events [Events] (tmnxOspfNgNbrEvents)	long	The value of tmnxOspfNgNbrEvents indicates the number of times this neighbor relationship has changed state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfNgNbrLsRetransQLen)	long	The value of tmnxOspfNgNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>NeighborStatusStats</p> <p>MIB entry name: tmnxOspfNgNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfNgNbrStatsTable represents additional columns for statistics for an OSPF neighbor.</p> <p>Table description (for tmnxOspfNgNbrStatsTable): The tmnxOspfNgNbrStatsTable provides an extension of the tmnxOspfNgNbrTable for statistics for an OSPF neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Neighbor</p>		

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badMtus [Bad Mtus] (tmnxOspfNgNbrBadMTUs)	long	The value of tmnxOspfNgNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badNeighborStates [Bad Neighbor States] (tmnxOspfNgNbrBadNbrStates)	long	The value of tmnxOspfNgNbrBadNbrStates indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfNgNbrBadPackets)	long	The value of tmnxOspfNgNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfNgNbrBadSeqNums)	long	The value of tmnxOspfNgNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfNgNbrDuplicates)	long	The value of tmnxOspfNgNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfNgNbrLsaInstallFailed)	long	The value of tmnxOspfNgNbrLsaInstallFailed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfNgNbrLsaNotInLsdb)	long	The value of tmnxOspfNgNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfNgNbrNumRestarts)	long	The value of tmnxOspfNgNbrNumRestarts indicates the number of times the neighbor has attempted restart.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
optionMismatches [Option Mismatches] (tmnxOspfNgNbrOptionMismatches)	long	The value of tmnxOspfNgNbrOptionMismatches indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkGeneralStats MIB entry name: tmnxOspfShamLfStatsEntry Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
events [Events] (tmnxOspfShamLfEvents)	long	The value of tmnxOspfShamLfEvents indicates the number of state changes or error events on this sham link.
<p>ShamLinkNeighborGeneralStats MIB entry name: tmnxOspfShamNbrStatsEntry Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor. Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLinkNeighbor</p>		
events [Events] (tmnxOspfShamNbrEvents)	long	The value of tmnxOspfShamNbrEvents indicates the number of times this sham link has changed its state, or an error has occurred.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfShamNbrLsRetransQLen)	long	The value of tmnxOspfShamNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>ShamLinkNeighborStatusStats</p> <p>MIB entry name: tmnxOspfShamNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamNbrStatsTable represents additional columns for statistics for an OSPF sham link neighbor.</p> <p>Table description (for tmnxOspfShamNbrStatsTable): The tmnxOspfShamNbrStatsTable provides an extension of the tmnxOspfShamNbrTable for statistics for an OSPF sham link neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLinkNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfShamNbrBadMTUs)	long	The value of tmnxOspfShamNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfShamNbrBadPackets)	long	The value of tmnxOspfShamNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfShamNbrBadSeqNums)	long	The value of tmnxOspfShamNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfShamNbrBadNbrStates)	long	The value of tmnxOspfShamNbrBadNbrStates indicates the total number of OSPF packets received when the sham link neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
duplicates [Duplicates] (tmnxOspfShamNbrDuplicates)	long	The value of tmnxOspfShamNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfShamNbrLsaInstallFail)	long	The value of tmnxOspfShamNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfShamNbrLsaNotInLsdb)	long	The value of tmnxOspfShamNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfShamNbrNumRestarts)	long	The value of tmnxOspfShamNbrNumRestarts indicates the number of times the sham link neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfShamNbrOptionMismatch)	long	The value of tmnxOspfShamNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
ShamLinkReceiveStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink		

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
lsasWithBadChecksums [Lsas With Bad Checksums] (tmnxOspfShamIfRxBadChecksums)	long	The value of tmnxOspfShamIfRxBadChecksums indicates the count of LSAs received with bad checksums.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>ShamLinkStatusStats</p> <p>MIB entry name: tmnxOspfShamLfStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfShamLfStatsTable represents additional columns for statistics for an OSPF sham link.</p> <p>Table description (for tmnxOspfShamLfStatsTable): The tmnxOspfShamLfStatsTable provides an extension of the tmnxOspfShamLfTable for statistics for an OSPF sham link.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.ShamLink</p>		
authorizationFailures [Authorization Failures] (tmnxOspfShamLfAuthFailures)	long	The value of tmnxOspfShamLfAuthFailures indicates the total number of OSPF packets received with an invalid authorization key since tmnxOspfAdminState was last set to 'enabled'.
badAreas [Bad Areas] (tmnxOspfShamLfBadAreas)	long	The value of tmnxOspfShamLfBadAreas indicates the total number of OSPF packets received with an area mismatch since tmnxOspfAdminState was last set to 'enabled'.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfShamLfBadAuthTypes)	long	The value of tmnxOspfShamLfBadAuthTypes indicates the total number of OSPF packets received with an invalid authorization type since tmnxOspfAdminState was last set to 'enabled'.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfShamLfBadDeadIntervals)	long	The value of tmnxOspfShamLfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfShamLfBadDstAddrs)	long	The value of tmnxOspfShamLfBadDstAddrs indicates the total number of OSPF packets received with the incorrect IP destination address since tmnxOspfAdminState was last set to 'enabled'.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badHelloIntervals [Bad Hello Intervals] (tmnxOspfShamIfBadHelloIntervals)	long	The value of tmnxOspfShamIfBadHelloIntervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this sham link since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfShamIfBadLengths)	long	The value of tmnxOspfShamIfBadLengths indicates the total number of OSPF packets received on this sham link with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfShamIfBadNeighbors)	long	The value of tmnxOspfShamIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since tmnxOspfAdminState was last set to 'enabled'.
badNetworks [Bad Networks] (tmnxOspfShamIfBadNetworks)	long	The value of tmnxOspfShamIfBadNetworks indicates the total number of OSPF packets received with invalid network or mask since tmnxOspfAdminState was last set to 'enabled'.
badOptions [Bad Options] (tmnxOspfShamIfBadOptions)	long	The value of tmnxOspfShamIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this sham link or area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfShamIfBadPacketTypes)	long	The value of tmnxOspfShamIfBadPacketTypes indicates the total number of OSPF packets received with an invalid OSPF packet type since tmnxOspfAdminState was last set to 'enabled'.
badVersions [Bad Versions] (tmnxOspfShamIfBadVersions)	long	The value of tmnxOspfShamIfBadVersions indicates the total number of OSPF packets received with bad OSPF version numbers since tmnxOspfAdminState was last set to 'enabled'.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
discardPackets [Discard Packets] (tmnxOspfShamIfDiscardPackets)	long	The value of tmnxOspfShamIfDiscardPackets indicates the total number of OSPF packets discarded on this sham link since tmnxOspfAdminState was last set to 'enabled'.
retransmitOuts [Retransmit Outs] (tmnxOspfShamIfRetransmitOuts)	long	The value of tmnxOspfShamIfRetransmitOuts indicates the total number of OSPF Retransmits sent on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>ShamLinkTransmitStats MIB entry name: tmnxOspfShamIfStatsEntry Entry description: Each row entry in the tmnxOspfShamIfStatsTable represents additional columns for statistics for an OSPF sham link. Table description (for tmnxOspfShamIfStatsTable): The tmnxOspfShamIfStatsTable provides an extension of the tmnxOspfShamIfTable for statistics for an OSPF sham link. Supports realtime plotting Supports scheduled collection Monitored class: ospf.ShamLink</p>		
databaseDescriptionPackets [Database Description Packets] (tmnxOspfShamIfRxDBDs)	long	The value of tmnxOspfShamIfRxDBDs indicates the total number of OSPF Database Description packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
helloPackets [Hello Packets] (tmnxOspfShamIfRxHellos)	long	The value of tmnxOspfShamIfRxHellos indicates the total number of OSPF Hello packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfShamIfRxLSAcks)	long	The value of tmnxOspfShamIfRxLSAcks indicates the total number of Link State Acknowledgements received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
linkStateRequests [Link State Requests] (tmnxOspfShamIfRxLSRs)	long	The value of tmnxOspfShamIfRxLSRs indicates the total number of Link State Requests (LSRs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
linkStateUpdates [Link State Updates] (tmnxOspfShamIfRxLSUs)	long	The value of tmnxOspfShamIfRxLSUs indicates the total number of Link State Updates (LSUs) received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
totalPackets [Total Packets] (tmnxOspfShamIfRxPackets)	long	The value of tmnxOspfShamIfRxPackets indicates the total number of OSPF packets received on this sham link since tmnxOspfAdminState was last set to 'enabled'.
<p>SiteStats</p> <p>MIB entry name: tmnxOspfStatisticsEntry</p> <p>Entry description: Each row entry in the tmnxOspfStatisticsTable represents additional columns for statistics for an OSPF instance.</p> <p>Table description (for tmnxOspfStatisticsTable): The tmnxOspfStatisticsTable provides an extension of the tmnxOspfGeneralTable for statistics for an OSPF instance.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.Site</p>		
addRouteFailed [Add Route Failed] (tmnxOspfRoutesAddsFailed)	long	The value of tmnxOspfRoutesAddsFailed indicates the number of times an attempt to add a route to the Route Table Manager (RTM) failed for this OSPF instance.
cspfDroppedRequests [Cspf Dropped Requests] (tmnxOspfCSPFDroppedRequests)	long	The value of tmnxOspfCSPFDroppedRequests indicates the number of dropped CSPF requests made by the OSPF protocol.
cspfPathsFound [Cspf Paths Found] (tmnxOspfCSPFPathsFound)	long	The value of tmnxOspfCSPFPathsFound indicates the number of of paths found for the requests made to OSPF protocol.
cspfPathsNotFound [Cspf Paths Not Found] (tmnxOspfCSPFPathsNotFound)	long	The value of tmnxOspfCSPFPathsNotFound indicates the number of of paths not found for the requests made to OSPF protocol.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
cspfRequests [Cspf Requests] (tmnxOspfCSPFRequests)	long	The value of tmnxOspfCSPFRequests indicates the number of CSPF requests made to the OSPF protocol.
deleteRouteFailed [Delete Route Failed] (tmnxOspfRoutesDelsFailed)	long	The value of tmnxOspfRoutesDelsFailed indicates the number of times an attempt to delete a route from the Route Table Manager (RTM) failed for this instance of OSPF.
inOverflowCount [In Overflow Count] (tmnxOspfNumTimesInOverflow)	long	The value of tmnxOspfNumTimesInOverflow indicates the count of the number of times the system was in the overflow state.
inOverloadCount [In Overload Count] (tmnxOspfNumTimesInOverload)	long	The value of tmnxOspfNumTimesInOverload indicates the count of the number of times the system was overloaded.
modifyRouteFailed [Modify Route Failed] (tmnxOspfRoutesModsFailed)	long	The value of tmnxOspfRoutesModsFailed indicates the number of times an attempt to modify a route in the Route Table Manager (RTM) failed for this instance of OSPF.
newLsasOriginated [New Lsas Originated] (tmnxOspfOriginateNewLsas)	long	The value of tmnxOspfOriginateNewLsas indicates the number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
newLsasReceived [New Lsas Received] (tmnxOspfRxNewLsas)	long	The value of tmnxOspfRxNewLsas indicates the number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
spfAttemptsFailed [Spf Attempts Failed] (tmnxOspfSpfAttemptsFailed)	long	The value of tmnxOspfSpfAttemptsFailed indicates the number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualLink		
authorizationFailures [Authorization Failures] (tmnxOspfVirtIfAuthFailures)	long	The value of tmnxOspfVirtIfAuthFailures indicates the total number of OSPF packets received on this virtual interface with invalid authentication keys.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badAreas [Bad Areas] (tmnxOspfVirtIfBadAreas)	long	The value of tmnxOspfVirtIfBadAreas indicates the total number of OSPF packets received on this virtual interface with area mismatches.
badAuthorizationTypes [Bad Authorization Types] (tmnxOspfVirtIfBadAuthTypes)	long	The value of tmnxOspfVirtIfBadAuthTypes indicates the total number of OSPF packets received on this virtual interface with invalid authentication types.
badDeadIntervals [Bad Dead Intervals] (tmnxOspfVirtIfBadDeadIntervals)	long	The value of tmnxOspfVirtIfBadDeadIntervals indicates the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badDestinationAddresses [Bad Destination Addresses] (tmnxOspfVirtIfBadDstAdrs)	long	The value of tmnxOspfVirtIfBadDstAdrs indicates the total number of OSPF packets received on this virtual interface with invalid destination IP address.
badHelloIntervals [Bad Hello Intervals] (tmnxOspfVirtIfBadHelloIntervls)	long	The value of tmnxOspfVirtIfBadHelloIntervls indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this virtual interface since tmnxOspfAdminState was last set to 'enabled'.
badLengths [Bad Lengths] (tmnxOspfVirtIfBadLengths)	long	The value of tmnxOspfVirtIfBadLengths indicates the total number of OSPF packets received on this virtual interface with a total length not equal to the length given in the packet itself since tmnxOspfAdminState was last set to 'enabled'.
badNeighbors [Bad Neighbors] (tmnxOspfVirtIfBadNeighbors)	long	The value of tmnxOspfVirtIfBadNeighbors indicates the total number of OSPF packets received where the neighbor information does not match the configuration this router has for the neighbor.
badNetworks [Bad Networks] (tmnxOspfVirtIfBadNetworks)	long	The value of tmnxOspfVirtIfBadNetworks indicates the total number of OSPF packets received on this virtual interface with invalid network or mask fields.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badOptions [Bad Options] (tmnxOspfVirtIfBadOptions)	long	The value of tmnxOspfVirtIfBadOptions indicates the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit-area since tmnxOspfAdminState was last set to 'enabled'.
badPacketTypes [Bad Packet Types] (tmnxOspfVirtIfBadPacketTypes)	long	The value of tmnxOspfVirtIfBadPacketTypes indicates the total number of OSPF packets received on this virtual interface with invalid OSPF packet types.
badVersions [Bad Versions] (tmnxOspfVirtIfBadVersions)	long	The value of tmnxOspfVirtIfBadVersions indicates the total number of OSPF packets received on this virtual interface with invalid OSPF version numbers.
discardPackets [Discard Packets] (tmnxOspfVirtIfDiscardPackets)	long	The value of tmnxOspfVirtIfDiscardPackets indicates the total number of OSPF packets discarded on this virtual interface.
retransmitOuts [Retransmit Outs] (tmnxOspfVirtIfRetransmitOuts)	long	The value of tmnxOspfVirtIfRetransmitOuts indicates the total number of OSPF packets retransmitted on this virtual interface.
<p>VirtualLinkTransmitStats MIB entry name: tmnxOspfVirtIfStatsEntry Entry description: Each row entry in the tmnxOspfVirtIfStatsTable represents additional columns for statistics for an OSPF virtual interface. Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
databaseDescriptionPackets [Database Description Packets] (tmnxOspfVirtIfRxDBDs)	long	The value of tmnxOspfVirtIfRxDBDs indicates the total number of OSPF Database Description packets received on this virtual interface.
helloPackets [Hello Packets] (tmnxOspfVirtIfRxHellos)	long	The value of tmnxOspfVirtIfRxHellos indicates the total number of OSPF Hello packets received on this virtual interface.
linkStateAcknowledgements [Link State Acknowledgements] (tmnxOspfVirtIfRxLSAcks)	long	The value of tmnxOspfVirtIfRxLSAcks indicates the total number of Link State Acknowledgements received on this virtual interface.
linkStateRequests [Link State Requests] (tmnxOspfVirtIfRxLSRs)	long	The value of tmnxOspfVirtIfRxLSRs indicates the total number of OSPF Link State Requests (LSRs) received on this virtual interface.
linkStateUpdates [Link State Updates] (tmnxOspfVirtIfRxLSUs)	long	The value of tmnxOspfVirtIfRxLSUs indicates the total number of OSPF Link State Updates (LSUs) received on this virtual interface.
totalPackets [Total Packets] (tmnxOspfVirtIfRxPackets)	long	The value of tmnxOspfVirtIfRxPackets indicates the total number of OSPF packets received on this virtual interface since it was created.
<p>VirtualNeighborGeneralStats</p> <p>MIB entry name: tmnxOspfVirtNbrStatsEntry</p> <p>Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor.</p> <p>Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: ospf.VirtualNeighbor</p>		

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
events [Events] (tmnxOspfVirtNbrEvents)	long	The value of tmnxOspfVirtNbrEvents indicates the number of times this virtual link has changed its state, or an error has occurred.
retransmissionQueueLength [Retransmission Queue Length] (tmnxOspfVirtNbrLsRetransQLen)	long	The value of tmnxOspfVirtNbrLsRetransQLen indicates the current length of the retransmission queue.
<p>VirtualNeighborStatusStats MIB entry name: tmnxOspfVirtNbrStatsEntry Entry description: Each row entry in the tmnxOspfVirtNbrStatsTable represents additional columns for statistics for an OSPF virtual neighbor. Table description (for tmnxOspfVirtNbrStatsTable): The tmnxOspfVirtNbrStatsTable provides an extension of the tmnxOspfVirtNbrTable for statistics for an OSPF virtual neighbor. Supports realtime plotting Supports scheduled collection Monitored class: ospf.VirtualNeighbor</p>		
badMtus [Bad Mtus] (tmnxOspfVirtNbrBadMTUs)	long	The value of tmnxOspfVirtNbrBadMTUs indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since tmnxOspfAdminState was last set to 'enabled'.
badPackets [Bad Packets] (tmnxOspfVirtNbrBadPackets)	long	The value of tmnxOspfVirtNbrBadPackets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since tmnxOspfAdminState was last set to 'enabled'.
badSequenceNumbers [Bad Sequence Numbers] (tmnxOspfVirtNbrBadSeqNums)	long	The value of tmnxOspfVirtNbrBadSeqNums indicates the total number of times when a database description packet was received with a sequence number mismatch since tmnxOspfAdminState was last set to 'enabled'.

Table 844 ospf statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
badVirtualNeighborStates [Bad Virtual Neighbor States] (tmnxOspfVirtNbrBadNbrStates)	long	The value of tmnxOspfVirtNbrBadNbrStates indicates the total number of OSPF packets received when the virtual neighbor state was not expecting to receive this packet type since tmnxOspfAdminState was last set to 'enabled'.
duplicates [Duplicates] (tmnxOspfVirtNbrDuplicates)	long	The value of tmnxOspfVirtNbrDuplicates indicates the total number of times when a duplicate database description packet was received during the Exchange state since tmnxOspfAdminState was last set to 'enabled'.
lsaInstallFailed [Lsa Install Failed] (tmnxOspfVirtNbrLsaInstallFail)	long	The value of tmnxOspfVirtNbrLsaInstallFail indicates the total number of times when an LSA could not be installed into the LSDB due to a resource allocation issue since tmnxOspfAdminState was last set to 'enabled'.
lsaNotInLSDB [Lsa Not In LSDB] (tmnxOspfVirtNbrLsaNotInLsdb)	long	The value of tmnxOspfVirtNbrLsaNotInLsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since tmnxOspfAdminState was last set to 'enabled'.
numberOfRestarts [Number Of Restarts] (tmnxOspfVirtNbrNumRestarts)	long	The value of tmnxOspfVirtNbrNumRestarts indicates the number of times the virtual neighbor has attempted restart since tmnxOspfAdminState was last set to 'enabled'.
optionMismatches [Option Mismatches] (tmnxOspfVirtNbrOptionMismatch)	long	The value of tmnxOspfVirtNbrOptionMismatch indicates the total number of times when a LS update was received with an option mismatch since tmnxOspfAdminState was last set to 'enabled'.

dot1xAuthAuthEapLogoffWhileAuthenticated [Dot 1 x Auth Auth Eap Logoff While Authenticated] (dot1xAuthAuthEapLogoffWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapLogoffWhileAuthenticating [Dot 1 x Auth Auth Eap Logoff While Authenticating] (dot1xAuthAuthEapLogoffWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticated [Dot 1 x Auth Auth Eap Starts While Authenticated] (dot1xAuthAuthEapStartsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
dot1xAuthAuthEapStartsWhileAuthenticating [Dot 1 x Auth Auth Eap Starts While Authenticating] (dot1xAuthAuthEapStartsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.

Table 845 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthAuthFailWhileAuthenticating [Dot 1 x Auth Auth Fail While Authenticating] (dot1xAuthAuthFailWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE).
dot1xAuthAuthReauthsWhileAuthenticated [Dot 1 x Auth Auth Reauths While Authenticated] (dot1xAuthAuthReauthsWhileAuthenticated)	long	Counts the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthReauthsWhileAuthenticating [Dot 1 x Auth Auth Reauths While Authenticating] (dot1xAuthAuthReauthsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE).
dot1xAuthAuthSuccessWhileAuthenticating [Dot 1 x Auth Auth Success While Authenticating] (dot1xAuthAuthSuccessWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant (authSuccess = TRUE).
dot1xAuthAuthTimeoutsWhileAuthenticating [Dot 1 x Auth Auth Timeouts While Authenticating] (dot1xAuthAuthTimeoutsWhileAuthenticating)	long	Counts the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE).
dot1xAuthBackendAccessChallenges [Dot 1 x Auth Backend Access Challenges] (dot1xAuthBackendAccessChallenges)	long	Counts the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). Indicates that the Authentication Server has communication with the Authenticator.
dot1xAuthBackendAuthFails [Dot 1 x Auth Backend Auth Fails] (dot1xAuthBackendAuthFails)	long	Counts the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 845 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthBackendAuthSuccesses [Dot 1 x Auth Backend Auth Successes] (dot1xAuthBackendAuthSuccesses)	long	Counts the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). Indicates that the Supplicant has successfully authenticated to the Authentication Server.
dot1xAuthBackendNonNakResponsesFromSupplicant [Dot 1 x Auth Backend Non Nak Responses From Supplicant] (dot1xAuthBackendNonNakResponsesFromSupplicant)	long	Counts the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.
dot1xAuthBackendOtherRequestsToSupplicant [Dot 1 x Auth Backend Other Requests To Supplicant] (dot1xAuthBackendOtherRequestsToSupplicant)	long	Counts the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). Indicates that the Authenticator chose an EAP-method.
dot1xAuthBackendResponses [Dot 1 x Auth Backend Responses] (dot1xAuthBackendResponses)	long	Counts the number of times that the state machine sends an initial Access-Request packet to the Authentication server (i.e., executes sendRespToServer on entry to the RESPONSE state). Indicates that the Authenticator attempted communication with the Authentication Server.
dot1xAuthEapLogoffsWhileConnecting [Dot 1 x Auth Eap Logoffs While Connecting] (dot1xAuthEapLogoffsWhileConnecting)	long	Counts the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
dot1xAuthEntersAuthenticating [Dot 1 x Auth Enters Authenticating] (dot1xAuthEntersAuthenticating)	long	Counts the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Table 845 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEntersConnecting [Dot 1 x Auth Enters Connecting] (dot1xAuthEntersConnecting)	long	Counts the number of times that the state machine transitions to the CONNECTING state from any other state.
<p>PaePortAuthenticatorSessionStats MIB entry name: dot1xAuthSessionStatsEntry Entry description: The session statistics information for an Authenticator PAE. This shows the current values being collected for each session that is still in progress, or the final values for the last valid session on each port where there is no session currently active. Table description (for dot1xAuthSessionStatsTable): A table that contains the session statistics objects for the Authenticator PAE associated with each Port. An entry appears in this table for each port that may authenticate access to itself. Supports realtime plotting Supports scheduled collection Monitored classes:</p> <ul style="list-style-type: none"> • equipment.ManagementPort • equipment.PhysicalPort 		
dot1xAuthSessionAuthenticMethod [Dot 1 x Auth Session Authentic Method] (dot1xAuthSessionAuthenticMethod)	int	The authentication method used to establish the session.
dot1xAuthSessionFramesRx [Dot 1 x Auth Session Frames Rx] (dot1xAuthSessionFramesRx)	long	The number of user data frames received on this Port during the session.
dot1xAuthSessionFramesTx [Dot 1 x Auth Session Frames Tx] (dot1xAuthSessionFramesTx)	long	The number of user data frames transmitted on this Port during the session.
dot1xAuthSessionOctetsRx [Dot 1 x Auth Session Octets Rx] (dot1xAuthSessionOctetsRx)	java. math. BigInteger	The number of octets received in user data frames on this Port during the session.

dot1xAuthEapLengthErrorFramesRx [Dot 1 x Auth Eap Length Error Frames Rx] (dot1xAuthEapLengthErrorFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid.
dot1xAuthEapolFramesRx [Dot 1 x Auth Eapol Frames Rx] (dot1xAuthEapolFramesRx)	long	The number of valid EAPOL frames of any type that have been received by this Authenticator.

Table 845 pae802_1x statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dot1xAuthEapolFramesTx [Dot 1 x Auth Eapol Frames Tx] (dot1xAuthEapolFramesTx)	long	The number of EAPOL frames of any type that have been transmitted by this Authenticator.
dot1xAuthEapolLogoffFramesRx [Dot 1 x Auth Eapol Logoff Frames Rx] (dot1xAuthEapolLogoffFramesRx)	long	The number of EAPOL Logoff frames that have been received by this Authenticator.
dot1xAuthEapolReqFramesTx [Dot 1 x Auth Eapol Req Frames Tx] (dot1xAuthEapolReqFramesTx)	long	The number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator.
dot1xAuthEapolReqIdFramesTx [Dot 1 x Auth Eapol Req Id Frames Tx] (dot1xAuthEapolReqIdFramesTx)	long	The number of EAP Req/Id frames that have been transmitted by this Authenticator.
dot1xAuthEapolRespFramesRx [Dot 1 x Auth Eapol Resp Frames Rx] (dot1xAuthEapolRespFramesRx)	long	The number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator.
dot1xAuthEapolRespIdFramesRx [Dot 1 x Auth Eapol Resp Id Frames Rx] (dot1xAuthEapolRespIdFramesRx)	long	The number of EAP Resp/Id frames that have been received by this Authenticator.
dot1xAuthEapolStartFramesRx [Dot 1 x Auth Eapol Start Frames Rx] (dot1xAuthEapolStartFramesRx)	long	The number of EAPOL Start frames that have been received by this Authenticator.
dot1xAuthInvalidEapolFramesRx [Dot 1 x Auth Invalid Eapol Frames Rx] (dot1xAuthInvalidEapolFramesRx)	long	The number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized.
dot1xAuthLastEapolFrameVersion [Dot 1 x Auth Last Eapol Frame Version] (dot1xAuthLastEapolFrameVersion)	long	The protocol version number carried in the most recently received EAPOL frame.

Table 846 rsvp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>RsvpSessionStats</p> <p>MIB entry name: vRtrRsvpSessionStatEntry</p> <p>Entry description: Each row entry represents a collection of statistics for an RSVP session. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrRsvpSessionStatTable): The vRtrRsvpSessionStatTable contains statistics for an RSVP session.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rsvp.Session</p>		
detourAge [Detour Age] (vRtrRsvpSessionDetourAge)	long	vRtrRsvpSessionDetourAge is the age (i.e., time from creation till now) of this detour LSP in 10-millisecond periods.
detourTimeUp [Detour Time Up] (vRtrRsvpSessionDetourTimeUp)	long	vRtrRsvpSessionDetourTimeUp is the total time in 10-millisecond units that the detour LSP has been operational.
pathsReceived [Paths Received] (vRtrRsvpSessionRxPaths)	java. math. BigInteger	The total number of RSVP PATH messages received for this RSVP session.
pathsTransmitted [Paths Transmitted] (vRtrRsvpSessionTxPaths)	java. math. BigInteger	The total number of RSVP PATH messages transmitted for this RSVP session.
refreshPathsReceived [Refresh Paths Received] (vRtrRsvpSessionRxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshPaths indicates the number of times PATH was refreshed using message ID from full PATH refresh or Srefresh message for this RSVP session.

Table 846 rsvp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
refreshPathsTransmitted [Refresh Paths Transmitted] (vRtrRsvpSessionTxSrefreshPaths)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshPaths indicates the number of times PATH refresh for the session was sent as a part of a Srefresh message.
refreshReservesReceived [Refresh Reserves Received] (vRtrRsvpSessionRxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionRxSrefreshResvs indicates the number of times RESV was refreshed using message ID from full RESV refresh or Srefresh message for this RSVP session.
refreshReservesTransmitted [Refresh Reserves Transmitted] (vRtrRsvpSessionTxSrefreshResvs)	java. math. BigInteger	The value of vRtrRsvpSessionTxSrefreshResvs indicates the number of times RESV refresh for the session was sent as a part of a Srefresh message.
reservesReceived [Reserves Received] (vRtrRsvpSessionRxResvs)	java. math. BigInteger	The total number of RSVP RESV messages received for this RSVP session.
reservesTransmitted [Reserves Transmitted] (vRtrRsvpSessionTxResvs)	java. math. BigInteger	The total number of RSVP RESV messages transmitted for this RSVP session.

Table 847 rtr statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>CpeCheckStats</p> <p>MIB entry name: vRtrInetStatRteCpeChkStatsEntry</p> <p>Entry description: Each row entry represents a collection of Customer-Provided Equipment (CPE) availability statistics for a virtual router static route in the system with non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects. Entries cannot be created and deleted via SNMP SET operations.</p> <p>Table description (for vRtrInetStatRteCpeChkStatsTable): The vRtrInetStatRteCpeChkStatsTable has an entry for each entry in the vRtrInetStaticRouteTable that has a non-default values set for the vRtrInetStaticRouteCpeAddrType and vRtrInetStaticRouteCpeAddr objects.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: rtr.StaticRoute</p>		
downTransitions [Down Transitions] (vRtrInetStatRteCpeChkDownTrans)	long	The value of vRtrInetStatRteCpeChkDownTrans indicates the number of times the CPE has transitioned to the unavailable state.
echoReplyPacketsReceived [Echo Reply Packets Received] (vRtrInetStatRteCpeChkInPktCnt)	long	The value of vRtrInetStatRteCpeChkInPktCnt indicates the number of echo-reply packets received.
echoRequestPacketsSent [Echo Request Packets Sent] (vRtrInetStatRteCpeChkOutPktCnt)	long	The value of vRtrInetStatRteCpeChkOutPktCnt indicates the number of echo-request packets sent.
hostUpDownTime [Host Up Down Time] (vRtrInetStatRteCpeChkUpTime)	long	The value of vRtrInetStatRteCpeChkUpTime indicates how long (in hundredths of a second) that the CPE has been available.
tTl [Ttl] (vRtrInetStatRteCpeChkTTL)	long	The value of vRtrInetStatRteCpeChkTTL indicates the time, in seconds, before the CPE will be declared down. Upon receipt of an echo reply, it has the value of vRtrInetStaticRouteCpeInterval * vRtrInetStaticRouteCpeDropCnt and is decremented by 1 every second.

Table 847 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
upTransitions [Up Transitions] (vRtrInetStatRteCpeChkUpTrans)	long	The value of vRtrInetStatRteCpeChkUpTrans indicates the number of times the CPE has transitioned to the available state.
<p>IpInterfaceStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. activeARPEntries [Active ARPEntries] (vRtrStatActiveARPEntries)	long	vRtrStatActiveARPEntries indicates the number of active ARP entries for the specified virtual router in the system.

Table 847 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
activeBgpTunnels [Active Bgp Tunnels] (vRtrStatActiveBgpTunnels)	long	vRtrStatActiveBgpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'bgp'.
aggregateActiveRoutes [Aggregate Active Routes] (vRtrAggregateActiveRoutes)	long	vRtrAggregateActiveRoutes indicates the current number of active aggregate routes for this instance of the route table.
aggregateRoutes [Aggregate Routes] (vRtrAggregateRoutes)	long	vRtrAggregateRoutes indicates the current number of aggregate routes for this instance of the route table.
bgpActiveRoutes [Bgp Active Routes] (vRtrBGPAciveRoutes)	long	vRtrBGPActiveRoutes indicates the current number of active bgp routes for this instance of the route table.
bgpRoutes [Bgp Routes] (vRtrBGPRoutes)	long	vRtrBGPRoutes indicates the current number of bgp routes for this instance of the route table.
bgpVpnActiveRoutes [Bgp Vpn Active Routes] (vRtrStatBGPVpnActiveRoutes)	long	vRtrStatBGPVpnActiveRoutes indicates the current number of active VPN-IPV4 routes learned by MP-BGP for this virtual router.
bgpVpnRoutes [Bgp Vpn Routes] (vRtrStatBGPVpnRoutes)	long	vRtrStatBGPVpnRoutes indicates the current number of VPN-IPV4 routes learned by MP-BGP for this virtual router.
directActiveRoutes [Direct Active Routes] (vRtrDirectActiveRoutes)	long	vRtrDirectActiveRoutes indicates the current number of active direct routes for this instance of the route table.
directRoutes [Direct Routes] (vRtrDirectRoutes)	long	vRtrDirectRoutes indicates the current number of direct routes for this instance of the route table.

Table 847 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
illegalLabelsReceived [Illegal Labels Received] (vRtrStatIllegalLabels)	long	vRtrStatIllegalLabels indicates the number of illegally received labels on this virtual router.
isisActiveRoutes [Isis Active Routes] (vRtrISISActiveRoutes)	long	vRtrISISActiveRoutes indicates the current number of active isis routes for this instance of the route table.
isisRoutes [Isis Routes] (vRtrISISRoutes)	long	vRtrISISRoutes indicates the current number of isis routes for this instance of the route table.
ldpActiveTunnels [Ldp Active Tunnels] (vRtrStatActiveLdpTunnels)	long	vRtrStatActiveLdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'ldp'.
ldpTunnels [Ldp Tunnels] (vRtrStatTotalLdpTunnels)	long	vRtrStatTotalLdpTunnels indicates the current number of both active and inactive LDP tunnels.
multicastRoutes [Multicast Routes] (vRtrMulticastRoutes)	long	vRtrMulticastRoutes indicates the current number of rows in the vRtrPimNgGrpSrcTable.
ospfActiveRoutes [Ospf Active Routes] (vRtrOSPFActiveRoutes)	long	vRtrOSPFActiveRoutes indicates the current number of active ospf routes for this instance of the route table.
ospfRoutes [Ospf Routes] (vRtrOSPFRoutes)	long	vRtrOSPFRoutes indicates the current number of ospf routes for this instance of the route table.
ripActiveRoutes [Rip Active Routes] (vRtrRIPActiveRoutes)	long	vRtrRIPActiveRoutes indicates the current number of active rip routes for this instance of the route table.

Table 847 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ripRoutes [Rip Routes] (vRtrRIPRoutes)	long	vRtrRIPRoutes indicates the current number of rip routes for this instance of the route table.
routerInterfacesActive [Router Interfaces Active] (vRtrStatActiveIfs)	long	vRtrStatActiveIfs indicates the current number of router interfaces with vRtrIfAdminState equal 'inService' on this virtual router.
routerInterfacesConfigured [Router Interfaces Configured] (vRtrStatConfiguredIfs)	long	vRtrStatConfiguredIfs indicates the current number of router interfaces configured on this virtual router.
routesInVrf [Routes In Vrf] (vRtrStatCurrNumRoutes)	long	vRtrStatCurrNumRoutes indicates the current number of routes in the VRF for this virtual router.
sdpActiveTunnels [Sdp Active Tunnels] (vRtrStatActiveSdpTunnels)	long	vRtrStatActiveSdpTunnels indicates the current number of rows in the vRtrTunnelTable where vRtrTunnelType has a value of 'sdp'.
sdpTunnels [Sdp Tunnels] (vRtrStatTotalSdpTunnels)	long	vRtrStatTotalSdpTunnels indicates the current number of both active and inactive SDP tunnels.
staticActiveRoutes [Static Active Routes] (vRtrStaticActiveRoutes)	long	vRtrStaticActiveRoutes indicates the current number of active static routes for this instance of the route table.
staticRoutes [Static Routes] (vRtrStaticRoutes)	long	vRtrStaticRoutes indicates the current number of static routes for this instance of the route table.
totalARPEntries [Total ARPEntries] (vRtrStatTotalARPEntries)	long	vRtrStatTotalARPEntries indicates the total number of active and inactive ARP entries for the specified virtual router in the system.

Table 847 rtr statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
totalBgpTunnels [Total Bgp Tunnels] (vRtrStatTotalBgpTunnels)	long	vRtrStatTotalBgpTunnels indicates the current number of both active and inactive BGP tunnels.

Table 848 sas statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SrvConnsStats</p> <p>MIB entry name: tmnxTwampSrvConnStatsEntry</p> <p>Entry description: tmnxTwampSrvConnStatsEntry contains the statistics for the TWAMP control connection specified by the index values. A row is created by the system when a TWAMP control connection is established.</p> <p>Table description (for tmnxTwampSrvConnStatsTable): tmnxTwampSrvConnStatsTable contains the statistics for each active control connection managed by the TWAMP server.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: sas.PrefixSrv</p>		
clientAddr [Client Addr] (tmnxTwampSrvConnClientAddr)	String	The value of tmnxTwampSrvConnClientAddr specifies the TWAMP client's address. This is the fifth index for tmnxTwampSrvConnStatsTable.
clientAddrType [Client Addr Type] (tmnxTwampSrvConnClientAddrType)	int	The value of tmnxTwampSrvConnClientAddrType specifies the type of tmnxTwampSrvConnClientAddr. This is the fourth index for tmnxTwampSrvConnStatsTable.
connIdleTime [Conn Idle Time] (tmnxTwampSrvConnIdleTime)	long	The value of tmnxTwampSrvConnIdleTime specifies the elapsed time, in seconds, since a TWAMP message was received on this control connection. When this value exceeds tmnxTwampSrvInactTimeout, the connection will be torn down.
connSessionCount [Conn Session Count] (tmnxTwampSrvConnSessionCount)	long	The value of tmnxTwampSrvConnSessionCount indicates, for the connection specified by the index values, the number of currently in-progress TWAMP test sessions.
connState [Conn State] (tmnxTwampSrvConnState)	int	The value of tmnxTwampSrvConnState indicates the operational state of a control connection managed by the TWAMP server. Code points: settingUp(1) - the connection is being established ready(2) - the connection is ready to accept test sessions running(3) - the connection is running a test.

Table 848 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
connTestPacketsRx [Conn Test Packets Rx] (tmnxTwampSrvConnTestPacketsRx)	long	The value of tmnxTwampSrvConnTestPacketsRx indicates, for the connection specified by the index values, the number of TWAMP test packets received by the TWAMP server.
connTestPacketsTx [Conn Test Packets Tx] (tmnxTwampSrvConnTestPacketsTx)	long	The value of tmnxTwampSrvConnTestPacketsTx indicates, for the connection specified by the index values, the number of TWAMP test packets sent by the TWAMP server.
connTestSessComplete [Conn Test Sess Complete] (tmnxTwampSrvConnTestSessComplete)	long	The value of tmnxTwampSrvConnTestSessComplete indicates, for the connection specified by the index values, the number of test sessions completed by the TWAMP server.
connTestSessRejected [Conn Test Sess Rejected] (tmnxTwampSrvConnTestSessRejected)	long	The value of tmnxTwampSrvConnTestSessRejected indicates, for the connection specified by the index values, the number of test sessions rejected by the TWAMP server.
prefixAddr [Prefix Addr] (tmnxTwampSrvPrefixAddr)	String	The value of tmnxTwampSrvPrefixAddr specifies, in conjunction with tmnxTwampSrvPrefixAddrType and tmnxTwampSrvPrefixLen, a prefix to be matched against a TWAMP client address. This is the second index for tmnxTwampSrvPrefixTable.
prefixAddrType [Prefix Addr Type] (tmnxTwampSrvPrefixAddrType)	int	The value of tmnxTwampSrvPrefixAddrType specifies the type of tmnxTwampSrvPrefixAddr. This is the first index for tmnxTwampSrvPrefixTable.
prefixLen [Prefix Len] (tmnxTwampSrvPrefixLen)	int	The value of tmnxTwampSrvPrefixLen specifies the number of bits to match when comparing a TWAMP client address in an incoming message to tmnxTwampSrvPrefixAddr. This is the third index for tmnxTwampSrvPrefixTable. Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.

Table 848 sas statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
seqNum [Seq Num] (tmnxTwampSrvConnSeqNum)	int	The value of tmnxTwampSrvConnSeqNum specifies this control connection's sequence number. This is the sixth index for tmnxTwampSrvConnStatsTable - it allows n>1 rows (i.e. n>1 connections) for one client.

Table 849 service statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>L3AccessInterfaceURPFStats</p> <p>MIB entry name: vRtrIfStatsEntry</p> <p>Entry description: Each row entry represents the statistics per virtual router interface. Entries are created and deleted when entries in the vRtrIfEntry are created and deleted.</p> <p>Table description (for vRtrIfStatsTable): The vRtrIfStatsTable table contains statistics per virtual router interface.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: service.L3AccessInterface</p>		
uRPFCheckFailPkts [URPFCheck Fail Pkts] (vRtrIfuRPFCheckFailPkts)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailPkts indicates the number of packets that fail uRPF check on this interface.
uRPFCheckFailPktsHigh32 [URPFCheck Fail Pkts High 32] (vRtrIfuRPFCheckFailPktsHigh32)	long	The value of vRtrIfuRPFCheckFailPktsHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailPkts.
uRPFCheckFailPktsLow32 [URPFCheck Fail Pkts Low 32] (vRtrIfuRPFCheckFailPktsLow32)	long	The value of vRtrIfuRPFCheckFailPktsLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailPkts.
vRtrIfuRPFCheckFailBytes [VRtr Ifu RPFCheck Fail Bytes] (vRtrIfuRPFCheckFailBytes)	java. math. BigInteger	The value of vRtrIfuRPFCheckFailBytes indicates the number of bytes in the packets that fail uRPF check.
vRtrIfuRPFCheckFailBytesHigh32 [VRtr Ifu RPFCheck Fail Bytes High 32] (vRtrIfuRPFCheckFailBytesHigh32)	long	The value of vRtrIfuRPFCheckFailBytesHigh32 indicates the high 32 bits of the value of vRtrIfuRPFCheckFailBytes.
vRtrIfuRPFCheckFailBytesLow32 [VRtr Ifu RPFCheck Fail Bytes Low 32] (vRtrIfuRPFCheckFailBytesLow32)	long	The value of vRtrIfuRPFCheckFailBytesLow32 indicates the lower 32 bits of the value of vRtrIfuRPFCheckFailBytes.

authenticationPacketsDiscarded [Authentication Packets Discarded] (sapBaseStatsAuthenticationPktsDiscarded)	long	The number of DHCP packets discarded as result of authentication.
authenticationPacketsSuccessful [Authentication Packets Successful] (sapBaseStatsAuthenticationPktsSuccess)	long	The number of DHCP packets successfully authenticated.
customerId [Customer Id] (sapBaseStatsCustId)	long	The Customer ID for the associated service.
egressQChipDroppedInProfOctets [Egress QChip Dropped In Prof Octets] (sapBaseStatsEgressQchipDroppedInProfOctets)	java. math. BigInteger	The number of in-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
egressQChipDroppedInProfPackets [Egress QChip Dropped In Prof Packets] (sapBaseStatsEgressQchipDroppedInProfPackets)	java. math. BigInteger	The number of in-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfOctets [Egress QChip Dropped Out Prof Octets] (sapBaseStatsEgressQchipDroppedOutProfOctets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipDroppedOutProfPackets [Egress QChip Dropped Out Prof Packets] (sapBaseStatsEgressQchipDroppedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
egressQChipForwardedInProfOctets [Egress QChip Forwarded In Prof Octets] (sapBaseStatsEgressQchipForwardedInProfOctets)	java. math. BigInteger	The number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedInProfPackets [Egress QChip Forwarded In Prof Packets] (sapBaseStatsEgressQchipForwardedInProfPackets)	java. math. BigInteger	The number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfOctets [Egress QChip Forwarded Out Prof Octets] (sapBaseStatsEgressQchipForwardedOutProfOctets)	java. math. BigInteger	The number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
egressQChipForwardedOutProfPackets [Egress QChip Forwarded Out Prof Packets] (sapBaseStatsEgressQchipForwardedOutProfPackets)	java. math. BigInteger	The number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipDroppedOctets [Ingress PChip Dropped Octets] (sapBaseStatsIngressPchipDroppedOctets)	java. math. BigInteger	The number of octets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipDroppedPackets [Ingress PChip Dropped Packets] (sapBaseStatsIngressPchipDroppedPackets)	java. math. BigInteger	The number of packets dropped by the ingress Pchip due to: SAP state, ingress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
ingressPChipOfferedHiPrioOctets [Ingress PChip Offered Hi Prio Octets] (sapBaseStatsIngressPchipOfferedHiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedHiPrioPackets [Ingress PChip Offered Hi Prio Packets] (sapBaseStatsIngressPchipOfferedHiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioOctets [Ingress PChip Offered Lo Prio Octets] (sapBaseStatsIngressPchipOfferedLoPrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedLoPrioPackets [Ingress PChip Offered Lo Prio Packets] (sapBaseStatsIngressPchipOfferedLoPrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressPChipOfferedUncoloredOctets [Ingress PChip Offered Uncolored Octets] (sapBaseStatsIngressPchipOfferedUncoloredOctets)	java. math. BigInteger	The number of uncolored octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
ingressPChipOfferedUncoloredPackets [Ingress PChip Offered Uncolored Packets] (sapBaseStatsIngressPchipOf- feredUncoloredPackets)	java. math. BigInte- ger	The number of uncolored packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
ingressQChipDroppedHiPrioOctets [Ingress QChip Dropped Hi Prio Octets] (sapBaseStatsIngressQchip- DroppedHiPrioOctets)	java. math. BigInte- ger	The number of high priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedHiPrioPackets [Ingress QChip Dropped Hi Prio Packets] (sapBaseStatsIngressQchip- DroppedHiPrioPackets)	java. math. BigInte- ger	The number of high priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioOctets [Ingress QChip Dropped Lo Prio Octets] (sapBaseStatsIngressQchip- DroppedLoPrioOctets)	java. math. BigInte- ger	The number of low priority octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipDroppedLoPrioPackets [Ingress QChip Dropped Lo Prio Packets] (sapBaseStatsIngressQchip- DroppedLoPrioPackets)	java. math. BigInte- ger	The number of low priority packets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
ingressQChipForwardedInProfOctets [Ingress QChip Forwarded In Prof Octets] (sapBaseStatsIngressQchipFor- wardedInProfOctets)	java. math. BigInte- ger	The number of in-profile octets (rate below CIR) forwarded by the ingress Qchip.
ingressQChipForwardedInProfPackets [Ingress QChip Forwarded In Prof Packets] (sapBaseStatsIngressQchipFor- wardedInProfPackets)	java. math. BigInte- ger	The number of in-profile packets (rate below CIR) forwarded by the ingress Qchip.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

ingressQChipForwardedOutProfPackets [Ingress QChip Forwarded Out Prof Packets] (sapBaseStatsIngressQchipFor- wardedOutProfPackets)	java. math. BigInte- ger	The number of out-of-profile packets (rate above CIR) forwarded by the ingress Qchip.
<p>SapEgrEGBaseStats MIB entry name: sapEgrEGBaseStEntry Entry description: Egress statistics about a specific Encap Group of a SAP. Table description (for sapEgrEGBaseStTable): The sapEgrEGBaseStTable contains egress Encap Group basic SAP statistics at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember. In the descriptions below 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip. Supports realtime plotting Does not support scheduled collection Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGBaseStCustId)	long	The value of sapEgrEGBaseStCustId indicates the Customer ID for the associated service.
dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGBaseStQcDpdInPfOcts)	java. math. BigInte- ger	The value of sapEgrEGBaseStQcDpdInPfOcts indicates the number of in-profile octets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGBaseStQcDpdInPfOctsH)	long	The value of sapEgrEGBaseStQcDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGBaseStQcDpdInPfOctsL)	long	The value of sapEgrEGBaseStQcDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGBaseStQcDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdInPfPkts indicates the number of in-profile packets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGBaseStQcDpdInPfPktsH)	long	The value of sapEgrEGBaseStQcDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGBaseStQcDpdInPfPktsL)	long	The value of sapEgrEGBaseStQcDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGBaseStQcDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGBaseStQcDpdOutPfOctsH)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGBaseStQcDpdOutPfOctsL)	long	The value of sapEgrEGBaseStQcDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfOcts.
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGBaseStQcDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGBaseStQcDpdOutPfPktsH)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGBaseStQcDpdOutPfPktsL)	long	The value of sapEgrEGBaseStQcDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcDpdOutPfPkts.
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGBaseStQcFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGBaseStQcFwdInPfOctsH)	long	The value of sapEgrEGBaseStQcFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGBaseStQcFwdInPfOctsL)	long	The value of sapEgrEGBaseStQcFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGBaseStQcFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGBaseStQcFwdInPfPktsH)	long	The value of sapEgrEGBaseStQcFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGBaseStQcFwdInPfPktsL)	long	The value of sapEgrEGBaseStQcFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdInPfPkts.

Table 849 service statistics (continued)

fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGBaseStQcFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGBaseStQcFwdOutPfOctsH)	long	The value of sapEgrEGBaseStQcFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGBaseStQcFwdOutPfOctsL)	long	The value of sapEgrEGBaseStQcFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdOutPfOcts.
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGBaseStQcFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGBaseStQcFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGBaseStQcFwdOutPfPktsH)	long	The value of sapEgrEGBaseStQcFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGBaseStQcFwdOutPfPkts.
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGBaseStQcFwdOutPfPktsL)	long	The value of sapEgrEGBaseStQcFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGBaseStQcFwdOutPfPkts.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>SapEgrEGMbrBaseStats</p> <p>MIB entry name: sapEgrEGMbrBaseStEntry</p> <p>Entry description: Egress statistics about a specific Encap Group member of a SAP.</p> <p>Table description (for sapEgrEGMbrBaseStTable): The sapEgrEGMbrBaseStTable that contains basic Encap Group statistics per member. This statistics table is valid for Encap Groups created by enabling sapEgrEncapGroupQosPerMember. In the descriptions below 'Qchip' refers to the Alcatel-Lucent SROS series QoS Queueing Engine chip.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGMbrBaseStCustId)	long	The value of sapEgrEGMbrBaseStCustId indicates the Customer ID for the associated service.
dpdInPfOcts [Dpd In Pf Octs] (sapEgrEGMbrBaseStQcDpdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcDpdInPfOcts indicates the number of in-profile octets dropped by the egress Qchip due to: SAP state, egress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.
dpdInPfOctsH [Dpd In Pf Octs H] (sapEgrEGMbrBaseStQcDpdInPfOctsH)	long	The value of sapEgrEGMbrBaseStQcDpdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcDpdInPfOcts.
dpdInPfOctsL [Dpd In Pf Octs L] (sapEgrEGMbrBaseStQcDpdInPfOctsL)	long	The value of sapEgrEGMbrBaseStQcDpdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcDpdInPfOcts.
dpdInPfPkts [Dpd In Pf Pkts] (sapEgrEGMbrBaseStQcDpdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcDpdInPfPkts indicates the number of in-profile packets dropped by the egress Qchip due to: SAP state, gress MAC, IP or IPv6 filter, same segment discard, bad checksum, etc.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
dpdInPfPktsH [Dpd In Pf Pkts H] (sapEgrEGMbrBaseStQcDpdInPfPktsH)	long	The value of sapEgrEGMbrBaseStQcDpdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcDpdInPfPkts.
dpdInPfPktsL [Dpd In Pf Pkts L] (sapEgrEGMbrBaseStQcDpdInPfPktsL)	long	The value of sapEgrEGMbrBaseStQcDpdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcDpdInPfPkts.
dpdOutPfOcts [Dpd Out Pf Octs] (sapEgrEGMbrBaseStQcDpdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcDpdOutPfOcts indicates the number of out-of-profile octets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfOctsH [Dpd Out Pf Octs H] (sapEgrEGMbrBaseStQcDpdOutPfOctsH)	long	The value of sapEgrEGMbrBaseStQcDpdOutPfOctsL indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcDpdOutPfOcts.
dpdOutPfOctsL [Dpd Out Pf Octs L] (sapEgrEGMbrBaseStQcDpdOutPfOctsL)	long	The value of sapEgrEGMbrBaseStQcDpdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcDpdOutPfOcts.
dpdOutPfPkts [Dpd Out Pf Pkts] (sapEgrEGMbrBaseStQcDpdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcDpdOutPfPkts indicates the number of out-of-profile packets discarded by the egress Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
dpdOutPfPktsH [Dpd Out Pf Pkts H] (sapEgrEGMbrBaseStQcDpdOutPfPktsH)	long	The value of sapEgrEGMbrBaseStQcDpdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcDpdOutPfPkts.
dpdOutPfPktsL [Dpd Out Pf Pkts L] (sapEgrEGMbrBaseStQcDpdOutPfPktsL)	long	The value of sapEgrEGMbrBaseStQcDpdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcDpdOutPfPkts.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdInPfOcts [Fwd In Pf Octs] (sapEgrEGMbrBaseStQcFwdInPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdInPfOcts indicates the number of in-profile octets (rate below CIR) forwarded by the egress Qchip.
fwdInPfOctsH [Fwd In Pf Octs H] (sapEgrEGMbrBaseStQcFwdInPfOctsH)	long	The value of sapEgrEGMbrBaseStQcFwdInPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfOcts.
fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGMbrBaseStQcFwdInPfOctsL)	long	The value of sapEgrEGMbrBaseStQcFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGMbrBaseStQcFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress Qchip.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGMbrBaseStQcFwdInPfPktsH)	long	The value of sapEgrEGMbrBaseStQcFwdInPfPktsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGMbrBaseStQcFwdInPfPktsL)	long	The value of sapEgrEGMbrBaseStQcFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGMbrBaseStQcFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGMbrBaseStQcFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGMbrBaseStQcFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress Qchip.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGMbrBaseStQcFwdOutPfOctsH)	long	The value of sapEgrEGMbrBaseStQcFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGMbrBaseStQcFwdOutPfOcts.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description

fwdInPfOctsL [Fwd In Pf Octs L] (sapEgrEGQueueStFwdInPfOctsL)	long	The value of sapEgrEGQueueStFwdInPfOctsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdInPfOcts.
fwdInPfPkts [Fwd In Pf Pkts] (sapEgrEGQueueStFwdInPfPkts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdInPfPkts indicates the number of in-profile packets (rate below CIR) forwarded by the egress queue.
fwdInPfPktsH [Fwd In Pf Pkts H] (sapEgrEGQueueStFwdInPfPktsH)	long	The value of sapEgrEGQueueStFwdInPfPktsL indicates the higher 32 bits of the value of sapEgrEGQueueStFwdInPfPkts.
fwdInPfPktsL [Fwd In Pf Pkts L] (sapEgrEGQueueStFwdInPfPktsL)	long	The value of sapEgrEGQueueStFwdInPfPktsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdInPfPkts.
fwdOutPfOcts [Fwd Out Pf Octs] (sapEgrEGQueueStFwdOutPfOcts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdOutPfOcts indicates the number of out-of-profile octets (rate above CIR) forwarded by the egress queue.
fwdOutPfOctsH [Fwd Out Pf Octs H] (sapEgrEGQueueStFwdOutPfOctsH)	long	The value of sapEgrEGQueueStFwdOutPfOctsH indicates the higher 32 bits of the value of sapEgrEGQueueStFwdOutPfOcts.
fwdOutPfOctsL [Fwd Out Pf Octs L] (sapEgrEGQueueStFwdOutPfOctsL)	long	The value of sapEgrEGQueueStFwdOutPfOctsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdOutPfOcts.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOutPfPkts [Fwd Out Pf Pkts] (sapEgrEGQueueStFwdOutPfPkts)	java. math. BigInteger	The value of sapEgrEGQueueStFwdOutPfPkts indicates the number of out-of-profile packets (rate above CIR) forwarded by the egress queue.
fwdOutPfPktsH [Fwd Out Pf Pkts H] (sapEgrEGQueueStFwdOutPfPktsH)	long	The value of sapEgrEGQueueStFwdOutPfPktsH indicates the higher 32 bits of the value of sapEgrEGQueueStFwdOutPfPkts.
fwdOutPfPktsL [Fwd Out Pf Pkts L] (sapEgrEGQueueStFwdOutPfPktsL)	long	The value of sapEgrEGQueueStFwdOutPfPktsL indicates the lower 32 bits of the value of sapEgrEGQueueStFwdOutPfPkts.
queueId [Queue Id] (sapEgrEGQueueId)	long	The value of sapEgrEGQueueId indicates the index of the egress QoS queue of this SAP.
<p>SapEgrEGSchedStats</p> <p>MIB entry name: sapEgrEGSchedStEntry</p> <p>Entry description: Egress statistics about a specific QoS scheduler instantiated per encapsulation group of SAP.</p> <p>Table description (for sapEgrEGSchedStTable): The sapEgrEGSchedStTable contains egress encapsulation group QoS scheduler SAP at the Group level. This statistics table is valid for Encap Groups created without enabling sapEgrEncapGroupQosPerMember.</p> <p>Supports realtime plotting</p> <p>Does not support scheduled collection</p> <p>Monitored class: service.EncapGroup</p>		
custId [Cust Id] (sapEgrEGSchedCustId)	long	The value of sapEgrEGSchedCustId indicates the Customer ID for the associated service.
fwdOcts [Fwd Octets] (sapEgrEGSchedStFwdOcts)	java. math. BigInteger	The value of sapEgrEGSchedStFwdOcts indicates the number of octets forwarded by the egress QoS scheduler of this SAP.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
fwdOctsH [Fwd Octets H] (sapEgrEGSchedStFwdOctsH)	long	The value of sapEgrEGSchedStFwdOctsH indicates the higher 32 bits of the value of sapEgrEGSchedStFwdOcts.
fwdOctsL [Fwd Octets L] (sapEgrEGSchedStFwdOctsL)	long	The value of sapEgrEGSchedStFwdOctsL indicates the lower 32 bits of the value of sapEgrEGSchedStFwdOcts.
fwdPkts [Fwd Pkts] (sapEgrEGSchedStFwdPkts)	java. math. BigInteger	The value of sapEgrEGSchedStFwdPkts indicates the number of packets forwarded by the egress QoS scheduler of this SAP.
fwdPktsH [Fwd Pkts H] (sapEgrEGSchedStFwdPktsH)	long	The value of sapEgrEGSchedStFwdPktsH indicates the higher 32 bits of the value of sapEgrEGSchedStFwdPkts.
fwdPktsL [Fwd Pkts L] (sapEgrEGSchedStFwdPktsL)	long	The value of sapEgrEGSchedStFwdPktsL indicates the lower 32 bits of the value of sapEgrEGSchedStFwdPkts.
<p>SapEgrQosPlyQueueStats</p> <p>MIB entry name: sapEgrQosPlyQueueStatsEntry</p> <p>Entry description: Egress statistics about a specific SAP's QoS queue for a given QoS policy.</p> <p>Table description (for sapEgrQosPlyQueueStatsTable): A table that contains egress QoS queue SAP statistics per Egress QoS Policy the queue was used by. Conceptual rows in this table are automatically created by the system. offeredHiPrioOctets [Offered Hi Prio Octets] (sapIngQosQueueStatsOffered- HiPrioOctets)	java. math. BigInteger	The number of high priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
offeredHiPrioPackets [Offered Hi Prio Packets] (sapIngQosQueueStatsOffered- HiPrioPackets)	java. math. BigInteger	The number of high priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
offeredLoPrioOctets [Offered Lo Prio Octets] (sapIngQosQueueStatsOfferedLo- PrioOctets)	java. math. BigInteger	The number of low priority octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
offeredLoPrioPackets [Offered Lo Prio Packets] (sapIngQosQueueStatsOfferedLo- PrioPackets)	java. math. BigInteger	The number of low priority packets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
queueId [Queue Id] (sapIngQosQueueId)	long	The index of the ingress QoS queue of this SAP.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
uncoloredOctetsOffered [Uncolored Octets Offered] (sapIngQosQueueStatsUncoloredOctetsOffered)	java. math. BigInteger	The number of uncolored octets offered to the ingress Qchip.
uncoloredPacketsOffered [Uncolored Packets Offered] (sapIngQosQueueStatsUncoloredPacketsOffered)	java. math. BigInteger	The number of uncolored packets offered to the ingress Qchip.
SapIngQosSchedStats MIB entry name: sapIngQosSchedStatsEntry Entry description: Ingress statistics about a specific SAP's QoS queue. Table description (for sapIngQosSchedStatsTable): A table that contains ingress QoS queue SAP statistics. Supports realtime plotting Does not support scheduled collection Monitored classes: <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
customerId [Customer Id] (sapIngQosSchedCustId)	long	The Customer ID for the associated service.
forwardedOctets [Forwarded Octets] (sapIngQosSchedStatsForwardedOctets)	java. math. BigInteger	The number of forwarded octets, as determined by the SAP ingress scheduler policy, offered by the Pchip to the Qchip.
forwardedPackets [Forwarded Packets] (sapIngQosSchedStatsForwardedPackets)	java. math. BigInteger	The number of forwarded packets, as determined by the SAP ingress scheduler policy, offered by the Pchip to the Qchip.

Table 849 service statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
qosSchedName [Qos Sched Name] (sapIngQosSchedName)	String	The index of the ingress QoS scheduler of this SAP.
<p>SapIngSchedPlcyPortStats</p> <p>MIB entry name: sapIngSchedPlcyPortStatsEntry</p> <p>Entry description: Statistics about a specific SAP's ingress Qos Scheduler. Entries are created when a scheduler policy of a SAP is replaced with another one due to Time-Of-Day policies.</p> <p>Table description (for sapIngSchedPlcyPortStatsTable): The sapIngSchedPlcyPortStatsTable contains ingress QoS scheduler statistics for the SAP's, organized per scheduler policy and per port. This table is used when the SAP is a CCAG or LAG in 'link' mode, or an APS. Entries are created when a scheduler policy of a SAP is replaced with another one due to Time-Of-Day policies. Conceptual rows in this table are automatically created by the system. No row will be created for a SAP if the value of the object sapTodSuite is equal to the empty string.</p> <p>Does not support realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored classes:</p> <ul style="list-style-type: none"> • service.IPsecInterface • service.L2AccessInterface • service.L3AccessInterface 		
forwardedOctets [Forwarded Octets] (sapIngSchedPlcyPortStatsFwdOct)	java. math. BigInteger	The value of sapIngSchedPlcyPortStatsFwdOct indicates the number of forwarded octets, as determined by the SAP ingress scheduler policy, offered by the Pchip to the Qchip.
forwardedPackets [Forwarded Packets] (sapIngSchedPlcyPortStatsFwdPkt)	java. math. BigInteger	The value of sapIngSchedPlcyPortStatsFwdPkt indicates the number of forwarded packets, as determined by the SAP ingress scheduler policy, offered by the Pchip to the Qchip.
portId [Port Id] (sapPortIdIngPortId)	long	The value of sapPortIdIngPortId is used as an index of the ingress QoS scheduler of this SAP. When the SAP is an aps/ccag/lag in 'link' mode, this object is the TmnxPortID of the member-port on which the scheduler is applied.

Table 850 sitesecc statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
droppedPackets [Dropped Packets] (tCpmMacFilterStatsDroppedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsDroppedPkts indicates the number of packets dropped due to the tCpmMacFilterEntry with the same index.
forwardedPackets [Forwarded Packets] (tCpmMacFilterStatsForwardedPkts)	java. math. BigInteger	The value of tCpmMacFilterStatsForwardedPkts indicates the number of packets forwarded due to the tCpmMacFilterEntry with the same index.
<p>MafEntryStats MIB entry name: tmnxIPMafMatchEntry Entry description: Each row entry contains information about a management access filter entry associated with a specific Management Access Filter (MAF). The filter criterion is applied in order according to the value of tmnxIPMafMatchIndex. The match algorithm is exited upon the first match found and then the action specified is executed. For this reason, entries must be sequenced from most to least explicit. An entry where tmnxIPMafMatchAction has a value of 'none' is not active. Rows can only be created for tmnxGenMafType's: - ipv4 (1), and. - ipv6 (2). For mac Maf filters a dedicated table is provided (tmnxMacMafMatchTable). Table description (for tmnxIPMafMatchTable): This table replaces the tmnxMafMatchTable. It allows to define both IPv4 and IPv6 MAF IP entries. The tmnxIPMafMatchTable contains ipvx filter match criteria associated with Management Access Filters (MAFs) configured on the system. Supports realtime plotting Supports scheduled collection Monitored class: sitesecc.MafEntry</p>		
matchCount [Match Count] (tmnxIPMafMatchCount)	java. math. BigInteger	The value of tmnxIPMafMatchCount indicates the number of times a management packet has matched this filter entry.
<p>PKICertMgrStats MIB entry name: tmnxCertMgrStatsGroup Supports realtime plotting Supports scheduled collection Monitored class: sitesecc.SiteSystemSecurityPublicKey</p>		

Table 850 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
certMgrAuthFailed [Cert Mgr Auth Failed] (tmnxCertMgrAuthFailed)	long	The tmnxCertMgrAuthFailed indicates the number of authentication failures using the certificates.
certMgrAuthPassed [Cert Mgr Auth Passed] (tmnxCertMgrAuthPassed)	long	The tmnxCertMgrAuthPassed indicates the number of authentication checks passed using the certificates.
certMgrTotalAuth [Cert Mgr Total Auth] (tmnxCertMgrTotalAuth)	long	The tmnxCertMgrTotalAuth indicates the number of authentication attempts using the certificates.
RadiusNotifyStats MIB entry name: tmnxSubRadNotifyStatsObjects Supports realtime plotting Supports scheduled collection Monitored class: netw.NetworkElement		
accepted [Accepted] (tmnxSubRadNotifyStatsAccepted)	long	The value of tmnxSubRadNotifyStatsAccepted indicates the number of notify Change-of-Authorization requests accepted.
badAuthentication [Bad Authentication] (tmnxSubRadNotifyStatsBadAuth)	long	The value of tmnxSubRadNotifyStatsBadAuth indicates the number of notify Change-of-Authorization requests rejected because of authentication failure.
invalidMsg [Invalid Msg] (tmnxSubRadNotifyStatsInvalidMsg)	long	The value of tmnxSubRadNotifyStatsInvalidMsg indicates the number of notify Change-of-Authorization requests rejected because of decode errors.
noNotification [No Notification] (tmnxSubRadNotifyStatsNoNotify)	long	The value of tmnxSubRadNotifyStatsNoNotify indicates the number of notify Change-of-Authorization requests rejected due to lack of notification process.

Table 850 sitesec statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
noResource [No Resource] (tmnxSubRadNotifyStatsNoResource)	long	The value of tmnxSubRadNotifyStatsNoResource indicates the number of notify Change-of-Authorization requests rejected due to lack of resources.
received [Received] (tmnxSubRadNotifyStatsReceived)	long	The value of tmnxSubRadNotifyStatsReceived indicates the number of notify Change-of-Authorization requests received.
rejected [Rejected] (tmnxSubRadNotifyStatsRejected)	long	The value of tmnxSubRadNotifyStatsRejected indicates the number of notify Change-of-Authorization requests rejected.
unknownHost [Unknown Host] (tmnxSubRadNotifyStatsUnknownHost)	long	The value of tmnxSubRadNotifyStatsUnknownHost indicates the number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id.

Table 851 srrp statistics

NFM-P counter names: XML [displayed] (MIB)	Type	Description
<p>InstanceStats</p> <p>MIB entry name: tmnxSrrpStatsEntry</p> <p>Entry description: Each row entry represents the statistics for a particular SRRP instance tied to a service group interface. Entries are created/deleted in conjunction with entries in the tmnxSrrpOperTable</p> <p>Table description (for tmnxSrrpStatsTable): The tmnxSrrpStatsTable has an entry for each Subscriber Router Redundancy Protocol instance configured on this system.</p> <p>Supports realtime plotting</p> <p>Supports scheduled collection</p> <p>Monitored class: srrp.Instance</p>		
advertiseIntervalDiscards [Advertise Interval Discards] (tmnxSrrpStatsAdvIntDiscards)	long	The value for tmnxSrrpStatsAdvIntDiscards indicates the total number of SRRP advertisement packets discarded because the advertisement interval in the received packet was different than the one configured for the local virtual router.
advertiseIntervalErrors [Advertise Interval Errors] (tmnxSrrpStatsAdvIntErrors)	long	The value for tmnxSrrpStatsAdvIntErrors indicates the total number of SRRP advertisement packets received for which the advertisement interval is different than the one configured for the local virtual router.
advertiseRcvd [Advertise Rcvd] (tmnxSrrpStatsAdvRcvd)	long	The value for tmnxSrrpStatsAdvRcvd indicates the total number of SRRP advertisements received by this virtual router.
advertiseSent [Advertise Sent] (tmnxSrrpStatsAdvSent)	long	The value for tmnxSrrpStatsAdvSent indicates the total number of SRRP advertisements sent by this virtual router.
becomeBackupRouting [Become Backup Routing] (tmnxSrrpStatsBecomeBackupRouting)	long	The value for tmnxSrrpStatsBecomeBackupRouting indicates the total number of times that the virtual router's state has transitioned to backup routing state.

Table 851 srrp statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
becomeBackupShunt [Become Backup Shunt] (tmnxSrrpStatsBecomeBackupShunt)	long	The value for tmnxSrrpStatsBecomeBackupShunt indicates the total number of times that the virtual router's state has transitioned to backup shunt.
becomeMaster [Become Master] (tmnxSrrpStatsBecomeMaster)	long	The value for tmnxSrrpStatsBecomeMaster indicates the total number of times that the virtual router's state has transitioned to master.
becomeNonMaster [Become Non Master] (tmnxSrrpStatsBecomeNonMaster)	long	The value for tmnxSrrpStatsBecomeNonMaster indicates the total number times that the virtual router's state has transitioned from master to a non-master state.
masterChanges [Master Changes] (tmnxSrrpStatsMasterChanges)	long	The value for tmnxSrrpStatsMasterChanges indicates the total number of times the virtual router has seen the master virtual router change.
preemptEvents [Preempt Events] (tmnxSrrpStatsPreemptEvents)	long	The value for tmnxSrrpStatsPreemptEvents indicates the total number of times the virtual router has preempted another non-owner master with lower priority.
preemptedEvents [Preempted Events] (tmnxSrrpStatsPreemptedEvents)	long	The value for tmnxSrrpStatsPreemptedEvents indicates the total number of times the virtual router has been preempted by another non-owner master with higher priority.
priorityZeroPktsRcvd [Priority Zero Pkts Rcvd] (tmnxSrrpStatsPriZeroPktsSent)	long	The value for tmnxSrrpStatsPriZeroPktsSent indicates the total number of SRRP packets sent by the virtual router with a priority of '0'.
priorityZeroPktsSent [Priority Zero Pkts Sent] (tmnxSrrpStatsPriZeroPktsRcvd)	long	The value for tmnxSrrpStatsPriZeroPktsRcvd indicates the total number of SRRP packets received by the virtual router with a priority of '0'.

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgMaxNumSourcesDrops [Sdp Bnd IgmP Snpg Max Num Sources Drops] (sdpBndIgmPsnpgMaxNumSourcesDrops)	long	The value of the object sdpBndIgmPsnpgMaxNumSourcesDrops indicates the number of times an IGMP Source is dropped because of exceeding the configured maximum number of sources per group on this SDP Bind.
sdpBndIgmPsnpgMcacPolicyDrops [Sdp Bnd IgmP Snpg Mcac Policy Drops] (sdpBndIgmPsnpgMcacPolicyDrops)	long	The value of the object sdpBndIgmPsnpgMcacPolicyDrops indicates the number of times an IGMP Group is dropped because of applying a multicast CAC policy on this SDP Bind.
sdpBndIgmPsnpgRxBadEncodedPkts [Sdp Bnd IgmP Snpg Rx Bad Encoded Pkts] (sdpBndIgmPsnpgRxBadEncodedPkts)	long	The value of the object sdpBndIgmPsnpgRxBadEncodedPkts indicates the number of IGMP packets dropped on this SDP Bind because of a bad encoding.
sdpBndIgmPsnpgRxBadIgmPChkSmPkts [Sdp Bnd IgmP Snpg Rx Bad IgmP ChkSm Pkts] (sdpBndIgmPsnpgRxBadIgmPChkSmPkts)	long	The value of the object sdpBndIgmPsnpgRxBadIgmPChkSmPkts indicates the number of dropped IGMP packets on this SDP Bind because of a bad IGMP header checksum.
sdpBndIgmPsnpgRxBadIpChkSmPkts [Sdp Bnd IgmP Snpg Rx Bad Ip ChkSm Pkts] (sdpBndIgmPsnpgRxBadIpChkSmPkts)	long	The value of the object sdpBndIgmPsnpgRxBadIpChkSmPkts indicates the number of dropped IGMP packets on this SDP Bind because of a bad IPv4 header checksum.
sdpBndIgmPsnpgRxBadLenPkts [Sdp Bnd IgmP Snpg Rx Bad Len Pkts] (sdpBndIgmPsnpgRxBadLenPkts)	long	The value of the object sdpBndIgmPsnpgRxBadLenPkts indicates the number of IGMP packets dropped on this SDP Bind because of a bad length.
sdpBndIgmPsnpgRxNoRtrAlertPkts [Sdp Bnd IgmP Snpg Rx No Rtr Alert Pkts] (sdpBndIgmPsnpgRxNoRtrAlertPkts)	long	The value of the object sdpBndIgmPsnpgRxNoRtrAlertPkts indicates the number of IGMP packets dropped on this SDP Bind because the Router Alert Option in the IP packet is not set.

Table 852 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgRxWrongVersionPkts [Sdp Bnd IgmP Snpg Rx Wrong Version Pkts] (sdpBndIgmPsnpgRxWrongVersionPkts)	long	The value of the object sdpBndIgmPsnpgRxWrongVersionPkts indicates the total number of IGMP packets with a wrong version received on this SDP Bind.
sdpBndIgmPsnpgRxZeroSrcAdrPkts [Sdp Bnd IgmP Snpg Rx Zero Src Adr Pkts] (sdpBndIgmPsnpgRxZeroSrcAdrPkts)	long	The value of the object sdpBndIgmPsnpgRxZeroSrcAdrPkts indicates the number of IGMP packets dropped on this SDP Bind because they contain a zero source IPv4 address.
sdpBndIgmPsnpgSendQueryCfgDrops [Sdp Bnd IgmP Snpg Send Query Cfg Drops] (sdpBndIgmPsnpgSendQueryCfgDrops)	long	The value of the object sdpBndIgmPsnpgSendQueryCfgDrops indicates the number of times an IGMP Query is dropped because the object sdpBndIgmPsnpgCfgSendQueries for this SDP Bind is set to 'enabled(1)'. SdpBindingIgmPsnpgStats MIB entry name: sdpBndIgmPsnpgStatsEntry Entry description: sdpBndIgmPsnpgStatsEntry is an entry in the sdpBndIgmPsnpgStatsTable. Each entry contains IGMP snooping statistics for a SDP Bind in a TIs. Table description (for sdpBndIgmPsnpgStatsTable): sdpBndIgmPsnpgStatsTable contains statistics on IGMP snooping per SDP Bind. Supports realtime plotting Supports scheduled collection Monitored classes: • svt.MeshSdpBinding • svt.SpokeSdpBinding
sdpBndIgmPsnpgFwdGenQueries [Sdp Bnd IgmP Snpg Fwd Gen Queries] (sdpBndIgmPsnpgFwdGenQueries)	long	The value of the object sdpBndIgmPsnpgFwdGenQueries indicates the number of IGMP General Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdGrpSpecQueries [Sdp Bnd IgmP Snpg Fwd Grp Spec Queries] (sdpBndIgmPsnpgFwdGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdGrpSpecQueries indicates the number of IGMP Group-Specific Queries forwarded on this SDP Bind.

Table 852 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgFwdSrcSpecQueries [Sdp Bnd IgmP Snpg Fwd Src Spec Queries] (sdpBndIgmPsnpgFwdSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgFwdSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdUnknownType [Sdp Bnd IgmP Snpg Fwd Unknown Type] (sdpBndIgmPsnpgFwdUnknownType)	long	The value of the object sdpBndIgmPsnpgFwdUnknownType indicates the number of IGMP unknown type packets forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV1Reports [Sdp Bnd IgmP Snpg Fwd V1 Reports] (sdpBndIgmPsnpgFwdV1Reports)	long	The value of the object sdpBndIgmPsnpgFwdV1Reports indicates the number of IGMPv1 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Leaves [Sdp Bnd IgmP Snpg Fwd V2 Leaves] (sdpBndIgmPsnpgFwdV2Leaves)	long	The value of the object sdpBndIgmPsnpgFwdV2Leaves indicates the number of IGMPv2 Leaves forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV2Reports [Sdp Bnd IgmP Snpg Fwd V2 Reports] (sdpBndIgmPsnpgFwdV2Reports)	long	The value of the object sdpBndIgmPsnpgFwdV2Reports indicates the number of IGMPv2 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgFwdV3Reports [Sdp Bnd IgmP Snpg Fwd V3 Reports] (sdpBndIgmPsnpgFwdV3Reports)	long	The value of the object sdpBndIgmPsnpgFwdV3Reports indicates the number of IGMPv3 Reports forwarded on this SDP Bind.
sdpBndIgmPsnpgRxGenQueries [Sdp Bnd IgmP Snpg Rx Gen Queries] (sdpBndIgmPsnpgRxGenQueries)	long	The value of the object sdpBndIgmPsnpgRxGenQueries indicates the number of IGMP General Queries received on this SDP Bind.
sdpBndIgmPsnpgRxGrpSpecQueries [Sdp Bnd IgmP Snpg Rx Grp Spec Queries] (sdpBndIgmPsnpgRxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxGrpSpecQueries indicates the number of IGMP Group-Specific Queries received on this SDP Bind.

Table 852 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgRxSrcSpecQueries [Sdp Bnd IgmP Snpg Rx Src Spec Queries] (sdpBndIgmPsnpgRxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgRxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries received on this SDP Bind.
sdpBndIgmPsnpgRxUnknownType [Sdp Bnd IgmP Snpg Rx Unknown Type] (sdpBndIgmPsnpgRxUnknownType)	long	The value of the object sdpBndIgmPsnpgRxUnknownType indicates the number of IGMP unknown type packets received on this SDP Bind.
sdpBndIgmPsnpgRxV1Reports [Sdp Bnd IgmP Snpg Rx V1 Reports] (sdpBndIgmPsnpgRxV1Reports)	long	The value of the object sdpBndIgmPsnpgRxV1Reports indicates the number of IGMPv1 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV2Leaves [Sdp Bnd IgmP Snpg Rx V2 Leaves] (sdpBndIgmPsnpgRxV2Leaves)	long	The value of the object sdpBndIgmPsnpgRxV2Leaves indicates the number of IGMPv2 Leaves received on this SDP Bind.
sdpBndIgmPsnpgRxV2Reports [Sdp Bnd IgmP Snpg Rx V2 Reports] (sdpBndIgmPsnpgRxV2Reports)	long	The value of the object sdpBndIgmPsnpgRxV2Reports indicates the number of IGMPv2 Reports received on this SDP Bind.
sdpBndIgmPsnpgRxV3Reports [Sdp Bnd IgmP Snpg Rx V3 Reports] (sdpBndIgmPsnpgRxV3Reports)	long	The value of the object sdpBndIgmPsnpgRxV3Reports indicates the number of IGMPv3 Reports received on this SDP Bind.
sdpBndIgmPsnpgTxGenQueries [Sdp Bnd IgmP Snpg Tx Gen Queries] (sdpBndIgmPsnpgTxGenQueries)	long	The value of the object sdpBndIgmPsnpgTxGenQueries indicates the number of IGMP General Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxGrpSpecQueries [Sdp Bnd IgmP Snpg Tx Grp Spec Queries] (sdpBndIgmPsnpgTxGrpSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxGrpSpecQueries indicates the number of IGMP Group-Specific Queries transmitted on this SDP Bind.
sdpBndIgmPsnpgTxSrcSpecQueries [Sdp Bnd IgmP Snpg Tx Src Spec Queries] (sdpBndIgmPsnpgTxSrcSpecQueries)	long	The value of the object sdpBndIgmPsnpgTxSrcSpecQueries indicates the number of IGMP Group-And-Source-Specific Queries transmitted on this SDP Bind.

Table 852 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
sdpBndIgmPsnpgTxV1Reports [Sdp Bnd IgmP Snpg Tx V1 Reports] (sdpBndIgmPsnpgTxV1Reports)	long	The value of the object sdpBndIgmPsnpgTxV1Reports indicates the number of IGMPv1 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Leaves [Sdp Bnd IgmP Snpg Tx V2 Leaves] (sdpBndIgmPsnpgTxV2Leaves)	long	The value of the object sdpBndIgmPsnpgTxV2Leaves indicates the number of IGMPv2 Leaves transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV2Reports [Sdp Bnd IgmP Snpg Tx V2 Reports] (sdpBndIgmPsnpgTxV2Reports)	long	The value of the object sdpBndIgmPsnpgTxV2Reports indicates the number of IGMPv2 Reports transmitted on this SDP Bind.
sdpBndIgmPsnpgTxV3Reports [Sdp Bnd IgmP Snpg Tx V3 Reports] (sdpBndIgmPsnpgTxV3Reports)	long	The value of the object sdpBndIgmPsnpgTxV3Reports indicates the number of IGMPv3 Reports transmitted on this SDP Bind.
TunnelKeepAliveStats MIB entry name: sdpInfoEntry Entry description: Information about a specific SDP. Table description (for sdpInfoTable): A table that contains SDP information. Supports realtime plotting Supports scheduled collection Monitored class: svt.Tunnel		
lateHelloResponses [Late Hello Responses] (sdpKeepAliveNumLateHelloR- esponseMessages)	long	The number of SDP Echo Response messages received after the corresponding Request timeout timer expired.
receivedHelloMessages [Received Hello Messages] (sdpKeepAliveNumHelloRespon- seMessages)	long	The number of SDP Echo Response messages received since the keep-alive was administratively enabled or the counter was cleared.

Table 852 svt statistics (continued)

NFM-P counter names: XML [displayed] (MIB)	Type	Description
transmittedHelloMessages [Transmitted Hello Messages] (sdpKeepAliveNumHelloRequestMessages)	long	The number of SDP Echo Request messages transmitted since the keep-alive was administratively enabled or the counter was cleared.

Part VI: Non-mediation Statistics

Overview

Purpose

This volume contains device-specific lists of the non-mediator statistics that the NFM-P supports.

The tables in this volume are provided as a reference.

Contents

Chapter 50, 1830 PSS non-mediation statistics counters	9289
--	------

50 1830 PSS non-mediation statistics counters

50.1 Non-mediation statistics counters

50.1.1 Counters

Part VII: Accounting statistics

Overview

Purpose

This volume contains device-specific lists of the accounting statistics that the NFM-P supports.

The tables in this volume are provided as a reference.

Contents

Chapter 51, 7210 SAS Sx accounting statistics counters	9337
Chapter 52, 7210 SAS-D accounting statistics counters	9349

Chapter 69, VSC accounting statistics counters	9715

51 7210 SAS Sx accounting statistics counters

51.1 Statistics

51.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

Table 864 7210 SAS Sx accounting statistics

NFM-P statistics objects	NFM-P counter (type, NE counter equivalent)
<p>Policy: Port Access Egress Octet (accessEgressOctet) Supported policy: Access Egress Octets</p>	
<p>Object: Access Egress Octets (AccessEgressOctets)</p> <p>Description: Accounting statistics octet usage data for the physical queues being used for the ports to forward the access egress traffic.</p> <p>Related performance stat (real-time plotting only): Port Access Egress Queue Accounting Stats (Object name: equipment.PortAccessEgressQueueStats)</p> <p>Monitored class: equipment.Port</p>	<ul style="list-style-type: none"> • Octets Dropped (LONG, od) • Octets Forwarded (LONG, of)

52 7210 SAS-D accounting statistics counters

52.1 Statistics

52.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

53 7210 SAS-E accounting statistics counters

53.1 Statistics

53.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

55 7210 SAS-M accounting statistics counters

55.1 Statistics

55.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

56 7210 SAS-Mxp accounting statistics counters

56.1 Statistics

56.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

57 7210 SAS-R accounting statistics counters

57.1 Statistics

57.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

58 7210 SAS-T accounting statistics counters

58.1 Statistics

58.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

60 7450 ESS accounting statistics counters

60.1 Statistics

60.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

Note: The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

61 7705 SAR accounting statistics counters

61.1 Statistics

61.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

Note: The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

62 7705 SAR-H accounting statistics counters

62.1 Statistics

62.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

64 7750 MG accounting statistics counters

64.1 Statistics

64.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

65 7750 SR accounting statistics counters

65.1 Statistics

65.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

Note: The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

66 7850 VSA-8 accounting statistics counters

66.1 Statistics

66.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

67 7850 VSG accounting statistics counters

67.1 Statistics

67.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

68 7950 XRS accounting statistics counters

68.1 Statistics

68.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.

69 VSC accounting statistics counters

69.1 Statistics

69.1.1 Statistics

Each NFM-P policy entry in a table contains the following:

- policy name
- supported objects
- description
- related performance statistics
- monitored object class
- NFM-P counter names, types, and equivalent device counter names

i **Note:** The tables list the NFM-P-supported statistics counters for the latest supported release of the device. Counters that are supported for a previous device release, but not for the current release, are not listed

Accounting data collection is controlled through File, Accounting and Log policies:

- LogPolicy: Defines the retention requirements for the statistics.
- LogRecord: Contains common properties for historical log.
- CurrentData (deprecated): CurrentData does not apply to accounting statistics.
