsmdaQOvrTotal represents the total number of HSMDA queue overrides that are supported on this card. When the value of tCardResHsmdaQOvrTotal is zero, it indicates that this resource type is not supported on this card.
portAccEgrQGrpInstAlloc [Port Acc Egr QGrp Inst Alloc] (tCardResPortAccEgrQGrpInstAlloc)	long	The value of tCardResPortAccEgrQGrpInstAlloc represents the total number of port access egress queue-group instances across all ports on this card that are currently provisioned.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portAccEgrQGrpInstTotal [Port Acc Egr QGrp Inst Total] (tCardResPortAccEgrQGrpInstTotal)	long	The value of tCardResPortAccEgrQGrpInstTotal represents the total number of port access egress queue-group instances across all ports on this card that are allowed to be provisioned. When the value of tCardResPortAccEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
portEgrQGrpInstAlloc [Port Egr QGrp Inst Alloc] (tCardResPortEgrQGrpInstAlloc)	long	The value of tCardResPortEgrQGrpInstAlloc represents the total number of port egress queue-group instances across all ports on this card including access and network instances that are currently provisioned.
portEgrQGrpInstTotal [Port Egr QGrp Inst Total] (tCardResPortEgrQGrpInstTotal)	long	The value of tCardResPortEgrQGrpInstTotal represents the total number of port egress queue-group instances across all ports on this card including access and network instances that are allowed to be provisioned. When the value of tCardResPortEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
portEgrUserSchedOvrsAlloc [Port Egr User Sched Ovrs Alloc] (tCardResQosUserSchedOvrsAlloc)	long	The value of tCardResQosUserSchedOvrsAlloc represents the total number of QoS user virtual scheduler overrides that are currently allocated on this card.
portEgrUserSchedOvrsTotal [Port Egr User Sched Ovrs Total] (tCardResQosUserSchedOvrsTotal)	long	The value of tCardResQosUserSchedOvrsTotal represents the total amount of QoS user virtual scheduler overrides that are supported on this card. When the value of tCardResQosUserSchedOvrsTotal is zero, it indicates that this resource type is not supported on this card.
portEgrVPortAlloc [Port Egr VPort Alloc] (tCardResPortEgrVPortAlloc)	long	The value of tCardResPortEgrVPortAlloc represents the total number of egress virtual ports across all ports on this card that are currently provisioned.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrVPortTotal [Port Egr VPort Total] (tCardResPortEgrVPortTotal)	long	The value of tCardResPortEgrVPortTotal represents the total number of egress virtual ports across all ports on this card that are allowed to be provisioned. When the value of tCardResPortEgrVPortTotal is zero, it indicates that this resource type is not supported on this card.
portNetEgrQGrpInstAlloc [Port Net Egr QGrp Inst Alloc] (tCardResPortNetEgrQGrpInstAlloc)	long	The value of tCardResPortNetEgrQGrpInstAlloc represents the total number of port network egress queue-group instances across all ports on this card that are currently provisioned.
portNetEgrQGrpInstTotal [Port Net Egr QGrp Inst Total] (tCardResPortNetEgrQGrpInstTotal)	long	The value of tCardResPortNetEgrQGrpInstTotal represents the total number of port network egress queue-group instances across all ports on this card that are allowed to be provisioned. When the value of tCardResPortNetEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this card.
qosUserSchedsAlloc [Qos User Scheds Alloc] (tCardResQosUserSchedsAlloc)	long	The value of tCardResQosUserSchedsAlloc represents the total number of QoS user virtual schedulers that are currently allocated on this card.
qosUserSchedsTotal [Qos User Scheds Total] (tCardResQosUserSchedsTotal)	long	The value of tCardResQosUserSchedsTotal represents the total amount of QoS user virtual schedulers that are supported on this card. When the value of tCardResQosUserSchedsTotal is zero, it indicates that this resource type is not supported on this card.
subSPIQosOvrAlloc [Sub SPIQos Ovr Alloc] (tCardResSubSPIQosOvrAlloc)	long	The value of tCardResSubSPIQosOvrAlloc represents the total number of QoS subscriber sla-profile instance overrides that are currently allocated on this card.
subSPIQosOvrTotal [Sub SPIQos Ovr Total] (tCardResSubSPIQosOvrTotal)	long	The value of tCardResSubSPIQosOvrTotal represents the total number of QoS subscriber sla-profile instance overrides that are supported on this card. When the value of tCardResSubSPIQosOvrTotal is zero, it indicates that this resource type is not supported on this card.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ChassisResourceStats MIB entry name: tChassisResEntry Entry description: The value of tChassisResEntry represents chassis specific system resource information. Table description (for tChassisResTable): The value of tChassisResTable represents system resource information that are specific to chassis. Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder</p>		
dynSvcNHEntryAlloc [Dyn Svc NHEntry Alloc] (tChassisResDynSvcNHEntryAlloc)	long	The value of tChassisResDynSvcNHEntryAlloc represents the total number of dynamic service next-hop entries currently in use on this chassis. The value of tChassisResDynSvcNHEntryAlloc will always equal to the sum of tChassisResIpSecNHEntryAlloc and tChassisResSubNHEntryAlloc since IPsec next-hop and subscriber next-hop resources are subsets of dynamic service next-hop entry resources.
dynSvcNHEntryTotal [Dyn Svc NHEntry Total] (tChassisResDynSvcNHEntryTotal)	long	The value of tChassisResDynSvcNHEntryTotal represents the total number of dynamic service next-hop entries supported on this chassis. When the value of tChassisResDynSvcNHEntryTotal is zero, it indicates that this resource type is not supported on this chassis.
egrQGrpTmplAlloc [Egr QGrp Tmpl Alloc] (tChassisResEgrQGrpTmplAlloc)	long	The value of tChassisResEgrQGrpTmplAlloc represents the total number of egress queue-group-templates that are currently provisioned on this chassis.
egrQGrpTmplTotal [Egr QGrp Tmpl Total] (tChassisResEgrQGrpTmplTotal)	long	The value of tChassisResEgrQGrpTmplTotal represents the total number of egress queue-group-templates that are allowed to be provisioned on this chassis. When the value of tChassisResEgrQGrpTmplTotal is zero, it indicates that this resource type is not supported on this chassis.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fPIngQGrpInstAlloc [FPIng QGrp Inst Alloc] (tChassisResFPIngQGrpInstAlloc)	long	The value of tChassisResFPIngQGrpInstAlloc represents the total number of forwarding-plane (FP) ingress queue-group instances across all the FP on this chassis including access and network instances that are allowed to be provisioned.
fPIngQGrpInstTotal [FPIng QGrp Inst Total] (tChassisResFPIngQGrpInstTotal)	long	The value of tChassisResFPIngQGrpInstTotal represents the total number of forwarding-plane (FP) ingress queue-group instances across all the FP on this chassis including access and network instances that are allowed to be provisioned. When the value of tChassisResFPIngQGrpInstTotal is zero, it indicates that this resource type is not supported on this chassis.
ingQGrpTmplAlloc [Ing QGrp Tmpl Alloc] (tChassisResIngQGrpTmplAlloc)	long	The value of tChassisResIngQGrpTmplAlloc represents the total number of ingress queue-group-templates that are currently provisioned on this chassis.
ingQGrpTmplTotal [Ing QGrp Tmpl Total] (tChassisResIngQGrpTmplTotal)	long	The value of tChassisResIngQGrpTmplTotal represents the total number of ingress queue-group-templates that are allowed to be provisioned on this chassis. When the value of tChassisResIngQGrpTmplTotal is zero, it indicates that this resource type is not supported on this chassis.
ipSecNHEntryAlloc [Ip Sec NHEntry Alloc] (tChassisResIpSecNHEntryAlloc)	long	The value of tChassisResIpSecNHEntryAlloc represents the total number of IPsec next-hop entries currently in use on this chassis. The value of tChassisResIpSecNHEntryAlloc will always be less than or equal to tChassisResDynSvcNHEntryAlloc since IPsec next-hop entry resources are a subset of dynamic service next-hop entry resources.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipSecNHEntryTotal [Ip Sec NHEntry Total] (tChassisResIpSecNHEntryTotal)	long	The value of tChassisResIpSecNHEntryTotal represents the total number of IPsec next-hop entries supported on this chassis. When the value of tChassisResIpSecNHEntryTotal is zero, it indicates that this resource type is not supported on this chassis. The value of tChassisResIpSecNHEntryTotal will always be less than or equal to tChassisResDynSvcNHEntryTotal since IPsec next-hop entry resources are a subset of dynamic service next-hop entry resources.
portEgrQGrpInstAlloc [Port Egr QGrp Inst Alloc] (tChassisResPortEgrQGrpInstAlloc)	long	The value of tChassisResPortEgrQGrpInstAlloc represents the total number of port egress queue-group instances across all the ports on this chassis including access and network instances that are currently provisioned.
portEgrQGrpInstTotal [Port Egr QGrp Inst Total] (tChassisResPortEgrQGrpInstTotal)	long	The value of tChassisResPortEgrQGrpInstTotal represents the total number of port egress queue-group instances across all the ports on this chassis including access and network instances that are allowed to be provisioned. When the value of tChassisResPortEgrQGrpInstTotal is zero, it indicates that this resource type is not supported on this chassis.
portEgrVPortAlloc [Port Egr VPort Alloc] (tChassisResPortEgrVPortAlloc)	long	The value of tChassisResPortEgrVPortAlloc represents the total number of port virtual ports across all the ports on this chassis that are currently provisioned.
portEgrVPortTotal [Port Egr VPort Total] (tChassisResPortEgrVPortTotal)	long	The value of tChassisResPortEgrVPortTotal represents the total number of egress virtual ports across all the ports on this chassis that are allowed to be provisioned. When the value of tChassisResPortEgrVPortTotal is zero, it indicates that this resource type is not supported on this chassis.
sapEgrQosPolAlloc [Sap Egr Qos Pol Alloc] (tChassisResSapEgrQosPolAlloc)	long	The value of tChassisResSapEgrQosPolAlloc represents the total number of sap-egress QoS policies that are currently provisioned on this chassis.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sapEgrQosPolTotal [Sap Egr Qos Pol Total] (tChassisResSapEgrQosPolTotal)	long	The value of tChassisResSapEgrQosPolTotal represents the total number of sap-egress QoS policies that are allowed to be provisioned on this chassis. When the value of tChassisResSapEgrQosPolTotal is zero, it indicates that this resource type is not supported on this chassis.
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tChassisResSapIngQosPolAlloc)	long	The value of tChassisResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently provisioned on this chassis.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tChassisResSapIngQosPolTotal)	long	The value of tChassisResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be provisioned on this chassis. When the value of tChassisResSapIngQosPolTotal is zero, it indicates that this resource type is not supported on this chassis.
subNHEntryAlloc [Sub NHEntry Alloc] (tChassisResSubNHEntryAlloc)	long	The value of tChassisResSubNHEntryAlloc represents the total number of subscriber next-hop entries currently in use on this chassis. The value of tChassisResSubNHEntryAlloc will always be less than or equal to tChassisResDynSvcNHEntry-Alloc since subscriber next-hop entry resources are a subset of dynamic service next hop entry resources.
subNHEntryTotal [Sub NHEntry Total] (tChassisResSubNHEntryTotal)	long	The value of tChassisResSubNHEntryTotal represents the total number of subscriber next-hop entries supported on this chassis. When the value of tChassisResSubNHEntryTotal is zero, it indicates that this resource type is not supported on this chassis. The value of tChassisResSubNHEntryTotal will always be less than or equal to tChassisResDynSvcNHEntry-Total since subscriber next-hop entry resources are a subset of dynamic service next-hop entry resources.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpuUtilizationStats</p> <p>MIB entry name: tmnxCardCpuResMonitorEntry</p> <p>Entry description: The tmnxCardCpuResMonitorEntry contains the card level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxCardCpuResMonitorTable): The tmnxCardCpuResMonitorTable details the specified current card's CPU resources. The information described in this table is volatile and dependent on the current environmental conditions, and specified sample-time. Information is only displayed for online cards.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.CardSlot</p>		
busyCoreUtil [Busy Core Util] (tmnxCardCpuResMonBusyCoreUtil)	double	The value of tmnxCardCpuResMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
busyGroupName [Busy Group Name] (tmnxCardCpuResMonBusyGroupName)	String	The value of tmnxCardCpuResMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxCardCpuResMonBusyGroupUtil.
busyGroupUtil [Busy Group Util] (tmnxCardCpuResMonBusyGroupUtil)	double	The value of tmnxCardCpuResMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxCardCpuResMonBusyGroupName.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cardSlotId [Card Slot Id] (tmnxCardResourceSlotNum)	long	The value of tmnxCardResourceSlotNum specifies the slot number of the card to which the resource information is monitored.
cpuldle [Cpu Idle] (tmnxCardCpuResMonCpuldle)	double	The value of tmnxCardCpuResMonCpuldle indicates the overall percentage of CPU idleness over the specified sample-time.
samplingTime [Sampling Time] (tmnxCardCpuResSampleTime)	int	The value of tmnxCardCpuResSampleTime specifies the sample-time used to calculate the utilization results for the row.
<p>DDMStats</p> <p>MIB entry name: tmnxDigitalDiagMonitorEntry</p> <p>Entry description: Each row represents a particular SFF that supports Digital Diagnostic Monitoring. Entries are created and deleted internally by the system.</p> <p>Table description (for tmnxDigitalDiagMonitorTable): The tmnxDigitalDiagMonitorTable has an entry for each SFF in the system that supports Digital Diagnostic Monitoring (DDM). The table is indexed by TmnxPortID. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable SFF components.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.DigitalDiagnosticMonitoring</p>		
aux1 [Aux 1] (tmnxDDMAux1)	float	The value of tmnxDDMAux1 indicates the Manufacturer specific Auxiliary 1 information of the XFP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
aux1Type [Aux 1 Type] (tmnxDDMAux1Type)	int	The value of tmnxDDMAux1Type indicates the measurement type of the Manufacturer specific Auxiliary 1 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.
aux2 [Aux 2] (tmnxDDMAux2)	float	The value of tmnxDDMAux2 indicates the Manufacturer specific Auxiliary 2 information of the SFF.
aux2Type [Aux 2 Type] (tmnxDDMAux2Type)	int	The value of tmnxDDMAux2Type indicates the measurement type of the Manufacturer specific Auxiliary 2 information of the XFP: none (0) - not specified. adp-bias-voltage (1) - LSB is 10mV. reserved-2 (2) - reserved for future use. tec-current (3) - LSB is 100uA. laser-temp (4) - degrees Celsius(C). laser-wavelength (5) - LSB is 0.05 nm. voltage-50 (6) - 5.0 supply voltage, LSB=100uV. voltage-33 (7) - 3.3 supply voltage, LSB=100uV. voltage-18 (8) - 1.8 supply voltage, LSB=100uV, voltage-52 (9) - -5.2 supply voltage, LSB=100uV. current-50 (10) - 5.0V supply current, LSB=100uA. reserved-11 (11) - reserved for future use. reserved-12 (12) - reserved for future use. current-33 (13) - 3.3V supply current, LSB=100uA. current-18 (14) - 1.8V supply current, LSB=100uA. current-52 (15) - -5.2V supply current, LSB=100uA.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxOpticalPower [Rx Optical Power] (tmnxDDMRxOpticalPower)	float	The value of tmnxDDMRxOpticalPower indicates the current Received Optical Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalRxPower4, tmnxDDMExtCalRxPower3, tmnxDDMExtCalRxPower2, tmnxDDMExtCalRxPower1 and tmnxDDMExtCalRxPower0 affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMRxOpticalPowerType)	int	The value of tmnxDDMRxOpticalPowerType indicates whether the tmnxDDMRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).
supplyVoltage [Supply Voltage] (tmnxDDMSupplyVoltage)	float	The value of tmnxDDMSupplyVoltage indicates the current supply voltage of the SFF. For 100G MSA Transponder, the supply voltage is in millivolts (mV). For all other types the voltage is in deci-millivolts (1/10th of a millivolt or 100 microvolt units). If the SFF is externally calibrated, the objects tmnxDDMExtCalVoltageSlope and tmnxDDMExtCalVoltageOffset affect the voltage calculation. The formula for translating between the value of tmnxDDMSupplyVoltage and Voltage is: Internally Calibrated only: tmnxDDMSupplyVoltage * conversion_factor Externally Calibrated: (tmnxDDMSupplyVoltage * (tmnxDDMExtCalVoltageSlope / 256) + tmnxDDMExtCalVoltageOffset) * conversion_factor where conversion_factor is 1/1000 for 100G MSA transponders and 1/10000 for all the others. For example (internally calibrated SFF): 1. For 100G MSA transponders, the SNMP value 32851 is 32.851 Volts (V). 2. For all others, the SNMP value 32851 is 3.2851 Volts (V).

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxDDMTemperature)	float	The value of tmnxDDMTemperature indicates the current temperature of the SFF in 1/256th degrees Celsius. If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the temperature calculation. The formula for translating between the value of tmnxDDMTemperature and degrees Celsius is: Internally Calibrated only: $\text{tmnxDDMTemperature} / 256$ Externally Calibrated: $(\text{tmnxDDMTemperature} * (\text{tmnxDDMExtCalTemperatureSlope} / 256) + \text{tmnxDDMExtCalTemperatureOffset}) / 256$ For example (internally calibrated SFF): The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMTxBiasCurrent)	float	The value of tmnxDDMTxBiasCurrent indicates the current Transmit Bias Current of the SFF in 1/500 milliamperes (mA). If the SFF is externally calibrated, the objects tmnxDDMExtCalTxLaserBiasSlope and tmnxDDMExtCalTxLaserBiasOffset affect the ampere calculation. The formula for translating between the value of tmnxDDMTxBiasCurrent and amperes is: Internally Calibrated only: $\text{tmnxDDMTxBiasCurrent} / 500$ Externally Calibrated: $(\text{tmnxDDMTxBiasCurrent} * (\text{tmnxDDMExtCalTxLaserBiasSlope} / 256) + \text{tmnxDDMExtCalTxLaserBiasOffset}) / 500$ For example (internally calibrated SFF): The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMTxOutputPower)	float	The value of tmnxDDMTxOutputPower indicates the current Output Power of the SFF in one tenths of a microwatt (uW). If the SFF is externally calibrated, the objects tmnxDDMExtCalTemperatureSlope and tmnxDDMExtCalTemperatureOffset affect the output power calculation. For example (internally calibrated SFF): Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm

<p>EgrVPortAggStats</p> <p>MIB entry name: tPortEgrVPortAggStatsEntry</p> <p>Entry description: Each row in tPortEgrVPortAggStatsEntry represents a particular virtual port at the port egress level specified by tPortEgrVPortName and tPortEgrVPStLvl.</p> <p>Table description (for tPortEgrVPortAggStatsTable): The tPortEgrVPortAggStatsTable contains the statistics of each virtual port at the port egress level configured on this system. Most objects are represented in 64 bit. 32-bit version of the objects are available in tPortEgrVPortAggStatsHLTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.EgrSchVirtualPort</p>		
egrVportAggStatsCIRLevelDpdOct [Egr Vport Agg Stats CIRLevel Dpd Oct] (tPortEgrVPStLvlDpdOct)	java. math. BigInteger	The value of tPortEgrVPStLvlDpdOct indicates the number of octets dropped by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLevelDpdPkt [Egr Vport Agg Stats CIRLevel Dpd Pkt] (tPortEgrVPStLvlDpdPkt)	java. math. BigInteger	The value of tPortEgrVPStLvlDpdPkt indicates the number of packets dropped by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLevelFwdOct [Egr Vport Agg Stats CIRLevel Fwd Oct] (tPortEgrVPStLvlFwdOct)	java. math. BigInteger	The value of tPortEgrVPStLvlFwdOct indicates the number of octets forwarded by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLevelFwdPkt [Egr Vport Agg Stats CIRLevel Fwd Pkt] (tPortEgrVPStLvlFwdPkt)	java. math. BigInteger	The value of tPortEgrVPStLvlFwdPkt indicates the number of packets forwarded by the virtual port for the priority level specified by tPortEgrVPStLvl.
egrVportAggStatsCIRLevel [Egr Vport Agg Stats CIRLevel] (tPortEgrVPStLvl)	int	The value of tPortEgrVPStLvl indicates the priority level for the port scheduler to which a subscriber host queue can be port-parented. When the value of tPortEgrVPStLvl is specified as '0xffffffff H', snmp GET on this table returns aggregate statistics.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrVportAggStatsLastClearTime [Egr Vport Agg Stats Last Clear Time] (tPortEgrVPStLstClrdTime)	long	The value of tPortEgrVPStLstClrdTime indicates the sysUpTime when the counters in this table were last cleared.
<p>EgrVPortMonitorThresholdStats</p> <p>MIB entry name: tPortEgrVPortMonThrEntry</p> <p>Entry description: The value of tPortEgrVPortMonThrEntry represents threshold monitoring information for port scheduler policy specified by tPortEgrVPortQosSchedPolicy for each access egress vport when the value of tPortEgrVPortMonitorPortSched is set to 'enabled (1)'.</p> <p>Table description (for tPortEgrVPortMonThrTable): The value of tPortEgrVPortMonThrTable contains port scheduler policy's threshold monitoring information for each access egress vport when the value of tPortEgrVPortMonitorPortSched is set to 'enabled (1)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.EgrSchVirtualPort</p>		
egrVPortMonThrEndTime [Egr VPort Mon Thr End Time] (tPortEgrVPortMonThrEndTime)	long	The value of tPortEgrVPortMonThrEndTime represents the end time for threshold monitoring.
egrVPortMonThrGrp1ExceedCnt [Egr VPort Mon Thr Grp 1 Exceed Cnt] (tPortEgrVPortMonThrGrp1ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp1ExceedCnt represents the exceed count for group 1 specified by tPortEgrVPortMonThrGrp1Name.
egrVPortMonThrGrp1Name [Egr VPort Mon Thr Grp 1 Name] (tPortEgrVPortMonThrGrp1Name)	String	The value of tPortEgrVPortMonThrGrp1Name represents port scheduler policy's group name.
egrVPortMonThrGrp2ExceedCnt [Egr VPort Mon Thr Grp 2 Exceed Cnt] (tPortEgrVPortMonThrGrp2ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp2ExceedCnt represents the exceed count for group 2 specified by tPortEgrVPortMonThrGrp2Name.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrVPortMonThrGrp2Name [Egr VPort Mon Thr Grp 2 Name] (tPortEgrVPortMonThrGrp2Name)	String	The value of tPortEgrVPortMonThrGrp2Name represents port scheduler policy's group name.
egrVPortMonThrGrp3ExceedCnt [Egr VPort Mon Thr Grp 3 Exceed Cnt] (tPortEgrVPortMonThrGrp3ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp3ExceedCnt represents the exceed count for group 3 specified by tPortEgrVPortMonThrGrp3Name.
egrVPortMonThrGrp3Name [Egr VPort Mon Thr Grp 3 Name] (tPortEgrVPortMonThrGrp3Name)	String	The value of tPortEgrVPortMonThrGrp3Name represents port scheduler policy's group name.
egrVPortMonThrGrp4ExceedCnt [Egr VPort Mon Thr Grp 4 Exceed Cnt] (tPortEgrVPortMonThrGrp4ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp4ExceedCnt represents the exceed count for group 4 specified by tPortEgrVPortMonThrGrp4Name.
egrVPortMonThrGrp4Name [Egr VPort Mon Thr Grp 4 Name] (tPortEgrVPortMonThrGrp4Name)	String	The value of tPortEgrVPortMonThrGrp4Name represents port scheduler policy's group name.
egrVPortMonThrGrp5ExceedCnt [Egr VPort Mon Thr Grp 5 Exceed Cnt] (tPortEgrVPortMonThrGrp5ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp5ExceedCnt represents the exceed count for group 5 specified by tPortEgrVPortMonThrGrp5Name.
egrVPortMonThrGrp5Name [Egr VPort Mon Thr Grp 5 Name] (tPortEgrVPortMonThrGrp5Name)	String	The value of tPortEgrVPortMonThrGrp5Name represents port scheduler policy's group name.
egrVPortMonThrGrp6ExceedCnt [Egr VPort Mon Thr Grp 6 Exceed Cnt] (tPortEgrVPortMonThrGrp6ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp6ExceedCnt represents the exceed count for group 6 specified by tPortEgrVPortMonThrGrp6Name.
egrVPortMonThrGrp6Name [Egr VPort Mon Thr Grp 6 Name] (tPortEgrVPortMonThrGrp6Name)	String	The value of tPortEgrVPortMonThrGrp6Name represents port scheduler policy's group name.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrVPortMonThrGrp7ExceedCnt [Egr VPort Mon Thr Grp 7 Exceed Cnt] (tPortEgrVPortMonThrGrp7ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp7ExceedCnt represents the exceed count for group 7 specified by tPortEgrVPortMonThrGrp7Name.
egrVPortMonThrGrp7Name [Egr VPort Mon Thr Grp 7 Name] (tPortEgrVPortMonThrGrp7Name)	String	The value of tPortEgrVPortMonThrGrp7Name represents port scheduler policy's group name.
egrVPortMonThrGrp8ExceedCnt [Egr VPort Mon Thr Grp 8 Exceed Cnt] (tPortEgrVPortMonThrGrp8ExceedCnt)	long	The value of tPortEgrVPortMonThrGrp8ExceedCnt represents the exceed count for group 8 specified by tPortEgrVPortMonThrGrp8Name.
egrVPortMonThrGrp8Name [Egr VPort Mon Thr Grp 8 Name] (tPortEgrVPortMonThrGrp8Name)	String	The value of tPortEgrVPortMonThrGrp8Name represents port scheduler policy's group name.
egrVPortMonThrLvl1ExceedCnt [Egr VPort Mon Thr Lvl 1 Exceed Cnt] (tPortEgrVPortMonThrLvl1ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl1ExceedCnt represents the exceed count for priority level 1.
egrVPortMonThrLvl2ExceedCnt [Egr VPort Mon Thr Lvl 2 Exceed Cnt] (tPortEgrVPortMonThrLvl2ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl2ExceedCnt represents the exceed count for priority level 2.
egrVPortMonThrLvl3ExceedCnt [Egr VPort Mon Thr Lvl 3 Exceed Cnt] (tPortEgrVPortMonThrLvl3ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl3ExceedCnt represents the exceed count for priority level 3.
egrVPortMonThrLvl4ExceedCnt [Egr VPort Mon Thr Lvl 4 Exceed Cnt] (tPortEgrVPortMonThrLvl4ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl4ExceedCnt represents the exceed count for priority level 4.
egrVPortMonThrLvl5ExceedCnt [Egr VPort Mon Thr Lvl 5 Exceed Cnt] (tPortEgrVPortMonThrLvl5ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl5ExceedCnt represents the exceed count for priority level 5.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrVPortMonThrLvl6ExceedCnt [Egr VPort Mon Thr Lvl 6 Exceed Cnt] (tPortEgrVPortMonThrLvl6ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl6ExceedCnt represents the exceed count for priority level 6.
egrVPortMonThrLvl7ExceedCnt [Egr VPort Mon Thr Lvl 7 Exceed Cnt] (tPortEgrVPortMonThrLvl7ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl7ExceedCnt represents the exceed count for priority level 7.
egrVPortMonThrLvl8ExceedCnt [Egr VPort Mon Thr Lvl 8 Exceed Cnt] (tPortEgrVPortMonThrLvl8ExceedCnt)	long	The value of tPortEgrVPortMonThrLvl8ExceedCnt represents the exceed count for priority level 8.
egrVPortMonThrPortExceedCnt [Egr VPort Mon Thr Port Exceed Cnt] (tPortEgrVPortMonThrPortExceedCnt)	long	The value of tPortEgrVPortMonThrPortExceedCnt represents the exceed count for egress port scheduler.
egrVPortMonThrStartTime [Egr VPort Mon Thr Start Time] (tPortEgrVPortMonThrStartTime)	long	The value of tPortEgrVPortMonThrStartTime represents the start time for threshold monitoring.
egrVPortMonThrTotalSamples [Egr VPort Mon Thr Total Samples] (tPortEgrVPortMonThrTotalSamples)	long	The value of tPortEgrVPortMonThrTotalSamples represents total samples collected during the threshold monitoring interval.
FPAcclngQGrpPolicerStats MIB entry name: tmnxFPAcclngQGrpPStatEntry Entry description: The value of tmnxFPAcclngQGrpPStatEntry defines an entry in the tmnxFPAcclngQGrpPStatTable. It represents statistics about a specific QoS ingress queue group policer. Table description (for tmnxFPAcclngQGrpPStatTable): The tmnxFPAcclngQGrpPStatTable contains forwarding-plane ingress QoS queue group policer statistics on access side. Supports realtime plotting Does not support scheduled collection Monitored class: equipment.FPAcclngQGrpEntry		

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAccIngQGrpPStatMode [Fp Acc Ing QGrp PStat Mode] (tmnxFPAccIngQGrpPStatMode)	int	The value of tmnxFPAccIngQGrpPStatMode indicates the stat mode used by this policer.
fpAccIngQGrpPStatPolicerId [Fp Acc Ing QGrp PStat Policer Id] (tmnxFPAccIngQGrpPStatPolicerId)	long	The value of tmnxFPAccIngQGrpPStatPolicerId specifies the index of the ingress QoS policer of this forwarding-plane queue group on access.
fpAccIngQgPStDrpHPrioOcts [Fp Acc Ing Qg PSt Drp HPrio Octs] (tmnxFPAccIngQgPStDrpHPrioOcts)	java. math. BigInteger	The value of tmnxFPAccIngQgPStDrpHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAccIngQgPStDrpHPrioOctsH [Fp Acc Ing Qg PSt Drp HPrio Octs H] (tmnxFPAccIngQgPStDrpHPrioOctsH)	long	The value of tmnxFPAccIngQgPStDrpHPrioOctsH indicates the upper 32 bits of tmnxFPAccIngQgPStDrpHPrioOcts.
fpAccIngQgPStDrpHPrioOctsL [Fp Acc Ing Qg PSt Drp HPrio Octs L] (tmnxFPAccIngQgPStDrpHPrioOctsL)	long	The value of tmnxFPAccIngQgPStDrpHPrioOctsL indicates the lower 32 bits of tmnxFPAccIngQgPStDrpHPrioOcts.
fpAccIngQgPStDrpHPrioPkts [Fp Acc Ing Qg PSt Drp HPrio Pkts] (tmnxFPAccIngQgPStDrpHPrioPkts)	java. math. BigInteger	The value of tmnxFPAccIngQgPStDrpHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAccIngQgPStDrpHPrioPktsH [Fp Acc Ing Qg PSt Drp HPrio Pkts H] (tmnxFPAccIngQgPStDrpHPrioPktsH)	long	The value of tmnxFPAccIngQgPStDrpHPrioPktsH indicates the upper 32 bits of tmnxFPAccIngQgPStDrpHPrioPkts.
fpAccIngQgPStDrpHPrioPktsL [Fp Acc Ing Qg PSt Drp HPrio Pkts L] (tmnxFPAccIngQgPStDrpHPrioPktsL)	long	The value of tmnxFPAccIngQgPStDrpHPrioPktsL indicates the lower 32 bits of tmnxFPAccIngQgPStDrpHPrioPkts.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpAcclngQgPStDrpLPrioOcts [Fp Acc Ing Qg PSt Drp LPrio Octs] (tmnxFPAcclngQgPStDrpLPrioOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStDrpLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAcclngQgPStDrpLPrioOctsH [Fp Acc Ing Qg PSt Drp LPrio Octs H] (tmnxFPAcclngQgPStDrpLPrioOctsH)	long	The value of tmnxFPAcclngQgPStDrpLPrioOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStDrpLPrioOcts.
fpAcclngQgPStDrpLPrioOctsL [Fp Acc Ing Qg PSt Drp LPrio Octs L] (tmnxFPAcclngQgPStDrpLPrioOctsL)	long	The value of tmnxFPAcclngQgPStDrpLPrioOctsL indicates the lower 32 bits of tmnxFPAcclngQgPStDrpLPrioOcts.
fpAcclngQgPStDrpLPrioPkts [Fp Acc Ing Qg PSt Drp LPrio Pkts] (tmnxFPAcclngQgPStDrpLPrioPkts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStDrpLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpAcclngQgPStDrpLPrioPktsH [Fp Acc Ing Qg PSt Drp LPrio Pkts H] (tmnxFPAcclngQgPStDrpLPrioPktsH)	long	The value of tmnxFPAcclngQgPStDrpLPrioPktsH indicates the upper 32 bits of tmnxFPAcclngQgPStDrpLPrioPkts.
fpAcclngQgPStDrpLPrioPktsL [Fp Acc Ing Qg PSt Drp LPrio Pkts L] (tmnxFPAcclngQgPStDrpLPrioPktsL)	long	The value of tmnxFPAcclngQgPStDrpLPrioPktsL indicates the lower 32 bits of tmnxFPAcclngQgPStDrpLPrioPkts.
fpAcclngQgPStFwdInProfOcts [Fp Acc Ing Qg PSt Fwd In Prof Octs] (tmnxFPAcclngQgPStFwdInProfOcts)	java. math. BigInteger	The value of tmnxFPAcclngQgPStFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Pchip.
fpAcclngQgPStFwdInProfOctsH [Fp Acc Ing Qg PSt Fwd In Prof Octs H] (tmnxFPAcclngQgPStFwdInProfOctsH)	long	The value of tmnxFPAcclngQgPStFwdInProfOctsH indicates the upper 32 bits of tmnxFPAcclngQgPStFwdInProfOcts.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQGrpPStatPolicerId [Fp Net Ing QGrp PStat Policer Id] (tmnxFPNetIngQGrpPStatPolicerId)	long	The value of tmnxFPNetIngQGrpPStatPolicerId specifies the index of the ingress QoS policer of this forwarding-plane queue group on network.
fpNetIngQgPStDrpHPrioOcts [Fp Net Ing Qg PSt Drp HPrio Octs] (tmnxFPNetIngQgPStDrpHPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpHPrioOctsH [Fp Net Ing Qg PSt Drp HPrio Octs H] (tmnxFPNetIngQgPStDrpHPrioOctsH)	long	The value of tmnxFPNetIngQgPStDrpHPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpHPrioOcts.
fpNetIngQgPStDrpHPrioOctsL [Fp Net Ing Qg PSt Drp HPrio Octs L] (tmnxFPNetIngQgPStDrpHPrioOctsL)	long	The value of tmnxFPNetIngQgPStDrpHPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpHPrioOcts.
fpNetIngQgPStDrpHPrioPkts [Fp Net Ing Qg PSt Drp HPrio Pkts] (tmnxFPNetIngQgPStDrpHPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpHPrioPktsH [Fp Net Ing Qg PSt Drp HPrio Pkts H] (tmnxFPNetIngQgPStDrpHPrioPktsH)	long	The value of tmnxFPNetIngQgPStDrpHPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpHPrioPkts.
fpNetIngQgPStDrpHPrioPktsL [Fp Net Ing Qg PSt Drp HPrio Pkts L] (tmnxFPNetIngQgPStDrpHPrioPktsL)	long	The value of tmnxFPNetIngQgPStDrpHPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpHPrioPkts.
fpNetIngQgPStDrpLPrioOcts [Fp Net Ing Qg PSt Drp LPrio Octs] (tmnxFPNetIngQgPStDrpLPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStDrpLPrioOctsH [Fp Net Ing Qg PSt Drp LPrio Octs H] (tmnxFPNetIngQgPStDrpLPrioOctsH)	long	The value of tmnxFPNetIngQgPStDrpLPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpLPrioOcts.
fpNetIngQgPStDrpLPrioOctsL [Fp Net Ing Qg PSt Drp LPrio Octs L] (tmnxFPNetIngQgPStDrpLPrioOctsL)	long	The value of tmnxFPNetIngQgPStDrpLPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpLPrioOcts.
fpNetIngQgPStDrpLPrioPkts [Fp Net Ing Qg PSt Drp LPrio Pkts] (tmnxFPNetIngQgPStDrpLPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStDrpLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, dropped by the Pchip due to: MBS exceeded, buffer pool limit exceeded, etc.
fpNetIngQgPStDrpLPrioPktsH [Fp Net Ing Qg PSt Drp LPrio Pkts H] (tmnxFPNetIngQgPStDrpLPrioPktsH)	long	The value of tmnxFPNetIngQgPStDrpLPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStDrpLPrioPkts.
fpNetIngQgPStDrpLPrioPktsL [Fp Net Ing Qg PSt Drp LPrio Pkts L] (tmnxFPNetIngQgPStDrpLPrioPktsL)	long	The value of tmnxFPNetIngQgPStDrpLPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStDrpLPrioPkts.
fpNetIngQgPStFwdInProfOcts [Fp Net Ing Qg PSt Fwd In Prof Octs] (tmnxFPNetIngQgPStFwdInProfOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdInProfOctsH [Fp Net Ing Qg PSt Fwd In Prof Octs H] (tmnxFPNetIngQgPStFwdInProfOctsH)	long	The value of tmnxFPNetIngQgPStFwdInProfOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdInProfOcts.
fpNetIngQgPStFwdInProfOctsL [Fp Net Ing Qg PSt Fwd In Prof Octs L] (tmnxFPNetIngQgPStFwdInProfOctsL)	long	The value of tmnxFPNetIngQgPStFwdInProfOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdInProfOcts.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStFwdInProfPkts [Fp Net Ing Qg PSt Fwd In Prof Pkts] (tmnxFPNetIngQgPStFwdInProfPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdInProfPktsH [Fp Net Ing Qg PSt Fwd In Prof Pkts H] (tmnxFPNetIngQgPStFwdInProfPktsH)	long	The value of tmnxFPNetIngQgPStFwdInProfPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdInProfPkts.
fpNetIngQgPStFwdInProfPktsL [Fp Net Ing Qg PSt Fwd In Prof Pkts L] (tmnxFPNetIngQgPStFwdInProfPktsL)	long	The value of tmnxFPNetIngQgPStFwdInProfPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdInProfPkts.
fpNetIngQgPStFwdOutProfOcts [Fp Net Ing Qg PSt Fwd Out Prof Octs] (tmnxFPNetIngQgPStFwdOutProfOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdOutProfOctsH [Fp Net Ing Qg PSt Fwd Out Prof Octs H] (tmnxFPNetIngQgPStFwdOutProfOctsH)	long	The value of tmnxFPNetIngQgPStFwdOutProfOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdOutProfOcts.
fpNetIngQgPStFwdOutProfOctsL [Fp Net Ing Qg PSt Fwd Out Prof Octs L] (tmnxFPNetIngQgPStFwdOutProfOctsL)	long	The value of tmnxFPNetIngQgPStFwdOutProfOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdOutProfOcts.
fpNetIngQgPStFwdOutProfPkts [Fp Net Ing Qg PSt Fwd Out Prof Pkts] (tmnxFPNetIngQgPStFwdOutProfPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Pchip.
fpNetIngQgPStFwdOutProfPktsH [Fp Net Ing Qg PSt Fwd Out Prof Pkts H] (tmnxFPNetIngQgPStFwdOutProfPktsH)	long	The value of tmnxFPNetIngQgPStFwdOutProfPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStFwdOutProfPkts.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStFwdOutProfPktsL [Fp Net Ing Qg PSt Fwd Out Prof Pkts L] (tmnxFPNetIngQgPStFwdOutProfPktsL)	long	The value of tmnxFPNetIngQgPStFwdOutProfPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStFwdOutProfPkts.
fpNetIngQgPStOffHPrioOcts [Fp Net Ing Qg PSt Off HPrio Octs] (tmnxFPNetIngQgPStOffHPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffHPrioOcts indicates the number of high priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffHPrioOctsH [Fp Net Ing Qg PSt Off HPrio Octs H] (tmnxFPNetIngQgPStOffHPrioOctsH)	long	The value of tmnxFPNetIngQgPStOffHPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffHPrioOcts.
fpNetIngQgPStOffHPrioOctsL [Fp Net Ing Qg PSt Off HPrio Octs L] (tmnxFPNetIngQgPStOffHPrioOctsL)	long	The value of tmnxFPNetIngQgPStOffHPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffHPrioOcts.
fpNetIngQgPStOffHPrioPkts [Fp Net Ing Qg PSt Off HPrio Pkts] (tmnxFPNetIngQgPStOffHPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffHPrioPkts indicates the number of high priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffHPrioPktsH [Fp Net Ing Qg PSt Off HPrio Pkts H] (tmnxFPNetIngQgPStOffHPrioPktsH)	long	The value of tmnxFPNetIngQgPStOffHPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffHPrioPkts.
fpNetIngQgPStOffHPrioPktsL [Fp Net Ing Qg PSt Off HPrio Pkts L] (tmnxFPNetIngQgPStOffHPrioPktsL)	long	The value of tmnxFPNetIngQgPStOffHPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffHPrioPkts.
fpNetIngQgPStOffLPrioOcts [Fp Net Ing Qg PSt Off LPrio Octs] (tmnxFPNetIngQgPStOffLPrioOcts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffLPrioOcts indicates the number of low priority octets, as determined by the ingress queue group policer, offered by the Pchip to the Pchip.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStOffLPrioOctsH [Fp Net Ing Qg PSt Off LPrio Octs H] (tmnxFPNetIngQgPStOffLPrioOctsH)	long	The value of tmnxFPNetIngQgPStOffLPrioOctsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffLPrioOcts.
fpNetIngQgPStOffLPrioOctsL [Fp Net Ing Qg PSt Off LPrio Octs L] (tmnxFPNetIngQgPStOffLPrioOctsL)	long	The value of tmnxFPNetIngQgPStOffLPrioOctsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffLPrioOcts.
fpNetIngQgPStOffLPrioPkts [Fp Net Ing Qg PSt Off LPrio Pkts] (tmnxFPNetIngQgPStOffLPrioPkts)	java. math. BigInteger	The value of tmnxFPNetIngQgPStOffLPrioPkts indicates the number of low priority packets, as determined by the ingress queue group policer, offered by the Pchip to the Qchip.
fpNetIngQgPStOffLPrioPktsH [Fp Net Ing Qg PSt Off LPrio Pkts H] (tmnxFPNetIngQgPStOffLPrioPktsH)	long	The value of tmnxFPNetIngQgPStOffLPrioPktsH indicates the upper 32 bits of tmnxFPNetIngQgPStOffLPrioPkts.
fpNetIngQgPStOffLPrioPktsL [Fp Net Ing Qg PSt Off LPrio Pkts L] (tmnxFPNetIngQgPStOffLPrioPktsL)	long	The value of tmnxFPNetIngQgPStOffLPrioPktsL indicates the lower 32 bits of tmnxFPNetIngQgPStOffLPrioPkts.
fpNetIngQgPStUncolOctsOff [Fp Net Ing Qg PSt Uncol Octs Off] (tmnxFPNetIngQgPStUncolOctsOff)	java. math. BigInteger	The value of tmnxFPNetIngQgPStUncolOctsOff indicates the number of uncolored octets offered to the ingress Pchip.
fpNetIngQgPStUncolOctsOffH [Fp Net Ing Qg PSt Uncol Octs Off H] (tmnxFPNetIngQgPStUncolOctsOffH)	long	The value of tmnxFPNetIngQgPStUncolOctsOffH indicates the higher 32 bits of the value of tmnxFPNetIngQgPStUncolOctsOff.
fpNetIngQgPStUncolOctsOffL [Fp Net Ing Qg PSt Uncol Octs Off L] (tmnxFPNetIngQgPStUncolOctsOffL)	long	The value of tmnxFPNetIngQgPStUncolOctsOffL indicates the lower 32 bits of tmnxFPNetIngQgPStUncolOctsOff.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fpNetIngQgPStUncolPktsOff [Fp Net Ing Qg PSt Uncol Pkts Off] (tmnxFPNetIngQgPStUncolPktsOff)	java. math. BigInteger	The value of tmnxFPNetIngQgPStUncolPktsOff indicates the number of uncolored packets offered to the ingress Pchip.
fpNetIngQgPStUncolPktsOffH [Fp Net Ing Qg PSt Uncol Pkts Off H] (tmnxFPNetIngQgPStUncolPktsOffH)	long	The value of tmnxFPNetIngQgPStUncolPktsOffH indicates the upper 32 bits of tmnxFPNetIngQgPStUncolPktsOff.
fpNetIngQgPStUncolPktsOffL [Fp Net Ing Qg PSt Uncol Pkts Off L] (tmnxFPNetIngQgPStUncolPktsOffL)	long	The value of tmnxFPNetIngQgPStUncolPktsOffL indicates the lower 32 bits of tmnxFPNetIngQgPStUncolPktsOff.
<p>FibNextHopStats</p> <p>MIB entry name: vRtrFibStatNextHopEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatNextHopTable): The vRtrFibStatNextHopTable has an entry for each IOM in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
ipActive [Ip Active] (vRtrFibStatNextHopIPActive)	long	vRtrFibStatNextHopIPActive indicates current active IP next-hop counts for the FIB on the IOM.
ipAvailable [Ip Available] (vRtrFibStatNextHopIPAvailable)	long	vRtrFibStatNextHopIPAvailable indicates the available IP next-hop counts for the FIB on the IOM.
tunnelActive [Tunnel Active] (vRtrFibStatNextHopTunnelActive)	long	vRtrFibStatNextHopTunnelActive indicates current active Tunnel next-hop counts for the FIB on the IOM.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tunnelAvailable [Tunnel Available] (vRtrFibStatNextHopTunnelAvailable)	long	vRtrFibStatNextHopTunnelAvailable indicates the available Tunnel next-hop counts for the FIB on the IOM.
<p>FibStats</p> <p>MIB entry name: vRtrFibStatEntry</p> <p>Entry description: Each row entry represents a collection of summarized statistics for each virtual router on an IOM card in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrFibStatTable): The vRtrStatTable has an entry for IOM card configured in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.BaseCard</p>		
aggrRoutes [Aggr Routes] (vRtrFibStatAggrRoutes)	long	vRtrFibStatAggrRoutes indicates current aggregate route counts for the virtual router.
alarmCount [Alarm Count] (vRtrFibStatAlarmCount)	long	vRtrFibStatAlarmCount indicates the number of times the FIB has raised an alarm due to high FIB usage.
bgpEvpnRoutes [Bgp Evpn Routes] (vRtrFibStatBGPEvpnRoutes)	long	The value of vRtrFibStatBGPEvpnRoutes indicates the current IPv4 BGP EVPN route counts for the virtual router.
bgpRoutes [Bgp Routes] (vRtrFibStatBGPRoutes)	long	vRtrFibStatBGPRoutes indicates current BGP route counts for the virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrFibStatBGPVpnRoutes)	long	vRtrFibStatBGPVpnRoutes indicates current BGP VPN route counts for the virtual router.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currentUtilization [Current Utilization] (vRtrFibStatCurrentUtilization)	long	The value of vRtrFibStatCurrentUtilization indicates the space usage by IPv4 routes in hardware FIB in percentage.
directRoutes [Direct Routes] (vRtrFibStatDirectRoutes)	long	vRtrFibStatDirectRoutes indicates current direct route counts for the virtual router.
filteredRoutes [Filtered Routes] (vRtrFibStatFilteredRoutes)	long	The value of vRtrFibStatFilteredRoutes indicates the total number of IPv4 routes filtered due to selective download and so not installed in hardware FIB.
highUtilization [High Utilization] (vRtrFibStatHighUtilization)	boolean	vRtrFibStatHighUtilization indicates whether or not the FIB on the IOM is experiences persistent high occupancy.
hostRoutes [Host Routes] (vRtrFibStatHostRoutes)	long	vRtrFibStatHostRoutes indicates current host route counts for the virtual router.
isisRoutes [Isis Routes] (vRtrFibStatISIRoutes)	long	vRtrFibStatISIRoutes indicates current ISIS route counts for the virtual router.
lastAlarmTime [Last Alarm Time] (vRtrFibStatLastAlarmTime)	long	vRtrFibStatLastAlarmTime indicates the last time a high FIB usage alarm was raised.
managedRoutes [Managed Routes] (vRtrFibStatManagedRoutes)	long	vRtrFibStatManagedRoutes indicates current managed route counts for the virtual router.
natRoutes [Nat Routes] (vRtrFibStatNatRoutes)	long	vRtrFibStatNatRoutes indicates current NAT route counts for the virtual router.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ospfRoutes [Ospf Routes] (vRtrFibStatOSPFRoutes)	long	vRtrFibStatOSPFRoutes indicates current OSPF route counts for the virtual router.
overflows [Overflows] (vRtrFibStatOverflows)	long	vRtrFibStatOverflows indicates the number of times the FIB has run out of space due to IPv4 routes.
ripRoutes [Rip Routes] (vRtrFibStatRIPRoutes)	long	vRtrFibStatRIPRoutes indicates current RIP route counts for the virtual router.
staticRoutes [Static Routes] (vRtrFibStatStaticRoutes)	long	vRtrFibStatStaticRoutes indicates current static route counts for the virtual router.
subMgmtRoutes [Sub Mgmt Routes] (vRtrFibStatSubMgmtRoutes)	long	vRtrFibStatSubMgmtRoutes indicates current Sub-management route counts for the virtual router.
totalInstalledRoutes [Total Installed Routes] (vRtrFibStatTotalInstalledRoutes)	long	The value of vRtrFibStatTotalInstalledRoutes indicates the total number of IPv4 routes installed in hardware FIB.
v6AggrRoutes [V6 Aggr Routes] (vRtrFibStatV6AggrRoutes)	long	vRtrFibStatV6AggrRoutes indicates current aggregate route counts for the virtual router.
v6BGPRoutes [V6 BGP Routes] (vRtrFibStatV6BGPRoutes)	long	vRtrFibStatV6BGPRoutes indicates current BGP route counts for the virtual router.
v6BGPVpnRoutes [V6 BGPVpn Routes] (vRtrFibStatV6BGPVpnRoutes)	long	vRtrFibStatV6BGPVpnRoutes indicates current BGP VPN route counts for the virtual router.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6CurrentUtilization [V6 Current Utilization] (vRtrFibStatV6CurrentUtilization)	long	The value of vRtrFibStatV6CurrentUtilization indicates the space usage by IPv6 routes in hardware FIB in percentage.
v6DirectRoutes [V6 Direct Routes] (vRtrFibStatV6DirectRoutes)	long	vRtrFibStatV6DirectRoutes indicates current direct route counts for the virtual router.
v6FilteredRoutes [V6 Filtered Routes] (vRtrFibStatV6FilteredRoutes)	long	The value of vRtrFibStatV6FilteredRoutes indicates the total number of IPv6 routes filtered due to selective download and so not installed in hardware FIB.
v6HostRoutes [V6 Host Routes] (vRtrFibStatV6HostRoutes)	long	vRtrFibStatV6HostRoutes indicates current host route counts for the virtual router.
v6ISISRoutes [V6 ISISRoutes] (vRtrFibStatV6ISISRoutes)	long	vRtrFibStatV6ISISRoutes indicates current ISIS route counts for the virtual router.
v6ManagedRoutes [V6 Managed Routes] (vRtrFibStatV6ManagedRoutes)	long	vRtrFibStatV6ManagedRoutes indicates current managed route counts for the virtual router.
v6NatRoutes [V6 Nat Routes] (vRtrFibStatV6NatRoutes)	long	vRtrFibStatV6NatRoutes indicates current NAT IPv6 route counts for the virtual router.
v6OSPFRoutes [V6 OSPFRoutes] (vRtrFibStatV6OSPFRoutes)	long	vRtrFibStatV6OSPFRoutes indicates current OSPF route counts for the virtual router.
v6Overflows [V6 Overflows] (vRtrFibStatV6Overflows)	long	vRtrFibStatV6Overflows indicates the number of times the FIB has run out of space due to IPv6 routes.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
v6RIPRoutes [V6 RIPRoutes] (vRtrFibStatV6RIPRoutes)	long	vRtrFibStatV6RIPRoutes indicates current RIP route counts for the virtual router.
v6StaticRoutes [V6 Static Routes] (vRtrFibStatV6StaticRoutes)	long	vRtrFibStatV6StaticRoutes indicates current static route counts for the virtual router.
v6SubMgmtRoutes [V6 Sub Mgmt Routes] (vRtrFibStatV6SubMgmtRoutes)	long	vRtrFibStatV6SubMgmtRoutes indicates current Sub-management route counts for the virtual router.
v6TotalInstalledRoutes [V6 Total Installed Routes] (vRtrFibStatV6TotalInstalledRt)	long	The value of vRtrFibStatV6TotalInstalledRt indicates the total number of IPv6 routes installed in hardware FIB.
v6VpnLeakRoutes [V6 Vpn Leak Routes] (vRtrFibStatV6VPNLeakRoutes)	long	vRtrFibStatV6VPNLeakRoutes indicates current IPv6 VPN Leak route counts for the virtual router.
v6bgpEvpnRoutes [V6 bgp Evpn Routes] (vRtrFibStatV6BGPEvpnRoutes)	long	The value of vRtrFibStatV6BGPEvpnRoutes indicates the current IPv6 BGP EVPN route counts for the virtual router.
vpnLeakRoutes [Vpn Leak Routes] (vRtrFibStatVPNLeakRoutes)	long	vRtrFibStatVPNLeakRoutes indicates current VPN Leak route counts for the virtual router.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ForwardingPlaneResourceStats</p> <p>MIB entry name: tFPResEntry</p> <p>Entry description: The value of tFPResEntry represents forwarding plane (FP) specific system resource information.</p> <p>Table description (for tFPResTable): The value of tFPResTable represents system resource information that are specific to forwarding plane (FP) for a particular card on a given chassis.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.CardSlot • equipment.ForwardingPlane 		
dynEgrClassAlloc [Dyn Egr Class Alloc] (tFPResDynEgrClassAlloc)	long	The value of tFPResDynEgrClassAlloc represents the total number of QoS dynamic egress classification resources that are currently allocated on this FP.
dynEgrClassIUBNE [Dyn Egr Class IUBNE] (tFPResDynEgrClassIUBNE)	long	The value of tFPResDynEgrClassIUBNE represents the subset of resources which are currently in use by network egress QoS classification out of currently allocated QoS dynamic egress classification resources, tFPResDynEgrClassAlloc. A network egress QoS classification resource is consumed whenever a network QoS policy has at least one egress DSCP or prec classification rule provisioned.
dynEgrClassIUBSE [Dyn Egr Class IUBSE] (tFPResDynEgrClassIUBSE)	long	The value of tFPResDynEgrClassIUBSE represents the subset of resources which are currently in use by sap-egress QoS policies out of currently allocated QoS dynamic egress classification resources, tFPResDynEgrClassAlloc.
dynEgrClassTotal [Dyn Egr Class Total] (tFPResDynEgrClassTotal)	long	The value of tFPResDynEgrClassTotal represents the total number of QoS dynamic egress classification resources that are allowed to be in use on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynPolicerAlloc [Dyn Policer Alloc] (tFPResDynPolicerAlloc)	long	The value of tFPResDynPolicerAlloc represents the total number of dynamic policers that are currently allocated on this FP.
dynPolicerIUBE [Dyn Policer IUBE] (tFPResDynPolicerIUBE)	long	The value of tFPResDynPolicerIUBE represents the subset of resources which are currently in use by egress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerIUBI [Dyn Policer IUBI] (tFPResDynPolicerIUBI)	long	The value of tFPResDynPolicerIUBI represents the subset of resources which are currently in use by ingress policer out of currently allocated dynamic policer resources, tFPResDynPolicerAlloc.
dynPolicerStatAlloc [Dyn Policer Stat Alloc] (tFPResDynPolicerStatAlloc)	long	The value of tFPResDynPolicerStatAlloc represents the total number of dynamic policers stats that are currently allocated on this FP.
dynPolicerStatIUBE [Dyn Policer Stat IUBE] (tFPResDynPolicerStatIUBE)	long	The value of tFPResDynPolicerStatIUBE represents the subset of resources which are currently in use by egress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatIUBI [Dyn Policer Stat IUBI] (tFPResDynPolicerStatIUBI)	long	The value of tFPResDynPolicerStatIUBI represents the subset of resources which are currently in use by ingress policer stats out of currently allocated dynamic policer stats resources, tFPResDynPolicerStatAlloc.
dynPolicerStatTotal [Dyn Policer Stat Total] (tFPResDynPolicerStatTotal)	long	The value of tFPResDynPolicerStatTotal represents the total number of dynamic policer stats that are supported on this FP. When the value of tFPResDynPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
dynPolicerTotal [Dyn Policer Total] (tFPResDynPolicerTotal)	long	The value of tFPResDynPolicerTotal represents the total number of dynamic policer that are supported on this FP. When the value of tFPResDynPolicerTotal is zero, it indicates that this resource type is not supported on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQ2NamedPoolAlloc [Dyn Q2 Named Pool Alloc] (tFPResDynQ2NamedPoolAlloc)	long	The value of tFPResDynQ2NamedPoolAlloc represents the total number of dynamic Q2 named pools that are currently allocated on this FP.
dynQ2NamedPoolIUBE [Dyn Q2 Named Pool IUBE] (tFPResDynQ2NamedPoolIUBE)	long	The value of tFPResDynQ2NamedPoolIUBE represents the subset of resources which are currently in use by egress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolIUBI [Dyn Q2 Named Pool IUBI] (tFPResDynQ2NamedPoolIUBI)	long	The value of tFPResDynQ2NamedPoolIUBI represents the subset of resources which are currently in use by ingress Q2 named pools out of currently allocated dynamic Q2 named pools resources, tFPResDynQ2NamedPoolAlloc.
dynQ2NamedPoolTotal [Dyn Q2 Named Pool Total] (tFPResDynQ2NamedPoolTotal)	long	The value of tFPResDynQ2NamedPoolTotal represents the total number of dynamic Q2 named pools that are supported on this FP. When the value of tFPResDynQ2NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQ2WredPoolAlloc [Dyn Q2 Wred Pool Alloc] (tFPResDynQ2WredPoolAlloc)	long	The value of tFPResDynQ2WredPoolAlloc represents the total number of dynamic Q2 wred pools that are currently allocated on this FP.
dynQ2WredPoolTotal [Dyn Q2 Wred Pool Total] (tFPResDynQ2WredPoolTotal)	long	The value of tFPResDynQ2WredPoolTotal represents the total number of dynamic Q2 wred pools that are supported on this FP. When the value of tFPResDynQ2WredPoolTotal is zero, it indicates that this resource type is not supported on this FP.
dynQueueAlloc [Dyn Queue Alloc] (tFPResDynQueueAlloc)	long	The value of tFPResDynQueueAlloc represents the total number of dynamic queues that are currently allocated on this FP.
dynQueueIUBE [Dyn Queue IUBE] (tFPResDynQueueIUBE)	long	The value of tFPResDynQueueIUBE represents the subset of resources which are currently in use by egress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dynQueueIUBI [Dyn Queue IUBI] (tFPResDynQueueIUBI)	long	The value of tFPResDynQueueIUBI represents the subset of resources which are currently in use by ingress queues out of currently allocated dynamic queue resources, tFPResDynQueueAlloc.
dynQueueTotal [Dyn Queue Total] (tFPResDynQueueTotal)	long	The value of tFPResDynQueueTotal represents the total number of dynamic queues that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
dynSvcEntryAlloc [Dyn Svc Entry Alloc] (tFPResDynSvcEntryAlloc)	long	The value of tFPResDynSvcEntryAlloc represents the total number of dynamic services that are currently allocated on this FP. The value of tFPResDynSvcEntryAlloc will always equal to the sum of tFPResSubHostAlloc, tFPResEncapGrpMemberAlloc and tFPResEgrNetQGrpMapAlloc since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
dynSvcEntryTotal [Dyn Svc Entry Total] (tFPResDynSvcEntryTotal)	long	The value of tFPResDynSvcEntryTotal represents the total number of dynamic services that are supported on this FP. When the value of tFPResDynSvcEntryTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResDynSvcEntryTotal will always equal to the sum of tFPResSubHostTotal, tFPResEncapGrpMemberTotal and tFPResEgrNetQGrpMapTotal since subscriber host resources, encap-group members resources and egress network queue-group mappings resources are subsets of dynamic service entry resources.
egrAclEntryAlloc [Egr Acl Entry Alloc] (tFPResEgrAclEntryAlloc)	long	The value of tFPResEgrAclEntryAlloc represents the total number of egress ACL CAM entries that are currently allocated on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrAclEntryTotal [Egr Acl Entry Total] (tFPResEgrAclEntryTotal)	long	The value of tFPResEgrAclEntryTotal represents the total number of egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrAclFilterAlloc [Egr Acl Filter Alloc] (tFPResEgrAclFilterAlloc)	long	The value of tFPResEgrAclFilterAlloc represents the total number of egress MAC + IP ACL filter policies that are currently allocated on this FP.
egrAclFilterTotal [Egr Acl Filter Total] (tFPResEgrAclFilterTotal)	long	The value of tFPResEgrAclFilterTotal represents the total number of egress MAC + IP ACL filter policies that are supported on this FP. Note that on 7750 SR-c4/c12 the CPM enforced limit for the total number of ACL filter policies is lower than the value of this object.
egrAclQosEntryAlloc [Egr Acl Qos Entry Alloc] (tFPResEgrAclQosEntryAlloc)	long	The value of tFPResEgrAclQosEntryAlloc represents the total number of combined egress ACL and QoS CAM entries that are currently allocated on this FP.
egrAclQosEntryTotal [Egr Acl Qos Entry Total] (tFPResEgrAclQosEntryTotal)	long	The value of tFPResEgrAclQosEntryTotal represents the total number of combined egress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResEgrAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrIPv6AclEntryAlloc [Egr IPv 6 Acl Entry Alloc] (tFPResEgrIPv6AclEntryAlloc)	long	The value of tFPResEgrIPv6AclEntryAlloc represents the total number of IPv6 egress ACL CAM entries that are currently allocated on this FP.
egrIPv6AclEntryTotal [Egr IPv 6 Acl Entry Total] (tFPResEgrIPv6AclEntryTotal)	long	The value of tFPResEgrIPv6AclEntryTotal represents the total number of IPv6 egress ACL CAM entries that are supported on this FP. When the value of tFPResEgrIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrIPv6QosEntryAlloc [Egr IPv 6 Qos Entry Alloc] (tFPResEgrIPv6QosEntryAlloc)	long	The value of tFPResEgrIPv6QosEntryAlloc represents the total number of IPv6 egress QoS CAM entries that are currently allocated on this FP.
egrIPv6QosEntryTotal [Egr IPv 6 Qos Entry Total] (tFPResEgrIPv6QosEntryTotal)	long	The value of tFPResEgrIPv6QosEntryTotal represents the total number of IPv6 egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrNetQGrpMapAlloc [Egr Net QGrp Map Alloc] (tFPResEgrNetQGrpMapAlloc)	long	The value of tFPResEgrNetQGrpMapAlloc represents the total number of egress network queue-group mappings that are currently allocated on this FP. The value of tFPResEgrNetQGrpMapAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since egress network queue-group mappings are subset of dynamic service entry resources.
egrNetQGrpMapTotal [Egr Net QGrp Map Total] (tFPResEgrNetQGrpMapTotal)	long	The value of tFPResEgrNetQGrpMapTotal represents the total number of egress network queue-group mappings that are supported on this FP. When the value of tFPResEgrNetQGrpMapTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEgrNetQGrpMapTotal will always be less than or equal to tFPResDynSvcEntryTotal since egress network queue-group mappings are subset of dynamic service entry resources.
egrPolicerAlloc [Egr Policer Alloc] (tFPResEgrPolicerAlloc)	long	The value of tFPResEgrPolicerAlloc represents the total number of egress policers that are currently allocated on this FP.
egrPolicerStatAlloc [Egr Policer Stat Alloc] (tFPResEgrPolicerStatAlloc)	long	The value of tFPResEgrPolicerStatAlloc represents the total number of egress policer stats that are currently allocated on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrPolicerStatTotal [Egr Policer Stat Total] (tFPResEgrPolicerStatTotal)	long	The value of tFPResEgrPolicerStatTotal represents the total number of egress policer stats that are supported on this FP. When the value of tFPResEgrPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
egrPolicerTotal [Egr Policer Total] (tFPResEgrPolicerTotal)	long	The value of tFPResEgrPolicerTotal represents the total number of egress policers that are supported on this FP. When the value of tFPResEgrPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
egrQ1NamedPoolAlloc [Egr Q1 Named Pool Alloc] (tFPResEgrQ1NamedPoolAlloc)	long	The value of tFPResEgrQ1NamedPoolAlloc represents the total number of egress Q1 named pools that are currently allocated on this FP.
egrQ1NamedPoolTotal [Egr Q1 Named Pool Total] (tFPResEgrQ1NamedPoolTotal)	long	The value of tFPResEgrQ1NamedPoolTotal represents the total number of egress Q1 named pools that are supported on this FP. When the value of tFPResEgrQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
egrQosEntryAlloc [Egr Qos Entry Alloc] (tFPResEgrQosEntryAlloc)	long	The value of tFPResEgrQosEntryAlloc represents the total number of egress QoS CAM entries that are currently allocated on this FP.
egrQosEntryTotal [Egr Qos Entry Total] (tFPResEgrQosEntryTotal)	long	The value of tFPResEgrQosEntryTotal represents the total number of egress QoS CAM entries that are supported on this FP. When the value of tFPResEgrQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
egrQueueAlloc [Egr Queue Alloc] (tFPResEgrQueueAlloc)	long	The value of tFPResEgrQueueAlloc represents the total number of egress queues that are currently allocated on this FP.
egrQueueTotal [Egr Queue Total] (tFPResEgrQueueTotal)	long	The value of tFPResEgrQueueTotal represents the total number of egress queues that are supported on this FP. When the value of tFPResEgrQueueTotal is zero, it indicates that this resource type is not supported on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrRootArbiterAlloc [Egr Root Arbiter Alloc] (tFPResEgrRootArbiterAlloc)	long	The value of tFPResEgrRootArbiterAlloc represents the total number of egress root arbiters that are currently allocated on this FP.
egrRootArbiterTotal [Egr Root Arbiter Total] (tFPResEgrRootArbiterTotal)	long	The value of tFPResEgrRootArbiterTotal represents the total number of egress root arbiters that are supported on this FP. When the value of tFPResEgrRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
encapGrpMemberAlloc [Encap Grp Member Alloc] (tFPResEncapGrpMemberAlloc)	long	The value of tFPResEncapGrpMemberAlloc represents the total number of encap group members that are currently allocated on this FP. The value of tFPResEncapGrpMemberAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since encap group members are subset of dynamic service entry resources.
encapGrpMemberTotal [Encap Grp Member Total] (tFPResEncapGrpMemberTotal)	long	The value of tFPResEncapGrpMemberTotal represents the total number of encap group members that are supported on this FP. When the value of tFPResEncapGrpMemberTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResEncapGrpMemberTotal will always be less than or equal to tFPResDynSvcEntryTotal since encap group members are subset of dynamic service entry resources.
ingAclEntryAlloc [Ing Acl Entry Alloc] (tFPResIngAclEntryAlloc)	long	The value of tFPResIngAclEntryAlloc represents the total number of ingress ACL CAM entries that are currently allocated on this FP.
ingAclEntryTotal [Ing Acl Entry Total] (tFPResIngAclEntryTotal)	long	The value of tFPResIngAclEntryTotal represents the total number of ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngAclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingAclFilterAlloc [Ing Acl Filter Alloc] (tFPResIngAclFilterAlloc)	long	The value of tFPResIngAclFilterAlloc represents the total number of ingress MAC + IP ACL filter policies that are currently allocated on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingAclFilterTotal [Ing Acl Filter Total] (tFPResIngAclFilterTotal)	long	The value of tFPResIngAclFilterTotal represents the total number of ingress MAC + IP ACL filter policies that are supported on this FP. Note that on 7750 SR-c4/c12 the CPM enforced limit for the total number of ACL filter policies is lower than the value of this object.
ingAclQosEntryAlloc [Ing Acl Qos Entry Alloc] (tFPResIngAclQosEntryAlloc)	long	The value of tFPResIngAclQosEntryAlloc represents the total number of combined ingress ACL and QoS CAM entries that are currently allocated on this FP.
ingAclQosEntryTotal [Ing Acl Qos Entry Total] (tFPResIngAclQosEntryTotal)	long	The value of tFPResIngAclQosEntryTotal represents the total number of combined ingress ACL and QoS CAM entries that are supported on this FP. When the value of tFPResIngAclQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6AclEntryAlloc [Ing IPv 6 Acl Entry Alloc] (tFPResIngIPv6AclEntryAlloc)	long	The value of tFPResIngIPv6AclEntryAlloc represents the total number of IPv6 ingress ACL CAM entries that are currently allocated on this FP.
ingIPv6AclEntryTotal [Ing IPv 6 Acl Entry Total] (tFPResIngIPv6AclEntryTotal)	long	The value of tFPResIngIPv6AclEntryTotal represents the total number of IPv6 ingress ACL CAM entries that are supported on this FP. When the value of tFPResIngIPv6AclEntryTotal is zero, it indicates that this resource type is not supported on this FP.
ingIPv6QosEntryAlloc [Ing IPv 6 Qos Entry Alloc] (tFPResIngIPv6QosEntryAlloc)	long	The value of tFPResIngIPv6QosEntryAlloc represents the total number of IPv6 ingress QoS CAM entries that are currently allocated on this FP.
ingIPv6QosEntryTotal [Ing IPv 6 Qos Entry Total] (tFPResIngIPv6QosEntryTotal)	long	The value of tFPResIngIPv6QosEntryTotal represents the total number of IPv6 ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngIPv6QosEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingPolicerAlloc [Ing Policer Alloc] (tFPResIngPolicerAlloc)	long	The value of tFPResIngPolicerAlloc represents the total number of ingress policers that are currently allocated on this FP.
ingPolicerStatAlloc [Ing Policer Stat Alloc] (tFPResIngPolicerStatAlloc)	long	The value of tFPResIngPolicerStatAlloc represents the total number of ingress policer stats that are currently allocated on this FP.
ingPolicerStatTotal [Ing Policer Stat Total] (tFPResIngPolicerStatTotal)	long	The value of tFPResIngPolicerStatTotal represents the total number of ingress policer stats that are supported on this FP. When the value of tFPResIngPolicerStatTotal is zero, it indicates that this resource type is not supported on this FP.
ingPolicerTotal [Ing Policer Total] (tFPResIngPolicerTotal)	long	The value of tFPResIngPolicerTotal represents the total number of ingress policers that are supported on this FP. When the value of tFPResIngPolicerTotal is zero, it indicates that this resource type is not supported on this FP.
ingQ1NamedPoolAlloc [Ing Q1 Named Pool Alloc] (tFPResIngQ1NamedPoolAlloc)	long	The value of tFPResIngQ1NamedPoolAlloc represents the total number of ingress Q1 named pools that are currently allocated on this FP.
ingQ1NamedPoolTotal [Ing Q1 Named Pool Total] (tFPResIngQ1NamedPoolTotal)	long	The value of tFPResIngQ1NamedPoolTotal represents the total number of ingress Q1 named pools that are supported on this FP. When the value of tFPResIngQ1NamedPoolTotal is zero, it indicates that this resource type is not supported on this FP.
ingQosEntryAlloc [Ing Qos Entry Alloc] (tFPResIngQosEntryAlloc)	long	The value of tFPResIngQosEntryAlloc represents the total number of ingress QoS CAM entries that are currently allocated on this FP.
ingQosEntryTotal [Ing Qos Entry Total] (tFPResIngQosEntryTotal)	long	The value of tFPResIngQosEntryTotal represents the total number of ingress QoS CAM entries that are supported on this FP. When the value of tFPResIngQosEntryTotal is zero, it indicates that this resource type is not supported on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingQueueAlloc [Ing Queue Alloc] (tFPResIngQueueAlloc)	long	The value of tFPResIngQueueAlloc represents the total number of ingress queues that are currently allocated on this FP.
ingQueueTotal [Ing Queue Total] (tFPResIngQueueTotal)	long	The value of tFPResIngQueueTotal represents the total number of ingress queues that are supported on this FP. When the value of tFPResIngQueueTotal is zero, it indicates that this resource type is not supported on this FP.
ingRootArbiterAlloc [Ing Root Arbiter Alloc] (tFPResIngRootArbiterAlloc)	long	The value of tFPResIngRootArbiterAlloc represents the total number of ingress root arbiters that are currently allocated on this FP.
ingRootArbiterTotal [Ing Root Arbiter Total] (tFPResIngRootArbiterTotal)	long	The value of tFPResIngRootArbiterTotal represents the total number of ingress root arbiters that are supported on this FP. When the value of tFPResIngRootArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
intArbiterAlloc [Int Arbiter Alloc] (tFPResIntArbiterAlloc)	long	The value of tFPResIntArbiterAlloc represents the total number of intermediate arbiters that are currently allocated on this FP.
intArbiterTotal [Int Arbiter Total] (tFPResIntArbiterTotal)	long	The value of tFPResIntArbiterTotal represents the total number of intermediate arbiters that are supported on this FP. When the value of tFPResIntArbiterTotal is zero, it indicates that this resource type is not supported on this FP.
macFdbRecAlloc [Mac Fdb Rec Alloc] (tFPResMacFdbRecAlloc)	long	The value of tFPResMacFdbRecAlloc represents the total number of MAC Forwarding Data-Base (FDB) records that are currently allocated on this FP.
macFdbRecTotal [Mac Fdb Rec Total] (tFPResMacFdbRecTotal)	long	The value of tFPResMacFdbRecTotal represents the total number of MAC Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResMacFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
resRvplsFdbRecAlloc [Res Rvpls Fdb Rec Alloc] (tFPResResRvplsFdbRecAlloc)	long	The value of tFPResResRvplsFdbRecAlloc represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are currently allocated on this FP.
resRvplsFdbRecTotal [Res Rvpls Fdb Rec Total] (tFPResResRvplsFdbRecTotal)	long	The value of tFPResResRvplsFdbRecTotal represents the total number of reserved R-VPLS Forwarding Data-Base (FDB) records that are supported on this FP. When the value of tFPResResRvplsFdbRecTotal is zero, it indicates that this resource type is not supported on this FP.
sapIngQosPolAlloc [Sap Ing Qos Pol Alloc] (tFPResSapIngQosPolAlloc)	long	The value of tFPResSapIngQosPolAlloc represents the total number of sap-ingress QoS policies that are currently allocated on this FP.
sapIngQosPolTotal [Sap Ing Qos Pol Total] (tFPResSapIngQosPolTotal)	long	The value of tFPResSapIngQosPolTotal represents the total number of sap-ingress QoS policies that are allowed to be in use on this FP.
subHostAlloc [Sub Host Alloc] (tFPResSubHostAlloc)	long	The value of tFPResSubHostAlloc represents the total number of subscriber hosts that are currently allocated on this FP. The value of tFPResSubHostAlloc will always be less than or equal to tFPResDynSvcEntryAlloc since subscriber host resources are subset of dynamic service entry resources.
subHostTotal [Sub Host Total] (tFPResSubHostTotal)	long	The value of tFPResSubHostTotal represents the total number of subscriber hosts that are supported on this FP. When the value of tFPResSubHostTotal is zero, it indicates that this resource type is not supported on this FP. The value of tFPResSubHostTotal will always be less than or equal to tFPResDynSvcEntryTotal since subscriber host resources are subset of dynamic service entry resources.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>FpDynamicEnforcementPlcrStat</p> <p>MIB entry name: tmnxFpDcpDynEnfrcPlcrStatEntry</p> <p>Entry description: The value of tmnxFpDcpDynEnfrcPlcrStatEntry represents statistics information per forwarding plane for the dynamic enforcement policer.</p> <p>Table description (for tmnxFpDcpDynEnfrcPlcrStatTable): The tmnxFpDcpDynEnfrcPlcrStatTable has the statistics information of the dynamic enforcement policer per forwarding plane.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.ForwardingPlane</p>		
allocFailCount [Alloc Fail Count] (tmnxFpDcpDynPlcrAllocFailCount)	long	The value of tmnxFpDcpDynPlcrAllocFailCount indicated the number of times the system failed to allocate dynamic enforcement policers.
cardSlotNum [Card Slot Num] (tmnxCardSlotNum)	int	The unique value which identifies this IOM slot within a chassis in the system.
chassisIndex [Chassis Index] (tmnxChassisIndex)	int	The value of tmnxChassisIndex specifies a system identifier. The value of this object cannot be changed. The only supported value is '1'. Different values of TmnxPhysChassisIndex are used to identify different physical chassis (e.g. in an XRS-40 system) in tmnxPhysChassisTable.
fpId [Fp Id] (tmnxFPNum)	int	The value of tmnxFPNum identifies the Forwarding Plane.
hiWtrMrkHitCnt [Hi Wtr Mrk Hit Cnt] (tmnxFpDcpDynPlcrHiWtrMrkHitCnt)	long	The value of tmnxFpDcpDynPlcrHiWtrMrkHitCnt indicates the maximum number of dynamic enforcement policers in use at any point of time.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
hiWtrMrkTime [Hi Wtr Mrk Time] (tmnxFpDcpDynPlcrHiWtrMrkTime)	long	The value of tmnxFpDcpDynPlcrHiWtrMrkTime indicates the time at which maximum number of dynamic enforcement policers was hit.
inUse [In Use] (tmnxFpDcpDynPlcrInUse)	long	The value of tmnxFpDcpDynPlcrInUse indicated the number of dynamic enforcement policers currently in use by the system.
HardwareResourceStats MIB entry name: tmnxHwResourceEntry Entry description: Each tmnxHwResourceEntry row consists of the current resource levels for a particular managed hardware component. Table description (for tmnxHwResourceTable): The tmnxHwResourceTable has an entry for each managed hardware component in the Nokia SROS series system's chassis that supports resource monitoring. Hardware components that do not support resource monitoring will not show up in this table. Rows in this table are created by the agent at initialization and cannot be created or destroyed by SNMP Get or Set requests. Supports realtime plotting Supports scheduled collection Monitored class: equipment.HwEnvironment		
currentAmperage [Current Amperage] (tmnxHwResourceCurrentAmperage)	long	The value of tmnxHwResourceCurrentAmperage indicates the current drawn by the managed hardware component in milli-Amperes (mA).
currentVoltage [Current Voltage] (tmnxHwResourceCurrentVoltage)	long	The value of tmnxHwResourceCurrentVoltage indicates the current voltage use of the managed hardware component in milli-Volts (mV).
maxRequiredWattage [Max Required Wattage] (tmnxHwResourceMaxRequiredWattage)	long	The value of tmnxHwResourceMaxRequiredWattage indicates the maximum possible power consumption for this device. This value is used to determine the amount of system power to reserve in order to safely power up the device.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
minAmperage [Min Amperage] (tmnxHwResourceMinAmperage)	long	The value of tmnxHwResourceMinAmperage indicates the lowest current drawn by the managed hardware component in milli-Amperes (mA) last recorded at the time indicated by tmnxHwResourceMinAmperageTime.
minAmperageTime [Min Amperage Time] (tmnxHwResourceMinAmperageTime)	long	The value of tmnxHwResourceMinAmperageTime indicates the time, since system initialization, that tmnxHwResourceMinAmperage was last updated.
minVoltage [Min Voltage] (tmnxHwResourceMinVoltage)	long	The value of tmnxHwResourceMinVoltage indicates the lowest voltage use of the managed hardware component in milli-Volts (mV) last recorded at the time indicated by tmnxHwResourceMinVoltageTime.
minVoltageTime [Min Voltage Time] (tmnxHwResourceMinVoltageTime)	long	The value of tmnxHwResourceMinVoltageTime indicates the time, since system initialization, that tmnxHwResourceMinVoltage was last updated.
minWattage [Min Wattage] (tmnxHwResourceMinWattage)	long	The value of tmnxHwResourceMinWattage indicates the lowest power use of the managed hardware component in milli-Watts (mW) last recorded at the time indicated by tmnxHwResourceMinWattageTime.
minWattageTime [Min Wattage Time] (tmnxHwResourceMinWattageTime)	long	The value of tmnxHwResourceMinWattageTime indicates the time, since system initialization, that tmnxHwResourceMinWattage was last updated.
peakAmperage [Peak Amperage] (tmnxHwResourcePeakAmperage)	long	The value of tmnxHwResourcePeakAmperage indicates the peak current drawn by the managed hardware component in milli-Amperes (mA) last recorded at the time indicated by tmnxHwResourcePeakAmperageTime.
peakAmperageTime [Peak Amperage Time] (tmnxHwResourcePeakAmperageTime)	long	The value of tmnxHwResourcePeakAmperageTime indicates the time, since system initialization, that tmnxHwResourcePeakAmperage was last updated.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peakVoltage [Peak Voltage] (tmnxHwResourcePeakVoltage)	long	The value of tmnxHwResourcePeakVoltage indicates the peak voltage use of the managed hardware component in milli-Volts (mV) last recorded at the time indicated by tmnxHwResourcePeakVoltageTime.
peakVoltageTime [Peak Voltage Time] (tmnxHwResourcePeakVoltageTime)	long	The value of tmnxHwResourcePeakVoltageTime indicates the time, since system initialization, that tmnxHwResourcePeakVoltage was last updated.
peakWattage [Peak Wattage] (tmnxHwResourcePeakWattage)	long	The value of tmnxHwResourcePeakWattage indicates the peak power use of the managed hardware component in milli-Watts (mW) last recorded at the time indicated by tmnxHwResourcePeakWattageTime.
peakWattageTime [Peak Wattage Time] (tmnxHwResourcePeakWattageTime)	long	The value of tmnxHwResourcePeakWattageTime indicates the time, since system initialization, that tmnxHwResourcePeakWattage was last updated.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>HardwareTemperature</p> <p>MIB entry name: tmnxHwEntry</p> <p>Entry description: Each row entry represents an Nokia SROS series manufactured hardware component. Entries cannot be created and deleted via SNMP SET operations. When an entry is created in one of the card tables, IOM, CPM, Fabric or MDA, a tmnxHwEntry is created for the common hardware management information for that card in that chassis. When the card is removed from the chassis, its corresponding tmnxHwEntry is deleted. The tmnxHwIndex is bitmapped. The tmnxPhysChassisClass is used to indicate a sub-class of a TmnxHwClass type. A value of 0 instead of 'routerChassis (3)' is used to represent router chassis: 32 25 24 17 16 9 8 1 +-----+----- +-----+-----+ TmnxHwClass TmnxPhysChassisClass Slot number +-----+----- +-----+-----+ The Slot field is only used for components on cards in slots. It is zero for all others. The number field starts from 1 and indicates which component. E.g. Power supply 1 or 2.</p> <p>Table description (for tmnxHwTable): The tmnxHwTable has an entry for each managed hardware component in the Nokia SROS series system's chassis. Examples of these hardware component types are IOM, Fabric, and CPM cards, MCM and CCM, and MDA modules. Similar information for physical ports is in the tmnxPortObjs.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.BaseCard • equipment.CCM • equipment.CardSlot • equipment.ControlProcessor • equipment.DaughterCard • equipment.FanTray • equipment.MCMCard • equipment.PowerSupplyTray • equipment.SwitchFabricProcessor 		
temperature [Temperature] (tmnxHwTemperature)	int	The current temperature reading in degrees celsius from this hardware component's temperature sensor. If this component does not contain a temperature sensor, then the value -1 is returned.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IngressPortFwdEngDropReasonStats</p> <p>MIB entry name: tPortIngressFwdEngDRStatsEntry</p> <p>Entry description: The value of tPortIngressFwdEngDRStatsEntry specifies per-reason drop statistics on each port for the packets dropped by the forwarding engine.</p> <p>Table description (for tPortIngressFwdEngDRStatsTable): The value of tPortIngressFwdEngDRStatsTable specifies per-reason drop statistics on each port for the packets dropped by the forwarding engine.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
aclFilterDiscards [Acl Filter Discards] (tFwdEngDRACLFilterDiscards)	java. math. BigInteger	The value of tFwdEngDRACLFilterDiscards indicates the total number of packets dropped by forwarding engine due to packets dropped by ACL filter on the line card. This does not include packets dropped by CPM filters or ESM antispoof filters.
bfdSpoofCheckFailed [Bfd Spoof Check Failed] (tFwdEngDRBFDSpoofChkFailed)	java. math. BigInteger	The value of tFwdEngDRBFDSpoofChkFailed indicates the total number of packets dropped by forwarding engine due to the received BFD packet either failed the TTL check or failed the source IP address lookup of known sessions.
ipRouteBlackHoled [Ip Route Black Holed] (tFwdEngDRIpRouteBlackHoled)	java. math. BigInteger	The value of tFwdEngDRIpRouteBlackHoled indicates the total number of packets dropped by forwarding engine due to IP address of the packet matching a black hole route.
ipv4HeaderErr [Ipv 4 Header Err] (tFwdEngDRIpv4HeaderError)	java. math. BigInteger	The value of tFwdEngDRIpv4HeaderError indicates the total number of packets dropped by forwarding engine due an error in the IPv4 packet header such as an IPv4 header checksum error, an invalid IP version number (not IPv4 or IPv6) or an incorrect Total Length field.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4InvalidAddr [Ipv 4 Invalid Addr] (tFwdEngDRIPv4InvalidAddress)	java. math. BigInteger	The value of tFwdEngDRIPv4InvalidAddress indicates the total number of packets dropped by forwarding engine due to an error in source (SA) or destination (DA) IPv4 address. Some examples include class D or class E IPv4 DAs, loopback SA (127.0.0.0/8), 0.0.0.0/8 DA, SA is a subnet broadcast or network address, and non-IP traffic arriving on an IP interface that is not a valid L2 protocol for that interface (valid protocols may include ARP, ISIS and PPP control), and cases where the IPv4 address is a multicast address but the ethernet destination address is not RFC1112 compliant. RFC1112 checks are also carried out on IPIPE traffic.
ipv6HeaderErr [Ipv 6 Header Err] (tFwdEngDRIPv6HeaderError)	java. math. BigInteger	The value of tFwdEngDRIPv6HeaderError indicates the total number of packets dropped by forwarding engine due to an error in the IPv6 packet header such as an incorrect payload length field or an IP version not equal to 'IPv6' when the ethernet etype or PPP ID indicates it is IPv6.
ipv6InvalidAddr [Ipv 6 Invalid Addr] (tFwdEngDRIPv6InvalidAddress)	java. math. BigInteger	The value of tFwdEngDRIPv6InvalidAddress indicates the total number of packets dropped by forwarding engine due to error in source (SA) or destination (DA) IPv6 addresses. Some examples include an unspecified IPv6 DA, an IPv6 multicast SA, non-IP traffic arriving on an IP interface or into an IPIPE service that is not a valid L2 protocol for that interface (valid protocols may include ARP, ISIS and PPP control), and cases where the IPv6 address is a multicast address but the ethernet destination address is not RFC2464 compliant. RFC 2464 checks are also carried out on IPIPE traffic.
l2ServiceMTUExceeded [L2 Service MTUExceeded] (tFwdEngDRL2ServiceMTUExceed)	java. math. BigInteger	The value of tFwdEngDRL2ServiceMTUExceed indicates the total number of packets dropped by forwarding engine due to the length of the packet received on a SAP bound to a Layer 2 service (e.g. VPLS, Epipe) exceeded the configured MTU for the service.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multicastMACWithUnicastDestIP [Multicast MACWith Unicast Dest IP] (tFwdEngDRMcastMACUnicastDstIp)	java. math. BigInteger	The value of tFwdEngDRMcastMACUnicastDstIp indicates the total number of packets dropped by forwarding engine due to the destination MAC address being multicast but the IP address is unicast.
needsICMP [Needs ICMP] (tFwdEngDRNeedsICMP)	java. math. BigInteger	The value of tFwdEngDRNeedsICMP indicates the total number of packets dropped by forwarding engine and the received packet requires the router to generate an ICMP message. Some examples include when the IP packet TTL is expired or the destination host, network or Enhanced Subscriber Management (ESM) subscriber is unreachable. Host unreachable can occur, amongst other reasons, if the destination address (e.g. 10.0.1.2) of a packet resolves to a loopback interface subnet (e.g. 10.0.1.1/24) but doesn't match the specific loopback address (e.g. 10.0.1.1). Destination unreachable can also occur, for example, in response to an IPv6 packet received by a router from a point-to-point link (e.g. a non-ethernet link) destined to an address within a subnet assigned to that same link (other than one of the receiving router's own addresses) as described in RFC 4443.
unicastMACDestnAddrMismatch [Unicast MACDestn Addr Mismatch] (tFwdEngDRUcastMACDstAddMismatch)	java. math. BigInteger	The value of tFwdEngDRUcastMACDstAddMismatch indicates the total number of packets dropped by forwarding engine due to the unicast destination MAC address not being present or when it does not match any of the expected MAC addresses associated with the receiving interface. Packets with multicast or broadcast MAC addresses do not increment this counter.
unicastRPFCheckFailed [Unicast RPFCheck Failed] (tFwdEngDRUcastRPFChkFailed)	java. math. BigInteger	The value of tFwdEngDRUcastRPFChkFailed indicates the total number of packets dropped by forwarding engine due to IP packet failed the unicast reverse path forwarding (uRPF) check.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownMACDestnAddrDiscardedInVPLS [Unknown MACDestn Addr Discarded In VPLS] (tFwdEngDRUnkwnMACDstAddDscrd- VPLS)	java. math. BigInte- ger	The value of tFwdEngDRUnkwnMACDstAddDscrdVPLS indicates the total number of packets dropped by forwarding engine due to the destination MAC address lookup in the MAC FIB failed and the VPLS service is configured to discard packets with unknown destination MAC addresses.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedBroadcastPackets [Received Broadcast Packets] (ifHCInBroadcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. This object is a 64-bit version of ifInBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedMulticastPackets [Received Multicast Packets] (ifHCInMulticastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifInMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedTotalOctets [Received Total Octets] (ifHCInOctets)	java. math. BigInteger	The total number of octets received on the interface, including framing characters. This object is a 64-bit version of ifInOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifHCInUcastPkts)	java. math. BigInteger	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. This object is a 64-bit version of ifInUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedBroadcastPackets [Transmitted Broadcast Packets] (ifHCOutBroadcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedMulticastPackets [Transmitted Multicast Packets] (ifHCOutMulticastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedTotalOctets [Transmitted Total Octets] (ifHCOutOctets)	java. math. BigInteger	The total number of octets transmitted out of the interface, including framing characters. This object is a 64-bit version of ifOutOctets. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedUnicastPackets [Transmitted Unicast Packets] (ifHCOutUcastPkts)	java. math. BigInteger	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutUcastPkts. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outboundBadPackets [Outbound Bad Packets] (ifOutErrors)	long	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
outboundPacketsDiscarded [Outbound Packets Discarded] (ifOutDiscards)	long	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedBadPackets [Received Bad Packets] (ifInErrors)	long	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedOctets [Received Octets] (ifInOctets)	long	The total number of octets received on the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedPacketsDiscarded [Received Packets Discarded] (ifInDiscards)	long	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnicastPackets [Received Unicast Packets] (ifInUcastPkts)	long	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
receivedUnknownProtocolPackets [Received Unknown Protocol Packets] (ifInUnknownProtos)	long	For packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
transmittedOctets [Transmitted Octets] (ifOutOctets)	long	The total number of octets transmitted out of the interface, including framing characters. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedUnicastPackets [Transmitted Unicast Packets] (ifOutUcastPkts)	long	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
<p>LaneDDMStats MIB entry name: tmnxDDMLaneEntry Entry description: Each row represents a particular multi-lane optic that supports Digital Diagnostic Monitoring Lanes. Entries are created and deleted internally by the system. Table description (for tmnxDDMLaneTable): The tmnxDDMLaneTable has an entry for each multi-lane optic in the system that supports Lane Digital Diagnostic Monitoring (DDM). The table is indexed by tmnxPortPortID and tmnxDDMLaneId. Each row in this table is dynamically added and removed internally by the system based on the presence or absence of DDM capable multi-lane optics. Some example multi-lane optics are : CFP, CFP2, CFP4, QSFP. Supports realtime plotting Supports scheduled collection Monitored class: equipment.LaneDDM</p>		
rxOpticalPower [Rx Optical Power] (tmnxDDMLaneRxOpticalPower)	float	The value of tmnxDDMLaneRxOpticalPower indicates the current Received Optical Power of the multi-lane optic in one tenths of a microwatt (uW). For example: Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
rxOpticalPowerType [Rx Optical Power Type] (tmnxDDMLaneRxOpticalPowerType)	int	The value of tmnxDDMLaneRxOpticalPowerType indicates whether the tmnxDDMLaneRxOpticalPower was taken as an average, or as an Optical Modulation Amplitude (OMA).

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
temperature [Temperature] (tmnxDDMLaneTemperature)	float	The value of tmnxDDMLaneTemperature indicates the current temperature of the multi-lane optic in 1/256th degrees Celsius. The formula for translating between the value of tmnxDDMLaneTemperature and degrees Celsius is: $\text{tmnxDDMLaneTemperature} / 256$ For example: The SNMP value 5734 is 22.4 degrees Celsius.
txBiasCurrent [Tx Bias Current] (tmnxDDMLaneTxBiasCurrent)	float	The value of tmnxDDMLaneTxBiasCurrent indicates the current Transmit Bias Current of the multi-lane optic in 1/500 milliamperes (mA). The formula for translating between the value of tmnxDDMLaneTxBiasCurrent and amperes is: $\text{tmnxDDMLaneTxBiasCurrent} / 500$ For example: The SNMP value 2565 is 5.1 milliamperes (mA).
txOutputPower [Tx Output Power] (tmnxDDMLaneTxOutputPower)	float	The value of tmnxDDMLaneTxOutputPower indicates the current Output Power of the multi-lane optic in one tenths of a microwatt (uW). For example: Using the SNMP value of 790, and using units of tenths of microwatt, 790 becomes 79 microwatts or 0.079 milliwatts. Converting to dBm: $10 \times \log_{10}(0.079) = -11.0$ dBm
MDAResourceStats MIB entry name: tMDAResEntry Entry description: The value of tMDAResEntry represents MDA specific system resource information. Table description (for tMDAResTable): The value of tMDAResTable represents system resource information that are specific to MDA for a particular card on a given chassis. Supports realtime plotting Supports scheduled collection Monitored class: equipment.DaughterCardSlot		
egrHsmdaQGrpAlloc [Egr Hsmda QGrp Alloc] (tMDAResEgrHsmdaQGrpAlloc)	long	The value of tMDAResEgrHsmdaQGrpAlloc represents the total number of egress HSMDA queue-groups that are currently allocated on this MDA.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrHsmdaQGrpTotal [Egr Hsmda QGrp Total] (tMDAResEgrHsmdaQGrpTotal)	long	The value of tMDAResEgrHsmdaQGrpTotal represents the total number of egress HSMDA queue-groups that are supported on this MDA. When the value of tMDAResEgrHsmdaQGrpTotal is zero, it indicates that this resource type is not supported on this MDA.
egrHsmdaSecShaperAlloc [Egr Hsmda Sec Shaper Alloc] (tMDAResEgrHsmdaSecShaperAlloc)	long	The value of tMDAResEgrHsmdaSecShaperAlloc represents the total number of egress HSMDA secondary-shapers that are currently allocated on this MDA.
egrHsmdaSecShaperTotal [Egr Hsmda Sec Shaper Total] (tMDAResEgrHsmdaSecShaperTotal)	long	The value of tMDAResEgrHsmdaSecShaperTotal represents the total number of egress HSMDA secondary-shapers that are supported on this MDA. When the value of tMDAResEgrHsmdaSecShaperTotal is zero, it indicates that this resource type is not supported on this MDA.
<p>MediaIndependentStats</p> <p>MIB entry name: mediaIndependentEntry</p> <p>Entry description: Media independent statistics for promiscuous monitoring of any media.</p> <p>Table description (for mediaIndependentTable): Media independent statistics for promiscuous monitoring of any media. The following table defines media independent statistics that provide information for full and/or half-duplex links as well as high capacity links. For half-duplex links, or full-duplex-capable links operating in half-duplex mode, the mediaIndependentIn* objects shall be used and the mediaIndependentOut* objects shall not increment. For full-duplex links, the mediaIndependentOut* objects shall be present and shall increment. Whenever possible, the probe should count packets moving away from the closest terminating equipment as output packets. Failing that, the probe should count packets moving away from the DTE as output packets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dropEvents [Drop Events] (mediaIndependentDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.
droppedFrames [Dropped Frames] (mediaIndependentDroppedFrames)	long	The total number of frames which were received by the probe and therefore not accounted for in the mediaIndependentDropEvents, but for which the probe chose not to count for this entry for whatever reason. Most often, this event occurs when the probe is out of some resources and decides to shed load from this collection. This count does not include packets that were not counted because they had MAC-layer errors. Note that, unlike the dropEvents counter, this number is the exact number of frames dropped.
duplex [Duplex] (mediaIndependentDuplexMode)	int	The current mode of this link. Note that if the link has full-duplex capabilities but is operating in half-duplex mode, this value will be halfduplex(1).
duplexChanges [Duplex Changes] (mediaIndependentDuplexChanges)	long	The number of times this link has changed from full-duplex mode to half-duplex mode or from half-duplex mode to full-duplex mode.
inputSpeed [Input Speed] (mediaIndependentInputSpeed)	long	The nominal maximum speed in kilobits per second of this half-duplex link or on the inbound connection of this full-duplex link. If the speed is unknown or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
outputSpeed [Output Speed] (mediaIndependentOutputSpeed)	long	The nominal maximum speed in kilobits per second of this full-duplex link in the direction of the network. If the speed is unknown, the link is half-duplex, or there is no fixed maximum (e.g. a compressed link), this value shall be zero.
receivedBadPackets [Received Bad Packets] (mediaIndependentInErrors)	long	The total number of bad packets received on a half-duplex link or on the inbound connection of a full-duplex link.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
receivedNonUnicastPackets [Received Non Unicast Packets] (mediaIndependentInNUCastHighCapacityPkts)	java. math. BigInteger	The total number of non-unicast packets (including bad packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
receivedOctets [Received Octets] (mediaIndependentInHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received (excluding framing bits but including FCS octets) on a half-duplex link or on the inbound connection of a full-duplex link.
receivedPackets [Received Packets] (mediaIndependentInHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a half-duplex link or on the inbound connection of a full-duplex link.
transmittedBadPackets [Transmitted Bad Packets] (mediaIndependentOutErrors)	long	The total number of bad packets received on a full-duplex link in the direction of the network.
transmittedNonUnicastPackets [Transmitted Non Unicast Packets] (mediaIndependentOutNUCastHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets) received on a full-duplex link in the direction of the network.
transmittedOctets [Transmitted Octets] (mediaIndependentOutHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on a full-duplex link in the direction of the network (excluding framing bits but including FCS octets).
transmittedPackets [Transmitted Packets] (mediaIndependentOutHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received on a full-duplex link in the direction of the network.

Table 639 equipment statistics (continued)

<p>PortEgressMonitorThresholdStats MIB entry name: tPortEgrMonThrEntry Entry description: The value of tPortEgrMonThrEntry represents threshold monitoring information for port scheduler policy specified by tmnxPortEgrPortSchedPly for each ethernet egress port when the value of tmnxPortEgrMonitorPortSched is set to 'enabled (1)'. Table description (for tPortEgrMonThrTable): The value of tPortEgrMonThrTable contains port scheduler policy's threshold monitoring information for each ethernet egress port when the value of tmnxPortEgrMonitorPortSched is set to 'enabled (1)'. Supports realtime plotting Supports scheduled collection Monitored class: equipment.PhysicalPort</p>		
egrMonThrEndTime [Egr Mon Thr End Time] (tPortEgrMonThrEndTime)	long	The value of tPortEgrMonThrEndTime represents the end time for threshold monitoring.
egrMonThrGrp1ExceedCnt [Egr Mon Thr Grp 1 Exceed Cnt] (tPortEgrMonThrGrp1ExceedCnt)	long	The value of tPortEgrMonThrGrp1ExceedCnt represents the exceed count for group 1 specified by tPortEgrMonThrGrp1Name.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrMonThrGrp1Name [Egr Mon Thr Grp 1 Name] (tPortEgrMonThrGrp1Name)	String	The value of tPortEgrMonThrGrp1Name represents port scheduler policy's group name.
egrMonThrGrp2ExceedCnt [Egr Mon Thr Grp 2 Exceed Cnt] (tPortEgrMonThrGrp2ExceedCnt)	long	The value of tPortEgrMonThrGrp2ExceedCnt represents the exceed count for group 2 specified by tPortEgrMonThrGrp2Name.
egrMonThrGrp2Name [Egr Mon Thr Grp 2 Name] (tPortEgrMonThrGrp2Name)	String	The value of tPortEgrMonThrGrp2Name represents port scheduler policy's group name.
egrMonThrGrp3ExceedCnt [Egr Mon Thr Grp 3 Exceed Cnt] (tPortEgrMonThrGrp3ExceedCnt)	long	The value of tPortEgrMonThrGrp3ExceedCnt represents the exceed count for group 3 specified by tPortEgrMonThrGrp3Name.
egrMonThrGrp3Name [Egr Mon Thr Grp 3 Name] (tPortEgrMonThrGrp3Name)	String	The value of tPortEgrMonThrGrp3Name represents port scheduler policy's group name.
egrMonThrGrp4ExceedCnt [Egr Mon Thr Grp 4 Exceed Cnt] (tPortEgrMonThrGrp4ExceedCnt)	long	The value of tPortEgrMonThrGrp4ExceedCnt represents the exceed count for group 4 specified by tPortEgrMonThrGrp4Name.
egrMonThrGrp4Name [Egr Mon Thr Grp 4 Name] (tPortEgrMonThrGrp4Name)	String	The value of tPortEgrMonThrGrp4Name represents port scheduler policy's group name.
egrMonThrGrp5ExceedCnt [Egr Mon Thr Grp 5 Exceed Cnt] (tPortEgrMonThrGrp5ExceedCnt)	long	The value of tPortEgrMonThrGrp5ExceedCnt represents the exceed count for group 5 specified by tPortEgrMonThrGrp5Name.
egrMonThrGrp5Name [Egr Mon Thr Grp 5 Name] (tPortEgrMonThrGrp5Name)	String	The value of tPortEgrMonThrGrp5Name represents port scheduler policy's group name.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrMonThrGrp6ExceedCnt [Egr Mon Thr Grp 6 Exceed Cnt] (tPortEgrMonThrGrp6ExceedCnt)	long	The value of tPortEgrMonThrGrp6ExceedCnt represents the exceed count for group 6 specified by tPortEgrMonThrGrp6Name.
egrMonThrGrp6Name [Egr Mon Thr Grp 6 Name] (tPortEgrMonThrGrp6Name)	String	The value of tPortEgrMonThrGrp6Name represents port scheduler policy's group name.
egrMonThrGrp7ExceedCnt [Egr Mon Thr Grp 7 Exceed Cnt] (tPortEgrMonThrGrp7ExceedCnt)	long	The value of tPortEgrMonThrGrp7ExceedCnt represents the exceed count for group 7 specified by tPortEgrMonThrGrp7Name.
egrMonThrGrp7Name [Egr Mon Thr Grp 7 Name] (tPortEgrMonThrGrp7Name)	String	The value of tPortEgrMonThrGrp7Name represents port scheduler policy's group name.
egrMonThrGrp8ExceedCnt [Egr Mon Thr Grp 8 Exceed Cnt] (tPortEgrMonThrGrp8ExceedCnt)	long	The value of tPortEgrMonThrGrp8ExceedCnt represents the exceed count for group 8 specified by tPortEgrMonThrGrp8Name.
egrMonThrGrp8Name [Egr Mon Thr Grp 8 Name] (tPortEgrMonThrGrp8Name)	String	The value of tPortEgrMonThrGrp8Name represents port scheduler policy's group name.
egrMonThrLvl1ExceedCnt [Egr Mon Thr Lvl 1 Exceed Cnt] (tPortEgrMonThrLvl1ExceedCnt)	long	The value of tPortEgrMonThrLvl1ExceedCnt represents the exceed count for priority level 1.
egrMonThrLvl2ExceedCnt [Egr Mon Thr Lvl 2 Exceed Cnt] (tPortEgrMonThrLvl2ExceedCnt)	long	The value of tPortEgrMonThrLvl2ExceedCnt represents the exceed count for priority level 2.
egrMonThrLvl3ExceedCnt [Egr Mon Thr Lvl 3 Exceed Cnt] (tPortEgrMonThrLvl3ExceedCnt)	long	The value of tPortEgrMonThrLvl3ExceedCnt represents the exceed count for priority level 3.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egrMonThrLvl4ExceedCnt [Egr Mon Thr Lvl 4 Exceed Cnt] (tPortEgrMonThrLvl4ExceedCnt)	long	The value of tPortEgrMonThrLvl4ExceedCnt represents the exceed count for priority level 4.
egrMonThrLvl5ExceedCnt [Egr Mon Thr Lvl 5 Exceed Cnt] (tPortEgrMonThrLvl5ExceedCnt)	long	The value of tPortEgrMonThrLvl5ExceedCnt represents the exceed count for priority level 5.
egrMonThrLvl6ExceedCnt [Egr Mon Thr Lvl 6 Exceed Cnt] (tPortEgrMonThrLvl6ExceedCnt)	long	The value of tPortEgrMonThrLvl6ExceedCnt represents the exceed count for priority level 6.
egrMonThrLvl7ExceedCnt [Egr Mon Thr Lvl 7 Exceed Cnt] (tPortEgrMonThrLvl7ExceedCnt)	long	The value of tPortEgrMonThrLvl7ExceedCnt represents the exceed count for priority level 7.
egrMonThrLvl8ExceedCnt [Egr Mon Thr Lvl 8 Exceed Cnt] (tPortEgrMonThrLvl8ExceedCnt)	long	The value of tPortEgrMonThrLvl8ExceedCnt represents the exceed count for priority level 8.
egrMonThrPortExceedCnt [Egr Mon Thr Port Exceed Cnt] (tPortEgrMonThrPortExceedCnt)	long	The value of tPortEgrMonThrPortExceedCnt represents the exceed count for egress port scheduler.
egrMonThrStartTime [Egr Mon Thr Start Time] (tPortEgrMonThrStartTime)	long	The value of tPortEgrMonThrStartTime represents the start time for threshold monitoring.
egrMonThrTotalSamples [Egr Mon Thr Total Samples] (tPortEgrMonThrTotalSamples)	long	The value of tPortEgrMonThrTotalSamples represents total samples collected during the threshold monitoring interval.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortNetEgressStats</p> <p>MIB entry name: tmnxPortNetEgressStatsEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgressStatsTable. Entries are created and deleted by the system depending on the queue policy being used at the specific port.</p> <p>Table description (for tmnxPortNetEgressStatsTable): Defines the Nokia SROS series network port egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the physical queues being used for the ports to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • bundle.Interface • equipment.PhysicalPort 		
inProfileOctetsDropped [In Profile Octets Dropped] (tmnxPortNetEgressDroInProfOcts)	java. math. BigInteger	tmnxPortNetEgressDroInProfOcts indicates the number of conforming network egress octets dropped on this port using this queue.
inProfileOctetsForwarded [In Profile Octets Forwarded] (tmnxPortNetEgressFwdInProfOcts)	java. math. BigInteger	tmnxPortNetEgressFwdInProfOcts indicates the number of conforming network egress octets forwarded on this port using this queue.
inProfilePacketsDropped [In Profile Packets Dropped] (tmnxPortNetEgressDroInProfPkts)	java. math. BigInteger	tmnxPortNetEgressDroInProfPkts indicates the number of conforming network egress packets dropped on this port using this queue.
inProfilePacketsForwarded [In Profile Packets Forwarded] (tmnxPortNetEgressFwdInProfPkts)	java. math. BigInteger	tmnxPortNetEgressFwdInProfPkts indicates the number of conforming network egress packets forwarded on this port using this queue.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
outOfProfileOctetsDropped [Out Of Profile Octets Dropped] (tmnxPortNetEgressDroOutProfOcts)	java. math. BigInteger	tmnxPortNetEgressDroOutProfOcts indicates the number of exceeding network egress octets dropped on this port using this queue.
outOfProfileOctetsForwarded [Out Of Profile Octets Forwarded] (tmnxPortNetEgressFwdOutProfOcts)	java. math. BigInteger	tmnxPortNetEgressFwdOutProfOcts indicates the number of exceeding network egress octets forwarded on this port using this queue.
outOfProfilePacketsDropped [Out Of Profile Packets Dropped] (tmnxPortNetEgressDroOutProfPkts)	java. math. BigInteger	tmnxPortNetEgressDroOutProfPkts indicates the number of exceeding network egress packets dropped on this port using this queue.
outOfProfilePacketsForwarded [Out Of Profile Packets Forwarded] (tmnxPortNetEgressFwdOutProfPkts)	java. math. BigInteger	tmnxPortNetEgressFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this port using this queue.
queueId [Queue Id] (tmnxPortNetEgressQueueIndex)	long	tmnxPortNetEgressQueueIndex serves as the tertiary index. When used in conjunction with tmnxChassisIndex and tmnxPortPortID, it uniquely identifies a network egress queue for the specified port in the managed system.

outOfProfilePacketsForwarded [Out Of Profile Packets Forwarded] (tmnxPortNetIngressFwdOutProfPkts)	java. math. BigInteger	tmnxPortNetIngressFwdOutProfPkts indicates the number of exceeding network ingress packets forwarded on this port using this queue.
<p>PortTerminationStats</p> <p>MIB entry name: tmnxBundleMemberImaEntry</p> <p>Entry description: Each row entry represents an IMA link associated with an IMA Group.</p> <p>Table description (for tmnxBundleMemberImaTable): The tmnxBundleMemberImaTable has an entry for an IMA link associated with an IMA Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: bundle.PortTermination</p>		
bundleMemberImaErrorIcpCells [Bundle Member Ima Error Icp Cells] (tmnxBundleMemberImaErrorIcpCells)	long	tmnxBundleMemberImaErrorIcpCells indicates the number of ICP cells with HEC or CRC-10 errors.
bundleMemberImaFeRxNumFails [Bundle Member Ima Fe Rx Num Fails] (tmnxBundleMemberImaFeRxNumFails)	long	tmnxBundleMemberImaFeRxNumFails indicates the number of times that a far-end receive alarm is set on the IMA link.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaFeRxUnuseSecs [Bundle Member Ima Fe Rx Unuse Secs] (tmnxBundleMemberImaFeRxUnuseSecs)	long	tmnxBundleMemberImaFeRxUnuseSecs indicates the number of unavailable seconds at the far-end receive link state machine.
bundleMemberImaFeSevErrSecs [Bundle Member Ima Fe Sev Err Secs] (tmnxBundleMemberImaFeSevErrSecs)	long	tmnxBundleMemberImaFeSevErrSecs indicates the number of one second intervals in which the far-end contains IMA-RDI defects.
bundleMemberImaFeTxNumFails [Bundle Member Ima Fe Tx Num Fails] (tmnxBundleMemberImaFeTxNumFails)	long	tmnxBundleMemberImaFeTxNumFails indicates the number of times that a far-end transmit alarm is set on the IMA link.
bundleMemberImaFeTxUnuseSecs [Bundle Member Ima Fe Tx Unuse Secs] (tmnxBundleMemberImaFeTxUnuseSecs)	long	tmnxBundleMemberImaFeTxUnuseSecs indicates the number of unavailable seconds at the far-end transmit link state machine.
bundleMemberImaFeUnavailSecs [Bundle Member Ima Fe Unavail Secs] (tmnxBundleMemberImaFeUnavailSecs)	long	tmnxBundleMemberImaFeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaLstRxlcpCells [Bundle Member Ima Lst Rx lcp Cells] (tmnxBundleMemberImaLstRxlcpCells)	long	tmnxBundleMemberImaLstRxlcpCells indicates the number of lost ICP cells at the expected offset.
bundleMemberImaNeRxNumFails [Bundle Member Ima Ne Rx Num Fails] (tmnxBundleMemberImaNeRxNumFails)	long	tmnxBundleMemberImaNeRxNumFails indicates the number of times that a near-end receive alarm is set on the IMA link.
bundleMemberImaNeRxUnuseSecs [Bundle Member Ima Ne Rx Unuse Secs] (tmnxBundleMemberImaNeRxUnuseSecs)	long	tmnxBundleMemberImaNeRxUnuseSecs indicates the number of unavailable seconds at the near-end receive link state machine.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
bundleMemberImaNeSevErrSecs [Bundle Member Ima Ne Sev Err Secs] (tmnxBundleMemberImaNeSevErrSecs)	long	tmnxBundleMemberImaNeSevErrSecs indicates the number of one second intervals in which thirty percent or more of the near-end ICP cells are in violation, or link defects have occurred.
bundleMemberImaNeTxNumFails [Bundle Member Ima Ne Tx Num Fails] (tmnxBundleMemberImaNeTxNumFails)	long	tmnxBundleMemberImaNeTxNumFails indicates the number of times that a near-end transmit alarm is set on the IMA link.
bundleMemberImaNeTxUnuseSecs [Bundle Member Ima Ne Tx Unuse Secs] (tmnxBundleMemberImaNeTxUnuseSecs)	long	tmnxBundleMemberImaNeTxUnuseSecs indicates the number of unavailable seconds at the near-end transmit link state machine.
bundleMemberImaNeUnavailSecs [Bundle Member Ima Ne Unavail Secs] (tmnxBundleMemberImaNeUnavailSecs)	long	tmnxBundleMemberImaNeUnavailSecs indicates the number of unavailable seconds at the near-end.
bundleMemberImaOifAnomalies [Bundle Member Ima Oif Anomalies] (tmnxBundleMemberImaOifAnomalies)	long	tmnxBundleMemberImaOifAnomalies indicates the number of OIF anomalies at the near-end.
bundleMemberImaRxlcpCells [Bundle Member Ima Rx lcp Cells] (tmnxBundleMemberImaRxlcpCells)	long	tmnxBundleMemberImaRxlcpCells indicates the number of ICP cells that have been received on the IMA link.
bundleMemberImaTxlcpCells [Bundle Member Ima Tx lcp Cells] (tmnxBundleMemberImaTxlcpCells)	long	tmnxBundleMemberImaTxlcpCells indicates the number of ICP cells that have been transmitted on the IMA link.
bundleMemberImaViolations [Bundle Member Ima Violations] (tmnxBundleMemberImaViolations)	long	tmnxBundleMemberImaViolations indicates the number of ICP violations including errored, invalid or missing ICP cells.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SystemCpuMonStats</p> <p>MIB entry name: tmnxSysCpuMonEntry</p> <p>Entry description: tmnxSysCpuMonEntry contains the system level CPU monitoring statistics over a specified sample-time.</p> <p>Table description (for tmnxSysCpuMonTable): tmnxSysCpuMonTable consists of the system level CPU monitoring statistics.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.SystemStatsHolder</p>		
tmnxSysCpuMonBusyCoreUtil [Tmnx Sys Cpu Mon Busy Core Util] (tmnxSysCpuMonBusyCoreUtil)	float	The value of tmnxSysCpuMonBusyCoreUtil indicates the utilization percentage of the busiest processor core over the specified sample-time. On single core CPUs, this is the overall system utilization percentage over the specified sample-time.
tmnxSysCpuMonBusyGroupName [Tmnx Sys Cpu Mon Busy Group Name] (tmnxSysCpuMonBusyGroupName)	String	The value of tmnxSysCpuMonBusyGroupName indicates the name of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The capacity utilization of the busiest group is indicated by tmnxSysCpuMonBusyGroupUtil.
tmnxSysCpuMonBusyGroupUtil [Tmnx Sys Cpu Mon Busy Group Util] (tmnxSysCpuMonBusyGroupUtil)	float	The value of tmnxSysCpuMonBusyGroupUtil indicates the capacity utilization of the group that is running at the highest capacity utilization. Capacity utilization is the CPU utilization relative to the maximum CPU resources available to that group. A group is a set of related applications, services, tasks or protocol handlers that consumes some part of the system CPU resources. The name of the busiest group is indicated by tmnxSysCpuMonBusyGroupName.

Table 639 equipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
tmnxSysCpuMonCpuIdle [Tmnx Sys Cpu Mon Cpu Idle] (tmnxSysCpuMonCpuIdle)	float	The value of tmnxSysCpuMonCpuIdle indicates the overall percentage of CPU idleness over the specified sample-time.
tmnxSysCpuMonSampleTime [Tmnx Sys Cpu Mon Sample Time] (tmnxSysCpuMonSampleTime)	int	The value of tmnxSysCpuMonSampleTime specifies the sample-time used to calculate the utilization results for the row.
SystemCpuStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemCpuUsage [System Cpu Usage] (sgiCpuUsage)	long	The value of sgiCpuUsage indicates the current CPU utilization for the system.
SystemMemoryStats MIB entry name: sysGenInfo Supports realtime plotting Supports scheduled collection Monitored class: equipment.SystemStatsHolder		
systemMemoryUsage [System Memory Usage] (sgiMemoryUsed)	long	The value of sgiMemoryUsed indicates the total pre-allocated pool memory currently in use on the system. If the value is greater than the maximum value reportable by this object then this object reports its maximum value (4,294,967,295) and sgiKbMemoryUsed must be used to determine the total pre-allocated pool memory.

Table 640 ethernetequipment statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AccessEgrQDepthInfo</p> <p>MIB entry name: tPortAccEgrQGrpQDepthInfoEntry</p> <p>Entry description: The value of tPortAccEgrQGrpQDepthInfoEntry represents queue-depth monitoring information for each access egress port queue-group override queue for which the value of tPortAccEgrQOverMonitorDepth is set to 'true (1)'.</p> <p>Table description (for tPortAccEgrQGrpQDepthInfoTable): The value of tPortAccEgrQGrpQDepthInfoTable has an entry for each access egress port queue-group override queue for which the value of tPortAccEgrQOverMonitorDepth is set to 'true (1)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.AccessEgrQOverride</p>		
depthAvgElpsdTime [Depth Avg Elpsd Time] (tPortAccEgrQGrpQDepthAvgElpsdTme)	String	The value of tPortAccEgrQGrpQDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctInterval [Depth Avg Poll Prct Interval] (tPortAccEgrQGrpQDepthAvgPollInt)	long	The value of tPortAccEgrQGrpQDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrct1 [Depth Poll Prct 1] (tPortAccEgrQGrpQDepthPollPrct1)	double	The value of tPortAccEgrQGrpQDepthPollPrct1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrct10 [Depth Poll Prct 10] (tPortAccEgrQGrpQDepthPollPrct10)	double	The value of tPortAccEgrQGrpQDepthPollPrct10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.
depthPollPrct2 [Depth Poll Prct 2] (tPortAccEgrQGrpQDepthPollPrct2)	double	The value of tPortAccEgrQGrpQDepthPollPrct2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrCnt3 [Depth Poll PrCnt 3] (tPortAccEgrQGrpQDepthPollPrCnt3)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt4 [Depth Poll PrCnt 4] (tPortAccEgrQGrpQDepthPollPrCnt4)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt5 [Depth Poll PrCnt 5] (tPortAccEgrQGrpQDepthPollPrCnt5)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt6 [Depth Poll PrCnt 6] (tPortAccEgrQGrpQDepthPollPrCnt6)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt7 [Depth Poll PrCnt 7] (tPortAccEgrQGrpQDepthPollPrCnt7)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt8 [Depth Poll PrCnt 8] (tPortAccEgrQGrpQDepthPollPrCnt8)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt9 [Depth Poll PrCnt 9] (tPortAccEgrQGrpQDepthPollPrCnt9)	double	The value of tPortAccEgrQGrpQDepthPollPrCnt9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

Table 640 ethernetequipment statistics (continued)

depthAvgElpsdTime [Depth Avg Elpsd Time] (tPortAcclngQGrpQDepthAvgElpsdTme)	String	The value of tPortAcclngQGrpQDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctInterval [Depth Avg Poll Prct Interval] (tPortAcclngQGrpQDepthAvgPollInt)	long	The value of tPortAcclngQGrpQDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrct1 [Depth Poll Prct 1] (tPortAcclngQGrpQDepthPollPrct1)	double	The value of tPortAcclngQGrpQDepthPollPrct1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrct10 [Depth Poll Prct 10] (tPortAcclngQGrpQDepthPollPrct10)	double	The value of tPortAcclngQGrpQDepthPollPrct10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.
depthPollPrct2 [Depth Poll Prct 2] (tPortAcclngQGrpQDepthPollPrct2)	double	The value of tPortAcclngQGrpQDepthPollPrct2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrct3 [Depth Poll Prct 3] (tPortAcclngQGrpQDepthPollPrct3)	double	The value of tPortAcclngQGrpQDepthPollPrct3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrct4 [Depth Poll Prct 4] (tPortAcclngQGrpQDepthPollPrct4)	double	The value of tPortAcclngQGrpQDepthPollPrct4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrct5 [Depth Poll Prct 5] (tPortAcclngQGrpQDepthPollPrct5)	double	The value of tPortAcclngQGrpQDepthPollPrct5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrct6 [Depth Poll Prct 6] (tPortAcclngQGrpQDepthPollPrct6)	double	The value of tPortAcclngQGrpQDepthPollPrct6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrct7 [Depth Poll Prct 7] (tPortAcclngQGrpQDepthPollPrct7)	double	The value of tPortAcclngQGrpQDepthPollPrct7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrct8 [Depth Poll Prct 8] (tPortAcclngQGrpQDepthPollPrct8)	double	The value of tPortAcclngQGrpQDepthPollPrct8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrct9 [Depth Poll Prct 9] (tPortAcclngQGrpQDepthPollPrct9)	double	The value of tPortAcclngQGrpQDepthPollPrct9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>AdditionalEthernetStats</p> <p>MIB entry name: tmnxPortEtherEntry</p> <p>Entry description: Each row entry represents an Ethernet port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. Before an IOM card entry can be deleted from the tmnxMDATable, its supported tmnxPortEntry and tmnxPortEtherEntry rows must be in the proper state for removal. The tmnxPortEtherEntry contains attributes that are unique to the Ethernet TmnxPortType.</p> <p>Table description (for tmnxPortEtherTable): The tmnxPortEtherTable has an entry for each Ethernet (faste, gige, xcme or xgige) port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
highCapacityPackets1519toMaxFrameSize [High Capacity Packets 1519 to Max Frame Size] (tmnxPortEtherHCPkts1519toMax)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 1519 octets in length and the maximum frame size, usually 12287 octets inclusive (excluding framing bits but including FCS octets). The lower 32-bits of this 64-bit counter will equal the value of tmnxPortEtherHCPkts1519toMax. The high 32-bits of this counter will equal the value of tmnxPortEtherHCOverPkts1519toMax.
packets1519toMaxFrameSize [Packets 1519 to Max Frame Size] (tmnxPortEtherPkts1519toMax)	long	The total number of packets received that were longer than 1518 octets but less than the maximum frame size for the particular medium, usually 12287 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CohOptPortStats</p> <p>MIB entry name: tmnxCohOptPortStatsEntry</p> <p>Entry description: Each row entry includes statistics for a DWDM coherent optical port in the system. Entries cannot be created or deleted via SNMP SET operations.</p> <p>Table description (for tmnxCohOptPortStatsTable): The tmnxCohOptPortStatsTable contains statistics information for DWDM coherent optical ports in the Nokia SROS system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
cohOptPortRxBER [Coh Opt Port Rx BER] (tmnxCohOptPortRxBER)	long	The value of tmnxCohOptPortRxBER indicates the RX Bit Error Rate (BER) since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERAvg [Coh Opt Port Rx BERAvg] (tmnxCohOptPortRxBERAvg)	long	The value of tmnxCohOptPortRxBERAvg indicates the RX average BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERMax [Coh Opt Port Rx BERMax] (tmnxCohOptPortRxBERMax)	long	The value of tmnxCohOptPortRxBERMax indicates the RX maximum BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxBERMin [Coh Opt Port Rx BERMin] (tmnxCohOptPortRxBERMin)	long	The value of tmnxCohOptPortRxBERMin indicates the RX minimum BER since the last port statistics clear, represented as an IEEE 754 32-bit floating point number.
cohOptPortRxChromaticDisp [Coh Opt Port Rx Chromatic Disp] (tmnxCohOptPortRxChromaticDisp)	long	The value of tmnxCohOptPortRxChromaticDisp indicates the RX chromatic dispersion since the last port statistics clear.
cohOptPortRxChromaticDispAvg [Coh Opt Port Rx Chromatic Disp Avg] (tmnxCohOptPortRxChromaticDispAvg)	long	The value of tmnxCohOptPortRxChromaticDispAvg indicates the RX average chromatic dispersion since the last port statistics clear.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxChromaticDispMax [Coh Opt Port Rx Chromatic Disp Max] (tmnxCohOptPortRxChromaticDispMax)	long	The value of tmnxCohOptPortRxChromaticDispMax indicates the RX maximum chromatic dispersion since the last port statistics clear.
cohOptPortRxChromaticDispMin [Coh Opt Port Rx Chromatic Disp Min] (tmnxCohOptPortRxChromaticDispMin)	long	The value of tmnxCohOptPortRxChromaticDispMin indicates the RX minimum chromatic dispersion since the last port statistics clear.
cohOptPortRxDiffGrpDly [Coh Opt Port Rx Diff Grp Dly] (tmnxCohOptPortRxDiffGrpDly)	long	The value of tmnxCohOptPortRxDiffGrpDly indicates the RX differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyAvg [Coh Opt Port Rx Diff Grp Dly Avg] (tmnxCohOptPortRxDiffGrpDlyAvg)	long	The value of tmnxCohOptPortRxDiffGrpDlyAvg indicates the RX average differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyMax [Coh Opt Port Rx Diff Grp Dly Max] (tmnxCohOptPortRxDiffGrpDlyMax)	long	The value of tmnxCohOptPortRxDiffGrpDlyMax indicates the RX maximum differential group delay since the last port statistics clear.
cohOptPortRxDiffGrpDlyMin [Coh Opt Port Rx Diff Grp Dly Min] (tmnxCohOptPortRxDiffGrpDlyMin)	long	The value of tmnxCohOptPortRxDiffGrpDlyMin indicates the RX minimum differential group delay since the last port statistics clear.
cohOptPortRxFreqOffset [Coh Opt Port Rx Freq Offset] (tmnxCohOptPortRxFreqOffset)	long	The value of tmnxCohOptPortRxFreqOffset indicates the RX frequency offset since the last port statistics clear.
cohOptPortRxFreqOffsetAvg [Coh Opt Port Rx Freq Offset Avg] (tmnxCohOptPortRxFreqOffsetAvg)	long	The value of tmnxCohOptPortRxFreqOffsetAvg indicates the RX average frequency offset since the last port statistics clear.
cohOptPortRxFreqOffsetMax [Coh Opt Port Rx Freq Offset Max] (tmnxCohOptPortRxFreqOffsetMax)	long	The value of tmnxCohOptPortRxFreqOffsetMax indicates the RX maximum frequency offset since the last port statistics clear.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxFreqOffsetMin [Coh Opt Port Rx Freq Offset Min] (tmnxCohOptPortRxFreqOffsetMin)	long	The value of tmnxCohOptPortRxFreqOffsetMin indicates the RX minimum frequency offset since the last port statistics clear.
cohOptPortRxFreqPower [Coh Opt Port Rx Power] (tmnxCohOptPortRxFreqPower)	float	The value of tmnxCohOptPortRxFreqPower indicates the RX optical power since the last port statistics clear.
cohOptPortRxFreqPowerAvg [Coh Opt Port Rx Power Avg] (tmnxCohOptPortRxFreqPowerAvg)	float	The value of tmnxCohOptPortRxFreqPowerAvg indicates the RX average optical power since the last port statistics clear.
cohOptPortRxFreqPowerMax [Coh Opt Port Rx Power Max] (tmnxCohOptPortRxFreqPowerMax)	float	The value of tmnxCohOptPortRxFreqPowerMax indicates the RX maximum optical power since the last port statistics clear.
cohOptPortRxFreqPowerMin [Coh Opt Port Rx Power Min] (tmnxCohOptPortRxFreqPowerMin)	float	The value of tmnxCohOptPortRxFreqPowerMin indicates the RX minimum optical power since the last port statistics clear.
cohOptPortRxQ [Coh Opt Port Rx Q] (tmnxCohOptPortRxQ)	long	The value of tmnxCohOptPortRxQ indicates the RX Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQAvg [Coh Opt Port Rx QAvg] (tmnxCohOptPortRxQAvg)	long	The value of tmnxCohOptPortRxQAvg indicates the RX average Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQMax [Coh Opt Port Rx QMax] (tmnxCohOptPortRxQMax)	long	The value of tmnxCohOptPortRxQMax indicates the RX maximum Q since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxQMin [Coh Opt Port Rx QMin] (tmnxCohOptPortRxQMin)	long	The value of tmnxCohOptPortRxQMin indicates the RX minimum Q since the last port statistics clear, represented in tenths of a dB.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cohOptPortRxSNR [Coh Opt Port Rx SNR] (tmnxCohOptPortRxSNR)	long	The value of tmnxCohOptPortRxSNR indicates the RX Signal-to-Noise Ratio (SNR) since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRAvg [Coh Opt Port Rx SNRAvg] (tmnxCohOptPortRxSNRAvg)	long	The value of tmnxCohOptPortRxSNRAvg indicates the RX average SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRMax [Coh Opt Port Rx SNRMax] (tmnxCohOptPortRxSNRMax)	long	The value of tmnxCohOptPortRxSNRMax indicates the RX maximum SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortRxSNRMin [Coh Opt Port Rx SNRMin] (tmnxCohOptPortRxSNRMin)	long	The value of tmnxCohOptPortRxSNRMin indicates the RX minimum SNR since the last port statistics clear, represented in tenths of a dB.
cohOptPortStatsElapsedSec [Coh Opt Port Stats Elapsed Sec] (tmnxCohOptPortStatsElapsedSec)	long	The value of tmnxCohOptPortStatsElapsedSec indicates the number of elapsed seconds since the start of coherent optical stats collection after the last port statistics clear.
cohOptPortTxPower [Coh Opt Port Tx Power] (tmnxCohOptPortTxPower)	float	The value of tmnxCohOptPortTxPower indicates the TX optical power since the last port statistics clear.
cohOptPortTxPowerAvg [Coh Opt Port Tx Power Avg] (tmnxCohOptPortTxPowerAvg)	float	The value of tmnxCohOptPortTxPowerAvg indicates the TX average optical power since the last port statistics clear.
cohOptPortTxPowerMax [Coh Opt Port Tx Power Max] (tmnxCohOptPortTxPowerMax)	float	The value of tmnxCohOptPortTxPowerMax indicates the TX maximum optical power since the last port statistics clear.
cohOptPortTxPowerMin [Coh Opt Port Tx Power Min] (tmnxCohOptPortTxPowerMin)	float	The value of tmnxCohOptPortTxPowerMin indicates the TX minimum optical power since the last port statistics clear.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>Dot3Stats</p> <p>MIB entry name: dot3StatsEntry</p> <p>Entry description: Statistics for a particular interface to an ethernet-like medium.</p> <p>Table description (for dot3StatsTable): Statistics for a collection of ethernet-like interfaces attached to a particular system. There will be one row in this table for each ethernet-like interface in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
<p>alignmentErrors [Alignment Errors] (dot3StatsAlignmentErrors)</p>	<p>long</p>	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. This counter does not increment for group encoding schemes greater than 4 bits per group. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsAlignmentErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
carrierSenseErrors [Carrier Sense Errors] (dot3StatsCarrierSenseErrors)	long	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface. The count represented by an instance of this object is incremented at most once per transmission attempt, even if the carrier sense condition fluctuates during a transmission attempt. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
deferredTransmissions [Deferred Transmissions] (dot3StatsDeferredTransmissions)	long	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
duplex [Duplex] (dot3StatsDuplexStatus)	int	The current mode of operation of the MAC entity. 'unknown' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
excessiveCollisions [Excessive Collisions] (dot3StatsExcessiveCollisions)	long	A count of frames for which transmission on a particular interface fails due to excessive collisions. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
fcsErrors [Fcs Errors] (dot3StatsFCSErrors)	long	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. Note: Coding errors detected by the physical layer for speeds above 10 Mb/s will cause the frame to fail the FCS check. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFCSErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
frameTooLongs [Frame Too Longs] (dot3StatsFrameTooLongs)	long	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions pertain are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC. For interfaces operating at 10 Gb/s, this counter can roll over in less than 80 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsFrameTooLongs object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacReceiveErrors [Internal Mac Receive Errors] (dot3StatsInternalMacReceiveErrors)	long	A count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacReceiveErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
internalMacTransmitErrors [Internal Mac Transmit Errors] (dot3StatsInternalMacTransmitErrors)	long	A count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object. The precise meaning of the count represented by an instance of this object is implementation- specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsInternalMacTransmitErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
lateCollisions [Late Collisions] (dot3StatsLateCollisions)	long	The number of times that a collision is detected on a particular interface later than one slotTime into the transmission of a packet. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
multipleCollisionFrames [Multiple Collision Frames] (dot3StatsMultipleCollisionFrames)	long	A count of frames that are involved in more than one collision and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
singleCollisionFrames [Single Collision Frames] (dot3StatsSingleCollisionFrames)	long	A count of frames that are involved in a single collision, and are subsequently transmitted successfully. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrames object. This counter does not increment when the interface is operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.
sqeTestErrors [Sqe Test Errors] (dot3StatsSQETestErrors)	long	A count of times that the SQE TEST ERROR is received on a particular interface. The SQE TEST ERROR is set in accordance with the rules for verification of the SQE detection mechanism in the PLS Carrier Sense Function as described in IEEE Std. 802.3, 2000 Edition, section 7.2.4.6. This counter does not increment on interfaces operating at speeds greater than 10 Mb/s, or on interfaces operating in full-duplex mode. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
symbolErrors [Symbol Errors] (dot3StatsSymbolErrors)	long	<p>For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present. For an interface operating in half-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than slotTime, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' or 'carrier extend error' on the GMII. For an interface operating in full-duplex mode at 1000 Mb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Data reception error' on the GMII. For an interface operating at 10 Gb/s, the number of times the receiving media is non-idle (a carrier event) for a period of time equal to or greater than minFrameSize, and during which there was at least one occurrence of an event that causes the PHY to indicate 'Receive Error' on the XGMII. The count represented by an instance of this object is incremented at most once per carrier event, even if multiple symbol errors occur during the carrier event. This count does not increment if a collision is present. This counter does not increment when the interface is operating at 10 Mb/s. For interfaces operating at 10 Gb/s, this counter can roll over in less than 5 minutes if it is incrementing at its maximum rate. Since that amount of time could be less than a management station's poll cycle time, in order to avoid a loss of information, a management station is advised to poll the dot3HCStatsSymbolErrors object for 10 Gb/s or faster interfaces. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of ifCounterDiscontinuityTime.</p>

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets64Octets [Packets 64 Octets] (etherStatsHighCapacityPkts64Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsHighCapacityPkts65to127Octets)	java. math. BigInteger	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalOctets [Total Octets] (etherStatsHighCapacityOctets)	java. math. BigInteger	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). If the network is half-duplex Fast Ethernet, this object can be used as a reasonable estimate of utilization. If greater precision is desired, the etherStatsHighCapacityPkts and etherStatsHighCapacityOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (.96 + .64) + (Octets * .08)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent. This table is not appropriate for monitoring full-duplex ethernets. If the network is a full-duplex ethernet and the medialIndependentTable is monitoring that network, the utilization can be calculated as follows: 1) Determine the utilization of the inbound path by using the appropriate equation (for ethernet or fast ethernet) to determine the utilization, substituting medialIndependentInPkts for etherStatsHighCapacityPkts, and medialIndependentInOctets for etherStatsHighCapacityOctets. Call the resulting utilization inUtilization. 2) Determine the utilization of the outbound path by using the same equation to determine the utilization, substituting medialIndependentOutPkts for etherStatsHighCapacityPkts, and medialIndependentOutOctets for etherStatsHighCapacityOctets. Call the resulting utilization outUtilization. 3) The utilization is the maximum of inUtilization and outUtilization. This metric shows the amount of percentage of bandwidth that is left before congestion will be experienced on the link.
totalPackets [Total Packets] (etherStatsHighCapacityPkts)	java. math. BigInteger	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>EthernetStats</p> <p>MIB entry name: etherStatsEntry</p> <p>Entry description: A collection of statistics kept for a particular Ethernet interface. As an example, an instance of the etherStatsPkts object might be named etherStatsPkts.1</p> <p>Table description (for etherStatsTable): A list of Ethernet statistics entries.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort • pxc.PortCrossConnectSubPort 		
broadcastPackets [Broadcast Packets] (etherStatsBroadcastPkts)	long	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
collisions [Collisions] (etherStatsCollisions)	long	The best estimate of the total number of collisions on this Ethernet segment. The value returned will depend on the location of the RMON probe. Section 8.2.1.3 (10BASE-5) and section 10.3.1.3 (10BASE-2) of IEEE standard 802.3 states that a station must detect a collision, in the receive mode, if three or more stations are transmitting simultaneously. A repeater port must detect a collision when two or more stations are transmitting simultaneously. Thus a probe placed on a repeater port could record more collisions than a probe connected to a station on the same segment would. Probe location plays a much smaller role when considering 10BASE-T. 14.2.1.4 (10BASE-T) of IEEE standard 802.3 defines a collision as the simultaneous presence of signals on the DO and RD circuits (transmitting and receiving at the same time). A 10BASE-T station can only detect collisions when it is transmitting. Thus probes placed on a station and a repeater, should report the same number of collisions. Note also that an RMON probe inside a repeater should ideally report collisions between the repeater and one or more other hosts (transmit collisions as defined by IEEE 802.3k) plus receiver collisions observed on any coax segments to which the repeater is connected.
crcAlignErrors [Crc Align Errors] (etherStatsCRCAlignErrors)	long	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
dropEvents [Drop Events] (etherStatsDropEvents)	long	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fragments [Fragments] (etherStatsFragments)	long	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
jabbers [Jabbers] (etherStatsJabbers)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Note that this definition of jabber is different than the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
multicastPackets [Multicast Packets] (etherStatsMulticastPkts)	long	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
oversizePackets [Oversize Packets] (etherStatsOversizePkts)	long	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
packets1024to1518Octets [Packets 1024 to 1518 Octets] (etherStatsPkts1024to1518Octets)	long	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
packets128to255Octets [Packets 128 to 255 Octets] (etherStatsPkts128to255Octets)	long	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packets256to511Octets [Packets 256 to 511 Octets] (etherStatsPkts256to511Octets)	long	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
packets512to1023Octets [Packets 512 to 1023 Octets] (etherStatsPkts512to1023Octets)	long	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
packets64Octets [Packets 64 Octets] (etherStatsPkts64Octets)	long	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
packets65to127Octets [Packets 65 to 127 Octets] (etherStatsPkts65to127Octets)	long	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
totalOctets [Total Octets] (etherStatsOctets)	long	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). This object can be used as a reasonable estimate of 10-Megabit ethernet utilization. If greater precision is desired, the etherStatsPkts and etherStatsOctets objects should be sampled before and after a common interval. The differences in the sampled values are Pkts and Octets, respectively, and the number of seconds in the interval is Interval. These values are used to calculate the Utilization as follows: $Pkts * (9.6 + 6.4) + (Octets * .8)$ Utilization = - Interval * 10,000 The result of this equation is the value Utilization which is the percent utilization of the ethernet segment on a scale of 0 to 100 percent.
totalPackets [Total Packets] (etherStatsPkts)	long	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
undersizePackets [Undersize Packets] (etherStatsUndersizePkts)	long	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
<p>NetworkEgrQDepthInfo</p> <p>MIB entry name: tPortNetEgrQGrpQDepthInfoEntry</p> <p>Entry description: The value of tPortNetEgrQGrpQDepthInfoEntry represents queue-depth monitoring information for each network egress port queue-group override queue for which the value of tPortNetEgrQOverMonitorDepth is set to 'true (1)'.</p> <p>Table description (for tPortNetEgrQGrpQDepthInfoTable): The value of tPortNetEgrQGrpQDepthInfoTable has an entry for each network egress port queue-group override queue for which the value of tPortNetEgrQOverMonitorDepth is set to 'true (1)'.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQOverride</p>		
depthAvgElpsdTime [Depth Avg Elpsd Time] (tPortNetEgrQGrpQDepthAvgElpsdTme)	String	The value of tPortNetEgrQGrpQDepthAvgElpsdTme represents the average elapsed time since the start of queue-depth monitoring or the last monitoring clear.
depthAvgPollPrctInterval [Depth Avg Poll Prct Interval] (tPortNetEgrQGrpQDepthAvgPollInt)	long	The value of tPortNetEgrQGrpQDepthAvgPollInt represents the weighted average polling interval for the elapsed time.
depthPollPrct1 [Depth Poll Prct 1] (tPortNetEgrQGrpQDepthPollPrct1)	double	The value of tPortNetEgrQGrpQDepthPollPrct1 represents the percentage of polls in occupancy range of 0 to 10 percent for the queue depths seen during the polling elapsed time.
depthPollPrct10 [Depth Poll Prct 10] (tPortNetEgrQGrpQDepthPollPrct10)	double	The value of tPortNetEgrQGrpQDepthPollPrct10 represents the percentage of polls in occupancy range of 91 to 100 percent for the queue depths seen during the polling elapsed time.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
depthPollPrCnt2 [Depth Poll PrCnt 2] (tPortNetEgrQGrpQDepthPollPrCnt2)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt2 represents the percentage of polls in occupancy range of 11 to 20 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt3 [Depth Poll PrCnt 3] (tPortNetEgrQGrpQDepthPollPrCnt3)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt3 represents the percentage of polls in occupancy range of 21 to 30 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt4 [Depth Poll PrCnt 4] (tPortNetEgrQGrpQDepthPollPrCnt4)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt4 represents the percentage of polls in occupancy range of 31 to 40 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt5 [Depth Poll PrCnt 5] (tPortNetEgrQGrpQDepthPollPrCnt5)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt5 represents the percentage of polls in occupancy range of 41 to 50 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt6 [Depth Poll PrCnt 6] (tPortNetEgrQGrpQDepthPollPrCnt6)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt6 represents the percentage of polls in occupancy range of 51 to 60 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt7 [Depth Poll PrCnt 7] (tPortNetEgrQGrpQDepthPollPrCnt7)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt7 represents the percentage of polls in occupancy range of 61 to 70 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt8 [Depth Poll PrCnt 8] (tPortNetEgrQGrpQDepthPollPrCnt8)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt8 represents the percentage of polls in occupancy range of 71 to 80 percent for the queue depths seen during the polling elapsed time.
depthPollPrCnt9 [Depth Poll PrCnt 9] (tPortNetEgrQGrpQDepthPollPrCnt9)	double	The value of tPortNetEgrQGrpQDepthPollPrCnt9 represents the percentage of polls in occupancy range of 81 to 90 percent for the queue depths seen during the polling elapsed time.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OtulfStats</p> <p>MIB entry name: tmnxOtulfRawStatsEntry</p> <p>Entry description: The tmnxOtulfRawStatsEntry stores the statistics for an individual OTU interface. tmnxOtulfRawStatsEntry rows are created and destroyed by the system when rows are added or removed in the tmnxOtulfTable.</p> <p>Table description (for tmnxOtulfRawStatsTable): The tmnxOtulfRawStatsTable consists of the raw statistics associated with the OTU interfaces contained in the tmnxOtulfTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		
elapsedSec [Elapsed Sec] (tmnxOtulfRawStatsElapsedSec)	long	The value of tmnxOtulfRawStatsElapsedSec indicates the number of Elapsed seconds since the last OTU raw statistics clearing.
feCes [Fe Ces] (tmnxOtulfRawStatsFECES)	long	The value of tmnxOtulfRawStatsFECES indicates the number of Forward Error Correction (FEC) Errors Seconds (ES).
fecCorrOnes [Fec Corr Ones] (tmnxOtulfRawStatsFECCorrOnes)	long	The value of tmnxOtulfRawStatsFECCorrOnes indicates the number of Forward Error Correction (FEC) corrected ones.
fecCorrZeros [Fec Corr Zeros] (tmnxOtulfRawStatsFECCorrZeros)	long	The value of tmnxOtulfRawStatsFECCorrZeros indicates the number of Forward Error Correction (FEC) corrected zeros.
fecSes [Fec Ses] (tmnxOtulfRawStatsFECSES)	long	The value of tmnxOtulfRawStatsFECSES indicates the number of Forward Error Correction (FEC) Severely Errors Seconds (SES).
fecUas [Fec Uas] (tmnxOtulfRawStatsFECUAS)	long	The value of tmnxOtulfRawStatsFECUAS indicates the number of Forward Error Correction (FEC) Unavailable Seconds (UAS).

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fecUncorrSr [Fec Uncorr Sr] (tmnxOtuIfRawStatsFECUncorrSR)	long	The value of tmnxOtuIfRawStatsFECUncorrSR indicates the number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcFecCorrOnes [Hc Fec Corr Ones] (tmnxOtuIfRawStatsHCFECCorrOnes)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrOnes indicates the High Capacity number of Forward Error Correction (FEC) corrected ones.
hcFecCorrZeros [Hc Fec Corr Zeros] (tmnxOtuIfRawStatsHCFECCorrZeros)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrZeros indicates the High Capacity number of Forward Error Correction (FEC) corrected zeros.
hcFecUncorrSr [Hc Fec Uncorr Sr] (tmnxOtuIfRawStatsHCFECCorrSR)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCFECCorrSR indicates the High Capacity number of Forward Error Correction (FEC) Uncorrectable Sub-Rows.
hcPmBei [Hc Pm Bei] (tmnxOtuIfRawStatsHCPMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBEI indicates the High Capacity number of Path Monitoring (PM) Backward Error Indication (BEI) errors.
hcPmBip8 [Hc Pm Bip 8] (tmnxOtuIfRawStatsHCPMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCPMBIP8 indicates the High Capacity number of Path Monitoring (PM) BIP8 errors.
hcSmBei [Hc Sm Bei] (tmnxOtuIfRawStatsHCSMBEI)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBEI indicates the High Capacity number of Section Monitoring (SM) Backward Error Indication (BEI) errors.
hcSmBip8 [Hc Sm Bip 8] (tmnxOtuIfRawStatsHCSMBIP8)	java. math. BigInteger	The value of tmnxOtuIfRawStatsHCSMBIP8 indicates the High Capacity number of Section Monitoring (SM) BIP8 errors.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
npj [Npj] (tmnxOtuIfRawStatsNPJ)	long	The value of tmnxOtuIfRawStatsNPJ indicates the number of Negative Pointer justifications that occurred during the asynchronous demapping of the received payload inside the OTU frame.
ofFecCorrOnes [Of Fec Corr Ones] (tmnxOtuIfRawStatsOFFECCorrOnes)	long	The value of tmnxOtuIfRawStatsOFFECCorrOnes indicates the number of times the tmnxOtuIfRawStatsFECCorrOnes overflowed.
ofFecCorrZeros [Of Fec Corr Zeros] (tmnxOtuIfRawStatsOFFECCorrZeros)	long	The value of tmnxOtuIfRawStatsOFFECCorrZeros indicates the number of times the tmnxOtuIfRawStatsFECCorrZeros overflowed.
ofFecUncorrSr [Of Fec Uncorr Sr] (tmnxOtuIfRawStatsOFFECUncorrSR)	long	The value of tmnxOtuIfRawStatsOFFECUncorrSR indicates the number of times the tmnxOtuIfRawStatsFECUncorrSR overflowed.
ofPmBei [Of Pm Bei] (tmnxOtuIfRawStatsOFPMBEI)	long	The value of tmnxOtuIfRawStatsOFPMBEI indicates the number of times tmnxOtuIfRawStatsPMBEI overflowed.
ofPmBip8 [Of Pm Bip 8] (tmnxOtuIfRawStatsOFPMBIP8)	long	The value of tmnxOtuIfRawStatsOFPMBIP8 indicates the number of times the tmnxOtuIfRawStatsPMBIP8 overflowed.
ofSmBei [Of Sm Bei] (tmnxOtuIfRawStatsOFSMBEI)	long	The value of tmnxOtuIfRawStatsOFSMBEI indicates the number of times the tmnxOtuIfRawStatsSMBEI overflowed.
ofSmBip8 [Of Sm Bip 8] (tmnxOtuIfRawStatsOF SMBIP8)	long	The value of tmnxOtuIfRawStatsOF SMBIP8 indicates the number of times the tmnxOtuIfRawStatsSMBIP8 overflowed.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls1StFwdOcts [Port Egr Exp Shaper Cls 1 St Fwd Octs] (tPortEgrExpShaperCls1StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StFwdOcts indicates the number of octets forwarded by the class '1' egress expanded shaper.
portEgrExpShaperCls1StFwdPkts [Port Egr Exp Shaper Cls 1 St Fwd Pkts] (tPortEgrExpShaperCls1StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StFwdPkts indicates the number of packets forwarded by the class '1' egress expanded shaper.
portEgrExpShaperCls1StMonOvrOct [Port Egr Exp Shaper Cls 1 St Mon Ovr Oct] (tPortEgrExpShaperCls1StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls1StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '1' egress expanded shaper.
portEgrExpShaperCls2StFwdOcts [Port Egr Exp Shaper Cls 2 St Fwd Octs] (tPortEgrExpShaperCls2StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StFwdOcts indicates the number of octets forwarded by the class '2' egress expanded shaper.
portEgrExpShaperCls2StFwdPkts [Port Egr Exp Shaper Cls 2 St Fwd Pkts] (tPortEgrExpShaperCls2StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StFwdPkts indicates the number of packets forwarded by the class '2' egress expanded shaper.
portEgrExpShaperCls2StMonOvrOct [Port Egr Exp Shaper Cls 2 St Mon Ovr Oct] (tPortEgrExpShaperCls2StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls2StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '2' egress expanded shaper.
portEgrExpShaperCls3StFwdOcts [Port Egr Exp Shaper Cls 3 St Fwd Octs] (tPortEgrExpShaperCls3StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StFwdOcts indicates the number of octets forwarded by the class '3' egress expanded shaper.
portEgrExpShaperCls3StFwdPkts [Port Egr Exp Shaper Cls 3 St Fwd Pkts] (tPortEgrExpShaperCls3StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StFwdPkts indicates the number of packets forwarded by the class '3' egress expanded shaper.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls3StMonOvrOct [Port Egr Exp Shaper Cls 3 St Mon Ovr Oct] (tPortEgrExpShaperCls3StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls3StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '3' egress expanded shaper.
portEgrExpShaperCls4StFwdOcts [Port Egr Exp Shaper Cls 4 St Fwd Octs] (tPortEgrExpShaperCls4StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StFwdOcts indicates the number of octets forwarded by the class '4' egress expanded shaper.
portEgrExpShaperCls4StFwdPkts [Port Egr Exp Shaper Cls 4 St Fwd Pkts] (tPortEgrExpShaperCls4StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StFwdPkts indicates the number of packets forwarded by the class '4' egress expanded shaper.
portEgrExpShaperCls4StMonOvrOct [Port Egr Exp Shaper Cls 4 St Mon Ovr Oct] (tPortEgrExpShaperCls4StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls4StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '4' egress expanded shaper.
portEgrExpShaperCls5StFwdOcts [Port Egr Exp Shaper Cls 5 St Fwd Octs] (tPortEgrExpShaperCls5StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StFwdOcts indicates the number of octets forwarded by the class '5' egress expanded shaper.
portEgrExpShaperCls5StFwdPkts [Port Egr Exp Shaper Cls 5 St Fwd Pkts] (tPortEgrExpShaperCls5StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StFwdPkts indicates the number of packets forwarded by the class '5' egress expanded shaper.
portEgrExpShaperCls5StMonOvrOct [Port Egr Exp Shaper Cls 5 St Mon Ovr Oct] (tPortEgrExpShaperCls5StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls5StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '5' egress expanded shaper.
portEgrExpShaperCls6StFwdOcts [Port Egr Exp Shaper Cls 6 St Fwd Octs] (tPortEgrExpShaperCls6StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StFwdOcts indicates the number of octets forwarded by the class '6' egress expanded shaper.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portEgrExpShaperCls6StFwdPkts [Port Egr Exp Shaper Cls 6 St Fwd Pkts] (tPortEgrExpShaperCls6StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StFwdPkts indicates the number of packets forwarded by the class '6' egress expanded shaper.
portEgrExpShaperCls6StMonOvrOct [Port Egr Exp Shaper Cls 6 St Mon Ovr Oct] (tPortEgrExpShaperCls6StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls6StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '6' egress expanded shaper.
portEgrExpShaperCls7StFwdPkts [Port Egr Exp Shaper Cls 7 St Fwd Pkts] (tPortEgrExpShaperCls7StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StFwdPkts indicates the number of packets forwarded by the class '7' egress expanded shaper.
portEgrExpShaperCls7StFwdOcts [Port Egr Exp Shaper Cls 7 St Fwd Octs] (tPortEgrExpShaperCls7StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StFwdOcts indicates the number of octets forwarded by the class '7' egress expanded shaper.
portEgrExpShaperCls7StMonOvrOct [Port Egr Exp Shaper Cls 7 St Mon Ovr Oct] (tPortEgrExpShaperCls7StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls7StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '7' egress expanded shaper.
portEgrExpShaperCls8StFwdPkts [Port Egr Exp Shaper Cls 8 St Fwd Pkts] (tPortEgrExpShaperCls8StFwdPkts)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StFwdPkts indicates the number of packets forwarded by the class '8' egress expanded shaper.
portEgrExpShaperCls8StFwdOcts [Port Egr Exp Shaper Cls 8 St Fwd Octs] (tPortEgrExpShaperCls8StFwdOcts)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StFwdOcts indicates the number of octets forwarded by the class '8' egress expanded shaper.
portEgrExpShaperCls8StMonOvrOct [Port Egr Exp Shaper Cls 8 St Mon Ovr Oct] (tPortEgrExpShaperCls8StMonOvrOct)	java. math. BigInteger	The value of tPortEgrExpShaperCls8StMonOvrOct indicates the number of octets above the configured monitor-threshold (since last read) by the class '8' egress expanded shaper.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortIngQosQueueStat MIB entry name: tmnxPortIngQosQStatEntry Entry description: Ingress statistics about a specific port's QoS queue-group queue. Table description (for tmnxPortIngQosQStatTable): A table that contains ingress QoS queue-group queue port statistics. Supports realtime plotting Does not support scheduled collection Monitored class: ethernetequipment.AccessIngrQGroup</p>		
portIngQosQStatDpdHiPrioOcts [Port Ing Qos QStat Dpd Hi Prio Octs] (tmnxPortIngQosQStatDpdHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdHiPrioPkts [Port Ing Qos QStat Dpd Hi Prio Pkts] (tmnxPortIngQosQStatDpdHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioOcts [Port Ing Qos QStat Dpd Lo Prio Octs] (tmnxPortIngQosQStatDpdLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatDpdLoPrioPkts [Port Ing Qos QStat Dpd Lo Prio Pkts] (tmnxPortIngQosQStatDpdLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatDpdLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
portIngQosQStatFwdInProfOcts [Port Ing Qos QStat Fwd In Prof Octs] (tmnxPortIngQosQStatFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdInProfPkts [Port Ing Qos QStat Fwd In Prof Pkts] (tmnxPortIngQosQStatFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdInProfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatFwdOutProfOcts [Port Ing Qos QStat Fwd Out Prof Octs] (tmnxPortIngQosQStatFwdOutProfOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatFwdOutProfPkts [Port Ing Qos QStat Fwd Out Prof Pkts] (tmnxPortIngQosQStatFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatFwdOutProfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
portIngQosQStatOffHiPrioOcts [Port Ing Qos QStat Off Hi Prio Octs] (tmnxPortIngQosQStatOffHiPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioOcts indicates the number of high priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffHiPrioPkts [Port Ing Qos QStat Off Hi Prio Pkts] (tmnxPortIngQosQStatOffHiPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffHiPrioPkts indicates the number of high priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioOcts [Port Ing Qos QStat Off Lo Prio Octs] (tmnxPortIngQosQStatOffLoPrioOcts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioOcts indicates the number of low priority octets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatOffLoPrioPkts [Port Ing Qos QStat Off Lo Prio Pkts] (tmnxPortIngQosQStatOffLoPrioPkts)	java. math. BigInteger	The value of tmnxPortIngQosQStatOffLoPrioPkts indicates the number of low priority packets, as determined by the port ingress QoS policy, offered by the Pchip to the Qchip.
portIngQosQStatQueueId [Port Ing Qos QStat Queue Id] (tmnxPortIngQosQStatQueueId)	long	The value of tmnxPortIngQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
portIngQosQStatUncolOctsOff [Port Ing Qos QStat Uncol Octs Off] (tmnxPortIngQosQStatUncolOctsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolOctsOff indicates the number of uncolored octets offered to the ingress Qchip.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portIngQosQStatUncolPktsOff [Port Ing Qos QStat Uncol Pkts Off] (tmnxPortIngQosQStatUncolPktsOff)	java. math. BigInteger	The value of tmnxPortIngQosQStatUncolPktsOff indicates the number of uncolored packets offered to the ingress Qchip.
<p>PortNetEgrQGrpArbitStat</p> <p>MIB entry name: tPortNetEgrQGrpArbitStatEntry</p> <p>Entry description: The value of tPortNetEgrQGrpArbitStatEntry defines an entry in the tPortNetEgrQGrpArbitStatTable. portNetEgrQGrpPStFwdInPlusProfOcts [Port Net Egr QGrp PSt Fwd In Plus Prof Octs] (tPortNetEgrQGrpPStFwdInPProfOcts)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStFwdInPProfOcts indicates the number of inplus-profile octets forwarded by the egress Pchip.
portNetEgrQGrpPStFwdInPlusProfPkts [Port Net Egr QGrp PSt Fwd In Plus Prof Pkts] (tPortNetEgrQGrpPStFwdInPProfPkts)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStFwdInPProfPkts indicates the number of inplus-profile packets forwarded by the egress Pchip.
portNetEgrQGrpPStFwdInProfOct [Port Net Egr QGrp PSt Fwd In Prof Oct] (tPortNetEgrQGrpPStFwdInProfOct)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStFwdInProfOct indicates the number of in-profile octets (rate below CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStFwdInProfOctH [Port Net Egr QGrp PSt Fwd In Prof Oct H] (tPortNetEgrQGrpPStFwdInProfOctH)	long	The value of tPortNetEgrQGrpPStFwdInProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStFwdInProfOct.
portNetEgrQGrpPStFwdInProfOctL [Port Net Egr QGrp PSt Fwd In Prof Oct L] (tPortNetEgrQGrpPStFwdInProfOctL)	long	The value of tPortNetEgrQGrpPStFwdInProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStFwdInProfOct.
portNetEgrQGrpPStFwdInProfPkt [Port Net Egr QGrp PSt Fwd In Prof Pkt] (tPortNetEgrQGrpPStFwdInProfPkt)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStFwdInProfPkt indicates the number of in-profile packets (rate below CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStFwdInProfPktH [Port Net Egr QGrp PSt Fwd In Prof Pkt H] (tPortNetEgrQGrpPStFwdInProfPktH)	long	The value of tPortNetEgrQGrpPStFwdInProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStFwdInProfPkt.
portNetEgrQGrpPStFwdInProfPktL [Port Net Egr QGrp PSt Fwd In Prof Pkt L] (tPortNetEgrQGrpPStFwdInProfPktL)	long	The value of tPortNetEgrQGrpPStFwdInProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStFwdInProfPkt.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStFwdOutProfOct [Port Net Egr QGrp PSt Fwd Out Prof Oct] (tPortNetEgrQGrpPStFwdOutProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStFwdOutProfOct indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStFwdOutProfOctH [Port Net Egr QGrp PSt Fwd Out Prof Oct H] (tPortNetEgrQGrpPStFwdOutProfOctH)	long	The value of tPortNetEgrQGrpPStFwdOutProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStFwdOutProfOct.
portNetEgrQGrpPStFwdOutProfOctL [Port Net Egr QGrp PSt Fwd Out Prof Oct L] (tPortNetEgrQGrpPStFwdOutProfOctL)	long	The value of tPortNetEgrQGrpPStFwdOutProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStFwdOutProfOct.
portNetEgrQGrpPStFwdOutProfPkt [Port Net Egr QGrp PSt Fwd Out Prof Pkt] (tPortNetEgrQGrpPStFwdOutProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStFwdOutProfPkt indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStFwdOutProfPktH [Port Net Egr QGrp PSt Fwd Out Prof Pkt H] (tPortNetEgrQGrpPStFwdOutProfPktH)	long	The value of tPortNetEgrQGrpPStFwdOutProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStFwdOutProfPkt.
portNetEgrQGrpPStFwdOutProfPktL [Port Net Egr QGrp PSt Fwd Out Prof Pkt L] (tPortNetEgrQGrpPStFwdOutProfPktL)	long	The value of tPortNetEgrQGrpPStFwdOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStFwdOutProfPkt.
portNetEgrQGrpPStOffExdProfOcts [Port Net Egr QGrp PSt Off Exd Prof Octs] (tPortNetEgrQGrpPStOffExdProfOcts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffExdProfOcts indicates the number of exceed-profile octets offered by the egress Pchip.
portNetEgrQGrpPStOffExdProfPkts [Port Net Egr QGrp PSt Off Exd Prof Pkts] (tPortNetEgrQGrpPStOffExdProfPkts)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffExdProfPkts indicates the number of exceed-profile packets offered by the egress Pchip.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStOffInPlusProfOcts [Port Net Egr QGrp PSt Off In Plus Prof Octs] (tPortNetEgrQGrpPStOffInPProfOcts)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStOffInPProfOcts indicates the number of inplus-profile octets offered by the egress Pchip.
portNetEgrQGrpPStOffInPlusProfPkts [Port Net Egr QGrp PSt Off In Plus Prof Pkts] (tPortNetEgrQGrpPStOffInPProfPkts)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStOffInPProfPkts indicates the number of inplus-profile packets offered by the egress Pchip.
portNetEgrQGrpPStOffInProfOct [Port Net Egr QGrp PSt Off In Prof Oct] (tPortNetEgrQGrpPStOffInProfOct)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStOffInProfOct indicates the number of in-profile octets (rate below CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffInProfOctH [Port Net Egr QGrp PSt Off In Prof Oct H] (tPortNetEgrQGrpPStOffInProfOctH)	long	The value of tPortNetEgrQGrpPStOffInProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStOffInProfOct.
portNetEgrQGrpPStOffInProfOctL [Port Net Egr QGrp PSt Off In Prof Oct L] (tPortNetEgrQGrpPStOffInProfOctL)	long	The value of tPortNetEgrQGrpPStOffInProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStOffInProfOct.
portNetEgrQGrpPStOffInProfPkt [Port Net Egr QGrp PSt Off In Prof Pkt] (tPortNetEgrQGrpPStOffInProfPkt)	java. math. BigInte- ger	The value of tPortNetEgrQGrpPStOffInProfPkt indicates the number of in-profile packets (rate below CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffInProfPktH [Port Net Egr QGrp PSt Off In Prof Pkt H] (tPortNetEgrQGrpPStOffInProfPktH)	long	The value of tPortNetEgrQGrpPStOffInProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffInProfPkt.
portNetEgrQGrpPStOffInProfPktL [Port Net Egr QGrp PSt Off In Prof Pkt L] (tPortNetEgrQGrpPStOffInProfPktL)	long	The value of tPortNetEgrQGrpPStOffInProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffInProfPkt.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStOffOutProfOct [Port Net Egr QGrp PSt Off Out Prof Oct] (tPortNetEgrQGrpPStOffOutProfOct)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfOct indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Pchip.
portNetEgrQGrpPStOffOutProfOctH [Port Net Egr QGrp PSt Off Out Prof Oct H] (tPortNetEgrQGrpPStOffOutProfOctH)	long	The value of tPortNetEgrQGrpPStOffOutProfOctH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfOctL [Port Net Egr QGrp PSt Off Out Prof Oct L] (tPortNetEgrQGrpPStOffOutProfOctL)	long	The value of tPortNetEgrQGrpPStOffOutProfOctL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfOct.
portNetEgrQGrpPStOffOutProfPkt [Port Net Egr QGrp PSt Off Out Prof Pkt] (tPortNetEgrQGrpPStOffOutProfPkt)	java. math. BigInteger	The value of tPortNetEgrQGrpPStOffOutProfPkt indicates the number of out-of-profile packets (rate above CIR) offered by the egress Pchip.
portNetEgrQGrpPStOffOutProfPktH [Port Net Egr QGrp PSt Off Out Prof Pkt H] (tPortNetEgrQGrpPStOffOutProfPktH)	long	The value of tPortNetEgrQGrpPStOffOutProfPktH indicates the upper 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStOffOutProfPktL [Port Net Egr QGrp PSt Off Out Prof Pkt L] (tPortNetEgrQGrpPStOffOutProfPktL)	long	The value of tPortNetEgrQGrpPStOffOutProfPktL indicates the lower 32 bits of tPortNetEgrQGrpPStOffOutProfPkt.
portNetEgrQGrpPStUncolOctOff [Port Net Egr QGrp PSt Uncol Oct Off] (tPortNetEgrQGrpPStUncolOctOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolOctOff indicates the number of uncolored octets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolOctOffH [Port Net Egr QGrp PSt Uncol Oct Off H] (tPortNetEgrQGrpPStUncolOctOffH)	long	The value of tPortNetEgrQGrpPStUncolOctOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolOctOff.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQGrpPStUncolOctOffL [Port Net Egr QGrp PSt Uncol Oct Off L] (tPortNetEgrQGrpPStUncolOctOffL)	long	The value of tPortNetEgrQGrpPStUncolOctOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolOctOff.
portNetEgrQGrpPStUncolPktOff [Port Net Egr QGrp PSt Uncol Pkt Off] (tPortNetEgrQGrpPStUncolPktOff)	java. math. BigInteger	The value of tPortNetEgrQGrpPStUncolPktOff indicates the number of uncolored packets forwarded by the egress Pchip.
portNetEgrQGrpPStUncolPktOffH [Port Net Egr QGrp PSt Uncol Pkt Off H] (tPortNetEgrQGrpPStUncolPktOffH)	long	The value of tPortNetEgrQGrpPStUncolPktOffH indicates the upper 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStUncolPktOffL [Port Net Egr QGrp PSt Uncol Pkt Off L] (tPortNetEgrQGrpPStUncolPktOffL)	long	The value of tPortNetEgrQGrpPStUncolPktOffL indicates the lower 32 bits of tPortNetEgrQGrpPStUncolPktOff.
portNetEgrQGrpPStatMode [Port Net Egr QGrp PStat Mode] (tPortNetEgrQGrpPStatMode)	int	The value of tPortNetEgrQGrpPStatMode indicates the stat mode used by this policer.
portNetEgrQGrpPStatQosPolicerId [Port Net Egr QGrp PStat Qos Policer Id] (tPortNetEgrQGrpPStatQosPolicerId)	long	The value of tPortNetEgrQGrpPStatQosPolicerId specifies the index of the egress QoS policer queue group on network port.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PortNetEgrQueueStat</p> <p>MIB entry name: tmnxPortNetEgrQStatEntry</p> <p>Entry description: Defines an entry in tmnxPortNetEgrQStatTable. Entries are created and deleted by the system depending on the queue policy being used at the specific port. In release 10.0 tPortNetEgrQGrpInstanceId is added as another index before tmnxPortEgrQosQStatQueueId for this tmnxPortNetEgrQStatTable.</p> <p>Table description (for tmnxPortNetEgrQStatTable): Defines the Nokia SROS series network port egress statistics table for providing, via SNMP, the capability of retrieving the traffic statistics for the queue-group queues being used for the ports to forward the network egress traffic.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ethernetequipment.NetworkEgrQGroup</p>		
portNetEgrQDroInProfOcts [Port Net Egr QDro In Prof Octs] (tmnxPortNetEgrQDroInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfOcts indicates the number of conforming network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroInProfPkts [Port Net Egr QDro In Prof Pkts] (tmnxPortNetEgrQDroInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroInProfPkts indicates the number of conforming network egress packets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfOcts [Port Net Egr QDro Out Prof Octs] (tmnxPortNetEgrQDroOutProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfOcts indicates the number of exceeding network egress octets dropped on this port using this queue-group queue.
portNetEgrQDroOutProfPkts [Port Net Egr QDro Out Prof Pkts] (tmnxPortNetEgrQDroOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQDroOutProfPkts indicates the number of exceeding network egress packets dropped on this port using this queue-group queue.
portNetEgrQFwdInProfOcts [Port Net Egr QFwd In Prof Octs] (tmnxPortNetEgrQFwdInProfOcts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfOcts indicates the number of conforming network egress octets forwarded on this port using this queue-group queue.

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
portNetEgrQFwdInProfPkts [Port Net Egr QFwd In Prof Pkts] (tmnxPortNetEgrQFwdInProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdInProfPkts indicates the number of conforming network egress packets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfPkts [Port Net Egr QFwd Out Prof Pkts] (tmnxPortNetEgrQFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfPkts indicates the number of exceeding network egress octets forwarded on this port using this queue-group queue.
portNetEgrQFwdOutProfPkts [Port Net Egr QFwd Out Prof Pkts] (tmnxPortNetEgrQFwdOutProfPkts)	java. math. BigInteger	The value of tmnxPortNetEgrQFwdOutProfPkts indicates the number of exceeding network egress packets forwarded on this port using this queue-group queue.
portNetEgrQStatQueueId [Port Net Egr QStat Queue Id] (tmnxPortEgrQosQStatQueueId)	long	The value of tmnxPortEgrQosQStatQueueId specifies the queue-group queue ID which is used as the fourth index to the table entry.
<p>QosDroppedOctetStats</p> <p>MIB entry name: tmnxPortIngrMdaQosStatEntry</p> <p>Entry description: Each row indicates the MDA QoS discard statistics on an ethernet or SONET/SDH port located on an oversubscribed MDA. For ethernet ports, the tmnxPortEtherIngressRate object indicates the ingress shaping rate configured.</p> <p>Table description (for tmnxPortIngrMdaQosStatTable): The table tmnxPortIngrMdaQosStatTable contains a row for each ethernet or SONET/SDH port located on an oversubscribed MDA. Each object in a row refers to a QoS priority and forwarding class, which is a decimal value between 00 and 15 inclusive. The following table describes each decimal value: Priority ----- Forwarding Class High Low NC (Network Control) 00 01 H1 (Voice) 02 03 EF (Premium) 04 05 H2 (Video) 06 07 L1 (Management) 08 09 AF (Assured) 10 11 L2 (Priority) 12 13 BE (Best Effort) 14 15</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: equipment.PhysicalPort</p>		

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
qosClassifier0DroppedOctets [Qos Classifier 0 Dropped Octets] (tmnxPortIngrMdaQos00StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos00StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 00 because of an overload condition on the MDA.
qosClassifier10DroppedOctets [Qos Classifier 10 Dropped Octets] (tmnxPortIngrMdaQos10StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos10StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 10 because of an overload condition on the MDA.
qosClassifier11DroppedOctets [Qos Classifier 11 Dropped Octets] (tmnxPortIngrMdaQos11StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos11StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 11 because of an overload condition on the MDA.
qosClassifier12DroppedOctets [Qos Classifier 12 Dropped Octets] (tmnxPortIngrMdaQos12StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos12StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 12 because of an overload condition on the MDA.
qosClassifier13DroppedOctets [Qos Classifier 13 Dropped Octets] (tmnxPortIngrMdaQos13StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos13StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 13 because of an overload condition on the MDA.
qosClassifier14DroppedOctets [Qos Classifier 14 Dropped Octets] (tmnxPortIngrMdaQos14StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos14StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 14 because of an overload condition on the MDA.
qosClassifier15DroppedOctets [Qos Classifier 15 Dropped Octets] (tmnxPortIngrMdaQos15StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos15StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 15 because of an overload condition on the MDA.
qosClassifier1DroppedOctets [Qos Classifier 1 Dropped Octets] (tmnxPortIngrMdaQos01StatDropOcts)	java. math. BigInteger	tmnxPortIngrMdaQos01StatDropOcts indicates the number of octets dropped on the oversubscribed MDA for QoS classifier result threshold 01 because of an overload condition on the MDA.

<p>WaveLengthTrackerStats</p> <p>MIB entry name: tmnxWaveTrackerEntry</p> <p>Entry description: Each row entry represents a Wave Tracker capable port on a IOM card in a chassis in the system. Entries cannot be created and deleted via SNMP SET operations. The tmnxWaveTrackerEntry contains attributes that are unique to the Wave Tracker capable ports.</p> <p>Table description (for tmnxWaveTrackerTable): The tmnxWaveTrackerTable has an entry for each Wavelength Tracker port on each IOM card in each chassis in the TMNX system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetequipment.WaveLengthTracker</p>		

Table 640 ethernetequipment statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
targetPower [Target Power] (tmnxWaveTrackerTargetPower)	float	The value of tmnxWaveTrackerTargetPower specifies the desired average output power of the interface's transmitted optical signal when tmnxWaveTrackerPowerCtrlEnable is set to 'true (1)'. The UNITS millibels (mBm) are units of 0.01 decibel relative to one milliwatt (0 dBm) or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
waveTrackerLowerPowerMargin [Wave Tracker Lower Power Margin] (tmnxWaveTrackerLowerPowerMargin)	float	tmnxWaveTrackerLowerPowerMargin indicates how much the average output power of the interface's transmitted optical signal can be decreased. The UNITS mBm are units of 0.01 dB or dB multiplied by 100. The mB is used when integers are required instead of floating point. For example: 5.21 dB is equivalent to 521 mB.
waveTrackerMeasuredPower [Wave Tracker Measured Power] (tmnxWaveTrackerMeasuredPower)	float	tmnxWaveTrackerMeasuredPower indicates the current average output power of the interface's transmitted optical signal. The UNITS mBm are units of 0.01 dBm or dBm multiplied by 100. The mBm is used when integers are required instead of floating point. For example: -5.21 dBm is equivalent to -521 mBm.
waveTrackerUpperPowerMargin [Wave Tracker Upper Power Margin] (tmnxWaveTrackerUpperPowerMargin)	float	tmnxWaveTrackerUpperPowerMargin indicates how much the average output power of the interface's transmitted optical signal can be increased. The UNITS millibels (mB) are units of 0.01 dB or dB multiplied by 100. The mB is used when integers are required instead of floating point. For example: 5.21 dB is equivalent to 521 mB.

<p>CfmDmmBinStats</p> <p>MIB entry name: tmnxOamPmStsDelayDmmBinEntry</p> <p>Entry description: tmnxOamPmStsDelayDmmBinEntry contains the per-bin DMM (Delay Measurement Message) statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a corresponding row is created in tmnxOamPmStsDelayDmmTable. If the tmnxOamPmStsDelayDmmTable row is created with the index value tmnxOamPmCfgBinType = 'fd(1)', then the the number of rows created in this table is tmnxOamPmCfgBinGroupFdBinCount. Similarly, 'fdr(2)' and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsDelayDmmTable row is destroyed. When a test is running, the DMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. A successful clear operation zeros all the raw DMM statistics for the specified session.</p> <p>Table description (for tmnxOamPmStsDelayDmmBinTable): tmnxOamPmStsDelayDmmBinTable contains the per-bin DMM (Delay Measurement Message) statistics for OAM Performance Monitoring Measurement Interval Data Sets.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmDmmBin</p>		
delayDmmBinBwdCount [Delay Dmm Bin Bwd Count] (tmnxOamPmStsDelayDmmBinBwdCount)	long	The value of tmnxOamPmStsDelayDmmBinBwdCount indicates the number of measurements in the backward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of DMM measurements (in microseconds) in the backward direction in the first interval of 'dmmSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayDmmBinFwdCount [Delay Dmm Bin Fwd Count] (tmnxOamPmStsDelayDmmBinFwdCount)	long	The value of tmnxOamPmStsDelayDmmBinFwdCount indicates the number of measurements in the forward direction that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 9 Then, the value of this object indicates the number of DMM measurements (in microseconds) in the forward direction in the first interval of 'dmmSess1' that fit in the highest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
delayDmmBinNum [Delay Dmm Bin Num] (tmnxOamPmStsDelayDmmBinNum)	long	The value of tmnxOamPmStsDelayDmmBinNum specifies the bin number of the statistics to be read.
delayDmmBintwoyCount [Delay Dmm Bintwoy Count] (tmnxOamPmStsDelayDmmBin2wyCount)	long	The value of tmnxOamPmStsDelayDmmBin2wyCount indicates the number of two-way measurements that fall within the configured range (in microseconds) of the specified bin. For example, suppose the index values for this object are as follows (where the index names are abbreviated, and index columns are underlined with octothorpes). <u>_SessName</u> <u>_IntvlDuration</u> <u>_IntvlNum</u> <u>_BinType</u> <u>_BinNum</u> ##### ##### 'dmmSess1' 'mi15Minutes(2)' 1 'fd(1)' 0 Then, the value of this object indicates the number of two-way DMM measurements (in microseconds) in the first interval of 'dmmSess1' that fit in the lowest configured delay range (as configured using tmnxOamPmCfgBinLowerBound).
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmDmmSessionStats</p> <p>MIB entry name: tmnxOamPmStsDelayDmmEntry</p> <p>Entry description: tmnxOamPmStsDelayDmmEntry contains the summarized DMM (Delay Measurement Message) statistics for one OAM Performance Monitoring Measurement Interval Data Set. When a row is created in tmnxOamPmStsBaseTable with tmnxOamPmStsBaseTestType = 'dmm(1)', three rows are created in this table. The three rows have the following values in the tmnxOamPmCfgBinType index column: 'fd(1)', 'fdr(2)', and 'ifdv(3)'. Rows are destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. When a test is running, the DMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. delayDmm2wyAvg [Delay Dmm 2 wy Avg] (tmnxOamPmStsDelayDmm2wyAvg)	long	The value of tmnxOamPmStsDelayDmm2wyAvg indicates the average two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
delayDmm2wyMax [Delay Dmm 2 wy Max] (tmnxOamPmStsDelayDmm2wyMax)	long	The value of tmnxOamPmStsDelayDmm2wyMax indicates the maximum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmm2wyMin [Delay Dmm 2 wy Min] (tmnxOamPmStsDelayDmm2wyMin)	long	The value of tmnxOamPmStsDelayDmm2wyMin indicates the minimum two-way delay for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdAvg [Delay Dmm Bwd Avg] (tmnxOamPmStsDelayDmmBwdAvg)	long	The value of tmnxOamPmStsDelayDmmBwdAvg indicates the average delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdMax [Delay Dmm Bwd Max] (tmnxOamPmStsDelayDmmBwdMax)	long	The value of tmnxOamPmStsDelayDmmBwdMax indicates the maximum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmBwdMin [Delay Dmm Bwd Min] (tmnxOamPmStsDelayDmmBwdMin)	long	The value of tmnxOamPmStsDelayDmmBwdMin indicates the minimum delay in the backward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdAvg [Delay Dmm Fwd Avg] (tmnxOamPmStsDelayDmmFwdAvg)	long	The value of tmnxOamPmStsDelayDmmFwdAvg indicates the average delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdMax [Delay Dmm Fwd Max] (tmnxOamPmStsDelayDmmFwdMax)	long	The value of tmnxOamPmStsDelayDmmFwdMax indicates the maximum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').
delayDmmFwdMin [Delay Dmm Fwd Min] (tmnxOamPmStsDelayDmmFwdMin)	long	The value of tmnxOamPmStsDelayDmmFwdMin indicates the minimum delay in the forward direction for the specified session, interval duration (e.g. 'mi15Minutes(2)'), interval number, and bin type (e.g. 'fd(1)').

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmBinType [Pm Bin Type] (tmnxOamPmCfgBinType)	int	The value of tmnxOamPmCfgBinType specifies the type of the bin to be configured or read.
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmGlobalOpcodeStats</p> <p>MIB entry name: tmnxDot1agCfmGlobalOpcodeEntry</p> <p>Entry description: A Global Opcode Stats Table entry.</p> <p>Table description (for tmnxDot1agCfmGlobalOpcodeTable): tmnxDot1agCfmGlobalOpcodeTable consists of global statistics that are kept in the receive and transmit direction on the node for each CFM PDU Opcode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmGlobalOpcode</p>		
globalOpcode [Global Opcode] (tmnxDot1agCfmGlobalOpcode)	int	Integer that defines which CFM PDU Opcode the statistics refer to.
globalOpcodeRx [Global Opcode Rx] (tmnxDot1agCfmGlobalOpcodeRx)	long	The total number of PDUs received on the node with the specified Opcode.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
globalOpcodeTx [Global Opcode Tx] (tmnxDot1agCfmGlobalOpcodeTx)	long	The total number of PDUs transmitted from the node with the specified Opcode.
<p>CfmLmmSessionStats</p> <p>MIB entry name: tmnxOamPmStsLossLmmEntry</p> <p>Entry description: tmnxOamPmStsLossLmmEntry contains the LMM test statistics for one OAM Performance Monitoring Measurement Interval Data Set. A row is created in this table when a tmnxOamPmStsBaseTable row is created with tmnxOamPmStsBaseTestType = 'lmm(4)'. A row is destroyed in this table when the corresponding tmnxOamPmStsBaseTable row is destroyed. The following objects are modelled after the MEF-35 loss parameters defined for Synthetic Loss Measurement (SLM) tests: tmnxOamPmStsLossLmmAvailIndBwd, tmnxOamPmStsLossLmmAvailIndFwd, tmnxOamPmStsLossLmmChliBwd, tmnxOamPmStsLossLmmChliFwd, tmnxOamPmStsLossLmmHliBwd, tmnxOamPmStsLossLmmHliFwd, tmnxOamPmStsLossLmmUnavIndBwd, and tmnxOamPmStsLossLmmUnavIndFwd. Hence, the REFERENCE text for this object is a MEF-35 SLM section. The value of tmnxOamPmCfgLossLmmAvAdminStatus controls the value of several objects in this table. See the tmnxOamPmCfgLossLmmAvAdminStatus DESCRIPTION clause for more information. When a test is running, the LMM statistics for a test's raw (i.e. 'miRaw(1)') measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. A successful clear operation zeros all raw LMM statistics for the specified session.</p> <p>Table description (for tmnxOamPmStsLossLmmTable): tmnxOamPmStsLossLmmTable contains the frame loss statistics for OAM Performance Monitoring LMM (Loss Measurement Message) tests.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmLmmSession</p>		
pmLmmAvailIndBwd [Pm Lmm Avail Ind Bwd] (tmnxOamPmStsLossLmmAvailIndBwd)	long	The value of tmnxOamPmStsLossLmmAvailIndBwd indicates the number of availability indicators evaluated as Available in the backward direction for the specified measurement interval data set.
pmLmmAvailIndFwd [Pm Lmm Avail Ind Fwd] (tmnxOamPmStsLossLmmAvailIndFwd)	long	The value of tmnxOamPmStsLossLmmAvailIndFwd indicates the number of availability indicators evaluated as Available in the forward direction for the specified measurement interval data set.

pmLmmUnavailIndBwd [Pm Lmm Unavail Ind Bwd] (tmnxOamPmStsLossLmmUnavailIndBwd)	long	The value of tmnxOamPmStsLossLmmUnavailIndBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction for the specified measurement interval data set.
pmLmmUnavailIndFwd [Pm Lmm Unavail Ind Fwd] (tmnxOamPmStsLossLmmUnavailIndFwd)	long	The value of tmnxOamPmStsLossLmmUnavailIndFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction for the specified measurement interval data set.
pmLmmUndtAvlBwd [Pm Lmm Undt Avl Bwd] (tmnxOamPmStsLossLmmUndtAvlBwd)	long	The value of tmnxOamPmStsLossLmmUndtAvlBwd indicates the number of availability indicators evaluated as Undetermined Available, in the backward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the backward direction was Available. In that case, the availability indicator is Undetermined Available because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Available).
pmLmmUndtAvlFwd [Pm Lmm Undt Avl Fwd] (tmnxOamPmStsLossLmmUndtAvlFwd)	long	The value of tmnxOamPmStsLossLmmUndtAvlFwd indicates the number of availability indicators evaluated as Undetermined Available, in the forward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the forward direction was Available. In that case, the availability indicator is Undetermined Available because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Available).

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmUndtDeltaBwd [Pm Lmm Undt Delta Bwd] (tmnxOamPmStsLossLmmUndetDelTsBwd)	long	The value of tmnxOamPmStsLossLmmUndetDelTsBwd indicates the number of undetermined MEF-35 'delta_t's (also known as 'Small Time Intervals') for the backward direction for the specified measurement interval data set. An undetermined delta_t occurs when no Loss Measurement Reply (LMR) PDUs are received during the time interval. This counter is incremented because of a problem with the data path, or because the MEF-35 delta_t for this test is too short. delta_t is configured using tmnxOamPmCfgLossLmmInterval and tmnxOamPmCfgLossLmmTxFrmsPerDelT.
pmLmmUndtDeltaFwd [Pm Lmm Undt Delta Fwd] (tmnxOamPmStsLossLmmUndetDelTsFwd)	long	The value of tmnxOamPmStsLossLmmUndetDelTsFwd indicates the number of undetermined MEF-35 'delta_t's (also known as 'Small Time Intervals') for the forward direction for the specified measurement interval data set. An undetermined delta_t occurs when no Loss Measurement Reply (LMR) PDUs are received during the time interval. This counter is incremented because of a problem with the data path, or because the MEF-35 delta_t for this test is too short. delta_t is configured using tmnxOamPmCfgLossLmmInterval and tmnxOamPmCfgLossLmmTxFrmsPerDelT.
pmLmmUndtUnavlBwd [Pm Lmm Undt Unavl Bwd] (tmnxOamPmStsLossLmmUndtUnavlBwd)	long	The value of tmnxOamPmStsLossLmmUndtUnavlBwd indicates the number of availability indicators evaluated as Undetermined Unavailable, in the backward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the backward direction was Unavailable. In that case, the availability indicator is Undetermined Unavailable because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Unavailable).

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmLmmUndtUnaviFwd [Pm Lmm Undt Unavi Fwd] (tmnxOamPmStsLossLmmUndtUnaviFwd)	long	The value of tmnxOamPmStsLossLmmUndtUnaviFwd indicates the number of availability indicators evaluated as Undetermined Unavailable, in the forward direction. This counter is incremented when: 1. It is time to calculate an availability indicator, and 2. No Loss Measurement Replies (LMRs) have been received within the availability window, and 3. The most recently declared availability indicator in the forward direction was Unavailable. In that case, the availability indicator is Undetermined Unavailable because: 1. No information is available to indicate if the problem is in the forward direction or the backward direction, and 2. We extrapolate from the previous state (i.e. Unavailable).
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>CfmMepOpcodeStats</p> <p>MIB entry name: tmnxDot1agCfmMepOpcodeEntry</p> <p>Entry description: A Mep Opcode Stats Table entry.</p> <p>Table description (for tmnxDot1agCfmMepOpcodeTable): tmnxDot1agCfmMepOpcodeTable consists of statistics that are kept in the receive and transmit direction on a MEP for each CFM PDU Opcode.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmMepOpcode</p>		
mepOpcode [Mep Opcode] (tmnxDot1agCfmMepOpcode)	int	The value of tmnxDot1agCfmMepOpcode specifies the CFM PDU Opcode to which the statistics refer.
mepOpcodeRx [Mep Opcode Rx] (tmnxDot1agCfmMepOpcodeRx)	long	The total number of PDUs received on the MEP with the specified Opcode.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mepOpcodeTx [Mep Opcode Tx] (tmnxDot1agCfmMepOpcodeTx)	long	The total number of PDUs transmitted from the MEP with the specified Opcode.
CfmPacketCountStats MIB entry name: tmnxDot1agCfmGlobalPacketStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
globalAisTxActive [Global Ais Tx Active] (tmnxDot1agCfmGlobalAisTxActive)	long	The value of tmnxDot1agCfmGlobalAisTxActive indicates the number of sessions where fault (AIS or other) is actively being transmitted.
globalAisTxFail [Global Ais Tx Fail] (tmnxDot1agCfmGlobalAisTxFail)	long	The value of tmnxDot1agCfmGlobalAisTxFail indicates the number of sessions where fault (AIS or other) can't be transmitted due to lack of resources.
globalPacketDiscard [Global Packet Discard] (tmnxDot1agCfmGlobalPacketDiscard)	long	The value of tmnxDot1agCfmGlobalPacketDiscard indicates the number of packets discarded by ETH-CFM. A packet may be discarded for several reasons including, but not limited to, malformed PDU, invalid TLVs, MEP admin down, etc.
globalPacketDropped [Global Packet Dropped] (tmnxDot1agCfmGlobalPacketDropped)	long	The value of tmnxDot1agCfmGlobalPacketDropped indicates the number of packets dropped by ETH-CFM. A packet is dropped because of resource contention.
globalPacketRxCount [Global Packet Rx Count] (tmnxDot1agCfmGlobalPacketRxCount)	long	The value of tmnxDot1agCfmGlobalPacketRxCount indicates the number of received ETH-CFM packets.
globalPacketTxCount [Global Packet Tx Count] (tmnxDot1agCfmGlobalPacketTxCount)	long	The value of tmnxDot1agCfmGlobalPacketTxCount indicates the number of transmitted ETH-CFM packets.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CfmSlmSessionStats</p> <p>MIB entry name: tmnxOamPmStsBaseEntry</p> <p>Entry description: tmnxOamPmStsBaseEntry contains the base statistics for one OAM Performance Monitoring Measurement Interval Data Set. Rows are created in this table when a test is started (e.g. using tmnxOamPmCfgDelayDmmAdminStatus and tmnxOamPmCfgDelayDmmOnDmndStatus). At that time, a row for the current interval (with the index value tmnxOamPmStsIntvlNum=1) is created for each row with a matching session name in tmnxOamPmCfgMeasIntvlTable. In addition, a row is created in this table for the test's 'miRaw(1)' interval. After that, the timed creation and destruction of rows in this table is explained using the following example. Suppose the configured number of intervals to be retained is as follows (where index columns are underlined with octothorpes, and 'tmnxOamPm' is abbreviated as '_'): <u>_CfgSessName</u> <u>_CfgMeasIntvlDuration</u> <u>_CfgMeasIntvlsStored</u> ##### ##### 'mySess1' 'mi15Minutes(2)' 3 Suppose statistics collection started at t = 0 (minutes). Suppose the following rows exist in tmnxOamPmStsBaseTable at t = 59 (minutes): <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 1 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 The interval numbers are assigned as follows: 1 - the historical interval ended at t = 15 minutes 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the current interval Then, after the next 15 minute interval ends (e.g. at t = 61 minutes), the following rows will exist: <u>_CfgSessName</u> <u>_StsBaseTestType</u> <u>_StsIntvlDuration</u> <u>_StsIntvlNum</u> ##### ##### 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 2 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 3 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 4 'mySess1' 'dmm(1)' 'mi15Minutes(2)' 5 The interval numbers are assigned as follows: 2 - the historical interval ended at t = 30 minutes 3 - the historical interval ended at t = 45 minutes 4 - the historical interval ended at t = 60 minutes 5 - the current interval The row with interval number 1 was destroyed, because tmnxOamPmCfgMeasIntvlsStored=3 specifies that at most three historical intervals be retained. Rows are also destroyed in this table when the corresponding tmnxOamPmCfgMeasIntvlTable row is destroyed. When the index value tmnxOamPmStsMeasIntvlDuration is 'miRaw(1)', only one interval is available (i.e. tmnxOamPmStsIntvlNum = 1). When a test is running, the measurement interval data set for a test's 'miRaw(1)' measurement interval duration can be cleared using TIMETRA-CLEAR-MIB::tmnxClearAction and tmnxClearParams. The change to the objects in the specified row is as follows. Object Change on Clear Operation tmnxOamPmStsBaseOperStatus No change tmnxOamPmStsBaseSuspect Set to 'true(1)' tmnxOamPmStsBaseStartTime Set to UTC time of the clear operation tmnxOamPmStsBaseElapsedTime Set to zero tmnxOamPmStsBaseTestFramesTx Set to zero tmnxOamPmStsBaseTestFramesRx Set to zero Measurement interval data sets for measurement interval durations other than 'miRaw(1)' cannot be cleared.</p> <p>Table description (for tmnxOamPmStsBaseTable): tmnxOamPmStsBaseTable contains the base statistics for OAM Performance Monitoring Measurement Interval Data Sets. The statistics in this table are common to all test types (e.g. DMM and SLM tests).</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.CfmSlmSession</p>		

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
intervalDuration [Interval Duration] (tmnxOamPmStsMeasIntvlDuration)	int	The value of tmnxOamPmStsMeasIntvlDuration specifies the duration of the interval of the statistics to be read (e.g. 'mi15Minutes(2)').
pmSlmAvailIndBwd [Pm Slm Avail Ind Bwd] (tmnxOamPmStsLossSlmAvailIndBwd)	long	The value of tmnxOamPmStsLossSlmAvailIndBwd indicates the number of availability indicators evaluated as Available in the backward direction for the specified measurement interval data set.
pmSlmAvailIndFwd [Pm Slm Avail Ind Fwd] (tmnxOamPmStsLossSlmAvailIndFwd)	long	The value of tmnxOamPmStsLossSlmAvailIndFwd indicates the number of availability indicators evaluated as Available in the forward direction for the specified measurement interval data set.
pmSlmAvgFlrBwd [Pm Slm Avg Flr Bwd] (tmnxOamPmStsLossSlmAvgFlrBwd)	float	The value of tmnxOamPmStsLossSlmAvgFlrBwd indicates the average Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmSlmAvgFlrFwd [Pm Slm Avg Flr Fwd] (tmnxOamPmStsLossSlmAvgFlrFwd)	float	The value of tmnxOamPmStsLossSlmAvgFlrFwd indicates the average Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmSlmChliBwd [Pm Slm Chli Bwd] (tmnxOamPmStsLossSlmChliBwd)	long	The value of tmnxOamPmStsLossSlmChliBwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the backward direction for the specified measurement interval data set.
pmSlmChliFwd [Pm Slm Chli Fwd] (tmnxOamPmStsLossSlmChliFwd)	long	The value of tmnxOamPmStsLossSlmChliFwd indicates the number of Consecutive High Loss Intervals (CHLIs) in the forward direction for the specified measurement interval data set.
pmSlmHliBwd [Pm Slm Hli Bwd] (tmnxOamPmStsLossSlmHliBwd)	long	The value of tmnxOamPmStsLossSlmHliBwd indicates the number of High Loss Intervals (HLIs) in the backward direction for the specified measurement interval data set.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmHliFwd [Pm Slm Hli Fwd] (tmnxOamPmStsLossSlmHliFwd)	long	The value of tmnxOamPmStsLossSlmHliFwd indicates the number of High Loss Intervals (HLIs) in the forward direction for the specified measurement interval data set.
pmSlmMaxFlrBwd [Pm Slm Max Flr Bwd] (tmnxOamPmStsLossSlmMaxFlrBwd)	float	The value of tmnxOamPmStsLossSlmMaxFlrBwd indicates the maximum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmSlmMaxFlrFwd [Pm Slm Max Flr Fwd] (tmnxOamPmStsLossSlmMaxFlrFwd)	float	The value of tmnxOamPmStsLossSlmMaxFlrFwd indicates the maximum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmSlmMinFlrBwd [Pm Slm Min Flr Bwd] (tmnxOamPmStsLossSlmMinFlrBwd)	float	The value of tmnxOamPmStsLossSlmMinFlrBwd indicates the minimum Frame Loss Ratio (FLR) in the backward direction for the specified measurement interval data set.
pmSlmMinFlrFwd [Pm Slm Min Flr Fwd] (tmnxOamPmStsLossSlmMinFlrFwd)	float	The value of tmnxOamPmStsLossSlmMinFlrFwd indicates the minimum Frame Loss Ratio (FLR) in the forward direction for the specified measurement interval data set.
pmSlmRxBwd [Pm Slm Rx Bwd] (tmnxOamPmStsLossSlmRxBwd)	long	The value of tmnxOamPmStsLossSlmRxBwd indicates the number of SLR reply frames received in the backward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.
pmSlmRxFwd [Pm Slm Rx Fwd] (tmnxOamPmStsLossSlmRxFwd)	long	The value of tmnxOamPmStsLossSlmRxFwd indicates the number of SLM request frames received in the forward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at receive time (as specified in MEF-35 Section 9.2.5). A simple count of the frames received for the test is available in tmnxOamPmStsBaseTestFramesRx.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmTxBwd [Pm Slm Tx Bwd] (tmnxOamPmStsLossSlmTxBwd)	long	The value of tmnxOamPmStsLossSlmTxBwd indicates the number of SLR reply frames transmitted in the backward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmSlmTxFwd [Pm Slm Tx Fwd] (tmnxOamPmStsLossSlmTxFwd)	long	The value of tmnxOamPmStsLossSlmTxFwd indicates the number of SLM request frames transmitted in the forward direction for the specified measurement interval data set. A frame is counted if the SLM Availability state is Available at transmit time (as specified in MEF-35 Section 9.2.5). A simple count of the frames transmitted for the test is available in tmnxOamPmStsBaseTestFramesTx.
pmSlmUnavailIndBwd [Pm Slm Unavail Ind Bwd] (tmnxOamPmStsLossSlmUnavlIndBwd)	long	The value of tmnxOamPmStsLossSlmUnavlIndBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction for the specified measurement interval data set.
pmSlmUnavailIndFwd [Pm Slm Unavail Ind Fwd] (tmnxOamPmStsLossSlmUnavlIndFwd)	long	The value of tmnxOamPmStsLossSlmUnavlIndFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction for the specified measurement interval data set.
pmSlmUndtAvlBwd [Pm Slm Undt Avl Bwd] (tmnxOamPmStsLossSlmUndtAvlBwd)	long	The value of tmnxOamPmStsLossSlmUndtAvlBwd indicates the number of availability indicators evaluated as Available in the backward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmSlmUndtAvlFwd [Pm Slm Undt Avl Fwd] (tmnxOamPmStsLossSlmUndtAvlFwd)	long	The value of tmnxOamPmStsLossSlmUndtAvlFwd indicates the number of availability indicators evaluated as Available in the forward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Available. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmSlmUndtUnavlBwd [Pm Slm Undt Unavl Bwd] (tmnxOamPmStsLossSlmUndtUnavlBwd)	long	The value of tmnxOamPmStsLossSlmUndtUnavlBwd indicates the number of availability indicators evaluated as Unavailable in the backward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the backward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.
pmSlmUndtUnavlFwd [Pm Slm Undt Unavl Fwd] (tmnxOamPmStsLossSlmUndtUnavlFwd)	long	The value of tmnxOamPmStsLossSlmUndtUnavlFwd indicates the number of availability indicators evaluated as Unavailable in the forward direction based on extrapolation from the previous state. For example, this counter will be incremented when: 1. It is time to calculate an availability indicator, and 2. All the probe requests used to calculate the availability indicator have timed out, and 3. The most recently declared availability indicator in the forward direction was Unavailable. In that case, the result is considered undetermined because no information is available to indicate if the problem is in the forward direction or the backward direction.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pmStatsIntervalNum [Pm Stats Interval Num] (tmnxOamPmStsIntvlNum)	long	The value of tmnxOamPmStsIntvlNum specifies the interval number of the statistics to be read. The system's creation and destruction of interval numbers is described in the tmnxOamPmStsBaseEntry DESCRIPTION clause.
sessionName [Session Name] (tmnxOamPmCfgSessName)	String	The value of tmnxOamPmCfgSessName specifies the name of the session to be configured or read.
<p>OamPerfReqTypesStats</p> <p>MIB entry name: tmnxOamSysPerfReqTypeEntry</p> <p>Entry description: Rows in tmnxOamSysPerfReqTypeTable are system-generated at CPM restart. Rows cannot be created or destroyed using SNMP.</p> <p>Table description (for tmnxOamSysPerfReqTypeTable): tmnxOamSysPerfReqTypeTable has a row for each relevant OAM echo request packet type. Each row contains packet counters.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ethernetoam.OamPerfReqTypes</p>		
oamTypeName [Oam Type Name] (tmnxOamSysPerfReqTypeName)	String	The value of tmnxOamSysPerfReqTypeName specifies the name of an echo request packet type (e.g. 'ICMP'). The name is the index for the row.
rxPackets [Rx Packets] (tmnxOamSysPerfReqTypeRemoteTstRx)	long	The value of tmnxOamSysPerfReqTypeRemoteTstRx indicates the number of echo request packets received from remotely initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.
txPackets [Tx Packets] (tmnxOamSysPerfReqTypeLocalTestTx)	long	The value of tmnxOamSysPerfReqTypeLocalTestTx indicates the number of echo request packets transmitted by locally initiated tests (since the last clear) for the echo request packet type specified by tmnxOamSysPerfReqTypeName.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>OamSysPerfStats MIB entry name: tmnxOamGeneralStats Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement</p>		
currentNumberOfSAATests [Current Number Of SAATests] (tmnxOamSysSessionCount)	long	The value of tmnxOamSysSessionCount indicates the number of currently allocated sessions in the OAM general session pool. A test with one of the following test types allocates a session from the OAM general session pool: 1. Filter redirect policy ping test. 2. SDP keep-alive. 3. Static route CPE check. 4. VRRP policy host unreachable ping test. 5. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 6. Any test configured using TIMETRA-OAM-PM-MIB. 7. Background ICMP Bridged Residential Gateway ping test. A session is allocated from the OAM general session pool when a test is configured (in the case of some test types) or activated (in the remaining cases). The session is freed when the test is deactivated or deleted. tmnxOamSysSessionCount will not exceed tmnxOamSysSessionLimit. Configuration or activation of a test (with a test type listed above) will fail when tmnxOamSysSessionCount equals tmnxOamSysSessionLimit.
currentTxRateForContinousTests [Current Tx Rate For Continous Tests] (tmnxOamSysPerfCfgTotalTx)	long	The value of tmnxOamSysPerfCfgTotalTx indicates this node's current total configured echo request packet transmission rate, for the set of tests listed in the tmnxOamSysPerfCfgLimitTx DESCRIPTION clause. For example, suppose: a) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and b) several SAA continuous tests are enabled, totalling 2000 echo request packets per second, and c) no other relevant tests are enabled. Then, tmnxOamSysPerfCfgTotalTx will have the value 3000. The value of tmnxOamSysPerfCfgTotalTx will not exceed the value of tmnxOamSysPerfCfgLimitTx.

Table 641 ethernetoam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
lastClearStatsTime [Last Clear Stats Time] (tmnxOamSysPerfLastClearedTime)	long	The value of tmnxOamSysPerfLastClearedTime indicates the sysUpTime when the following statistics were cleared: tmnxOamSysPerfLocalTestTx, tmnxOamSysPerfRemoteTestRx, and tmnxOamSysPerfReqTypeTable. If the statistics have not been cleared since the last CPM restart, zero is returned. A packet count which is time stamped by this object can be converted to an average packets per second value using, for example, pps = tmnxOamSysPerfLocalTestTx / [(sysUpTime - tmnxOamSysPerfLastClearedTime)/100].
maxNumberOfSAATests [Max Number Of SAATests] (tmnxOamSysSessionLimit)	long	The value of tmnxOamSysSessionLimit indicates the maximum number of sessions in the OAM general session pool. OAM general session pool sessions are allocated and freed as described in the tmnxOamSysSessionCount DESCRIPTION clause.
maxTxRateForAllOamTests [Max Tx Rate For All Oam Tests] (tmnxOamSysPerfOprLimitTx)	long	The value of tmnxOamSysPerfOprLimitTx indicates this node's upper bound on the total echo request packet transmission rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following test types: 1. Background ICMP Bridged Residential Gateway ping test. 2. Filter redirect policy ping test. 3. SDP keep-alive. 4. Static route CPE check. 5. VRRP policy host unreachable ping test. 6. Any OAM or SAA test configured using TIMETRA-OAM-TEST-MIB. 7. Any test configured using TIMETRA-OAM-PM-MIB.

Table 641 ethernetOam statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
maxTxRateForContinuousTests [Max Tx Rate For Continuous Tests] (tmnxOamSysPerfCfgLimitTx)	long	The value of tmnxOamSysPerfCfgLimitTx indicates this node's upper bound on the total configured echo request packet transmission rate for a set of test types. The upper bound is enforced to avoid echo request packet transmit overload, i.e. to ensure each enabled test can transmit echo request packets at the test's configured rate. Echo reply packets are not affected by this limit. The upper bound applies to echo request packets sent by the following 'always on' test types: 1. Background ICMP Bridged Residential Gateway ping test. 2. Filter redirect policy ping test. 3. SDP keep-alive. 4. Static route CPE check. 5. VRRP policy host unreachable ping test. 6. SAA continuous test (see tmnxOamSaaCtlContinuous). 7. OAM-PM proactive test (see TIMETRA-OAM-PM-MIB::tmnxOamPmCfgSessType). For example, suppose: a) tmnxOamSysPerfCfgLimitTx has the value 4000 echo request packets per second, and b) several SDP keep-alive sessions are enabled, totalling 1000 echo request packets per second, and c) several SAA continuous tests are enabled, totalling 3000 echo request packets per second. Then, an attempt to enable an additional SAA continuous test would be rejected with a 'resourceUnavailable(13)' error.
totalNumberOfEchoRequestPacketsReceived [Total Number Of Echo Request Packets Received] (tmnxOamSysPerfRemoteTestRx)	long	The value of tmnxOamSysPerfRemoteTestRx indicates this node's total number of echo request packets received from remotely initiated tests (since the last clear).
totalNumberOfEchoRequestPacketsTransmitted [Total Number Of Echo Request Packets Transmitted] (tmnxOamSysPerfLocalTestTx)	long	The value of tmnxOamSysPerfLocalTestTx indicates this node's total number of echo request packets transmitted by locally initiated tests (since the last clear). The test types are listed in the tmnxOamSysPerfOprLimitTx DESCRIPTION clause.

Table 642 gmplsuni statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: vRtrGmplsPeerStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for GMPLS peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrGmplsPeerStatTable): The vRtrGmplsPeerStatTable contains statistics for GMPLS peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: gmplsuni.Peer</p>		
rxAcks [Rx Acks] (vRtrGmplsPeerRxAcks)	java. math. BigInteger	The value of vRtrGmplsPeerRxAcks indicates the total number of RSVP ACK messages that have been received on this RSVP interface when refresh reduction is enabled.
rxBadPktCount [Rx Bad Pkt Count] (vRtrGmplsPeerRxBadPktCount)	java. math. BigInteger	The value of vRtrGmplsPeerRxBadPktCount indicates the total number of bad packets received by this GMPLS Peer.
rxHello [Rx Hello] (vRtrGmplsPeerRxHello)	java. math. BigInteger	The value of vRtrGmplsPeerRxHello indicates the number of RSVP HELLO messages received by this GMPLS Peer.
rxNotify [Rx Notify] (vRtrGmplsPeerRxNotify)	java. math. BigInteger	The value of vRtrGmplsPeerRxNotify indicates the total number of notification messages received by this GMPLS Peer.
rxPathErr [Rx Path Err] (vRtrGmplsPeerRxPathErr)	java. math. BigInteger	The value of vRtrGmplsPeerRxPathErr indicates the total number of RSVP PATH ERROR messages that have been received by this GMPLS Peer.

Table 642 gmplsuni statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxPathTear [Rx Path Tear] (vRtrGmplsPeerRxPathTear)	java. math. BigInteger	The value of vRtrGmplsPeerRxPathTear indicates the number of RSVP PATH TEAR messages that have been received from this GMPLS Peer.
rxPaths [Rx Paths] (vRtrGmplsPeerRxPaths)	java. math. BigInteger	The value of vRtrGmplsPeerRxPaths indicates the total number of RSVP PATH messages that have been received by this GMPLS Peer.
rxResv [Rx Resv] (vRtrGmplsPeerRxResv)	java. math. BigInteger	The value of vRtrGmplsPeerRxResv indicates the total number of RSVP RESV messages that have been received by this GMPLS Peer.
rxResvTear [Rx Resv Tear] (vRtrGmplsPeerRxResvTear)	java. math. BigInteger	The value of vRtrGmplsPeerRxResvTear indicates the total number of RSVP RESV TEAR messages that have been received by this GMPLS Peer.
rxSRefreshes [Rx SRefreshes] (vRtrGmplsPeerRxSRefreshes)	java. math. BigInteger	The value of vRtrGmplsPeerRxSRefreshes indicates the total number of summary refresh, SREFRESH, messages that have been received on this RSVP interface.
txAcks [Tx Acks] (vRtrGmplsPeerTxAcks)	java. math. BigInteger	The value of vRtrGmplsPeerTxAcks indicates the total number of RSVP ACK messages that have been transmitted on this RSVP interface when refresh reduction is enabled.
txHello [Tx Hello] (vRtrGmplsPeerTxHello)	java. math. BigInteger	The value of vRtrGmplsPeerTxHello indicates the number of RSVP HELLO messages transmitted by this GMPLS Peer.
txNotify [Tx Notify] (vRtrGmplsPeerTxNotify)	java. math. BigInteger	The value of vRtrGmplsPeerTxNotify indicates the total number of notification messages transmitted by this GMPLS Peer.

Table 642 gmplsuni statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txPathErr [Tx Path Err] (vRtrGmplsPeerTxPathErr)	java. math. BigInteger	The value of vRtrGmplsPeerTxPathErr indicates the total number of RSVP PATH ERROR messages that have been transmitted by this GMPLS Peer.
txPathTear [Tx Path Tear] (vRtrGmplsPeerTxPathTear)	java. math. BigInteger	The value of vRtrGmplsPeerTxPathTear indicates the number of RSVP PATH TEAR messages that have been transmitted from this GMPLS Peer.
txPaths [Tx Paths] (vRtrGmplsPeerTxPaths)	java. math. BigInteger	The value of vRtrGmplsPeerTxPaths indicates the total number of RSVP PATH messages that have been transmitted by this GMPLS Peer.
txResv [Tx Resv] (vRtrGmplsPeerTxResv)	java. math. BigInteger	The value of vRtrGmplsPeerTxResv indicates the total number of RSVP RESV messages that have been transmitted by this GMPLS Peer.
txResvTear [Tx Resv Tear] (vRtrGmplsPeerTxResvTear)	java. math. BigInteger	The value of vRtrGmplsPeerTxResvTear indicates the total number of RSVP RESV TEAR messages that have been transmitted from this GMPLS Peer.
txSRefreshes [Tx SRefreshes] (vRtrGmplsPeerTxSRefreshes)	java. math. BigInteger	The value of vRtrGmplsPeerTxSRefreshes indicates the total number of summary refresh, SREFRESH, messages that have been transmitted on this RSVP interface.

Table 642 gmplsuni statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SessionStats</p> <p>MIB entry name: vRtrGmplsSessionStatsEntry</p> <p>Entry description: Each row entry represents statistics for a session of the GMPLS protocol within a virtual router. Entries in this table cannot be created and deleted via SNMP SET operations. An entry in this table is created by the agent when the GMPLS protocol establishes a session. The entry is destroyed when the GMPLS session is removed.</p> <p>Table description (for vRtrGmplsSessionStatsTable): The vRtrGmplsSessionStatsTable contains objects for reporting statistics for the sessions associated with the GMPLS protocol running in a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: gmplsuni.Session</p>		
rxPath [Rx Path] (vRtrGmplsSessStatRxPaths)	java. math. BigInteger	The value of vRtrGmplsSessStatRxPaths indicates the total number of PATH messages received for this GMPLS session.
rxResv [Rx Resv] (vRtrGmplsSessStatRxResv)	java. math. BigInteger	The value of vRtrGmplsSessStatRxResv indicates the total number of RESV messages received for this GMPLS session.
summRxPath [Summ Rx Path] (vRtrGmplsSessStatSummRxPath)	java. math. BigInteger	The value of vRtrGmplsSessStatSummRxPath indicates the total number of summary PATH messages received.
summRxResv [Summ Rx Resv] (vRtrGmplsSessStatSummRxResv)	java. math. BigInteger	The value of vRtrGmplsSessStatSummRxResv indicates the total number of summary RESV messages received.
summTxPath [Summ Tx Path] (vRtrGmplsSessStatSummTxPath)	java. math. BigInteger	The value of vRtrGmplsSessStatSummTxPath indicates the total number of summary PATH messages transmitted.

Table 642 gmplsuni statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
summTxResv [Summ Tx Resv] (vRtrGmplsSessStatSummTxResv)	java. math. BigInteger	The value of vRtrGmplsSessStatSummTxResv indicates the total number of summary RESV messages transmitted.
txPath [Tx Path] (vRtrGmplsSessStatTxPaths)	java. math. BigInteger	The value of vRtrGmplsSessStatTxPaths indicates the total number of PATH messages transmitted for this GMPLS sessio.
txResv [Tx Resv] (vRtrGmplsSessStatTxResv)	java. math. BigInteger	The value of vRtrGmplsSessStatTxResv indicates the total number of RESV messages transmitted for this GMPLS session.
<p>SiteStats</p> <p>MIB entry name: vRtrGmplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the GMPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrGmplsGeneralStatTable): The vRtrGmplsGeneralStatTable contains statistics for a GMPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: gmplsuni.Site</p>		
protectPathOriginate [Protect Path Originate] (vRtrGmplsGenProtectPathOriginate)	long	The value of vRtrGmplsGenProtectPathOriginate indicates the number of protect path LSPs that originate at this virtual router.
protectPathTerminate [Protect Path Terminate] (vRtrGmplsGenProtectPathTerminate)	long	The value of vRtrGmplsGenProtectPathTerminate indicates the number of protect path LSPs that terminate at this virtual router.

Table 642 gmplsuni statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
workingPathOriginate [Working Path Originate] (vRtrGmplsGenWorkingPathOriginate)	long	The value of vRtrGmplsGenWorkingPathOriginate indicates the number of working path LSPs that originate at this virtual router.

Table 643 igmp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceStats MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		
importPolicyDrops [Import Policy Drops] (vRtrIgmplfImportPolicyDrops)	long	The value of vRtrIgmplfImportPolicyDrops indicates the total number of times IGMP protocol instance matched the host IP address or group/source addresses specified in the import policy vRtrIgmplfImportPolicy.
mcacPolicyDrops [Mcac Policy Drops] (vRtrIgmplfStatsMcacPolicyDrops)	long	The value of the object vRtrIgmplfStatsMcacPolicyDrops indicates the number times an IGMP Group is dropped because of applying a multicast CAC policy on this interface.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrIgmplfRxBadChecksumPkts)	long	The value of vRtrIgmplfRxBadChecksumPkts indicates the total number of IGMP packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrIgmplfRxBadEncodings)	long	The value of vRtrIgmplfRxBadEncodings indicates the total number of IGMP packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrIgmplfRxBadLenPkts)	long	The value of vRtrIgmplfRxBadLenPkts indicates the total number of IGMP packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrIgmplfRxBadReceiveIfPkts)	long	The value of vRtrIgmplfRxBadReceiveIfPkts indicates the total number of IGMP packets incorrectly received on this interface.

Table 643 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGenQueries [Rx Gen Queries] (vRtrIgmplfRxGenQueries)	long	The value of vRtrIgmplfRxGenQueries indicates the total number of IGMP General Queries received on this interface.
rxGrpQueries [Rx Grp Queries] (vRtrIgmplfRxGrpQueries)	long	The value of vRtrIgmplfRxGrpQueries indicates the number of IGMP Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrIgmplfRxGrpSrcQueries)	long	The value of vRtrIgmplfRxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrIgmplfRxLeaves)	long	The value of vRtrIgmplfRxLeaves indicates the total number of IGMP V2 Leaves received on this interface.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrIgmplfRxNoRtrAlertPkts)	long	The value of vRtrIgmplfRxNoRtrAlertPkts indicates the total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrIgmplfRxNonLocal)	long	The value of vRtrIgmplfRxNonLocal indicates the total number of IGMP packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrIgmplfRxPktDrops)	long	The value of vRtrIgmplfRxPktDrops indicates the total number of IGMP packets that were received on this interface but were dropped.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrIgmplfRxUnknownTypePkts)	long	The value of vRtrIgmplfRxUnknownTypePkts indicates the total number of IGMP packets with unknown type received on this interface.
rxV1Reports [Rx V1 Reports] (vRtrIgmplfRxV1Reports)	long	The value of vRtrIgmplfRxV1Reports indicates the total number of IGMP V1 Reports received on this interface.

Table 643 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV2Reports [Rx V2 Reports] (vRtrIgmplfRxV2Reports)	long	The value of vRtrIgmplfRxV2Reports indicates the total number of IGMP V2 Reports received on this interface.
rxV3Reports [Rx V3 Reports] (vRtrIgmplfRxV3Reports)	long	The value of vRtrIgmplfRxV3Reports indicates the total number of IGMP V3 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrIgmplfRxWrongVersions)	long	The value of vRtrIgmplfRxWrongVersions indicates the total number of IGMP packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrIgmplfStatsSGTypes)	long	The value of vRtrIgmplfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrIgmplfStatsStarGTypes)	long	vRtrIgmplfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrIgmplfTxErrors)	long	The value of vRtrIgmplfTxErrors indicates the total number of times there was an error transmitting IGMP packets on this interface..
txGenQueries [Tx Gen Queries] (vRtrIgmplfTxGenQueries)	long	The value of vRtrIgmplfTxGenQueries indicates the number of IGMP General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrIgmplfTxGrpQueries)	long	The value of vRtrIgmplfTxGrpQueries indicates the number of IGMP Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrIgmplfTxGrpSrcQueries)	long	The value of vRtrIgmplfTxGrpSrcQueries indicates the number of IGMP Group and Source Specific Queries transmitted on this interface.

Table 643 igmp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrIgmplfTxLeaves)	long	The value of vRtrIgmplfTxLeaves indicates the total number of IGMP Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrIgmplfTxV1Reports)	long	The value of vRtrIgmplfTxV1Reports indicates the total number of IGMP V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrIgmplfTxV2Reports)	long	The value of vRtrIgmplfTxV2Reports indicates the total number of IGMP V2 Reports transmitted on this interface.
txV3Reports [Tx V3 Reports] (vRtrIgmplfTxV3Reports)	long	The value of vRtrIgmplfTxV3Reports indicates the total number of IGMP V3 Reports transmitted on this interface.
InterfaceStatsExtension MIB entry name: vRtrIgmplfStatsEntry Entry description: An entry in the vRtrIgmplfStatsTable. Table description (for vRtrIgmplfStatsTable): The table listing the IGMP statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: igmp.Interface		
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrIgmplfRxLocalScopePkts)	long	The value of the object vRtrIgmplfRxLocalScopePkts indicates the number of IGMP packets received on the link-local scope IPv4 multicast address.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrIgmplfRxRsvdScopePkts)	long	The value of the object vRtrIgmplfRxRsvdScopePkts indicates the number of IGMP packets received on the reserved scope IPv4 multicast address.

pipStpOutRstBpdus [Pip Stp Out Rst Bpdus] (tlsPipStpOutRstBpdus)	long	The value of the object tlsPipStpOutRstBpdus indicates the number of Rapid Spanning Tree (RST) BPDUs sent out on this PIP uplink.
pipStpOutTcnBpdus [Pip Stp Out Tcn Bpdus] (tlsPipStpOutTcnBpdus)	long	This object indicates the number of Topology Change Notification BPDUs sent out this PIP uplink.
SiteFibStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteFib		

Table 646 I2fwd statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
entries [Entries] (svcTlsFdbNumEntries)	long	The value of the object svcTlsFdbNumEntries indicates the current number of entries allocated in the FDB of this service.
provisionedSize [Provisioned Size] (svcTlsFdbTableSize)	long	The value of the object svcTlsFdbTableSize specifies the maximum number of learned and static entries allowed in the FDB of this service. The maximum value of svcTlsFdbTableSize depends on the platform/chassis mode.
staticEntries [Static Entries] (svcTlsFdbNumStaticEntries)	long	The value of the object svcTlsFdbNumStaticEntries indicates the current number of static entries in the FDB of this service.
SiteStpStats MIB entry name: svcTlsInfoEntry Entry description: TLS specific information about a service. Table description (for svcTlsInfoTable): A table that contains TLS service information. Supports realtime plotting Supports scheduled collection Monitored class: I2fwd.SiteStp		
timeSinceTopologyChange [Time Since Topology Change] (svcTlsStpTimeSinceTopologyChange)	long	The value of the object svcTlsStpTimeSinceTopologyChange indicates the time (in hundredths of a second) since the last time a topology change was detected by the Spanning Tree Protocol instance associated with this service.
topologyChanges [Topology Changes] (svcTlsStpTopologyChanges)	long	The value of the object svcTlsStpTopologyChanges indicates the total number of topology changes detected by the Spanning Tree Protocol instance associated with this service since the management entity was last reset or initialized.

Table 647 lag statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>LagStats</p> <p>MIB entry name: tLagOperationEntry</p> <p>Entry description: An entry (conceptual row) in the tLagOperationTable. Each entry represents an active Link Aggregation Group.</p> <p>Table description (for tLagOperationTable): Operational information about each Link Aggregation Group.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: lag.Interface</p>		
portThresholdFalling [Port Threshold Falling] (tLagPortThresholdFalling)	long	counts the number of linkDown or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being less than or equal to tLagPortThreshold value.
portThresholdRising [Port Threshold Rising] (tLagPortThresholdRising)	long	counts the number of linkUp or dynamicCost events for the Link Aggregation Group caused by the number of physical ports being greater than tLagPortThreshold value.
<p>MultiChassisLagMemberStats</p> <p>MIB entry name: tmnxMcLagLagStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a lag that participates in a multi-chassis configuration with a given peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcLagLagStatsTable): The tmnxMcLagLagStatsTable has an entry for each lag that participates in a multi-chassis configuration for the indicated peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • lag.MultiChassisLagMember • multichassis.MultiChassisLagMember 		
configPacketsReceived [Config Packets Received] (tmnxMcLagLagStatsPktsRxConfig)	long	The value of tmnxMcLagLagStatsPktsRxConfig indicates how many MC-Lag control packets of type lag config were received on this system from the peer for this lag.

Table 647 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagLagStatsPktsTxConfig)	long	The value of tmnxMcLagLagStatsPktsTxConfig indicates how many MC-Lag control packets of type lag config were sent on this system to the peer for this lag.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagLagStatsPktsTxFailed)	long	The value of tmnxMcLagLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted on this system to the peer for this lag.
statePacketsReceived [State Packets Received] (tmnxMcLagLagStatsPktsRxState)	long	The value of tmnxMcLagLagStatsPktsRxState indicates how many MC-Lag control packets of type lag state were received on this system from the peer for this lag.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagLagStatsPktsTxState)	long	The value of tmnxMcLagLagStatsPktsTxState indicates how many MC-Lag control packets of type lag state were sent on this system to the peer for this lag.
MultiChassisLagStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored classes: <ul style="list-style-type: none"> • equipment.CardSlot • netw.NetworkElement 		
configPacketsReceived [Config Packets Received] (tmnxMcLagStatsPktsRxConfig)	long	The value of tmnxMcLagStatsPktsRxConfig indicates how many valid MC-Lag control packets indicating the lag configuration were received on this system.
configPacketsTransmitted [Config Packets Transmitted] (tmnxMcLagStatsPktsTxConfig)	long	The value of tmnxMcLagStatsPktsTxConfig indicates how many MC-Lag control packets were transmitted from this system of type lag config.

Table 647 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagStatsDropMD5)	long	The value of tmnxMcLagStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system because they failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagStatsPktsTxFailed)	long	The value of tmnxMcLagStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagStatsDropTlvInvlLagId)	long	The value of tmnxMcLagStatsDropTlvInvlLagId indicates how many MC-Lag control packets were dropped on this system because they refer to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagStatsDropTlvInvalidSize)	long	The value of tmnxMcLagStatsDropTlvInvalidSize indicates how many MC-Lag control packets were dropped on this system because of invalid size.
keepalivePacketsReceived [Keepalive Packets Received] (tmnxMcLagStatsPktsRxKeepalive)	long	The value of tmnxMcLagStatsPktsRxKeepalive indicates how many valid MC-Lag control packets of type keepalive were received on this system.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagStatsPktsTxKeepalive)	long	The value of tmnxMcLagStatsPktsTxKeepalive indicates how many MC-Lag control packets were transmitted from this system of type keepalive.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagStatsDropOutOfSeq)	long	The value of tmnxMcLagStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system because they were out of sequence.
packetsDropped [Packets Dropped] (tmnxMcLagStatsDropPktKpaliveTask)	long	The value of tmnxMcLagStatsDropPktKpaliveTask indicates how many MC-Lag control packets were dropped on this system because of invalid size, authentication or unknown peer.

Table 647 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagStatsPktsRx)	long	The value of tmnxMcLagStatsPktsRx indicates how many MC-Lag control packets with valid authentication were received on this system.
packetsTransmitted [Packets Transmitted] (tmnxMcLagStatsPktsTx)	long	The value of tmnxMcLagStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagStatsPktsRxPeerConfig)	long	The value of tmnxMcLagStatsPktsRxPeerConfig indicates how many valid MC-Lag control packets indicating the peer configuration were received on this system.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagStatsPktsTxPeerConfig)	long	The value of tmnxMcLagStatsPktsTxPeerConfig indicates how many MC-Lag control packets were transmitted from this system of type peer config.
statePacketsReceived [State Packets Received] (tmnxMcLagStatsPktsRxState)	long	The value of tmnxMcLagStatsPktsRxState indicates how many valid MC-Lag control packets indicating the lag state were received on this system.
statePacketsTransmitted [State Packets Transmitted] (tmnxMcLagStatsPktsTxState)	long	The value of tmnxMcLagStatsPktsTxState indicates how many MC-Lag control packets were transmitted from this system of type lag state.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcLagStatsDropPktTooShort)	long	The value of tmnxMcLagStatsDropPktTooShort indicates how many MC-Lag control packets were dropped on this system because the packet was too small.
unknownPeerPacketsDropped [Unknown Peer Packets Dropped] (tmnxMcLagStatsDropUnknownPeer)	long	The value of tmnxMcLagStatsDropUnknownPeer indicates how many MC-Lag control packets were dropped on this system because they are coming from an unknown peer.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcLagStatsDropUnknownTlv)	long	The value of tmnxMcLagStatsDropUnknownTlv indicates how many MC-Lag control packets were dropped on this system because they contained an unknown TLV.

Table 647 lag statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
verifyFailedPacketsDropped [Verify Failed Packets Dropped] (tmnxMcLagStatsDropPktVerifyFaild)	long	The value of tmnxMcLagStatsDropPktVerifyFaild indicates how many MC-Lag control packets were dropped on this system because of invalid formatting.

Table 648 Ldp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>IPv6InterfaceStats</p> <p>MIB entry name: vRtrLdpNgInetIfStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Interface for given Inet address family. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpNgSessionStatsEntry.</p> <p>Table description (for vRtrLdpNgInetIfStatsTable): The vRtrLdpNgInetIfStatsTable is a read-only table. The purpose of this table is to keep statistical information about the LDP Interfaces for given Inet address family on this LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgInetIfTable, and the augmenting table, vRtrLdpNgInetIfStatsTable. This in effect extends the vRtrLdpNgInetIfTable with additional columns. Creation or deletion of a row in the vRtrLdpNgInetIfTable results in the same fate for the row in the vRtrLdpNgInetIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.IPv6Extension</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpNgInetIfStatsExistingAdj)	long	The value of vRtrLdpNgInetIfStatsExistingAdj indicates a count of the total active adjacencies on this LDP interface for given Inet address family.

Table 648 Ldp statistics (continued)

Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgInetIfTable, and the augmenting table, vRtrLdpNgInetIfStatsTable. This in effect extends the vRtrLdpNgInetIfTable with additional columns. Creation or deletion of a row in the vRtrLdpNgInetIfTable results in the same fate for the row in the vRtrLdpNgInetIfStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Interface</p>		
existingAdjacencies [Existing Adjacencies] (vRtrLdpNgInetIfStatsExistingAdj)	long	The value of vRtrLdpNgInetIfStatsExistingAdj indicates a count of the total active adjacencies on this LDP interface for given Inet address family.
<p>LdpEgressStats</p> <p>MIB entry name: vRtrLdpEgrStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrLdpEgrStatisticsTable): The vRtrLdpEgrStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: ldp.AccountingFecPrefix</p>		

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ldpInProfileOctetsFc0 [Ldp In Profile Octets Fc 0] (vRtrLdpInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
ldpInProfileOctetsFc1 [Ldp In Profile Octets Fc 1] (vRtrLdpInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
ldpInProfileOctetsFc2 [Ldp In Profile Octets Fc 2] (vRtrLdpInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
ldpInProfileOctetsFc3 [Ldp In Profile Octets Fc 3] (vRtrLdpInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
ldpInProfileOctetsFc4 [Ldp In Profile Octets Fc 4] (vRtrLdpInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
ldpInProfileOctetsFc5 [Ldp In Profile Octets Fc 5] (vRtrLdpInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
ldpInProfileOctetsFc6 [Ldp In Profile Octets Fc 6] (vRtrLdpInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
ldpInProfileOctetsFc7 [Ldp In Profile Octets Fc 7] (vRtrLdpInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrLdpInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

This in effect extends the vRtrLdpNgSessionTable with additional columns. Creation or deletion of a row in the vRtrLdpNgSessionTable results in the same fate for the row in the vRtrLdpNgSessionStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Idp.Session</p>		
addressMessagesReceived [Address Messages Received] (vRtrLdpNgSessStatsAddrIn)	long	The value of vRtrLdpNgSessStatsAddrIn counts the number of Address Messages that have been received during this session.
addressMessagesSent [Address Messages Sent] (vRtrLdpNgSessStatsAddrOut)	long	The value of vRtrLdpNgSessStatsAddrOut counts the number of Address Messages that have been sent during this session.
addressWithdrawMessagesReceived [Address Withdraw Messages Received] (vRtrLdpNgSessStatsAddrWithdrIn)	long	The value of vRtrLdpNgSessStatsAddrWithdrIn counts the number of Address Withdraw Messages that have been received during this session.
addressWithdrawMessagesSent [Address Withdraw Messages Sent] (vRtrLdpNgSessStatsAddrWithdrOut)	long	The value of vRtrLdpNgSessStatsAddrWithdrOut counts the number of Address Withdraw Messages that have been sent during this session.
capabilityMessageIn [Capability Message In] (vRtrLdpNgSessStatsCapabilityIn)	long	The value of vRtrLdpNgSessStatsCapabilityIn counts the number of Capability Messages that have been received during this session.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
capabilityMessageOut [Capability Message Out] (vRtrLdpNgSessStatsCapabilityOut)	long	The value of vRtrLdpNgSessStatsCapabilityOut counts the number of Capability Messages that have been sent during this session.
helloMessagesReceived [Hello Messages Received] (vRtrLdpNgSessStatsHelloIn)	long	The value of vRtrLdpNgSessStatsHelloIn counts the number of Hello Messages that have been received during this session.
helloMessagesSent [Hello Messages Sent] (vRtrLdpNgSessStatsHelloOut)	long	The value of vRtrLdpNgSessStatsHelloOut counts the number of Hello Messages that have been sent during this session.
initMessagesReceived [Init Messages Received] (vRtrLdpNgSessStatsInitIn)	long	The value of vRtrLdpNgSessStatsInitIn counts the number of Init Messages that have been received during this session.
initMessagesSent [Init Messages Sent] (vRtrLdpNgSessStatsInitOut)	long	The value of vRtrLdpNgSessStatsInitOut counts the number of Init Messages that have been sent during this session.
ipv4AddrReceived [Ipv 4 Addr Received] (vRtrLdpNgSessStatsIPv4AddrRcv)	long	The value of vRtrLdpNgSessStatsIPv4AddrRcv counts the number of IPv4 local addresses received for this session.
ipv4AddrSent [Ipv 4 Addr Sent] (vRtrLdpNgSessStatsIPv4AddrSent)	long	The value of vRtrLdpNgSessStatsIPv4AddrSent counts the number of IPv4 local addresses sent for this session.
ipv4P2mpFecReceived [Ipv 4 P2 mp Fec Received] (vRtrLdpNgSessStatsIPv4P2MPFecRcv)	long	The value of vRtrLdpNgSessStatsIPv4P2MPFecRcv counts the number of IPv4 P2MP FECs received for this session.
ipv4P2mpFecSent [Ipv 4 P2 mp Fec Sent] (vRtrLdpNgSessStatsIPv4P2MPFecSnt)	long	The value of vRtrLdpNgSessStatsIPv4P2MPFecSnt counts the number of IPv4 P2MP FECs sent for this session.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv4PfxFecReceived [Ipv 4 Pfx Fec Received] (vRtrLdpNgSessStatsIPv4PfxFecRcv)	long	The value of vRtrLdpNgSessStatsIPv4PfxFecRcv counts the number of IPv4 prefix FECs received for this session.
ipv4PfxFecSent [Ipv 4 Pfx Fec Sent] (vRtrLdpNgSessStatsIPv4PfxFecSnt)	long	The value of vRtrLdpNgSessStatsIPv4PfxFecSnt counts the number of IPv4 prefix FECs sent for this session.
ipv6AddrReceived [Ipv 6 Addr Received] (vRtrLdpNgSessStatsIPv6AddrRcv)	long	The value of vRtrLdpNgSessStatsIPv6AddrRcv counts the number of IPv6 local addresses received for this session.
ipv6AddrSent [Ipv 6 Addr Sent] (vRtrLdpNgSessStatsIPv6AddrSent)	long	The value of vRtrLdpNgSessStatsIPv6AddrSent counts the number of IPv6 local addresses sent for this session.
ipv6P2mpFecReceived [Ipv 6 P2 mp Fec Received] (vRtrLdpNgSessStatsIPv6P2MPFecRcv)	long	The value of vRtrLdpNgSessStatsIPv6P2MPFecRcv counts the number of IPv6 P2MP FECs received for this session.
ipv6P2mpFecSent [Ipv 6 P2 mp Fec Sent] (vRtrLdpNgSessStatsIPv6P2MPFecSnt)	long	The value of vRtrLdpNgSessStatsIPv6P2MPFecSnt counts the number of IPv6 P2MP FECs sent for this session.
ipv6PfxFecReceived [Ipv 6 Pfx Fec Received] (vRtrLdpNgSessStatsIPv6PfxFecRcv)	long	The value of vRtrLdpNgSessStatsIPv6PfxFecRcv counts the number of IPv6 prefix FECs received for this session.
ipv6PfxFecSent [Ipv 6 Pfx Fec Sent] (vRtrLdpNgSessStatsIPv6PfxFecSnt)	long	The value of vRtrLdpNgSessStatsIPv6PfxFecSnt counts the number of IPv6 prefix FECs sent for this session.
keepAliveMessagesReceived [Keep Alive Messages Received] (vRtrLdpNgSessStatsKeepaliveIn)	long	The value of vRtrLdpNgSessStatsKeepaliveIn counts the number of Keepalive Messages that have been received during this session.

Table 648 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAliveMessagesSent [Keep Alive Messages Sent] (vRtrLdpNgSessStatsKeepaliveOut)	long	The value of vRtrLdpNgSessStatsKeepaliveOut counts the number of Keepalive Messages that have been sent during this session.
labelAbortsReceived [Label Aborts Received] (vRtrLdpNgSessStatsLblAbortIn)	long	The value of vRtrLdpNgSessStatsLblAbortIn counts the number of Label Abort Messages that have been received during this session.
labelAbortsSent [Label Aborts Sent] (vRtrLdpNgSessStatsLblAbortOut)	long	The value of vRtrLdpNgSessStatsLblAbortOut counts the number of Label Abort Messages that have been sent during this session.
labelMappingsReceived [Label Mappings Received] (vRtrLdpNgSessStatsLblMappingIn)	long	The value of vRtrLdpNgSessStatsLblMappingIn counts the number of Label Mapping Messages that have been received during this session.
labelMappingsSent [Label Mappings Sent] (vRtrLdpNgSessStatsLblMappingOut)	long	The value of vRtrLdpNgSessStatsLblMappingOut counts the number of Label Mapping Messages that have been sent during this session.
labelReleasesReceived [Label Releases Received] (vRtrLdpNgSessStatsLblReleaseIn)	long	The value of vRtrLdpNgSessStatsLblReleaseIn counts the number of Label Release Messages that have been received during this session.
labelReleasesSent [Label Releases Sent] (vRtrLdpNgSessStatsLblReleaseOut)	long	The value of vRtrLdpNgSessStatsLblReleaseOut counts the number of Label Release Messages that have been sent during this session.
labelRequestsReceived [Label Requests Received] (vRtrLdpNgSessStatsLblRequestIn)	long	The value of vRtrLdpNgSessStatsLblRequestIn counts the number of Label Request Messages that have been received during this session.
labelRequestsSent [Label Requests Sent] (vRtrLdpNgSessStatsLblRequestOut)	long	The value of vRtrLdpNgSessStatsLblRequestOut counts the number of Label Request Messages that have been sent during this session.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
labelWithdrawsReceived [Label Withdraws Received] (vRtrLdpNgSessStatsLblWithdrawIn)	long	The value of vRtrLdpNgSessStatsLblWithdrawIn counts the number of Label Withdraw Messages that have been received during this session.
labelWithdrawsSent [Label Withdraws Sent] (vRtrLdpNgSessStatsLblWithdrawOut)	long	The value of vRtrLdpNgSessStatsLblWithdrawOut counts the number of Label Withdraw Messages that have been sent during this session.
linkAdjacencies [Link Adjacencies] (vRtrLdpNgSessStatsLinkAdj)	long	The value of vRtrLdpNgSessStatsLinkAdj indicates the number of link adjacencies for this session.
notificationMessagesReceived [Notification Messages Received] (vRtrLdpNgSessStatsNotifIn)	long	The value of vRtrLdpNgSessStatsNotifIn counts the number of Notification Messages that have been received during this session.
notificationMessagesSent [Notification Messages Sent] (vRtrLdpNgSessStatsNotifOut)	long	The value of vRtrLdpNgSessStatsNotifOut counts the number of Notification Messages that have been sent during this session.
svcFec128Received [Svc Fec 128 Received] (vRtrLdpNgSessStatsSvcFec128Recv)	long	The value of vRtrLdpNgSessStatsSvcFec128Recv counts the number of service FEC 128 received for this session.
svcFec128Sent [Svc Fec 128 Sent] (vRtrLdpNgSessStatsSvcFec128Sent)	long	The value of vRtrLdpNgSessStatsSvcFec128Sent counts the number of service FEC 128 sent for this session.
svcFec129Received [Svc Fec 129 Received] (vRtrLdpNgSessStatsSvcFec129Recv)	long	The value of vRtrLdpNgSessStatsSvcFec129Recv counts the number of service FEC 129 received for this session.
svcFec129Sent [Svc Fec 129 Sent] (vRtrLdpNgSessStatsSvcFec129Sent)	long	The value of vRtrLdpNgSessStatsSvcFec129Sent counts the number of service FEC 129 sent for this session.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
targetedAdjacencies [Targeted Adjacencies] (vRtrLdpNgSessStatsTargAdj)	long	The value of vRtrLdpNgSessStatsTargAdj indicates the number of targeted adjacencies for this session.
<p>SiteStats</p> <p>MIB entry name: vLdpNgStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vLdpNgStatsTable): vLdpNgStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgGeneralTable, and the augmenting table, vLdpNgStatsTable. This in effect extends the vRtrLdpNgGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpNgGeneralTable results in the same fate for the row in the vLdpNgStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Ldp.Site</p>		
activeInterfaces [Active Interfaces] (vLdpNgStatsIPv4ActiveIf)	long	The value of vLdpNgStatsIPv4ActiveIf indicates the number of active (i.e. operationally up) IPv4 interfaces associated with the LDP instance.
activeLinkAdjacencies [Active Link Adjacencies] (vLdpNgStatsIPv4ActiveLinkAdj)	long	The value of vLdpNgStatsIPv4ActiveLinkAdj indicates the number of active IPv4 link adjacencies (i.e. established adjacencies) associated with the LDP instance.
activeSessions [Active Sessions] (vLdpNgStatsIPv4ActiveSess)	long	The value of vLdpNgStatsIPv4ActiveSess indicates the number of active IPv4 sessions (i.e. session in some form of creation) associated with the LDP instance.
activeTargAdjacencies [Active Targ Adjacencies] (vLdpNgStatsIPv4ActiveTargAdj)	long	The value of vLdpNgStatsIPv4ActiveTargAdj indicates the number of active IPv4 target adjacencies (i.e. established sessions) associated with the LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeTargetedSessions [Active Targeted Sessions] (vLdpNgStatsIPv4ActiveTargPeers)	long	The value of vLdpNgStatsIPv4ActiveTargPeers indicates the number of configured IPv4 targeted peers that are administratively up in an LDP instance.
addressFECsReceived [Address FECs Received] (vLdpNgStatsIPv4PfxFecRecv)	long	The value of vLdpNgStatsIPv4PfxFecRecv indicates the number of IPv4 Address FECs received by the LDP instance from its neighbors.
addressFECsSent [Address FECs Sent] (vLdpNgStatsIPv4PfxFecSent)	long	The value of vLdpNgStatsIPv4PfxFecSent indicates the number of IPv4 Address FECs sent by the LDP instance to its neighbors.
attemptedSessions [Attempted Sessions] (vLdpNgStatsIPv4AttemptedSessions)	long	The value of vLdpNgStatsIPv4AttemptedSessions indicates the total number of attempted IPv4 sessions for this LDP instance.
badLdpIdentifierErrors [Bad Ldp Identifier Errors] (vLdpNgStatsBadLdpIdErrors)	long	The value of vLdpNgStatsBadLdpIdErrors gives the number of Bad LDP Identifier Fatal Errors detected for sessions associated with this LDP instance.
badMessageLengthErrors [Bad Message Length Errors] (vLdpNgStatsBadMsgLengthErrors)	long	The value of vLdpNgStatsBadMsgLengthErrors gives the number of Bad Message Length Fatal Errors detected for sessions associated with this LDP instance.
badPduLengthErrors [Bad Pdu Length Errors] (vLdpNgStatsBadPduLengthErrors)	long	The value of vLdpNgStatsBadPduLengthErrors gives the number of Bad Pdu Length Fatal Errors detected for sessions associated with this LDP instance.
badTlvLengthErrors [Bad Tlv Length Errors] (vLdpNgStatsBadTlvLengthErrors)	long	The value of vLdpNgStatsBadTlvLengthErrors gives the number of Bad TLV Length Fatal Errors detected for sessions associated with this LDP instance.
egrFecPfxCount [Egr Fec Pfx Count] (vLdpNgStatsIPv4EgrFecPfxCount)	long	The value of vLdpNgStatsIPv4EgrFecPfxCount indicates the number of IPv4 egress FEC prefix statistics configured for this LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fec128FecInOverloaded [Fec 128 Fec In Overloaded] (vLdpNgStatsFec128FecInOLoad)	long	The value of vLdpNgStatsFec128FecInOLoad indicates the number PW ID FEC in overload state in LDP instance.
fec128FecOLSessionReceived [Fec 128 Fec OLSession Received] (vLdpNgStatsFec128FecOLSessRecv)	long	The value of vLdpNgStatsFec128FecOLSessRecv indicates the number of Overload Notifications received for PW ID FEC over sessions in LDP instance.
fec128FecOLSessionSent [Fec 128 Fec OLSession Sent] (vLdpNgStatsFec128FecOLSessSent)	long	The value of vLdpNgStatsFec128FecOLSessSent indicates the number of Overload Notifications sent for PW ID FEC over sessions in LDP instance.
fec129FecInOverloaded [Fec 129 Fec In Overloaded] (vLdpNgStatsFec129FecInOLoad)	long	The value of vLdpNgStatsFec129FecInOLoad indicates the number General PW ID FEC in overload state in LDP instance.
fec129FecOLSessionReceived [Fec 129 Fec OLSession Received] (vLdpNgStatsFec129FecOLSessRecv)	long	The value of vLdpNgStatsFec129FecOLSessRecv indicates the number of Overload Notifications received for General PW ID FEC over sessions in LDP instance.
fec129FecOLSessionSent [Fec 129 Fec OLSession Sent] (vLdpNgStatsFec129FecOLSessSent)	long	The value of vLdpNgStatsFec129FecOLSessSent indicates the number of Overload Notifications sent for General PW ID FEC over sessions in LDP instance.
inactiveInterfaces [Inactive Interfaces] (vLdpNgStatsIPv4Inactif)	long	The value of vLdpNgStatsIPv4Inactif indicates the number of inactive (i.e. operationally down) IPv4 interfaces associated with the LDP instance.
inactiveTargetedSessions [Inactive Targeted Sessions] (vLdpNgStatsIPv4InactiveTargPeers)	long	The value of vLdpNgStatsIPv4InactiveTargPeers indicates the number of inactive (i.e. operationally down) IPv4 targeted sessions associated with the LDP instance.
ipv6ActiveInterfaces [Ipv 6 Active Interfaces] (vLdpNgStatsIPv6Activif)	long	The value of vLdpNgStatsIPv6Activif indicates the number of active (i.e. operationally up) IPv6 interfaces associated with the LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6ActiveLinkAdjacencies [Ipv 6 Active Link Adjacencies] (vLdpNgStatsIPv6ActiveLinkAdj)	long	The value of vLdpNgStatsIPv6ActiveLinkAdj indicates the number of active IPv6 link adjacencies (i.e. established adjacencies) associated with the LDP instance.
ipv6ActiveSessions [Ipv 6 Active Sessions] (vLdpNgStatsIPv6ActiveSess)	long	The value of vLdpNgStatsIPv6ActiveSess indicates the number of active IPv6 sessions (i.e. session in some form of creation) associated with the LDP instance.
ipv6ActiveTargAdjacencies [Ipv 6 Active Targ Adjacencies] (vLdpNgStatsIPv6ActiveTargAdj)	long	The value of vLdpNgStatsIPv6ActiveTargAdj indicates the number of active IPv6 target adjacencies (i.e. established sessions) associated with the LDP instance.
ipv6ActiveTargetedSessions [Ipv 6 Active Targeted Sessions] (vLdpNgStatsIPv6ActiveTargPeers)	long	The value of vLdpNgStatsIPv6ActiveTargPeers indicates the number of configured IPv6 targeted peers that are administratively up in an LDP instance.
ipv6AddressFECsReceived [Ipv 6 Address FECs Received] (vLdpNgStatsIPv6PfxFecRecv)	long	The value of vLdpNgStatsIPv6PfxFecRecv indicates the number of IPv6 Address FECs received by the LDP instance from its neighbors.
ipv6AddressFECsSent [Ipv 6 Address FECs Sent] (vLdpNgStatsIPv6PfxFecSent)	long	The value of vLdpNgStatsIPv6PfxFecSent indicates the number of IPv6 Address FECs sent by the LDP instance to its neighbors.
ipv6AttemptedSessions [Ipv 6 Attempted Sessions] (vLdpNgStatsIPv6AttemptedSessions)	long	The value of vLdpNgStatsIPv6AttemptedSessions indicates the total number of attempted IPv6 sessions for this LDP instance.
ipv6EgrFecPfxCount [Ipv 6 Egr Fec Pfx Count] (vLdpNgStatsIPv6EgrFecPfxCount)	long	The value of vLdpNgStatsIPv6EgrFecPfxCount indicates the number of IPv6 egress FEC prefix statistics configured for this LDP instance.
ipv6InactiveInterfaces [Ipv 6 Inactive Interfaces] (vLdpNgStatsIPv6InactiveIf)	long	The value of vLdpNgStatsIPv6InactiveIf indicates the number of inactive (i.e. operationally down) IPv6 interfaces associated with the LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6InactiveTargetedSessions [Ipv 6 Inactive Targeted Sessions] (vLdpNgStatsIPv6InactiveTargPeers)	long	The value of vLdpNgStatsIPv6InactiveTargPeers indicates the number of inactive (i.e. operationally down) IPv6 targeted sessions associated with the LDP instance.
ipv6OverloadedInterfaces [Ipv 6 Overloaded Interfaces] (vLdpNgStatsIPv6OLoadInterfaces)	long	The value of vLdpNgStatsIPv6OLoadInterfaces indicates the number of overloaded IPv6 interfaces in LDP instance.
ipv6OverloadedTargetedPeers [Ipv 6 Overloaded Targeted Peers] (vLdpNgStatsIPv6OLoadTargPeers)	long	The value of vLdpNgStatsIPv6OLoadTargPeers indicates the number of overloaded IPv6 targeted peers in LDP instance.
ipv6P2mpFecInOverloaded [Ipv 6 P2 mp Fec In Overloaded] (vLdpNgStatsIPv6P2MPFecInOLoad)	long	The value of vLdpNgStatsIPv6P2MPFecInOLoad indicates the number IPv4 P2MP FEC in overload state in LDP instance.
ipv6P2mpFecOLSessionReceived [Ipv 6 P2 mp Fec OLSession Received] (vLdpNgStatsIPv6P2MPFecOLSessRecv)	long	The value of vLdpNgStatsIPv6P2MPFecOLSessRecv indicates the number of Overload Notifications received for IPv6 P2MP FEC over sessions in LDP instance.
ipv6P2mpFecOLSessionSent [Ipv 6 P2 mp Fec OLSession Sent] (vLdpNgStatsIPv6P2MPFecOLSessSent)	long	The value of vLdpNgStatsIPv6P2MPFecOLSessSent indicates the number of Overload Notifications sent for IPv6 P2MP FEC over sessions in LDP instance.
ipv6PfxFecInOverloaded [Ipv 6 Pfx Fec In Overloaded] (vLdpNgStatsIPv6PfxFecInOLoad)	long	The value of vLdpNgStatsIPv6PfxFecInOLoad indicates the number IPv6 Address FEC in overload state in LDP instance.
ipv6PfxFecOLSessionReceived [Ipv 6 Pfx Fec OLSession Received] (vLdpNgStatsIPv6PfxFecOLSessRecv)	long	The value of vLdpNgStatsIPv6PfxFecOLSessRecv indicates the number of Overload Notifications received for IPv6 address FEC over sessions in LDP instance.
ipv6PfxFecOLSessionSent [Ipv 6 Pfx Fec OLSession Sent] (vLdpNgStatsIPv6PfxFecOLSessSent)	long	The value of vLdpNgStatsIPv6PfxFecOLSessSent indicates the number of Overload Notifications sent for IPv6 address FEC over sessions in LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAliveExpiredErrors [Keep Alive Expired Errors] (vLdpNgStatsKeepAliveExpErrors)	long	The value of vLdpNgStatsKeepAliveExpErrors gives the number of Session Keep Alive Timer Expired Errors detected for sessions associated with this LDP instance.
malformedTlvValueErrors [Malformed Tlv Value Errors] (vLdpNgStatsMalformedTlvErrors)	long	The value of vLdpNgStatsMalformedTlvErrors gives the number of Malformed TLV Value Fatal Errors detected for sessions associated with this LDP instance.
operDownEvents [Oper Down Events] (vLdpNgStatsIPv4OperDownEvents)	long	The value of vLdpNgStatsIPv4OperDownEvents indicates the number of times the IPv4 LDP instance has gone operationally down since the instance was created.
overloadedInterfaces [Overloaded Interfaces] (vLdpNgStatsIPv4OLoadInterfaces)	long	The value of vLdpNgStatsIPv4OLoadInterfaces indicates the number of overloaded IPv4 interfaces in LDP instance.
overloadedTargetedPeers [Overloaded Targeted Peers] (vLdpNgStatsIPv4OLoadTargPeers)	long	The value of vLdpNgStatsIPv4OLoadTargPeers indicates the number of overloaded IPv4 targeted peers in LDP instance.
p2mpFecInOverloaded [P2 mp Fec In Overloaded] (vLdpNgStatsIPv4P2MPFecInOLoad)	long	The value of vLdpNgStatsIPv4P2MPFecInOLoad indicates the number IPv4 P2MP FEC in overload state in LDP instance.
p2mpFecOLSessionReceived [P2 mp Fec OLSession Received] (vLdpNgStatsIPv4P2MPFecOLSessRecv)	long	The value of vLdpNgStatsIPv4P2MPFecOLSessRecv indicates the number of Overload Notifications received for IPv4 P2MP FEC over sessions in LDP instance.
p2mpFecOLSessionSent [P2 mp Fec OLSession Sent] (vLdpNgStatsIPv4P2MPFecOLSessSent)	long	The value of vLdpNgStatsIPv4P2MPFecOLSessSent indicates the number of Overload Notifications sent for IPv4 P2MP FEC over sessions in LDP instance.
pfxFecInOverloaded [Pfx Fec In Overloaded] (vLdpNgStatsIPv4PfxFecInOLoad)	long	The value of vLdpNgStatsIPv4PfxFecInOLoad indicates the number IPv4 Address FEC in overload state in LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
pfxFecOLSessionReceived [Pfx Fec OLSession Received] (vLdpNgStatsIPv4PfxFecOLSessRecv)	long	The value of vLdpNgStatsIPv4PfxFecOLSessRecv indicates the number of Overload Notifications received for IPv4 address FEC over sessions in LDP instance.
pfxFecOLSessionSent [Pfx Fec OLSession Sent] (vLdpNgStatsIPv4PfxFecOLSessSent)	long	The value of vLdpNgStatsIPv4PfxFecOLSessSent indicates the number of Overload Notifications sent for IPv4 address FEC over sessions in LDP instance.
service129FECsReceived [Service 129 FECs Received] (vLdpNgStatsFec129FecRecv)	long	The value of vLdpNgStatsFec129FecRecv indicates the number of General Pseudo wire ID FECs received by the LDP instance from its neighbors.
service129FECsSent [Service 129 FECs Sent] (vLdpNgStatsFec129FecSent)	long	The value of vLdpNgStatsFec129FecSent indicates the number of General Pseudo wire ID FECs sent by the LDP instance to its neighbors.
serviceFECsReceived [Service FECs Received] (vLdpNgStatsFec128FecRecv)	long	The value of vLdpNgStatsFec128FecRecv indicates the number of Pseudo wire ID FECs received by the LDP instance from its neighbors.
serviceFECsSent [Service FECs Sent] (vLdpNgStatsFec128FecSent)	long	The value of vLdpNgStatsFec128FecSent indicates the number of Pseudo wire ID FECs sent by the LDP instance to its neighbors.
sessionRejectedAdvertisementModeErrors [Session Rejected Advertisement Mode Errors] (vLdpNgStatsSessRejAdvErrors)	long	The value of vLdpNgStatsSessRejAdvErrors gives the total number of Session Rejected/Parameters Advertisement Mode Error Notification Messages sent or received by this LDP instance.
sessionRejectedLabelRangeErrors [Session Rejected Label Range Errors] (vLdpNgStatsSessRejLblRngeErrs)	long	The value of vLdpNgStatsSessRejLblRngeErrs gives the total number of Session Rejected/Parameters Label Range Error Notification Messages sent or received by this LDP instance.

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sessionRejectedMaxPduLengthErrors [Session Rejected Max Pdu Length Errors] (vLdpNgStatsSessRejMaxPduErrs)	long	The value of vLdpNgStatsSessRejMaxPduErrs gives the total number of Session Rejected/Parameters Max Pdu Length Error Notification Messages sent or received by this LDP instance.
sessionRejectedNoHelloErrors [Session Rejected No Hello Errors] (vLdpNgStatsSessRejNoHelloErrs)	long	The value of vLdpNgStatsSessRejNoHelloErrs gives the total number of Session Rejected/No Hello Error Notification Messages sent or received by this LDP instance.
shutdownNotificationsReceived [Shutdown Notifications Received] (vLdpNgStatsShutdownNotifRecv)	long	The value of vLdpNgStatsShutdownNotifRecv gives the number of Shutdown Notifications received related to sessions associated with this LDP instance.
shutdownNotificationsSent [Shutdown Notifications Sent] (vLdpNgStatsShutdownNotifSent)	long	The value of vLdpNgStatsShutdownNotifSent gives the number of Shutdown Notifications sent related to sessions associated with this LDP instance.
unknownTlvErrors [Unknown Tlv Errors] (vLdpNgStatsUnknownTlvErrors)	long	The value of vLdpNgStatsUnknownTlvErrors indicates the number of Unknown TLV Fatal Errors detected for sessions associated with this LDP instance.
<p>SiteStatsExtension</p> <p>MIB entry name: vLdpNgStatsEntry</p> <p>Entry description: A row in this table represents statistical information about an LDP instance.</p> <p>Table description (for vLdpNgStatsTable): vLdpNgStatsTable is a read-only table. The purpose of this table is to keep statistical information about an LDP Instance. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgGeneralTable, and the augmenting table, vLdpNgStatsTable. This in effect extends the vRtrLdpNgGeneralTable with additional columns. Creation or deletion of a row in the vRtrLdpNgGeneralTable results in the same fate for the row in the vLdpNgStatsTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ldp.Site</p>		

Table 648 Ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ipv6P2mpFecReceived [Ipv 6 P2 mp Fec Received] (vLdpNgStatsIPv6P2MPFecRecv)	long	The value of vLdpNgStatsIPv6P2MPFecRecv indicates the number of IPv6 P2MP FECs received by the LDP instance from its neighbors.
ipv6P2mpFecSent [Ipv 6 P2 mp Fec Sent] (vLdpNgStatsIPv6P2MPFecSent)	long	The value of vLdpNgStatsIPv6P2MPFecSent indicates the number of IPv6 P2MP FECs sent by the LDP instance to its neighbors.
p2mpFecReceived [P2 mp Fec Received] (vLdpNgStatsIPv4P2MPFecRecv)	long	The value of vLdpNgStatsIPv4P2MPFecRecv indicates the number of IPv4 P2MP FECs received by the LDP instance from its neighbors.
p2mpFecSent [P2 mp Fec Sent] (vLdpNgStatsIPv4P2MPFecSent)	long	The value of vLdpNgStatsIPv4P2MPFecSent indicates the number of IPv4 P2MP FECs sent by the LDP instance to its neighbors.
<p>TargetedPeerStats</p> <p>MIB entry name: vRtrLdpNgTargPeerStatsEntry</p> <p>Entry description: A row in this table contains statistical information about an LDP Targeted peer. Some counters contained in a row are for fatal errors received during a former LDP Session associated with this entry. For example, an LDP Pdu received on a TCP connection during an LDP Session contains a fatal error. That error is counted here, because the session is terminated. If the error is NOT fatal (i.e. and the Session remains), then the error is counted in the vRtrLdpNgSessionStatsEntry.</p> <p>Table description (for vRtrLdpNgTargPeerStatsTable): The vRtrLdpNgTargPeerStatsTable is a read-only table. The purpose of this table is to keep statistical information about the Targeted peers on the LSR. Use of AUGMENTS clause implies a one-to-one dependent relationship between the base table, vRtrLdpNgTargPeerTable, and the augmenting table, vRtrLdpNgTargPeerStatsTable. This in effect extends the vRtrLdpNgTargPeerTable with additional columns. Creation or deletion of a row in the vRtrLdpNgTargPeerTable results in the same fate for the row in the vRtrLdpNgTargPeerTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Idp.TargetedPeer</p>		

Table 648 ldp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
existingAdjacencies [Existing Adjacencies] (vRtrLdpNgTargPeerStatExistingAdj)	long	The value of vRtrLdpNgTargPeerStatExistingAdj indicates a count of the total active adjacencies with this targeted peer.

Table 649 Ildp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
LLDPRemoteSystemStats MIB entry name: IldpStatistics Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration		
remTablesAgeouts [Rem Tables Ageouts] (IldpStatsRemTablesAgeouts)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter should be incremented only once when the complete set of information is completely invalidated (aged out) from all related tables. Partial aging, similar to deletion case, is not allowed, and thus, should not change the value of this counter.
remTablesDeletes [Rem Tables Deletes] (IldpStatsRemTablesDeletes)	long	The number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in IldpRemoteSystemsData and IldpExtensions objects. This counter should be incremented only once when the complete set of information is completely deleted from all related tables. Partial deletions, such as deletion of rows associated with a particular MSAP from some tables, but not from all tables are not allowed, thus should not change the value of this counter.
remTablesDrops [Rem Tables Drops] (IldpStatsRemTablesDrops)	long	The number of times the complete set of information advertised by a particular MSAP could not be entered into tables contained in IldpRemoteSystemsData and IldpExtensions objects because of insufficient resources.

Table 649 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
remTablesInserts [Rem Tables Inserts] (IldpStatsRemTablesInserts)	long	The number of times the complete set of information advertised by a particular MSAP has been inserted into tables contained in IldpRemoteSystemsData and IldpExtensions objects. The complete set of information received from a particular MSAP should be inserted into related tables. If partial information cannot be inserted for a reason such as lack of resources, all of the complete set of information should be removed. This counter should be incremented only once after the complete set of information is successfully recorded in all related tables. Any failures during inserting information set which result in deletion of previously inserted information should not trigger any changes in IldpStatsRemTablesInserts since the insert is not completed yet or or in IldpStatsRemTablesDeletes, since the deletion would only be a partial deletion. If the failure was the result of lack of resources, the IldpStatsRemTablesDrops counter should be incremented once.
<p>LLDPRxPortStats</p> <p>MIB entry name: tmnxLldpStatsRxPortEntry</p> <p>Entry description: LLDP frame reception statistics for a particular port. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsRxPortTable): A table containing LLDP reception statistics for individual ports and destination MAC addresses. Entries are not required to exist in this table while the tmnxLldpPortCfgAdminStatus object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration</p>		

Table 649 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
IldpStatsRxPortAgeouts [Lldp Stats Rx Port Ageouts] (tmnxLldpStatsRxPortAgeouts)	long	The counter that represents the number of age-outs that occurred on a given port. An age-out is the number of times the complete set of information advertised by a particular MSAP has been deleted from tables contained in tmnxLldpRemoteSystemsData and IldpExtensions objects because the information timeliness interval has expired. This counter is similar to IldpStatsRemTablesAgeouts, except that the counter is on a per port basis. This enables NMS to poll tables associated with the tmnxLldpRemoteSystemsData objects and all LLDP extension objects associated with remote systems on the indicated port only. This counter should be set to zero during agent initialization and its value should not be saved in non-volatile storage. When a port's admin status changes from 'disabled' to 'rxOnly', 'txOnly' or 'txAndRx', the counter associated with the same port should reset to 0. The agent should also flush all remote system information associated with the same port. This counter should be incremented only once when the complete set of information is invalidated (aged out) from all related tables on a particular port. Partial ageing is not allowed, and thus, should not change the value of this counter.
IldpStatsRxPortFrameDiscard [Lldp Stats Rx Port Frame Discard] (tmnxLldpStatsRxPortFrameDiscard)	long	The number of LLDP frames received by this LLDP agent on the indicated port, and then discarded for any reason. This counter can provide an indication that LLDP header formatting problems may exist with the local LLDP agent in the sending system or that LLDPDU validation problems may exist with the local LLDP agent in the receiving system.
IldpStatsRxPortFrameErrs [Lldp Stats Rx Port Frame Errs] (tmnxLldpStatsRxPortFrameErrs)	long	The number of invalid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.
IldpStatsRxPortFrames [Lldp Stats Rx Port Frames] (tmnxLldpStatsRxPortFrames)	long	The number of valid LLDP frames received by this LLDP agent on the indicated port, while this LLDP agent is enabled.

Table 649 Ildp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
IldpStatsRxPortTLVDiscard [Lldp Stats Rx Port TLVDiscard] (tmnxLldpStatsRxPortTLVDiscard)	long	The number of LLDP TLVs discarded for any reason by this LLDP agent on the indicated port.
IldpStatsRxPortTLVUnknown [Lldp Stats Rx Port TLVUnknown] (tmnxLldpStatsRxPortTLVUnknown)	long	The number of LLDP TLVs received on the given port that are not recognized by this LLDP agent on the indicated port. An unrecognized TLV is referred to as the TLV whose type value is in the range of reserved TLV types (000 1001 - 111 1110) in Table 9.1 of IEEE Std 802.1AB-2004. An unrecognized TLV may be a basic management TLV from a later LLDP version.
<p>LLDPTxPortStats MIB entry name: tmnxLldpStatsTxPortEntry</p> <p>Entry description: LLDP frame transmission statistics for a particular port and destination MAC address. The port must be contained in the same chassis as the LLDP agent. All counter values in a particular entry shall be maintained on a continuing basis and shall not be deleted upon expiration of rx Info TTL timing counters in the LLDP remote systems MIB of the receipt of a shutdown frame from a remote LLDP agent. All statistical counters associated with a particular port on the local LLDP agent become frozen whenever the admin status is disabled for the same port. Rows in this table can only be created for MAC addresses that can validly be used in association with the type of interface concerned, as defined by table 8-2. The contents of this table is persistent across re-initializations or re-boots.</p> <p>Table description (for tmnxLldpStatsTxPortTable): A table containing LLDP transmission statistics for individual port/destination address combinations. Entries are not required to exist in this table while the tmnxLldpPortConfigEntry object is equal to 'disabled(4)'. Supports realtime plotting Supports scheduled collection Monitored class: Ildp.LLDPConfiguration</p>		
IldpStatsTxLLDPDULengthErrs [Lldp Stats Tx LLDPDULength Errs] (tmnxLldpStatsTxLLDPDULengthErrs)	long	The number of LLDPD Length Errors recorded for the Port.
IldpStatsTxPortFrames [Lldp Stats Tx Port Frames] (tmnxLldpStatsTxPortFrames)	long	The number of LLDP frames transmitted by this LLDP agent on the indicated port.

Table 650 Imp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ControlChannelStats</p> <p>MIB entry name: tmnxLmpVRtrControlChanStatsEntry</p> <p>Entry description: The tmnxLmpVRtrControlChanStatsEntry consists of statistical information about a control channel for a virtual router instance.</p> <p>Table description (for tmnxLmpVRtrControlChanStatsTable): The tmnxLmpVRtrControlChanStatsTable contains the LMP control channel statistics counters for a virtual router instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Imp.ControlChannel</p>		
ImpVRtrCcConfigAckReceived [Lmp VRtr Cc Config Ack Received] (tmnxLmpVRtrCcConfigAckReceived)	long	The value of tmnxLmpVRtrCcConfigAckReceived indicates the number of ConfigAck messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcConfigAckSent [Lmp VRtr Cc Config Ack Sent] (tmnxLmpVRtrCcConfigAckSent)	long	The value of tmnxLmpVRtrCcConfigAckSent indicates the number of ConfigAck messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcConfigNackReceived [Lmp VRtr Cc Config Nack Received] (tmnxLmpVRtrCcConfigNackReceived)	long	The value of tmnxLmpVRtrCcConfigNackReceived indicates the number of ConfigNack messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.

Table 650 Imp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ImpVRtrCcConfigNackSent [Lmp VRtr Cc Config Nack Sent] (tmnxLmpVRtrCcConfigNackSent)	long	The value of tmnxLmpVRtrCcConfigNackSent indicates the number of ConfigNack messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcConfigReceived [Lmp VRtr Cc Config Received] (tmnxLmpVRtrCcConfigReceived)	long	The value of tmnxLmpVRtrCcConfigReceived indicates the number of Config messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcConfigRetransmit [Lmp VRtr Cc Config Retransmit] (tmnxLmpVRtrCcConfigRetransmit)	long	The value of tmnxLmpVRtrCcConfigRetransmit indicates the number of Config messages that have been retransmitted over this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcConfigSent [Lmp VRtr Cc Config Sent] (tmnxLmpVRtrCcConfigSent)	long	The value of tmnxLmpVRtrCcConfigSent indicates the number of Config messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcHelloReceived [Lmp VRtr Cc Hello Received] (tmnxLmpVRtrCcHelloReceived)	long	The value of tmnxLmpVRtrCcHelloReceived indicates the number of Hello messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.

Table 650 Imp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ImpVRtrCcHelloSent [Lmp VRtr Cc Hello Sent] (tmnxLmpVRtrCcHelloSent)	long	The value of tmnxLmpVRtrCcHelloSent indicates the number of Hello messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcInErrors [Lmp VRtr Cc In Errors] (tmnxLmpVRtrCcInErrors)	long	The value of tmnxLmpVRtrCcInErrors indicates the number of inbound packets that contained errors preventing them from being processed by LMP. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcLinkSumAckReceived [Lmp VRtr Cc Link Sum Ack Received] (tmnxLmpVRtrCcLinkSumAckReceived)	long	The value of tmnxLmpVRtrCcLinkSumAckReceived indicates the number of LinkSummaryAck messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcLinkSumAckSent [Lmp VRtr Cc Link Sum Ack Sent] (tmnxLmpVRtrCcLinkSumAckSent)	long	The value of tmnxLmpVRtrCcLinkSumAckSent indicates the number of LinkSummaryAck messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcLinkSumNackReceived [Lmp VRtr Cc Link Sum Nack Received] (tmnxLmpVRtrCcLinkSumNackReceived)	long	The value of tmnxLmpVRtrCcLinkSumNackReceived indicates the number of LinkSummaryNack messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.

Table 650 Imp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ImpVRtrCcLinkSumNackSent [Lmp VRtr Cc Link Sum Nack Sent] (tmnxLmpVRtrCcLinkSumNackSent)	long	The value of tmnxLmpVRtrCcLinkSumNackSent indicates the number of LinkSummaryNack messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcLinkSumReceived [Lmp VRtr Cc Link Sum Received] (tmnxLmpVRtrCcLinkSumReceived)	long	The value of tmnxLmpVRtrCcLinkSumReceived indicates the number of LinkSummary messages that have been received on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcLinkSumRetransmit [Lmp VRtr Cc Link Sum Retransmit] (tmnxLmpVRtrCcLinkSumRetransmit)	long	The value of tmnxLmpVRtrCcLinkSumRetransmit indicates the number of LinkSummary messages that have been retransmitted over this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcLinkSumSent [Lmp VRtr Cc Link Sum Sent] (tmnxLmpVRtrCcLinkSumSent)	long	The value of tmnxLmpVRtrCcLinkSumSent indicates the number of LinkSummary messages that have been sent on this control channel. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.
ImpVRtrCcOutErrors [Lmp VRtr Cc Out Errors] (tmnxLmpVRtrCcOutErrors)	long	The value of tmnxLmpVRtrCcOutErrors indicates the number of outbound packets that could not be transmitted because of errors. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrCcDiscontinuityTime.

Table 650 Imp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TeLinkStats</p> <p>MIB entry name: tmnxLmpVRtrTeLinkStatsEntry</p> <p>Entry description: The tmnxLmpVRtrTeLinkStatsEntry consists of statistical information about a TE link for a virtual router instance.</p> <p>Table description (for tmnxLmpVRtrTeLinkStatsTable): The tmnxLmpVRtrTeLinkStatsTable contains the LMP Traffic Engineering (TE) link statistics counters for a virtual router instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: Imp.TeLink</p>		
ImpVRtrTeLinkSumAckReceived [Lmp VRtr Te Link Sum Ack Received] (tmnxLmpVRtrTeLinkSumAckReceived)	long	The value of tmnxLmpVRtrTeLinkSumAckReceived indicates the number of LinkSummaryAck messages that have been received for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.
ImpVRtrTeLinkSumAckSent [Lmp VRtr Te Link Sum Ack Sent] (tmnxLmpVRtrTeLinkSumAckSent)	long	The value of tmnxLmpVRtrTeLinkSumAckSent indicates the number of LinkSummaryAck messages that have been sent for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.
ImpVRtrTeLinkSumNackReceived [Lmp VRtr Te Link Sum Nack Received] (tmnxLmpVRtrTeLinkSumNackReceived)	long	The value of tmnxLmpVRtrTeLinkSumNackReceived indicates the number of LinkSummaryNack messages that have been received for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.

Table 650 Imp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ImpVRtrTeLinkSumNackSent [Lmp VRtr Te Link Sum Nack Sent] (tmnxLmpVRtrTeLinkSumNackSent)	long	The value of tmnxLmpVRtrTeLinkSumNackSent indicates the number of LinkSummaryNack messages that have been sent for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.
ImpVRtrTeLinkSumReceived [Lmp VRtr Te Link Sum Received] (tmnxLmpVRtrTeLinkSumReceived)	long	The value of tmnxLmpVRtrTeLinkSumReceived indicates the number of LinkSummary messages that have been received for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.
ImpVRtrTeLinkSumRetransmit [Lmp VRtr Te Link Sum Retransmit] (tmnxLmpVRtrTeLinkSumRetransmit)	long	The value of tmnxLmpVRtrTeLinkSumRetransmit indicates the number of LinkSummary messages that have been retransmitted for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.
ImpVRtrTeLinkSumSent [Lmp VRtr Te Link Sum Sent] (tmnxLmpVRtrTeLinkSumSent)	long	The value of tmnxLmpVRtrTeLinkSumSent indicates the number of LinkSummary messages that have been sent for this TE link. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of tmnxLmpVRtrTeLinkDiscntnuityTime.

Table 651 mld statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
InterfaceStats MIB entry name: vRtrMldIfStatsEntry Entry description: An entry in the vRtrMldIfStatsTable. Table description (for vRtrMldIfStatsTable): The vRtrMldIfStatsTable contains objects corresponding to the MLD statistics for a particular interface. Supports realtime plotting Supports scheduled collection Monitored class: mld.Interface		
importPolicyDrops [Import Policy Drops] (vRtrMldIfImportPolicyDrops)	long	The value of vRtrMldIfImportPolicyDrops indicates the total number of times the MLD protocol instance matched the host IP address or group or source addresses specified in the import policy vRtrMldIfImportPolicy.
rxBadChecksumPkts [Rx Bad Checksum Pkts] (vRtrMldIfRxBadChecksumPkts)	long	The value of vRtrMldIfRxBadChecksumPkts indicates the total number of MLD packets with bad checksum received on this interface.
rxBadEncodings [Rx Bad Encodings] (vRtrMldIfRxBadEncodings)	long	The value of vRtrMldIfRxBadEncodings indicates the total number of MLD packets received on this interface which were not encoded correctly.
rxBadLenPkts [Rx Bad Len Pkts] (vRtrMldIfRxBadLenPkts)	long	The value of vRtrMldIfRxBadLenPkts indicates the total number of MLD packets with bad length received on this interface.
rxBadReceiveIfPkts [Rx Bad Receive If Pkts] (vRtrMldIfRxBadReceiveIfPkts)	long	The value of vRtrMldIfRxBadReceiveIfPkts indicates the total number of MLD packets incorrectly received on this interface.
rxGenQueries [Rx Gen Queries] (vRtrMldIfRxGenQueries)	long	The value of vRtrMldIfRxGenQueries indicates the total number of MLD General Queries received on this interface.

Table 651 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxGrpQueries [Rx Grp Queries] (vRtrMldIfRxGrpQueries)	long	The value of vRtrMldIfRxGrpQueries indicates the number of MLD Group Specific Queries received on this interface.
rxGrpSrcQueries [Rx Grp Src Queries] (vRtrMldIfRxGrpSrcQueries)	long	The value of vRtrMldIfRxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries received on this interface.
rxLeaves [Rx Leaves] (vRtrMldIfRxLeaves)	long	The value of vRtrMldIfRxLeaves indicates the total number of MLD V2 Leaves received on this interface.
rxLocalScopePkts [Rx Local Scope Pkts] (vRtrMldIfRxLocalScopePkts)	long	The value of the object vRtrMldIfRxLocalScopePkts indicates the number of MLD packets received on the link-local scope IPv6 multicast address.
rxNoRtrAlertPkts [Rx No Rtr Alert Pkts] (vRtrMldIfRxNoRtrAlertPkts)	long	The value of vRtrMldIfRxNoRtrAlertPkts indicates the total number of MLDv2 packets received on this interface which did not have the router alert flag set.
rxNonLocal [Rx Non Local] (vRtrMldIfRxNonLocal)	long	The value of vRtrMldIfRxNonLocal indicates the total number of MLD packets received from a non-local sender.
rxPktDrops [Rx Pkt Drops] (vRtrMldIfRxPktDrops)	long	The value of vRtrMldIfRxPktDrops indicates the total number of MLD packets that were received on this interface but were dropped.
rxRsvdScopePkts [Rx Rsvd Scope Pkts] (vRtrMldIfRxRsvdScopePkts)	long	The value of the object vRtrMldIfRxRsvdScopePkts indicates the number of MLD packets received on the reserved scope IPv6 multicast address.
rxUnknownTypePkts [Rx Unknown Type Pkts] (vRtrMldIfRxUnknownTypePkts)	long	The value of vRtrMldIfRxUnknownTypePkts indicates the total number of MLD packets with unknown type received on this interface.

Table 651 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
rxV1Reports [Rx V1 Reports] (vRtrMldIfRxV1Reports)	long	The value of vRtrMldIfRxV1Reports indicates the total number of MLD V1 Reports received on this interface.
rxV2Reports [Rx V2 Reports] (vRtrMldIfRxV2Reports)	long	The value of vRtrMldIfRxV2Reports indicates the total number of MLD V2 Reports received on this interface.
rxWrongVersions [Rx Wrong Versions] (vRtrMldIfRxWrongVersions)	long	The value of vRtrMldIfRxWrongVersions indicates the total number of MLD packets with wrong versions received on this interface.
statsSGTypes [Stats SGTypes] (vRtrMldIfStatsSGTypes)	long	The value of vRtrMldIfStatsSGTypes indicates the number of entries on this interface for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldIfStatsStarGTypes)	long	The value of vRtrMldIfStatsStarGTypes indicates the number of entries on this interface for which the source type is 'starG'.
txErrors [Tx Errors] (vRtrMldIfTxErrors)	long	The value of vRtrMldIfTxErrors indicates the total number of times there was an error transmitting the MLD packets on this interface.
txGenQueries [Tx Gen Queries] (vRtrMldIfTxGenQueries)	long	The value of vRtrMldIfTxGenQueries indicates the number of MLD General Queries transmitted on this interface.
txGrpQueries [Tx Grp Queries] (vRtrMldIfTxGrpQueries)	long	The value of vRtrMldIfTxGrpQueries indicates the number of MLD Group Specific Queries transmitted on this interface.
txGrpSrcQueries [Tx Grp Src Queries] (vRtrMldIfTxGrpSrcQueries)	long	The value of vRtrMldIfTxGrpSrcQueries indicates the number of MLD Group and Source Specific Queries transmitted on this interface.

Table 651 mld statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
txLeaves [Tx Leaves] (vRtrMldIfTxLeaves)	long	The value of vRtrMldIfTxLeaves indicates the total number of MLD Leaves transmitted on this interface.
txV1Reports [Tx V1 Reports] (vRtrMldIfTxV1Reports)	long	The value of vRtrMldIfTxV1Reports indicates the total number of MLD V1 Reports transmitted on this interface.
txV2Reports [Tx V2 Reports] (vRtrMldIfTxV2Reports)	long	The value of vRtrMldIfTxV2Reports indicates the total number of MLD V2 Reports transmitted on this interface.
SiteStats MIB entry name: vRtrMldGenStatsEntry Entry description: Each row entry represents statistics for an instance of the MLD protocol running within a virtual router. Table description (for vRtrMldGenStatsTable): The vRtrMldGenStatsTable contains objects for general statistics for the MLD protocol instance within a virtual router. Supports realtime plotting Supports scheduled collection Monitored class: mld.Site		
statsSGTypes [Stats SGTypes] (vRtrMldGenStatsSGTypes)	long	The value of vRtrMldGenStatsSGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'sg'.
statsStarGTypes [Stats Star GTypes] (vRtrMldGenStatsStarGTypes)	long	The value of vRtrMldGenStatsStarGTypes indicates the number of entries in vRtrMldGrpSrcTable for which the source type is 'starG'.

Table 652 mpls statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>DynamicLspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp 		
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by (vRtrMplsLspPrimaryTimeUp/vRtrMplsLspTimeUp * 100) %.
<p>LspPathStats</p> <p>MIB entry name: vRtrMplsLspPathStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspPathStatTable): The vRtrMplsLspPathStatTable has an entry for an association between a Labeled Switch Path (LSP) in the vRtrMplsLspTable and a path (or tunnel) entry in the mplsTunnelTable.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.LspPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsLspPathCspfQueries)	long	The value of vRtrMplsLspPathCspfQueries indicates the number of CSPF queries that have been made for this LSP path.
retryAttempts [Retry Attempts] (vRtrMplsLspPathRetryAttempts)	long	The number of unsuccessful attempts which have been made to signal this path. As soon as the path gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsLspPathTimeDown)	long	The total time in 10-millisecond units that this LSP Path has not been operational.
timeUp [Time Up] (vRtrMplsLspPathTimeUp)	long	The total time in 10-millisecond units that this LSP path has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspPathTimeUp/vRtrMplsLspAge * 100 %).

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitionCount [Transition Count] (vRtrMplsLspPathTransitionCount)	long	The object vRtrMplsLspPathTransitionCount maintains the number of transitions that have occurred for this LSP.
<p>LspStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.BypassOnlyLsp • mpls.DynamicLsp • mpls.SegmentRoutingTeLsp • mpls.StaticLsp 		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing (vRtrMplsLspTimeUp/ vRtrMplsLspAge * 100 %).

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>MplsInterfaceStats</p> <p>MIB entry name: vRtrMplsIfStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an interface on this virtual router that participates in the MPLS protocol. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsIfStatTable): The vRtrMplsIfStatTable has an entry for each router interface configured for MPLS in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Interface</p>		
receiveOctets [Receive Octets] (vRtrMplsIfRxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets received on this interface.
receivePackets [Receive Packets] (vRtrMplsIfRxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets received on this interface.
transmitOctets [Transmit Octets] (vRtrMplsIfTxOctetCount)	java. math. BigInteger	The total number of bytes in MPLS labeled packets transmitted on this interface.
transmitPackets [Transmit Packets] (vRtrMplsIfTxPktCount)	java. math. BigInteger	The total number of MPLS labeled packets transmitted from this interface.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>MplsLspEgressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • mpls.DynamicLsp • mpls.P2MPDynamicLsp 		
lspType [Lsp Type] (vRtrMplsLspStatsLspType)	int	The value of vRtrMplsLspStatsLspType indicates whether the statistics apply to MPLS-TP, P2P, P2MP, Auto P2P or Auto P2MP LSP. When the value of vRtrMplsLspStatsTpOnly is 'true', the statistics apply for MPLS-TP LSP only and vRtrMplsLspStatsLspType is set to 'tpLsp'. When the value of vRtrMplsLspStatsTpOnly is 'false', the statistics apply for regular RSVP-TE signalled terminating LSP and the value of vRtrMplsLspStatsLspType can be set to either p2p, p2mp, autoP2p or autoP2mp.
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

<p>MplsLspIngressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.IngStatsPolicy</p>		
lspType [Lsp Type] (vRtrMplsLspStatsLspType)	int	The value of vRtrMplsLspStatsLspType indicates whether the statistics apply to MPLS-TP, P2P, P2MP, Auto P2P or Auto P2MP LSP. When the value of vRtrMplsLspStatsTpOnly is 'true', the statistics apply for MPLS-TP LSP only and vRtrMplsLspStatsLspType is set to 'tpLsp'. When the value of vRtrMplsLspStatsTpOnly is 'false', the statistics apply for regular RSVP-TE signalled terminating LSP and the value of vRtrMplsLspStatsLspType can be set to either p2p, p2mp, autoP2p or autoP2mp.
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.
mplsOutOfProfOctetsFc0 [Mpls Out Of Prof Octets Fc 0] (vRtrMplsOutOfProfOctetsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc0 indicates the number of out of profile octets received for Forwarding Class 0.
mplsOutOfProfOctetsFc1 [Mpls Out Of Prof Octets Fc 1] (vRtrMplsOutOfProfOctetsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc1 indicates the number of out of profile octets received for Forwarding Class 1.
mplsOutOfProfOctetsFc2 [Mpls Out Of Prof Octets Fc 2] (vRtrMplsOutOfProfOctetsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc2 indicates the number of out of profile octets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.
tpOnly [Tp Only] (vRtrMplsLspStatsTpOnly)	boolean	The value of vRtrMplsLspStatsTpOnly indicates whether the statistics apply to mpls-tp lsp or for regular rsvp-te signalled terminating LSP. The value of 'true' indicates the statistics apply to mpls-tp LSP only. The value of 'false' indicates the statistics apply for regular rsvp-te signalled terminating LSP.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>P2MPInstanceStats</p> <p>MIB entry name: vRtrMplsP2mplInstStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsP2mplInstStatTable): The vRtrMplsP2mplInstStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.P2MPInstance</p>		
configuredS2Is [Configured S2 Is] (vRtrMplsP2mplInstStatConfiguredS2Is)	long	The value of vRtrMplsP2mplInstStatConfiguredS2Is indicates the number of S2Is configured for this P2MP LSP.
lastS2IChange [Last S2 I Change] (vRtrMplsP2mplInstStatLastS2IChange)	long	The value of vRtrMplsP2mplInstStatLastS2IChange indicates the time since the last change occurred on this P2MP LSP.
lastS2ITimeDown [Last S2 I Time Down] (vRtrMplsP2mplInstStatLastS2ITimeDown)	long	The value of vRtrMplsP2mplInstStatLastS2ITimeDown indicates the total time that this S2I has not been operational.
lastTrans [Last Trans] (vRtrMplsP2mplInstStatLastTrans)	long	The value of vRtrMplsP2mplInstStatLastTrans indicates the time since the last transition occurred on this P2mp instance.
operationalS2Is [Operational S2 Is] (vRtrMplsP2mplInstStatOperationalS2Is)	long	The value of vRtrMplsP2mplInstStatOperationalS2Is indicates the number of operational S2Is for this P2MP LSP. This includes the S2Is currently active.
s2IChanges [S2 I Changes] (vRtrMplsP2mplInstStatS2IChanges)	long	The value of vRtrMplsP2mplInstStatS2IChanges indicates the number of S2I changes this P2MP LSP has had. For every S2I change (S2I down, S2I up, S2I change), a corresponding syslog/trap (if enabled) is generated for it.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
s2lTimeUp [S2 l Time Up] (vRtrMplsP2mplInstStatLastS2lTimeUp)	long	The value of vRtrMplsP2mplInstStatLastS2lTimeUp indicates the total time that this S2l has been operational.
timeDown [Time Down] (vRtrMplsP2mplInstStatTimeDown)	long	The value of vRtrMplsP2mplInstStatTimeDown indicates the total time that this P2MP instance has not been operational.
timeUp [Time Up] (vRtrMplsP2mplInstStatTimeUp)	long	The value of vRtrMplsP2mplInstStatTimeUp indicates the total time that this P2MP instance has been operational.
transitions [Transitions] (vRtrMplsP2mplInstStatTransitions)	long	The The value of vRtrMplsP2mplInstStatTransitions indicates the number of state transitions (up -> down and down -> up) this P2mp instance has undergone.
<p>S2LPathStats</p> <p>MIB entry name: vRtrMplsS2lSubLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a P2MP Source to Leaf (S2L) Sub Labeled Switch Path (LSP) configured for a i virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsS2lSubLspStatTable): The vRtrMplsS2lSubLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.S2LPath</p>		
cspfQueries [Cspf Queries] (vRtrMplsS2lSubLspCspfQueries)	long	The value of vRtrMplsS2lSubLspCspfQueries indicates the number of CSPF queries that have been made for this LSP S2l.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retryAttempts [Retry Attempts] (vRtrMplsS2ISubLspRetryAttempts)	long	The value of vRtrMplsS2ISubLspRetryAttempts indicates the number of unsuccessful attempts which have been made to signal this S2I. As soon as the S2I gets signalled, this is set to 0.
timeDown [Time Down] (vRtrMplsS2ISubLspTimeDown)	long	The value of vRtrMplsS2ISubLspTimeDown indicates the total time that this LSP S2I has not been operational.
timeUp [Time Up] (vRtrMplsS2ISubLspTimeUp)	long	The value of vRtrMplsS2ISubLspTimeUp indicates the total time that this LSP S2I has been operational. For example, the percentage up time can be determined by computing $(vRtrMplsS2ISubLspTimeUp/vRtrMplsLspAge * 100 \%)$.
transitionCount [Transition Count] (vRtrMplsS2ISubLspTransitionCount)	long	The value of vRtrMplsS2ISubLspTransitionCount indicates the number of transitions that have occurred for this LSP.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mpls.Site</p>		
detourOriginate [Detour Originate] (vRtrMplsGeneralDetourLspOriginate)	long	The value of vRtrMplsGeneralDetourLspOriginate indicates the number of detour LSPs that originate at this virtual router.
detourTerminate [Detour Terminate] (vRtrMplsGeneralDetourLspTerminate)	long	The value of vRtrMplsGeneralDetourLspTerminate indicates the number of detour LSPs that terminate at this virtual router.

Table 652 mpls statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detourTransit [Detour Transit] (vRtrMplsGeneralDetourLspTransit)	long	The value of vRtrMplsGeneralDetourLspTransit indicates the number of detour LSPs that transit through this virtual router.
dynamicOriginate [Dynamic Originate] (vRtrMplsGeneralDynamicLspOriginate)	long	The value of vRtrMplsGeneralDynamicLspOriginate indicates the number of dynamic LSPs that originate at this virtual router.
dynamicTerminate [Dynamic Terminate] (vRtrMplsGeneralDynamicLspTerminate)	long	The value of vRtrMplsGeneralDynamicLspTerminate indicates the number of dynamic LSPs that terminate at this virtual router.
dynamicTransit [Dynamic Transit] (vRtrMplsGeneralDynamicLspTransit)	long	The value of vRtrMplsGeneralDynamicLspTransit indicates the number of dynamic LSPs that transit through this virtual router.
srTeLspOriginate [Sr Te Lsp Originate] (vRtrMplsGeneralSrTeLspOriginate)	long	The value of vRtrMplsGeneralSrTeLspOriginate indicates the number of Segment Routing TE LSPs that are originating at this virtual router.
staticOriginate [Static Originate] (vRtrMplsGeneralStaticLspOriginate)	long	The value of vRtrMplsGeneralStaticLspOriginate indicates the number of static LSPs that originate at this virtual router.
staticTerminate [Static Terminate] (vRtrMplsGeneralStaticLspTerminate)	long	The value of vRtrMplsGeneralStaticLspTerminate indicates the number of static LSPs that terminate at this virtual router.
staticTransit [Static Transit] (vRtrMplsGeneralStaticLspTransit)	long	The value of vRtrMplsGeneralStaticLspTransit indicates the number of static LSPs that transit through this virtual router.

Table 653 mplsTp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PathMepStats</p> <p>MIB entry name: vRtrMplsTpLspPtPathMepStatEntry</p> <p>Entry description: The vRtrMplsTpLspPathMepEntry represents a Maintenance Endpoint for a MPLS-TP LSP protection Path. Rows are created and destroyed by the system based on the configuration of the MEP protection-type.</p> <p>Table description (for vRtrMplsTpLspPtPathMepStatTable): The vRtrMplsTpLspPtPathMepStatTable maintains the Maintenance End Points (MEPs) statistics for MPLS-TP LSP protection paths.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: mplsTp.PathMep</p>		
wtrTimer [Wtr Timer] (vRtrMplsTpLspPtPathMepWTRTimer)	long	The value of vRtrMplsTpLspPtPathMepWTRTimer indicates the remaining Wait-To-Restore time, in seconds, before the protection path can switch back to the working path. A value of zero (0) indicates that there is no WTR timer in effect.
<p>SiteStats</p> <p>MIB entry name: vRtrMplsGeneralStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an instance of the MPLS protocol running within a virtual router. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsGeneralStatTable): The vRtrMplsGeneralStatTable contains statistics for an MPLS protocol instance within a virtual router.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsTp.Site</p>		
mplsTpLspOriginate [Mpls Tp Lsp Originate] (vRtrMplsGenMplsTpLspOriginate)	long	The value of vRtrMplsGenMplsTpLspOriginate indicates the number of MPLS TP LSPs that originate at this virtual router.
mplsTpLspTerminate [Mpls Tp Lsp Terminate] (vRtrMplsGenMplsTpLspTerminate)	long	The value of vRtrMplsGenMplsTpLspTerminate indicates the number of MPLS TP LSPs that terminate at this virtual router.

Table 653 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsTpLspTransit [Mpls Tp Lsp Transit] (vRtrMplsGenMplsTpLspTransit)	long	The value of vRtrMplsGenMplsTpLspTransit indicates the number of MPLS TP LSPs that transit through this virtual router.
mplsTpOrigPathInst [Mpls Tp Orig Path Inst] (vRtrMplsGenMplsTpOrigPathInst)	long	The value of vRtrMplsGenMplsTpOrigPathInst indicates the number of MPLS TP LSPs originate path instances.
mplsTpTermPathInst [Mpls Tp Term Path Inst] (vRtrMplsGenMplsTpTermPathInst)	long	The value of vRtrMplsGenMplsTpTermPathInst indicates the number of MPLS TP LSPs terminated path instances.
mplsTpTranPathInst [Mpls Tp Tran Path Inst] (vRtrMplsGenMplsTpTranPathInst)	long	The value of vRtrMplsGenMplsTpTranPathInst indicates the number of MPLS TP LSPs transit path instances.
<p>TpLspEgressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsdp.TPLsp</p>		
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.

Table 653 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.

Table 653 mplsip statistics (continued)

mplsOutOfProfOctetsFc3 [Mpls Out Of Prof Octets Fc 3] (vRtrMplsOutOfProfOctetsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc3 indicates the number of out of profile octets received for Forwarding Class 3.
mplsOutOfProfOctetsFc4 [Mpls Out Of Prof Octets Fc 4] (vRtrMplsOutOfProfOctetsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc4 indicates the number of out of profile octets received for Forwarding Class 4.
mplsOutOfProfOctetsFc5 [Mpls Out Of Prof Octets Fc 5] (vRtrMplsOutOfProfOctetsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc5 indicates the number of out of profile octets received for Forwarding Class 5.
mplsOutOfProfOctetsFc6 [Mpls Out Of Prof Octets Fc 6] (vRtrMplsOutOfProfOctetsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc6 indicates the number of out of profile octets received for Forwarding Class 6.
mplsOutOfProfOctetsFc7 [Mpls Out Of Prof Octets Fc 7] (vRtrMplsOutOfProfOctetsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfOctetsFc7 indicates the number of out of profile octets received for Forwarding Class 7.
mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.

Table 653 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 653 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>TpLspGeneralStats</p> <p>MIB entry name: vRtrMplsLspStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatTable): The vRtrMplsLspStatTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplsdp.TPLsp</p>		
age [Age] (vRtrMplsLspAge)	long	The age (i.e., time from creation till now) of this LSP in 10-millisecond periods.
configuredPaths [Configured Paths] (vRtrMplsLspConfiguredPaths)	long	The number of paths configured for this LSP.
operationalPaths [Operational Paths] (vRtrMplsLspOperationalPaths)	long	The number of operational paths for this LSP. This includes the path currently active, as well as operational standby paths.
pathChanges [Path Changes] (vRtrMplsLspPathChanges)	long	The number of path changes this LSP has had. For every path change (path down, path up, path change), a corresponding syslog/trap (if enabled) is generated for it.
standbyPaths [Standby Paths] (vRtrMplsLspStandbyPaths)	long	The number of standby paths configured for this LSP.
timeSinceLastDownState [Time Since Last Down State] (vRtrMplsLspTimeDown)	long	The total time in 10-millisecond units that this LSP has not been operational.

Table 653 mplstp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
timeSinceLastPathChange [Time Since Last Path Change] (vRtrMplsLspLastPathChange)	long	The time in 10-millisecond units since the last change occurred on this LSP.
timeSinceLastPrimaryUpState [Time Since Last Primary Up State] (vRtrMplsLspPrimaryTimeUp)	long	The total time in 10-millisecond units that this LSP's primary path has been operational. For example, the percentage contribution of the primary path to the operational time is given by $(\text{vRtrMplsLspPrimaryTimeUp} / \text{vRtrMplsLspTimeUp} * 100) \%$.
timeSinceLastTransition [Time Since Last Transition] (vRtrMplsLspLastTransition)	long	The time in 10-millisecond units since the last transition occurred on this LSP.
timeSinceLastUpState [Time Since Last Up State] (vRtrMplsLspTimeUp)	long	The total time in 10-millisecond units that this LSP has been operational. For example, the percentage up time can be determined by computing $(\text{vRtrMplsLspTimeUp} / \text{vRtrMplsLspAge} * 100 \%)$.
transitions [Transitions] (vRtrMplsLspTransitions)	long	The number of state transitions (up -> down and down -> up) this LSP has undergone.
<p>TpLspIngressStats</p> <p>MIB entry name: vRtrMplsLspStatisticsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a Labeled Switch Path (LSP) configured for a virtual router in the system. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrMplsLspStatisticsTable): The vRtrMplsLspStatisticsTable has an entry for each Labeled Switch Path (LSP) configured for a virtual router in the system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: mplstp.TPLsp</p>		

Table 653 mplsIp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfileOctetsFc0 [Mpls In Profile Octets Fc 0] (vRtrMplsInProfileOctetsFc0)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc0 indicates the number of in profile octets received for Forwarding Class 0.
mplsInProfileOctetsFc1 [Mpls In Profile Octets Fc 1] (vRtrMplsInProfileOctetsFc1)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc1 indicates the number of in profile octets received for Forwarding Class 1.
mplsInProfileOctetsFc2 [Mpls In Profile Octets Fc 2] (vRtrMplsInProfileOctetsFc2)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc2 indicates the number of in profile octets received for Forwarding Class 2.
mplsInProfileOctetsFc3 [Mpls In Profile Octets Fc 3] (vRtrMplsInProfileOctetsFc3)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc3 indicates the number of in profile octets received for Forwarding Class 3.
mplsInProfileOctetsFc4 [Mpls In Profile Octets Fc 4] (vRtrMplsInProfileOctetsFc4)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc4 indicates the number of in profile octets received for Forwarding Class 4.
mplsInProfileOctetsFc5 [Mpls In Profile Octets Fc 5] (vRtrMplsInProfileOctetsFc5)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc5 indicates the number of in profile octets received for Forwarding Class 5.
mplsInProfileOctetsFc6 [Mpls In Profile Octets Fc 6] (vRtrMplsInProfileOctetsFc6)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc6 indicates the number of in profile octets received for Forwarding Class 6.
mplsInProfileOctetsFc7 [Mpls In Profile Octets Fc 7] (vRtrMplsInProfileOctetsFc7)	java. math. BigInteger	The value of vRtrMplsInProfileOctetsFc7 indicates the number of in profile octets received for Forwarding Class 7.

Table 653 mplsip statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mplsInProfilePktsFc0 [Mpls In Profile Pkts Fc 0] (vRtrMplsInProfilePktsFc0)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc0 indicates the number of in profile packets received for Forwarding Class 0.
mplsInProfilePktsFc1 [Mpls In Profile Pkts Fc 1] (vRtrMplsInProfilePktsFc1)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc1 indicates the number of in profile packets received for Forwarding Class 1.
mplsInProfilePktsFc2 [Mpls In Profile Pkts Fc 2] (vRtrMplsInProfilePktsFc2)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc2 indicates the number of in profile packets received for Forwarding Class 2.
mplsInProfilePktsFc3 [Mpls In Profile Pkts Fc 3] (vRtrMplsInProfilePktsFc3)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc3 indicates the number of in profile packets received for Forwarding Class 3.
mplsInProfilePktsFc4 [Mpls In Profile Pkts Fc 4] (vRtrMplsInProfilePktsFc4)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc4 indicates the number of in profile packets received for Forwarding Class 4.
mplsInProfilePktsFc5 [Mpls In Profile Pkts Fc 5] (vRtrMplsInProfilePktsFc5)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc5 indicates the number of in profile packets received for Forwarding Class 5.
mplsInProfilePktsFc6 [Mpls In Profile Pkts Fc 6] (vRtrMplsInProfilePktsFc6)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc6 indicates the number of in profile packets received for Forwarding Class 6.
mplsInProfilePktsFc7 [Mpls In Profile Pkts Fc 7] (vRtrMplsInProfilePktsFc7)	java. math. BigInteger	The value of vRtrMplsInProfilePktsFc7 indicates the number of in profile packets received for Forwarding Class 7.

mplsOutOfProfPktsFc0 [Mpls Out Of Prof Pkts Fc 0] (vRtrMplsOutOfProfPktsFc0)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc0 indicates the number of out of profile packets received for Forwarding Class 0.
mplsOutOfProfPktsFc1 [Mpls Out Of Prof Pkts Fc 1] (vRtrMplsOutOfProfPktsFc1)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc1 indicates the number of out of profile packets received for Forwarding Class 1.
mplsOutOfProfPktsFc2 [Mpls Out Of Prof Pkts Fc 2] (vRtrMplsOutOfProfPktsFc2)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc2 indicates the number of out of profile packets received for Forwarding Class 2.
mplsOutOfProfPktsFc3 [Mpls Out Of Prof Pkts Fc 3] (vRtrMplsOutOfProfPktsFc3)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc3 indicates the number of out of profile packets received for Forwarding Class 3.
mplsOutOfProfPktsFc4 [Mpls Out Of Prof Pkts Fc 4] (vRtrMplsOutOfProfPktsFc4)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc4 indicates the number of out of profile packets received for Forwarding Class 4.
mplsOutOfProfPktsFc5 [Mpls Out Of Prof Pkts Fc 5] (vRtrMplsOutOfProfPktsFc5)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc5 indicates the number of out of profile packets received for Forwarding Class 5.
mplsOutOfProfPktsFc6 [Mpls Out Of Prof Pkts Fc 6] (vRtrMplsOutOfProfPktsFc6)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc6 indicates the number of out of profile packets received for Forwarding Class 6.
mplsOutOfProfPktsFc7 [Mpls Out Of Prof Pkts Fc 7] (vRtrMplsOutOfProfPktsFc7)	java. math. BigInteger	The value of vRtrMplsOutOfProfPktsFc7 indicates the number of out of profile packets received for Forwarding Class 7.

Table 653 mplsdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
psbMatch [Psb Match] (vRtrMplsLspStatsPSBMatch)	boolean	The value of vRtrMplsLspStatsPSBMatch indicates if a path state block (PSB) match was made against this LSP name.

Table 654 msdp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>PeerStats</p> <p>MIB entry name: tmnxMsdpNgPeerStatsEntry</p> <p>Entry description: tmnxMsdpNgPeerStatsEntry is an entry (conceptual row) in the tmnxMsdpNgPeerStatsTable. Each entry represents a MSDP peer related statistics information.</p> <p>Table description (for tmnxMsdpNgPeerStatsTable): The table tmnxMsdpNgPeerStatsTable is the statistics information related to a MSDP peer.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • msdp.GroupPeer • msdp.Peer 		
errorMsgsReceived [Error Msgs Received] (tmnxMsdpNgPeerStatsErrMsgsRx)	long	The value of tmnxMsdpNgPeerStatsErrMsgsRx indicates number of error messages received.
keepAliveMsgsReceived [Keep Alive Msgs Received] (tmnxMsdpNgPeerStatsKAMsgsRx)	long	The value of tmnxMsdpNgPeerStatsKAMsgsRx indicates the number of keep-alive messages received.
keepAliveMsgsSent [Keep Alive Msgs Sent] (tmnxMsdpNgPeerStatsKAMsgsSent)	long	The value of tmnxMsdpNgPeerStatsKAMsgsSent indicates the number of keep-alive messages sent.
lastMsgPeer [Last Msg Peer] (tmnxMsdpNgPeerStatsLastMsgPeer)	long	The value of tmnxMsdpNgPeerStatsLastMsgPeer indicates how long ago the last message was received from this peer instance.
lastStateChange [Last State Change] (tmnxMsdpNgPeerStatsLastStChange)	long	The value of tmnxMsdpNgPeerStatsLastStChange indicates how long ago the peer state changed.

Table 654 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
peerTimeouts [Peer Timeouts] (tmnxMsdpNgPeerStatsPeerTimeouts)	long	The value of tmnxMsdpNgPeerStatsPeerTimeouts indicates the number of peer timeouts.
remoteCloses [Remote Closes] (tmnxMsdpNgPeerStatsRemoteCloses)	long	The value of tmnxMsdpNgPeerStatsRemoteCloses indicates the number of times the remote peer closed.
reservedMsgsReceived [Reserved Msgs Received] (tmnxMsdpNgPeerStatsResvMsgsRx)	long	The value of tmnxMsdpNgPeerStatsResvMsgsRx indicates the number of MSDP messages received with type 'Reserved'.
rpfFailures [Rpf Failures] (tmnxMsdpNgPeerStatsRPFFailures)	long	The value of tmnxMsdpNgPeerStatsRPFFailures indicates number of reverse path forwarding (RPF) failures.
saLearned [Sa Learned] (tmnxMsdpNgPeerStatsSALearnt)	long	The value of tmnxMsdpNgPeerStatsSALearnt indicates the number of unique source active entries in the cache learned from the peer.
saLimitExceeded [Sa Limit Exceeded] (tmnxMsdpNgPeerStatsActSrcLimExcd)	long	The value of tmnxMsdpNgPeerStatsActSrcLimExcd indicates the number of times the global active source limit has been exceeded by this peer instance.
saMsgsReceived [Sa Msgs Received] (tmnxMsdpNgPeerStatsSAMsgsRx)	long	The value of tmnxMsdpNgPeerStatsSAMsgsRx indicates the number of source-active messages received.
saMsgsSent [Sa Msgs Sent] (tmnxMsdpNgPeerStatsSAMsgsSent)	long	The value of tmnxMsdpNgPeerStatsSAMsgsSent indicates the number of source-active messages sent.
saRejectExportPolicy [Sa Reject Export Policy] (tmnxMsdpNgPeerStatsSARejExpPlcy)	long	The value of tmnxMsdpNgPeerStatsSARejExpPlcy indicates the number of source active messages from the peer that were not sent due to export policy.

Table 654 msdp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
saRejectImportPolicy [Sa Reject Import Policy] (tmnxMsdpNgPeerStatsSARejImpPly)	long	The value of tmnxMsdpNgPeerStatsSARejImpPly indicates the number of source active messages from the peer that were rejected due to import policy.
saRequestMsgsReceived [Sa Request Msgs Received] (tmnxMsdpNgPeerStatsSAReqMsgsRx)	long	The value of tmnxMsdpNgPeerStatsSAReqMsgsRx indicates the number of source-active request messages received.
saRequestMsgsSent [Sa Request Msgs Sent] (tmnxMsdpNgPeerStatsSAReqMsgsSent)	long	The value of tmnxMsdpNgPeerStatsSAReqMsgsSent indicates the number of source-active request messages sent.
saResponseMsgsReceived [Sa Response Msgs Received] (tmnxMsdpNgPeerStatsSAResMsgsRx)	long	The value of tmnxMsdpNgPeerStatsSAResMsgsRx indicates the number of source-active response messages received.
saResponseMsgsSent [Sa Response Msgs Sent] (tmnxMsdpNgPeerStatsSAResMsgsSent)	long	The value of tmnxMsdpNgPeerStatsSAResMsgsSent indicates the number of source-active response messages sent.
unknownMsgsReceived [Unknown Msgs Received] (tmnxMsdpNgPeerStatsUnknMsgsRx)	long	The value of tmnxMsdpNgPeerStatsUnknMsgsRx indicates the number of unknown messages received.

Table 655 multicast statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastCacChannelServiceStats</p> <p>MIB entry name: tmnxMcacServStatsEntry</p> <p>Entry description: An entry in the tmnxMcacServStatsTable</p> <p>Table description (for tmnxMcacServStatsTable): The tmnxMcacServStatsTable has an entry for each service protocol (igmp-snooping on sap/sdp) channel that was either accepted/discarded by the applied multicast cac policy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastCacPolicy</p>		
action [Action] (tmnxMcacServStatsAction)	int	The value of tmnxMcacServStatsAction indicates the action specified by the mcac policy for the service application to act upon.
algorithmReapply [Algorithm Reapply] (tmnxMcacServStatsAlgoReapply)	boolean	The value of tmnxMcacServStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the service application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacServStatsBundleAvailBW)	long	The value of tmnxMcacServStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
channelBw [Channel Bw] (tmnxMcacServStatsChannelBW)	long	The value of tmnxMcacServStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the service application.
channelRequestCount [Channel Request Count] (tmnxMcacServStatsApplyAttempts)	long	The value of tmnxMcacServStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the service application.
channelType [Channel Type] (tmnxMcacServStatsChannelType)	int	The value of tmnxMcacServStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the service application.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
encapValueOrVcId [Encap Value Or VcId] (tmnxMcacServStatsEncapValue)	String	The value of tmnxMcacServStatsEncapValue indicates the SAP/SDP Encap value of which the mcac policy is applied.
interfaceAvailBw [Interface Avail Bw] (tmnxMcacServStatsIntfAvailBW)	long	The value of tmnxMcacServStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
portIdOrTunnelId [Port Id Or Tunnel Id] (tmnxMcacServStatsPortId)	String	The value of tmnxMcacServStatsPortId indicates the port Id of the SAP/SDP on which the mcac policy is applied.
reason [Reason] (tmnxMcacServStatsReason)	int	The value of tmnxMcacServStatsReason indicates the reason for the action specified by the mcac policy for the service application to act upon.
timeStamp [Time Stamp] (tmnxMcacServStatsTimeStamp)	long	The value of tmnxMcacServStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
<p>McastCacChannelStats MIB entry name: tmnxMcacStatsEntry Entry description: An entry in the tmnxMcacStatsTable Table description (for tmnxMcacStatsTable): The tmnxMcacStatsTable has an entry for each protocol interface channel that was either accepted/discarded by the applied multicast cac policy. This table is deprecated and replaced by tmnxMcacStatsNgTable. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy</p>		
action [Action] (tmnxMcacStatsAction)	int	The value of tmnxMcacStatsAction indicates the action specified by the mcac policy for the application interface to act upon.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
algorithmReapply [Algorithm Reapply] (tmnxMcacStatsAlgoReapply)	boolean	The value of tmnxMcacStatsAlgoReapply indicates if the mcac policy was reapplied on the already accepted channel due lag constraints or if this was the first request for this channel from the application.
bundleAvailBw [Bundle Avail Bw] (tmnxMcacStatsBundleAvailBW)	long	The value of tmnxMcacStatsBundleAvailBW indicates the available bundle bandwidth after the requested channel was either accepted or discarded by the mcac policy.
bundleName [Bundle Name] (tmnxMcacStatsBundleName)	String	The value of tmnxMcacStatsBundleName indicates the name of the multicast CAC policy bundle. The value of tmnxMcacStatsBundleName could be an empty string, meaning that this particular statistics entry's channel did not belong to any bundle in the policy.
channelAddress [Channel Address] (tmnxMcacStatsChlAddr)	String	The value of tmnxMcacStatsChlAddr indicates the address of the multicast channel that mcac policy was applied upon when requested by the application interface. Address type is indicated by tmnxMcacStatsChlAddrType.
channelAddressType [Channel Address Type] (tmnxMcacStatsChlAddrType)	int	The value of tmnxMcacStatsChlAddrType indicates the address type of tmnxMcacStatsChlAddr.
channelBw [Channel Bw] (tmnxMcacStatsChannelBW)	long	The value of tmnxMcacStatsChannelBW indicates the channel bandwidth configured at the mcac policy at the time of request from the application interface.
channelRequestCount [Channel Request Count] (tmnxMcacStatsApplyAttempts)	long	The value of tmnxMcacStatsApplyAttempts indicates the number of times the mcac policy was applied for a particular channel entry by the application.
channelType [Channel Type] (tmnxMcacStatsChannelType)	int	The value of tmnxMcacStatsChannelType indicates the channel type configured at the mcac policy at the time of request from the application interface.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
interfaceAvailBw [Interface Avail Bw] (tmnxMcacStatsIntfAvailBW)	long	The value of tmnxMcacStatsIntfAvailBW indicates the available interface bandwidth after the requested channel was either accepted or discarded by the mcac policy.
interfaceId [Interface Id] (tmnxMcacStatsIfIndex)	long	The value of tmnxMcacStatsIfIndex indicates the application interface index that has applied mcac policy.
protocolName [Protocol Name] (tmnxMcacStatsProtocolIndex)	int	The value of tmnxMcacStatsProtocolIndex indicates the application that has applied mcac policy.
reason [Reason] (tmnxMcacStatsReason)	int	The value of tmnxMcacStatsReason indicates the reason for the action specified by the mcac policy for the application interface to act upon.
timeStamp [Time Stamp] (tmnxMcacStatsTimeStamp)	long	The value of tmnxMcacStatsTimeStamp indicates the timestamp of the last time the mcac policy was applied for this channel entry.
<p>McastCacOper MIB entry name: tmnxMcacOperEntry Entry description: An entry in the tmnxMcacOperTable Table description (for tmnxMcacOperTable): The tmnxMcacOperTable has an entry for each protocol interface that has active channels on a bundle that were accepted by the mcac policy. Supports realtime plotting Supports scheduled collection Monitored class: multicast.McastCacPolicy</p>		
activeChannels [Active Channels] (tmnxMcacOperActiveChannels)	long	The value of tmnxMcacOperActiveChannels indicates the number of active channels for this entry.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
availMandBw [Avail Mand Bw] (tmnxMcacOperAvailMandBw)	long	The value of tmnxMcacOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacOperAvailOptnlBw)	long	The value of tmnxMcacOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
currConstrtlvl [Curr Constrt Lvl] (tmnxMcacOperCurrConstrtlvl)	long	The value of tmnxMcacOperCurrConstrtlvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacOperInUseMandBw)	long	The value of tmnxMcacOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this protocol interface instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacOperInUseOptnlBw)	long	The value of tmnxMcacOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this protocol interface instance.
maxBw [Max Bw] (tmnxMcacOperMaxBw)	long	The value of tmnxMcacOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this protocol interface instance.
portsDown [Ports Down] (tmnxMcacOperPortsDown)	long	The value of tmnxMcacOperPortsDown indicates the the number of ports down on the application interface. This value is used to index the table tmnxMcacLagTable to get the bundle level id.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
valuesInTransit [Values In Transit] (tmnxMcacOperValuesInTransit)	boolean	The value of tmnxMcacOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacOperAvailOptnlBw tmnxMcacOperAvailMandBw tmnxMcacOperInUseMandBw tmnxMcacOperInUseOptnlBw When Multicast CAC Policy is applied on the interface for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacOperValuesInTransit will be set to 'false'. If the value of tmnxMcacOperValuesInTransit is 'true' then the values are in transition.
<p>McastCacServOperStats</p> <p>MIB entry name: tmnxMcacServOperEntry</p> <p>Entry description: An entry in the tmnxMcacServOperTable</p> <p>Table description (for tmnxMcacServOperTable): The tmnxMcacServOperTable has an entry for each service application (igmp-snooping on sap/sdp) that has active channels on a bundle that were accepted by the mcac policy.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastCacPolicy</p>		
activeChannels [Active Channels] (tmnxMcacServOperActiveChannels)	long	The value of tmnxMcacServOperActiveChannels indicates the number of active channels for this entry.
availMandBw [Avail Mand Bw] (tmnxMcacServOperAvailMandBw)	long	The value of tmnxMcacServOperAvailMandBw indicates the operational pre-reserved bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
availOptionalBw [Avail Optional Bw] (tmnxMcacServOperAvailOptnlBw)	long	The value of tmnxMcacServOperAvailOptnlBw indicates the operational available bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
currConstrLvl [Curr Constrt Lvl] (tmnxMcacServOperCurrConstrLvl)	long	The value of tmnxMcacServOperCurrConstrLvl indicates the current lag constraints bundle level id for the number of ports down (tmnxMcacServOperPortsDown). This value is used to index the table tmnxMcacLevelTable to get the bundle level bandwidth.
inUseMandBw [In Use Mand Bw] (tmnxMcacServOperInUseMandBw)	long	The value of tmnxMcacServOperInUseMandBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the mandatory channels on the bundle for this service application on sap/sdp instance.
inUseOptionalBw [In Use Optional Bw] (tmnxMcacServOperInUseOptnlBw)	long	The value of tmnxMcacServOperInUseOptnlBw indicates the operational in-use bandwidth in kilo-bits per second(kbps) for the optional channels on the bundle for this service application on sap/sdp instance.
maxBw [Max Bw] (tmnxMcacServOperMaxBw)	long	The value of tmnxMcacServOperMaxBw indicates the operational maximum bandwidth in kilo-bits per second(kbps) on the bundle for this service application on sap/sdp instance.
portsDown [Ports Down] (tmnxMcacServOperPortsDown)	long	The value of tmnxMcacServOperPortsDown indicates the the number of ports down on the service application on sap/sdp. This value is used to index the table tmnxMcacLagTable to get the bundle level id.
valuesInTransit [Values In Transit] (tmnxMcacServOperValuesInTransit)	boolean	The value of tmnxMcacServOperValuesInTransit indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: tmnxMcacServOperAvailOptnlBw tmnxMcacServOperAvailMandBw tmnxMcacServOperInUseMandBw tmnxMcacServOperInUseOptnlBw When Multicast CAC Policy is applied on the sap/sdp for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for tmnxMcacServOperValuesInTransit will be set to 'false'. If the value of tmnxMcacServOperValuesInTransit is 'true' then the values are in transition.

Table 655 multicast statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McastReportDestinationStats</p> <p>MIB entry name: tmnxMcPathRprtDestEntry</p> <p>Entry description: Each row entry represents a particular multicast reporting destination. Entries are created/deleted by the user.</p> <p>Table description (for tmnxMcPathRprtDestTable): The tmnxMcPathRprtDestTable has an entry for each multicast reporting destination configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multicast.McastReportDestination</p>		
framesLost [Frames Lost] (tmnxMcPathRprtDestFrmsLost)	long	The value of tmnxMcPathRprtDestFrmsLost specifies the number of frames lost for this mcast reporting destination.
framesSent [Frames Sent] (tmnxMcPathRprtDestFrmsSent)	long	The value of tmnxMcPathRprtDestFrmsSent specifies the number of frames sent to this mcast reporting destination.
recordsLost [Records Lost] (tmnxMcPathRprtDestRecsLost)	long	The value of tmnxMcPathRprtDestRecsLost specifies the number of records lost for this mcast reporting destination.
recordsSent [Records Sent] (tmnxMcPathRprtDestRecsSent)	long	The value of tmnxMcPathRprtDestRecsSent specifies the number of records sent to this mcast reporting destination.

Table 656 multichassis statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>McEPPeerStats</p> <p>MIB entry name: tmnxMcEPPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for tmnxMcEPPeerStatsTable): The tmnxMcEPPeerStatsTable has an entry for each multi-chassis peer configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: multichassis.MultiChassisEndpoint</p>		
configPacketsReceived [Config Packets Received] (tmnxMcEPPeerStatsPktsRxConfig)	long	The value of tmnxMcEPPeerStatsPktsRxConfig indicates how many valid MC-Endpoint control packets of type end-point config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcEPPeerStatsDropMD5)	long	The value of tmnxMcEPPeerStatsDropMD5 indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcEPPeerStatsPktsTxFailed)	long	The value of tmnxMcEPPeerStatsPktsTxFailed indicates how many MC-Endpoint control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlId)	long	The value of tmnxMcEPPeerStatsDropTlvInvlId indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis end-point.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcEPPeerStatsDropTlvInvlSz)	long	The value of tmnxMcEPPeerStatsDropTlvInvlSz indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet size was invalid.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcEPPeerStatsPktsRxKpalive)	long	The value of tmnxMcEPPeerStatsPktsRxKpalive indicates how many valid MC-Endpoint control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcEPPeerStatsPktsTxKpalive)	long	The value of tmnxMcEPPeerStatsPktsTxKpalive indicates how many MC-Endpoint control packets of type keepalive were transmitted from this system to the peer.
noEpPeerPacketsDropped [No Ep Peer Packets Dropped] (tmnxMcEPPeerStatsDropEpNoPeer)	long	The value of tmnxMcEPPeerStatsDropEpNoPeer indicates how many pkts were dropped because MC-Endpoint does not have a MC-peer assigned yet or MC-Endpoint is attached to a different peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcEPPeerStatsDropOutOfSeq)	long	The value of tmnxMcEPPeerStatsDropOutOfSeq indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was out of sequence.
packetsReceived [Packets Received] (tmnxMcEPPeerStatsPktsRx)	long	The value of tmnxMcEPPeerStatsPktsRx indicates how many valid MC-Endpoint control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcEPPeerStatsPktsTx)	long	The value of tmnxMcEPPeerStatsPktsTx indicates how many MC-Endpoint control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcEPPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsRxPeerCfg indicates how many valid MC-Endpoint control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcEPPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcEPPeerStatsPktsTxPeerCfg indicates how many MC-Endpoint control packets of type peer config were transmitted from this system to the peer.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcEPPeerStatsDropStateDsblid)	long	The value of tmnxMcEPPeerStatsDropStateDsblid indicates how many MC-Endpoint control packets were dropped on this system from the peer because the peer was administratively disabled.
statePacketsReceived [State Packets Received] (tmnxMcEPPeerStatsPktsRxState)	long	The value of tmnxMcEPPeerStatsPktsRxState indicates how many valid MC-Endpoint control packets of type end-point state were received on this system from the peer.
tooShortPacketsDropped [Too Short Packets Dropped] (tmnxMcEPPeerStatsDropPktTooShrt)	long	The value of tmnxMcEPPeerStatsDropPktTooShrt indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet was too short.
unknownTlvPacketsDropped [Unknown Tlv Packets Dropped] (tmnxMcEPPeerStatsDropUnknownTlv)	long	The value of tmnxMcEPPeerStatsDropUnknownTlv indicates how many MC-Endpoint control packets were dropped on this system from the peer because the packet contained an unknown TLV.
<p>MultiChassisPeerRingStats MIB entry name: tmnxMcrPeerStatsEntry Entry description: Each row entry in the tmnxMcrPeerStatsTable represents additional columns of operational data for a multi-chassis peer. Table description (for tmnxMcrPeerStatsTable): The tmnxMcrPeerStatsTable has an entry for each multi-chassis peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.Peer</p>		
keepAlivePacketsTransmitted [Keep Alive Packets Transmitted] (tmnxMcrPeerStatsTxKeepAlive)	long	The value of tmnxMcrPeerStatsTxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were transmitted to the peer.
mcsIdRequestPacketsReceived [Mcs Id Request Packets Received] (tmnxMcrPeerStatsRxMcsIdReq)	long	The value of tmnxMcrPeerStatsRxMcsIdReq indicates how many valid MCS ID requests were received from the peer.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
mcsIdRequestPacketsTransmitted [Mcs Id Request Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdReq)	long	The value of tmnxMcrPeerStatsTxMcsIdReq indicates how many valid MCS ID requests were transmitted to the peer.
mcsIdResponsePacketsReceived [Mcs Id Response Packets Received] (tmnxMcrPeerStatsRxMcsIdRsp)	long	The value of tmnxMcrPeerStatsRxMcsIdRsp indicates how many valid MCS ID responses were received from the peer.
mcsIdResponsePacketsTransmitted [Mcs Id Response Packets Transmitted] (tmnxMcrPeerStatsTxMcsIdRsp)	long	The value of tmnxMcrPeerStatsTxMcsIdRsp indicates how many valid MCS ID responses were transmitted to the peer.
ringExistsRequestPacketsReceived [Ring Exists Request Packets Received] (tmnxMcrPeerStatsRxRingExistsReq)	long	The value of tmnxMcrPeerStatsRxRingExistsReq indicates how many valid 'ring exists' requests were received from the peer.
ringExistsRequestPacketsTransmitted [Ring Exists Request Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsReq)	long	The value of tmnxMcrPeerStatsTxRingExistsReq indicates how many valid 'ring exists' requests were transmitted to the peer.
ringExistsResponsePacketsReceived [Ring Exists Response Packets Received] (tmnxMcrPeerStatsRxRingExistsRsp)	long	The value of tmnxMcrPeerStatsRxRingExistsRsp indicates how many valid 'ring exists' responses were received from the peer.
ringExistsResponsePacketsTransmitted [Ring Exists Response Packets Transmitted] (tmnxMcrPeerStatsTxRingExistsRsp)	long	The value of tmnxMcrPeerStatsTxRingExistsRsp indicates how many valid 'ring exists' responses were transmitted to the peer.
ringKeepAlivePacketsReceived [Ring Keep Alive Packets Received] (tmnxMcrPeerStatsRxKeepAlive)	long	The value of tmnxMcrPeerStatsRxKeepAlive indicates how many valid MC-Ring control packets of type 'keepalive' were received from the peer.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ringSignallingPacketsReceived [Ring Signalling Packets Received] (tmnxMcrPeerStatsRx)	long	The value of tmnxMcrPeerStatsRx indicates how many valid MC-Ring signalling messages were received from the peer.
ringSignallingPacketsTransmitted [Ring Signalling Packets Transmitted] (tmnxMcrPeerStatsTx)	long	The value of tmnxMcrPeerStatsTx indicates how many valid MC-Ring signalling messages were transmitted to the peer.
MultiChassisRingGlobalStats MIB entry name: tmnxMcRedundancyStatsObjs Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
deliveredToPeerPacketsReceived [Delivered To Peer Packets Received] (tmnxMcrStatsRxDelivrdToPeer)	long	The value of tmnxMcrStatsRxDelivrdToPeer indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their peer.
deliveredToRingNodePacketsReceived [Delivered To Ring Node Packets Received] (tmnxMcrStatsRxDelivrdToRingNode)	long	The value of tmnxMcrStatsRxDelivrdToRingNode indicates how many MC-R signalling packets were received by this system that were correctly delivered to their ring node.
deliveredToRingPacketsReceived [Delivered To Ring Packets Received] (tmnxMcrStatsRxDelivrdToRing)	long	The value of tmnxMcrStatsRxDelivrdToRing indicates how many MC-Ring signalling packets were received by this system that were correctly delivered to their ring.
incompletePacketsReceived [Incomplete Packets Received] (tmnxMcrStatsRxIncomplete)	long	The value of tmnxMcrStatsRxIncomplete indicates how many MC-Ring signalling packets were received by this system that were incomplete.
invalidTlvPacketsReceived [Invalid Tlv Packets Received] (tmnxMcrStatsRxInvalidTlv)	long	The value of tmnxMcrStatsRxInvalidTlv indicates how many MC-Ring signalling packets were received by this system with invalid TLV.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
missedBfdEvents [Missed Bfd Events] (tmnxMcrStatsMissedBfdEvent)	long	The value of tmnxMcrStatsMissedBfdEvent indicates the number of missed BFD events on this system.
missedConfigEvents [Missed Config Events] (tmnxMcrStatsMissedConfigEvent)	long	The value of tmnxMcrStatsMissedConfigEvent indicates the number of missed configuration events on this system.
noBufferPacketsNotTransmitted [No Buffer Packets Not Transmitted] (tmnxMcrStatsTxNoBuffer)	long	The value of tmnxMcrStatsTxNoBuffer indicates how many MC-Ring signalling packets could not be transmitted by this system due to a lack of packet buffers.
signallingPacketsNotTransmitted [Signalling Packets Not Transmitted] (tmnxMcrStatsTxTransmitFailed)	long	The value of tmnxMcrStatsTxTransmitFailed indicates how many MC-Ring signalling packets could not be transmitted by this system due to a transmission failure.
signallingPacketsReceived [Signalling Packets Received] (tmnxMcrStatsRx)	long	The value of tmnxMcrStatsRx indicates how many MC-Ring signalling packets were received by this system.
signallingPacketsTransmitted [Signalling Packets Transmitted] (tmnxMcrStatsTx)	long	The value of tmnxMcrStatsTx indicates how many MC-Ring signalling packets were transmitted by this system.
tooShortPacketsReceived [Too Short Packets Received] (tmnxMcrStatsRxTooShort)	long	The value of tmnxMcrStatsRxTooShort indicates how many MC-Ring signalling packets were received by this system that were too short.
unknownDestinationPacketsDropped [Unknown Destination Packets Dropped] (tmnxMcrStatsTxUnknownDest)	long	The value of tmnxMcrStatsTxUnknownDest indicates how many MC-R signalling packets were dropped because the destination was unknown.
unknownPeerPacketsReceived [Unknown Peer Packets Received] (tmnxMcrStatsRxUnknownPeer)	long	The value of tmnxMcrStatsRxUnknownPeer indicates how many MC-Ring signalling packets were received by this system that were related to an unknown peer.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
unknownRingNodePacketsReceived [Unknown Ring Node Packets Received] (tmnxMcrStatsRxUnknownRingNode)	long	The value of tmnxMcrStatsRxUnknownRingNode indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring node.
unknownRingPacketsReceived [Unknown Ring Packets Received] (tmnxMcrStatsRxUnknownRing)	long	The value of tmnxMcrStatsRxUnknownRing indicates how many MC-Ring signalling packets were received by this system that were related to an unknown ring.
unknownTypePacketsReceived [Unknown Type Packets Received] (tmnxMcrStatsRxUnknownType)	long	The value of tmnxMcrStatsRxUnknownType indicates how many MC-Ring signalling packets were received by this system that were of unknown type.
wrongAuthenticationPacketsReceived [Wrong Authentication Packets Received] (tmnxMcrStatsRxWrongAuth)	long	The value of tmnxMcrStatsRxWrongAuth indicates how many MC-Ring signalling packets were received by this system with invalid authentication.
MultiChassisRingNodeStats MIB entry name: tmnxMcrRingNodeStatsEntry Entry description: Each row entry represents statistics related to an access node that participates in a multi-chassis ring configuration with a given peer. Rows are created or removed automatically by the system. Table description (for tmnxMcrRingNodeStatsTable): The tmnxMcrRingNodeStatsTable has an entry for each access node that participates in a multi-chassis ring configuration for the indicated peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRingNode		
detectedPacketsAcknowledged [Detected Packets Acknowledged] (tmnxMcrRingNodeStatsTxDetectAck)	long	The value of tmnxMcrRingNodeStatsTxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged to the peer for this multi-chassis ring node.
detectedPacketsPeerAcknowledged [Detected Packets Peer Acknowledged] (tmnxMcrRingNodeStatsRxDetectAck)	long	The value of tmnxMcrRingNodeStatsRxDetectAck indicates how many valid 'detected ring node' signalling messages were acknowledged by the peer for this multi-chassis ring node.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
detectedPacketsReceived [Detected Packets Received] (tmnxMcrRingNodeStatsRxDetect)	long	The value of tmnxMcrRingNodeStatsRxDetect indicates how many valid 'detected ring node' signalling messages were received from the peer for this multi-chassis ring node.
detectedPacketsTransmitted [Detected Packets Transmitted] (tmnxMcrRingNodeStatsTxDetect)	long	The value of tmnxMcrRingNodeStatsTxDetect indicates how many valid 'detected ring node' signalling messages were transmitted to the peer for this multi-chassis ring node.
rncvPacketsReceived [Rncv Packets Received] (tmnxMcrRingNodeStatsRncvRxResp)	long	The value of tmnxMcrRingNodeStatsRncvRxResp indicates how many valid connectivity verification messages were received from this multi-chassis ring node.
rncvPacketsRoundTripTime [Rncv Packets Round Trip Time] (tmnxMcrRingNodeStatsRncvRtTime)	long	The value of tmnxMcrRingNodeStatsRncvRtTime indicates the round-trip-time of the last successful connectivity verification for this multi-chassis ring node. If there has not been a successful connectivity verification, the value of tmnxMcrRingNodeStatsRncvRtTime is zero.
rncvPacketsTransmitted [Rncv Packets Transmitted] (tmnxMcrRingNodeStatsRncvTxReq)	long	The value of tmnxMcrRingNodeStatsRncvTxReq indicates how many valid connectivity verification messages were transmitted to this multi-chassis ring node.
<p>MultiChassisRingStats MIB entry name: tmnxMcrRingStatsEntry Entry description: Each row entry in the tmnxMcrRingStatsTable represents additional columns of operational data for a ring that participates in a multi-chassis operation with a given peer. Supports realtime plotting Supports scheduled collection Monitored class: multichassis.MultiChassisRing</p>		

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
opaquePacketsReceivedDelivered [Opaque Packets Received Delivered] (tmnxMcrRingStatsRxOpaqueDelivrd)	long	The value of tmnxMcrRingStatsRxOpaqueDelivrd indicates how many valid opaque signalling messages were received from the peer and delivered for this multi-chassis ring.
opaquePacketsReceivedNoDestination [Opaque Packets Received No Destination] (tmnxMcrRingStatsRxOpaqueNoDest)	long	The value of tmnxMcrRingStatsRxOpaqueNoDest indicates how many valid opaque signalling messages were received from the peer and for which no destination could be found.
opaquePacketsTransmitted [Opaque Packets Transmitted] (tmnxMcrRingStatsTxOpaque)	long	The value of tmnxMcrRingStatsTxOpaque indicates how many valid opaque signalling messages were transmitted to the peer for this multi-chassis ring.
sapsChangedPacketsReceived [Saps Changed Packets Received] (tmnxMcrRingStatsRxSapsChanged)	long	The value of tmnxMcrRingStatsRxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were received from the peer for this multi-chassis ring.
sapsChangedPacketsTransmitted [Saps Changed Packets Transmitted] (tmnxMcrRingStatsTxSapsChanged)	long	The value of tmnxMcrRingStatsTxSapsChanged indicates how many valid 'SAPs changed info' signalling messages were transmitted to the peer for this multi-chassis ring.
<p>PeerStats</p> <p>MIB entry name: tmnxMcLagPeerStatsEntry</p> <p>Entry description: Each row entry represents a collection of statistics for a multi-chassis peer. Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
configPacketsReceived [Config Packets Received] (tmnxMcLagPeerStatsPktsRxConfig)	long	The value of tmnxMcLagPeerStatsPktsRxConfig indicates how many valid MC-Lag control packets of type lag config were received on this system from the peer.
failedMD5AuthenticationPacketsDropped [Failed MD5 Authentication Packets Dropped] (tmnxMcLagPeerStatsDropMD5)	long	The value of tmnxMcLagPeerStatsDropMD5 indicates how many MC-Lag control packets were dropped on this system from the peer because the packet failed MD5 authentication.
failedPacketsTransmitted [Failed Packets Transmitted] (tmnxMcLagPeerStatsPktsTxFailed)	long	The value of tmnxMcLagPeerStatsPktsTxFailed indicates how many MC-Lag control packets failed to be transmitted from this system to the peer.
invalidLagIdPacketsDropped [Invalid Lag Id Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvldId)	long	The value of tmnxMcLagPeerStatsDropTlvInvldId indicates how many MC-Lag control packets were dropped on this system from the peer because the packet referred to an invalid or non multi-chassis lag.
invalidSizePacketsDropped [Invalid Size Packets Dropped] (tmnxMcLagPeerStatsDropTlvInvldSz)	long	The value of tmnxMcLagPeerStatsDropTlvInvldSz indicates how many MC-Lag control packets were dropped on this system from the peer because the packet size was invalid.
keepAlivePacketsReceived [Keep Alive Packets Received] (tmnxMcLagPeerStatsPktsRxKpalive)	long	The value of tmnxMcLagPeerStatsPktsRxKpalive indicates how many valid MC-Lag control packets of type keepalive were received on this system from the peer.
keepalivePacketsTransmitted [Keepalive Packets Transmitted] (tmnxMcLagPeerStatsPktsTxKpalive)	long	The value of tmnxMcLagPeerStatsPktsTxKpalive indicates how many MC-Lag control packets of type keepalive were transmitted from this system to the peer.
outOfSequencePacketsDropped [Out Of Sequence Packets Dropped] (tmnxMcLagPeerStatsDropOutOfSeq)	long	The value of tmnxMcLagPeerStatsDropOutOfSeq indicates how many MC-Lag control packets were dropped on this system from the peer because the packet was out of sequence.

Table 656 multichassis statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
packetsReceived [Packets Received] (tmnxMcLagPeerStatsPktsRx)	long	The value of tmnxMcLagPeerStatsPktsRx indicates how many valid MC-Lag control packets were received on this system from the peer.
packetsTransmitted [Packets Transmitted] (tmnxMcLagPeerStatsPktsTx)	long	The value of tmnxMcLagPeerStatsPktsTx indicates how many MC-Lag control packets were transmitted from this system to the peer.
peerConfigPacketsReceived [Peer Config Packets Received] (tmnxMcLagPeerStatsPktsRxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsRxPeerCfg indicates how many valid MC-Lag control packets of type peer config were received on this system from the peer.
peerConfigPacketsTransmitted [Peer Config Packets Transmitted] (tmnxMcLagPeerStatsPktsTxPeerCfg)	long	The value of tmnxMcLagPeerStatsPktsTxPeerCfg indicates how many MC-Lag control packets of type peer config were transmitted from this system to the peer.
stateDisabledPacketsDropped [State Disabled Packets Dropped] (tmnxMcLagPeerStatsDropStateDsblD)	long	The value of tmnxMcLagPeerStatsDropStateDsblD indicates how many MC-Lag control packets were dropped on this system from the peer because the peer was administratively disabled.
