# dhcp6

Syntax dhcp [<filter-id>]

Context show>filter

**Description** This command displays DHCP6 filter information.

## download-failed

Syntax download-failed

Context show>filter

**Description** This command shows all filter entries for which the download has failed.

Output download-failed Output — The following table describes the filter download-failed output.

Label	Description	
Filter-type	Displays the filter type.	
Filter-ID	Displays the ID of the filter.	
Filter-Entry	Displays the entry number of the filter.	

#### **Sample Output**

A:ALA-48# show filter download-failed

Filter entries for which download failed

Filter-type Filter-Id Filter-Entry

ip 1 10

A:ALA-48#

ip

Syntax ip

ip embedded [inactive]

ip ip-filter-id embedded [inactive]

ip ip-filter-id [detail]

ip ip-filter-id associations

ip ip-filter-id type entry-type

ip ip-filter-id counters [type entry-type]

ip ip-filter-id entry entry-id counters

ip ip-filter-id entry entry-id [detail]

Context show>filter

**Description** This command shows IP filter information.

**Parameters** *ip-filter-id* — Displays detailed information for the specified filter ID and its filter entries.

**Values** 1 — 65535

entry entry-id — Displays information on the specified filter entry ID for the specified filter ID only.

**Values** 1 — 65535

**associations** — Appends information as to where the filter policy ID is applied to the detailed filter policy ID output.

**counters** — Displays counter information for the specified filter ID. Note that egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

**type** *entry-type* — specifies type of filter entry to display, values:

**Values** fixed, radius-insert, credit-control-insert, flowspec, embedded, radius-shared

**embedded** [failed] — Shows all embeddings, optionally shows failed embedding only, if *filter-id* is not specified shows all embedded filters.

#### Output

**Show Filter (no filter-id specified)** — The following table describes the command output for the command when no filter ID is specified.

Description
The IP filter ID
Template - The filter policy is of type template.
Exclusive - The filter policy is of type exclusive.
NO — The filter policy ID has not been applied.
Yes - The filter policy ID is applied.
The IP filter policy description.
Shows embedding filter index
Shows embedded filters included
Shows priority of embedded filter
Shows embedded/total number of entries from embedded filter Status: <b>OK</b> —embedding operation successful, if any entries are overwritten this will also be indicated. <b>Failed</b> —embedding failed, the reason is displayed (out of resources).

# Output Show Filter (with filter-id specified) — The following table describes the command output for the command when a filter ID is specified.

Label	Description
Filter Id	The IP filter policy ID.
Scope	Template - The filter policy is of type template.
	Exclusive - The filter policy is of type exclusive.
Entries	The number of entries configured in this filter ID.
Description	The IP filter policy description.
Applied	No - The filter policy ID has not been applied.
	Yes - The filter policy ID is applied.
Def. Action	Forward — The default action for the filter ID for packets that do not match the filter entries is to forward.
	Drop — The default action for the filter ID for packets that do not match the filter entries is to drop.
Filter Match Criteria	IP - Indicates the filter is an IP filter policy.

Label	Description (Continued)
Entry	The filter ID filter entry ID. If the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified.
Log Id	The filter log ID.
Src. IP	The source IPv6 address and prefix length match criterion.
Dest. IP	The destination IPv6 address and prefix length match criterion.
Next-header	The next header ID for the match criteria. Undefined indicates no next-header specified.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
Fragment	${\tt False} \ - \ Configures \ a \ match \ on \ all \ non-fragmented \ IP \ packets.$
	True - Configures a match on all fragmented IP packets.
	Off - Fragments are not a matching criteria. All fragments and non-fragments implicitly match.
Sampling	Off - Specifies that traffic sampling is disabled.
	$\circ_n$ – Specifies that traffic matching the associated IP filter entry is sampled.
IP-Option	Specifies matching packets with a specific IP option or a range of IP options in the IP header for IP filter match criteria.
TCP-syn	${\tt False}$ — Configures a match on packets with the SYN flag set to false.
	True - Configured a match on packets with the SYN flag set to true.
	Off - The state of the TCP SYN flag is not considered as part of the match criteria.
Match action	Default — The filter does not have an explicit forward or drop match action specified. If the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified.
	Drop - Drop packets matching the filter entry.
	Forward — The explicit action to perform is forwarding of the packet.
Ing. Matches	The number of ingress filter matches/hits for the filter entry.
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list.

Label	Description (Continued)
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list.
Dscp	The DiffServ Code Point (DSCP) name.
ICMP Code	The ICMP code field in the ICMP header of an IP packet.
Option-present	${\tt Off}-{\tt Specifies}$ not to search for packets that contain the option field or have an option field of zero.
	$\circ$ n - Matches packets that contain the option field or have an option field of zero be used as IP filter match criteria.
Int. Sampling	off - Interface traffic sampling is disabled.
	on - Interface traffic sampling is enabled.
Multiple Option	off - The option fields are not checked.
	on - Packets containing one or more option fields in the IP header will be used as IP filter match criteria.
TCP-ack	False - Configures a match on packets with the ACK flag set to false.
	True - Configurs a match on packets with the ACK flag set to true.
	Off — The state of the TCP ACK flag is not considered as part of the match criteria. as part of the match criteria.
Egr. Matches	The number of egress filter matches/hits for the filter entry.

## Output

**Show Filter Associations** — The following table describes the fields that display when the **associations** keyword is specified.

Label	Description
Filter Id	The IP filter policy ID.
Scope	Template - The filter policy is of type Template.
	Exclusive - The filter policy is of type Exclusive.
Entries	The number of entries configured in this filter ID.
Applied	No - The filter policy ID has not been applied.
	Yes - The filter policy ID is applied.
Def. Action	Forward — The default action for the filter ID for packets that do not match the filter entries is to forward.
	Drop - The default action for the filter ID for packets that do not match the filter entries is to drop.
Service Id	The service ID on which the filter policy ID is applied.
SAP	The Service Access Point on which the filter policy ID is applied.
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface.
(Egress)	The filter policy ID is applied as an egress filter policy on the interface.
Туре	The type of service of the service ID.
Entry	The filter ID filter entry ID. If the filter entry ID indicates the entry is Inactive, the filter entry is incomplete as no action was specified.
Log Id	The filter log ID.
Src. IP	The source IP address and mask match criterion. 0.0.0.0/0 indicates no criterion specified for the filter entry.
Dest. IP	The destination IP address and mask match criterion. 0.0.0.0/0 indicates no criterion specified for the filter entry.
Protocol	The protocol ID for the match criteria. Undefined indicates no protocol specified.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
Fragment	${\tt False} \ - \ Configures \ a \ match \ on \ all \ non-fragmented \ IP \ packets.$
	True - Configures a match on all fragmented IP packets.

Label	Description (Continued)
	Off - Fragments are not a matching criteria. All fragments and non-fragments implicitly match.
Sampling	Off - Specifies that traffic sampling is disabled.
	$\circ n$ - Specifies that traffic matching the associated IP filter entry is sampled.
IP-Option	Specifies matching packets with a specific IP option or a range of IP options in the IP header for IP filter match criteria.
TCP-syn	$\label{eq:False-Configures} \textbf{False-Configures a match on packets with the SYN flag set to} \\ \textbf{false}.$
	True - Configured a match on packets with the SYN flag set to true.
	${\tt Off}-{\tt The}$ state of the TCP SYN flag is not considered as part of the match criteria.
Match action	Default — The filter does not have an explicit forward or drop match action specified. If the filter entry ID indicates the entry is Inactive, the filter entry is incomplete (no action was specified).
	Drop - Drop packets matching the filter entry.
	Forward — The explicit action to perform is forwarding of the packet. If the action is Forward, then if configured the nexthop information should be displayed, including Nexthop: <ip address="">, Indirect: <ip address=""> or Interface: <ip interface="" name="">.</ip></ip></ip>
Ing. Matches	The number of ingress filter matches/hits for the filter entry.
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list.
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list.
Dscp	The DiffServ Code Point (DSCP) name.
ICMP Code	The ICMP code field in the ICMP header of an IP packet.
Option-present	Off - Specifies not to search for packets that contain the option field or have an option field of zero.
	on - Matches packets that contain the option field or have an option field of zero be used as IP filter match criteria.
Int. Sampling	Off - Interface traffic sampling is disabled.
	on - Interface traffic sampling is enabled.

Label	Description (Continued)
Multiple Option	Off - The option fields are not checked.
	on - Packets containing one or more option fields in the IP header will be used as IP filter match criteria.
TCP-ack	False - Configures a match on packets with the ACK flag set to false.
	${\tt True}\ -\ configures\ a\ match\ on\ packets\ with\ the\ ACK\ flag\ set\ to\ true.$
	Off - The state of the TCP ACK flag is not considered as part of the match criteria.h criteria.
Egr. Matches	The number of egress filter matches/hits for the filter entry.

ipv6 ipv6-filter-id type entry-type

ipv6 ipv6-filter-id counters [type entry-type]

ipv6 ipv6-filter-id entry entry-id counters

Context

show>filter

Description

This command shows IPv6 filter information.

**Parameters** 

*ipv6-filter-id* — Displays detailed information for the specified IPv6 filter ID and filter entries.

**Values** 1 - 65535

entry entry-id — Displays information on the specified IPv6 filter entry ID for the specified filter ID.

associations — Appends information as to where the IPv6 filter policy ID is applied to the detailed filter policy ID output.

counters — Displays counter information for the specified IPv6 filter ID. Note that egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

**embedded** [failed] — Shows all embeddings, optionally shows failed embedding only, if *filter-id* is not specified shows all embedded filters.

**type** *entry-type* — specifies type of filter entry to display, values:

**Values** fixed, radius-insert, credit-control-insert, flowspec, embedded, radius-shared

<sup>\*</sup>A:ALA-48#

command when no filter ID is specified.

Label	Description
Filter Id	The IP filter ID
Scope	Template - The filter policy is of type template.
	Exclusive — The filter policy is of type exclusive.
Applied	No — The filter policy ID has not been applied.
	Yes - The filter policy ID is applied.
Description	The IP filter policy description.
In	Shows embedding filter index
From	Shows embedded filters included
Priority	Shows priority of embedded filter
Inserted	Shows embedded/total number of entries from embedded filter Status:  OK—embedding operation successful, if any entries are overwritten this will also be indicated.  Failed—embedding failed, the reason is displayed (out of resources).
In	Shows embedding filter index

Show Filter (no filter-id specified) — The following table describes the command output for the

**Show Filter (with filter-id specified) —** The following table describes the command output for the command when a filter ID is specified.

Label	Description
Filter Id	The IP filter policy ID.
Scope	Template - The filter policy is of type template.
	Exclusive — The filter policy is of type exclusive.
Entries	The number of entries configured in this filter ID.
Description	The IP filter policy description.
Applied	No - The filter policy ID has not been applied.
	Yes - The filter policy ID is applied.
Def. Action	Forward — The default action for the filter ID for packets that do not match the filter entries is to forward.
	Drop - The default action for the filter ID for packets that do not match the filter entries is to drop.
Filter Match Criteria	IP - Indicates the filter is an IP filter policy.
Entry	The filter ID filter entry ID. If the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified.
Log Id	The filter log ID.
Src. IP	The source IP address and mask match criterion. 0.0.0.0/0 indicates no criterion specified for the filter entry.

Label	Description (Continued)
Dest. IP	The destination IP address and mask match criterion. $0.0.0.0.0/0$ indicates no criterion specified for the filter entry.
Protocol	The protocol ID for the match criteria. Undefined indicates no protocol specified.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
Fragment	${\tt False-Configures~a~match~on~all~non-fragmented~IP~packets}.$
	True - Configures a match on all fragmented IP packets.
	${\tt Off}-{\tt Fragments}$ are not a matching criteria. All fragments and non-fragments implicitly match.
Sampling	off - Specifies that traffic sampling is disabled.
	$\fine {\tt On-Specifies}$ that traffic matching the associated IP filter entry is sampled.
IP-Option	Specifies matching packets with a specific IP option or a range of IP options in the IP header for IP filter match criteria.
TCP-syn	False - Configures a match on packets with the SYN flag set to false.
	True - Configured a match on packets with the SYN flag set to true.
	${\tt Off}-{\tt The}$ state of the TCP SYN flag is not considered as part of the match criteria.
Match action	Default — The filter does not have an explicit forward or drop match action specified. If the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified.
	Drop - Drop packets matching the filter entry.
	Forward — The explicit action to perform is forwarding of the packet. If the action is Forward, then if configured the nexthop information should be displayed, including Nexthop: <ip address="">, Indirect: <ip address=""> or Interface: <ip interface="" name="">.</ip></ip></ip>
Ing. Matches	The number of ingress filter matches/hits for the filter entry.
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list.
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list.
Dscp	The DiffServ Code Point (DSCP) name.

Label	Description (Continued)
ICMP Code	The ICMP code field in the ICMP header of an IP packet.
Option-present	Off - Specifies not to search for packets that contain the option field or have an option field of zero.
	on-Matches packets that contain the option field or have an option field of zero be used as IP filter match criteria.
Int. Sampling	Off - Interface traffic sampling is disabled.
	on - Interface traffic sampling is enabled.
Multiple Option	off - The option fields are not checked.
	on - Packets containing one or more option fields in the IP header will be used as IP filter match criteria.
TCP-ack	False - Configures a match on packets with the ACK flag set to false.
	True - Configured a match on packets with the ACK flag set to true.
	Off — The state of the TCP ACK flag is not considered as part of the match criteria.
Egr. Matches	The number of egress filter matches/hits for the filter entry.

A:ALA-48#

# log

Syntax log log-id [match string] [bindings]

Context show>filter

**Description** This command shows the contents of a memory-based or a file-based filter log.

If the optional keyword **match** and *string* parameter are given, the command displays the given filter

log from the first occurence of the given string.

**Parameters** log-id — The filter log ID destination expressed as a decimal integer.

**Values** 101 — 199

match string — Specifies to start displaying the filter log entries from the first occurence of string.

bindings — Displays the number of filter logs currently instantiated.

**Output** Log Message Formatting — Each filter log entry contains the following information in case summary log feature is not active (as appropriate).

Label	Description		
yyyy/mm/dd hh:mm:ss	The date and timestamp for the log filter entry where $yyyy$ is the year, $mm$ is the month, $dd$ is the day, $hh$ is the hour, $mm$ is the minute and $ss$ is the second.		
Filter	The filter ID and the entry ID which generated the filter log entry in the form Filter_ID: Entry_ID.		
Desc	The description of the filter entry ID which generated the filter log entry.		
Interface	The IP interface on which the filter ID and entry ID was associated which generated the filter log entry.		
Action	The action of the filter entry on the logged packet.		
Src MAC	The source MAC address of the logged packet.		

Label	Description (Continued)	
Dst MAC	The destination MAC of the logged packet.	
EtherType	The Ethernet type of the logged Ethernet type II packet.	
Src IP	The source IP address of the logged packet. The source port will be displayed after the IP address as appropriate separated with a colon.	
Dst IP	The destination IP address of the logged packet. The source port will be displayed after the IP address as appropriate separated with a colon.	
Flags (IP flags)	<ul> <li>M - The more fragments IP flag is set in the logged packet.</li> <li>DF - The do not fragment IP flag is set in the logged packet.</li> </ul>	
TOS	The TOS byte value in the logged packet.	
Protocol	The IP protocol of the logged packet (TCP, UDP, ICMP or a protocol number in hex).	
Flags (TCP flags)	<ul> <li>URG - Urgent bit set.</li> <li>ACK - Acknowledgement bit set.</li> <li>RST - Reset bit set.</li> <li>SYN - Synchronize bit set.</li> <li>FIN - Finish bit set.</li> </ul>	
HEX	If an IP protocol does not have a supported decode, the first 32 bytes following the IP header are printed in a hex dump.  Log entries for non-IP packets include the Ethernet frame information and a hex dump of the first 40 bytes of the frame after the Ethernet header.	
Total Log Instances (Allowed)	Specifies the maximum allowed instances of filter logs allowed on the system.	
Total Log Instances (In Use)	Specifies the instances of filter logs presently existing on the system.	
Total Log Bindings	Specifies the count of the filter log bindings presently existing on the system.	
Туре	The type of service of the service ID.	
Filter ID	Uniquely identifies an IP filter as configured on the system.	
Entry ID	The identifier which uniquely identifies an entry in a filter table.	
Log	Specifies an entry in the filter log table.	
Instantiated	Specifies if the filter log for this filter entry has or has not been instantiated.	

If the packet being logged does not have a source or destination MAC address (i.e., POS) then the MAC information output line is omitted from the log entry.

In case log summary is active, the filter log mini-tables contain the following information..

Label	Description	
Summary Log LogID	Displays the log ID.	
Crit1	Summary criterion that is used as index into the mini-tables of the log.	
TotCnt	The total count of logs.	
ArpCnt	Displays the total number of ARP messages logged for this log ID.	
Src Dst	The address type indication of the key in the mini-table.	
count	The number of messages logged with the specified source/destination address.	
address	The address for which count messages where received.

#### mac

Syntax mac [mac-filter-id [associations | counters] [entry entry-id]]

Context show>filter

**Description** This command displays MAC filter information.

**Parameters** mac-filter-id — Displays detailed information for the specified filter ID and its filter entries.

**Values** 1—65535

**associations** — Appends information as to where the filter policy ID is applied to the detailed filter policy ID output.

**counters** — Displays counter information for the specified filter ID.

entry entry-id — Displays information on the specified filter entry ID for the specified filter ID only.

**Values** 1 — 65535

**Output** No Parameters Specified — When no parameters are specified, a brief listing of IP filters is produced. The following table describes the command output for the command.

Filter ID Specified — When the filter ID is specified, detailed filter information for the filter ID

Label	Description
Filter Id	The IP filter ID
Scope	Template - The filter policy is of type Template.
	Exclusiv - The filter policy is of type Exclusive.
Applied	No — The filter policy ID has not been applied.
	Yes - The filter policy ID is applied.
Description	The MAC filter policy description.
1	

and its entries is produced. The following table describes the command output for the command.

Label	Description		
MAC Filter Filter Id	The MAC filter policy ID.		
Scope	Template - The filter policy is of type Template.		
	Exclusiv - The filter policy is of type Exclusive.		
Description	The IP filter policy description.		
Applied	No — The filter policy ID has not been applied.		
	Yes - The filter policy ID is applied.		
Def. Action	Forward — The default action for the filter ID for packets that do not match the filter entries is to forward.		
	$\mathtt{Drop}$ — The default action for the filter ID for packets that do not match the filter entries is to drop.		
Filter Match Criteria	MAC - Indicates the filter is an MAC filter policy.		
Entry	The filter ID filter entry ID. If the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified.		
Description	The filter entry description.		
FrameType	Ethernet — The entry ID match frame type is Ethernet IEEE 802.3.  Ethernet II — The entry ID match frame type is Ethernet Type II.		
Src MAC	The source MAC address and mask match criterion. When both the MAC address and mask are all zeroes, no criterion specified for the filter entry.		
Dest MAC	The destination MAC address and mask match criterion. When both the MAC address and mask are all zeroes, no criterion specified for the filter entry.		

Label	Description (Continued)		
Dot1p	The IEEE 802.1p value for the match criteria. Undefined indicates no value is specified.		
Ethertype	The Ethertype value match criterion.		
DSAP	The DSAP value match criterion. Undefined indicates no value specified.		
SSAP	SSAP value match criterion. Undefined indicates no value specified.		
Snap-pid	The Ethernet SNAP PID value match criterion. Undefined indicates no value specified.		
Esnap-oui-zero	Non-Zero - Filter entry matches a non-zero value for the Ethernet SNAP OUI.  Zero - Filter entry matches a zero value for the Ethernet SNAP OUI.  Undefined - No Ethernet SNAP OUI value specified.		
Match action	Default — The filter does not have an explicit forward or drop match action specified. If the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified.  Drop — Packets matching the filter entry criteria will be dropped.  Forward — Packets matching the filter entry criteria is forwarded.		
Ing. Matches	The number of ingress filter matches/hits for the filter entry.		
Egr. Matches	The number of egress filter matches/hits for the filter entry.

#### li-mac

Syntax li-mac [li-mac-filter-id [associations | counters] [entry entry-id]]

Context show>filter

**Description** This command displays Lawful Intercept MAC filter information.

**Parameters** *li-mac-filter-id* — Displays detailed information for the specified Lawful Intercept filter ID and its filter entries.

**Values** 1—65535

**associations** — Appends information as to where the Lawful Intercept filter policy ID is applied to the detailed filter policy ID output.

**counters** — Displays counter information for the specified Lawful Intercept filter ID.

**entry** *entry-id* — Displays information on the specified Lawful Intercept filter entry ID for the specified filter ID only.

**Values** 1 — 65535

Lahol

#### Output

**No Parameters Specified** — When no parameters are specified, a brief listing of IP filters is produced. The following table describes the command output for the command.

**Filter ID Specified** — When the filter ID is specified, detailed filter information for the filter ID

Description

Labei	Description	
Filter Id	The IP filter ID

## redirect-policy

**Syntax** redirect-policy {redirect-policy-name [dest ip-address] [association]}

Context show>filter

**Description** This command shows redirect filter information.

**Parameters** redirect-policy-name — Displays information for the specified redirect policy.

**dest** *ip-address* — Directs the router to use a specified IP address for communication.

**association** — Appends association information.

**Output** Redirect Policy Output — The following table describes the fields in the redirect policy command output.

Label	Description
Redirect Policy	Specifies a specific redirect policy.
Applied	Specifies whether the redirect policy is applied to a filter policy entry.
Description	Displays the user-provided description for this redirect policy.
Active Destina- tion	ip address — Specifies the IP address of the active destination.  none — Indicates that there is currently no active destination.
Destination	Specifies the destination IP address.
Oper Priority	Specifies the operational value of the priority for this destination. The highest operational priority across multiple destinations is used as the preferred destination.
Admin Priority	Specifies the configured base priority for the destination.

Label	Description (Continued)
Admin State	Specifies the configured state of the destination.
	Out of Service $-$ Tests for this destination will not be conducted.
Oper State	Specifies the operational state of the destination.
Ping Test	Specifies the name of the ping test.
Timeout	Specifies the amount of time in seconds that is allowed for receiving a response from the far-end host. If a reply is not received within this time the far-end host is considered unresponsive.
Interval	Specifies the amount of time in seconds between consecutive requests sent to the far end host.
Drop Count	Specifies the number of consecutive requests that must fail for the destination to declared unreachable.
Hold Down	Specifies the amount of time in seconds that the system should be held down if any of the test has marked it unreachable.
Hold Remain	Specifies the amount of time in seconds that the system will remain in a hold down state before being used again.
Last Action at	Displays a time stamp of when this test received a response for a probe that was sent out.
SNMP Test	Specifies the name of the SNMP test.
URL Test	Specifies the name of the URL test.

-----

No. of IPv6 filters that chain to the active IPv6 system filter: 0

## match-list

Syntax match-list

Context show>filter

**Description** This command displays information for match lists used in filter policies (IOM and CPM).

## ip-prefix-list

**Syntax** ip-prefix-list [prefix-list-name]

ip-prefix-list prefix-list-name references

Context show>filter>match-list

**Description** This command displays IPv4 prefixes information for match criteria in IPv4 ACL and CPM filter

policies.

**Parameters** ip-prefix-list-name — A string of up to 32 characters of printable ASCII characters. If special

characters are used, the string must be enclosed within double quotes.

## ipv6-prefix-list

**Syntax** ipv6-prefix-list [prefix-list-name]

ipv6-prefix-list prefix-list-name references

Context show>filter>match-list

**Description** This command displays IPv6 prefixes information for match criteria in IPv6 ACL and CPM filter

policies.

**Parameters** ip-prefix-list-name — A string of up to 32 characters of printable ASCII characters. If special

characters are used, the string must be enclosed within double quotes.

# port-list

**Syntax** port-list [port-list-name]

port-list port-list-name references

Context show>filter>match-list

**Description** This command displays TCP/UDP/SCTP port values or ranges for match criteria in IPv4 and IPv6

ACL and CPM filter policies.

**Parameters** port-list-name — A string of up to 32 characters of printable ASCII characters. If special characters

are used, the string must be enclosed within double quotes.

## **Clear Commands**

ip

Syntax ip ip-filter-id [entry entry-id] [ingress | egress]

Context clear>filter

**Description** Clears the counters associated with the IP filter policy.

By default, all counters associated with the filter policy entries are reset. The scope of which counters

are cleared can be narrowed using the command line parameters.

**Default** clears all counters associated with the IP filter policy entries.

**Parameters** *ip-filter-id* — The IP filter policy ID.

**Values** 1 — 65535

entry-id — Specifies that only the counters associated with the specified filter policy entry will be

cleared.

**Values** 1 — 65535

**ingress** — Specifies to only clear the ingress counters.

egress — Specifies to only clear the egress counters.

ipv6

Syntax ipv6 ip-filter-id [entry entry-id] [ingress | egress]

Context clear>filter

**Description** Clears the counters associated with the IPv6 filter policy.

By default, all counters associated with the filter policy entries are reset. The scope of which counters

are cleared can be narrowed using the command line parameters.

**Default** Clears all counters associated with the IPv6 filter policy entries.

**Parameters** *ip-filter-id* — The IP filter policy ID.

**Values** 1 — 65535

entry-id — Specifies that only the counters associated with the specified filter policy entry will be

cleared.

**Values** 1 — 65535

ingress — Specifies to only clear the ingress counters.

egress — Specifies to only clear the egress counters.

log

Syntax log log-id

Context clear

**Description** Clears the contents of a memory or file based filter log.

This command has no effect on a syslog based filter log.

**Parameters** *log-id* — The filter log ID destination expressed as a decimal integer.

**Values** 101 — 199

mac

Syntax mac mac-filter-id [entry entry-id] [ingress | egress]

Context clear>filter

Clears the counters associated with the MAC filter policy.

By default, all counters associated with the filter policy entries are reset. The scope of which counters

are cleared can be narrowed using the command line parameters.

**Default** Clears all counters associated with the MAC filter policy entries

**Parameters** *mac-filter-id* — The MAC filter policy ID.

**Values** 1 — 65535

entry-id — Specifies that only the counters associated with the specified filter policy entry will be

cleared.

**Values** 1 — 65535

**ingress** — Specifies to only clear the ingress counters.

**egress** — Specifies to only clear the egress counters.

# **Monitor Commands**

### filter

Syntax filter ip ip-filter-id entry entry-id [interval seconds] [repeat repeat] [absolute | rate]

**Context** monitor

**Description** This command monitors the counters associated with the IP filter policy.

**Parameters** *ip-filter-id* — The IP filter policy ID.

**Values** 1 — 65535

*entry-id* — Specifies that only the counters associated with the specified filter policy entry will be monitored.

**Values** 1 — 65535

interval — Configures the interval for each display in seconds.

**Default** 10 seconds

**Values** 3 — 60

**repeat** *repeat* — Configures how many times the command is repeated.

**Default** 10

**Values** 1 — 999

**absolute** — When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

**rate** — When the **rate** keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

### filter

Syntax filter ipv6 ipv6-filter-id entry entry-id [interval seconds] [repeat repeat] [absolute | rate]

Context monitor

**Description** This command monitors the counters associated with the IPv6 filter policy.

**Parameters** *ipv6-filter-id* — The IP filter policy ID.

**Values** 1 — 65535

entry-id — Specifies that only the counters associated with the specified filter policy entry will be moniitored.

**Values** 1 — 65535

**interval** — Configures the interval for each display in seconds.

Default 5 seconds
Values 3 — 60

**repeat** *repeat* — Configures how many times the command is repeated.

**Default** 10 **Values** 1 — 999

**absolute** — When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate — When the rate keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

### filter

### Syntax filter mac mac-filter-id entry entry-id [interval seconds] [repeat repeat] [absolute | rate]

**Context** monitor

**Description** This command monitors the counters associated with the MAC filter policy.

**Parameters** *mac-filter-id* — The MAC filter policy ID.

**Values** 1 — 65535

entry-id — Specifies that only the counters associated with the specified filter policy entry will be cleared.

**Values** 1 — 65535

**interval** — Configures the interval for each display in seconds.

Default 5 seconds
Values 3 — 60

**repeat** repeat — Configures how many times the command is repeated.

**Default** 10 **Values** 1 — 999

**absolute** — When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate — When the rate keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

# **Debug Commands**

## cpm

Syntax cpm

Context tools>dump>filter>resources

**Description** 

This command displays information about filter resource utilization on the CPM, consumption by filter-using services like TMS, Flowspec, OpenFlow, and the filters that use the most resources.

### Sample Output

## egress-pbr

•		
ı	Syntax	egress-pbr [detail]
1	Context	tools>dump>filter>resources
1	Description	This command displays the number of allocated unique egress PBR destinations.
	Parameters	<b>detail</b> — Displays number of allocated unique egress PBR destinations together with a list of destinations and their ref counts.

### **Sample Output**

\*A:Dut-C>tools dump filter resources egress-pbr

Egress PBR destinations	
Name	Count
All destinations	8
Unique destinations	4

\*A:Dut-C# tools dump filter resources egress-pbr detail

Unique egress PBR destinations

### iom

Syntax iom [<slot-number>]

Context tools>dump>filter>resources

**Description** This command shows information about filter resource utilization on all IOMs or a specified IOM.

Resource utilization per filter type is available, as well as filters using most resources on a given line

card.

**Parameters** slot-number — specifies that only the filter resource utilization associated with the IOM card in this slot will be displayed

**Values** 1 — 10

#### Sample Output

\*A:Dut-C>tools>dump>filter>resources># iom

Number of ACL filter entries used / available on IOMs

Slot Used Available

1 11 65524
2 5 65530
3 5 65530

Number of ACL filters and filter entries used / available on FlexPaths

Slot FlexPath Dir Filters Filters MAC/IP MAC/IP IPv6 IPv6 used avail entries entries used avail used avail

1 1 Ingr 2 2045 10 65526 2 28670

No more Ipv6 filters			

ip

**Syntax** ip <filter-id>

Context tools>dump>filter>resources

**Description** This command displays information about the specified IP filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

**Parameters filter-id** — specifies that only the filter resource utilization associated with this IP filter will be displayed.

> **Values** 1 - 65535

### **Sample Output**

\*A:Dut-C>tools>dump>filter>resources># ip 100

Resource utilization details for Ip filter 100

\_\_\_\_\_\_

CPM entries used CPM subentries used : 5
TCAM entries used (per FlexPath) : 5
Associated with IOMs : 1,2,3,4,5,6,7,8,9,10

Largest 5 entries

Active TCAM entries Entry ID

	(per FlexPath)	
3	Yes	1
4	Yes	1
5	Yes	1
6	Yes	1
100	Yes	1

## ipv6

Syntax ipv6 <filter-id>

Context tools>dump>filter>resources

**Description** This command displays information about the specified IPv6 filter including resource utilization on

CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

**Parameters filter-id** — specifies that only the filter resource utilization associated with this IPv6 filter will be displayed.

**Values** 1 — 65535

### Sample Output

### mac

Syntax mac <filter-id>

Context tools>dump>filter>resources

**Description** This command displays information about the specified MAC filter including resource utilization on

CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

**Parameters filter-id** — specifies that only the filter resource utilization associated with this IPv6 filter will be displayed.

displayed.

**Values** 1 — 65535

### **Sample Output**

### activate-best-dest

**Description** 

Syntax activate-best-dest

Context tools>perform>filter>redirect-policy

toolo ponomi inter real out policy

This command allows the operator to force a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If **hold-time-up** is running, the timer is also expired.
