Description	This command configures a community expression statement as a match criterion for the policy statement. This statement is a logical expression string composed of logical operators (keywords AND, OR, NOT), community names delimited by square brackets [], and parentheses () to group subexpressions. If the expression contains special characters (for example, #, \$, spaces), the entire string must be enclosed in double quotes.

The expression specified must already be defined using the **configure policy-options community expression expr** command.

The following are examples of valid logical expressions:

"[community_list_A] OR ([community_list_B] AND [community_list_C])"

"NOT [community_list_A]"

"[community_list_A] AND [community_list_B] OR [community_list_C]"

"NOT ([community_list_A] OR [community_list_B] OR [community_list_C])"

String length 1 to 900

Notes The following elements are part of a choice: **expression** or **name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

name (*param-midstring-64* | *string*)

Synopsis Community list name

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [community](#) [name](#) (*param-midstring-64* | *string*)

Tree [name](#)

String length 1 to 64

Notes The following elements are part of a choice: **expression** or **name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

distinguisher *number*

Synopsis SR policy distinguisher as a match criterion

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [distinguisher](#) *number*

Tree [distinguisher](#)

Description This command configures an SR Policy distinguisher as a route policy match criterion. This match criterion is only used in import policies.

Range 0 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

endpoint (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	SR policy endpoint address as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from endpoint (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	endpoint
Description	This command configures an SR Policy endpoint address as a route policy match criterion. This match criterion is only used in import policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-type *keyword*

Synopsis	EVPN type as a match criterion for the entry
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from evpn-type <i>keyword</i>
Tree	evpn-type
Options	ethernet-auto-discovery, mac-ip-advertisement, inclusive-multicast, ethernet-segment, ip-prefix, selective-multicast, multicast-join-sync, multicast-leave-sync, selective-pmsi-auto-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

external *boolean*

Synopsis	Specify the external IS-IS route as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from external <i>boolean</i>
Tree	external
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

family *keyword*

Synopsis	Address family as the match condition
----------	---------------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from family <i>keyword</i>
Tree	family
Description	This command specifies address families as matching conditions.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Max. instances	20
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*param-midstring* | *string*)

Synopsis	Prefix list of multicast group addresses for mathcing
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from group-address (<i>param-midstring</i> <i>string</i>)
Tree	group-address
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

host-ip (*param-midstring* | *string*)

Synopsis	Prefix list of IGMP host IP addresses for matching
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from host-ip (<i>param-midstring</i> <i>string</i>)
Tree	host-ip
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

interface (*named-item* | *interface-name* | *interface-name* | *interface-name*)

Synopsis	Interface name as match criterion
----------	-----------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from interface (<i>named-item</i> <i>interface-name</i> <i>interface-name</i> <i>interface-name</i>)
Tree	interface
String length	1 to 32
Max. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-subnets

Synopsis	Enter the interface-subnets context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from interface-subnets
Tree	interface-subnets
Description	<p>Commands in this context configure the applied router instance and interfaces that are used as the matching condition within each policy statement entry when exporting the IP address of the associated interface to a routing protocol.</p> <p>The interface subnet policy statement match criterion is applied to the following unicast use case contexts:</p> <ul style="list-style-type: none"> • export, when used with OSPFv2, OSPFv3, IS-IS, RIP, RIPng, and BGP • route-table-import, when used with BGP • vrf-export, when used with MP-BGP
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-int-name *interface-name*

Synopsis	Interface name as the match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from interface-subnets ip-int-name <i>interface-name</i>
Tree	ip-int-name
Description	This command specifies the interface name to match when exporting the IP address of the associated interface to a routing protocol.
String length	1 to 32
Max. instances	10

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

service string

Synopsis	Service ID of the interface subnets
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from interface-subnets service <i>string</i>
Tree	service
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR-1

level number

Synopsis	IS-IS route level as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from level <i>number</i>
Tree	level
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference

Synopsis	Enter the local-preference context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from local-preference
Tree	local-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier keyword

Synopsis	Higher or lower values to be accepted as match criteria
----------	---

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from local-preference qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower
Default	equal
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*number* | *string*)

Synopsis	BGP routes per local preference value or variable name
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from local-preference value (<i>number</i> <i>string</i>)
Tree	value
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

metric

Synopsis	Enter the metric context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from metric
Tree	metric
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from metric qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower
Default	equal
Introduced	25.3.R2

Platforms 7705 SAR-1

value (*number* | *string*)

Synopsis Local preference value or variable name

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [metric](#) [value](#) (*number* | *string*)

Tree [value](#)

String length 1 to 32

Range 0 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

neighbor

Synopsis Enter the **neighbor** context

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [neighbor](#)

Tree [neighbor](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis IP address to match the neighbor

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [neighbor](#) [ip-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree [ip-address](#)

Notes The following elements are part of a choice: **ip-address** or **prefix-list**.

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix-list (*param-midstring* | *string*)

Synopsis Name to match the neighbor prefix list

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from neighbor prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop

Synopsis	Enter the next-hop context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from next-hop
Tree	next-hop
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from next-hop ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a next hop prefix list to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from next-hop prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2

Platforms 7705 SAR-1

origin keyword

Synopsis	Route origin match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from origin keyword
Tree	origin
Description	<p>This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes:</p> <p>Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the sub-mgmt option for the protocol command.</p> <p>Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the direct option for the protocol command.</p> <p>Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the direct option for the protocol command.</p> <p>Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the managed option for the protocol command.</p> <p>The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.</p>
Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation-state keyword

Synopsis	Origin validation state used for match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from origin-validation-state keyword
Tree	origin-validation-state
Description	This command specifies a validation state that is used to match BGP routes based on their origin validation state.
Options	valid, not-found, invalid
Introduced	25.3.R2

Platforms 7705 SAR-1

ospf-type *number*

Synopsis OSPF type metric applied to unmatching route entries

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [ospf-type](#) *number*

Tree [ospf-type](#)

value *named-item*

Synopsis	Policy variable value
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from policy-variables <i>name</i> <i>policy-var-name</i> value <i>named-item</i>
Tree	value
String length	1 to 32
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring-64* | *string*)

Synopsis	Prefix list as match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from prefix-list (<i>param-midstring-64</i> <i>string</i>)
Tree	prefix-list
String length	1 to 64
Max. instances	28
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list-override [[prefix-list](#)] *string*

Synopsis	Enter the prefix-list-override list instance
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from prefix-list-override <i>string</i>
Tree	prefix-list-override
Description	<p>Commands in this context convert a prefix list to a specific match type. The routing policy uses the converted list as a match condition.</p> <p>The prefix list to be converted can be specified by its name, as an expression containing the name of a global variable that holds the name of the prefix list, or as an expression containing the name of a subroutine variable that holds the name of the prefix list.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix-list] *string*

Synopsis	Prefix list to be converted
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from prefix-list-override <i>string</i>
Tree	prefix-list-override
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

end-length *number*

Synopsis Prefix range end length

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [prefix-list-override](#) *string* **end-length** *number*

Tree [end-length](#)

Range 0 to 128

Notes The following elements are part of a choice: (**end-length** and **start-length**) or **through-length**.

Introduced 25.3.R2

Platforms 7705 SAR-1

start-length *number*

Synopsis Prefix range start length

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [prefix-list-override](#) *string* **start-length** *number*

Tree [start-length](#)

Range 0 to 128

Notes The following elements are part of a choice: (**end-length** and **start-length**) or **through-length**.

Introduced 25.3.R2

Platforms 7705 SAR-1

through-length *number*

Synopsis Prefix through length

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from](#) [prefix-list-override](#) *string* **through-length** *number*

Tree [through-length](#)

Range 0 to 128

Notes The following elements are part of a choice: (**end-length** and **start-length**) or **through-length**.

Introduced 25.3.R2

Platforms 7705 SAR-1

type *keyword*

Synopsis	New match type for entries in referenced prefix list
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from prefix-list- override <i>string</i> type <i>keyword</i>
Tree	type
Options	exact, longer, through, range
Default	exact
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from protocol
Tree	protocol
Description	Commands in this context configure the match criterion based on protocols for a route policy statement entry and may be used for both import and export policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

instance (*keyword* | *number*)

Synopsis	Instance for protocol IS-IS, OSPF, or OSPFv3 to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Description	<p>This command specifies the OSPF, OSPFv3, or IS-IS instance to be used as the match criterion.</p> <p>When this command is explicitly configured, the name command must be configured to identify the protocol (OSPF, OSPFv3, or IS-IS).</p>
Range	0 to 127
Options	all
Default	0

Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	List of protocol names as the match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from protocol name <i>keyword</i>
Tree	name
Description	<p>This command specifies a protocol list for the match criterion. If multiple protocols are specified, the protocol names must belong to the following protocol set:</p> <ul style="list-style-type: none"> • direct • static • isis • aggregate • bgp • bgp-label • direct-interface <p>If multiple protocols are specified, the instance command cannot be explicitly configured.</p> <p>The protocol direct-interface route type matches the specific direct interface host IPv4 / 32 and IPv6 /128 routes.</p>
Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta, dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd, rib-api, dhcp-client, evpn-ift, srv6, video, evpn-ift-host
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

route-distinguisher-list (*param-midstring-64* | *string*)

Synopsis	Route distinguisher list as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from route-distinguisher-list (<i>param-midstring-64</i> <i>string</i>)
Tree	route-distinguisher-list
Description	This command specifies the (possibly parameterized) name of a route distinguisher (RD) list.

This match condition is supported by policies applied as VRF-import or BGP peer import policies. A BGP route can match a policy entry with this match criterion if the NLRI field contains an RD that is matched by at least one of the entries in the RD list.

BGP routes belonging to address families other than VPN-IPv4, VPN-IPv6, MCAST-VPN-IPv4, MCAST-VPN-IPv6, EVPN, FlowSpec-VPN IPv4, FlowSpec-VPN IPv6, MVPN-IPv4, or MVPN-IPv6 route do not match policy entries with this match criterion.

String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from source-address
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from source-address ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a source address prefix list to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from source-address prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .

Introduced	25.3.R2
Platforms	7705 SAR-1

state *keyword*

Synopsis	State used as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from state <i>keyword</i>
Tree	state
Description	This command configures a criterion that identifies in resilient gateways which routes are associated with an active context and which routes are associated with a standby context.
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master, fsg-active, fsg-standby, fsg-active-path-restoration
Introduced	25.3.R2
Platforms	7705 SAR-1

tag (*number* | *keyword*)

Synopsis	Route tag used as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from tag (<i>number</i> <i>keyword</i>)
Tree	tag
Range	1 to 4294967295
Options	no-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

to

Synopsis	Enable the to context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> to
Tree	to
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	IS-IS route level as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> to level <i>number</i>
Tree	level
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> to prefix-list (<i>param-midstring-64</i> <i>string</i>)
Tree	prefix-list
String length	1 to 64
Max. instances	28
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> to protocol
Tree	protocol
Introduced	25.3.R2
Platforms	7705 SAR-1

instance (*keyword* | *number*)

Synopsis	Instance for the IS-IS, OSPF, or OSPF3 protocol
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> to protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Range	0 to 127
Options	all
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Protocol name to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number to protocol name</i> <i>keyword</i>
Tree	name
Options	bgp, isis, ospf, rip, bgp-vpn, ospf3, ldp, vpn-leak, ripng, bgp-label, evpn-ift
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

entry-type *keyword*

Synopsis	The entry type for a route policy entry
Context	configure policy-options policy-statement <i>named-item-64</i> entry-type <i>keyword</i>
Tree	entry-type
Options	numbered, named
Default	numbered
Introduced	25.3.R2
Platforms	7705 SAR-1

named-entry [[entry-name](#)] *named-item-255*

Synopsis	Enter the named-entry list instance
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i>
Tree	named-entry
Max. instances	16384
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-name] *named-item-255*

Synopsis	Route policy entry name
----------	-------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i>
Tree	named-entry
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enable the action context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action action-type <i>keyword</i>
Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

add-paths-send-limit (*number* | *keyword*)

Synopsis	BGP Add-Paths send limit applied for routes
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action add-paths-send-limit (<i>number</i> <i>keyword</i>)
Tree	add-paths-send-limit
Range	1 to 16
Options	multipaths
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-tag-policy (*param-midstring-64* | *string*)

Options	most-recent
Introduced	25.3.R2

Platforms 7705 SAR-1

repeat (*number* | *string*)

Synopsis Number of times to prepend the specified AS number

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [named-entry](#) *named-item-255*
[action as-path-prepend repeat](#) (*number* | *string*)

Tree [repeat](#)

String length 1 to 32

Range 1 to 50

Default 1

Introduced 25.3.R2

Platforms 7705 SAR-1

bgp-high-priority *boolean*

Synopsis Tag routes as high priority for fast table updates

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [named-entry](#) *named-item-255*
[action bgp-high-priority](#) *boolean*

Tree [bgp-high-priority](#)

Description When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates.

This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types:

- IPv4
- label-IPv4
- IPv6
- label-IPv6

This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.

When configured to **false**, no routes are tagged for faster route table updates.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action bgp-leak <i>boolean</i>
Tree	bgp-leak
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-med

Synopsis	Enter the bgp-med context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action bgp-med
Tree	bgp-med
Introduced	25.3.R2
Platforms	7705 SAR-1

adjust *string*

Synopsis	BGP-MED adjustment
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action bgp-med adjust <i>string</i>
Tree	adjust
String length	1 to 64
Notes	The following elements are part of a choice: adjust or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*keyword* | *number* | *string*)

Synopsis	BGP-MED assignment
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action bgp-med set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set

String length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
Notes	The following elements are part of a choice: adjust or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 action bgp-tunnel-metric prefer-aigp <i>boolean</i>
Tree	prefer-aigp
Description	When configured to true , and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf. When configured to false , the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
----------	---

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action bgp-tunnel-metric prefer-med <i>boolean</i>
Tree	prefer-med
Description	<p>When configured to true, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it.</p> <p>When configured to false, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*string* | *number*)

Synopsis	BGP tunnel table metric value
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> action bgp-tunnel-metric value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command configures a BGP tunnel metric is assigned to routes that do not match any entry.</p> <p>If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either:</p> <ul style="list-style-type: none"> the <code>prefer-aigp</code> option is set to false the <code>prefer-aigp</code> option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

community

Introduced	25.3.R2
Platforms	7705 SAR-1

from

Synopsis	Enable the from context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from
Tree	from
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregate-contributor *boolean*

Synopsis	Enable aggregate route match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from aggregate-contributor <i>boolean</i>
Tree	aggregate-contributor
Description	<p>When configured to true, matches all routes (BGP and non-BGP) that have contributed to an active aggregate route. If the prefix tree above a particular route includes no active aggregate routes or the most specific active aggregate route in the prefix tree above this route has a policy that rejects the route, then it is not considered as an aggregate-contributor.</p> <p>This match condition is only supported when used in a BGP export policy. If it is used in an entry of a BGP import policy, vrf-export policy or vrf-import policy, no routes are matched by that entry.</p> <p>When configured to false, no routes (BGP and non-BGP) that have contributed to an active aggregate route are matched.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

area *ipv4-address*

Synopsis	OSPF area as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from area <i>ipv4-address</i>
Tree	area
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path

Synopsis	Enter the as-path context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path
Tree	as-path
Introduced	25.3.R2
Platforms	7705 SAR-1

group (*param-midstring* | *string*)

Synopsis	AS path group as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path group (<i>param-midstring</i> <i>string</i>)
Tree	group
String length	1 to 32
Notes	The following elements are part of a choice: group or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

length

Synopsis	Enter the length context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path length
Tree	length
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path length qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower

Default	equal
Introduced	25.3.R2
Platforms	7705 SAR-1

unique *boolean*

Synopsis	Use unique AS numbers as matching criteria
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path length unique <i>boolean</i>
Tree	unique
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*number* | *string*)

Synopsis	AS numbers in the AS path that match on the BGP route
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path length value (<i>number</i> <i>string</i>)
Tree	value
String length	1 to 32
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

name (*param-midstring* | *string*)

Synopsis	AS path name to match
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from as-path name (<i>param-midstring</i> <i>string</i>)
Tree	name
Description	This command specifies an AS path regular expression name for the route policy entry. Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".
String length	1 to 32
Notes	The following elements are part of a choice: group or name .

Introduced	25.3.R2
Platforms	7705 SAR-1

cluster-id

Synopsis	Enter the cluster-id context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from cluster-id
Tree	cluster-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-prefix-with-host-bits*

Synopsis	Cluster list attribute IP addresses for route matching
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from cluster-id ip-address <i>ipv4-prefix-with-host-bits</i>
Tree	ip-address
Max. instances	5
Notes	The following elements are part of a choice: ip-address or none-cluster-list . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

none-cluster-list *boolean*

Synopsis	Specify matching BGP routes without a cluster ID
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from cluster-id none-cluster-list <i>boolean</i>
Tree	none-cluster-list
Default	false
Notes	The following elements are part of a choice: ip-address or none-cluster-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

color *number*

Synopsis	Color ID as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from color <i>number</i>
Tree	color
Description	This command configures an SR Policy color ID as a route policy match criterion. This match criterion is only used in import policies.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

community

Synopsis	Enter the community context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from community
Tree	community
Introduced	25.3.R2
Platforms	7705 SAR-1

count

Synopsis	Enter the count context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from community count
Tree	count
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from community count qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower

Default	equal
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Community count to match the community count criteria
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from community count type keyword
Tree	type
Options	standard, extended, large
Introduced	25.3.R2
Platforms	7705 SAR-1

value (number | string)

Synopsis	Number of BGP communities to match the BGP route
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from community count value (number string)
Tree	value
String length	1 to 32
Range	0 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

expression string

Synopsis	Community expression statement as a match criterion
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from community expression string
Tree	expression
Description	This command configures a community expression statement as a match criterion for the policy statement. This statement is a logical expression string composed of logical operators (keywords AND, OR, NOT), community names delimited by square brackets [], and parentheses () to group subexpressions. If the expression contains special characters (for example, #, \$, spaces), the entire string must be enclosed in double quotes.

The expression specified must already be defined using the **configure policy-options community expression expr** command.

The following are examples of valid logical expressions:

"[community_list_A] OR ([community_list_B] AND [community_list_C])"

"NOT [community_list_A]"

"[community_list_A] AND [community_list_B] OR [community_list_C]"

"NOT ([community_list_A] OR [community_list_B] OR [community_list_C])"

String length	1 to 900
Notes	The following elements are part of a choice: expression or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

name (*param-midstring-64* | *string*)

Synopsis	Community list name
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from community name (<i>param-midstring-64</i> <i>string</i>)
Tree	name
String length	1 to 64
Notes	The following elements are part of a choice: expression or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

distinguisher *number*

Synopsis	SR policy distinguisher as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from distinguisher number
Tree	distinguisher
Description	This command configures an SR Policy distinguisher as a route policy match criterion. This match criterion is only used in import policies.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	SR policy endpoint address as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Description	This command configures an SR Policy endpoint address as a route policy match criterion. This match criterion is only used in import policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-type *keyword*

Synopsis	EVPN type as a match criterion for the entry
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from evpn-type <i>keyword</i>
Tree	evpn-type
Options	ethernet-auto-discovery, mac-ip-advertisement, inclusive-multicast, ethernet-segment, ip-prefix, selective-multicast, multicast-join-sync, multicast-leave-sync, selective-pmsi-auto-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

external *boolean*

Synopsis	Specify the external IS-IS route as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from external <i>boolean</i>
Tree	external
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

family *keyword*

Synopsis	Address family as the match condition
----------	---------------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from family <i>keyword</i>
Tree	family
Description	This command specifies address families as matching conditions.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Max. instances	20
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*param-midstring* | *string*)

Synopsis	Prefix list of multicast group addresses for mathcing
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from group-address (<i>param-midstring</i> <i>string</i>)
Tree	group-address
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

host-ip (*param-midstring* | *string*)

Synopsis	Prefix list of IGMP host IP addresses for matching
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from host-ip (<i>param-midstring</i> <i>string</i>)
Tree	host-ip
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

interface (*named-item* | *interface-name* | *interface-name* | *interface-name*)

Synopsis	Interface name as match criterion
----------	-----------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from interface (<i>named-item</i> <i>interface-name</i> <i>interface-name</i> <i>interface-name</i>)
Tree	interface
String length	1 to 32
Max. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-subnets

Synopsis	Enter the interface-subnets context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from interface-subnets
Tree	interface-subnets
Description	<p>Commands in this context configure the applied router instance and interfaces that are used as the matching condition within each policy statement entry when exporting the IP address of the associated interface to a routing protocol.</p> <p>The interface subnet policy statement match criterion is applied to the following unicast use case contexts:</p> <ul style="list-style-type: none"> • export, when used with OSPFv2, OSPFv3, IS-IS, RIP, RIPng, and BGP • route-table-import, when used with BGP • vrf-export, when used with MP-BGP
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-int-name *interface-name*

Synopsis	Interface name as the match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from interface-subnets ip-int-name <i>interface-name</i>
Tree	ip-int-name
Description	This command specifies the interface name to match when exporting the IP address of the associated interface to a routing protocol.
String length	1 to 32
Max. instances	10

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

service *string*

Synopsis	Service ID of the interface subnets
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from interface-subnets service <i>string</i>
Tree	service
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	IS-IS route level as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from level <i>number</i>
Tree	level
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference

Synopsis	Enter the local-preference context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from local-preference
Tree	local-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
----------	---

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from local-preference qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower
Default	equal
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*number* | *string*)

Synopsis	BGP routes per local preference value or variable name
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from local-preference value (<i>number</i> <i>string</i>)
Tree	value
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

metric

Synopsis	Enter the metric context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from metric
Tree	metric
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from metric qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower
Default	equal

Introduced 25.3.R2
Platforms 7705 SAR-1

value (*number* | *string*)

Synopsis Local preference value or variable name
Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [named-entry](#) *named-item-255*
[from metric](#) [value](#) (*number* | *string*)
Tree [value](#)
String length 1 to 32
Range 0 to 4294967295
Introduced 25.3.R2
Platforms 7705 SAR-1

neighbor

Synopsis Enter the **neighbor** context
Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [named-entry](#) *named-item-255*
[from neighbor](#)
Tree [neighbor](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis IP address to match the neighbor
Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [named-entry](#) *named-item-255*
[from neighbor](#) [ip-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *ipv4-address-with-zone* | *ipv6-address-with-zone*)
Tree [ip-address](#)
Notes The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced 25.3.R2
Platforms 7705 SAR-1

prefix-list (*param-midstring* | *string*)

Synopsis	Name to match the neighbor prefix list
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from neighbor prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop

Synopsis	Enter the next-hop context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from next-hop
Tree	next-hop
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop to match
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from next-hop ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a next hop prefix list to match
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from next-hop prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list

String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

origin keyword

Synopsis	Route origin match criteria
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from origin <i>keyword</i>
Tree	origin
Description	<p>This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes:</p> <p>Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the sub-mgmt option for the protocol command.</p> <p>Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the direct option for the protocol command.</p> <p>Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the direct option for the protocol command.</p> <p>Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the managed option for the protocol command.</p> <p>The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.</p>
Options	igp, egg, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation-state keyword

Synopsis	Origin validation state used for match criteria
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from origin-validation-state <i>keyword</i>
Tree	origin-validation-state

Description	This command specifies a validation state that is used to match BGP routes based on their origin validation state.
Options	valid, not-found, invalid
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf-type *number*

Synopsis	OSPF type metric applied to unmatching route entries
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from ospf-type <i>number</i>
Tree	ospf-type
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

path-type *keyword*

Synopsis	Path type as a match criterion
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from path-type <i>keyword</i>
Tree	path-type
Options	ibgp, ebgp
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*string* | *string*)

Synopsis	Policy statement as a match criterion
Context	configure policy-options policy-statement named-item-64 named-entry named-item-255 from policy (<i>string</i> <i>string</i>)
Tree	policy
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-variables

Synopsis	Enter the policy-variables context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables
Tree	policy-variables
Introduced	25.3.R2
Platforms	7705 SAR-1

name [[variable-name](#)] *policy-var-name*

Synopsis	Enter the name list instance
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables name <i>policy-var-name</i>
Tree	name
Description	Commands in this context configure global variables for use across BGP peers of a common type (transit, peer, customer, and so on).
Max. instances	10
Introduced	25.3.R2
Platforms	7705 SAR-1

[[variable-name](#)] *policy-var-name*

Synopsis	Global variable name used to reference policy functions
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables name <i>policy-var-name</i>
Tree	name
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the policy variable
----------	-----------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables <i>name</i> <i>policy-var-name</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

decimal *decimal-number*

Synopsis	Attribute decimal to which variable name is resolved
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables <i>name</i> <i>policy-var-name</i> decimal <i>decimal-number</i>
Tree	decimal
Range	0.000 to 4294967295.000
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Numerical value of the policy variable
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables <i>name</i> <i>policy-var-name</i> number <i>number</i>
Tree	number
Range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

value *named-item*

Synopsis	Policy variable value
----------	-----------------------

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from policy-variables name <i>policy-var-name</i> value <i>named-item</i>
Tree	value
String length	1 to 32
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring-64* | *string*)

Synopsis	Prefix list as match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list (<i>param-midstring-64</i> <i>string</i>)
Tree	prefix-list
String length	1 to 64
Max. instances	28
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list-override [[prefix-list](#)] *string*

Synopsis	Enter the prefix-list-override list instance
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list-override <i>string</i>
Tree	prefix-list-override
Description	<p>Commands in this context convert a prefix list to a specific match type. The routing policy uses the converted list as a match condition.</p> <p>The prefix list to be converted can be specified by its name, as an expression containing the name of a global variable that holds the name of the prefix list, or as an expression containing the name of a subroutine variable that holds the name of the prefix list.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix-list] string

Synopsis	Prefix list to be converted
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list-override <i>string</i>
Tree	prefix-list-override
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-length number

Synopsis	Prefix range end length
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list-override <i>string end-length number</i>
Tree	end-length
Range	0 to 128
Notes	The following elements are part of a choice: (end-length and start-length) or through-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

start-length number

Synopsis	Prefix range start length
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list-override <i>string start-length number</i>
Tree	start-length
Range	0 to 128
Notes	The following elements are part of a choice: (end-length and start-length) or through-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

through-length *number*

Synopsis	Prefix through length
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list-override <i>string</i> through-length <i>number</i>
Tree	through-length
Range	0 to 128
Notes	The following elements are part of a choice: (end-length and start-length) or through-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	New match type for entries in referenced prefix list
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from prefix-list-override <i>string</i> type <i>keyword</i>
Tree	type
Options	exact, longer, through, range
Default	exact
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from protocol
Tree	protocol
Description	Commands in this context configure the match criterion based on protocols for a route policy statement entry and may be used for both import and export policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

instance (*keyword* | *number*)

Synopsis	Instance for protocol IS-IS, OSPF, or OSPFv3 to match
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Description	This command specifies the OSPF, OSPFv3, or IS-IS instance to be used as the match criterion. When this command is explicitly configured, the name command must be configured to identify the protocol (OSPF, OSPFv3, or IS-IS).
Range	0 to 127
Options	all
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	List of protocol names as the match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from protocol name <i>keyword</i>
Tree	name
Description	This command specifies a protocol list for the match criterion. If multiple protocols are specified, the protocol names must belong to the following protocol set: <ul style="list-style-type: none"> • direct • static • isis • aggregate • bgp • bgp-label • direct-interface <p>If multiple protocols are specified, the instance command cannot be explicitly configured.</p> <p>The protocol direct-interface route type matches the specific direct interface host IPv4 / 32 and IPv6 /128 routes.</p>
Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta,

	dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd, rib-api, dhcp-client, evpn-ifl, srv6, video, evpn-ifl-host
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

route-distinguisher-list (*param-midstring-64* | *string*)

Synopsis	Route distinguisher list as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from route-distinguisher-list (<i>param-midstring-64</i> <i>string</i>)
Tree	route-distinguisher-list
Description	<p>This command specifies the (possibly parameterized) name of a route distinguisher (RD) list.</p> <p>This match condition is supported by policies applied as VRF-import or BGP peer import policies. A BGP route can match a policy entry with this match criterion if the NLRI field contains an RD that is matched by at least one of the entries in the RD list.</p> <p>BGP routes belonging to address families other than VPN-IPv4, VPN-IPv6, MCAST-VPN-IPv4, MCAST-VPN-IPv6, EVPN, FlowSpec-VPN IPv4, FlowSpec-VPN IPv6, MVPN-IPv4, or MVPN-IPv6 route do not match policy entries with this match criterion.</p>
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from source-address
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address to match
----------	----------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from source-address ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a source address prefix list to match
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from source-address prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

state *keyword*

Synopsis	State used as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from state <i>keyword</i>
Tree	state
Description	This command configures a criterion that identifies in resilient gateways which routes are associated with an active context and which routes are associated with a standby context.
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master, fsg-active, fsg-standby, fsg-active-path-restoration
Introduced	25.3.R2
Platforms	7705 SAR-1

tag (*number* | *keyword*)

Synopsis	Route tag used as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> from tag (<i>number</i> <i>keyword</i>)

Tree	tag
Range	1 to 4294967295
Options	no-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

to

Synopsis	Enable the to context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to
Tree	to
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	IS-IS route level as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to level <i>number</i>
Tree	level
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor

Synopsis	Enter the neighbor context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to neighbor
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone | ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis	IP address to match the neighbor
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to neighbor ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone ipv4-address-with-zone ipv6-address-with-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring | string*)

Synopsis	Name to match the neighbor prefix list
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to neighbor prefix-list (<i>param-midstring string</i>)
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list (*param-midstring-64 | string*)

Synopsis	Prefix list as match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to prefix-list (<i>param-midstring-64 string</i>)
Tree	prefix-list
String length	1 to 64
Max. instances	28
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to protocol
Tree	protocol
Introduced	25.3.R2
Platforms	7705 SAR-1

instance (*keyword* | *number*)

Synopsis	Instance for the IS-IS, OSPF, or OSPF3 protocol
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Range	0 to 127
Options	all
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Protocol name to match
Context	configure policy-options policy-statement <i>named-item-64</i> named-entry <i>named-item-255</i> to protocol name <i>keyword</i>
Tree	name
Options	bgp, isis, ospf, rip, bgp-vpn, ospf3, ldp, vpn-leak, ripng, bgp-label, evpn-ifl
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list [[name](#)] *named-item-64*

Synopsis	Enter the prefix-list list instance
----------	--

Context	configure policy-options prefix-list <i>named-item-64</i>
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item-64*

Synopsis	Prefix list name
Context	configure policy-options prefix-list <i>named-item-64</i>
Tree	prefix-list
Description	This command specifies the name for a prefix list. Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [type](#) *keyword*

Synopsis	Enter the prefix list instance
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i>
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix associated with the prefix length
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Prefix list match type
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword
Tree	prefix
Options	exact, longer, through, range, to, address-mask
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-length number

Synopsis	Prefix range end length
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword end-length <i>number</i>
Tree	end-length
Range	0 to 128
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask-pattern [address] (ipv4-address-no-zone | ipv6-address-no-zone)

Synopsis	Add a list entry for mask-pattern
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword mask-pattern (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	mask-pattern
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Address mask for matching routes to the prefix entry
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword mask-pattern (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	mask-pattern
Description	<p>This command specifies the address mask to compare against the prefix entry to determine whether the route is considered a match.</p> <p>A route matches the prefix entry if the following conditions are met.</p> <ul style="list-style-type: none"> • The bitwise logical AND of the prefix address and its mask matches the bitwise logical AND of the route address and its mask. • The prefix length of the prefix entry matches the prefix length of the route. <p>For example, for a prefix entry of 17.1.0.0/32, routes with an address 17.1.x.0 (where x can be 0 through 255) and a prefix length of 32 match the entry.</p>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

start-length *number*

Synopsis	Start in the prefix range length
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword start-length <i>number</i>
Tree	start-length
Range	0 to 128
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	25.3.R2
Platforms	7705 SAR-1

through-length *number*

Synopsis	Prefix through length
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword through-length <i>number</i>
Tree	through-length
Range	0 to 128

Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	25.3.R2
Platforms	7705 SAR-1

to-prefix [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for to-prefix
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword to-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	to-prefix
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for "to" match type
Context	configure policy-options prefix-list <i>named-item-64</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword to-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	to-prefix
Description	<p>This command configures an IP prefix to use in a route policy prefix list for the to match type. If the prefix entry is in the format <i>prefix1/length1</i>, and this command is configured in the format <i>prefix2/length2</i>, a route matches the prefix entry if the following conditions are met.</p> <ul style="list-style-type: none"> • The route shares the same most-significant bits (specified by <i>length1</i>) with the prefix entry • The route shares the same most-significant bits (specified by <i>length2</i>) with this IP prefix value • The prefix length of the route is in the range of <i>length1</i> to <i>length2</i> (inclusive) <p>For example, for a prefix entry of 10.0.0.8 with a to IP prefix value of 10.0.0.0/32, routes 10.0.0.0/8, 10.0.0.0/9, 10.0.0.0/10, and so on, to 10.0.0.0/32 are considered matches for the prefix entry.</p>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-distinguisher-list [[name](#)] *named-item-64*

Synopsis	Enter the route-distinguisher-list list instance
Context	configure policy-options route-distinguisher-list <i>named-item-64</i>
Tree	route-distinguisher-list
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item-64*

Synopsis	Route distinguisher list name
Context	configure policy-options route-distinguisher-list <i>named-item-64</i>
Tree	route-distinguisher-list
Description	This command creates a list of entries used to match the RD in BGP routes of specific address families.
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rd-entry [[rd](#)] *string*

Synopsis	Add a list entry for rd-entry
Context	configure policy-options route-distinguisher-list <i>named-item-64</i> rd-entry <i>string</i>
Tree	rd-entry
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[rd] *string*

Synopsis	Route distinguisher
Context	configure policy-options route-distinguisher-list <i>named-item-64</i> rd-entry <i>string</i>
Tree	rd-entry

Description	<p>This command creates an RD matching entry containing an IPv4 address or ASN and the assigned number. The following formats are supported:</p> <ul style="list-style-type: none">• <i>a.b.c.d/m:*</i> – RD in IPv4 format with a wildcard character (such as 10.0.0.0/16:*)• <i>a.b.c.d/m:n</i> – RD in IPv4 format with a specific number (such as 10.0.0.2/32:535)• <i>asn:*</i> – RD in ASN format with a wildcard character (such as 65000:*)• <i>asn:n</i> – RD in ASN format with a specific number (such as 65000:535) <p>See the "Route distinguishers" section of the <i>7705 SAR Gen 2 Layer 3 Services Guide: IES and VPRN</i> for information about Type values.</p>
String length	3 to 28
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

4.19.1 port command descriptions

port [[port-id](#)] *port*

Synopsis	Enter the port list instance
Context	configure port <i>port</i>
Tree	port
Introduced	25.3.R2
Platforms	7705 SAR-1

[port-id] *port*

Synopsis	Port ID
Context	configure port <i>port</i>
Tree	port
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

access

Synopsis	Enter the access context
Context	configure port <i>port</i> access
Tree	access
Description	Commands in this context configure egress and ingress pool policy commands.
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure port <i>port</i> access egress
Tree	egress

Description	Commands in this context specify the configuration of access egress buffer pools to determine how a CBS-reserved space is handled and the strategy for utilizing the shared buffer space.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool [**name**] *named-item*

Synopsis	Enter the pool list instance
Context	configure port <i>port</i> access egress pool <i>named-item</i>
Tree	pool
Description	Commands in this context configure pool policies for the pool instance.
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Pool name for the access port
Context	configure port <i>port</i> access egress pool <i>named-item</i>
Tree	pool
String length	1 to 32
MD-CLI default	default
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure port <i>port</i> access ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

pool [*name*] *named-item*

Synopsis	Enter the pool list instance
Context	configure <i>port</i> <i>port</i> <i>access ingress pool</i> <i>named-item</i>
Tree	<i>pool</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Pool name for the access port
Context	configure <i>port</i> <i>port</i> <i>access ingress pool</i> <i>named-item</i>
Tree	<i>pool</i>
String length	1 to 32
MD-CLI default	default
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the port
Context	configure <i>port</i> <i>port</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

connector

Synopsis	Enter the connector context
Context	configure <i>port</i> <i>port</i> <i>connector</i>
Tree	<i>connector</i>
Description	Commands in this context configure connector ports and modes.

Introduced	25.3.R2
Platforms	7705 SAR-1

breakout *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port breakout of the transceiver used in the connector
Context	configure port <i>port</i> connector breakout <i>keyword</i>
Tree	breakout
Description	<p>This command defines the port breakout of the transceiver used in the connector. Specifying the type triggers the creation of the ports that will be accessible under the connector.</p> <p>When a QSFP28 connector uses an SFP+ optical module with the QSFP28-to-SFP+/SFP28 adapter, set this command to c1-10g. This value indicates the presence of the adapter.</p> <p>For some connectors (for example, QSFPDD), there can be overlap in the breakout for different host interfaces. The same port breakout can be supported on an optical modules that uses a host interface of CAUI-4 as another optical module that uses 100GAUI-2. To distinguish from the CAUI-4 host interface, the "-au12" suffix is used on some breakout options. This is only necessary where there is overlap. In other situations, SR OS sets the host interface correctly without requiring the distinction in the breakout option.</p>
Options	c1-40g, c4-10g, c1-100g, c4-25g, c10-10g, c1-400g, c2-100g, c4-100g, c1-10g, c1-25g, c1-50g, c8-50g, c1-800g, c3-100g, c8-100g, c2-400g, c1-400g-flex, c2-400g-flex, c1-1g, c2-1g, c1-100g-au12, c2-100g-au12, c1-400g-au14, c4-100g-au11, c1-100g-au11, c1-400g-au14-flex, c8-10g
Introduced	25.3.R2
Platforms	7705 SAR-1

rs-fec-mode *keyword*

Synopsis	RS-FEC mode for the Ethernet connector
Context	configure port <i>port</i> connector rs-fec-mode <i>keyword</i>
Tree	rs-fec-mode
Description	This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet connector.

See "Forward Error Correction" in the *7705 SAR Gen 2 Interface Configuration Guide* for more information about FEC settings.

Options	cl91-514-528, cl91-514-544
Introduced	25.3.R2
Platforms	7705 SAR-1

ddm-events *boolean*

Synopsis	Enable Digital Diagnostic Monitoring (DDM) events
Context	configure port port ddm-events <i>boolean</i>
Tree	ddm-events
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

description *very-long-description*

Synopsis	Text description
Context	configure port port description <i>very-long-description</i>
Tree	description
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection

Synopsis	Enter the dist-cpu-protection context
Context	configure port port dist-cpu-protection
Tree	dist-cpu-protection
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	Distributed CPU protection policy name
Context	configure port port dist-cpu-protection policy <i>reference</i>

Tree	policy
Reference	configure system security dist-cpu-protection policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dwdm

Synopsis	Enter the dwdm context
Context	configure port port dwdm
Tree	dwdm
Description	Commands in this context configure the Dense Wavelength Division Multiplexing (DWDM) parameters for the port.
Introduced	25.3.R2
Platforms	7705 SAR-1

coherent

Synopsis	Enter the coherent context
Context	configure port port dwdm coherent
Tree	coherent
Description	Commands in this context configure the coherent optical module.
Introduced	25.3.R2
Platforms	7705 SAR-1

compatibility *keyword*

Synopsis	Optical mode and rate of operation
Context	configure port port dwdm coherent compatibility <i>keyword</i>
Tree	compatibility
Options	long-haul, metro, access, interop, interop2, interop3, long-haul-non-differential, oif-400g-zr, open-zrp-ofec1, open-zrp-ofec2
Default	long-haul
Introduced	25.3.R2
Platforms	7705 SAR-1

cpr-window-size *number*

Synopsis	Window size for the carrier phase recovery
Context	configure <i>port port</i> <i>dwdm coherent</i> cpr-window-size <i>number</i>
Tree	<i>cpr-window-size</i>
Description	This command configures the window size for the carrier phase recovery. When this command is changed, the link bounces because the receiver needs to be reconfigured.
Range	2 4 8 16 32 64
Units	symbols
Introduced	25.3.R2
Platforms	7705 SAR-1

dispersion *number*

Synopsis	Residual chromatic dispersion compensation
Context	configure <i>port port</i> <i>dwdm coherent</i> dispersion <i>number</i>
Tree	<i>dispersion</i>
Description	This command specifies the residual chromatic dispersion compensation when the coherent receiver is operating in manual dispersion control mode.
Range	-50000 to 50000
Units	picoseconds per nanometer
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Mode used to compensate for chromatic dispersion
Context	configure <i>port port</i> <i>dwdm coherent</i> mode <i>keyword</i>
Tree	<i>mode</i>
Options	automatic, manual
Default	automatic
Introduced	25.3.R2
Platforms	7705 SAR-1

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port port dwdm coherent report-alarm
Tree	report-alarm
Description	Commands in this context configure the alarms reported for the coherent module.
Introduced	25.3.R2
Platforms	7705 SAR-1

hosttx *boolean*

Synopsis	Report the host (electrical side) transmit alarm
Context	configure port port dwdm coherent report-alarm hosttx <i>boolean</i>
Tree	hosttx
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mod *boolean*

Synopsis	Report the module alarm
Context	configure port port dwdm coherent report-alarm mod <i>boolean</i>
Tree	mod
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

modflt *boolean*

Synopsis	Report the module fault alarm
Context	configure port port dwdm coherent report-alarm modflt <i>boolean</i>
Tree	modflt
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

netrx boolean

Synopsis	Report the network (optical side) receive alarm
Context	configure <i>port port</i> <i>dwdm coherent</i> <i>report-alarm netrx boolean</i>
Tree	<i>netrx</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

nettx boolean

Synopsis	Report the network (optical side) transmit alarm
Context	configure <i>port port</i> <i>dwdm coherent</i> <i>report-alarm nettx boolean</i>
Tree	<i>nettx</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

rx-los-reaction keyword

Synopsis	Reaction to an RX LOS
Context	configure <i>port port</i> <i>dwdm coherent</i> <i>rx-los-reaction keyword</i>
Tree	<i>rx-los-reaction</i>
Description	<p>This command configures the reaction to an RX LOS.</p> <p>Note: If this command is disabled for some coherent DWDM transceivers, the transceiver only reports local fault alarms when an RX LOS condition occurs; however, the port returns to service faster after the LOS condition is cleared. For these transceivers, if this command is enabled, there is better visibility of individual alarms (for example, signal-fail, local fault, no-am-lock), but the port takes longer to service after the LOS condition is cleared.</p>
Options	none, squelch
Default	squelch
Introduced	25.3.R2
Platforms	7705 SAR-1

rx-los-thresh *decimal-number*

Synopsis	Average input power LOS threshold
Context	configure port port dwdm coherent rx-los-thresh <i>decimal-number</i>
Tree	rx-los-thresh
Range	-30 to -13
Units	decibel-milliwatts
Default	-23
Introduced	25.3.R2
Platforms	7705 SAR-1

sweep

Synopsis	Enter the sweep context
Context	configure port port dwdm coherent sweep
Tree	sweep
Description	Commands in this context allow users to configure the dispersion sweep start and end values for the automatic mode of coherent control. If the user knows the approximate or theoretical residual dispersion of the link, these commands can be used to limit the range of sweeping for the automatic control mode and therefore achieve a faster link up.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the dispersion compensation range
Context	configure port port dwdm coherent sweep end <i>number</i>
Tree	end
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	2000
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the dispersion compensation range
Context	configure <i>port port</i> <i>dwdm coherent sweep start number</i>
Tree	<i>start</i>
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	-25500
Introduced	25.3.R2
Platforms	7705 SAR-1

target-power decimal-number

Synopsis	Average output power target for the port
Context	configure <i>port port</i> <i>dwdm coherent target-power decimal-number</i>
Tree	<i>target-power</i>
Range	-20 to 3
Units	decibel-milliwatts
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

frequency number

Synopsis	Center frequency for tunable DWDM optical interface
Context	configure <i>port port</i> <i>dwdm frequency number</i>
Tree	<i>frequency</i>
Description	<p>This command configures the center frequency to use for a tunable DWDM optical interface. This command can be used to specify any frequency in the C band.</p> <p>To set the DWDM frequency, the port must be a physical port and the provisioned MDA type must have DWDM tunable optics (for example, p1-100g-tun-b), or the MDA must support the option of tunable DWDM optic modules.</p> <p>This command replaces the configure port dwdm channel command.</p>
Range	191100000 to 196150000
Units	megahertz
Introduced	25.3.R2

Platforms 7705 SAR-1

ethernet

Synopsis Enter the **ethernet** context

Context **configure** port port **ethernet**

Tree **ethernet**

Description Commands in this context configure Ethernet port attributes.
This context can only be used when configuring Fast Ethernet, Gigabit, or 10-Gb Ethernet LAN ports on an appropriate MDA.

Introduced 25.3.R2

Platforms 7705 SAR-1

access

Synopsis Enter the **access** context

Context **configure** port port **ethernet access**

Tree **access**

Description Commands in this context configure Ethernet access port commands.

Introduced 25.3.R2

Platforms 7705 SAR-1

bandwidth *number*

Synopsis Administrative bandwidth assigned to Ethernet ports

Context **configure** port port **ethernet access bandwidth** *number*

Tree **bandwidth**

Range 1 to 6400000000

Units kilobps

Introduced 25.3.R2

Platforms 7705 SAR-1

booking-factor *number*

Synopsis Booking factor applied to the Ethernet port

Context	configure port <i>port</i> ethernet access booking-factor <i>number</i>
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure port <i>port</i> ethernet access egress
Tree	egress
Description	Commands in this context configure Ethernet access egress port commands.
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group [*queue-group-name*] *reference instance-id number*

Synopsis	Enter the queue-group list instance
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference instance-id number</i>
Tree	queue-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-group-name] reference

Synopsis	Queue group name
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference instance-id number</i>
Tree	queue-group
Reference	configure qos queue-group-templates egress queue-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

instance-id *number*

Synopsis	Instance ID for the egress queue group
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i>
Tree	queue-group
Range	1 to 65535
MD-CLI default	1
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Accounting policy for the Ethernet port
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
----------	------------------

Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

host-match

Synopsis	Enter the host-match context
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> host-match
Tree	host-match
Introduced	25.3.R2
Platforms	7705 SAR-1

int-dest-id [[destination-string](#)] *int-dest-id*

Synopsis	Add a list entry for int-dest-id
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> host-match int-dest-id <i>int-dest-id</i>
Tree	int-dest-id
Introduced	25.3.R2
Platforms	7705 SAR-1

[[destination-string](#)] *int-dest-id*

Synopsis	Host match destination ID
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> host-match int-dest-id <i>int-dest-id</i>
Tree	int-dest-id
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-overrides

Synopsis	Enter the queue-overrides context
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides
Tree	queue-overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

queue [queue-id] reference

Synopsis	Enter the queue list instance
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i>
Tree	queue
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-id] reference

Synopsis	Queue ID
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i>
Tree	queue
Reference	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure port <i>port</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> adaptation-rule
Tree	adaptation-rule
Introduced	25.3.R2

Platforms 7705 SAR-1

cir keyword

Synopsis Constraint used when deriving the operational CIR value

Context **configure** port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference adaptation-rule cir keyword

Tree cir

Options max, min, closest

Introduced 25.3.R2

Platforms 7705 SAR-1

pir keyword

Synopsis Constraint used when deriving the operational PIR value

Context **configure** port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference adaptation-rule pir keyword

Tree pir

Options max, min, closest

Introduced 25.3.R2

Platforms 7705 SAR-1

burst-limit (number | keyword)

Synopsis Override for the shaping burst size for the queue

Context **configure** port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference burst-limit (number | keyword)

Tree burst-limit

Range 1 to 14000000

Units bytes

Options auto

Introduced 25.3.R2

Platforms 7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	CBS for the template queue
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>access</i> <i>egress</i> <i>queue-group</i> <i>reference</i> <i>instance-id</i> <i>number</i> <i>queue-overrides</i> <i>queue</i> <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	<i>cbs</i>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>access</i> <i>egress</i> <i>queue-group</i> <i>reference</i> <i>instance-id</i> <i>number</i> <i>queue-overrides</i> <i>queue</i> <i>reference</i> drop-tail
Tree	<i>drop-tail</i>
Description	Commands in this context configure queue drop tail commands.
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>access</i> <i>egress</i> <i>queue-group</i> <i>reference</i> <i>instance-id</i> <i>number</i> <i>queue-overrides</i> <i>queue</i> <i>reference</i> drop-tail low
Tree	<i>low</i>
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure <i>port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference drop-tail low percent-reduction-from-mbs (number keyword)</i>
Tree	percent-reduction-from-mbs
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	MBS for the template queue
Context	configure <i>port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference mbs (number keyword)</i>
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure <i>port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference parent</i>
Tree	parent
Description	Commands in this context define the weight of the queue treatment by the parent scheduler that further governs the available bandwidth given to the queue, aside from the queue PIR setting.

When multiple schedulers or queues share a child status with the parent scheduler, the weight or level commands define how the queue contends with the other children for the parent bandwidth.

Introduced 25.3.R2
Platforms 7705 SAR-1

cir-weight *number*

Synopsis CIR that overrides the parent for the queue group
Context **configure** *port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference parent cir-weight number*
Tree *cir-weight*
Range 0 to 100
Introduced 25.3.R2

percent-rate

Synopsis Enter the **percent-rate** context
Context **configure** *port port ethernet access egress queue-group reference instance-id number queue-overrides queue reference percent-rate*
Tree *percent-rate*
Description Commands in this context specify percent rates.

These commands are ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the percent rate is performed under the **hs-wrr-group** command within the egress queue group template.

Notes	The following elements are part of a choice: percent-rate or rate .

parent

SynopsisEnter the **parent** context

Context**configure** [port](#) *port* [ethernet access egress queue-group](#) *reference* [instance-id](#) *number*
[scheduler-policy overrides scheduler](#) *named-item* **parent**

Tree[parent](#)

DescriptionCommands in this context are used to override the scheduler's parent weight and CIR weight. The weights apply to the associated level or CIR level configured in the applied scheduler policy.

The override weights are ignored if the scheduler does not have a parent command configured in the scheduler policy. This allows the parent of the scheduler to be removed from the scheduler policy without having to remove all of the queue group overrides. If the parent scheduler does not exist, causing the configured scheduler to be fostered on an egress port scheduler, then the override weights are ignored.

queue-group [[queue-group-name](#)] *reference*

Synopsis	Enter the queue-group list instance
Context	configure port port ethernet access ingress queue-group <i>reference</i>
Tree	queue-group
Description	<p>Commands in this context create an ingress queue group on the Ethernet port. Queue groups created on access ports are used as an alternative queue destination for SAPs.</p> <p>Queue groups can be created on both access and network oriented ports. When the port is in access mode, the queue groups must be created within the port access node. Access ingress queue groups can only be used by ingress SAP forwarding classes and only a single ingress queue group per port is supported. When the queue group is created in an ingress port context, the queue group name must be an existing ingress queue group template. Two ingress queue groups with the same name cannot be created on the same port.</p> <p>When creating a queue group, the system will attempt to allocate queue resources based on the queues defined in the queue group template. If the appropriate queue resources do not currently exist, the queue group will not be created. Ingress port queue groups do not support shared-queuing or multipoint shared queuing behavior.</p> <p>A port queue group cannot be removed from the port when a forwarding class is currently redirected to the group. All forwarding class redirections must first be removed prior to removing the queue group.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[\[queue-group-name\]](#) *reference*

Synopsis	Queue group name
----------	------------------

Context	configure port port ethernet access ingress queue-group <i>reference</i>

threshold *number*

Synopsis	SF threshold
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>crc-monitor</i> <i>signal-failure</i> <i>threshold</i> <i>number</i>
Tree	<i>threshold</i>

Range	1 to 9
Introduced	25.3.R2
Platforms	7705 SAR-1

window-size *number*

Synopsis	Sliding window size over which errors are measured
Context	configure port port ethernet crc-monitor window-size <i>number</i>
Tree	window-size
Description	This command specifies the sliding window size over which the Ethernet frames are sampled to detect SF or SD conditions. The command is used jointly with the signal-failure and the signal-degrade commands to configure the sliding window size.
Range	5 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

dampening

Synopsis	Enter the dampening context
Context	configure port port ethernet dampening
Tree	dampening
Description	Commands in this context configure Exponential Port Dampening (EPD) for the Ethernet port.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of exponential port dampening
Context	configure port port ethernet dampening admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR-1

half-life *number*

Synopsis Half-life decay time

Context **configure** *port port ethernet dampening half-life number*

Tree *half-life*

Description This command specifies the time that must pass before penalties decay to one-half the initial amount. The half-life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half-life must be less than or equal to 49 and greater than or equal to one.

Range 1 to 2000

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR-1

max-suppress-time *number*

Synopsis Maximum suppression time

Context **configure** *port port ethernet dampening max-suppress-time number*

Tree *max-suppress-time*

Description This command specifies the maximum suppression time, which is the time it can take after the physical link comes up before the worst case accumulated penalties have decayed to the reuse threshold. The maximum penalty is derived from the maximum suppression time, half life, and reuse threshold, using the following equation:
$$\text{maximum penalty} = (\text{reuse threshold})^2 \exp(-(\text{maximum suppression time} / \text{half life}))$$

The half life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half life must be less than or equal to 49 and greater than or equal to one.

Range 1 to 43200

Units seconds

Default 20

Introduced 25.3.R2

Platforms 7705 SAR-1

reuse-threshold *number*

Synopsis	Threshold which port-up state is no longer suppressed
Context	configure <i>port</i> <i>port</i> <i>ethernet dampening reuse-threshold</i> <i>number</i>
Tree	<i>reuse-threshold</i>
Description	This command specifies the threshold at which the port-up state is no longer suppressed, after the port has been in a suppressed state and the accumulated penalties decay drops below this threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress-threshold *number*

Synopsis	Threshold at which the port-up state is suppressed
Context	configure <i>port</i> <i>port</i> <i>ethernet dampening suppress-threshold</i> <i>number</i>
Tree	<i>suppress-threshold</i>
Description	This command specifies the threshold at which the port-up state is suppressed until the accumulated penalties drop below the reuse threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	2000
Introduced	25.3.R2
Platforms	7705 SAR-1

discard-rx-pause-frames *boolean*

Synopsis	Discard received pause frames
Context	configure <i>port</i> <i>port</i> <i>ethernet discard-rx-pause-frames</i> <i>boolean</i>
Tree	<i>discard-rx-pause-frames</i>
Description	When configured to true , the router discards the received pause frames, which are used for local link flow control.

When configured to **false**, pause frames are processed upon receipt, and the transmit side of the receiving port pauses its transmissions.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1q-etype *etype*

Synopsis	Ethertype expected if port encapsulation type is dot1q
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1q-etype</i> <i>etype</i>
Tree	<i>dot1q-etype</i>
Description	This command specifies the Ethertype expected when the port encapsulation type is dot1q. Dot1q encapsulation is supported only on Ethernet interfaces.
Default	33024
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1x

Synopsis	Enter the dot1x context
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i>
Tree	<i>dot1x</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of dot1x packet extraction to CPM
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

macsec

Synopsis	Enter the macsec context
Context	configure <i>port port</i> <i>ethernet dot1x macsec</i>
Tree	<i>macsec</i>
Description	Commands in this context configure Media Access Control Security (MACsec) under the port.
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-mac-policy *reference*

Synopsis	MAC policy excluded from MACsec encryption
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-mac-policy reference</i>
Tree	<i>exclude-mac-policy</i>
Reference	configure <i>macsec mac-policy number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-protocol

Synopsis	Enter the exclude-protocol context
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-protocol</i>
Tree	<i>exclude-protocol</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

cdp *boolean*

Synopsis	Disable MACsec for all packets on the link for CDP
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-protocol cdp boolean</i>
Tree	<i>cdp</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

eapol-start *boolean*

Synopsis	Disable MACsec for all packets on the link for EAPOL
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-protocol eapol-start boolean</i>
Tree	eapol-start
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

efm-oam *boolean*

Synopsis	Disable MACsec for all packets on the link for EFM-OAM
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-protocol efm-oam boolean</i>
Tree	efm-oam
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-cfm *boolean*

Synopsis	Disable MACsec for all packets on the link for ETH-CFM
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-protocol eth-cfm boolean</i>
Tree	eth-cfm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP *boolean*

Synopsis	Disable MACsec for all packets on the link for LACP
Context	configure <i>port port</i> <i>ethernet dot1x macsec exclude-protocol lacp boolean</i>
Tree	lacp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lldp *boolean*

Synopsis	Disable MACsec for all packets on the link for LLDP
Context	configure port port ethernet dot1x macsec exclude-protocol lldp <i>boolean</i>
Tree	lldp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ptp *boolean*

Synopsis	Disable MACsec for all packets on the link for PTP
Context	configure port port ethernet dot1x macsec exclude-protocol ptp <i>boolean</i>
Tree	ptp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ubfd *boolean*

Synopsis	Disable MACsec for all packets on the link for uBFD
Context	configure port port ethernet dot1x macsec exclude-protocol ubfd <i>boolean</i>
Tree	ubfd
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rx-must-be-encrypted *boolean*

Synopsis	Drop all port traffic that is not MACsec-secured
Context	configure port port ethernet dot1x macsec rx-must-be-encrypted <i>boolean</i>
Tree	rx-must-be-encrypted
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sub-port [[sub-port-id](#)] *number*

Synopsis	Enter the sub-port list instance
Context	configure port <i>port</i> ethernet dot1x macsec sub-port <i>number</i>
Tree	sub-port
Introduced	25.3.R2
Platforms	7705 SAR-1

[sub-port-id] *number*

Synopsis	Sub-port ID
Context	configure port <i>port</i> ethernet dot1x macsec sub-port <i>number</i>
Tree	sub-port
Range	1 to 1023
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of MACsec on the port
Context	configure port <i>port</i> ethernet dot1x macsec sub-port <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-name *reference*

Synopsis	Connectivity association linked to the MACsec sub-port
Context	configure port <i>port</i> ethernet dot1x macsec sub-port <i>number</i> ca-name <i>reference</i>
Tree	ca-name
Reference	configure macsec connectivity-association <i>string</i>
Introduced	25.3.R2

Platforms 7705 SAR-1

eapol-destination-address *mac-address*

Synopsis EAPOL destination MAC address

Context **configure** *port port ethernet dot1x macsec sub-port number eapol-destination-address mac-address*

Tree [eapol-destination-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

encap-match

Synopsis Enter the **encap-match** context

Context **configure** *port port ethernet dot1x macsec sub-port number encap-match*

Tree [encap-match](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all-match *boolean*

Synopsis Match and encrypt all traffic patterns

Context **configure** *port port ethernet dot1x macsec sub-port number encap-match all-match boolean*

Tree [all-match](#)

Default true

Notes The following elements are part of a choice: **all-match**, **double-tag**, **single-tag**, or **untagged**.

Introduced 25.3.R2

Platforms 7705 SAR-1

double-tag *double-vlan-encap*

Synopsis QinQ double tag traffic pattern to match

Context **configure** *port port ethernet dot1x macsec sub-port number encap-match double-tag double-vlan-encap*

Tree	double-tag
String length	1 to 11
Notes	The following elements are part of a choice: all-match , double-tag , single-tag , or untagged .
Introduced	25.3.R2
Platforms	7705 SAR-1

single-tag *single-vlan-encap*

Synopsis	Dot1q single tag traffic pattern to match
Context	configure port port ethernet dot1x macsec sub-port number encap-match single-tag single-vlan-encap
Tree	single-tag
String length	1 to 11
Notes	The following elements are part of a choice: all-match , double-tag , single-tag , or untagged .
Introduced	25.3.R2
Platforms	7705 SAR-1

untagged *boolean*

Synopsis	Match and encrypt untagged traffic only
Context	configure port port ethernet dot1x macsec sub-port number encap-match untagged boolean
Tree	untagged
Notes	The following elements are part of a choice: all-match , double-tag , single-tag , or untagged .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-peers *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of peers supported on the port
----------	---

Context	configure port <i>port</i> ethernet dot1x macsec sub-port <i>number</i> max-peers <i>number</i>
Tree	max-peers
Range	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

max-authentication-requests *number*

Synopsis	Maximum number of RADIUS retries
Context	configure port <i>port</i> ethernet dot1x max-authentication-requests <i>number</i>
Tree	max-authentication-requests
Range	1 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

per-host-authentication

Synopsis	Enter the per-host-authentication context
Context	configure port <i>port</i> ethernet dot1x per-host-authentication
Tree	per-host-authentication
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of per-host authentication
Context	configure port <i>port</i> ethernet dot1x per-host-authentication admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allowed-source-macs

Synopsis	Enter the allowed-source-macs context
Context	configure port port ethernet dot1x per-host-authentication allowed-source-macs
Tree	allowed-source-macs
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address [[mac](#)] *mac-address*

Synopsis	Add a list entry for mac-address
Context	configure port port ethernet dot1x per-host-authentication allowed-source-macs mac-address <i>mac-address</i>
Tree	mac-address
Introduced	25.3.R2
Platforms	7705 SAR-1

[[mac](#)] *mac-address*

Synopsis	Source MAC address of a host selected for authentication
Context	configure port port ethernet dot1x per-host-authentication allowed-source-macs mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authenticator-init *boolean*

Synopsis	Initiate per-host authentication
Context	configure port port ethernet dot1x per-host-authentication authenticator-init <i>boolean</i>
Tree	authenticator-init
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

port-control *keyword*

Synopsis	802.1x authentication mode
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> port-control <i>keyword</i>
Tree	<i>port-control</i>
Options	force-unauthorized, auto, force-authorized
Default	force-authorized
Introduced	25.3.R2
Platforms	7705 SAR-1

quiet-period *number*

Synopsis	Time between two sessions when no EAPOL frames are sent
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> quiet-period <i>number</i>
Tree	<i>quiet-period</i>
Range	1 to 3600
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-server-policy *reference*

Synopsis	RADIUS server policy name
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> radius-server-policy <i>reference</i>
Tree	<i>radius-server-policy</i>
Reference	configure <i>aaa</i> <i>radius</i> <i>server-policy</i> <i>named-item</i>
Notes	The following elements are part of a choice: radius-server-policy or (radius-server-policy-acct and radius-server-policy-auth).
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-server-policy-acct *reference*

Synopsis	RADIUS server policy name for accounting
----------	--

Context	configure port <i>port</i> ethernet dot1x radius-server-policy-acct <i>reference</i>
Tree	radius-server-policy-acct
Reference	configure aaa radius server-policy <i>named-item</i>
Notes	The following elements are part of a choice: radius-server-policy or (radius-server-policy-acct and radius-server-policy-auth).
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-server-policy-auth *reference*

Synopsis	RADIUS server policy name for authentication
Context	configure port <i>port</i> ethernet dot1x radius-server-policy-auth <i>reference</i>
Tree	radius-server-policy-auth
Reference	configure aaa radius server-policy <i>named-item</i>
Notes	The following elements are part of a choice: radius-server-policy or (radius-server-policy-acct and radius-server-policy-auth).
Introduced	25.3.R2
Platforms	7705 SAR-1

re-authentication

Synopsis	Enable the re-authentication context
Context	configure port <i>port</i> ethernet dot1x re-authentication
Tree	re-authentication
Introduced	25.3.R2
Platforms	7705 SAR-1

period *number*

Synopsis	Delay before re-authentication is performed
Context	configure port <i>port</i> ethernet dot1x re-authentication period <i>number</i>
Tree	period
Range	1 to 9000
Units	seconds
Default	3600

Introduced	25.3.R2
Platforms	7705 SAR-1

server-timeout *number*

Synopsis	Wait time for a response from the RADIUS server
Context	configure port port ethernet dot1x server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 300
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

supplicant-timeout *number*

Synopsis	Wait time for a response to EAPOL messages
Context	configure port port ethernet dot1x supplicant-timeout <i>number</i>
Tree	supplicant-timeout
Range	1 to 300
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-period *number*

Synopsis	Time after which a new EAPOL request message is sent
Context	configure port port ethernet dot1x transmit-period <i>number</i>
Tree	transmit-period
Range	1 to 3600
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-dot1q *boolean*

Synopsis	Enable dot1x tunneling for 802.1q tagged packets
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> tunnel-dot1q <i>boolean</i>
Tree	tunnel-dot1q
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-qinq *boolean*

Synopsis	Enable dot1x tunneling for QinQ tagged packets
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> tunnel-qinq <i>boolean</i>
Tree	tunnel-qinq
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tunneling *boolean*

Synopsis	Allow tunneling of untagged 802.1x frames
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>dot1x</i> tunneling <i>boolean</i>
Tree	tunneling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

down-on-internal-error

Synopsis	Enable the down-on-internal-error context
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> down-on-internal-error
Tree	down-on-internal-error
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-laser *keyword*

Synopsis	Remote laser state on internal MAC transmit error
Context	configure <i>port port</i> <i>ethernet down-on-internal-error tx-laser keyword</i>
Tree	<i>tx-laser</i>
Options	off, on
Default	on
Introduced	25.3.R2
Platforms	7705 SAR-1

duplex *keyword*

Synopsis	Duplex type for the fast Ethernet port
Context	configure <i>port port</i> <i>ethernet duplex keyword</i>
Tree	<i>duplex</i>
Description	This command configures the duplex of a Fast Ethernet port when autonegotiation is disabled. This command setting is ignored if autonegotiation is enabled for the port.
Options	full, half
Introduced	25.3.R2
Platforms	7705 SAR-1

efm-oam

Synopsis	Enter the efm-oam context
Context	configure <i>port port</i> <i>ethernet efm-oam</i>
Tree	<i>efm-oam</i>
Description	Commands in this context configure EFM-OAM attributes.
Introduced	25.3.R2
Platforms	7705 SAR-1

accept-remote-loopback *boolean*

Synopsis	Enable reactions to loopback control OAMPDUs from peers
Context	configure <i>port port</i> <i>ethernet efm-oam accept-remote-loopback boolean</i>

Tree	accept-remote-loopback
Description	When configured to true , the router enables reactions to loopback control OAM PDUs from peers.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the EFM OAM operation
Context	configure port port ethernet efm-oam admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time *number*

Synopsis	Wait time before protocol returns to operational state
Context	configure port port ethernet efm-oam hold-time <i>number</i>
Tree	hold-time
Description	<p>This command specifies the time the EFM-OAM protocol waits before going back to the operational state after leaving the operational state. The hold time does not apply if the EFM-OAM protocol moved from the operational state to link fault.</p> <p>A hold-time value of zero indicates that there is no delay in transitioning to the operational state. A non-zero value causes the EFM-OAM protocol to attempt to negotiate with a peer if possible, but it remains in the send-local-remote-ok state until the hold time has expired if negotiation is successful.</p> <p>If the EFM-OAM protocol is administratively disabled while it is in the operational state and then re-enabled when a non-zero hold time is configured, EFM-OAM attempts transition to the operational state immediately.</p>
Range	1 to 50
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-efm-state *boolean*

Synopsis	Suppress port state changes for EFM-OAM faults
Context	configure <i>port port</i> <i>ethernet efm-oam ignore-efm-state boolean</i>
Tree	<i>ignore-efm-state</i>
Description	<p>When configured to true, the ETH-OAM protocol does not impact the state of the port when there is a failure in the protocol state machine (discovery, configuration, timeout, loops, and so on). There is only a protocol warning message on the port.</p> <p>When configured to false, the port state is affected by any existing EFM-OAM protocol fault condition.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Mode of OAM operation for the Ethernet port
Context	configure <i>port port</i> <i>ethernet efm-oam mode keyword</i>
Tree	<i>mode</i>
Description	<p>This command configures the mode of OAM operation for the Ethernet port.</p> <p>These two modes differ in that active mode causes the port to continually send out EFM-OAM information PDUs while passive mode waits for the peer to initiate the negotiation process. A passive mode port cannot initiate monitoring activities (such as loopback) with the peer.</p>
Options	<p>passive – Rely on peer to begin negotiation and monitoring</p> <p>active – Provide capability to begin negotiation and monitoring</p>
Default	active
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Multiplier for the transmit interval of OAMPDUs
Context	configure <i>port port</i> <i>ethernet efm-oam multiplier number</i>
Tree	<i>multiplier</i>
Description	This command configures the multiplier for the transmit interval to set the local link down timer.

Range	2 to 5
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-rdi-rx

Synopsis	Enter the peer-rdi-rx context
Context	configure port port ethernet efm-oam peer-rdi-rx
Tree	peer-rdi-rx
Description	Commands in this context allow an action to be configured for the various event conditions that can be received from a peer under the context of the EFM-OAM protocol.
Introduced	25.3.R2
Platforms	7705 SAR-1

critical-event *keyword*

Synopsis	Action taken after receipt of critical event flag
Context	configure port port ethernet efm-oam peer-rdi-rx critical-event <i>keyword</i>
Tree	critical-event
Description	This command defines how to react to the reception of a critical event flag field set in the informational OAMPDU.
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	25.3.R2
Platforms	7705 SAR-1

dying-gasp *keyword*

Synopsis	Action taken after receipt of dying gasp flag
Context	configure port port ethernet efm-oam peer-rdi-rx dying-gasp <i>keyword</i>
Tree	dying-gasp
Description	This command defines how to react to the reception of a dying gasp flag field set in the informational OAMPDU.
Options	log-only, port-out-of-service
Default	port-out-of-service

Introduced	25.3.R2
Platforms	7705 SAR-1

event-notification *keyword*

Synopsis	Action taken after receipt of event TLVs
Context	configure port port ethernet efm-oam peer-rdi-rx event-notification <i>keyword</i>
Tree	event-notification
Description	This command defines the reaction to the reception of event TLVs contained in the event notification OAMPDU. The event TLVs contained in the event notification OAMPDU are analyzed to determine if the peer has crossed the error threshold for the window. The analysis does not consider any local SDs or SF thresholds. The analysis is based solely on the information received from the peer. The analysis is performed on all event TLVs contained in the event notification OAMPDU without regard for the support of specific error counters. In the case of symbol errors, a threshold below the error rate can be used to return the port to service.
Options	log-only, port-out-of-service
Default	log-only
Introduced	25.3.R2
Platforms	7705 SAR-1

link-fault *keyword*

Synopsis	Action taken after receipt of link fault flag
Context	configure port port ethernet efm-oam peer-rdi-rx link-fault <i>keyword</i>
Tree	link-fault
Description	This command defines how to react to the reception of a link fault flag set in the informational PDU from the peer.
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-loopback-forward-non-efm-frames *boolean*

Synopsis	Allow the forwarding of non-EFM frames on the port
Context	configure port port ethernet efm-oam remote-loopback-forward-non-efm-frames <i>boolean</i>

Tree	remote-loopback-forward-non-efm-frames
Description	When configured to true , the router forwards non-EFM traffic that is received from the EFM peer when in remote loopback state.
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	Transmit interval of OAMPDUs
Context	configure port <i>port</i> ethernet efm-oam transmit-interval <i>number</i>
Tree	transmit-interval
Range	1 to 600
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

trigger-fault *keyword*

Synopsis	Flag setting in the information OAMPDU
Context	configure port <i>port</i> ethernet efm-oam trigger-fault <i>keyword</i>
Tree	trigger-fault
Description	This command configures the appropriate flag field in the information OAMPDU, bursting three consecutive packets during the off cycle. If the local port state is operational, this command changes the local port state to "Link Up". If the local port state is not operational, this configuration is installed as an EFM reason to prevent the port from returning to an up operational state. This command can be used as a precursor to administratively disabling a port. This terminates the peering relationship without having to wait for protocol timeouts, assuming the peer supports the necessary action when receiving the dying gasp or critical event flag setting.
Options	dying-gasp, critical-event
Introduced	25.3.R2
Platforms	7705 SAR-1

tunneling *boolean*

Synopsis	Enable EFM-OAM PDU tunneling
Context	configure <i>port port ethernet efm-oam tunneling boolean</i>
Tree	<i>tunneling</i>
Description	<p>When configured to true, the router enables EFM-OAM PDU tunneling. Enabling tunneling allows a port mode Epipe SAP to pass OAM frames through the pipe to the far end.</p> <p>When configured to false, tunneling is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure <i>port port ethernet egress</i>
Tree	<i>egress</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-bn-rate-changes *boolean*

Synopsis	Allow rate changes in ETH-BN messages on port-based MEP
Context	configure <i>port port ethernet egress eth-bn-rate-changes boolean</i>
Tree	<i>eth-bn-rate-changes</i>
Description	<p>When configured to true, this command allows rate changes received in ETH-BN messages on a port-based MEP to update the egress rate used on the port.</p> <p>This command is not supported for all MDA types.</p> <p>When configured to false, rate changes in ETH-BN messages are denied.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port-scheduler-policy

Synopsis	Enter the port-scheduler-policy context
Context	configure port port ethernet egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enable the overrides context
Context	configure port port ethernet egress port-scheduler-policy overrides
Tree	overrides
Description	Commands in this context configure egress scheduler overrides.
Introduced	25.3.R2
Platforms	7705 SAR-1

level [priority-level] number

Synopsis	Enter the level list instance
Context	configure port port ethernet egress port-scheduler-policy overrides level number
Tree	level
Introduced	25.3.R2
Platforms	7705 SAR-1

[priority-level] number

Synopsis	Port priority level to be overridden
Context	configure port port ethernet egress port-scheduler-policy overrides level number
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure port port ethernet egress port-scheduler-policy overrides level <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR
Context	configure port port ethernet egress port-scheduler-policy overrides level <i>number</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR
Context	configure port port ethernet egress port-scheduler-policy overrides level <i>number</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

max-rate

Synopsis	Enter the max-rate context
----------	-----------------------------------

Context	configure port <i>port</i> ethernet egress port-scheduler-policy overrides max-rate
Tree	max-rate
Description	Commands in this context override the max-rate command found in the port scheduler policy associated with the port. When a maximum rate is defined at the port or channel level, the port scheduler's policy max-rate command is ignored.
Introduced	25.3.R2
Platforms	7705 SAR-1

rate (*number* | *keyword*)

Synopsis	PIR rate
Context	configure port <i>port</i> ethernet egress port-scheduler-policy overrides max-rate rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Egress scheduler policy name
Context	configure port <i>port</i> ethernet egress port-scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos port-scheduler-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

rate *number*

Synopsis	Rate of egress traffic
Context	configure port <i>port</i> ethernet egress rate <i>number</i>
Tree	rate

Description	This command configures the rate of traffic leaving the network. An event log is generated each time the egress rate is modified unless the port is part of a LAG. This command is not supported for all MDA types.
Max. range	-2147483648 to 2147483647
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

encap-type *keyword*

Synopsis	Encapsulation method for the Ethernet port
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> encap-type <i>keyword</i>
Tree	<i>encap-type</i>
Options	null, dot1q, qinq
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> eth-cfm
Tree	<i>eth-cfm</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

mep *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number*

Synopsis	Enter the mep list instance
Context	configure <i>port</i> <i>port</i> <i>ethernet</i> <i>eth-cfm</i> mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i>
Tree	<i>mep</i>
Description	Commands in this context provision an 802.1ag maintenance endpoint (MEP). Port-based MEPs and LAG-based MEPs are mutually exclusive. If a LAG member port includes a MEP, the configuration of a MEP on the LAG fails. If a LAG includes the configuration of a MEP, the configuration of MEPs on the LAG member ports fails.
Introduced	25.3.R2

Platforms 7705 SAR-1

md-admin-name *reference*

Synopsis Maintenance Domain (MD) name

Context **configure** port port ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id number

Tree mep

Reference **configure** eth-cfm domain admin-name

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

ma-admin-name *reference*

Synopsis Maintenance Association (MA) name

Context **configure** port port ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id number

Tree mep

Reference **configure** eth-cfm domain admin-name association admin-name

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

mep-id *number*

Synopsis Maintenance Endpoint (MEP) ID

Context **configure** port port ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id number

Tree mep

Range 1 to 8191

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ais

Synopsis	Enable the ais context
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais
Tree	ais
Introduced	25.3.R2
Platforms	7705 SAR-1

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais client-meg-level <i>number</i>
Tree	client-meg-level
Range	1 to 7
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interface-support <i>boolean</i>

Tree	interface-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Transmission interval for AIS messages
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interval <i>number</i>
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7

Introduced	25.3.R2
Platforms	7705 SAR-1

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2

Platforms 7705 SAR-1

ccm boolean

Synopsis Generate CCM messages

Context **configure** [port](#) [port](#) [ethernet](#) [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **ccm** *boolean*

eth-bn

Synopsis Enter the **eth-bn** context

Context **configure** [port](#) [port](#) [ethernet](#) [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-bn](#)

Tree [eth-bn](#)

Description Commands in this context configure Ethernet Bandwidth Notification (ETH-BN) message handling.

Introduced 25.3.R2

Platforms 7705 SAR-1

receive *boolean*

Synopsis Enable the reception and processing of ETH-BN messages

Context **configure** [port](#) [port](#) [ethernet](#) [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-bn](#) [receive](#) *boolean*

Tree [receive](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

rx-update-pacing *number*

Synopsis Pace of messages to and from ETH-CFM to QoS subsystems

Context	configure <i>port port ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-bn rx-update-pacing number</i>
Tree	rx-update-pacing
Range	1 to 600
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-test

Synopsis	Enable the eth-test context
Context	configure <i>port port ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR-1

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure <i>port port ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-pattern

Synopsis	Enter the test-pattern context
Context	configure <i>port port ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</i>

Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR-1

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR-1

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> facility-fault <i>boolean</i>
Tree	facility-fault
Description	When configured to true , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition.

	When configured to false , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure port port ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure port port ethernet hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

down number

Synopsis	Delay after interface goes from up state to down state
Context	configure <i>port port</i> <i>ethernet</i> <i>hold-time</i> <i>down</i> <i>number</i>
Tree	<i>down</i>
Description	<p>This command specifies the delay to notify the upper layers after an interface transitions from an up state to a down state.</p> <p>When an interface transitions from an up state to a down state, it is immediately advertised to the rest of the system if the down interval is zero, but if the down interval is greater than zero, interface down transitions are not advertised to upper layers until the down interval has expired.</p>
Range	1 to 3600000
Introduced	25.3.R2
Platforms	7705 SAR-1

units keyword

Synopsis	Hold time units
Context	configure <i>port port</i> <i>ethernet</i> <i>hold-time</i> <i>units</i> <i>keyword</i>
Tree	<i>units</i>
Options	seconds, centiseconds
Default	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

up number

Synopsis	Delay after interface goes from down state to up state
Context	configure <i>port port</i> <i>ethernet</i> <i>hold-time</i> <i>up</i> <i>number</i>
Tree	<i>up</i>
Description	<p>This command specifies the delay to notify the upper layers after an interface transitions from a down state to an up state.</p> <p>When an interface transitions from a down state to an up state, it is immediately advertised as up to the rest of the system if the up interval is zero, but if the up interval is greater than zero, up transitions are not advertised until the up interval has expired.</p>
Range	1 to 3600000
Introduced	25.3.R2

Platforms 7705 SAR-1

ingress

Synopsis Enter the **ingress** context
Context **configure** port port ethernet ingress
Tree ingress
Introduced 25.3.R2
Platforms 7705 SAR-1

rate number

Synopsis Maximum ingress bandwidth
Context **configure** port port ethernet ingress rate number
Tree rate
Max. range -2147483648 to 2147483647
Units megabps
Introduced 25.3.R2
Platforms 7705 SAR-1

lACP-tunnel boolean

Synopsis Enable LACP packet tunneling for the Ethernet port
Context **configure** port port ethernet lACP-tunnel boolean
Tree lACP-tunnel
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

Ildp

Synopsis Enter the **Ildp** context
Context **configure** port port ethernet Ildp
Tree Ildp

Description	Commands in this context configure the Link Layer Discovery Protocol (LLDP) on the port.
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-mac [[mac-type](#)] *keyword*

Synopsis	Enter the dest-mac list instance
Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword</i>
Tree	dest-mac
Description	Commands in this context configure destination MAC address commands.
Introduced	25.3.R2
Platforms	7705 SAR-1

[mac-type] *keyword*

Synopsis	Destination MAC address type
Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword</i>
Tree	dest-mac
Options	nearest-bridge – Use the nearest bridge nearest-non-tpmr – Use nearest non-Two-Port MAC Relay (TPMR) nearest-customer – Use the nearest customer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

notification *boolean*

Synopsis	Enable LLDP notifications
Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword</i> notification <i>boolean</i>
Tree	notification
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port-id-subtype keyword

Synopsis	Port ID TLV encoding method for transmission to peer
Context	configure port port ethernet lldp dest-mac <i>keyword</i> port-id-subtype <i>keyword</i>
Tree	port-id-subtype
Options	tx-if-alias, tx-if-name, tx-local
Default	tx-local
Introduced	25.3.R2
Platforms	7705 SAR-1

receive boolean

Synopsis	Enable LLDP agent to receive but not transmit frames
Context	configure port port ethernet lldp dest-mac <i>keyword</i> receive <i>boolean</i>
Tree	receive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit boolean

Synopsis	Enable the LLDP agent to transmit frames
Context	configure port port ethernet lldp dest-mac <i>keyword</i> transmit <i>boolean</i>
Tree	transmit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-nearest-bridge boolean

Synopsis	Allow the received LLDP packets to be tunneled
Context	configure port port ethernet lldp dest-mac <i>keyword</i> tunnel-nearest-bridge <i>boolean</i>
Tree	tunnel-nearest-bridge
Description	When configured to true , the system allows LLDP packets received on the port with the destination address of the nearest bridge to be tunneled without being intercepted on the local port.

When configured to **false**, the system disables nearest bridge tunneling.

The **nearest-bridge** option in the **configure port ethernet lldp dest-mac mac-type** command must be disabled for tunneling to occur. This is applicable to NULL SAP Epipe and VPLS services only.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-nearest-customer *boolean*

Synopsis	Enable the nearest customer tunneling
Context	configure <i>port</i> <i>port</i> <i>ethernet lldp dest-mac</i> <i>keyword</i> <i>tunnel-nearest-customer</i> <i>boolean</i>
Tree	<i>tunnel-nearest-customer</i>
Description	When configured to true , the system allows LLDP packets received on the port with the destination address of the nearest customer to be tunneled without being intercepted on the local port. When configured to false , the system disables nearest customer tunneling.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-nearest-non-tpmr *boolean*

Synopsis	Enable the nearest non-TPMR tunneling
Context	configure <i>port</i> <i>port</i> <i>ethernet lldp dest-mac</i> <i>keyword</i> <i>tunnel-nearest-non-tpmr</i> <i>boolean</i>
Tree	<i>tunnel-nearest-non-tpmr</i>
Description	When configured to true , the system allows LLDP packets received on the port with the destination address of the nearest non-TPMR to be tunneled without being intercepted on the local port. When configured to false , the system disables nearest non-TPMR tunneling.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-mgmt-address [*mgmt-address-system-type*] *keyword*

Synopsis	Enter the tx-mgmt-address list instance
----------	--

Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword tx-mgmt-address</i> <i>keyword</i>
Tree	tx-mgmt-address
Introduced	25.3.R2
Platforms	7705 SAR-1

[mgmt-address-system-type] keyword

Synopsis	Management address to transmit
Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword tx-mgmt-address</i> <i>keyword</i>
Tree	tx-mgmt-address
Options	oob, system, system-ipv6, oob-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of transmitting management address
Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword tx-mgmt-address</i> <i>keyword admin-state</i> <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-tlvs

Synopsis	Enter the tx-tlvs context
Context	configure port <i>port</i> ethernet lldp dest-mac <i>keyword tx-tlvs</i>
Tree	tx-tlvs
Introduced	25.3.R2
Platforms	7705 SAR-1

port-desc *boolean*

Synopsis	Transmit port description TLVs
Context	configure port port ethernet lldp dest-mac <i>keyword</i> tx-tlvs port-desc <i>boolean</i>
Tree	port-desc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sys-cap *boolean*

Synopsis	Transmit system capabilities TLVs
Context	configure port port ethernet lldp dest-mac <i>keyword</i> tx-tlvs sys-cap <i>boolean</i>
Tree	sys-cap
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sys-desc *boolean*

Synopsis	Transmit system description TLVs
Context	configure port port ethernet lldp dest-mac <i>keyword</i> tx-tlvs sys-desc <i>boolean</i>
Tree	sys-desc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sys-name *boolean*

Synopsis	Transmit system name TLVs
Context	configure port port ethernet lldp dest-mac <i>keyword</i> tx-tlvs sys-name <i>boolean</i>
Tree	sys-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-algorithm *keyword*

Synopsis	Load balancing algorithm for the Ethernet port
Context	configure port <i>port</i> ethernet load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address of the Ethernet port
Context	configure port <i>port</i> ethernet mac-address <i>mac-address</i>
Tree	mac-address
Description	<p>This command specifies the MAC address of the Ethernet port. Allowed values are any non-broadcast, non-multicast MAC, and non-IEEE reserved MAC addresses.</p> <p>The default value indicates that an operation MAC address is to be assigned from the chassis MAC address pool.</p>
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	7705 SAR-1

min-frame-length *number*

Synopsis	Minimum transmitted frame length
Context	configure port <i>port</i> ethernet min-frame-length <i>number</i>
Tree	min-frame-length
Description	This command configures the minimum transmitted frame length.
Range	64 68 72
Units	bytes
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Operation mode for the Ethernet port
Context	configure <i>port port ethernet mode keyword</i>
Tree	<i>mode</i>
Options	access, network, hybrid
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu *number*

Synopsis	Maximum payload MTU size for the Ethernet port
Context	configure <i>port port ethernet mtu number</i>
Tree	<i>mtu</i>
Description	<p>This command configures the maximum payload MTU size for the Ethernet port. This command indirectly defines the largest physical packet the port can transmit or the far-end Ethernet port can receive. Packets that cannot be fragmented at egress and exceed the MTU size are discarded.</p> <p>The MTU size includes the destination MAC address, source MAC address, the Ethertype or length field, and the complete Ethernet payload. This value does not include the preamble, start of frame delimiter, or the trailing CRC.</p>
Range	512 to 9800
Units	bytes
Introduced	25.3.R2

network

Synopsis	Enter the network context
Context	configure <i>port port ethernet network</i>
Tree	<i>network</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Accounting policy that applies to the network port
----------	--

Context	configure port <i>port</i> ethernet network accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port <i>port</i> ethernet network collect-stats <i>boolean</i>
Tree	collect-stats
Description	<p>When configured to true, this command enables the collection of accounting and statistical data for the network interface. When applying accounting policies, by default the data is collected in the appropriate records and written to the designated billing file.</p> <p>When configured to false, the statistics are still accumulated by the XCM or IOM cards. However, the CPU does not obtain the results and write them to the billing file.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure port <i>port</i> ethernet network egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group [[queue-group-name](#)] *reference instance-id number*

Synopsis	Enter the queue-group list instance
Context	configure port <i>port</i> ethernet network egress queue-group <i>reference instance-id number</i>
Tree	queue-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-group-name] reference

Synopsis	Queue group name
Context	configure port port ethernet network egress queue-group reference instance-id number
Tree	queue-group
Reference	configure qos queue-group-templates egress queue-group named-item
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

instance-id number

Synopsis	Instance ID for the egress queue group
Context	configure port port ethernet network egress queue-group reference instance-id number
Tree	queue-group
Range	1 to 65535
MD-CLI default	1
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy reference

Synopsis	Accounting policy for the Ethernet port
Context	configure port port ethernet network egress queue-group reference instance-id number accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats boolean

Synopsis	Collect accounting and statistical data
----------	---

Context	configure port <i>port</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure port <i>port</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

policer-control-policy *reference*

Synopsis	Policer control policy for the QoS egress queue group
Context	configure port <i>port</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> policer-control-policy <i>reference</i>
Tree	policer-control-policy
Reference	configure qos policer-control-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-overrides

Synopsis	Enter the queue-overrides context
Context	configure port <i>port</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides
Tree	queue-overrides
Description	Commands in this context define queue command overrides for each queue within the queue group.
Introduced	25.3.R2

Platforms 7705 SAR-1

queue *[queue-id] reference*

Synopsis	Enter the queue list instance
Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference</i>
Tree	<i>queue</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-id] *reference*

Synopsis	Queue ID
Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference</i>
Tree	<i>queue</i>
Reference	configure <i>qos queue-group-templates egress queue-group named-item queue number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference adaptation-rule</i>
Tree	<i>adaptation-rule</i>
Description	<p>Commands in this context specify the method used by the system to derive the operational CIR and PIR settings when the queue is provisioned in hardware. For the CIR and PIR commands individually, the system attempts to find the best operational rate depending on the defined constraint.</p> <p>Commands in this context are ignored for egress HSQ queue group queues that are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the adaptation rule is performed under the hs-wrr-group command within the egress queue group template.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	CBS for the template queue
Context	configure port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference cbs (number keyword)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
----------	------------------------------------

Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference drop-tail</i>
Tree	drop-tail
Description	Commands in this context configure queue drop tail commands.
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference drop-tail low</i>
Tree	low
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference drop-tail low percent-reduction-from-mbs (number keyword)</i>
Tree	percent-reduction-from-mbs
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	MBS for the template queue
Context	configure <i>port</i> <i>port</i> <i>ethernet network egress queue-group reference instance-id number queue-overrides queue reference mbs (number keyword)</i>
Tree	<i>mbs</i>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure <i>port</i> <i>port</i> <i>ethernet network egress queue-group reference instance-id number queue-overrides queue reference percent-rate</i>
Tree	<i>percent-rate</i>
Description	<p>Commands in this context specify percent rates.</p> <p>This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the percent rate is performed under the hs-wrr-group command within the egress queue group template.</p>
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir *decimal-number*

Synopsis	CIR for the queue
Context	configure <i>port</i> <i>port</i> <i>ethernet network egress queue-group reference instance-id number queue-overrides queue reference percent-rate cir decimal-number</i>
Tree	<i>cir</i>
Range	0.00 to 100.00
Units	percent
Introduced	25.3.R2

Platforms7705 SAR-1

pir decimal-number

Synopsis	PIR for the queue
Context	configure port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference rate
Tree	rate
Description	<p>Commands in this context specify the administrative PIR and CIR for the queue. Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.</p> <p>This command can be executed at anytime, altering the PIR and CIR rates for all queues created through the association of the SAP egress QoS policy with the queue ID.</p> <p>This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the rate is performed under the hs-wrr-group command within the egress queue group template.</p>
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (number | keyword)

Synopsis	CIR for the queue
----------	-------------------

Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference rate cir (number keyword)</i>
Tree	<i>cir</i>
Description	<p>This command specifies the administrative CIR used by the queue. When the rate command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.</p> <p>The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.</p> <p>The CIR can be used by the queue's parent cir-level and cir-weight commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.</p>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number | keyword*)

Synopsis	PIR for the queue
Context	configure <i>port port ethernet network egress queue-group reference instance-id number queue-overrides queue reference rate pir (number keyword)</i>
Tree	<i>pir</i>
Description	<p>This command specifies the administrative PIR used by the queue. When the rate command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's adaptation-rule commands and the actual hardware where the queue is provisioned.</p> <p>The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.</p>
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure port <i>port</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy
Tree	scheduler-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Scheduler policy for the QoS egress queue group
Context	configure port <i>port</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy <i>policy-name</i> <i>reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>named-item</i>
Introduced	25.3.R2

Context	configure port <i>port</i> ethernet network egress queue-policy <i>reference</i>
Tree	queue-policy
Reference	configure qos network-queue <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

qinq-etype *etype*

Synopsis	Ethertype for QinQ encapsulation
Context	configure port <i>port</i> ethernet qinq-etype <i>etype</i>
Tree	qinq-etype
Default	33024
Introduced	25.3.R2

Platforms 7705 SAR-1

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port port ethernet report-alarm
Tree	report-alarm
Description	Commands in this context specify the settings for alarm generation and alarm clear notifications for the port. Note: For some DWDM transceivers, if the configure port dwdm coherent rx-los-reaction squelch command is disabled, the signal-fail and no-am-lock alarm conditions are not reported when the media side of the transceiver has an RX LOS condition.
Introduced	25.3.R2
Platforms	7705 SAR-1

alignment-marker-not-locked *boolean*

Synopsis	Report 40G/100G PCS Alignment Marker Loss of Lock
Context	configure port port ethernet report-alarm alignment-marker-not-locked <i>boolean</i>
Tree	alignment-marker-not-locked
Description	When configured to true , Alignment Marker Loss of Lock alarms are reported for this port.
Introduced	25.3.R2
Platforms	7705 SAR-1

block-not-locked *boolean*

Synopsis	Report 40G/100G PCS Lanes Not Block Locked
Context	configure port port ethernet report-alarm block-not-locked <i>boolean</i>
Tree	block-not-locked
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-lane *boolean*

Synopsis	Report 40G/100G PCS Duplicate Lane Marker alarm
----------	---

Context	configure port port ethernet report-alarm duplicate-lane <i>boolean</i>
Tree	duplicate-lane
Introduced	25.3.R2
Platforms	7705 SAR-1

frame-not-locked *boolean*

Synopsis	Report "not locked on the Ethernet framing sequence"
Context	configure port port ethernet report-alarm frame-not-locked <i>boolean</i>
Tree	frame-not-locked
Introduced	25.3.R2
Platforms	7705 SAR-1

high-ber *boolean*

Synopsis	Report High Bit Error Rate
Context	configure port port ethernet report-alarm high-ber <i>boolean</i>
Tree	high-ber
Introduced	25.3.R2
Platforms	7705 SAR-1

local *boolean*

Synopsis	Report local faults
Context	configure port port ethernet report-alarm local <i>boolean</i>
Tree	local
Introduced	25.3.R2
Platforms	7705 SAR-1

remote *boolean*

Synopsis	Report remote faults
Context	configure port port ethernet report-alarm remote <i>boolean</i>
Tree	remote
Introduced	25.3.R2

Platforms 7705 SAR-1

signal-fail *boolean*

Synopsis Report Ethernet signal lost alarm

Context **configure** *port port ethernet report-alarm signal-fail boolean*

Tree [signal-fail](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

rs-fec-mode *keyword*

Synopsis RS-FEC mode on the Ethernet port

Context **configure** *port port ethernet rs-fec-mode keyword*

Tree [rs-fec-mode](#)

Description This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet port.

See "Forward Error Correction" in the *7705 SAR Gen 2 Interface Configuration Guide* for more information about FEC settings.

Options cl91-514-528, cl74, cl108

Introduced 25.3.R2

Platforms 7705 SAR-1

speed *number*

Synopsis Ethernet port speed

Context **configure** *port port ethernet speed number*

Tree [speed](#)

Description This command configures the port speed for ports that support multiple speeds. This applies to the following:

- Fast Ethernet when autonegotiation is not enabled
- 10/100/1000 Mb/s Ethernet when autonegotiation is not enabled
- 10/1G ports supporting 10G SFP+ or 1G SFP
- 40/100G ports supporting QSFP28s on non connector-based MDAs

If autonegotiation is enabled for the port, this command setting is ignored. Speed cannot be configured for ports that are part of a LAG.

Range	10 100 1000 10000 25000 40000 50000 100000
Units	megabps
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm

Synopsis	Enter the ssm context
Context	configure port port ethernet ssm
Tree	ssm
Description	Commands in this context configure the Ethernet Synchronization Messaging Channel (ESMC) for the Ethernet port. The ESMC carries the Synchronization Status Message (SSM) code representing the quality level of the source of the frequency of the central clock of the node.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the ESMC for the Ethernet port
Context	configure port port ethernet ssm admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

code-type *keyword*

Synopsis	Encoding of synchronization status messages
Context	configure port port ethernet ssm code-type <i>keyword</i>
Tree	code-type
Options	sonet, sdh
Default	sdh
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-dus *boolean*

Synopsis	Force QL value transmitted be set to QL-DNU or QL-DUS
Context	configure <i>port</i> <i>port</i> <i>ethernet ssm tx-dus boolean</i>
Tree	<i>tx-dus</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

util-stats-interval *number*

Synopsis	Interval to calculate utilization statistics
Context	configure <i>port</i> <i>port</i> <i>ethernet util-stats-interval number</i>
Tree	<i>util-stats-interval</i>
Description	<p>This command configures the interval used to calculate the utilization statistics.</p> <p>Port utilization statistics are only available for physical Ethernet ports on a host system. These statistics are not available for the following:</p> <ul style="list-style-type: none">• Ethernet ports on an Ethernet satellite• Ethernet ports on a VSR• PXC ports• vsm-cca-xp ports
Range	30 to 600
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

xgig *keyword*

Synopsis	Ethernet port mode
Context	configure <i>port</i> <i>port</i> <i>ethernet xgig keyword</i>
Tree	<i>xgig</i>
Description	<p>This command configures a 10 Gb/s interface to be in LAN or WAN mode.</p> <p>When configuring the port to be in WAN mode, certain SONET/SDH commands can be changed to reflect the SONET/SDH requirements for the port. When configuring the port to be in LAN mode, all SONET/SDH commands are pre-determined and not configurable.</p>

Options	lan, wan
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure port port monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures the operational group to monitor the operational group state. The state of the operational group affects the state of this port. When the operational group is inactive, the state of the port goes down and powers off the port to signal to the CE that the connected port is not available.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

network

Synopsis TTI as a sequence of bytes

Context **configure** [port](#) [port](#) [otu](#) [path-monitoring](#) [trail-trace-identifier](#) [transmit](#) **bytes** *string*

Tree [bytes](#)

String length 0 to 192

Notes The following elements are part of a choice: **auto-generated**, **bytes**, or **string**.

Introduced	25.3.R2
Platforms	7705 SAR-1

string *string*

Synopsis	TTI as a sequence of printable ASCII
Context	configure port port otu path-monitoring trail-trace-identifier transmit string <i>string</i>
Tree	string
String length	0 to 64
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

payload-structure-identifier

Synopsis	Enter the payload-structure-identifier context
Context	configure port port otu payload-structure-identifier
Tree	payload-structure-identifier
Introduced	25.3.R2
Platforms	7705 SAR-1

payload

Synopsis	Enter the payload context
Context	configure port port otu payload-structure-identifier payload
Tree	payload
Introduced	25.3.R2
Platforms	7705 SAR-1

expected *keyword*

Synopsis	Expected received payload type of the PSI
Context	configure port port otu payload-structure-identifier payload expected <i>keyword</i>
Tree	expected
Options	auto, experimental, asynchronous-cbr, bit-synchronous-cbr, atm, gfp, vcat, gmp, bit-stream-octet, bit-stream-non-octet, odu-mux, reserved-80, reserved-81, reserved-82,

	reserved-83, reserved-84, reserved-85, reserved-86, reserved-87, reserved-88, reserved-89, reserved-8a, reserved-8b, reserved-8c, reserved-8d, reserved-8e, reserved-8f, null-test, prbs-test
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mismatch-reaction *keyword*

Synopsis	Reaction to a mismatched payload
Context	configure port <i>port</i> otu payload-structure-identifier payload mismatch-reaction <i>keyword</i>
Tree	mismatch-reaction
Options	squelch-rx
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit *keyword*

Synopsis	Transmit payload type
Context	configure port <i>port</i> otu payload-structure-identifier payload transmit <i>keyword</i>
Tree	transmit
Options	auto, experimental, asynchronous-cbr, bit-synchronous-cbr, atm, gfp, vcat, gmp, bit-stream-octet, bit-stream-non-octet, odu-mux, reserved-80, reserved-81, reserved-82, reserved-83, reserved-84, reserved-85, reserved-86, reserved-87, reserved-88, reserved-89, reserved-8a, reserved-8b, reserved-8c, reserved-8d, reserved-8e, reserved-8f, null-test, prbs-test
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port <i>port</i> otu report-alarm
Tree	report-alarm
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-fail *boolean*

Synopsis	Report FEC mode mismatch alarm
Context	configure <i>port port otu report-alarm fec-fail boolean</i>
Tree	<i>fec-fail</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-sd *boolean*

Synopsis	Report Signal Degrade alarm
Context	configure <i>port port otu report-alarm fec-sd boolean</i>
Tree	<i>fec-sd</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-sf *boolean*

Synopsis	Report Signal Fail alarm
Context	configure <i>port port otu report-alarm fec-sf boolean</i>
Tree	<i>fec-sf</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-uncorr *boolean*

Synopsis	Report one or more Uncorrectable FEC errors alarm
Context	configure <i>port port otu report-alarm fec-uncorr boolean</i>
Tree	<i>fec-uncorr</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

loc boolean

Synopsis	Report OTU alarm for loss of clock
Context	configure <i>port port otu report-alarm loc boolean</i>
Tree	<i>loc</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

lof boolean

Synopsis	Report alarm for the loss of OTU framing
Context	configure <i>port port otu report-alarm lof boolean</i>
Tree	<i>lof</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

lom boolean

Synopsis	Report alarm for the loss of multi-frame
Context	configure <i>port port otu report-alarm lom boolean</i>
Tree	<i>lom</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

los boolean

Synopsis	Report alarm for the loss of signal transitions on data
Context	configure <i>port port otu report-alarm los boolean</i>
Tree	<i>los</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

odu-ais *boolean*

Synopsis	Report ODU Alarm Indication Signal alarm
Context	configure <i>port port otu report-alarm odu-ais boolean</i>
Tree	<i>odu-ais</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

odu-bdi *boolean*

Synopsis	Report PM Backward Defect Indication alarm
Context	configure <i>port port otu report-alarm odu-bdi boolean</i>
Tree	<i>odu-bdi</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

odu-lck *boolean*

Synopsis	Report ODU Locked alarm
Context	configure <i>port port otu report-alarm odu-lck boolean</i>
Tree	<i>odu-lck</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

odu-oci *boolean*

Synopsis	Report ODU Open Connection Indication alarm
Context	configure <i>port port otu report-alarm odu-oci boolean</i>
Tree	<i>odu-oci</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

odu-tim boolean

Synopsis	Report PM Trace ID Mismatch alarm
Context	configure port port otu report-alarm odu-tim <i>boolean</i>
Tree	odu-tim
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

opu-plm boolean

Synopsis	Report PSI Payload Type Mismatch alarm
Context	configure port port otu report-alarm opu-plm <i>boolean</i>
Tree	opu-plm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-ais boolean

Synopsis	Report OTU Alarm Indication Signal alarm
Context	configure port port otu report-alarm otu-ais <i>boolean</i>
Tree	otu-ais
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-bdi boolean

Synopsis	Report SM Backward Defect Indication alarm
Context	configure port port otu report-alarm otu-bdi <i>boolean</i>
Tree	otu-bdi
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-ber-sd *boolean*

Synopsis	Report SM Signal Degrade alarm
Context	configure port port otu report-alarm otu-ber-sd <i>boolean</i>
Tree	otu-ber-sd
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-ber-sf *boolean*

Synopsis	Report SM Signal Fail alarm
Context	configure port port otu report-alarm otu-ber-sf <i>boolean</i>
Tree	otu-ber-sf
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-biae *boolean*

Synopsis	Report SM Backward Incoming Alignment Error alarm
Context	configure port port otu report-alarm otu-biae <i>boolean</i>
Tree	otu-biae
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-iae *boolean*

Synopsis	Report SM Incoming Alignment Error alarm
Context	configure port port otu report-alarm otu-iae <i>boolean</i>
Tree	otu-iae
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

otu-tim *boolean*

Synopsis	Report SM Trace ID Mismatch alarm
Context	configure <i>port port otu report-alarm otu-tim boolean</i>
Tree	<i>otu-tim</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sd-threshold *number*

Synopsis	Error rate at which to declare signal degrade condition
Context	configure <i>port port otu sd-threshold number</i>
Tree	<i>sd-threshold</i>
Range	5 to 9
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

section-monitoring

Synopsis	Enter the section-monitoring context
Context	configure <i>port port otu section-monitoring</i>
Tree	<i>section-monitoring</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

trail-trace-identifier

Synopsis	Enter the trail-trace-identifier context
Context	configure <i>port port otu section-monitoring trail-trace-identifier</i>
Tree	<i>trail-trace-identifier</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

expected

Synopsis	Enter the expected context
Context	configure port port otu section-monitoring trail-trace-identifier expected
Tree	expected
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-generated

Synopsis	Use the system generated TTI
Context	configure port port otu section-monitoring trail-trace-identifier expected auto-generated
Tree	auto-generated
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

bytes *string*

Synopsis	TTI as a sequence of bytes
Context	configure port port otu section-monitoring trail-trace-identifier expected bytes <i>string</i>
Tree	bytes
String length	0 to 192
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string*

Synopsis	TTI as a sequence of printable ASCII
Context	configure port port otu section-monitoring trail-trace-identifier expected string <i>string</i>
Tree	string
String length	0 to 64
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	25.3.R2

Platforms 7705 SAR-1

mismatch-reaction *keyword*

Synopsis Reaction to a mismatched TTI

Context **configure** [port](#) [port](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) **mismatch-reaction** *keyword*

Tree [mismatch-reaction](#)

Options [squelch-rx](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

transmit

Synopsis Enter the **transmit** context

Context **configure** [port](#) [port](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) **transmit**

Tree [transmit](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

auto-generated

Synopsis Use the system generated TTI

Context **configure** [port](#) [port](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) **transmit** **auto-generated**

Tree [auto-generated](#)

Notes The following elements are part of a choice: **auto-generated**, **bytes**, or **string**.

Introduced 25.3.R2

Platforms 7705 SAR-1

bytes *string*

Synopsis TTI as a sequence of bytes

Context **configure** [port](#) [port](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) **transmit** **bytes** *string*

Tree [bytes](#)

String length 0 to 192

Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string*

Synopsis	TTI as a sequence of printable ASCII
Context	configure port port otu section-monitoring trail-trace-identifier transmit string <i>string</i>
Tree	string
String length	0 to 64
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

sf-sd-method *keyword*

Synopsis	Method used to determine the SF and SD alarms
Context	configure port port otu sf-sd-method <i>keyword</i>
Tree	sf-sd-method
Options	fec, bip8
Default	fec
Introduced	25.3.R2
Platforms	7705 SAR-1

sf-threshold *number*

Synopsis	Error rate at which to declare signal fail condition
Context	configure port port otu sf-threshold <i>number</i>
Tree	sf-threshold
Range	3 to 6
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

transceiver

Synopsis	Enter the transceiver context
Context	configure port port transceiver
Tree	transceiver
Introduced	25.3.R2
Platforms	7705 SAR-1

digital-coherent-optics *boolean*

Synopsis	Enable digital coherent optics module for transceiver
Context	configure port port transceiver digital-coherent-optics <i>boolean</i>
Tree	digital-coherent-optics
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

optical-line-system

Synopsis	Enable the optical-line-system context
Context	configure port port transceiver optical-line-system
Tree	optical-line-system
Description	Commands in this context configure the QSFP-LS pluggable optical line system, used in conjunction with 400G ZR/ZR+ coherent pluggable modules.
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-amplifier-gain *decimal-number*

Synopsis	Gain for the egress amplifier
Context	configure port port transceiver optical-line-system egress-amplifier-gain <i>decimal-number</i>
Tree	egress-amplifier-gain
Range	0.00 to 25.00
Units	decibels
Default	25.00

Introduced	25.3.R2
Platforms	7705 SAR-1

4.20 port-xc commands

```
configure
- port-xc
- apply-groups reference
- apply-groups-exclude reference
- pxc number
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference
- description description
- port-id reference
```

4.20.1 port-xc command descriptions

port-xc

Synopsis	Enter the port-xc context
Context	configure port-xc
Tree	port-xc
Description	Commands in this context configure port cross-connect (PXC) functionality.
Introduced	25.3.R2
Platforms	7705 SAR-1

pxc [**pxc-id**] *number*

Synopsis	Enter the pxc list instance
Context	configure port-xc pxc <i>number</i>
Tree	pxc
Description	Commands in this context configure port cross-connect (PXC) information.
Introduced	25.3.R2
Platforms	7705 SAR-1

[**pxc-id**] *number*

Synopsis	PXC ID
Context	configure port-xc pxc <i>number</i>
Tree	pxc
Range	1 to 256
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the PXC
Context	configure port-xc pxc <i>number</i> admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure port-xc pxc <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

port-id *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PXC port ID
Context	configure port-xc pxc <i>number</i> port-id <i>reference</i>
Tree	port-id
Reference	configure port <i>port</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

4.21 qos commands

Context **configure** qos network *network-policy-name* egress **fc** keyword

Tree **fc**

Introduced 25.3.R2

Platforms 7705 SAR-1

[fc-name] keyword

Synopsis	Forwarding class name
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

de-mark

Synopsis	Enable the de-mark context
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> de-mark
Tree	de-mark
Introduced	25.3.R2
Platforms	7705 SAR-1

force number

Synopsis	DE value
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> de-mark force <i>number</i>
Tree	force
Range	0 to 1
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p-in-profile number

Synopsis	Dot1p marking for in-profile marking
----------	--------------------------------------

Context	configure qos network <i>network-policy-name</i> egress fc keyword dot1p-in-profile <i>number</i>
Tree	dot1p-in-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p-out-profile *number*

Synopsis	Dot1p marking for out-of-profile marking
Context	configure qos network <i>network-policy-name</i> egress fc keyword dot1p-out-profile <i>number</i>
Tree	dot1p-out-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp-in-profile *keyword*

Synopsis	DSCP marking for in-profile marking
Context	configure qos network <i>network-policy-name</i> egress fc keyword dscp-in-profile <i>keyword</i>
Tree	dscp-in-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp-out-profile *keyword*

Synopsis	DSCP marking for out-of-profile marking
Context	configure qos network <i>network-policy-name</i> egress fc keyword dscp-out-profile <i>keyword</i>
Tree	dscp-out-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef,

	cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-exp-in-profile *number*

Synopsis	LSP-EXP marking for in-profile marking
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> lsp-exp-in-profile <i>number</i>
Tree	lsp-exp-in-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-exp-out-profile *number*

Synopsis	LSP-EXP marking for out-of-profile marking
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> lsp-exp-out-profile <i>number</i>
Tree	lsp-exp-out-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> port-redirect-group
Tree	port-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

policer *number*

Synopsis	Policer to be used
----------	--------------------

Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> port-redirect-group policer <i>number</i>
Tree	policer
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *number*

Synopsis	Queue to be used
Context	configure qos network <i>network-policy-name</i> egress fc <i>keyword</i> port-redirect-group queue <i>number</i>
Tree	queue
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-criteria

Synopsis	Enter the ip-criteria context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria
Tree	ip-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID for match criterion and corresponding action
----------	---

Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i>
Tree	entry
Description	This command uniquely identifies a match criterion and the corresponding action. Nokia recommends that multiple entries be given entry IDs in staggered increments. This allows users to insert a new entry in an existing policy without requiring renumbering all of the existing entries.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> action fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number action port-redirect-group
Tree	port-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

policer *number*

Synopsis	Policer ID to be used for the matched traffic
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number action port-redirect-group policer number
Tree	policer
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *number*

Synopsis	Queue to be used for post-policed traffic
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number action port-redirect-group queue number
Tree	queue
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Profile reclassification action
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number action profile keyword
Tree	profile
Options	in, out, exceed, inplus

Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> action type <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp *keyword*

Synopsis	DSCP value to match in the packet
----------	-----------------------------------

Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Destination IPv4 address to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match dst-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	Subnet mask
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match dst-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .

Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start *number*

Synopsis	Lower bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match dst-port range start <i>number</i>

Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment *keyword*

Synopsis	Fragmentation state as the match criterion
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match fragment <i>keyword</i>
Tree	fragment
Description	<p>This command configures fragmented or non-fragmented IP packets as a network QoS policy match criterion.</p> <p>When unconfigured, all packets match regardless of whether they are fragmented.</p>
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-type *number*

Synopsis	ICMP type in the ICMP header of IPv4 packet to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match icmp-type <i>number</i>
Tree	icmp-type
Description	<p>This command configures matching on the ICMP type field in the ICMP header of an IPv4 packet as a network QoS match criterion.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non-initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing a match criteria of zero may not match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol (*number | keyword*)

Synopsis	IP protocol to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match protocol (<i>number keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits | ipv4-address*)

Synopsis	Source IPv4 address to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-ip address (<i>ipv4-prefix-with-host-bits ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	Subnet mask
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-ip mask <i>ipv4-address</i>

Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match src-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry number match src-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start *number*

Synopsis	Lower bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ip-criteria entry <i>number</i> match src-port range start <i>number</i>

Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-criteria

Synopsis	Enter the ipv6-criteria context
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria
Tree	ipv6-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID for match criterion and corresponding action
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i>
Tree	entry
Description	<p>This command uniquely identifies a match criterion and the corresponding action.</p> <p>Nokia recommends that multiple entries be given entry IDs in staggered increments. This allows users to insert a new entry in an existing policy without requiring renumbering all of the existing entries.</p>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action port-redirect-group
Tree	port-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

policer number

Synopsis	Policer ID to be used for the matched traffic
----------	---

Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action <i>port-redirect-group</i> policer <i>number</i>
Tree	policer
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *number*

Synopsis	Queue to be used for post-policed traffic
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action <i>port-redirect-group</i> queue <i>number</i>
Tree	queue
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Profile reclassification action
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action <i>profile</i> <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> action <i>type</i> <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

dst-ip

Synopsis Enter the **dst-ip** context

Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Destination IPv6 address to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	Address mask
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Value 'less than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match dst-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
----------	--------------------------------

Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match <i>dst-port</i> range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match <i>dst-port</i> range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match <i>dst-port</i> range start <i>number</i>
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment keyword

Synopsis	Fragmentation state as the match criterion
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match <i>fragment</i> keyword
Tree	fragment
Description	This command configures fragmented or non-fragmented IPv6 packets as a network QoS policy match criterion. When unconfigured, all packets match regardless of whether they are fragmented.

Options	false, true, first-only, non-first-only
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-type *number*

Synopsis	ICMPv6 type in ICMPv6 header of IPv6 packet to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match icmp-type <i>number</i>
Tree	icmp-type
Description	<p>This command configures matching on the ICMPv6 type field in the ICMPv6 header of an IPv6 packet as a network QoS match criterion.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non-initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing a match criteria of zero may not match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
----------	---------------------------------

Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry number match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Source IPv6 address to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry number match src-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	Address mask
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry number match src-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry number match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number match</i> src-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number match</i> src-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Value 'less than' assigned as match condition
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number match</i> src-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
----------	--------------------------------

Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of port range to match
Context	configure qos network <i>network-policy-name</i> egress ipv6-criteria entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

prec [[prec-value](#)] number

Synopsis	Enter the prec list instance
Context	configure qos network <i>network-policy-name</i> egress prec <i>number</i>
Tree	prec
Introduced	25.3.R2
Platforms	7705 SAR-1

[prec-value] *number*

Synopsis	Precedence value for which mapping is performed
Context	configure qos network <i>network-policy-name</i> egress prec <i>number</i>
Tree	prec
Range	0 to 7
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *keyword*

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> egress prec <i>number</i> fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Default profile to use for the ingressing traffic
Context	configure qos network <i>network-policy-name</i> egress prec <i>number</i> profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

remark-trusted

Synopsis	Enable the remark-trusted context
Context	configure qos network <i>network-policy-name</i> egress remark-trusted
Tree	remark-trusted
Introduced	25.3.R2
Platforms	7705 SAR-1

force-egress-marking *boolean*

Synopsis	Remark DSCP bits in the internal IP header
Context	configure qos network <i>network-policy-name</i> egress remark-trusted force-egress-marking <i>boolean</i>
Tree	force-egress-marking
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure qos network <i>network-policy-name</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action

Synopsis	Enter the default-action context
Context	configure qos network <i>network-policy-name</i> ingress default-action
Tree	default-action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class used when classifying ingress traffic
Context	configure qos network <i>network-policy-name</i> ingress default-action fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR-1

profile keyword

Synopsis	Default profile for the ingressing traffic
Context	configure qos network <i>network-policy-name</i> ingress default-action profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Default	out
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p [dot1p-value] number

Synopsis	Enter the dot1p list instance
Context	configure qos network <i>network-policy-name</i> ingress dot1p <i>number</i>
Tree	dot1p
Introduced	25.3.R2
Platforms	7705 SAR-1

[dot1p-value] *number*

Synopsis	Dot1p value to match in the packet
Context	configure qos network <i>network-policy-name</i> ingress dot1p <i>number</i>
Tree	dot1p
Range	0 to 7
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *keyword*

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> ingress dot1p <i>number</i> fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Default profile to be used for the ingressing traffic
Context	configure qos network <i>network-policy-name</i> ingress dot1p <i>number</i> profile <i>keyword</i>
Tree	profile
Options	in, out, de, exceed, inplus
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp [**dscp-name**] *keyword*

Synopsis	Enter the dscp list instance
Context	configure qos network <i>network-policy-name</i> ingress dscp <i>keyword</i>
Tree	dscp
Introduced	25.3.R2
Platforms	7705 SAR-1

[dscp-name] *keyword*

Synopsis	DSCP associated with the forwarding class
Context	configure qos network <i>network-policy-name</i> ingress dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *keyword*

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> ingress dscp <i>keyword</i> fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Default profile to use for the ingressing traffic
Context	configure qos network <i>network-policy-name</i> ingress dscp <i>keyword</i> profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc [[fc-name](#)] *keyword*

Synopsis	Enter the fc list instance
Context	configure qos network <i>network-policy-name</i> ingress fc <i>keyword</i>
Tree	fc
Introduced	25.3.R2
Platforms	7705 SAR-1

[fc-name] *keyword*

Synopsis	Forwarding class name
Context	configure qos network <i>network-policy-name</i> ingress fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure qos network <i>network-policy-name</i> ingress fc keyword fp-redirect-group
Tree	fp-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast-policer *number*

Synopsis	Policer to be used for broadcast traffic
Context	configure qos network <i>network-policy-name</i> ingress fc keyword fp-redirect-group broadcast-policer <i>number</i>
Tree	broadcast-policer
Range	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-policer *number*

Synopsis	Policer to be used for multicast traffic
Context	configure qos network <i>network-policy-name</i> ingress fc keyword fp-redirect-group multicast-policer <i>number</i>
Tree	multicast-policer
Range	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

policer *number*

Synopsis	Policer to be used for unicast traffic
Context	configure qos network <i>network-policy-name</i> ingress fc keyword fp-redirect-group policer <i>number</i>
Tree	policer
Range	1 to 32
Introduced	25.3.R2

Platforms 7705 SAR-1

unknown-policer *number*

Synopsis Policer to be used for unknown traffic

Context **configure** [qos network](#) *network-policy-name* [ingress fc](#) *keyword* [fp-redirect-group](#) [unknown-policer](#) *number*

Tree [unknown-policer](#)

Range 1 to 32

Introduced 25.3.R2

Platforms 7705 SAR-1

ip-criteria

Synopsis Enter the **ip-criteria** context

Context **configure** [qos network](#) *network-policy-name* [ingress ip-criteria](#)

Tree [ip-criteria](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis Enter the **entry** list instance

Context **configure** [qos network](#) *network-policy-name* [ingress ip-criteria](#) [entry](#) *number*

Tree [entry](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[entry-id] *number*

Synopsis Network Ingress IP Criteria Entry Index

Context **configure** [qos network](#) *network-policy-name* [ingress ip-criteria](#) [entry](#) *number*

Tree [entry](#)

Range 1 to 65535

Notes This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> action fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

profile keyword

Synopsis	Default profile for the matching traffic
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> action profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Action for criteria entry
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> action type keyword
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description description

Synopsis	Text description
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> description description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword

Synopsis	DSCP to be used as network QoS policy match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dscp keyword
Tree	dscp

Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Destination IPv4 address for network QoS policy match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	IPv4 prefix list containing IPv4 prefixes to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IP address to match with source IP of the packet
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry number match dst-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry number match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact destination port as the match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry number match dst-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than destination port value as match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry number match dst-port gt <i>number</i>
Tree	gt

Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than destination port value as the match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of port range to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of port range to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match dst-port range start <i>number</i>
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment keyword

Synopsis	Fragmentation state as the match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match fragment keyword
Tree	fragment
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol (number | keyword)

Synopsis	IP protocol to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match protocol (<i>number</i> keyword)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
----------	---------------------------------

Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Source IPv4 address for network QoS policy match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	IPv4 prefix list containing IPv4 prefixes to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IP address to match with source IP of the packet
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Exact source port as the match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than source port value as match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than destination port value as the match criterion
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port lt <i>number</i>

Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of port range to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of port range to match
Context	configure qos network <i>network-policy-name</i> ingress ip-criteria entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-criteria

Synopsis	Enter the ipv6-criteria context
Context	configure qos network <i>network-policy-name</i> ingress ipv6-criteria
Tree	ipv6-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure qos network <i>network-policy-name</i> ingress ipv6-criteria entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[[entry-id](#)] *number*

Synopsis	Network Ingress IPv6 Criteria Entry Index
Context	configure qos network <i>network-policy-name</i> ingress ipv6-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos network <i>network-policy-name</i> ingress ipv6-criteria entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
Context	configure qos network <i>network-policy-name</i> ingress ipv6-criteria entry <i>number</i> action fc <i>keyword</i>
Tree	fc

policy-id number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	QoS network policy ID
Context	configure qos network <i>network-policy-name</i> policy-id <i>number</i>
Tree	policy-id
Description	<p>This command specifies the QoS network policy ID and uniquely identifies the policy on the router.</p> <p>Network policy-id 1 exists as the default policy that is applied to all network interfaces by default. The network policy-id 1 cannot be modified or deleted. It defines the default DSCP-to-FC mapping and MPLS EXP-to-FC mapping for the ingress. For the egress, it defines forwarding classes that represent individual queues and the packet marking criteria.</p> <p>Network policy-id 1 exists as the default policy that is applied to all network ports by default. This default policy cannot be modified or deleted. It defines the default DSCP-to-FC mapping and default unicast meters for ingress IP traffic. For the egress, it defines the forwarding class to dot1p and DSCP values and the packet marking criteria.</p> <p>If a new network policy is created (for instance, policy-id 3), only the default action and egress forwarding class parameters are identical to the default policy. A new network policy does not contain the default DSCP-to-FC and MPLS-EXP-to-FC mapping for network QoS policy of type ip-interface or the DSCP-to-FC mapping (for network QoS policy of type port). The default network policy can be copied to create a new network policy that includes the default ingress DSCP-to-FC and MPLS EXP-to-FC mapping (as appropriate).</p>
Range	1 to 65535

avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure qos network-queue <i>named-item</i> queue <i>number</i> avg-frame-overhead <i>decimal-number</i>
Tree	avg-frame-overhead
Description	This command configures the average frame overhead, expressed as a percentage, at which the offered load expands on the physical medium (wire) at egress. This is important for accurate "on-the-wire" rate calculations at various levels of H-QoS that do

not inherently account for the physical medium characteristics. For example, without considering this overhead, a port scheduler in H-QoS might inaccurately estimate the available bandwidth on the wire, potentially leading to congestion issues and unexpected packet loss.

The rates impacted by the average frame overhead encompass the rates set on port-schedulers and aggregate rate limits for subscribers and Vports. This impact is evident in the configured values, which represent on-the-wire rates. Queue configured rates, however, remain unaffected by this adjustment and continue to reflect Layer 2 rates.

Configure the average frame overhead in networks with physical mediums that have constant sizes of transmission units (packets or cells) or in scenarios where the average packet size is known.

The average frame overhead only affects rate and weight calculations and does not impact collected statistics for accounting purposes.

For Ethernet ports, the effect of this command depends on the setting of the **avg-frame-overhead-mode** command in advanced QoS configuration policy associated with the queue. If the **avg-frame-overhead-mode** is set to **auto**, the packet encapsulation overhead calculation is based on a fixed 20 bytes (7 bytes for preamble, 1 byte for start of frame delimiter and 12 bytes for Inter-Frame Gap (IFG)) that Ethernet medium adds to every packet during transmission. In other words, the configured rates for port scheduler and aggregate rate limits for subscribers and Vports represent on-the-wire rates.

Range	0.00 to 100.00
Default	0.00
Introduced	25.3.R2

arbiter-parent

Synopsis	Enter the arbiter-parent context
Context	configure qos policer-control-policy <i>named-item</i> tier <i>number</i> arbiter <i>named-item</i> arbiter-parent
Tree	arbiter-parent
Introduced	25.3.R2
Platforms	7705 SAR-1

arbiter-name *named-item*

Synopsis	Arbiter name
Context	configure qos policer-control-policy <i>named-item</i> tier <i>number</i> arbiter <i>named-item</i> arbiter-parent arbiter-name <i>named-item</i>
Tree	arbiter-name
Description	This command specifies the arbiter name. In tier 1, the arbiter name is not allowed and only the system reversed name "root" is accepted. The specified arbiter name must exist within the policer control policy at tier 1 or the parent command fails. When a tiered arbiter is acting as a parent for another tiered arbiter, the parent arbiter cannot be removed from the policy. The child arbiter receives all bandwidth directly from its parent arbiter (that receives bandwidth from the root arbiter).
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Level the child arbiter uses on its parent
Context	configure qos policer-control-policy <i>named-item</i> tier <i>number</i> arbiter <i>named-item</i> arbiter-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight attribute at parent level applied to children
Context	configure qos policer-control-policy <i>named-item</i> tier <i>number</i> arbiter <i>named-item</i> arbiter-parent weight <i>number</i>
Tree	weight
Description	This command defines how multiple children at the same parent strict level compete when insufficient bandwidth exists on the parent for that level. Each child's weight is divided by the sum of the active children's weights and the result is multiplied by the available bandwidth. If a child cannot receive its entire weighted fair share of bandwidth due to a defined child rate limit, the remainder of its bandwidth is distributed between the other children based on their weights.

Range	1 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	configure qos port-scheduler-policy <i>named-item</i> max-rate (<i>number</i> <i>keyword</i>)
Tree	max-rate
Range	1 to 6400000000
Options	max
Default	max
Notes	The following elements are part of a choice: max-percent-rate or max-rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-threshold *number*

Synopsis	Congestion monitoring threshold
Context	configure qos port-scheduler-policy <i>named-item</i> monitor-threshold <i>number</i>
Tree	monitor-threshold
Description	<p>This command defines the congestion monitoring threshold for the desired monitoring entity under the port-scheduler for per aggregate port scheduler rate, per individual level, and per group that is aggregating multiple levels.</p> <p>The congestion threshold is specified as a percentage of the configured PIR rate for the entity for which congestion monitoring is desired. For example, if the configured PIR rate for level 1 is 1000,000 kb/s, and the monitoring threshold is set to 90%, an event where the offered rate is >90,000 kb/s is recorded. This event is shown as part of the cumulative count of congestion threshold exceeds since the last clearing of the counters.</p>
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

orphan-overrides

Synopsis	Enter the orphan-overrides context
Context	configure qos port-scheduler-policy <i>named-item</i> orphan-overrides
Tree	orphan-overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Port priority level for within-CIR orphan behavior
Context	configure qos port-scheduler-policy <i>named-item</i> orphan-overrides cir-level <i>number</i>
Tree	cir-level
Description	<p>This command defines the port priority that the orphan queues and schedulers use to receive bandwidth for their within-CIR offered-load. If the cir-weight command is set to the default value, the orphan queues and schedulers do not receive bandwidth during the port scheduler's within-CIR pass and this command setting is ignored.</p>
Range	0 to 8
Default	0

Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	configure qos port-scheduler-policy <i>named-item</i> orphan-overrides cir-weight <i>number</i>
Tree	cir-weight
Description	This command defines the weight the orphan queues and schedulers will use in the within-CIR port priority level. When this command is set to the default value, the orphan queues and schedulers do not receive bandwidth during the port scheduler's within-CIR pass and the cir-level command is ignored.
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Port priority level for above-CIR orphan behavior
Context	configure qos port-scheduler-policy <i>named-item</i> orphan-overrides level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	Buffer space allowed for the queue
Context	configure qos queue-group-templates egress queue-group named-item queue number mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet byte offset for addition of policing information
Context	configure qos queue-group-templates egress queue-group named-item queue number packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos queue-group-templates egress queue-group named-item queue number percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir decimal-number

Synopsis	Administrative CIR percent
Context	configure qos queue-group-templates egress queue-group named-item queue number percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir decimal-number

Synopsis	Administrative PIR percent
Context	configure qos queue-group-templates egress queue-group named-item queue number percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-rate *keyword*

Synopsis	Reference rate
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

port-parent

Synopsis	Enable the port-parent context
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> port-parent
Tree	port-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> port-parent cir-level <i>number</i>
Tree	cir-level
Range	0 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> port-parent cir-weight <i>number</i>

Tree	cir-weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Port priority for bandwidth for above-CIR offered load
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> port-parent level <i>number</i>
Tree	level
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight used at above-CIR port priority level
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> port-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-delay *number*

Synopsis	Target queue delay for forwarding packets through queue
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> queue-delay <i>number</i>
Tree	queue-delay
Range	1 to 5000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-type keyword

Synopsis	Method used to service queue from hardware perspective
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number queue-type keyword
Tree	queue-type
Options	expedited, best-effort
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (number | keyword)

Synopsis	Administrative CIR
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number rate cir (number keyword)
Tree	cir
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (number | keyword)

Synopsis	Administrative PIR
----------	--------------------

Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-parent

Synopsis	Enable the scheduler-parent context
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number scheduler-parent
Tree	scheduler-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number scheduler-parent cir-level <i>number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue number scheduler-parent cir-weight <i>number</i>

Tree	cir-weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> scheduler-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-name *named-item*

Synopsis	Parent scheduler name
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> scheduler-parent scheduler-name <i>named-item</i>
Tree	scheduler-name
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight used by the scheduler for feeding the queue
----------	--

Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> scheduler-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

wred-queue

Synopsis	Enter the wred-queue context
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> wred-queue
Tree	wred-queue
Introduced	25.3.R2
Platforms	7705 SAR-1

mode keyword

Synopsis	Pool association to allow queue-specific WRED slopes
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> wred-queue mode <i>keyword</i>
Tree	mode
Options	native, pool-per-queue
Introduced	25.3.R2
Platforms	7705 SAR-1

usage keyword

Synopsis	Congestion control type
Context	configure qos queue-group-templates egress queue-group <i>named-item</i> queue <i>number</i> wred-queue usage <i>keyword</i>
Tree	usage
Options	auto, exceed-low
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure qos queue-group-templates ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group [ingress-queue-group-name] *named-item*

Synopsis	Enter the queue-group list instance
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i>
Tree	queue-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[ingress-queue-group-name] *named-item*

Synopsis	Ingress queue group template name
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i>
Tree	queue-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [*policer-id*] *number*

Synopsis	Enter the policer list instance
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i>
Tree	policer
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-id] *number*

Synopsis	Ingress Queue-Group Policer identifier
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i>
Tree	policer
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i> adaptation-rule
Tree	adaptation-rule
Introduced	25.3.R2
Platforms	7705 SAR-1

cir *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i> adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Default	closest
Introduced	25.3.R2

Platforms 7705 SAR-1

pir *keyword*

Synopsis Constraint used when deriving the operational PIR value

Context **configure** qos queue-group-templates ingress queue-group *named-item* policer *number* adaptation-rule pir *keyword*

Tree pir

Options max, min, closest

Default closest

Introduced 25.3.R2

Platforms 7705 SAR-1

arbiter-parent

Synopsis Enter the **arbiter-parent** context

Context **configure** qos queue-group-templates ingress queue-group *named-item* policer *number* arbiter-parent

Tree arbiter-parent

Introduced 25.3.R2

Platforms 7705 SAR-1

arbiter-name *named-item*

Synopsis Arbiter name

Context **configure** qos queue-group-templates ingress queue-group *named-item* policer *number* arbiter-parent arbiter-name *named-item*

Tree arbiter-name

String length 1 to 32

Introduced 25.3.R2

Platforms 7705 SAR-1

level *number*

Synopsis Level of priority while feeding to the parent

Context **configure** qos queue-group-templates ingress queue-group *named-item* policer *number* arbiter-parent level *number*

Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i> arbiter-parent weight <i>number</i>
Tree	weight
Range	1 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456

Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> policer <i>number</i> stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Default	minimal
Introduced	25.3.R2
Platforms	7705 SAR-1

queue [queue-id] *number*

Synopsis	Enter the queue list instance
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i>
Tree	queue
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-id] *number*

Synopsis	Ingress Queue-Group Queue identifier
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i>
Tree	queue

Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

burst-limit (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> drop-tail

Tree	drop-tail
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> drop-tail low
Tree	low
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	Maximum buffer space that is allowed for queue
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	25.3.R2

Platforms 7705 SAR-1

multipoint *boolean*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create an ingress multipoint queue
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> multipoint <i>boolean</i>
Tree	multipoint
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size modification for queue accounting
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-mode *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Queue operational mode for explicitly profiled packets
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i> queue-mode <i>keyword</i>
Tree	queue-mode
Options	priority, profile

Default	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Priority that this queue receives from the hardware level schedulers
Context	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue number queue-type <i>keyword</i>

Context	configure qos sap-egress qos-policy-name dscp keyword

Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
Context	configure qos sap-egress <i>qos-policy-name</i> dscp keyword fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

profile keyword

Synopsis	Default profile for the ingressing traffic
Context	configure qos sap-egress <i>qos-policy-name</i> dscp keyword profile keyword
Tree	profile
Options	in, out, exceed, inplus
Introduced	25.3.R2
Platforms	7705 SAR-1

ethernet-ctag boolean

Synopsis	Tag value for dot1p and DE (Drop-Eligible) that are used by all dot1-p entries
----------	--

Context	configure qos sap-egress qos-policy-name ethernet-ctag boolean
Tree	ethernet-ctag
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fc [fc-name] keyword

Synopsis	Enter the fc list instance
Context	configure qos sap-egress qos-policy-name fc keyword
Tree	fc
Introduced	25.3.R2
Platforms	7705 SAR-1

[fc-name] keyword

Synopsis	Forwarding class
Context	configure qos sap-egress qos-policy-name fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

de-mark

Synopsis	Enable the de-mark context
Context	configure qos sap-egress qos-policy-name fc keyword de-mark
Tree	de-mark
Introduced	25.3.R2

Platforms 7705 SAR-1

force number

Synopsis DE value

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [de-mark](#) [force](#) *number*

Tree [force](#)

Range 0 to 1

Introduced 25.3.R2

Platforms 7705 SAR-1

de-mark-inner

Synopsis Enable the **de-mark-inner** context

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [de-mark-inner](#)

Tree [de-mark-inner](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

force number

Synopsis DE value to set in inner VLAN tag

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [de-mark-inner](#) [force](#) *number*

Tree [force](#)

Range 0 to 1

Introduced 25.3.R2

Platforms 7705 SAR-1

de-mark-outer

Synopsis Enable the **de-mark-outer** context

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [de-mark-outer](#)

Tree [de-mark-outer](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

force number

Synopsis	DE value to set in outer VLAN tag
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword de-mark-outer force <i>number</i>
Tree	force
Range	0 to 1
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p

Synopsis	Enter the dot1p context
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p
Tree	dot1p
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile number

Synopsis	Dot1p value for exceed-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p exceed-profile <i>number</i>
Tree	exceed-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile number

Synopsis	Dot1p value for in-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p in-profile <i>number</i>
Tree	in-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile number

Synopsis	Dot1p value for out-of-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p out-profile <i>number</i>
Tree	out-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p-inner

Synopsis	Enter the dot1p-inner context
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p-inner
Tree	dot1p-inner
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile number

Synopsis	Inner Dot1p value for in-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p-inner in-profile <i>number</i>
Tree	in-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile number

Synopsis	Inner Dot1p value for out-of-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dot1p-inner out-profile <i>number</i>
Tree	out-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p-outer

Synopsis	Enter the dot1p-outer context
Context	configure qos sap-egress qos-policy-name fc keyword dot1p-outer
Tree	dot1p-outer
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile *number*

Synopsis	Outer Dot1p value for exceed-profile frames
Context	configure qos sap-egress qos-policy-name fc keyword dot1p-outer exceed-profile <i>number</i>
Tree	exceed-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile *number*

Synopsis	Outer Dot1p value for in-profile frames
Context	configure qos sap-egress qos-policy-name fc keyword dot1p-outer in-profile <i>number</i>
Tree	in-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile *number*

Synopsis	Outer Dot1p value for out-of-profile frames
Context	configure qos sap-egress qos-policy-name fc keyword dot1p-outer out-profile <i>number</i>
Tree	out-profile
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp

Synopsis	Enter the dscp context
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dscp
Tree	dscp
Notes	The following elements are part of a choice: dscp or prec .
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile *keyword*

Synopsis	DSCP name for exceed-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dscp exceed-profile keyword
Tree	exceed-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile *keyword*

Synopsis	DSCP name for in-profile frames
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword dscp in-profile keyword
Tree	in-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile *keyword*

Synopsis	DSCP name for out-of-profile frames
----------	-------------------------------------

Context	configure qos sap-egress qos-policy-name fc keyword dscp out-profile keyword
Tree	out-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

policer reference

Synopsis	Policer to forward the traffic
Context	configure qos sap-egress qos-policy-name fc keyword policer reference
Tree	policer
Reference	configure qos sap-egress qos-policy-name policer number
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group-queue

Synopsis	Enable the port-redirect-group-queue context
Context	configure qos sap-egress qos-policy-name fc keyword port-redirect-group-queue
Tree	port-redirect-group-queue
Notes	The following elements are part of a choice: port-redirect-group-queue , queue , or queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

queue number

Synopsis	Queue to forward the traffic
Context	configure qos sap-egress qos-policy-name fc keyword port-redirect-group-queue queue number
Tree	queue
Range	1 to 8
Introduced	25.3.R2

Platforms 7705 SAR-1

prec

Synopsis Enter the **prec** context

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [prec](#)

Tree [prec](#)

Notes The following elements are part of a choice: **dscp** or **prec**.

Introduced 25.3.R2

Platforms 7705 SAR-1

exceed-profile *number*

Synopsis Precedence for exceed-profile frames

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [prec](#) [exceed-profile](#) *number*

Tree [exceed-profile](#)

Range 0 to 7

Introduced 25.3.R2

Platforms 7705 SAR-1

in-profile *number*

Synopsis Precedence value for in-profile frames

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [prec](#) [in-profile](#) *number*

Tree [in-profile](#)

Range 0 to 7

Introduced 25.3.R2

Platforms 7705 SAR-1

out-profile *number*

Synopsis Precedence value for out-of-profile frames

Context **configure** [qos sap-egress](#) *qos-policy-name* [fc](#) keyword [prec](#) [out-profile](#) *number*

Tree [out-profile](#)

Range 0 to 7

Introduced	25.3.R2
Platforms	7705 SAR-1

queue *reference*

Synopsis	Queue to forward the traffic
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword queue <i>reference</i>
Tree	queue
Reference	configure qos sap-egress <i>qos-policy-name</i> queue <i>number</i>
Notes	The following elements are part of a choice: port-redirect-group-queue , queue , or queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group-queue

Synopsis	Enable the queue-group-queue context
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword queue-group-queue
Tree	queue-group-queue
Notes	The following elements are part of a choice: port-redirect-group-queue , queue , or queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

instance *number*

Synopsis	Instance ID
Context	configure qos sap-egress <i>qos-policy-name</i> fc keyword queue-group-queue instance <i>number</i>
Tree	instance
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

queue reference

Synopsis	SAP egress queue ID
Context	configure qos sap-egress qos-policy-name fc keyword queue-group-queue queue reference
Tree	queue
Reference	configure qos queue-group-templates egress queue-group named-item queue number
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group-name reference

Synopsis	Queue group to forward traffic
Context	configure qos sap-egress qos-policy-name fc keyword queue-group-queue queue-group-name reference
Tree	queue-group-name
Reference	configure qos queue-group-templates egress queue-group named-item
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-criteria

Synopsis	Enter the ip-criteria context
Context	configure qos sap-egress qos-policy-name ip-criteria
Tree	ip-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [entry-id] number

Synopsis	Enter the entry list instance
Context	configure qos sap-egress qos-policy-name ip-criteria entry number
Tree	entry
Introduced	25.3.R2

Platforms 7705 SAR-1

[entry-id] *number*

Synopsis IP Criteria Entry Index

Context **configure** qos sap-egress qos-policy-name ip-criteria entry *number*

Tree entry

Range 1 to 65535

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

action

Synopsis Enter the **action** context

Context **configure** qos sap-egress qos-policy-name ip-criteria entry *number* action

Tree action

Introduced 25.3.R2

Platforms 7705 SAR-1

fc *keyword*

Synopsis Forwarding class

Context **configure** qos sap-egress qos-policy-name ip-criteria entry *number* action fc *keyword*

Tree fc

Options
be – Best effort
l2 – Low 2 (best effort)
af – Assured forwarding (assured)
l1 – Low 1 (assured)
h2 – High 2 (high priority)
ef – Expedited forwarding (high priority)
h1 – High 1 (high priority)
nc – Network control (high priority)

Introduced 25.3.R2

Platforms 7705 SAR-1

policer *reference*

Synopsis	Policer identifier for the matched traffic
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action policer <i>reference</i>
Tree	policer
Reference	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group-queue *boolean*

Synopsis	Use queue specified in egress access port queue group
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action port-redirect-group-queue <i>boolean</i>
Tree	port-redirect-group-queue
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Default profile for the matching traffic
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action queue <i>number</i>
Tree	queue

Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action type <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

use-fc-mapped-queue *boolean*

Synopsis	Redirect policer output to the configured queues
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action use-fc-mapped-queue <i>boolean</i>
Tree	use-fc-mapped-queue
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword

Synopsis	DSCP value to match in the packet
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Destination IPv4 address for SAP QoS policy match
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .

Introduced 25.3.R2
Platforms 7705 SAR-1

ip-prefix-list *reference*

Synopsis List of IPv4 prefixes for the match criteria
Context **configure** [qos sap-egress](#) *qos-policy-name* [ip-criteria entry number match dst-ip ip-prefix-list](#) *reference*
Tree [ip-prefix-list](#)
Reference **configure** [qos match-list ip-prefix-list](#) *named-item*
Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced 25.3.R2
Platforms 7705 SAR-1

mask *ipv4-address*

Synopsis IP address mask to match with source IP of the packet
Context **configure** [qos sap-egress](#) *qos-policy-name* [ip-criteria entry number match dst-ip mask](#) *ipv4-address*
Tree [mask](#)
Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced 25.3.R2
Platforms 7705 SAR-1

dst-port

Synopsis Enter the **dst-port** context
Context **configure** [qos sap-egress](#) *qos-policy-name* [ip-criteria entry number match dst-port](#)
Tree [dst-port](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

eq *number*

Synopsis Value 'equal to' as match condition

Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' as match condition
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Value 'less than' as match condition
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-port range
Tree	range

Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment keyword

Synopsis	Fragmented packets as the match criterion
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match fragment keyword
Tree	fragment
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	List of IPv4 prefixes for the match criteria
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-ip ip-prefix-list reference
Tree	ip-prefix-list

Reference	configure qos match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IP address mask to match with source IP of the packet
Context	configure qos sap-egress qos-policy-name ip-criteria entry <i>number</i> match src-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos sap-egress qos-policy-name ip-criteria entry <i>number</i> match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Value 'equal to' as match condition
Context	configure qos sap-egress qos-policy-name ip-criteria entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Value 'greater than' as match condition
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' as match condition
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-egress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
----------	-------------------------------

Context	configure qos sap-egress qos-policy-name ip-criteria entry number match src-port range end number
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress qos-policy-name ip-criteria entry number match src-port range start number
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-criteria

Synopsis	Enter the ipv6-criteria context
Context	configure qos sap-egress qos-policy-name ipv6-criteria
Tree	ipv6-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [entry-id] number

Synopsis	Enter the entry list instance
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] number

Synopsis	IP Criteria Entry Index
----------	-------------------------

Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number action fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

policer reference

Synopsis	Policer identifier for the matched traffic
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number action policer reference
Tree	policer

Reference	configure qos sap-egress qos-policy-name policer number
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group-queue *boolean*

Synopsis	Use queue specified in egress access port queue group
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number action port-redirect-group-queue boolean
Tree	port-redirect-group-queue
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Default profile for the matching traffic
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number action profile keyword
Tree	profile
Options	in, out, exceed, inplus
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number action queue number
Tree	queue
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> action type <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

use-fc-mapped-queue *boolean*

Synopsis	Redirect policer output to the configured queues
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> action use-fc-mapped-queue <i>boolean</i>
Tree	use-fc-mapped-queue
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> match
Tree	match

Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword

Synopsis	DSCP value to match in the packet
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Destination IPv6 address for SAP QoS policy match
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IP address mask to match with destination IP of packet
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-port <i>dst-port</i>
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Value 'equal to' as match condition
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Value 'greater than' as match condition
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-port gt <i>number</i>
Tree	gt
Range	0 to 65535

Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' as match condition
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> match dst-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

next-header (*number | keyword*)

Synopsis	IP protocol to match
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match next-header (number keyword)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits | ipv6-address*)

Synopsis	Source IPv6 address for SAP QoS policy match
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry number match src-ip address (ipv6-prefix-with-host-bits ipv6-address)
Tree	address

Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IP address mask to match with source IP of the packet
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-port src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Value 'equal to' as match condition
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Value 'greater than' as match condition
----------	---

Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Value 'less than' as match condition
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure qos sap-egress qos-policy-name ipv6-criteria entry number match src-port range end number
Tree	end
Range	0 to 65535

Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

parent-location keyword

Synopsis	Location where queues look to find parent scheduler
Context	configure qos sap-egress <i>qos-policy-name</i> parent-location <i>keyword</i>
Tree	parent-location
Options	auto, sla
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [[policer-id](#)] number

Synopsis	Enter the policer list instance
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i>
Tree	policer
Introduced	25.3.R2
Platforms	7705 SAR-1

[[policer-id](#)] number

Synopsis	SAP egress policer ID
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i>
Tree	policer

Range	1 to 63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure qos sap-egress qos-policy-name policer number adaptation-rule
Tree	adaptation-rule
Introduced	25.3.R2
Platforms	7705 SAR-1

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure qos sap-egress qos-policy-name policer number adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Default	closest
Introduced	25.3.R2
Platforms	7705 SAR-1

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure qos sap-egress qos-policy-name policer number adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	25.3.R2
Platforms	7705 SAR-1

arbiter-parent

Synopsis	Enter the arbiter-parent context
Context	configure qos sap-egress qos-policy-name policer number arbiter-parent
Tree	arbiter-parent
Introduced	25.3.R2
Platforms	7705 SAR-1

arbiter-name *named-item*

Synopsis	Arbiter name
Context	configure qos sap-egress qos-policy-name policer number arbiter-parent arbiter-name <i>named-item</i>
Tree	arbiter-name
Description	This command specifies an arbiter name. The policer is intended to become a child to one of the tiered arbiters with the specified arbiter name where an instance of the policer is created. If the specified arbiter name does not exist, the policer is placed in the orphan state.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos sap-egress qos-policy-name policer number arbiter-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	configure qos sap-egress qos-policy-name policer number arbiter-parent weight <i>number</i>

Tree	weight
Range	1 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp-prec-remarking *boolean*

Synopsis	Remark DSCP/precedence based on packet profile state
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> dscp-prec-remarking <i>boolean</i>
Tree	dscp-prec-remarking
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

exceed-pir *boolean*

Synopsis Forward packets exceeding the PIR as exceed-profile

Context **configure** [qos sap-egress](#) *qos-policy-name* [policer](#) *number* **exceed-pir** *boolean*

Tree [exceed-pir](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

high-prio-only (*number* | *keyword*)

Synopsis Percentage of MBS reserved for high priority traffic

Context **configure** [qos sap-egress](#) *qos-policy-name* [policer](#) *number* **high-prio-only** (*number* | *keyword*)

Tree [high-prio-only](#)

Range 0 to 100

Options auto

Default auto

Introduced 25.3.R2

Platforms 7705 SAR-1

mbs (*number* | *keyword*)

Synopsis Maximum burst tolerance allowed by the policer

Context **configure** [qos sap-egress](#) *qos-policy-name* [policer](#) *number* **mbs** (*number* | *keyword*)

Tree [mbs](#)

Range 0 to 268435456

Units bytes

Options auto

Default auto

Introduced 25.3.R2

Platforms 7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir *decimal-number*

Synopsis	Administrative CIR percent
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	Administrative PIR percent
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir

Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-rate *keyword*

Synopsis	Reference rate
Context	configure qos sap-egress qos-policy-name policer number percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	local-limit, reference-port-limit
Default	local-limit
Introduced	25.7.R1
Platforms	7705 SAR-1

port-parent

Synopsis	Enable the port-parent context
Context	configure qos sap-egress qos-policy-name policer number port-parent
Tree	port-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Port priority level for within-CIR offered load
Context	configure qos sap-egress qos-policy-name policer number port-parent cir-level <i>number</i>
Tree	cir-level
Description	This command defines the port priority that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the port schedulers with-CIR pass and the cir-weight command is ignored.
Range	0 to 8
Default	0
Introduced	25.3.R2

Platforms 7705 SAR-1

cir-weight *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	configure qos sap-egress qos-policy-name policer <i>number</i> port-parent cir-weight <i>number</i>
Tree	cir-weight
Description	<p>This command defines the weight that the policer uses at the within-CIR port priority level.</p> <p>All CIR weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to the default value, the policer receives bandwidth only after other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Port priority level for above-CIR behavior
Context	configure qos sap-egress qos-policy-name policer <i>number</i> port-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight to use in the above-CIR port priority level
Context	configure qos sap-egress qos-policy-name policer <i>number</i> port-parent weight <i>number</i>
Tree	weight

Description	<p>This command defines the weight that the policer uses at the above-CIR port priority level.</p> <p>All weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after other children with a non-zero weight at this level.</p>
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

profile-capped *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	configure qos sap-egress qos-policy-name policer number profile-capped <i>boolean</i>
Tree	profile-capped
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

profile-out-preserve *boolean*

Synopsis	Preserve the color of offered out-of-profile traffic
Context	configure qos sap-egress qos-policy-name policer number profile-out-preserve <i>boolean</i>
Tree	profile-out-preserve
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure qos sap-egress qos-policy-name policer number rate

Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-parent

Synopsis	Enable the scheduler-parent context
Context	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i> scheduler-parent
Tree	scheduler-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .

Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level number

Synopsis	Port priority level for within-CIR offered load
Context	configure qos sap-egress qos-policy-name policer number scheduler-parent cir-level number
Tree	cir-level
Description	This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the schedulers within-CIR pass and the cir-weight command is ignored.
Range	0 to 8
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight number

Synopsis	Weight to use in the within-CIR port priority level
Context	configure qos sap-egress qos-policy-name policer number scheduler-parent cir-weight number
Tree	cir-weight
Description	<p>The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.</p> <p>A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Priority level for bandwidth on the parent scheduler
Context	configure qos sap-egress qos-policy-name policer <i>number</i> scheduler-parent level <i>number</i>
Tree	level
Description	<p>This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler.</p> <p>Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.</p>
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-name *named-item*

Synopsis	Scheduler name
Context	configure qos sap-egress qos-policy-name policer <i>number</i> scheduler-parent scheduler-name <i>named-item</i>
Tree	scheduler-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Policer weight at the above-CIR priority level
Context	configure qos sap-egress qos-policy-name policer <i>number</i> scheduler-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2

Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure qos sap-egress <i>qos-policy-name</i> queue <i>number</i> avg-frame-overhead <i>decimal-number</i>
Tree	avg-frame-overhead
Description	<p>This command configures the average frame overhead, expressed as a percentage, at which the offered load expands on the physical medium (wire) at egress. This is important for accurate "on-the-wire" rate calculations at various levels of H-QoS that do not inherently account for the physical medium characteristics. For example, without considering this overhead, a port-scheduler in H-QoS might inaccurately estimate the available bandwidth on the wire, potentially leading to congestion issues and unexpected packet loss.</p> <p>The rates impacted by the average frame overhead encompass the rates set on port-schedulers and aggregate rate limits for subscribers and Vports. This impact is evident in the configured values, which represent on-the-wire (OTW) rates. Queue configured rates, however, remain unaffected by this adjustment and continue to reflect Layer 2 rates.</p> <p>Configure the average frame overhead in networks with physical mediums that have constant sizes of transmission units (packets or cells) or in scenarios where the average packet size is known.</p>

The average frame overhead only affects rate and weight calculations and does not impact collected statistics for accounting purposes.

For Ethernet ports, the effect of this command depends on the setting of the **avg-frame-overhead-mode** command in advanced QoS configuration policy associated with the queue. If the **avg-frame-overhead-mode** is set to **auto**, the packet encapsulation overhead calculation is based on a fixed 20 bytes (7 bytes for preamble, 1 byte for start of frame delimiter and 12 bytes for Inter-Frame Gap) that Ethernet medium adds to every packet during transmission. In other words, the configured rates for port-scheduler and aggregate rate limits for subscribers and Vports represent OTW rates.

Range	0.00 to 100.00
Default	0.00
Introduced	25.3.R2
Platforms	7705 SAR-1

burst-limit (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	configure qos sap-egress <i>qos-policy-name</i> queue <i>number</i> burst-limit (<i>number</i> <i>keyword</i>)

Context	configure qos sap-ingress qos-policy-name fc sap-ingress-fc-name in-remark dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: dscp or prec .
Introduced	25.3.R2
Platforms	7705 SAR-1

prec number

Synopsis	Value to override precedence bits of matching packet
Context	configure qos sap-ingress qos-policy-name fc sap-ingress-fc-name in-remark prec number
Tree	prec
Range	0 to 7
Notes	The following elements are part of a choice: dscp or prec .
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-policer number

Synopsis	Policer ID for multicast traffic in forwarding class
Context	configure qos sap-ingress qos-policy-name fc sap-ingress-fc-name multicast-policer number
Tree	multicast-policer
Range	1 to 63

Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-queue *reference*

Synopsis	Broadcast queue to assign for packets in this forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> multicast-queue <i>reference</i>
Tree	multicast-queue
Reference	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i>
Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-queue-group-queue

Synopsis	Enable the multicast-queue-group-queue context
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> multicast-queue-group-queue
Tree	multicast-queue-group-queue
Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> multicast-queue-group-queue queue <i>reference</i>
Tree	queue
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i>
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group-name *reference*

Synopsis	Queue group name to forward traffic
Context	configure qos sap-ingress qos-policy-name fc sap-ingress-fc-name multicast-queue-group-queue queue-group-name <i>reference</i>
Tree	queue-group-name
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

out-remark

Synopsis	Enter the out-remark context
Context	configure qos sap-ingress qos-policy-name fc sap-ingress-fc-name out-remark
Tree	out-remark
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp *keyword*

Synopsis	DSCP to override DSCP bits of the matching packet
Context	configure qos sap-ingress qos-policy-name fc sap-ingress-fc-name out-remark dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: dscp or prec .
Introduced	25.3.R2
Platforms	7705 SAR-1

prec *number*

Synopsis	Value to override precedence bits of matching packet
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> out-remark prec <i>number</i>
Tree	prec
Range	0 to 7
Notes	The following elements are part of a choice: dscp or prec .
Introduced	25.3.R2
Platforms	7705 SAR-1

policer *number*

Synopsis	Policer ID for unicast traffic in the forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Packets profile associated with the forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	25.3.R2
Platforms	7705 SAR-1

queue *reference*

Synopsis	Queue to assign for packets in this forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> queue <i>reference</i>

Tree	queue
Reference	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i>
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group-queue

Synopsis	Enable the queue-group-queue context
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> queue-group-queue
Tree	queue-group-queue
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

queue reference

Synopsis	Queue to assign for packets in this forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> queue-group-queue queue <i>reference</i>
Tree	queue
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i> queue <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group-name reference

Synopsis	Queue group to forward traffic
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> queue-group-queue queue-group-name <i>reference</i>
Tree	queue-group-name
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

unknown-policer *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> unknown-policer number
Tree	unknown-policer
Range	1 to 63
Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

unknown-queue *reference*

Synopsis	Broadcast queue to assign for packets in this forwarding class
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> unknown-queue reference
Tree	unknown-queue
Reference	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i>
Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .
Introduced	25.3.R2
Platforms	7705 SAR-1

unknown-queue-group-queue

Synopsis	Enable the unknown-queue-group-queue context
Context	configure qos sap-ingress <i>qos-policy-name</i> fc <i>sap-ingress-fc-name</i> unknown-queue-group-queue
Tree	unknown-queue-group-queue
Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .

Introduced 25.3.R2
Platforms 7705 SAR-1

queue *reference*

Synopsis Broadcast queue for packets in the forwarding class
Context **configure** qos sap-ingress qos-policy-name fc sap-ingress-fc-name unknown-queue-group-queue queue *reference*
Tree queue
Reference **configure** qos queue-group-templates ingress queue-group named-item queue number
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

queue-group-name *reference*

Synopsis Queue group name to forward traffic
Context **configure** qos sap-ingress qos-policy-name fc sap-ingress-fc-name unknown-queue-group-queue queue-group-name *reference*
Tree queue-group-name
Reference **configure** qos queue-group-templates ingress queue-group named-item
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

ip-criteria

Synopsis Enter the **ip-criteria** context
Context **configure** qos sap-ingress qos-policy-name ip-criteria
Tree ip-criteria
Introduced 25.3.R2
Platforms 7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	IP criteria entry to create or edit for the policy
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *sap-ingress-fc-name*

Synopsis	Forwarding class for traffic matching the criteria
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> action fc <i>sap-ingress-fc-name</i>
Tree	fc
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *keyword*

Synopsis	Priority for the packet
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number action priority keyword
Tree	priority
Options	low, high, auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number action type keyword
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number description description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match

Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword

Synopsis	DSCP value to match in the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (ipv4-prefix-with-host-bits | ipv4-address)

Synopsis	Destination IPv4 address for SAP QoS policy match
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match dst-ip address (ipv4-prefix-with-host-bits ipv4-address)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	IP-prefix list as match criterion
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-ip ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IP address to match with source IP of the packet
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-ip mask ipv4-address
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port eq number
Tree	eq
Range	0 to 65535

Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment keyword

Synopsis	Fragmented packets as the match criterion
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match fragment keyword
Tree	fragment
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol (number | keyword)

Synopsis	IP protocol to match
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match protocol (number keyword)
Tree	protocol

Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (ipv4-prefix-with-host-bits | ipv4-address)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match src-ip address (ipv4-prefix-with-host-bits ipv4-address)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list reference

Synopsis	IP-prefix list as match criterion
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match src-ip ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list named-item
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IP address to match with source IP of the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos sap-ingress <i>qos-policy-name</i> ip-criteria entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 to 65535

Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ip-criteria entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-ingress qos-policy-name ip-criteria entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure qos sap-ingress qos-policy-name ip-criteria entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-ingress qos-policy-name ip-criteria entry number match src-port range start number
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-criteria

Synopsis	Enter the ipv6-criteria context
Context	configure qos sap-ingress qos-policy-name ipv6-criteria
Tree	ipv6-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [entry-id] number

Synopsis	Enter the entry list instance
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] number

Synopsis	IPv6 criteria entry to create or edit for the policy
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry</i> <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc sap-ingress-fc-name

Synopsis	Forwarding class for traffic matching the criteria
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry</i> <i>number</i> action fc <i>sap-ingress-fc-name</i>
Tree	fc
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

priority keyword

Synopsis	Priority for the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry</i> <i>number</i> action priority <i>keyword</i>
Tree	priority
Options	low, high, auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Action for criteria entry
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry</i> <i>number</i> action type <i>keyword</i>
Tree	type
Options	ignore-match, accept

Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry number</i> match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp *keyword*

Synopsis	DSCP value to match in the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria <i>entry number</i> match dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address to match destination IP of the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match dst-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IP address to match with source IP of the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match dst-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Value 'less than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match dst-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
----------	--------------------------------

Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment keyword

Synopsis	Fragmented packets as the match criterion
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match fragment keyword
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	25.3.R2
Platforms	7705 SAR-1

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv4 address to match
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match src-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IP address to match with source IP of the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> ipv6-criteria entry <i>number</i> match src-ip mask <i>ipv6-address</i>
Tree	mask

Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Value 'less than' assigned as match condition
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enter the range context
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port range end number
Tree	end
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

start *number*

Synopsis	Lower bound of the port range
Context	configure qos sap-ingress qos-policy-name ipv6-criteria entry number match src-port range start number

Tree	start
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-criteria

Synopsis	Enter the mac-criteria context
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria
Tree	mac-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [\[entry-id\]](#) *number*

Synopsis	Enter the entry list instance
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enter the action context
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry <i>number</i> action

Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

fc sap-ingress-fc-name

Synopsis	Forwarding class for traffic matching the criteria
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry number action fc sap-ingress-fc-name
Tree	fc
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

priority keyword

Synopsis	Priority for the packet
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry number action priority keyword
Tree	priority
Options	low, high, auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Action for criteria entry
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry number action type keyword
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number <i>description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number <i>match</i>
Tree	<i>match</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p

Synopsis	Enable the dot1p context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number <i>match</i> dot1p
Tree	<i>dot1p</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *number*

Synopsis	3-bit mask for the 802.1p value
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number <i>match</i> dot1p <i>mask</i> <i>number</i>
Tree	<i>mask</i>
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	802.1P priority value to use as the match criterion
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match dot1p priority number
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-mac

Synopsis	Enable the dst-mac context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match dst-mac
Tree	dst-mac
Introduced	25.3.R2
Platforms	7705 SAR-1

address *mac-address*

Synopsis	Destination MAC address as QoS policy match criterion
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match dst-mac address mac-address
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *mac-address*

Synopsis	Mask for destination MAC address
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match dst-mac mask mac-address
Tree	mask
Default	ff:ff:ff:ff:ff:ff

Introduced 25.3.R2
Platforms 7705 SAR-1

etype *etype-value*

Synopsis Ethernet type
Context **configure** [qos sap-ingress](#) *qos-policy-name* [mac-criteria](#) [entry](#) *number* [match](#) [etype](#) *etype-value*
Tree [etype](#)
String length 5 to 6
Introduced 25.3.R2
Platforms 7705 SAR-1

frame-type *keyword*

Synopsis Match MAC criteria for ingress SAP QoS policy
Context **configure** [qos sap-ingress](#) *qos-policy-name* [mac-criteria](#) [entry](#) *number* [match](#) [frame-type](#) *keyword*
Tree [frame-type](#)
Options 802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii
Introduced 25.3.R2
Platforms 7705 SAR-1

inner-tag

Synopsis Enable the **inner-tag** context
Context **configure** [qos sap-ingress](#) *qos-policy-name* [mac-criteria](#) [entry](#) *number* [match](#) [inner-tag](#)
Tree [inner-tag](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

mask *number*

Synopsis Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Context **configure** [qos sap-ingress](#) *qos-policy-name* [mac-criteria](#) [entry](#) *number* [match](#) [inner-tag](#) [mask](#) *number*

Tree	mask
Range	1 to 4095
Default	4095
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan number

Synopsis	Value to match against the VID of the second VLAN tag
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match inner-tag vlan number
Tree	vlan
Range	0 to 4095
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

llc-dsap

Synopsis	Enable the llc-dsap context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match llc-dsap
Tree	llc-dsap
Introduced	25.3.R2
Platforms	7705 SAR-1

dsap number

Synopsis	DSAP value
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match llc-dsap dsap number
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask number

Synopsis	DSAP mask
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match llc-dsap mask number
Tree	mask
Range	0 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

llc-ssap

Synopsis	Enable the llc-ssap context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match llc-ssap
Tree	llc-ssap
Introduced	25.3.R2
Platforms	7705 SAR-1

mask number

Synopsis	Source SAP mask
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match llc-ssap mask number
Tree	mask
Range	0 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

ssap number

Synopsis	SSAP value
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match llc-ssap ssap number
Tree	ssap

Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

outer-tag

Synopsis	Enable the outer-tag context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match outer-tag
Tree	outer-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

mask number

Synopsis	First tag carried transparently through the service
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match outer-tag mask number
Tree	mask
Range	1 to 4095
Default	4095
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan number

Synopsis	Match against VID of the first VLAN tag in the packet carried transparently through service
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match outer-tag vlan number
Tree	vlan
Range	0 to 4095
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

snap-oui *keyword*

Synopsis	Parameter snap-oui as MAC filter match criteria
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match snap-oui keyword
Tree	snap-oui
Options	zero, non-zero
Introduced	25.3.R2
Platforms	7705 SAR-1

snap-pid *number*

Synopsis	Parameter snap-pid as MAC filter match criteria
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match snap-pid number
Tree	snap-pid
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

src-mac

Synopsis	Enable the src-mac context
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match src-mac
Tree	src-mac
Introduced	25.3.R2
Platforms	7705 SAR-1

address *mac-address*

Synopsis	Source MAC address as QoS policy match criterion
Context	configure qos sap-ingress qos-policy-name mac-criteria entry number match src-mac address mac-address
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

mask *mac-address*

Synopsis	Mask for source MAC address
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria entry <i>number</i> match src-mac mask <i>mac-address</i>
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC criteria filter type
Context	configure qos sap-ingress <i>qos-policy-name</i> mac-criteria type <i>keyword</i>
Tree	type
Options	normal, vid
Default	normal
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [[policer-id](#)] *number*

Synopsis	Enter the policer list instance
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i>
Tree	policer
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-id] *number*

Synopsis	SAP-ingress policer identifier
Context	configure qos sap-ingress qos-policy-name policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

arbiter-parent

Synopsis	Enter the arbiter-parent context
Context	configure qos sap-ingress qos-policy-name policer <i>number</i> arbiter-parent
Tree	arbiter-parent
Introduced	25.3.R2
Platforms	7705 SAR-1

arbiter-name *named-item*

Synopsis	Arbiter name
Context	configure qos sap-ingress qos-policy-name policer <i>number</i> arbiter-parent arbiter-name <i>named-item</i>
Tree	arbiter-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos sap-ingress qos-policy-name policer <i>number</i> arbiter-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1

Introduced 25.3.R2
Platforms 7705 SAR-1

weight *number*

Synopsis Weight used by the arbiter for feeding the policer
Context **configure** [qos sap-ingress](#) *qos-policy-name* [policer](#) *number* [arbiter-parent](#) [weight](#) *number*
Tree [weight](#)
Range 1 to 100
Default 1
Introduced 25.3.R2
Platforms 7705 SAR-1

cbs (*number* | *keyword*)

Synopsis Exceed threshold of the CIR leaky bucket of the policer
Context **configure** [qos sap-ingress](#) *qos-policy-name* [policer](#) *number* [cbs](#) (*number* | *keyword*)
Tree [cbs](#)
Range 0 to 268435456
Units bytes
Options auto
Default auto
Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Synopsis Text description
Context **configure** [qos sap-ingress](#) *qos-policy-name* [policer](#) *number* [description](#) *description*
Tree [description](#)
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

high-prio-only (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> high-prio-only (<i>number</i> <i>keyword</i>)
Tree	high-prio-only
Range	0 to 100
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	High priority violate threshold of PIR leaky bucket
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir decimal-number

Synopsis	Administrative CIR percent
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir decimal-number

Synopsis	Administrative PIR percent
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-rate keyword

Synopsis	Reference rate
Context	configure qos sap-ingress <i>qos-policy-name</i> policer <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate

Options	local-limit, reference-port-limit
Default	local-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

profile-capped *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	configure qos sap-ingress qos-policy-name policer number profile-capped boolean
Tree	profile-capped
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure qos sap-ingress qos-policy-name policer number rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos sap-ingress qos-policy-name policer number rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos sap-ingress qos-policy-name policer number rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure qos sap-ingress qos-policy-name policer number stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir, offered-profile-with-discards
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-id *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ingress SAP QoS policy ID
Context	configure qos sap-ingress qos-policy-name policy-id number
Tree	policy-id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

prec [*prec-value*] *number*

Synopsis	Enter the prec list instance
Context	configure qos sap-ingress qos-policy-name prec number
Tree	prec
Introduced	25.3.R2
Platforms	7705 SAR-1

[prec-value] *number*

Synopsis	Precedence value for which mapping is performed
Context	configure qos sap-ingress qos-policy-name prec number
Tree	prec
Range	0 to 7
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc sap-ingress-fc-name

Synopsis	Forwarding class for traffic matching precedence value
Context	configure qos sap-ingress qos-policy-name prec number fc sap-ingress-fc-name
Tree	fc
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

priority keyword

Synopsis	Priority for the matching traffic
Context	configure qos sap-ingress qos-policy-name prec number priority keyword
Tree	priority
Options	low, high, auto
Default	auto
Introduced	25.3.R2

Platforms 7705 SAR-1

queue *[queue-id] number*

Synopsis Enter the **queue** list instance

Context **configure** *qos sap-ingress qos-policy-name queue number*

Tree *queue*

Introduced 25.3.R2

Platforms 7705 SAR-1

[queue-id] number

Synopsis SAP-ingress policer identifier

Context **configure** *qos sap-ingress qos-policy-name queue number*

Tree *queue*

Range 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

burst-limit *(number | keyword)*

Synopsis Explicit shaping burst size of a queue

Context **configure** *qos sap-ingress qos-policy-name queue number burst-limit (number | keyword)*

Tree *burst-limit*

Range 1 to 14000000

Units bytes

Options auto

Default auto

Introduced 25.3.R2

Platforms 7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	configure qos sap-ingress qos-policy-name queue number cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
Context	configure qos sap-ingress qos-policy-name queue number drop-tail
Tree	drop-tail
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure qos sap-ingress qos-policy-name queue number drop-tail low
Tree	low
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	configure qos sap-ingress qos-policy-name queue number drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100

Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	Maximum buffer space that is allowed for queue
Context	configure qos sap-ingress qos-policy-name queue number mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

multipoint *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Apply as a multicast queue
Context	configure qos sap-ingress qos-policy-name queue number multipoint <i>boolean</i>
Tree	multipoint
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size modification for queue accounting
Context	configure qos sap-ingress qos-policy-name queue number packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 30
Default	0

Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos sap-ingress qos-policy-name queue number percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir decimal-number

Synopsis	Administrative CIR percent
Context	configure qos sap-ingress qos-policy-name queue number percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Default	0.00
Notes	The following elements are part of a choice: (cir and fir) or police .
Introduced	25.3.R2
Platforms	7705 SAR-1

fir decimal-number

Synopsis	Administrative FIR percent
Context	configure qos sap-ingress qos-policy-name queue number percent-rate fir decimal-number
Tree	fir
Range	0.00 to 100.00
Default	0.00
Notes	The following elements are part of a choice: (cir and fir) or police .
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	Administrative PIR percent
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

police

Synopsis	Drop out-of-profile traffic feeding into queue instance
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number percent-rate police
Tree	police
Notes	The following elements are part of a choice: (cir and fir) or police .
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-rate *keyword*

Synopsis	Reference rate
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-mode *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operating mode for this queue
Context	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i> queue-mode <i>keyword</i>
Tree	queue-mode
Options	priority, profile
Default	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to service queue from hardware perspective
Context	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i> queue-type <i>keyword</i>
Tree	queue-type
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir

Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: (cir and fir) or police .
Introduced	25.3.R2
Platforms	7705 SAR-1

fir (*number* | *keyword*)

Synopsis	Administrative FIR
Context	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i> rate fir (<i>number</i> <i>keyword</i>)
Tree	fir
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: (cir and fir) or police .
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos sap-ingress <i>qos-policy-name</i> queue <i>number</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

police

Synopsis	Drop the traffic feeding into queue above the PIR rate
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number rate police
Tree	police
Notes	The following elements are part of a choice: (cir and fir) or police .
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-parent

Synopsis	Enter the scheduler-parent context
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number scheduler-parent
Tree	scheduler-parent
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number scheduler-parent <i>cir-level number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number scheduler-parent <i>cir-weight number</i>
Tree	cir-weight
Range	0 to 100
Default	1

Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number scheduler-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-name *named-item*

Synopsis	Scheduler name
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number scheduler-parent scheduler-name <i>named-item</i>
Tree	scheduler-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure qos sap-ingress <i>qos-policy-name</i> queue number scheduler-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

scope *keyword*

Synopsis	Scope of the policy
Context	configure qos sap-ingress qos-policy-name scope keyword
Tree	scope
Options	exclusive, template
Default	template
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-policy [**scheduler-policy-name**] *named-item*

Synopsis	Enter the scheduler-policy list instance
Context	configure qos scheduler-policy <i>named-item</i>
Tree	scheduler-policy
Max. instances	2047
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-policy-name] *named-item*

Synopsis	Scheduler policy name
Context	configure qos scheduler-policy <i>named-item</i>
Tree	scheduler-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos scheduler-policy <i>named-item</i> description <i>description</i>
Tree	description

String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

frame-based-accounting *boolean*

Synopsis	Use frame-based accounting for queues and schedulers
Context	configure qos scheduler-policy <i>named-item</i> frame-based-accounting <i>boolean</i>
Tree	frame-based-accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tier [*tier-id*] *number*

Synopsis	Enter the tier list instance
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i>
Tree	tier
Introduced	25.3.R2
Platforms	7705 SAR-1

[tier-id] *number*

Synopsis	Tier for scheduler-policy scheduler
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i>
Tree	tier
Range	1 to 3
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent-location *keyword*

Synopsis	Expected location of parent schedulers
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> parent-location <i>keyword</i>

Tree	parent-location
Options	auto, sub, vport
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> <i>description</i> <i>description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

limit-unused-bandwidth *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> limit-unused-bandwidth <i>boolean</i>
Tree	<i>limit-unused-bandwidth</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> percent-rate
Tree	<i>percent-rate</i>
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*keyword* | *decimal-number*)

Synopsis	Scheduler CIR
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> percent-rate cir (<i>keyword</i> <i>decimal-number</i>)
Tree	<i>cir</i>

Range	0.00 to 100.00
Options	sum
Default	sum
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	Scheduler PIR
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-rate *keyword*

Synopsis	Reference rate
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	local-limit, reference-port-limit
Default	reference-port-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

port-parent

Synopsis	Enable the port-parent context
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> port-parent
Tree	port-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> port-parent cir-level <i>number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> port-parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Port priority for bandwidth for above-CIR offered load
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> port-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Weight used at the above-CIR port priority level
----------	--

Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> port-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Default	sum
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir

Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-parent

Synopsis	Enable the scheduler-parent context
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> scheduler-parent
Tree	scheduler-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> scheduler-parent cir-level <i>number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> scheduler-parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Default	1

Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

Synopsis	Level of priority while feeding to the parent
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> scheduler-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-name *named-item*

Synopsis	Scheduler name
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> scheduler-parent scheduler-name <i>named-item</i>
Tree	scheduler-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure qos scheduler-policy <i>named-item</i> tier <i>number</i> scheduler <i>named-item</i> scheduler-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

4.22.1 redundancy command descriptions

redundancy

Synopsis	Enter the redundancy context
Context	configure redundancy
Tree	redundancy
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-evpn

Synopsis	Enter the bgp-evpn context
Context	configure redundancy bgp-evpn
Tree	bgp-evpn
Introduced	25.3.R2
Platforms	7705 SAR-1

ethernet-segment

Synopsis	Enter the ethernet-segment context
Context	configure redundancy bgp-evpn ethernet-segment
Tree	ethernet-segment
Introduced	25.3.R2
Platforms	7705 SAR-1

activation-timer *number*

Synopsis	Time before Ethernet segment activated on DF-elected PE
Context	configure redundancy bgp-evpn ethernet-segment activation-timer <i>number</i>
Tree	activation-timer
Range	0 to 100
Units	seconds
Default	3
Introduced	25.3.R2

Platforms 7705 SAR-1

boot-timer *number*

Synopsis	Time before BGP EVPN multi-homing DF election algorithm
Context	configure <i>redundancy</i> <i>bgp-evpn</i> <i>ethernet-segment</i> boot-timer <i>number</i>
Tree	<i>boot-timer</i>
Description	<p>This command allows the necessary time for the control plane protocols to come up upon PE boot-up before bringing up the ESs and running the DF algorithm.</p> <p>The following considerations apply to this command:</p> <ul style="list-style-type: none">• The boot-timer command must provide enough time to allow the IOMs and BGP sessions to come up before exchanging ES routes and running the DF election for each EVI or ISID.• The boot-timer is synchronized across CPMs and is relative to the system up time; it is not changed or reset upon CPM switchover.• The boot-timer is never interrupted (the es-activation-timer, however, can be interrupted if there is a new event triggering the DF election).• The boot-timer runs per EVI or ISID on the ESs in the system. If the system up time (time the system has been up since the last reboot) is less than the boot-timer value, the system does not run the DF election for any EVI or ISID. When the boot-timer value expires, the DF election runs, and if the system is elected DF for the EVI or ISID, the es-activation-timer is triggered.• The system does not advertise ES routes until the boot timer expires, which guarantees that the peer ES PEs only run the DF election when the PE is ready to become the DF, if required.
Range	0 to 1800
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-mh

Synopsis	Enter the bgp-mh context
Context	configure <i>redundancy</i> <i>bgp-mh</i>
Tree	<i>bgp-mh</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

site

Synopsis	Enter the site context
Context	configure redundancy bgp-mh site
Tree	site
Introduced	25.3.R2
Platforms	7705 SAR-1

activation-timer *number*

Synopsis	Time to wait for BGP updates from remote PEs
Context	configure redundancy bgp-mh site activation-timer <i>number</i>
Tree	activation-timer
Range	0 to 100
Units	seconds
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

boot-timer *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	configure redundancy bgp-mh site boot-timer <i>number</i>
Tree	boot-timer
Range	0 to 600
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

min-down-timer *number*

Synopsis	Min downtime for BGP multi-homing site after transition
Context	configure redundancy bgp-mh site min-down-timer <i>number</i>
Tree	min-down-timer

Description	<p>This command configures the BGP multi-homing site minimum down time. When this value is set and the site goes operationally down, it remains operationally down for at least the length of time configured by this timer, regardless of whether other state changes might cause the site to go operationally up. This timer is restarted every time the site transitions from operationally up to down.</p> <p>This timer is optimized in the following circumstances:</p> <ul style="list-style-type: none"> • If the site goes down on the DF but there are no BGP multi-homing peers with the same site in an up state, this timer is not used. • If the site goes down on the DF but there are no active BGP multi-homing peers, this timer is not used. • If this timer is active and a BGP multihoming update is received from the DF indicating its site is down, this timer is immediately terminated and the BGP multihoming algorithm is triggered to determine whether this PE should become the DF.
Range	1 to 100
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-sync *boolean*

Synopsis	Automatically synchronize certificate files
Context	configure redundancy cert-sync <i>boolean</i>
Tree	cert-sync
Description	When configured to true , the system automatically synchronizes the certificate/CRL/key when importing or generating (for the key). If a new CF card is inserted into cf3: into the backup CPM, the system synchronizes the system-pki directory from the active CPM.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

multi-chassis

Synopsis	Enter the multi-chassis context
Context	configure redundancy multi-chassis
Tree	multi-chassis
Description	Commands in this context configure the attributes of multi-chassis redundancy.
Introduced	25.3.R2

Platforms 7705 SAR-1

ipsec-domain *[id] number*

Synopsis	Enter the ipsec-domain list instance
Context	configure redundancy multi-chassis ipsec-domain <i>number</i>
Tree	ipsec-domain
Description	Commands in this context configure an IPsec domain used for N:M IPsec redundancy.
Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	IPsec domain ID
Context	configure redundancy multi-chassis ipsec-domain <i>number</i>
Tree	ipsec-domain
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

designated-role *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designated role for the IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> designated-role <i>keyword</i>
Tree	designated-role
Description	This command configures the designated role of the tunnel group in the IPsec domain.
Options	standby, active
Default	standby
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Priority for the IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> priority <i>number</i>
Tree	priority
Description	This command configures the priority for the tunnel group in the IPsec domain. The node with the higher priority is more likely to be elected as active within the domain.
Range	0 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

revertive *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable revertive behavior for the tunnel group
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> revertive <i>boolean</i>
Tree	revertive

Description	When configured to true , the router enables the revertive behavior of the tunnel group, which allows a router in an N:M domain to automatically take over as the active router in the domain when it becomes eligible to do so. When configured to false , the revertive behavior of the tunnel group is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-group *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID for an IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> tunnel-group <i>reference</i>
Tree	tunnel-group
Description	This command specifies the tunnel group ID for the IPsec domain.
Reference	configure isa tunnel-group <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Description	This command configures the IP address of the peer in a redundant multi-chassis setup, and enters the context for further application-specific configuration options.
Max. instances	20
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Peer IP address
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MC redundancy peer
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Authentication key used between the node and MC peer
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
String length	1 to 54
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-endpoint

Synopsis	Enable the mc-endpoint context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint
Tree	mc-endpoint
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MC-EP
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd *boolean*

Synopsis	Enable BFD detection for the MC-EP peering tunnel
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint bfd <i>boolean</i>
Tree	bfd

Description	When configured to true , the system uses Bidirectional Forwarding Detection (BFD) to control the state of the associated protocol interface, where the state of the protocol interface is tied to the state of the BFD session between the local and remote nodes. The BFD settings are configured in the IP interface contexts.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

boot-timer *number*

Synopsis	Time to attempt connection before declaring failure
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint boot-timer <i>number</i>
Tree	boot-timer
Description	This command configures the time interval to attempt connection that applies after the node reboots. This command specifies the time the multi-chassis endpoint (MC-EP) protocol takes to establish a connection before declaring a connection failure with the remote peer. When the time interval expires, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	1 to 600
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-on-neighbor-failure *number*

Synopsis	Number of keepalive intervals to wait for packets
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint hold-on-neighbor-failure <i>number</i>
Tree	hold-on-neighbor-failure
Description	This command configures the number of keepalive intervals that the local node waits for packets from the MC-EP peer before declaring a connection failure. When the number of intervals is reached, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	2 to 25
Default	3
Introduced	25.3.R2

Platforms 7705 SAR-1

keep-alive-interval *number*

Synopsis	Interval for exchange of keepalive messages
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-endpoint keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Description	This command configures the interval for which keepalive messages are exchanged between two systems participating as MC-EP when BFD is not active. The fast keepalive messages are used to detect remote node failure.
Range	5 to 500
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

passive-mode *boolean*

Synopsis	Enable passive mode for the MC-EP tunnel
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-endpoint passive-mode <i>boolean</i>
Tree	passive-mode
Description	<p>When configured to true, the system enables passive mode behavior for the MC-EP protocol. Assuming the remote pair is configured with regular MC-EP in passive mode, the MC-EP pair remains dormant until two of the pseudowires in an MC-EP are activated by the remote PEs.</p> <p>When one pseudowire is active, the dormant MC-EP pair becomes active. The regular mechanism to select the best pseudowire between the active pair is initiated, and the system blocks the Rx and Tx directions of the other pseudowire.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

system-priority *number*

Synopsis	System priority of the MC-EP
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-endpoint system-priority <i>number</i>

Tree	system-priority
Description	This command configures the system priority of the MC-EP. The peer configured with the lower value is selected as the master. If the system priority values are equal, the peer with the higher system ID (chassis MAC address) becomes the master.
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-ipsec

Synopsis	Enable the mc-ipsec context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec
Tree	mc-ipsec
Description	Commands in this context configure the 1:1 and N:M MC-IPsec multi-chassis state failover mechanism that allows the IPsec tunnel to continue to function without interruption if an active node fails.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

discovery-interval

Synopsis	Enter the discovery-interval context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec discovery-interval
Tree	discovery-interval

Introduced	25.3.R2
Platforms	7705 SAR-1

boot *number*

Synopsis	Maximum interval after system bootup
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec discovery-interval boot <i>number</i>
Tree	boot
Range	1 to 1800
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

interval-secs *number*

Synopsis	Maximum discovery interval
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec discovery-interval interval-secs <i>number</i>
Tree	interval-secs
Range	1 to 1800
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

domain [[id](#)] *reference*

Synopsis	Enter the domain list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec domain <i>reference</i>
Tree	domain
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] reference

Synopsis	IPsec domain ID
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec domain <i>reference</i>
Tree	domain
Reference	configure redundancy multi-chassis ipsec-domain <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the IPsec domain
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec domain <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-on-neighbor-failure number

Synopsis	Hold time on neighbor failure
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec hold-on-neighbor-failure <i>number</i>
Tree	hold-on-neighbor-failure
Range	2 to 25
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

keep-alive-interval number

Synopsis	Keepalive interval
----------	--------------------

Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Range	5 to 500
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-group [[tunnel-group-id](#)] *reference*

Synopsis	Enter the tunnel-group list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[tunnel-group-id] *reference*

Synopsis	Tunnel group ID
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Reference	configure isa tunnel-group <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the peer IPsec tunnel group
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec tunnel-group <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-group *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Peer tunnel group
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec tunnel-group <i>reference</i> peer-group <i>number</i>
Tree	peer-group
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Tunnel group priority
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ipsec tunnel-group <i>reference</i> priority <i>number</i>
Tree	priority
Description	This command configures the 1:1 MC-IPsec local priority for the tunnel group. The priority configuration is one of the factors used to select the active node between MC peers for the tunnel group. The node that has the tunnel group with the higher priority value is more likely to be elected as the active node.
Range	0 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-lag

Synopsis	Enter the mc-lag context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag

Tree	mc-lag
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of MC-LAG
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-on-neighbor-failure *number*

Synopsis	Time to wait for packets before node failure assumed
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag hold-on-neighbor-failure <i>number</i>
Tree	hold-on-neighbor-failure
Range	2 to 25
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

keep-alive-interval *number*

Synopsis	Keepalive timer value
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Range	5 to 500
Units	deciseconds
Default	10
Introduced	25.3.R2

Platforms 7705 SAR-1

Synopsis	VLAN ID for access node connection
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>named-item</i> ring-node <i>named-item</i> vlan <i>ext-vlan-encap</i>
Tree	vlan

String length 1 to 11
 Introduced 25.3.R2
 Platforms 7705 SAR-1

type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Type of the multi-chassis ring
 Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring** **ring** *named-item* **type** *keyword*
 Tree **type**
 Options layer-2, layer-3
 Notes This element is mandatory.
 Introduced 25.3.R2
 Platforms 7705 SAR-1

peer-name *named-item*

Synopsis Multi-chassis peer name
 Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **peer-name** *named-item*
 Tree **peer-name**
 String length 1 to 32
 Introduced 25.3.R2
 Platforms 7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Source address to communicate with the MC peer
 Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

sync

Synopsis	Enable the sync context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync
Tree	sync
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the peer synchronization
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec *boolean*

Synopsis	Synchronize IPsec information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync ipsec <i>boolean</i>
Tree	ipsec
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

l2tp *boolean*

Synopsis	Synchronize Layer Two Tunnel Protocol (L2TP)
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync l2tp <i>boolean</i>
Tree	l2tp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-dhcp-server *boolean*

Synopsis	Synchronize DHCP Server information
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync local-dhcp-server <i>boolean</i>
Tree	local-dhcp-server
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-ring *boolean*

Synopsis	Synchronize ring information
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync mc-ring <i>boolean</i>
Tree	mc-ring
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tags

Synopsis	Enter the tags context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync tags
Tree	tags

Introduced 25.3.R2
Platforms 7705 SAR-1

lag [\[lag-name\]](#) *reference*

Synopsis Enter the **lag** list instance
Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [tags](#) [lag](#) *reference*
Tree [lag](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[lag-name] *reference*

Synopsis LAG name
Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [tags](#) [lag](#) *reference*
Tree [lag](#)
Reference **configure** [lag](#) *lag-interface*
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

range [start](#) *vlan-encap* [end](#) *vlan-encap*

Synopsis Enter the **range** list instance
Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [tags](#) [lag](#) *reference* [range](#) [start](#) *vlan-encap* [end](#) *vlan-encap*
Tree [range](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

start *vlan-encap*

Synopsis First encapsulation value

Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync tags lag <i>reference</i> range start <i>vlan-encap</i> end <i>vlan-encap</i>
Tree	range
String length	1 to 11
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *vlan-encap*

Synopsis	Last encapsulation value
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync tags lag <i>reference</i> range start <i>vlan-encap</i> end <i>vlan-encap</i>
Tree	range
String length	1 to 11

Tree	range
Introduced	25.3.R2
Platforms	7705 SAR-1

start *vlan-encap*

Synopsis	First encapsulation value
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync tags port <i>reference</i> range start <i>vlan-encap</i> end <i>vlan-encap</i>
Tree	range
String length	1 to 11
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *vlan-encap*

Synopsis	Last encapsulation value
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync tags port <i>reference</i> range start <i>vlan-encap</i> end <i>vlan-encap</i>
Tree	range
String length	1 to 11
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sync-tag *named-item*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
----------	---------------------

Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags port reference range start vlan-encap end vlan-encap sync-tag named-item
Tree	sync-tag
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sync-tag *named-item*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Synchronization tag
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags port reference sync-tag named-item
Tree	sync-tag
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp [[id](#)] *number*

Synopsis	Enter the sdp list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp number
Tree	sdp
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	ID of SDP to be synchronized with multi-chassis peer
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp number

Tree	sdp
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

range [start](#) *number* [end](#) *number*

Synopsis	Enter the range list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp <i>number</i> range start <i>number</i> end <i>number</i>
Tree	range
Introduced	25.3.R2
Platforms	7705 SAR-1

start *number*

Synopsis	First virtual circuit ID
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp <i>number</i> range start <i>number</i> end <i>number</i>
Tree	range
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Last virtual circuit ID
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp <i>number</i> range start <i>number</i> end <i>number</i>
Tree	range
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms7705 SAR-1

sync-tag *named-item*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp number range start number end number sync-tag <i>named-item</i>
Tree	sync-tag
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sync-tag *named-item*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags sdp number sync-tag <i>named-item</i>
Tree	sync-tag
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

transport-encryption

Synopsis	Enter the transport-encryption context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync transport-encryption
Tree	transport-encryption
Introduced	25.3.R2

Platforms 7705 SAR-1

application [[application-id](#)] *keyword*

Synopsis Enter the **application** list instance

Context **configure** [redundancy](#) [multi-chassis](#) [peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [transport-encryption](#) [application](#) *keyword*

Tree [application](#)

Description Commands in this context configure the MCS application for transport encryption. The application-id configures an application and a keychain defines the key used for the encryption.

Introduced 25.3.R2

Platforms 7705 SAR-1

[application-id] *keyword*

Synopsis Application using transport encryption

Context **configure** [redundancy](#) [multi-chassis](#) [peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [transport-encryption](#) [application](#) *keyword*

Tree [application](#)

Description This command configures an MCS application for the transport encryption method.

Options igmp, igmp-snooping, sub-mgmt-ipoe, srtp, mc-ring, mld-snooping, dhcp-server, sub-host-trk, sub-mgmt-pppoe, ipsec, mld, python, l2tp, diam-proxy, pim-snp-g-sap, pim-snp-g-sdp, diam-node, nat, sub-mgmt-wlan-gw

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

keychain *reference*

Synopsis Keychain containing the authentication keys

Context **configure** [redundancy](#) [multi-chassis](#) [peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [transport-encryption](#) [application](#) *keyword* [keychain](#) *reference*

Tree [keychain](#)

Description This command specifies a keychain that contains authentication keys for the application.

Reference **configure** [system](#) [security](#) [keychains](#) [keychain](#) *named-item*

Notes This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR-1

tunnel-group *[tunnel-group-id] number*

Synopsis Enter the **tunnel-group** list instance
Context **configure** *redundancy multi-chassis peer (ipv4-address-no-zone | ipv6-address-no-zone) sync tunnel-group number*
Tree *tunnel-group*
Introduced 25.3.R2
Platforms 7705 SAR-1

[tunnel-group-id] number

Synopsis Multi-active tunnel group ID
Context **configure** *redundancy multi-chassis peer (ipv4-address-no-zone | ipv6-address-no-zone) sync tunnel-group number*
Tree *tunnel-group*
Range 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

sync-tag *named-item*

Synopsis Tag to synchronize the tunnel group with the MC peer
Context **configure** *redundancy multi-chassis peer (ipv4-address-no-zone | ipv6-address-no-zone) sync tunnel-group number sync-tag named-item*
Tree *sync-tag*
String length 1 to 32
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

rollback-sync *keyword*

Synopsis	Parameters for redundancy rollback synchronization
Context	configure redundancy rollback-sync <i>keyword</i>
Tree	rollback-sync
Options	rollback-single, rollback-all
Introduced	25.3.R2
Platforms	7705 SAR-1

switchover-exec *url*

Synopsis	CLI script file executed after a redundancy switchover
Context	configure redundancy switchover-exec <i>url</i>
Tree	switchover-exec
Description	<p>This command specifies the location and name of the CLI script file executed following a redundancy switchover from the previously active CPM card. A switchover can happen because of a fatal failure or by manual action.</p> <p>The CLI script file can contain commands for environment settings, classic CLI debug configuration (excluding mirroring settings), and other commands not maintained by the configuration redundancy.</p> <p>The following commands are not supported in the switchover-exec file: clear, configure, candidate, oam, tools, oam, ping, traceroute, mstat, mtrace, and mrinfo.</p>
String length	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

synchronize *keyword*

Synopsis	Behavior for automatic redundancy synchronization
Context	configure redundancy synchronize <i>keyword</i>
Tree	synchronize
Description	This command specifies the behavior for the automatic synchronization of system files on the active CPM to the standby CPM.
Options	off – Disable synchronization config – Synchronize the configuration files boot-env – Synchronize all files required for the boot process
Introduced	25.3.R2

Platforms 7705 SAR-1

4.23 router commands

```

configure
- router named-item-64

4.23.1 router command descriptions

router [**router-name**] *named-item-64*

Synopsis	Enter the router list instance
Context	configure router <i>named-item-64</i>
Tree	router
Description	Commands in this context configure a router instance that represents a virtual router in the system. At least two instances always exist in the system. The base or transport router and the management router are created when the system is initialized and cannot be deleted.
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[router-name] *named-item-64*

Synopsis	Administrative router name
Context	configure router <i>named-item-64</i>
Tree	router
String length	1 to 64
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregates

Synopsis	Enter the aggregates context
Context	configure router <i>named-item-64</i> aggregates
Tree	aggregates
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the aggregate list instance
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Description	<p>Commands in this context add aggregate routes to the routing table when there are one or more component routes. A component route is any route installed in the forwarding table that is a more-specific match of the aggregate.</p> <p>The use of aggregate routes can lead to smaller routing table sizes by reducing the number of routes that need to be advertised to neighbor routes.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregator

Synopsis	Enter the aggregator context
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator
Tree	aggregator
Description	Commands in this context configure the BGP AGGREGATOR path attribute for the aggregate route.
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Aggregator IP address
----------	-----------------------

Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator address <i>ipv4-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

as-number *number*

Synopsis	Aggregator AS number
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

as-set *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i>
Tree	as-set
Description	When configured to true , the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes. When configured to false , the AS_PATH attribute contains no AS_SET and will be originated by the ESR.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

blackhole

Synopsis	Enable the blackhole context
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole
Tree	blackhole

Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	25.3.R2
Platforms	7705 SAR-1

generate-icmp *boolean*

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole generate-icmp <i>boolean</i>
Tree	generate-icmp
Description	When configured to true , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to false , ICMP unreachable messages are not generated.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

community *community*

Synopsis	Community name that is added to the aggregate route
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) community <i>community</i>
Tree	community
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String length	1 to 72
Max. instances	12
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
----------	------------------

Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

discard-component-communities *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) discard-component-communities <i>boolean</i>
Tree	discard-component-communities
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference *number*

Synopsis	Local preference used when aggregate route is exported
----------	--

Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) local-preference <i>number</i>
Tree	local-preference
Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

policy reference

Synopsis	Policy name for the aggregated route
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) policy reference
Tree	policy
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

summary-only boolean

Synopsis	Advertise the aggregate route only
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) summary-only <i>boolean</i>
Tree	summary-only
Description	<p>When configured to true, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to false, the router advertises both the aggregate route and its contributing routes.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-group *number*

Synopsis	Tunnel group from which to associate the MC IPsec state
Context	configure router <i>named-item-64</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tunnel-group <i>number</i>
Tree	tunnel-group
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-bgp-to-igp-export *boolean*

Synopsis	Enable the distribution of BGP routes into the IGP
Context	configure router <i>named-item-64</i> allow-bgp-to-igp-export <i>boolean</i>
Tree	allow-bgp-to-igp-export
Description	When configured to true , the router can export base BGP RTM routes into the IGP routing instance within the base router. This command applies to already exported BGP prefixes and to newly received BGP prefixes.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-icmp-redirect *boolean*

Synopsis	Allow ICMP redirects on the management interface
Context	configure router <i>named-item-64</i> allow-icmp-redirect <i>boolean</i>
Tree	allow-icmp-redirect
Description	When configured to true , ICMP redirect messages can be received on the management interface. When configured to false , all received ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-icmp6-redirect *boolean*

Synopsis	Allow IPv6 ICMP redirects on the management interface
Context	configure router <i>named-item-64</i> allow-icmp6-redirect <i>boolean</i>
Tree	allow-icmp6-redirect
Description	<p>When configured to true, IPv6 ICMP redirect messages can be received on the management interface.</p> <p>When configured to false, all received IPv6 ICMP redirect messages are dropped.</p> <p>This command cannot be configured on a non-management interface.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

autonomous-system *number*

Synopsis	AS number advertised to peers for this router
Context	configure router <i>named-item-64</i> autonomous-system <i>number</i>
Tree	autonomous-system
Description	<p>This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.</p> <p>If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp

Synopsis	Enable the bgp context
Context	configure router <i>named-item-64</i> bgp
Tree	bgp
Introduced	25.3.R2

Platforms 7705 SAR-1

add-paths

Synopsis Enable the **add-paths** context

Context **configure** [router](#) *named-item-64* [bgp](#) [add-paths](#)

Tree [add-paths](#)

Description Commands in this context configure add-paths support for the specified address families of the BGP instance. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.

Introduced 25.3.R2

Platforms 7705 SAR-1

evpn

Synopsis Enter the **evpn** context

Context **configure** [router](#) *named-item-64* [bgp](#) [add-paths](#) [evpn](#)

Tree [evpn](#)

Description Commands in this context configure the Add-Paths capability for EVPN routes. By default, Add-Paths is not enabled for EVPN routes.

Introduced 25.3.R2

Platforms 7705 SAR-1

receive *boolean*

Synopsis Receive multiple EVPN paths per prefix from a peer

Context **configure** [router](#) *named-item-64* [bgp](#) [add-paths](#) [evpn](#) [receive](#) *boolean*

Tree [receive](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

send (*number* | *keyword*)

Synopsis Maximum number of EVPN paths to send

Context **configure** [router](#) *named-item-64* [bgp](#) [add-paths](#) [evpn](#) [send](#) (*number* | *keyword*)

Tree	send
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> bgp add-paths ipv4
Tree	ipv4
Description	Commands in this context configure add-paths support for the IPv4 unicast address family.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per unlabeled IPv4 prefix
Context	configure router <i>named-item-64</i> bgp add-paths ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple unlabeled IPv4 unicast routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	configure router <i>named-item-64</i> bgp add-paths ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, add-paths send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths ipv6
Tree	ipv6
Description	Commands in this context configure add-paths support for the IPv6 unicast address family.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per unlabeled IPv6 prefix
Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per unlabeled IPv6 unicast prefix. The actual number of

advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, add-paths send capability is not enabled for unlabeled IPv6 unicast routes.

Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4

Synopsis	Enter the label-ipv4 context
Context	configure router <i>named-item-64</i> bgp add-paths label-ipv4
Tree	label-ipv4
Description	Commands in this context configure add-paths support for the labeled IPv4 unicast address family.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	configure router <i>named-item-64</i> bgp add-paths label-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Paths advertised per labeled IPv4 unicast prefix
Context	configure router <i>named-item-64</i> bgp add-paths label-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send

Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6

Synopsis	Enter the label-ipv6 context
Context	configure router <i>named-item-64</i> bgp add-paths label-ipv6
Tree	label-ipv6
Description	Commands in this context configure add-paths support for the labeled IPv6 unicast address family.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	configure router <i>named-item-64</i> bgp add-paths label-ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Paths advertised per labeled IPv6 unicast prefix
Context	configure router <i>named-item-64</i> bgp add-paths label-ipv6 send (<i>number</i> <i>keyword</i>)

Tree	send
Description	<p>This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.</p> <p>When not configured, add-paths send capability is not enabled for labeled IPv6 unicast routes.</p>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4

Synopsis	Enter the vpn-ipv4 context
Context	configure router <i>named-item-64</i> bgp add-paths vpn-ipv4
Tree	vpn-ipv4
Description	Commands in this context configure add-paths support for the VPN-IPv4 address family.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	configure router <i>named-item-64</i> bgp add-paths vpn-ipv4 receive <i>boolean</i>
Tree	receive
Description	<p>When configured to true, this command allows multiple routes per VPN-IPv4 prefix to be received from a peer.</p> <p>When configured to false, the ADD-PATH receive capability is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths advertised per VPN-IPv4 prefix
----------	--

Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths vpn-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6

Synopsis	Enter the vpn-ipv6 context
Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths vpn-ipv6
Tree	vpn-ipv6
Description	Commands in this context configure add-paths support for the VPN-IPv6 address family.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths vpn-ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple routes per VPN-IPv6 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths advertised per VPN-IPv6 prefix
----------	--

Context	configure <i>router</i> <i>named-item-64</i> bgp add-paths vpn-ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP instance
Context	configure <i>router</i> <i>named-item-64</i> bgp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-external

Synopsis	Enter the advertise-external context
Context	configure <i>router</i> <i>named-item-64</i> bgp advertise-external
Tree	advertise-external
Description	Commands in this context allow BGP to advertise its best external route to a destination for specified address families even when its best overall route is an internal route.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure <i>router</i> <i>named-item-64</i> bgp advertise-external ipv4 <i>boolean</i>

Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp advertise-external ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp advertise-external label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp advertise-external label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
----------	--

Context	configure <i>router</i> <i>named-item-64</i> bgp advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows any inactive BGP route to be advertised, even though it is not the used route.</p> <p>When configured to false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-ipv6-next-hops

Synopsis	Enter the advertise-ipv6-next-hops context
Context	configure <i>router</i> <i>named-item-64</i> bgp advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Description	<p>Commands in this context allow specified BGP address family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>This command context has no effect on routes advertised to IPv4 peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn *boolean*

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	configure <i>router</i> <i>named-item-64</i> bgp advertise-ipv6-next-hops evpn <i>boolean</i>
Tree	evpn
Description	<p>When configured to true, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Description	<p>When configured to true, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp advertise-ipv6-next-hops label-ipv4 <i>boolean</i>
Tree	label-ipv4
Description	<p>When configured to true, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>advertise-ipv6-next-hops</i> <i>label-ipv6</i> <i>boolean</i>
Tree	<i>label-ipv6</i>
Description	<p>When configured to true, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>advertise-ipv6-next-hops</i> <i>vpn-ipv4</i> <i>boolean</i>
Tree	<i>vpn-ipv4</i>
Description	<p>When configured to true, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>advertise-ipv6-next-hops</i> <i>vpn-ipv6</i> <i>boolean</i>
Tree	<i>vpn-ipv6</i>
Description	<p>When configured to true, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	configure router <i>named-item-64</i> bgp aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Description	<p>When configured to true, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.</p> <p>When configured to false, the AS number and router ID are added to the AGGREGATOR path attribute.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

asn-4-byte *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	configure router <i>named-item-64</i> bgp asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for all peers
Context	configure router <i>named-item-64</i> bgp authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.
String length	1 to 370

Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session
Context **configure** [router](#) *named-item-64* [bgp](#) [authentication-keychain](#) *reference*
Tree [authentication-keychain](#)
Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference **configure** [system](#) [security](#) [keychains](#) [keychain](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

backup-path

Synopsis Enter the **backup-path** context
Context **configure** [router](#) *named-item-64* [bgp](#) [backup-path](#)
Tree [backup-path](#)
Description Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.
By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.
Introduced 25.3.R2
Platforms 7705 SAR-1

ipv4 *boolean*

Synopsis Enable support for unlabeled unicast IPv4 routes
Context **configure** [router](#) *named-item-64* [bgp](#) [backup-path](#) [ipv4](#) *boolean*
Tree [ipv4](#)
Default false
Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes

Context **configure** [router](#) *named-item-64* [bgp](#) [backup-path](#) [ipv6](#) *boolean*

Tree [ipv6](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

label-ipv4 *boolean*

Synopsis Enable support for labeled-unicast IPv4 routes

Context **configure** [router](#) *named-item-64* [bgp](#) [backup-path](#) [label-ipv4](#) *boolean*

Tree [label-ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

label-ipv6 *boolean*

Synopsis Enable support for labeled-unicast IPv6 routes

Context **configure** [router](#) *named-item-64* [bgp](#) [backup-path](#) [label-ipv6](#) *boolean*

Tree [label-ipv6](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

vpn-ipv4 *boolean*

Synopsis Enable support for BGP FRR on VPN-IPv4 routes

Context **configure** [router](#) *named-item-64* [bgp](#) [backup-path](#) [vpn-ipv4](#) *boolean*

Tree [vpn-ipv4](#)

Description	When configured to true, the router enables BGP fast reroute for VPN-IPv4 routes, if the they have the same route distinguisher and IP prefix and the context is a model-B ASBR or next-hop-self RR.
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Enable support for BGP FRR on VPN-IPv6 routes
Context	configure router <i>named-item-64</i> bgp backup-path vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Description	When configured to true, the router enables BGP fast reroute for VPN-IPv6 routes, if the they have the same route distinguisher and IP prefix and the context is a model-B ASBR or next-hop-self RR.
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

best-path-selection

Synopsis	Enter the best-path-selection context
Context	configure router <i>named-item-64</i> bgp best-path-selection
Tree	best-path-selection
Introduced	25.3.R2
Platforms	7705 SAR-1

always-compare-med

Synopsis	Enter the always-compare-med context
Context	configure router <i>named-item-64</i> bgp best-path-selection always-compare-med
Tree	always-compare-med
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	25.3.R2
Platforms	7705 SAR-1

med-value *keyword*

Synopsis	Action for a missing MED attribute
Context	configure router <i>named-item-64</i> bgp best-path-selection always-compare-med med-value <i>keyword</i>
Tree	med-value
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-as *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	configure router <i>named-item-64</i> bgp best-path-selection always-compare-med strict-as <i>boolean</i>
Tree	strict-as
Description	<p>When configured to true, the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.</p> <p>When configured to false, the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path-ignore

Synopsis	Enter the as-path-ignore context
Context	configure router <i>named-item-64</i> bgp best-path-selection as-path-ignore
Tree	as-path-ignore
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp best-path-selection as-path-ignore ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 boolean

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp best-path-selection as-path-ignore ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

l2-vpn boolean

Synopsis	Ignore AS path length for L2-VPN routes
Context	configure router <i>named-item-64</i> bgp best-path-selection as-path-ignore l2-vpn <i>boolean</i>
Tree	l2-vpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 boolean

Synopsis	Ignore AS path length for labeled-unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp best-path-selection as-path-ignore label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

label-ipv6 *boolean*

Synopsis Ignore AS path length for labeled-unicast IPv6 routes

Context **configure** **router** *named-item-64* **bgp** **best-path-selection** **as-path-ignore** **label-ipv6** *boolean*

Tree **label-ipv6**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

mcast-ipv4 *boolean*

Synopsis Ignore AS path length for IPv4 multicast routes

Context **configure** **router** *named-item-64* **bgp** **best-path-selection** **as-path-ignore** **mcast-ipv4** *boolean*

Tree **mcast-ipv4**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

mcast-ipv6 *boolean*

Synopsis Ignore AS path length for IPv6 multicast routes

Context **configure** **router** *named-item-64* **bgp** **best-path-selection** **as-path-ignore** **mcast-ipv6** *boolean*

Tree **mcast-ipv6**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

vpn-ipv4 *boolean*

Synopsis Ignore AS path length for VPN IPv4 (SAFI 128) routes

Context **configure** **router** *named-item-64* **bgp** **best-path-selection** **as-path-ignore** **vpn-ipv4** *boolean*

Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Ignore AS path length for VPN IPv6 (SAFI 128) routes
Context	configure router <i>named-item-64</i> bgp best-path-selection as-path-ignore vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

compare-origin-validation-state *boolean*

Synopsis	Compare RPKI origin validation state of usable routes
Context	configure router <i>named-item-64</i> bgp best-path-selection compare-origin-validation-state <i>boolean</i>
Tree	compare-origin-validation-state
Description	<p>When configured to true, the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state.</p> <p>When configured to false, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

d-path-length-ignore *boolean*

Synopsis	Enable D-PATH length ignore
Context	configure router <i>named-item-64</i> bgp best-path-selection d-path-length-ignore <i>boolean</i>
Tree	d-path-length-ignore
Description	When configured to true , this command, enables the router to ignore the D-PATH domain segment length during best-path selection.

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

deterministic-med *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	configure router <i>named-item-64</i> bgp best-path-selection deterministic-med <i>boolean</i>
Tree	deterministic-med
Description	<p>When configured to true, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.</p> <p>When configured to false, paths are not grouped and the overall best-path selection can depend on the order of route arrival.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp-ibgp-equal

Synopsis	Enter the ebgp-ibgp-equal context
Context	configure router <i>named-item-64</i> bgp best-path-selection ebgp-ibgp-equal
Tree	ebgp-ibgp-equal

Description	Commands in this context allow BGP to ignore the difference between EBGp and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families. By default, the BGP decision process prefers an EBGp learned route over an IBGP learned route.
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn boolean

Synopsis	Consider EBGp and IBGP EVPN routes equal
Context	configure router <i>named-item-64</i> bgp best-path-selection ebgp-ibgp-equal evpn <i>boolean</i>
Tree	evpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Consider EBGp and IBGP IPv4 routes equal
Context	configure router <i>named-item-64</i> bgp best-path-selection ebgp-ibgp-equal ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 boolean

Synopsis	Consider EBGp and IBGP IPv6 routes equal
Context	configure router <i>named-item-64</i> bgp best-path-selection ebgp-ibgp-equal ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv4 routes equal
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>best-path-selection</i> <i>ebgp-ibgp-equal</i> <i>label-ipv4</i> <i>boolean</i>
Tree	<i>label-ipv4</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv6 routes equal
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>best-path-selection</i> <i>ebgp-ibgp-equal</i> <i>label-ipv6</i> <i>boolean</i>
Tree	<i>label-ipv6</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Consider EBGP and IBGP VPN-IPv4 routes equal
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>best-path-selection</i> <i>ebgp-ibgp-equal</i> <i>vpn-ipv4</i> <i>boolean</i>
Tree	<i>vpn-ipv4</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Consider EBGP and IBGP VPN-IPv6 routes equal
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>best-path-selection</i> <i>ebgp-ibgp-equal</i> <i>vpn-ipv6</i> <i>boolean</i>
Tree	<i>vpn-ipv6</i>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	configure router <i>named-item-64</i> bgp best-path-selection ignore-nh-metric <i>boolean</i>
Tree	ignore-nh-metric
Description	<p>When configured to true, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to false, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the router context) or IP prefix learned from VPRN BGP peers (in the vprn context).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-router-id

Synopsis	Enable the ignore-router-id context
Context	configure router <i>named-item-64</i> bgp best-path-selection ignore-router-id
Tree	ignore-router-id
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

include-internal

Synopsis	Enter the include-internal context
Context	configure router <i>named-item-64</i> bgp best-path-selection ignore-router-id include-internal

Tree	include-internal
Description	Commands in this context specify the internal address families for which the router ID values are ignored, even when comparing two IBGP paths or an EBGP and an IBGP path.
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-invalid-unusable *boolean*

Synopsis	Deem invalid routes unusable for best-path selection
Context	configure router <i>named-item-64</i> bgp best-path-selection origin-invalid-unusable <i>boolean</i>
Tree	origin-invalid-unusable
Description	<p>When configured to true, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers.</p> <p>When configured to false, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix according to the BGP decision process.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure router <i>named-item-64</i> bgp bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations.</p> <p>When configured to false, BFD is not enabled globally for all BGP sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure router <i>named-item-64</i> bgp bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise

Synopsis	Enable the advertise context
Context	configure router <i>named-item-64</i> bgp bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none">• The inherited or configured value for the bfd-liveness command that applies to the peer is true.• The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure router <i>named-item-64</i> bgp bfd-strict-mode advertise holdtime <i>number</i>
Tree	holdtime
Description	<p>This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.</p>
Range	1 to 65535
Units	seconds

Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure <i>router</i> <i>named-item-64</i> bgp bfd-strict-mode next-hop-reachability <i>boolean</i>
Tree	next-hop-reachability
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none">• The BFD session to the peer is in a down state.• There is a valid interface BFD configuration that applies to the peer.• There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none">• IPv4• IPv6• IPv4 VPN• IPv6 VPN• b• labeled unicast IPv4• labeled unicast IPv6• EVPN• IPv4 multicast• IPv6 multicast <p>When configured to false, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure router <i>named-item-64</i> bgp bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context control the tunnel table metrics associated with BGP label unicast routes.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-aigp *boolean*

Synopsis	Use the AIGP attribute as tunnel metric when present
Context	configure router <i>named-item-64</i> bgp bgp-tunnel-metric prefer-aigp <i>boolean</i>
Tree	prefer-aigp
Description	<p>When configured to true, the TTM metric is based on the AIGP metric if the route has the path attribute. When the BGP-LU route is selected for installation in TTM and it is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the resolved cost to the BGP next-hop of the route; otherwise, the metric is set to the value in the value setting.</p> <p>When configured to false, the AIGP attribute is ignored for purposes to TTM metric derivation.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-med *boolean*

Synopsis	Use the MED attribute as tunnel metric when present
Context	configure router <i>named-item-64</i> bgp bgp-tunnel-metric prefer-med <i>boolean</i>
Tree	prefer-med
Description	When configured to true , the TTM metric is based on the MED metric value of the BGP-LU route. When a BGP-LU route is selected for installation in TTM and is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the

TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the resolved cost to the BGP next hop of the route added to it. Otherwise, the metric is set to the value configured using the **value** command.

When configured to **false**, the MED attribute is ignored for TTM metric derivation.

Note: **prefer-aigp** takes precedence over this command if the received BGP-LU has both attributes.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	BGP tunnel metric value
Context	configure <i>router</i> <i>named-item-64</i> bgp bgp-tunnel-metric <i>value</i> <i>number</i>
Tree	<i>value</i>
Description	<p>This command configures a BGP tunnel metric for label IPv4 routes that do not have their metric set by more specific means.</p> <p>If a BGP-LU route is selected for installation in the TTM and there is no tunnel metric policy action that applies to the route, the TTM metric of the associated tunnel is set to this value if either:</p> <ul style="list-style-type: none">• prefer-aigp is set to false• prefer-aigp is set to true but the BGP-LU route does not have an AIGP attribute
Range	0 to 4294967295
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-tunnel-preference *number*

Synopsis	BGP tunnel table preference
Context	configure <i>router</i> <i>named-item-64</i> bgp bgp-tunnel-preference <i>number</i>
Tree	<i>bgp-tunnel-preference</i>
Description	<p>This command configures the tunnel table preference for BGP-LU tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes</p>

the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.

Range	1 to 255
Default	12
Introduced	25.3.R2
Platforms	7705 SAR-1

block-prefix-sid *boolean*

Synopsis	Block the prefix SID attribute
Context	configure router <i>named-item-64</i> bgp block-prefix-sid <i>boolean</i>
Tree	block-prefix-sid
Description	<p>When configured to true, all prefix SID attributes are removed from label IPv4 and label IPv6 routes when they are exchanged with EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to false, all prefix SID attributes associated with label IPv4 and label IPv6 routes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

client-reflect *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	configure router <i>named-item-64</i> bgp client-reflect <i>boolean</i>
Tree	client-reflect
Description	<p>When configured to true, routes received from neighbors considered to be RR clients are reflected to other peers as expected.</p> <p>When configured to false, routes received from neighbors considered to be RR clients are not reflected to other clients.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster

Synopsis	Enter the cluster context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>cluster</i>
Tree	<i>cluster</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology location for ORR
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>cluster</i> <i>allow-local-fallback</i> <i>boolean</i>
Tree	<i>allow-local-fallback</i>
Description	<p>When configured to true, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to true.</p> <p>When configured to false, no route is advertised to the clients when there are no reachable routes from the client's ORR location.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>cluster</i> <i>cluster-id</i> <i>ipv4-address</i>
Tree	<i>cluster-id</i>
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	25.3.R2
Platforms	7705 SAR-1

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>cluster</i> <i>orr-location</i> <i>number</i>

Tree	orr-location
Description	<p>This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.</p> <p>With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure router <i>named-item-64</i> bgp connect-retry <i>number</i>
Tree	connect-retry
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

convergence

Synopsis	Enter the convergence context
Context	configure router <i>named-item-64</i> bgp convergence
Tree	convergence
Description	Commands in this context configure the route convergence delay.
Introduced	25.3.R2
Platforms	7705 SAR-1

family [[family-type](#)] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>named-item-64</i> bgp convergence family <i>keyword</i>

Tree	family
Description	Commands in this context configure route convergence options for a specific BGP address family, specifically, the maximum amount of time BGP waits until it advertises the routes of the address family to its BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] *keyword*

Synopsis	Address family for which convergence selection applies
Context	configure router <i>named-item-64</i> bgp convergence family <i>keyword</i>
Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait-to-advertise *number*

Synopsis	Maximum wait time before advertising routes
Context	configure router <i>named-item-64</i> bgp convergence family <i>keyword</i> max-wait-to-advertise <i>number</i>
Tree	max-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

min-wait-to-advertise *number*

Synopsis	Minimum wait time before advertising routes
Context	configure router <i>named-item-64</i> bgp convergence min-wait-to-advertise <i>number</i>
Tree	min-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	25.3.R2

Platforms 7705 SAR-1

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure router <i>named-item-64</i> bgp damp-peer-oscillations
Tree	damp-peer-oscillations
Description	<p>Commands in this context support the DampPeerOscillations FSM behavior described in section 8.1 of RFC 4271, <i>A Border Gateway Protocol 4 (BGP-4)</i>.</p> <p>When unconfigured, the router does not perform peer oscillation damping and immediately transitions out of the idle state after every reset.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure router <i>named-item-64</i> bgp damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	<p>This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.</p>
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure router <i>named-item-64</i> bgp damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Description	<p>Commands in this context configure how long a BGP peer session remains in the idle state after some type of error causes the session to reset.</p> <p>In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur in a short time period after each session reset cause longer and longer hold times in the idle state.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure router named-item-64 bgp damp-peer-oscillations idle-hold-time initial-wait <i>number</i>
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure router named-item-64 bgp damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Time that doubles after each session failure
Context	configure router named-item-64 bgp damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2

Platforms 7705 SAR-1

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>router</i> <i>named-item-64</i> bgp damping <i>boolean</i>
Tree	damping
Description	<p>When configured to true, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none">• Half-life: 15 minutes• Max-suppress: 60 minutes• Suppress-threshold: 3000• Reuse-threshold: 750 <p>When configured to false, BGP route damping for learned routes is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
Context	configure <i>router</i> <i>named-item-64</i> bgp def-recv-evpn-encap <i>keyword</i>
Tree	def-recv-evpn-encap
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.
Options	mpls, vxlan
Default	mpls
Introduced	25.3.R2
Platforms	7705 SAR-1

default-label-preference

Synopsis	Enter the default-label-preference context
----------	---

Context	configure router <i>named-item-64</i> bgp default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Default preference for EBGp
Context	configure router <i>named-item-64</i> bgp default-label-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure router <i>named-item-64</i> bgp default-label-preference ibgp <i>number</i>
Tree	ibgp
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

default-preference

Synopsis	Enter the default-preference context
Context	configure router <i>named-item-64</i> bgp default-preference
Tree	default-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Default preference for EBGp
Context	configure router <i>named-item-64</i> bgp default-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure router <i>named-item-64</i> bgp default-preference ibgp <i>number</i>
Tree	ibgp
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

description description

Synopsis	Text description
Context	configure router <i>named-item-64</i> bgp description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-neighbor-limit number

Synopsis	Max dynamic BGP sessions to accept from remote peers
Context	configure router <i>named-item-64</i> bgp dynamic-neighbor-limit <i>number</i>
Tree	dynamic-neighbor-limit

Description	This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.
Range	1 to 8192
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp-default-reject-policy

Synopsis	Enter the ebgp-default-reject-policy context
Context	configure router <i>named-item-64</i> bgp ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure router <i>named-item-64</i> bgp ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	configure router <i>named-item-64</i> bgp ebgp-default-reject-policy import <i>boolean</i>
Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-peer-engineering

Synopsis	Enable the egress-peer-engineering context
Context	configure router <i>named-item-64</i> bgp egress-peer-engineering
Tree	egress-peer-engineering
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	configure router <i>named-item-64</i> bgp egress-peer-engineering admin-state <i>keyword</i>
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure router <i>named-item-64</i> bgp enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	<p>When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When configured to false, received routes are not checked for compliance with the rule.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

error-handling

Synopsis	Enter the error-handling context
Context	configure router <i>named-item-64</i> bgp error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR-1

legacy-mode *boolean*

Synopsis	Enable legacy-mode of BGP error handling
Context	configure router <i>named-item-64</i> bgp error-handling legacy-mode <i>boolean</i>
Tree	legacy-mode
Description	<p>When configured to true, the BGP instance handles the BGP update error messages based on the configured update-fault-tolerance commands. If these commands are not explicitly configured, BGP error handling follows the legacy procedures described in RFC 4271, which can result in disruptive session resets.</p> <p>When configured to false, the BGP instance ignores the configured update-fault-tolerance commands and applies the new error handling procedures described in RFC 7606 on all sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure router <i>named-item-64</i> bgp error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When configured to false, most errors trigger a session reset.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Enable the export context
Context	configure router <i>named-item-64</i> bgp export
Tree	export
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to all peers. Route policies are configured in the configure policy-options context.</p> <p>When no export policies are specified in this context, BGP-learned routes are advertised by default and non-BGP routes are not advertised.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	List of export policy names
Context	configure router <i>named-item-64</i> bgp export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>When no export policies are specified, BGP-learned routes are advertised by default and non-BGP routes are not advertised.</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-nh-encoding

Synopsis	Enter the extended-nh-encoding context
Context	configure router <i>named-item-64</i> bgp extended-nh-encoding
Tree	extended-nh-encoding
Description	Commands in this context specify the IPv4-related address families that can receive IPv6 next hops from peers. The peers should not send such routes unless the peers receive notification of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Advertise encoding capability for IPv4 routes
Context	configure router <i>named-item-64</i> bgp extended-nh-encoding ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Advertise encoding capability for label-IPv4 routes
Context	configure router <i>named-item-64</i> bgp extended-nh-encoding label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise encoding capability for VPN-IPv4 routes
Context	configure router <i>named-item-64</i> bgp extended-nh-encoding vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

family

Synopsis	Enter the family context
Context	configure router <i>named-item-64</i> bgp family
Tree	family
Description	Commands in this context specify the BGP address families supported by the base router BGP sessions.
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-ls *boolean*

Synopsis	Advertise MP-BGP support for the BGP-LS address family
Context	configure router <i>named-item-64</i> bgp family bgp-ls <i>boolean</i>
Tree	bgp-ls
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn *boolean*

Synopsis	Advertise MP-BGP support for the EVPN address family
Context	configure router <i>named-item-64</i> bgp family evpn <i>boolean</i>
Tree	evpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-ipv6 *boolean*

Synopsis	Advertise support for the FlowSpec-IPv6 address family
----------	--

Context	configure router <i>named-item-64</i> bgp family flow-ipv6 <i>boolean</i>
Tree	flow-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-vpn-ipv4 *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv4 address family
Context	configure router <i>named-item-64</i> bgp family flow-vpn-ipv4 <i>boolean</i>
Tree	flow-vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-vpn-ipv6 *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv6 address family
Context	configure router <i>named-item-64</i> bgp family flow-vpn-ipv6 <i>boolean</i>
Tree	flow-vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	configure router <i>named-item-64</i> bgp family ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	configure router <i>named-item-64</i> bgp family ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

l2-vpn *boolean*

Synopsis	Advertise MP-BGP support for the L2-VPN address family
Context	configure router <i>named-item-64</i> bgp family l2-vpn <i>boolean</i>
Tree	l2-vpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	configure router <i>named-item-64</i> bgp family label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Advertise support for the label-IPv6 address family
Context	configure router <i>named-item-64</i> bgp family label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-ipv4 *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	configure router <i>named-item-64</i> bgp family mcast-ipv4 <i>boolean</i>
Tree	mcast-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-ipv6 *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	configure router <i>named-item-64</i> bgp family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-vpn-ipv4 *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	configure router <i>named-item-64</i> bgp family mcast-vpn-ipv4 <i>boolean</i>
Tree	mcast-vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-vpn-ipv6 *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	configure router <i>named-item-64</i> bgp family mcast-vpn-ipv6 <i>boolean</i>
Tree	mcast-vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mdt-safi *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	configure router <i>named-item-64</i> bgp family mdt-safi <i>boolean</i>
Tree	mdt-safi
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ms-pw *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	configure router <i>named-item-64</i> bgp family ms-pw <i>boolean</i>
Tree	ms-pw
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	configure router <i>named-item-64</i> bgp family route-target <i>boolean</i>
Tree	route-target
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	configure router <i>named-item-64</i> bgp family sr-policy-ipv4 <i>boolean</i>
Tree	sr-policy-ipv4
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	configure router <i>named-item-64</i> bgp family sr-policy-ipv6 <i>boolean</i>
Tree	sr-policy-ipv6
Description	This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	configure router <i>named-item-64</i> bgp family vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	configure router <i>named-item-64</i> bgp family vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>fast-external-failover</i> <i>boolean</i>
Tree	<i>fast-external-failover</i>
Description	When configured to true , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to false , the BGP session remains up until the hold time expires.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>graceful-restart</i>
Tree	<i>graceful-restart</i>
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

gr-notification *boolean*

Synopsis	Perform Graceful Restart procedures
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>graceful-restart</i> <i>gr-notification</i> <i>boolean</i>
Tree	<i>gr-notification</i>
Description	When configured to true , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error. When configured to false , NOTIFICATION messages are not supported.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

long-lived

Synopsis	Enable the long-lived context
----------	--------------------------------------

Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived
Tree	long-lived
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

family [[family-type](#)] *keyword*

Synopsis	Enter the family list instance
----------	---------------------------------------

Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] *keyword*

Synopsis	Family type for family-specific LLGR configuration
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived family <i>keyword</i>
Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i>

Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure router <i>named-item-64</i> bgp graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure router <i>named-item-64</i> bgp graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp graceful-restart</i> stale-routes-time <i>number</i>
Tree	<i>stale-routes-time</i>
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR-1

group [*group-name*] *named-item-64*

Synopsis	Enter the group list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i>
Tree	<i>group</i>
Description	Commands in this context define BGP peer groups and their group-specific command options. The options in this context are identical to the global BGP options. Any options that are not overridden by the group-specific commands inherit the configuration settings from the BGP global level.
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *named-item-64*

Synopsis	BGP peer group name
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i>
Tree	<i>group</i>
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

add-paths

Synopsis	Enable the add-paths context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> add-paths

Tree	add-paths
Description	<p>Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn

Synopsis	Enter the evpn context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths evpn
Tree	evpn
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths evpn receive <i>boolean</i>
Tree	receive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths evpn send (<i>number</i> <i>keyword</i>)
Tree	send
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI

Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16

Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

receive boolean

Synopsis	Receive multiple routes per IPv6 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths ipv6 receive boolean
Tree	receive
Description	When configured to true , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (number | keyword)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4

Synopsis	Enter the label-ipv4 context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths label-ipv4
Tree	label-ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths label-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv4 unicast prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths label-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6

Synopsis	Enter the label-ipv6 context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths label-ipv6
Tree	label-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths label-ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv6 unicast prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths label-ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of

advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, ADD-PATH send capability is not enabled for labeled IPv6 unicast routes.

Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4

Synopsis	Enter the vpn-ipv4 context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths vpn-ipv4
Tree	vpn-ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths vpn-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple VPN-IPv4 routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv4 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths vpn-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send

Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6

Synopsis	Enter the vpn-ipv6 context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths vpn-ipv6
Tree	vpn-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths vpn-ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple VPN-IPv6 routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> add-paths vpn-ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send

Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP group
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicapt IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertise unless the active non-BGP route is matched and accepted by an export policy applied to the session • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p>

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 25.3.R2
Platforms 7705 SAR-1

advertise-ipv6-next-hops

Synopsis Enable the **advertise-ipv6-next-hops** context

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [advertise-ipv6-next-hops](#)

Tree [advertise-ipv6-next-hops](#)

Description Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.

When unconfigured, command settings are inherited from a higher level BGP configuration.

Introduced 25.3.R2
Platforms 7705 SAR-1

evpn *boolean*

Synopsis Advertise EVPN route with IPv6 next-hop address

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [advertise-ipv6-next-hops](#) [evpn](#) *boolean*

Tree [evpn](#)

Description When configured to **true**, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.

When configured to **false**, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.

Default false

Introduced 25.3.R2
Platforms 7705 SAR-1

ipv4 *boolean*

Synopsis Advertise IPv4 route with IPv6 next-hop address

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [advertise-ipv6-next-hops](#) [ipv4](#) *boolean*

Tree [ipv4](#)

Description	<p>When configured to true, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops label-ipv4 <i>boolean</i>
Tree	label-ipv4
Description	<p>When configured to true, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops label-ipv6 <i>boolean</i>
Tree	label-ipv6
Description	When configured to true , label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.

When configured to **false**, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Description	<p>When configured to true, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Description	<p>When configured to true, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

aggregator-id-zero *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to zero

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **aggregator-id-zero** *boolean*

Tree [aggregator-id-zero](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

aigp *boolean*

Synopsis Add AIGP attribute to advertised routes

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **aigp** *boolean*

Tree [aigp](#)

Description When configured to **true**, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance.

When configured to **false**, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

as-override *boolean*

Synopsis Replace the peer ASN with the local ASN in AS Path

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **as-override** *boolean*

Tree [as-override](#)

Description When configured to **true**, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When configured to **false**, no AS override is performed.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

asn-4-byte *boolean*

Synopsis Advertise the use of 4-byte ASNs

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **asn-4-byte** *boolean*

Tree *asn-4-byte*

Description When this command inherits a value of **true**, the use of 4-byte ASNs is supported.
When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.
When configured to **false**, this command disables the use of 4-byte ASNs.

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis BGP authentication key for peers in the group

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **authentication-key** *encrypted-leaf*

Tree *authentication-key*

Description This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the **configure system security hash-control management-interface md-cli hash-algorithm** setting.

String length 1 to 370

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **authentication-keychain** *reference*

Tree *authentication-keychain*

Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.

Reference **configure** *system security keychains* *keychain* *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-1

bfd-liveness *boolean*

Synopsis Enable BFD

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* **bfd-liveness** *boolean*

Tree [bfd-liveness](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

bfd-strict-mode

Synopsis Enter the **bfd-strict-mode** context

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* **bfd-strict-mode**

Tree [bfd-strict-mode](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

advertise

Synopsis Enable the **advertise** context

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* **bfd-strict-mode** [advertise](#)

Tree [advertise](#)

Description Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:

- The inherited or configured value for the **bfd-liveness** command that applies to the peer is **true**.
- The interface associated with the peer has a valid BFD configuration.

When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.

When unconfigured, BGP does not advertise the Strict-BFD capability to peers.

Introduced 25.3.R2

Platforms 7705 SAR-1

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>bfd-strict-mode</i> <i>advertise</i> <i>holdtime</i> <i>number</i>
Tree	<i>holdtime</i>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>bfd-strict-mode</i> <i>next-hop-reachability</i> <i>boolean</i>
Tree	<i>next-hop-reachability</i>
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none">• The BFD session to the peer is in a down state.• There is a valid interface BFD configuration that applies to the peer.• There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none">• IPv4• IPv6

- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced 25.3.R2

Platforms 7705 SAR-1

block-prefix-sid *boolean*

Synopsis Block the prefix SID attribute

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **block-prefix-sid** *boolean*

Tree **block-prefix-sid**

Description When configured to **true**, all prefix SID attributes are removed from all routes exchanged between EBGp and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.

When configured to **false**, all prefix SID attributes are propagated without restriction.

A change of this configuration causes the affected BGP sessions to flap.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

capability-negotiation *boolean*

Synopsis Enable capability negotiation

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **capability-negotiation** *boolean*

Tree **capability-negotiation**

Description When configured to **true**, this command enables the exchange of capabilities.

When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.

Default true

Introduced 25.3.R2
Platforms 7705 SAR-1

client-reflect *boolean*

Synopsis Allow cluster RR to advertise routes to its clients

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **client-reflect** *boolean*

Tree *client-reflect*

Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.
When the command inherits a value of **true**, client reflection of routes is enabled.
When configured to **false**, this command disables client reflection of routes.

Introduced 25.3.R2
Platforms 7705 SAR-1

cluster

Synopsis Enter the **cluster** context

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **cluster**

Tree *cluster*

Introduced 25.3.R2
Platforms 7705 SAR-1

allow-local-fallback *boolean*

Synopsis Allow fallback to RR topology location

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* **cluster** **allow-local-fallback** *boolean*

Tree *allow-local-fallback*

Description When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**.
When configured to **false**, no route is advertised to the client.

Default false

Introduced 25.3.R2
Platforms 7705 SAR-1

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> cluster cluster-id <i>ipv4-address</i>
Tree	cluster-id
Introduced	25.3.R2
Platforms	7705 SAR-1

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> cluster orr-location <i>number</i>
Tree	orr-location
Description	<p>This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.</p> <p>With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs are calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i>
Tree	<i>damp-peer-oscillations</i>
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state. When unconfigured, command settings are inherited from the global-level configuration.
Introduced	25.3.R2
Platforms	7705 SAR-1

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>error-interval</i> <i>number</i>
Tree	<i>error-interval</i>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i>
Tree	<i>idle-hold-time</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>initial-wait</i> <i>number</i>
Tree	<i>initial-wait</i>
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>max-wait</i> <i>number</i>
Tree	<i>max-wait</i>
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>second-wait</i> <i>number</i>
Tree	<i>second-wait</i>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>damping</i> <i>boolean</i>

Tree	damping
Introduced	25.3.R2
Platforms	7705 SAR-1

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> def-recv-evpn-encap <i>keyword</i>
Tree	def-recv-evpn-encap
Description	<p>This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.</p> <p>When unconfigured, the setting for this command is inherited from the BGP global-level configuration.</p>
Options	mpls, vxlan
Introduced	25.3.R2
Platforms	7705 SAR-1

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp *number*

Synopsis	Default preference for EBGp
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> default-label-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> default-label-preference ibgp number
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

default-preference

Synopsis	Enter the default-preference context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> default-preference
Tree	default-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Default preference for EBGp
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> default-preference ebgp number
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> default-preference ibgp number
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2

Platforms 7705 SAR-1

default-route-target *boolean*

Synopsis Send default RTC route (zero prefix length) to peers

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [default-route-target](#) *boolean*

Tree [default-route-target](#)

Description When configured to **true**, this command sends the default RTC route (zero prefix length) toward the selected peers.
When configured to **false**, a default RTC route is not sent.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [description](#) *description*

String length 1 to 80

Introduced 25.3.R2

Platforms 7705 SAR-1

dynamic-neighbor

Synopsis Enter the **dynamic-neighbor** context

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [dynamic-neighbor](#)

Tree [dynamic-neighbor](#)

Description Commands in this context configure dynamic BGP sessions for a peer group.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis Enter the **interface** list instance

Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>interface-name</i>
Tree	interface
Description	<p>Commands in this context configure an unnumbered base router network interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Name of the dynamic neighbor interface
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>interface-name</i> allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .

All values greater than or equal to *n1* and less than or equal to *n2* are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].

Max. instances	32
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-sessions *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>interface-name</i> max-sessions <i>number</i>
Tree	max-sessions
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor match
Tree	match
Description	Commands in this context configure match conditions for the dynamic neighbors.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	<p>This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i>.</p> <p>All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].</p>
Max. instances	32
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-neighbor-limit *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> dynamic-neighbor-limit <i>number</i>
Tree	dynamic-neighbor-limit

Description	<p>This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.</p> <p>When unconfigured, the setting is inherited from the BGP global-level configuration.</p>
Range	1 to 8192
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp-default-reject-policy

Synopsis	Enable the ebgp-default-reject-policy context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy import <i>boolean</i>
Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-engineering

Synopsis	Enable the egress-engineering context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> egress-engineering
Tree	egress-engineering
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> egress-engineering admin-state <i>keyword</i>
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-peer-engineering-label-unicast *boolean*

Synopsis	Generate EPE label-unicast routes for group
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> egress-peer-engineering-label-unicast <i>boolean</i>
Tree	egress-peer-engineering-label-unicast
Description	When configured to true , BGP generates a label-unicast route for each /32 or /128 prefix that corresponds to the BGP group address in the scope of the command. These routes can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. They support the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Introduced	25.3.R2
Platforms	7705 SAR-1

error-handling

Synopsis	Enter the error-handling context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR-1

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Enable the export context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> export
Tree	export

Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the configure policy-options context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-nh-encoding

Synopsis	Enable the extended-nh-encoding context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> extended-nh-encoding
Tree	extended-nh-encoding

Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Advertise encoding capability for IPv4 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> extended-nh-encoding ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Advertise encoding capability for label-IPv4 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> extended-nh-encoding label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise encoding capability for VPN-IPv4 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> extended-nh-encoding vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

family

Synopsis	Enable the family context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-ls *boolean*

Synopsis	Advertise MP-BGP support for the BGP-LS address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family bgp-ls <i>boolean</i>
Tree	bgp-ls
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn *boolean*

Synopsis	Advertise MP-BGP support for the EVPN address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family evpn <i>boolean</i>
Tree	evpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-ipv6 *boolean*

Synopsis	Advertise support for the FlowSpec-IPv6 address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family flow-ipv6 <i>boolean</i>
Tree	flow-ipv6

Default	false
Introduced	25.3.R2

Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-vpn-ipv4 *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family mcast-vpn-ipv4 <i>boolean</i>
Tree	mcast-vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-vpn-ipv6 *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family mcast-vpn-ipv6 <i>boolean</i>
Tree	mcast-vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mdt-safi *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family mdt-safi <i>boolean</i>
Tree	mdt-safi
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ms-pw *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family ms-pw <i>boolean</i>
Tree	ms-pw
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family route-target <i>boolean</i>
Tree	route-target
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family sr-policy-ipv4 <i>boolean</i>
Tree	sr-policy-ipv4
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family sr-policy-ipv6 <i>boolean</i>
Tree	sr-policy-ipv6
Description	This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> family vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
----------	---

Context	configure <i>router</i> <i>named-item-64</i> bgp group <i>named-item-64</i> fast-external-failover <i>boolean</i>
Tree	fast-external-failover
Description	<p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure <i>router</i> <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart
Tree	graceful-restart
Description	<p>Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.</p> <p>When the context is unconfigured, the command settings are inherited from the BGP global-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	configure <i>router</i> <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart gr-notification <i>boolean</i>
Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

long-lived

Synopsis	Enable the long-lived context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived
Tree	long-lived
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] *keyword*

Synopsis	Family type for family-specific LLGR configuration
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i>
Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Description	<p>This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.</p>
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived family keyword helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived helper-override-restart-time <i>number</i>

Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure <i>router</i> <i>named-item-64</i> bgp group <i>named-item-64</i> hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Description	<p>This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.</p> <p>When unconfigured, the command value is inherited from the BGP global-level setting.</p>
Range	0 3 to 65536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	configure <i>router</i> <i>named-item-64</i> bgp group <i>named-item-64</i> hold-time seconds <i>number</i>
Tree	seconds
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none">• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command setting is inherited from the BGP global-level configuration.</p>
Range	0 3 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Enable the import context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> import
Tree	import
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the configure policy-options context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of inbound routes received from certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> initial-send-delay-zero <i>boolean</i>
Tree	<i>initial-send-delay-zero</i>
Description	<p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> keepalive <i>number</i>
Tree	<i>keepalive</i>
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none">• If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value.• If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval.• If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	25.3.R2
Platforms	7705 SAR-1

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> label-preference <i>number</i>
Tree	label-preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

link-bandwidth

Synopsis	Enter the link-bandwidth context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> link-bandwidth
Tree	link-bandwidth
Description	<p>Commands in this context specify the handling of the Link Bandwidth Extended Community attached to specific BGP routes.</p> <p>When all used multipaths of an IP prefix correspond to BGP routes with a Link Bandwidth EC, the datapath is programmed to use weighted ECMP across the BGP next hops in proportion to the bandwidth values.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

accept-from-ebgp

Synopsis	Enter the accept-from-ebgp context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> link-bandwidth accept-from-ebgp
Tree	accept-from-ebgp
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> link-bandwidth accept-from-ebgp ipv4 <i>boolean</i>

Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Support Link Bandwidth EC in VPN-IPv6 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> link-bandwidth send-to-ebgp vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>interface-name</i>)
Tree	local-address
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

local-as

Synopsis	Enter the local-as context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> local-as
Tree	local-as
Introduced	25.3.R2
Platforms	7705 SAR-1

as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Description	<p>When configured to true, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.</p> <p>When configured to false, the global ASN is not included in the AS_PATH attribute.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> local-as private <i>boolean</i>
Tree	private
Description	<p>When configured to true, the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.</p> <p>When configured to false, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> local-preference <i>number</i>
Tree	local-preference
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> loop-detect <i>keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR-1

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR-1

min-route-advertisement *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255

Introduced 25.3.R2
Platforms 7705 SAR-1

multihop *number*

Synopsis TTL in IP packet headers for EBGp peers multi-hops away
Context **configure** **router** *named-item-64* **bgp group** *named-item-64* **multihop** *number*
Tree **multihop**
Range 1 to 255
Introduced 25.3.R2
Platforms 7705 SAR-1

multipath-eligible *boolean*

Synopsis Allow routes from group peers in multipath eligibility
Context **configure** **router** *named-item-64* **bgp group** *named-item-64* **multipath-eligible** *boolean*
Tree **multipath-eligible**
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

next-hop-self *boolean*

Synopsis Advertise routes with local address as next-hop address
Context **configure** **router** *named-item-64* **bgp group** *named-item-64* **next-hop-self** *boolean*
Tree **next-hop-self**
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

next-hop-unchanged

Synopsis Enter the **next-hop-unchanged** context
Context **configure** **router** *named-item-64* **bgp group** *named-item-64* **next-hop-unchanged**
Tree **next-hop-unchanged**

Description	Commands in this context specify the IP address families that allow unchanged BGP next-hops when sending BGP routes to peers in the group.
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn *boolean*

Synopsis	Advertise EVPN routes with unchanged BGP next hop
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> next-hop-unchanged evpn <i>boolean</i>
Tree	evpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Advertise label-IPv4 routes with unchanged BGP next hop
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> next-hop-unchanged label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Advertise label-IPv6 routes with unchanged BGP next hop
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> next-hop-unchanged label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 routes with unchanged BGP next hop
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> next-hop-unchanged vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> next-hop-unchanged vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation

Synopsis	Enter the origin-validation context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> origin-validation
Tree	origin-validation
Description	<p>Commands in this context configure the marking of every inbound IPv4, IPv6, labeled IPv4, and labeled IPv6 route from the BGP peer with one of the following origin validation states:</p> <ul style="list-style-type: none">• Valid (0)• Not-Found (1)• Invalid (2) <p>The configurations apply to all types of BGP peers, but generally should be applied only to EBGp peers and groups that contain only EBGp peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> origin-validation ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> origin-validation ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> origin-validation label-ipv6 <i>boolean</i>
Tree	label-ipv6

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

outbound-route-filtering

Synopsis	Enable the outbound-route-filtering context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When this context is unconfigured, the group command settings are inherited from the BGP global-level configuration.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-community

Synopsis	Enable the extended-community context
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the command settings are inherited from the global-level configuration.
Introduced	25.3.R2
Platforms	7705 SAR-1

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> outbound-route-filtering extended-community accept-orf <i>boolean</i>
Tree	accept-orf
Description	When configured to true , the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.

Introduced 25.3.R2
Platforms 7705 SAR-1

send-orf

Synopsis Enable the **send-orf** context

Context **configure** *router named-item-64* **bgp group** *named-item-64* **outbound-route-filtering extended-community send-orf**

Tree **send-orf**

Description Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.

When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.

Introduced 25.3.R2
Platforms 7705 SAR-1

route-target [*community-name*] *named-item*

Synopsis Add a list entry for **route-target**

Context **configure** *router named-item-64* **bgp group** *named-item-64* **outbound-route-filtering extended-community send-orf route-target** *named-item*

Tree **route-target**

Introduced 25.3.R2
Platforms 7705 SAR-1

[*community-name*] *named-item*

Synopsis Route target community name

Context **configure** *router named-item-64* **bgp group** *named-item-64* **outbound-route-filtering extended-community send-orf route-target** *named-item*

Tree **route-target**

String length 1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Enable passive mode for BGP communication
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-as *number*

Synopsis	Peer AS number
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> peer-as <i>number</i>

Tree	peer-as
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-limit [[family](#)] *keyword*

Synopsis	Enter the prefix-limit list instance
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i>
Tree	prefix-limit
Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.

Introduced	25.3.R2
Platforms	7705 SAR-1

[family] *keyword*

Synopsis	Address family to which the limit applies
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i>
Tree	prefix-limit
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-excess *number*

Synopsis	Percentage of maximum routes to install in route table
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> hold-excess <i>number</i>
Tree	hold-excess
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the post-import command is configured to true, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the idle-timeout and log-only commands.</p>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-timeout *number*

Synopsis	Time BGP peering remains idle before reconnecting
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>idle-timeout</i> <i>number</i>
Tree	<i>idle-timeout</i>
Description	<p>This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.</p> <p>When unconfigured, the BGP peer stays down until the operator performs a reset. This command and log-only cannot be configured simultaneously.</p>
Range	1 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>log-only</i> <i>boolean</i>
Tree	<i>log-only</i>
Description	<p>When configured to true, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and idle-timeout cannot be configured simultaneously.</p> <p>When configured to false, the router generates a log event and takes the BGP session down upon reaching the prefix limit.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>maximum</i> <i>number</i>
Tree	<i>maximum</i>
Description	<p>This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.</p> <p>When log-only is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.</p>

Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>post-import</i> <i>boolean</i>
Tree	<i>post-import</i>
Description	<p>When configured to true, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.</p> <p>When configured to false, the system limits the number of routes to all routes received from the peer.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>threshold</i> <i>number</i>
Tree	<i>threshold</i>
Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

remove-private

Synopsis	Enable the remove-private context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>remove-private</i>
Tree	<i>remove-private</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

limited *boolean*

Synopsis Remove private ASNs up to first public ASN encountered
Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [remove-private](#) **limited** *boolean*
Tree [limited](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

replace *boolean*

Synopsis Replace private ASN with global ASN before advertising
Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [remove-private](#) **replace** *boolean*
Tree [replace](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

skip-peer-as *boolean*

Synopsis Keep private ASN if it is the same as the BGP peer ASN
Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* [remove-private](#) **skip-peer-as** *boolean*
Tree [skip-peer-as](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

selective-label-ipv4-install *boolean*

Synopsis Enable selective download for bgp label-ipv4 routes

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>selective-label-ipv4-install</i> <i>boolean</i>
Tree	<i>selective-label-ipv4-install</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

send-communities

Synopsis	Enter the send-communities context
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>send-communities</i>
Tree	<i>send-communities</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>send-communities</i> <i>extended</i> <i>boolean</i>
Tree	<i>extended</i>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to false, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp group</i> <i>named-item-64</i> <i>send-communities</i> <i>large</i> <i>boolean</i>
Tree	<i>large</i>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p>

When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute.

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2
Platforms 7705 SAR-1

standard *boolean*

Synopsis Advertise the Communities attribute to peers

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* *send-communities standard boolean*

Tree *standard*

Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP standard communities are sent to peers in the Communities attribute.

When configured to **false**, all standard communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2
Platforms 7705 SAR-1

send-default

Synopsis Enable the **send-default** context

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* *send-default*

Tree *send-default*

Introduced 25.3.R2
Platforms 7705 SAR-1

export-policy *reference*

Synopsis Export policy name

Context **configure** *router* *named-item-64* *bgp group* *named-item-64* *send-default export-policy reference*

Tree *export-policy*

Reference **configure** *policy-options* *policy-statement* *named-item-64*

Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Generate and advertise an IPv4 default route (0/0)
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Generate and advertise an IPv6 default route (::/0)
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

static-group *boolean*

Synopsis Use group for static peers

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* **static-group** *boolean*

Tree [static-group](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

tcp-mss (*number* | *keyword*)

Synopsis TCP maximum segment size override

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* **tcp-mss** (*number* | *keyword*)

Tree [tcp-mss](#)

Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).

The configured value controls two properties of the TCP connection as follows:

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range 384 to 9746

Options ip-stack

Introduced 25.3.R2

Platforms 7705 SAR-1

third-party-nexthop *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers

Context **configure** [router](#) *named-item-64* [bgp group](#) *named-item-64* **third-party-nexthop** *boolean*

Tree [third-party-nexthop](#)

Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP accepst from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	BGP peer type
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> type <i>keyword</i>
Tree	type
Options	no-type, internal, external
Default	no-type
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
----------	---

Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> vpn-apply-export <i>boolean</i>
Tree	vpn-apply-export
Description	<p>When configured to true, base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the export policies are not applied.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-apply-import *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	configure router <i>named-item-64</i> bgp group <i>named-item-64</i> vpn-apply-import <i>boolean</i>
Tree	vpn-apply-import
Description	<p>When configured to true, base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the import policies are not applied.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure router <i>named-item-64</i> bgp hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure router <i>named-item-64</i> bgp hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time

Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0 3 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	configure router <i>named-item-64</i> bgp hold-time seconds <i>number</i>
Tree	seconds
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.
Range	0 3 to 65535
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp-multipath *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	configure router <i>named-item-64</i> bgp ibgp-multipath <i>boolean</i>
Tree	ibgp-multipath
Description	<p>When configured to true, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to false, this command disables IBGP multipath load balancing.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Enable the import context
Context	configure router <i>named-item-64</i> bgp import
Tree	import
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the configure policy-options context.</p> <p>When no import policies are specified in this context, BGP routes are accepted by default.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	configure router <i>named-item-64</i> bgp import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies a list of objects, where each object is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by this command is allowed to be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as session comes up
Context	configure <i>router</i> <i>named-item-64</i> bgp initial-send-delay-zero <i>boolean</i>
Tree	initial-send-delay-zero
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

inter-as-vpn *boolean*

Synopsis	Allow advertisement of VPN routes across AS boundaries
Context	configure <i>router</i> <i>named-item-64</i> bgp inter-as-vpn <i>boolean</i>
Tree	inter-as-vpn
Description	When configured to true , VPNs can exchange routes across AS boundaries, providing model B connectivity. When configured to false , ASBRs are prevented from advertising VPN routes to peers in other ASs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>router</i> <i>named-item-64</i> bgp keepalive <i>number</i>
Tree	keepalive
Range	0 to 21845
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

label-allocation

Synopsis	Enter the label-allocation context
Context	configure <i>router</i> <i>named-item-64</i> bgp label-allocation

Tree	label-allocation
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6

Synopsis	Enter the label-ipv6 context
Context	configure router <i>named-item-64</i> bgp label-allocation label-ipv6
Tree	label-ipv6
Description	This command controls the label allocation behavior for labeled unicast IPv6 routes. The label options are explicit-null and normal .
Introduced	25.3.R2
Platforms	7705 SAR-1

explicit-null *boolean*

Synopsis	Apply advertised label and associated programming rules
Context	configure router <i>named-item-64</i> bgp label-allocation label-ipv6 explicit-null <i>boolean</i>
Tree	explicit-null
Description	<p>When configured to true, this command uses the advertised label and associated programming rules on this instance of BGP. The following applies:</p> <ul style="list-style-type: none">• The router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising. It sets the BGP label value to IPv6 explicit null (value 2), forcing a POP behavior for received packets.• The received label-unicast IPv6 routes never create tunnels in TTM that can be used to resolve other BGP routes (with an IPv6 next-hop).• A received label-unicast IPv6 route can be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP). <p>When configured to false, advertised label IPv6 programming rules are not used. The following applies</p> <ul style="list-style-type: none">• When the router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising, it sets the BGP label value to a proper value in the dynamic label range and programs a POP or SWAP operation for that label, depending on the origin of the route and various import policy actions that could apply to the route.• Received label-unicast IPv6 routes that have a prefix length of 128 bits are automatically installed in TTM so that they can be used to resolve other (non-labeled-unicast) BGP routes (with an IPv6 next-hop).• A received label-unicast IPv6 route cannot be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP).

- The label-ipv6 routes used for ECMP toward an IPv6 destination cannot be a mix of routes with regular label values and routes with special (IPv6 explicit null) label values.

Changes in the value of this leaf do not cause the BGP sessions of the base router to reset.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4

Synopsis	Enter the vpn-ipv4 context
Context	configure router <i>named-item-64</i> bgp label-allocation vpn-ipv4
Tree	vpn-ipv4
Description	Commands in this context configure label allocation for VPN-IPv4 routes used in the context of an inter-AS model B ASBR or next-hop-self route reflector.
Introduced	25.10.R1
Platforms	7705 SAR-1

mode keyword

Synopsis	Mode for implementing VPN-IPv4 route label allocation
Context	configure router <i>named-item-64</i> bgp label-allocation vpn-ipv4 mode <i>keyword</i>
Tree	mode
Description	This command configures the label-allocation mode to use with VPN-IPv4 routes in the context of an inter-AS model B ASBR or next-hop-self route reflector.
Options	next-hop – Assign same label for routes that share same next hop per-prefix – Assign unique incoming label per route prefix
Default	next-hop
Introduced	25.10.R1
Platforms	7705 SAR-1

vpn-ipv6

Synopsis	Enter the vpn-ipv6 context
Context	configure router <i>named-item-64</i> bgp label-allocation vpn-ipv6
Tree	vpn-ipv6

Description	Commands in this context configure label allocation for VPN-IPv6 routes used in the context of an inter-AS model B ASBR or next-hop-self route reflector.
Introduced	25.10.R1
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Mode for implementing VPN-IPv6 route label allocation
Context	configure <i>router</i> <i>named-item-64</i> bgp label-allocation vpn-ipv6 mode <i>keyword</i>
Tree	mode
Description	This command configures the label-allocation mode to use with VPN-IPv6 routes in the context of an inter-AS model B ASBR or next-hop-self route reflector.
Options	next-hop – Assign same label for routes that share same next hop per-prefix – Assign unique incoming label per route prefix
Default	next-hop
Introduced	25.10.R1
Platforms	7705 SAR-1

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure <i>router</i> <i>named-item-64</i> bgp label-preference <i>number</i>
Tree	label-preference
Range	1 to 255
Default	170
Introduced	25.3.R2
Platforms	7705 SAR-1

link-state-route-export *boolean*

Synopsis	Allow the export of the TED NLRI database
Context	configure <i>router</i> <i>named-item-64</i> bgp link-state-route-export <i>boolean</i>
Tree	link-state-route-export
Description	When configured to true , this command allows BGP to export link-state information to BGP neighbors. When configured to false , link-state information is not exported.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

link-state-route-import *boolean*

Synopsis	Allow the import of the TED NLRI database
Context	configure router <i>named-item-64</i> bgp link-state-route-import <i>boolean</i>
Tree	link-state-route-import
Description	When configured to true , this command enables the import of link-state information into the BGP-LS address family for advertisement to other BGP neighbors. When configured to false , this command disables the import of link-state information.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-as

Synopsis	Enter the local-as context
Context	configure router <i>named-item-64</i> bgp local-as
Tree	local-as
Introduced	25.3.R2
Platforms	7705 SAR-1

as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	configure router <i>named-item-64</i> bgp local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

prepend-global-as *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	configure router <i>named-item-64</i> bgp local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Description	<p>When configured to true, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.</p> <p>When configured to false, the global ASN is hidden in paths announced to the EBGPeer.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure router <i>named-item-64</i> bgp local-as private <i>boolean</i>
Tree	private
Description	<p>When configured to true, the local ASN is hidden in paths learned from the peering.</p> <p>When configured to false, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure router <i>named-item-64</i> bgp local-preference <i>number</i>
Tree	local-preference
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure router <i>named-item-64</i> bgp loop-detect <i>keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Default	ignore-loop
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	configure router <i>named-item-64</i> bgp loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure router <i>named-item-64</i> bgp med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR-1

min-route-advertisement *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	configure router <i>named-item-64</i> bgp min-route-advertisement <i>number</i>
Tree	min-route-advertisement

Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

mp-bgp-keep *boolean*

Synopsis	Keep rejected VPN-IP routes in RIB-IN
Context	configure <i>router</i> <i>named-item-64</i> bgp mp-bgp-keep <i>boolean</i>
Tree	mp-bgp-keep
Description	<p>When configured to true, the RIB-IN retains all MP-BGP routes, including VPN routes rejected by import policies or not imported by any services. As a result, sending Route Refresh messages is not required when an import policy changes.</p> <p>When configured to false, these VPN routes are deleted from the RIB-IN.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure <i>router</i> <i>named-item-64</i> bgp multihop <i>number</i>
Tree	multihop
Description	This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGp peer multiple hops away. This command applies only to EBGp.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

multipath

Synopsis	Enter the multipath context
Context	configure <i>router</i> <i>named-item-64</i> bgp multipath
Tree	multipath
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Maximum multipaths per prefix for EBGp learned routes
Context	configure <i>router</i> <i>named-item-64</i> bgp multipath ebgp number
Tree	ebgp
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

family [family-type] keyword

Synopsis	Enter the family list instance
Context	configure <i>router</i> <i>named-item-64</i> bgp multipath family keyword
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] keyword

Synopsis	Address family for which multipath selection
Context	configure <i>router</i> <i>named-item-64</i> bgp multipath family keyword
Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	configure <i>router</i> <i>named-item-64</i> bgp multipath family keyword ebgp number
Tree	ebgp
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.

Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp multipath family</i> <i>keyword</i> <i>ibgp number</i>
Tree	<i>ibgp</i>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

max-paths number

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp multipath family</i> <i>keyword</i> <i>max-paths number</i>
Tree	<i>max-paths</i>
Description	<p>This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the family command.</p> <p>Consider the following when configuring this command:</p> <ul style="list-style-type: none">• If the best path is an EBGp-learned route and the ebgp command is configured, the limit configured in the ebgp command overrides the limit configured in this command.• If the best path is an IBGP-learned route and the ibgp command is configured, the limit configured in the ibgp command overrides the limit configured in this command.• If the best path is an EBGp-learned route and the ebgp command is not configured, and this command is configured to 1, multipaths are disabled.• If the best path is an IBGP-learned route and the ibgp command is not configured, and this command is configured to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure router <i>named-item-64</i> bgp multipath family <i>keyword</i> restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	25.3.R2
Platforms	7705 SAR-1

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure router <i>named-item-64</i> bgp multipath family <i>keyword</i> unequal-cost <i>boolean</i>
Tree	unequal-cost
Description	When configured to true , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp *number*

Synopsis	Maximum multipaths per prefix for IBGP learned routes
Context	configure router <i>named-item-64</i> bgp multipath ibgp <i>number</i>
Tree	ibgp
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

max-paths *number*

Synopsis	Maximum multipaths per prefix
Context	configure router <i>named-item-64</i> bgp multipath max-paths <i>number</i>
Tree	max-paths

Range	1 to 64
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure router <i>named-item-64</i> bgp multipath restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	25.3.R2
Platforms	7705 SAR-1

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure router <i>named-item-64</i> bgp multipath unequal-cost <i>boolean</i>
Tree	unequal-cost
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [[ip-address](#)] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the neighbor list instance
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the BGP peer router
----------	-----------------------------------

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

add-paths

Synopsis	Enable the add-paths context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths
Tree	add-paths
Description	<p>Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn

Synopsis	Enter the evpn context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths evpn
Tree	evpn
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	25.3.R2
Platforms	7705 SAR-1

receive boolean

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths evpn receive boolean

Tree	receive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths evpn send (<i>number</i> <i>keyword</i>)
Tree	send
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

receive boolean

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	<p>This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.</p> <p>When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.</p>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per IPv6 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv6 receive <i>boolean</i>
Tree	receive
Description	<p>When configured to true, this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer.</p> <p>When configured to false, the ADD-PATH receive capability is not enabled.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	<p>This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.</p> <p>When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.</p>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4

Synopsis	Enter the label-ipv4 context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths label-ipv4
Tree	label-ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths label-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer.

	When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv4 unicast prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths label-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	<p>This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.</p> <p>When not configured, ADD-PATH send capability is not enabled for labeled IPv4 unicast routes.</p>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6

Synopsis	Enter the label-ipv6 context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths label-ipv6
Tree	label-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

receive boolean

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths label-ipv6 receive boolean
Tree	receive

Description	When configured to true , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv6 unicast prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths label-ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4

Synopsis	Enter the vpn-ipv4 context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv4
Tree	vpn-ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv4 prefix
----------	---

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple VPN-IPv4 routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv4 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6

Synopsis	Enter the vpn-ipv6 context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv6
Tree	vpn-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv6 receive <i>boolean</i>
Tree	receive
Description	<p>When configured to true, this command allows multiple VPN-IPv6 routes per prefix to be received from a peer.</p> <p>When configured to false, the ADD-PATH receive capability is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	<p>This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.</p> <p>When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.</p>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Description	<p>Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn boolean

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops evpn boolean
Tree	evpn
Description	<p>When configured to true, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops ipv4 boolean
Tree	ipv4
Description	<p>When configured to true, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 boolean

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops label-ipv4 boolean
Tree	label-ipv4

Description	<p>When configured to true, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops label-ipv6 <i>boolean</i>
Tree	label-ipv6
Description	<p>When configured to true, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Description	<p>When configured to true, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export</p>

policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Description	When configured to true , VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to false , VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-ldp-prefix *boolean*

Synopsis	Advertise active /32 LDP FEC prefixes to BGP peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ldp-prefix <i>boolean</i>
Tree	advertise-ldp-prefix
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero

Introduced	25.3.R2
Platforms	7705 SAR-1

aigp *boolean*

Synopsis	Add AIGP attribute to advertised routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aigp <i>boolean</i>
Tree	aigp
Description	<p>When configured to true, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

as-override *boolean*

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-override <i>boolean</i>
Tree	as-override
Description	<p>When configured to true, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). This command cannot be explicitly configured to false.</p> <p>When configured to false, no AS override is performed.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

asn-4-byte *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
String length	1 to 370
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i>

Tree	bfd-liveness
Description	<p>When configured to true, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BFD is removed from the associated protocol adjacency.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise

Synopsis	Enable the advertise context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"> • The inherited or configured value for the bfd-liveness command that applies to the peer is true. • The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode advertise holdtime <i>number</i>
Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode next-hop-reachability <i>boolean</i>
Tree	next-hop-reachability
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none">• The BFD session to the peer is in a down state.• There is a valid interface BFD configuration that applies to the peer.• There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none">• IPv4• IPv6

- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced 25.3.R2

Platforms 7705 SAR-1

block-prefix-sid *boolean*

Synopsis Block the prefix SID attribute

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **block-prefix-sid** *boolean*

Tree [block-prefix-sid](#)

Description When configured to **true**, all prefix SID attributes are removed from all routes exchanged between EBGp and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.

When configured to **false**, all prefix SID attributes are propagated without restriction.

A change of this configuration causes the affected BGP sessions to flap.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

capability-negotiation *boolean*

Synopsis Enable capability negotiation

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **capability-negotiation** *boolean*

Tree [capability-negotiation](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

client-reflect *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) client-reflect <i>boolean</i>
Tree	client-reflect
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster

Synopsis	Enter the cluster context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster
Tree	cluster
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster allow-local-fallback <i>boolean</i>
Tree	allow-local-fallback
Description	<p>When configured to true, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to true.</p> <p>When configured to false, this command no route is advertised to the client.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster cluster-id <i>ipv4-address</i>

Tree	cluster-id
Introduced	25.3.R2
Platforms	7705 SAR-1

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster orr-location <i>number</i>
Tree	orr-location
Description	<p>This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.</p> <p>With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations
Tree	damp-peer-oscillations
Introduced	25.3.R2

Platforms 7705 SAR-1

error-interval *number*

Synopsis Time after a reset that the session must be error-free

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **damp-peer-oscillations error-interval** *number*

Tree **error-interval**

Description This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.

Range 0 to 2048

Default 30

Introduced 25.3.R2

Platforms 7705 SAR-1

idle-hold-time

Synopsis Enter the **idle-hold-time** context

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **damp-peer-oscillations idle-hold-time**

Tree **idle-hold-time**

Introduced 25.3.R2

Platforms 7705 SAR-1

initial-wait *number*

Synopsis Time session remains in idle state after stabilization

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **damp-peer-oscillations idle-hold-time initial-wait** *number*

Tree **initial-wait**

Range 0 to 2048

Default 0

Introduced 25.3.R2

Platforms 7705 SAR-1

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damping <i>boolean</i>
Tree	damping
Introduced	25.3.R2
Platforms	7705 SAR-1

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
----------	---------------------------------

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) def-recv-evpn-encap <i>keyword</i>
Tree	def-recv-evpn-encap
Description	<p>This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.</p> <p>When unconfigured, the setting for this command is inherited from the BGP group-level configuration.</p>
Options	mpls, vxlan
Introduced	25.3.R2
Platforms	7705 SAR-1

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Default preference for EBGp
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference ibgp <i>number</i>
Tree	ibgp
Range	0 to 255

Introduced 25.3.R2
Platforms 7705 SAR-1

default-preference

Synopsis Enter the **default-preference** context

Platforms 7705 SAR-1

ibgp number

Synopsis Default preference for IBGP
Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [default-preference](#) [ibgp number](#)
Tree [ibgp](#)
Range 0 to 255
Introduced 25.3.R2
Platforms 7705 SAR-1

default-route-target boolean

Synopsis Send default RTC route (zero prefix length) to peers
Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [default-route-target](#) [boolean](#)

Tree	default-route-target
Description	<p>When configured to true, this command sends the default RTC route (zero prefix length) toward the selected peers.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, a default RTC route is not sent.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp-default-reject-policy

Synopsis	Enable the ebgp-default-reject-policy context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2

Platforms 7705 SAR-1

import *boolean*

Synopsis Enable default reject import policy for external peers

Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [ebgp-default-reject-policy](#) **import** *boolean*

Tree [import](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

egress-engineering

Synopsis Enable the **egress-engineering** context

Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [egress-engineering](#)

Tree [egress-engineering](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of BGP egress engineering

Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [egress-engineering](#) **admin-state** *keyword*

Tree [admin-state](#)

Description This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

egress-peer-engineering-label-unicast *boolean*

Synopsis	Generate EPE label-unicast routes for neighbor
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) egress-peer-engineering-label-unicast <i>boolean</i>
Tree	egress-peer-engineering-label-unicast
Description	When configured to true , BGP generates a label-unicast route for the /32 or /128 prefix that corresponds to the BGP neighbor address. This route can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. This supports the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	<p>When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, received routes are not checked for compliance with the rule.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

error-handling

Synopsis	Enter the error-handling context
----------	---

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR-1

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Enable the export context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export
Tree	export
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the configure policy-options context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
----------	------------------------

Context	configure <i>router</i> <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-nh-encoding

Synopsis	Enable the extended-nh-encoding context
Context	configure <i>router</i> <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) extended-nh-encoding
Tree	extended-nh-encoding
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Advertise encoding capability for IPv4 routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) extended-nh-encoding ipv4 <i>boolean</i>
Tree	ipv4

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-vpn-ipv4 *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mcast-vpn-ipv4 <i>boolean</i>
Tree	mcast-vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-vpn-ipv6 *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mcast-vpn-ipv6 <i>boolean</i>
Tree	mcast-vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mdt-safi *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mdt-safi <i>boolean</i>
Tree	mdt-safi
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ms-pw *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family ms-pw <i>boolean</i>
Tree	ms-pw
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family route-target <i>boolean</i>
Tree	route-target
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family sr-policy-ipv4 <i>boolean</i>
Tree	sr-policy-ipv4

Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family sr-policy-ipv6 <i>boolean</i>
Tree	sr-policy-ipv6
Description	This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

fast-external-failover *boolean*

Synopsis Drop external BGP session immediately when link fails

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **fast-external-failover** *boolean*

Tree [fast-external-failover](#)

Description When this command inherits a value of **true**, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When configured to **false**, the BGP session remains up until the hold time expires.

Introduced 25.3.R2

Platforms 7705 SAR-1

graceful-restart

Synopsis Enable the **graceful-restart** context

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart**

Tree [graceful-restart](#)

Description Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.

When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.

Introduced 25.3.R2

Platforms 7705 SAR-1

gr-notification *boolean*

Synopsis Perform graceful restart procedures after NOTIFICATION

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart gr-notification** *boolean*

Tree [gr-notification](#)

Description When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the

session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to **false**, NOTIFICATION messages are not supported.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

long-lived

Synopsis	Enable the long-lived context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived
Tree	long-lived
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
----------	--

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

family [**family-type**] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] *keyword*

Synopsis	Family type for family-specific LLGR configuration
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i>
Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.

Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family keyword helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived forwarding-bits-set keyword
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2

Platforms 7705 SAR-1

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export

Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR-1

group reference

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	BGP peer group
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) group reference
Tree	group
Reference	configure router <i>named-item-64</i> bgp group <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-hold-time *number*

Synopsis	Minimum time BGP waits between successive messages
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Range	0 3 to 65536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Maximum hold time between successive messages
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-time seconds <i>number</i>
Tree	seconds
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command setting is inherited from the BGP group-level configuration.</p>
Range	0 3 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Enable the import context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) import
Tree	import
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the configure policy-options context.</p> <p>When this context is unconfigured, the policy association is inherited from the BGP group-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Names of the BGP import policies
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of inbound routes received from certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) initial-send-delay-zero <i>boolean</i>
Tree	initial-send-delay-zero
Description	<p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) keepalive <i>number</i>
Tree	keepalive
Range	0 to 21845
Introduced	25.3.R2
Platforms	7705 SAR-1

l2vpn-cisco-interop *boolean*

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>interface-name</i>)
Tree	local-address
String length	1 to 32
Introduced	25.3.R2

Platforms 7705 SAR-1

local-as

Synopsis Enter the **local-as** context

Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as](#)

Tree [local-as](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

as-number *number*

Synopsis Local (or virtual) BGP AS number

Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as](#) [as-number](#) *number*

Tree [as-number](#)

Range 1 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

prepend-global-as *boolean*

Synopsis Prepend global ASN when advertising routes to BGP peer

Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as](#) [prepend-global-as](#) *boolean*

Tree [prepend-global-as](#)

Description When configured to **true**, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.
When configured to **false**, the global ASN is not included in the AS_PATH attribute.

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as private <i>boolean</i>
Tree	private
Description	<p>When configured to true, the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.</p> <p>When configured to false, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-preference <i>number</i>
Tree	local-preference
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect <i>keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
----------	--

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR-1

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR-1

min-route-advertisement *number*

Synopsis	Minimum interval between successive prefix updates
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	25.3.R2

Platforms 7705 SAR-1

multipath-eligible *boolean*

Synopsis Allow routes from this peer in multipath eligibility

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **multipath-eligible** *boolean*

Tree **multipath-eligible**

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop-self *boolean*

Synopsis Advertise routes with local address as next-hop address

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-self** *boolean*

Tree **next-hop-self**

Description When configured to **true**, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.

Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the **configure router bgp rr-vpn-forwarding** command should also be configured.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop-unchanged

Synopsis Enable the **next-hop-unchanged** context

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged**

Tree **next-hop-unchanged**

Description Commands in this context specify the IP address families where the next hop remains unchanged when sending BGP routes to peers of the neighbor.

Introduced 25.3.R2

Platforms 7705 SAR-1

evpn *boolean*

Synopsis Advertise EVPN routes with unchanged BGP next hop

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged evpn** *boolean*

Tree **evpn**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

label-ipv4 *boolean*

Synopsis Advertise label-IPv4 routes with unchanged BGP next hop

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged label-ipv4** *boolean*

Tree **label-ipv4**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

label-ipv6 *boolean*

Synopsis Advertise label-IPv6 routes with unchanged BGP next hop

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged label-ipv6** *boolean*

Tree **label-ipv6**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

vpn-ipv4 *boolean*

Synopsis Advertise VPN IPv4 routes with unchanged BGP next hop

Context **configure** **router** *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged vpn-ipv4** *boolean*

Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-ipv6 boolean

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) next-hop-unchanged vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation

Synopsis	Enable the origin-validation context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation
Tree	origin-validation
Description	<p>Commands in this context configure the marking of every inbound IPv4, IPv6, labeled IPv4, and labeled IPv6 route from the BGP peer with one of the following origin validation states:</p> <ul style="list-style-type: none">• Valid (0)• Not-Found (1)• Invalid (2) <p>The configurations apply to all types of BGP peers, but generally should be applied only to EBGp peers and groups that contain only EBGp peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation ipv4 <i>boolean</i>

Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

outbound-route-filtering

Synopsis	Enable the outbound-route-filtering context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering
Tree	outbound-route-filtering
Description	<p>Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF).</p> <p>When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-community

Synopsis	Enable the extended-community context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering extended-community
Tree	extended-community
Description	<p>Commands in this context configure the ORF send and receive capabilities based on Extended Communities.</p> <p>When this context is unconfigured, the command settings are inherited from the group-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

accept-orf boolean

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering extended-community accept-orf <i>boolean</i>
Tree	accept-orf
Description	<p>When configured to true, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

send-orf

Synopsis	Enable the send-orf context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering extended-community send-orf
Tree	send-orf
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target [[community-name](#)] *named-item*

Synopsis	Add a list entry for route-target
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering extended-community send-orf route-target <i>named-item</i>
Tree	route-target
Introduced	25.3.R2
Platforms	7705 SAR-1

[[community-name](#)] *named-item*

Synopsis	Route target community name
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering extended-community send-orf route-target <i>named-item</i>
Tree	route-target
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

passive *boolean*

Synopsis Use passive mode for BGP communication

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **passive** *boolean*

Tree [passive](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

path-mtu-discovery *boolean*

Synopsis Enable path MTU discovery

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-mtu-discovery** *boolean*

Tree [path-mtu-discovery](#)

Description When configured to **true**, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced 25.3.R2

Platforms 7705 SAR-1

peer-as *number*

Synopsis Peer AS number

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **peer-as** *number*

Tree [peer-as](#)

Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGp peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-creation-type *keyword*

Synopsis	Peer creation type
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-creation-type <i>keyword</i>
Tree	peer-creation-type
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-limit [*family*] *keyword*

Synopsis	Enter the prefix-limit list instance
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>
Tree	prefix-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

[*family*] *keyword*

Synopsis	Address family to which the limit applies
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>
Tree	prefix-limit
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

hold-excess *number*

Synopsis	Percentage of maximum routes to install in route table
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword hold-excess <i>number</i>
Tree	hold-excess
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the post-import command is configured to true, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the idle-timeout and log-only commands.</p>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-timeout *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword idle-timeout <i>number</i>
Tree	idle-timeout
Description	<p>This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.</p> <p>When unconfigured, the command inherits the value from the group-level configuration.</p>
Range	1 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
----------	--

Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword maximum <i>number</i>
Tree	maximum
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword post-import <i>boolean</i>
Tree	post-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword threshold <i>number</i>
Tree	threshold

Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

remove-private

Synopsis	Enable the remove-private context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private
Tree	remove-private
Introduced	25.3.R2
Platforms	7705 SAR-1

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private limited <i>boolean</i>
Tree	limited
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private replace <i>boolean</i>
Tree	replace
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

skip-peer-as *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

selective-label-ipv4-install *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) selective-label-ipv4-install <i>boolean</i>
Tree	selective-label-ipv4-install
Introduced	25.3.R2
Platforms	7705 SAR-1

send-communities

Synopsis	Enter the send-communities context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities
Tree	send-communities
Introduced	25.3.R2
Platforms	7705 SAR-1

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities extended <i>boolean</i>
Tree	extended
Description	When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true .

When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute.

When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2
Platforms 7705 SAR-1

large boolean

Synopsis Advertise the Large Communities attribute to peers

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities large boolean**

Tree **large**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute.

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2
Platforms 7705 SAR-1

standard boolean

Synopsis Advertise the Communities attribute to peers

Context **configure** *router* *named-item-64* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities standard boolean**

Tree **standard**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP standard communities are sent to peers in the Communities attribute.

When configured to **false**, all standard communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2
Platforms 7705 SAR-1

send-default

Synopsis	Enable the send-default context
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policy name
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable IPv6 family type
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tcp-mss (<i>number</i> <i>keyword</i>)
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack

Introduced 25.3.R2
Platforms 7705 SAR-1

third-party-nexthop *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers
Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [third-party-nexthop](#) *boolean*
Tree [third-party-nexthop](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

ttl-security *number*

Synopsis Minimum TTL value for an incoming BGP packet
Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [ttl-security](#) *number*
Tree [ttl-security](#)
Description This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
When unconfigured, the command inherits the value of the group-level setting.
Range 1 to 255
Introduced 25.3.R2
Platforms 7705 SAR-1

type *keyword*

Synopsis BGP peer type
Context **configure** [router](#) *named-item-64* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [type](#) *keyword*
Tree [type](#)
Options no-type, internal, external
Introduced 25.3.R2
Platforms 7705 SAR-1

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) vpn-apply-export <i>boolean</i>
Tree	vpn-apply-export
Description	<p>When configured to true, base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the export policies are not applied.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-apply-import *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	configure router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) vpn-apply-import <i>boolean</i>
Tree	vpn-apply-import
Description	<p>When configured to true, base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the import policies are not applied.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-trust

Synopsis	Enter the neighbor-trust context
Context	configure router <i>named-item-64</i> bgp neighbor-trust
Tree	neighbor-trust
Description	<p>Commands in this context enable a label security feature at an inter-AS boundary for the specified IP families.</p> <p>This label security feature allows the configuration of a router, acting in a PE or in an ASBR role, to accept packets of VPN-IP or EVPN prefixes only from direct EBGP neighbors to which it advertised a service label.</p>

The untrusted state identifies the participating interfaces. The router supports a maximum of 15 network interfaces that can participate in this feature.

At a high level, BGP tracks each direct EBGP neighbor over an untrusted interface and to which it sent a prefix label. For each of those prefixes, BGP programs a bit map in the ILM record that indicates, on a per-untrusted interface basis, whether the matching received packets must be forwarded or dropped.

Introduced 25.3.R2
Platforms 7705 SAR-1

evpn boolean

Synopsis Enable inter-AS label security for the EVPN family
Context **configure** *router* *named-item-64* *bgp neighbor-trust evpn boolean*
Tree *evpn*
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

vpn-ipv4 boolean

Synopsis Enable inter-AS label security for the VPN-IPv4 family
Context **configure** *router* *named-item-64* *bgp neighbor-trust vpn-ipv4 boolean*
Tree *vpn-ipv4*
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

vpn-ipv6 boolean

Synopsis Enable inter-AS label security for the VPN-IPv6 family
Context **configure** *router* *named-item-64* *bgp neighbor-trust vpn-ipv6 boolean*
Tree *vpn-ipv6*
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

next-hop-resolution

Synopsis	Enter the next-hop-resolution context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution
Tree	next-hop-resolution
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-unresolved-leaking *boolean*

Synopsis	Allow unresolved BGP routes to be leaked to VPRN routes
Context	configure router <i>named-item-64</i> bgp next-hop-resolution allow-unresolved-leaking <i>boolean</i>
Tree	allow-unresolved-leaking
Description	<p>When configured to true, this command instructs BGP in the base router instance to allow its routes to be leaked to other (VPRN) BGP instances even if the routes to be leaked do not have a BGP next-hop that can be resolved by the base instance.</p> <p>When configured to false, VPRN cannot import a route.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

labeled-routes

Synopsis	Enter the labeled-routes context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes
Tree	labeled-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-static *boolean*

Synopsis	Allow static routes to resolve BGP next-hop
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes allow-static <i>boolean</i>
Tree	allow-static

Description	<p>When configured to true, the BGP next-hop of label-IPv4, label-IPv6, VPN-IPv4, and VPN-IPv6 routes received from any EBGP or IBGP peer can be resolved using static routes, except for static default routes (0/0 and ::/0).</p> <p>A static route is less preferred than a local or interface route for resolving the BGP next-hop of labeled route but is more preferred than other IGP routes or tunnels.</p> <p>When configured to false, BGP next-hop resolution using static routes is not allowed.</p> <p>A label-IPv4 or label-IPv6 route can be resolved by a static blackhole route, even when this command is configured to false, but only if the static blackhole route is the longest prefix match (LPM) static route for the BGP next-hop address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rr-use-route-table *boolean*

Synopsis	Use RTM to resolve BGP next-hop if TTM resolution fails
Context	configure <i>router named-item-64</i> bgp next-hop-resolution labeled-routes rr-use-route-table <i>boolean</i>
Tree	rr-use-route-table
Description	<p>When configured to true, this command enables BGP to perform a lookup of IGP routes in the route table to resolve the BGP next-hop of label-IPv4 and label-IPv6 routes. This is useful for a Route Reflector (RR) that does not participate in tunnel signaling protocols such as LDP and RSVP and therefore, does not have tunnels to resolve the BGP next-hops of label-unicast routes.</p> <p>Disable route table installation (via the route-table-install command) before setting this command to true; otherwise, forwarding of label routes resolved in this way will be incorrect.</p> <p>When configured to false, RTM next-hop resolution is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

transport-tunnel

Synopsis	Enter the transport-tunnel context
Context	configure <i>router named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel
Tree	transport-tunnel
Description	Commands in this context configure options for the next-hop resolution of BGP labeled routes (VPN-IP and labeled-unicast) using tunnels in TTM.

Introduced	25.3.R2
Platforms	7705 SAR-1

family *[family-type]* *keyword*

Synopsis	Enter the family list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i>
Tree	<i>family</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] *keyword*

Synopsis	Address family type for tunnel selection
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i>
Tree	<i>family</i>
Options	vpn, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> allow-flex-algo-fallback <i>boolean</i>
Tree	<i>allow-flex-algo-fallback</i>
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

enforce-strict-tunnel-tagging *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> enforce-strict-tunnel-tagging <i>boolean</i>
Tree	enforce-strict-tunnel-tagging
Description	<p>When configured to true, the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered.</p> <p>When configured to false, matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> enforce-untagged-route <i>keyword</i>
Tree	enforce-untagged-route
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p> <p>The untagged-tunnel option can be used in combination with the enforce-strict-tunnel-tagging command configured to true, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.</p> <p>When unconfigured, untagged routes can bind to tagged or untagged LSPs.</p>
Options	<p>none – Untagged routes can bind to tagged or untagged LSPs</p> <p>untagged-tunnel – Untagged routes only bind to LSPs without an admin tag</p>
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution keyword

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	<p>When configured to true, this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes.</p> <p>When configured to false, BGP tunneling for next-hop resolution is not enabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution-filter</i> <i>ldp</i> <i>boolean</i>
Tree	<i>ldp</i>
Description	When configured to true , this command enables the selection of LDP tunneling for next-hop resolution and specifies the LDP tunnels in the tunnel table corresponding to /32 IPv4 FECs and /128 IPv6 FECs. When configured to false , LDP tunneling for next-hop resolution is not enabled.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution-filter</i> <i>rsvp</i> <i>boolean</i>
Tree	<i>rsvp</i>
Description	When configured to true , this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations. This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , this command disables the selection of RSVP tunneling for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution-filter</i> <i>sr-isis</i> <i>boolean</i>
Tree	<i>sr-isis</i>
Description	When configured to true , this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP labeled routes.

This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference IS-IS instance. In the case of a tie, the IS-IS instance with the lowest metric SR tunnel is selected over the lowest numbered IS-IS instance.

When configured to **false**, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter sr-ospf boolean
Tree	sr-ospf
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP labeled routes.</p> <p>This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPF instance. In the case of a tie, the OSPF instance with the lowest metric SR tunnel is selected over the lowest numbered OSPF instance.</p> <p>When configured to false, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf3 boolean

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter sr-ospf3 boolean
Tree	sr-ospf3
Description	<p>When configured to true, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP labeled routes.</p> <p>This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance. In the case of a tie, the OSPFv3 instance with the lowest metric SR tunnel is selected over the lowest numbered OSPFv3 instance.</p>

When configured to **false**, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP routes.</p> <p>The SR policies are statically configured in the local router or learned through BGP routes (AFI 1/SAFI 73 or AFI 2/SAFI 73). BGP resolves a labeled IPv4 route with an IPv4 next-hop address or a labeled IPv6 route with IPv4-mapped IPv6 next-hop address using an SR policy selected by applying the following procedure in preference order:</p> <ul style="list-style-type: none"> • IPv4 endpoint - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the labeled IPv4 or IPv6 route must match the color of the SR policy. • null IPv4 endpoint (0.0.0.0) - The highest numbered color extended community attached to the labeled IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'. • null IPv6 endpoint (0::0) - The highest numbered color extended community attached to the labeled IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'. <p>BGP resolves a labeled IPv6 route with an IPv6 next hop that is not an IPv4-mapped IPv6 address using an SR policy selected by applying the following procedure in preference order:</p> <ul style="list-style-type: none"> • IPv6 endpoint - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the labeled IPv6 route must match the color of the SR policy. • null IPv6 endpoint (0::0) - The highest numbered color extended community attached to the labeled IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'. • null IPv4 endpoint (0.0.0.0) - The highest numbered color extended community attached to the labeled IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'. <p>When configured to false, SR policies are not enabled for next-hop resolution.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te boolean

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

udp boolean

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter udp <i>boolean</i>
Tree	udp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

use-bgp-routes

Synopsis	Enter the use-bgp-routes context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes use-bgp-routes
Tree	use-bgp-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6-explicit-null *boolean*

Synopsis	Use BGP routes to resolve address family routes
Context	configure router <i>named-item-64</i> bgp next-hop-resolution labeled-routes use-bgp-routes label-ipv6-explicit-null <i>boolean</i>
Tree	label-ipv6-explicit-null
Description	<p>When configured to true, a labeled IPv6 route with the explicit-null label can be resolved by other routes, and also by unlabeled IPv4 routes and unlabeled IPv6 routes that are resolved by static routes, interface routes, or tunnels. Up to four levels of recursive resolution are supported when the top route is a labeled IPv6 route with an explicit-null label. When disabled, a labeled IPv6 route cannot be resolved by other labeled IPv6 routes.</p> <p>A labeled IPv6 route with a regular label (not explicit-null) is never resolved by other labeled IPv6 routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution policy <i>reference</i>
Tree	policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

shortcut-tunnel

Synopsis	Enter the shortcut-tunnel context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel
Tree	shortcut-tunnel
Description	Commands in this context configure the tunnel types that can be used to resolve unlabeled IPv4 and IPv6 BGP routes.
Introduced	25.3.R2
Platforms	7705 SAR-1

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i>
Tree	<i>family</i>

[family-type] *keyword*

Synopsis	Address family type for shortcut tunnel selection
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>allow-flex-algo-fallback</i> <i>boolean</i>
Tree	<i>allow-flex-algo-fallback</i>
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

disallow-igp *boolean*

Synopsis	Do not perform route table lookup to resolve BGP route
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>disallow-igp</i> <i>boolean</i>
Tree	<i>disallow-igp</i>
Description	<p>When configured to true, no attempt is made to resolve the IPv4 or IPv6 BGP route using route table lookup if no resolving tunnel can be found in the tunnel table.</p> <p>When configured to false, route table lookup can be performed if no resolving tunnel is found in the tunnel table.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-strict-tunnel-tagging *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>enforce-strict-tunnel-tagging</i> <i>boolean</i>
Tree	<i>enforce-strict-tunnel-tagging</i>
Description	<p>When configured to true, the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered.</p> <p>When configured to false, matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure <i>router</i> <i>named-item-64</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>enforce-untagged-route</i> <i>keyword</i>
Tree	<i>enforce-untagged-route</i>
Description	This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.

If the **untagged-tunnel** option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.

The **untagged-tunnel** option can be used in combination with the **enforce-strict-tunnel-tagging** command configured to **true**, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.

When unconfigured, untagged routes can bind to tagged or untagged LSPs.

Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
----------	---

Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	<p>When configured to true, this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes.</p> <p>When configured to false, BGP tunneling for next-hop resolution is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter ldp <i>boolean</i>
Tree	ldp
Description	<p>When configured to true, BGP selects the LDP FEC that is the longest prefix match to the BGP next-hop address.</p> <p>When configured to false, LDP tunneling for next-hop resolution is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	<p>When configured to true, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations.</p> <p>This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to false, this command disables the selection of RSVP tunneling for next-hop resolution.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP routes.</p> <p>This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference IS-IS instance. In the case of a tie, the IS-IS instance with the lowest metric SR tunnel is selected over the lowest numbered IS-IS instance.</p> <p>When configured to false, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes.</p> <p>This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPF instance. In the case of a tie, the OSPF instance with the lowest metric SR tunnel is selected over the lowest numbered OSPF instance.</p> <p>When configured to false, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes.</p> <p>This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance. In the case of a tie, the OSPFv3 instance with the lowest metric SR tunnel is selected over the lowest numbered OSPFv3 instance.</p> <p>When configured to false, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP routes.</p> <p>The SR policies are statically configured in the local router or learned through BGP routes (AFI 1/SAFI 73 or AFI 2/SAFI 73). BGP resolves an IPv4 route with an IPv4 next-hop address or an IPv6 route with IPv4-mapped IPv6 next-hop address using an SR policy selected by applying the following procedure in preference order:</p> <ul style="list-style-type: none"> • IPv4 endpoint - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the IPv4 or IPv6 route must match the color of the SR policy. • null IPv4 endpoint (0.0.0.0) - The highest numbered color extended community attached to the IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'. • null IPv6 endpoint (0::0) - The highest numbered color extended community attached to the IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.

BGP resolves an IPv6 route with an IPv6 next hop that is not an IPv4-mapped IPv6 address using an SR policy selected by applying the following procedure in preference order:

- **IPv6 endpoint** - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the IPv6 route must match the color of the SR policy.
- **null IPv6 endpoint (0:::0)** - The highest numbered color extended community attached to the IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.
- **null IPv4 endpoint (0.0.0.0)** - The highest numbered color extended community attached to the IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.

When configured to **false**, SR policies are not enabled for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	configure router <i>named-item-64</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i>
Tree	use-bgp-routes

Description	<p>This command enables the use of BGP routes to resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

use-leaked-routes

Synopsis	Enter the use-leaked-routes context
Context	configure router <i>named-item-64</i> bgp next-hop-resolution use-leaked-routes
Tree	use-leaked-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

static *boolean*

Synopsis	Use leaked static routes to resolve BGP next hop
Context	configure router <i>named-item-64</i> bgp next-hop-resolution use-leaked-routes static <i>boolean</i>
Tree	static
Description	<p>When configured to true, the router allows any non-leaked unlabeled unicast IPv4 or IPv6 route in the BGP RIB to be resolved by a leaked static route with direct next hops. A BGP route resolved this way cannot resolve other routes (including BGP routes) and cannot be redistributed into non-BGP protocols, such as IGP.</p> <p>When configured to false, the router prevents the use of leaked static routes to resolve BGP routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-family-policy *reference*

Synopsis	Policy to filter routes for next-hop resolution
----------	---

Context	configure router <i>named-item-64</i> bgp next-hop-resolution vpn-family-policy <i>reference</i>
Tree	vpn-family-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp *boolean*

Synopsis	Use weighted ECMP for next-hop tunnel selection for 6PE
Context	configure router <i>named-item-64</i> bgp next-hop-resolution weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, this command enables weighted ECMP for next-hop tunnel selection for 6PE. When weighted ECMP is enabled, the RSVP-TE tunnel used to forward 6PE packets to the ECMP next hop that is chosen according to the outcome of the hash on the packet at the normalized load-balancing weight of the tunnel.</p> <p>When configured to false, weighted ECMP is disabled for next-hop tunnel selection for 6PE.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

optimal-route-reflection

Synopsis	Enter the optimal-route-reflection context
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection
Tree	optimal-route-reflection
Introduced	25.3.R2
Platforms	7705 SAR-1

location [[location-id](#)] *number*

Synopsis	Enter the location list instance
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection location <i>number</i>
Tree	location
Description	<p>Commands in this context configure the location ID for the route reflector. A BGP neighbor can be associated with a location if it is a route-reflector client.</p> <p>Up to three IPv4 addresses and three IPv6 addresses can be specified per location.</p>

If the TE DB is unable find a node in its topology database that matches a primary address of the location, it tries to find a node matching a secondary address. If this attempt also fails, the TE DB tries to find a node matching a tertiary address.

The IP addresses specified for a location should be topologically “close” to a set of clients that should all receive the same optimal path for that location.

Introduced 25.3.R2
Platforms 7705 SAR-1

[location-id] *number*

Synopsis Optimal route reflection location ID
Context **configure** **router** *named-item-64* **bgp** **optimal-route-reflection** **location** *number*
Tree **location**
Range 1 to 255
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

primary-ip-address *ipv4-unicast-address*

Synopsis Primary IPv4 address of the reference location for ORR
Context **configure** **router** *named-item-64* **bgp** **optimal-route-reflection** **location** *number* **primary-ip-address** *ipv4-unicast-address*
Tree **primary-ip-address**
Introduced 25.3.R2
Platforms 7705 SAR-1

primary-ipv6-address *ipv6-unicast-address*

Synopsis Primary IPv6 address of the reference location for ORR
Context **configure** **router** *named-item-64* **bgp** **optimal-route-reflection** **location** *number* **primary-ipv6-address** *ipv6-unicast-address*
Tree **primary-ipv6-address**
Introduced 25.3.R2
Platforms 7705 SAR-1

secondary-ip-address *ipv4-unicast-address*

Synopsis	Secondary IPv4 address of reference location for ORR
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection location <i>number</i> secondary-ip-address <i>ipv4-unicast-address</i>
Tree	secondary-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary-ipv6-address *ipv6-unicast-address*

Context	configure router <i>named-item-64</i> bgp optimal-route-reflection location <i>number</i> secondary-ipv6-address <i>ipv6-unicast-address</i>
Tree	secondary-ipv6-address
Introduced	25.3.R2
Platforms	7705 SAR-1

tertiary-ip-address *ipv4-unicast-address*

Synopsis	Tertiary IPv4 address of the reference location for ORR
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection location <i>number</i> tertiary-ip-address <i>ipv4-unicast-address</i>
Tree	tertiary-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

tertiary-ipv6-address *ipv6-unicast-address*

Synopsis	Tertiary IPv6 address of the reference location for ORR
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection location <i>number</i> tertiary-ipv6-address <i>ipv6-unicast-address</i>
Tree	tertiary-ipv6-address
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-wait

Synopsis	Enter the spf-wait context
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection spf-wait
Tree	spf-wait
Description	Commands in this context specify the interval between consecutive SPF calculations performed by the TE DB in support of BGP optimal route reflection. The time components implement an exponential back-off algorithm. .
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection spf-wait initial-wait <i>number</i>
Tree	initial-wait
Range	1 to 300
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait *number*

Synopsis	Maximum interval between consecutive SPF calculations
Context	configure router <i>named-item-64</i> bgp optimal-route-reflection spf-wait max-wait <i>number</i>
Tree	max-wait
Range	1 to 600
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Delay between first and second SPF calculation
----------	--

Context	configure router <i>named-item-64</i> bgp optimal-route-reflection spf-wait second-wait <i>number</i>
Tree	second-wait
Range	1 to 300
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

outbound-route-filtering

Synopsis	Enable the outbound-route-filtering context
Context	configure router <i>named-item-64</i> bgp outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When unconfigured, the ORF capabilities are not enabled.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-community

Synopsis	Enable the extended-community context
Context	configure router <i>named-item-64</i> bgp outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the ORF capabilities for Extended Communities is not enabled.
Introduced	25.3.R2
Platforms	7705 SAR-1

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	configure router <i>named-item-64</i> bgp outbound-route-filtering extended-community accept-orf <i>boolean</i>

Tree	accept-orf
Description	<p>When configured to true, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.</p> <p>When configured to false, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send-orf

Synopsis	Enable the send-orf context
Context	configure router <i>named-item-64</i> bgp outbound-route-filtering extended-community send-orf
Tree	send-orf
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, ORF send capability is not enabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target [[community-name](#)] *named-item*

Synopsis	Add a list entry for route-target
Context	configure router <i>named-item-64</i> bgp outbound-route-filtering extended-community send-orf route-target <i>named-item</i>
Tree	route-target
Introduced	25.3.R2
Platforms	7705 SAR-1

[[community-name](#)] *named-item*

Synopsis	Route target community name
Context	configure router <i>named-item-64</i> bgp outbound-route-filtering extended-community send-orf route-target <i>named-item</i>

Tree	route-target
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

override-tunnel-elc *boolean*

Synopsis	Enable entropy label capability on BGP tunnels
Context	configure router <i>named-item-64</i> bgp override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Description	<p>When configured to true, this command renders all far ends for BGP tunnels as entropy-label-capable, regardless of any received capability signaling. This ensures that the entropy label will be inserted on BGP tunnels in the absence of capability signaling support by the far end.</p> <p>This is a system-wide configuration, since efficient entropy label operation requires that all LSRs in a network support entropy labels. This command should be used with care, particularly in inter-AS use cases, as entropy label capability may differ between domains.</p> <p>When configured to false, this command disables all far ends for BGP tunnels as entropy-label-capable.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure router <i>named-item-64</i> bgp path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.</p> <p>When configured to false, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP</p>

interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure router <i>named-item-64</i> bgp peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-tracking-policy *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	configure router <i>named-item-64</i> bgp peer-tracking-policy <i>reference</i>
Tree	peer-tracking-policy
Description	<p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p> <p>Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure router <i>named-item-64</i> bgp preference <i>number</i>
Tree	preference

Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p>
Range	1 to 255
Default	170
Introduced	25.3.R2
Platforms	7705 SAR-1

purge-timer *number*

Synopsis	Maximum time before stale routes are purged
Context	configure router <i>named-item-64</i> bgp purge-timer <i>number</i>
Tree	purge-timer
Description	<p>This command configures the maximum time before stale routes are purged.</p> <p>When a route refresh request is sent to a peer for VPN-IP routes received from that peer (in the RIB-IN), the routes are set to stale and the purge timer is started. If the routes are not updated (refreshed) before the purge timer expires, the routes are removed.</p>
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

rapid-update

Synopsis	Enter the rapid-update context
Context	configure router <i>named-item-64</i> bgp rapid-update
Tree	rapid-update
Description	<p>Commands in this context specify the address families that are configured to support the rapid update functionality.</p> <p>The rapid update functionality overrides the remaining time on a peer's MRAI timer and immediately sends routes belonging the specified address families (and all other pending updates) to the peers receiving these routes.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn boolean

Synopsis	Include EVPN address family routes
Context	configure router <i>named-item-64</i> bgp rapid-update evpn <i>boolean</i>
Tree	evpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Include IPv4 address family routes
Context	configure router <i>named-item-64</i> bgp rapid-update ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

Context	configure router <i>named-item-64</i> bgp rib-management ipv4 leak-import
Tree	leak-import
Description	Commands in this context specify route policies that control the importation of leak-eligible routes from the BGP RIB of another routing instance into the unlabeled-IPv4 RIB of the base router. To leak a route from one routing instance to another, the origin and destination RIB types must be the same; for example, it is not possible to leak a route from an unlabeled-IPv4 RIB of a VPRN into the labeled-IPv4 RIB of the base router.
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Leak import policy name
Context	configure router <i>named-item-64</i> bgp rib-management ipv4 leak-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies one or more leak import policies.</p> <p>Policy names are limited to 64 characters except for the first policy. Only one object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p>
String length	1 to 255
Max. instances	15
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-table-import

Synopsis	Enter the route-table-import context
Context	configure router <i>named-item-64</i> bgp rib-management ipv4 route-table-import
Tree	route-table-import
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	configure router <i>named-item-64</i> bgp rib-management ipv4 route-table-import policy-name <i>reference</i>
Tree	policy-name
Description	<p>This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.</p> <p>When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.</p>

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

Platforms	7705 SAR-1

router-id *ipv4-address*

Synopsis	Router ID for the BGP instance in the AS
Context	configure router <i>named-item-64</i> bgp router-id <i>ipv4-address</i>
Tree	router-id
Description	<p>This command specifies the router ID to be used with the BGP instance.</p> <p>Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID.</p> <p>When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

rr-vpn-forwarding *boolean*

Synopsis	Allow route reflector to forward VPN-IP routes
Context	configure router <i>named-item-64</i> bgp rr-vpn-forwarding <i>boolean</i>
Tree	rr-vpn-forwarding
Description	<p>When configured to true, the route reflector resolves VPN-IPv4 and VPN-IPv6 routes, sets itself as the next hop, and generates new labels for all the resolved routes.</p> <p>During this process, all received VPN-IP routes, regardless of route target, are imported into the dummy VRF, where the BGP next hops are resolved. The routes are resolved to next-hop-self, and BGP allocates new VPRN service-label values for the routes, which are then advertised to peers.</p> <p>The transport-tunnel command under the configure router bgp next-hop-resolution labeled-routes context determines what types of tunnels are eligible to resolve the next hops. If a received VPN-IP route from IBGP peer X is resolved and selected as the best path so that it can be re-advertised to an IBGP peer Y, and the BGP next-hop is modified toward peer Y (by using the next-hop-self command in Y's group or neighbor context or by using a next-hop action in an export policy applied to Y), BGP allocates a new VPRN service label value for the route, signals that new label value to Y, and programs the IOM to do the corresponding label swap operation. The supported combinations of X and Y are outlined below:</p> <ul style="list-style-type: none"> • from X (client) to Y (client)

- from X (client) to Y (non-client)
- from X (non-client) to Y (client)

When configured to **false**, the routes are re-advertised without signaling new VPRN labels, even if the BGP next hop is changed.

Nokia recommends setting this command to **false** for scaling and convergence reasons.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>named-item-64</i> bgp segment-routing
Tree	segment-routing
Description	Commands in this context configure options related to BGP segment routing (including prefix SID support).
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of segment routing
Context	configure router <i>named-item-64</i> bgp segment-routing admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-sid-range

Synopsis	Enable the prefix-sid-range context
Context	configure router <i>named-item-64</i> bgp segment-routing prefix-sid-range
Tree	prefix-sid-range
Introduced	25.3.R2
Platforms	7705 SAR-1

global

Synopsis	Allow label allocation from entire SRBG space
Context	configure router <i>named-item-64</i> bgp segment-routing prefix-sid-range global
Tree	global
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR-1

max-index *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Last label value available in contiguous range
Context	configure router <i>named-item-64</i> bgp segment-routing prefix-sid-range max-index <i>number</i>
Tree	max-index
Range	0 to 1048575
Default	1
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR-1

start-label *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	First label value available in a contiguous range
Context	configure router <i>named-item-64</i> bgp segment-routing prefix-sid-range start-label <i>number</i>
Tree	start-label
Range	0 to 1048575
Default	0

Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR-1

selective-label-ip *keyword*

Synopsis	Label IP routes installed for local use on NHS router
Context	configure router <i>named-item-64</i> bgp selective-label-ip <i>keyword</i>
Tree	selective-label-ip
Description	<p>This command enables selective installation of labeled unicast routes for resolution by local services and IP shortcuts on a labeled unicast Next-hop=self router.</p> <p>This command is supported for labeled unicast for both IPv4 and IPv6 routes.</p> <p>The no-install option installs labeled IP routes that are required by services. This option conserves labeled route table space in addition to RTM table space on BGP-LU next-hop-self route reflectors. The route-table-install-only option ensures that the labeled unicast routes are installed in the RTM in full. When no-install is specified, the download of labeled unicast routes for NHLFE resolution by services continues.</p>
Options	no-install, route-table-install-only
Introduced	25.3.R2
Platforms	7705 SAR-1

selective-label-ip-prioritization *boolean*

Synopsis	Enable BGP selective prioritization for labeled routes
Context	configure router <i>named-item-64</i> bgp selective-label-ip-prioritization <i>boolean</i>
Tree	selective-label-ip-prioritization
Description	<p>When this command is set to true, every labeled IPv4 and IPv6 route that is received and potentially usable by a local service is automatically prioritized for fast control plane reconvergence. When the reachability of a BGP next-hop changes, the labeled IPv4 and IPv6 routes are updated into the route table first, along with other routes manually tagged as high priority by import policies. A /32 or /128 labeled unicast route (and associated BGP-LU tunnel) is determined to be potentially usable by a local service if one of the following conditions applies:</p> <ul style="list-style-type: none"> the route matches the far-end address of a user-provisioned SDP of a Layer 2 service and the SDP is configured to use BGP tunnels as transport the route matches the BGP next-hop address of a BGP-EVPN or IP VPN route, and this VPN route is either imported into a local service or readvertised by the router acting as a next-hop-self route reflector or a model-B ASBR <p>When this command is set to false, selective-label IP prioritization for BGP is not used.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

selective-label-ipv4-install *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	configure router <i>named-item-64</i> bgp selective-label-ipv4-install <i>boolean</i>
Tree	selective-label-ipv4-install
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send-communities

Synopsis	Enter the send-communities context
Context	configure router <i>named-item-64</i> bgp send-communities
Tree	send-communities
Introduced	25.3.R2

Synopsis	Enter the send-default context
Context	configure router <i>named-item-64</i> bgp send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policy name
Context	configure router <i>named-item-64</i> bgp send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure router <i>named-item-64</i> bgp send-default ipv4 <i>boolean</i>
Tree	ipv4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable IPv6 family type
Context	configure router <i>named-item-64</i> bgp send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure router <i>named-item-64</i> bgp split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to false, the use of split-horizon is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy-import *boolean*

Synopsis	Import all segment routing policies into the BGP RIB
Context	configure router <i>named-item-64</i> bgp sr-policy-import <i>boolean</i>
Tree	sr-policy-import
Description	When configured to true , statically-configured non-local segment routing policies from the segment routing database are imported into the BGP RIB so that they can be

advertised as originated routes toward BGP peers supporting segment routing policies (**sr-policy-ipv4** IP family type).

When configured to **false**, the SR policies are not imported into the BGP RIB.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

subconfed-vpn-forwarding *boolean*

Synopsis	Allow subconfed route resolution, next hop and labels
Context	configure <i>router named-item-64</i> bgp subconfed-vpn-forwarding <i>boolean</i>
Tree	subconfed-vpn-forwarding
Description	<p>When this is set to true, the base router BGP instance retains all received VPN-IPv4 and VPN-IPv6 routes, including those with route targets not matching any VRF import policy of any locally configured VPRN. In addition, when the base router BGP is configured to apply a next-hop-self command to a peer of any type (EBGP, IBGP, or confed-EBGP), VPN-IPv4 and VPN-IPv6 routes are advertised to the peer with a new BGP label, next hop, and label-swap forwarding entry.</p> <p>These behaviors described above are applied when the enable-inter-as-vpn or enable-rr-vpn-forwarding commands are enabled in the configure router bgp context, in the same BGP instance. This applies regardless of whether the base router has a confederation configuration.</p> <p>When this command is set to false, subconfederation VPN forwarding is not used.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size override
Context	configure <i>router named-item-64</i> bgp tcp-mss <i>number</i>
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR-1

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure router <i>named-item-64</i> bgp third-party-nexthop <i>boolean</i>
Tree	third-party-nexthop
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	configure router <i>named-item-64</i> bgp vpn-apply-export <i>boolean</i>
Tree	vpn-apply-export
Description	<p>When configured to true, base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.</p> <p>When configured to false, the export policies are not applied.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-apply-import *boolean*

Synopsis	Apply base-instance import route policies to VPN routes
Context	configure router <i>named-item-64</i> bgp vpn-apply-import <i>boolean</i>
Tree	vpn-apply-import
Description	When configured to true , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When configured to false , the import policies are not applied.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

confederation

Synopsis	Enter the confederation context
Context	configure router <i>named-item-64</i> confederation
Tree	confederation
Description	Commands in this context configure members that are to be part of a confederation. Creating confederation autonomous systems within as AS can be used to reduce the number of IBGP sessions required within an AS.
Introduced	25.3.R2
Platforms	7705 SAR-1

confed-as-num *number*

Synopsis	Confederation AS number
Context	configure router <i>named-item-64</i> confederation confed-as-num <i>number</i>
Tree	confed-as-num

failover

Synopsis	Enter the failover context
Context	configure router named-item-64 dhcp-server dhcpv4 named-item failover
Tree	failover
Description	Commands in this context define DHCP failover where two DHCP servers manage the same pool of addresses, enabling them to share the load to assign leases for pool and provide backup for each in the event of network outages.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the failover mechanism
Context	configure router named-item-64 dhcp-server dhcpv4 named-item failover admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure router named-item-64 dhcp-server dhcpv4 named-item failover ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover
Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-client-lead-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server dhcpv4</i> <i>named-item</i> <i>failover</i> maximum-client-lead-time <i>number</i>
Tree	<i>maximum-client-lead-time</i>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

partner-down-delay *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server dhcpv4</i> <i>named-item</i> <i>failover</i> partner-down-delay <i>number</i>
Tree	<i>partner-down-delay</i>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough

time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [[address](#)] *reference*

Synopsis	Enter the peer list instance
Context	configure router <i>named-item-64</i> dhcp-server dhcpv4 <i>named-item</i> failover peer <i>reference</i>
Tree	peer
Description	<p>Commands in this context define the peer-related parameters for DHCP failover.</p> <p>DHCP leases can be synchronized at the level of the DHCP server or pool. The pair of synchronizing servers or pools is identified by a tag. The synchronization information is carried over the Multi-Chassis Synchronization (MCS) link between the two peers. The MCS link is a logical IP or MPLS link.</p> <p>MCS runs over TCP port 45067, using either data traffic or keepalives to detect failure on the communication link between the two nodes. In the absence of any MCS data traffic for more than 0.5 seconds, MCS sends its own keepalive to the peer. If a reply is not received within 3 seconds, MCS declares its operational state as down and the DB sync state as out-of-sync. MCS consequently notifies its clients, including the DHCP server. It can take up to 3 seconds before the DHCP client realizes that the inter-chassis link has failed.</p> <p>The link failure does not necessarily imply the same failed state for the access links. It is possible, although unlikely, that both access links are operational while the inter-chassis communication link is broken. In this case, the two redundant nodes can become isolated from each other in the network. For this reason, it is important that the MCS link be highly redundant.</p>

use-gi-address

Synopsis Enable the **use-gi-address** context

Context **configure** [router](#) *named-item-64* [dhcp-server](#) [dhcpv4](#) *named-item* [pool-selection](#) [use-gi-address](#)

Tree [use-gi-address](#)

Description Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.

A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.

Introduced 25.3.R2

Platforms 7705 SAR-1

scope *keyword*

Synopsis GI address-matching scope

Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>defaults</i> <i>rebind-time</i> <i>number</i>
Tree	<i>rebind-time</i>
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds

Default	2880
Introduced	25.3.R2
Platforms	7705 SAR-1

renew-time *number*

Synopsis	Renew time for the lease
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> defaults renew-time <i>number</i>
Tree	renew-time
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR-1

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> defaults valid-lifetime <i>number</i>
Tree	valid-lifetime
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p>

Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisDelay to prevent lease duplication during link failure

Context**configure** *router* *named-item-64* *dhcp-server dhcpv6* *named-item failover* **partner-down-delay** *number*

Tree*partner-down-delay*

DescriptionThis command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

startup-wait-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time

Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-rapid-commit *boolean*

Synopsis	Ignore Rapid Commit option
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> ignore-rapid-commit <i>boolean</i>
Tree	ignore-rapid-commit
Description	When configured to true , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-id-mapping *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> interface-id-mapping <i>boolean</i>
Tree	interface-id-mapping
Description	When configured to true , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

lease-hold

Synopsis	Enter the lease-hold context
Context	configure router named-item-64 dhcp-server dhcpv6 named-item lease-hold
Tree	lease-hold
Introduced	25.3.R2
Platforms	7705 SAR-1

additional-scenarios

Synopsis	Enter the additional-scenarios context
Context	configure router named-item-64 dhcp-server dhcpv6 named-item lease-hold additional-scenarios
Tree	additional-scenarios
Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	25.3.R2
Platforms	7705 SAR-1

internal-lease-ipsec *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	configure router named-item-64 dhcp-server dhcpv6 named-item lease-hold additional-scenarios internal-lease-ipsec <i>boolean</i>
Tree	internal-lease-ipsec
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

solicited-release *boolean*

Synopsis	Apply lease hold timer for solicited releases
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>lease-hold</i> <i>additional-scenarios solicited-release</i> <i>boolean</i>
Tree	<i>solicited-release</i>
Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

time *number*

Synopsis	Lease hold time
Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>lease-hold</i> <i>time</i> <i>number</i>
Tree	<i>time</i>
Range	1 to 631152000
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

lease-query *boolean*

Synopsis	Handle and reply to lease query messages
Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>lease-query</i> <i>boolean</i>
Tree	<i>lease-query</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pool [*pool-name*] *named-item*

Synopsis	Enter the pool list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>pool</i> <i>named-item</i>
Tree	<i>pool</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool-name] *named-item*

Synopsis	DHCP server pool name
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i>
Tree	pool
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

delegated-prefix

Synopsis	Enter the delegated-prefix context
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> delegated-prefix
Tree	delegated-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

length *number*

Synopsis	Prefix length for pool if unspecified by client
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> delegated-prefix length <i>number</i>
Tree	length
Range	48 to 127
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum *number*

Synopsis	Maximum delegated prefix length for this pool
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> delegated-prefix maximum <i>number</i>
Tree	maximum

Range	48 to 127
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum *number*

Synopsis	Minimum delegated prefix length for this pool
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> delegated-prefix minimum <i>number</i>
Tree	minimum
Range	48 to 127
Default	48
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-prefix [[ipv6-prefix](#)] *ipv6-prefix*

Synopsis	Add a list entry for exclude-prefix
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> exclude-prefix <i>ipv6-prefix</i>
Tree	exclude-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-prefix*

Synopsis	IPv6 prefix to be excluded from available pool prefixes
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> exclude-prefix <i>ipv6-prefix</i>
Tree	exclude-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

failover

Synopsis	Enter the failover context
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover
Tree	failover
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the failover mechanism
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover

Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-client-lead-time *number*

	<p>WARNING:</p> <p>Modifying this element toggles the admin-state of the parent element automatically for the new value to take effect.</p>
Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover maximum-client-lead-time <i>number</i>
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

partner-down-delay *number*

	<p>WARNING:</p> <p>Modifying this element toggles the admin-state of the parent element automatically for the new value to take effect.</p>
Synopsis	Delay to prevent lease duplication during link failure
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover partner-down-delay <i>number</i>

Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [[address](#)] *reference*

Synopsis	Enter the peer list instance
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover peer <i>reference</i>
Tree	peer
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *reference*

Synopsis	IP address of the failover peer
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover peer <i>reference</i>
Tree	peer
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sync-tag *named-item*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover peer <i>reference</i> sync-tag <i>named-item</i>
Tree	sync-tag
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

startup-wait-time *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

options

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix <i>ipv6-prefix</i> preferred-lifetime <i>number</i>
Tree	preferred-lifetime

Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length-threshold [[prefix-length](#)] *number*

rebind-time *number*

Synopsis	Rebind time for the lease
----------	---------------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>pool</i> <i>named-item</i> <i>prefix</i> <i>ipv6-prefix</i> <i>rebind-time</i> <i>number</i>
Tree	<i>rebind-time</i>
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	7705 SAR-1

renew-time *number*

Synopsis	Renew time for the lease
Context	configure <i>router</i> <i>named-item-64</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>pool</i> <i>named-item</i> <i>prefix</i> <i>ipv6-prefix</i> <i>renew-time</i> <i>number</i>
Tree	<i>renew-time</i>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800

Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR-1

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix <i>ipv6-prefix</i> valid-lifetime <i>number</i>
Tree	valid-lifetime
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length-threshold [*prefix-length*] *number*

Synopsis	Enter the prefix-length-threshold list instance

ecmp *number*

Synopsis Maximum equal-cost routes for routing table instance

Context **configure** *router* *named-item-64* *ecmp* *number*

Tree	ecmp
Description	<p>This command configures ECMP and defines the number of routes for path sharing.</p> <p>ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p> <ol style="list-style-type: none">1. The system selects the lowest next hop router ID.2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.
Range	1 to 128
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label *boolean*

Synopsis	Use entropy label
Context	configure router <i>named-item-64</i> entropy-label <i>boolean</i>
Tree	entropy-label
Description	<p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the configure router mpls or configure router mpls lsp context.</p> <p>This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.</p> <p>The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.</p> <p>When configured to false, the use of entropy labels is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fib-priority *keyword*

Synopsis	FIB priority for VPRN BGP routes
Context	configure <i>router</i> <i>named-item-64</i> fib-priority <i>keyword</i>
Tree	fib-priority
Description	<p>This command prioritizes the order in which BGP FIB entries across different routing instances are pushed to the IOM for updating. This allows BGP route updates for higher priority router instances to occur as quickly as possible by assigning a FIB priority to the associated router instances (base and VPRN instances).</p> <p>If routing updates are available for multiple router instances, the IOMs or IMM update the FIB with entries with high priority router instances before entries with standard priority router instances.</p>
Options	standard – Standard FIB priority for routing instances high – High FIB priority for routing instances
Default	standard
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-tunneling *boolean*

Synopsis	Allow tunneling of ICMP reply packets over MPLS LSPs
Context	configure <i>router</i> <i>named-item-64</i> icmp-tunneling <i>boolean</i>
Tree	icmp-tunneling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp

Synopsis	Enable the igmp context

Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	Add a starg (*,G) address entry for the group range
Context	configure router <i>named-item-64</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

subnet-check *boolean*

Synopsis	Allow subnet checking
Context	configure router <i>named-item-64</i> igmp interface <i>interface-name</i> subnet-check <i>boolean</i>
Tree	subnet-check
Default	true
Introduced	25.3.R2

Platforms 7705 SAR-1

version *keyword*

Synopsis IGMP protocol version

Context **configure** [router](#) *named-item-64* [igmp](#) [interface](#) *interface-name* **version** *keyword*

Tree [version](#)

Options 1, 2, 3

Default 3

Introduced 25.3.R2

Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** [router](#) *named-item-64* [igmp](#) [query-interval](#) *number*

Tree [query-interval](#)

Description This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.

Range 2 to 1024

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** [router](#) *named-item-64* [igmp](#) [query-last-member-interval](#) *number*

Tree [query-last-member-interval](#)

Description This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.

Range 1 to 1023

Units seconds

Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure router <i>named-item-64</i> igmp query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure router <i>named-item-64</i> igmp robust-count <i>number</i>
Tree	robust-count
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, this value can be increased.
Range	2 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure router <i>named-item-64</i> igmp ssm-translate
Tree	ssm-translate
Description	Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.
Introduced	25.3.R2

Platforms 7705 SAR-1

group-range *start* *ipv4-multicast-address* *end* *ipv4-multicast-address*

Synopsis Enter the **group-range** list instance

Context **configure** *router* *named-item-64* *igmp* *ssm-translate* *group-range* *start* *ipv4-multicast-address* *end* *ipv4-multicast-address*

Tree *group-range*

Description Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.

Introduced 25.3.R2

Platforms 7705 SAR-1

start *ipv4-multicast-address*

Synopsis Lower bound of the IP address group range

Context **configure** *router* *named-item-64* *igmp* *ssm-translate* *group-range* *start* *ipv4-multicast-address* *end* *ipv4-multicast-address*

Tree *group-range*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

end *ipv4-multicast-address*

Synopsis Upper bound of the IP address group range

Context **configure** *router* *named-item-64* *igmp* *ssm-translate* *group-range* *start* *ipv4-multicast-address* *end* *ipv4-multicast-address*

Tree *group-range*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

source [*source-address*] *ipv4-unicast-address*

Synopsis Add a list entry for **source**

Context	configure router <i>named-item-64</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure router <i>named-item-64</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [**interface-name**] *interface-name*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i>
Tree	interface
Description	Commands in this context create a logical IP routing or unnumbered MPLS-TP interface. An IP address, port, or system can then be associated with the IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i>
Tree	interface
Description	This command specifies the name of the router interface. When a user enters a new name, the system creates a new logical interface and the context changes to that interface for more command processing.

When an existing interface name is entered, the user enters the router interface context for editing and configuration.

Nokia recommends using names that are meaningful and unique to remove ambiguity when displaying the state associated with IP interfaces either via show commands or model-driven interfaces.

See "Router configuration overview" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about the interface name.

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the interface

Context **configure** [router](#) *named-item-64* [interface](#) *interface-name* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Introduced 25.3.R2

Platforms 7705 SAR-1

autoconfigure

Synopsis Enter the **autoconfigure** context

Context **configure** [router](#) *named-item-64* [interface](#) *interface-name* **autoconfigure**

Tree [autoconfigure](#)

Description Commands in this context configure the autoconfigure functionality for the interface.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4

Synopsis Enter the **ipv4** context

Context **configure** [router](#) *named-item-64* [interface](#) *interface-name* **autoconfigure** [ipv4](#)

Tree [ipv4](#)

Description Commands in this context configure IPv4 autoconfigure settings.

Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp-client

Synopsis	Enable the dhcp-client context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client
Tree	dhcp-client
Description	Commands in this context configure the node as an IPv4 DHCP client. When the node operates as a DHCP client, it learns the IP address of the interface via dynamic IP address assignment.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCP client
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

class-id

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the class-id context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id
Tree	class-id
Description	Commands in this context configure the vendor class ID for the DHCP client.
Introduced	25.3.R2

Platforms 7705 SAR-1

ascii-string *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as an ASCII string
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex-string *hex-string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as a hexadecimal string
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.3.R2
Platforms	7705 SAR-1

client-id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the client-id context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id
Tree	client-id
Description	Commands in this context configure the client ID for the DHCP client.
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-string *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as an ASCII string
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex-string *hex-string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as a hexadecimal string
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis

Interface name as the client ID

Context

configure [router](#) *named-item-64* [interface](#) *interface-name* [autoconfigure](#) [ipv4](#) [dhcp-client](#) [client-id](#) [interface](#)

Tree

[interface](#)

Description

This command configures the node to use the interface name as the client ID.

Notes

The following elements are part of a choice: **ascii-string**, **hex-string**, **interface**, or **mac**.

Introduced

25.3.R2

Platforms

7705 SAR-1

mac

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis

MAC address as the client ID

Context

configure [router](#) *named-item-64* [interface](#) *interface-name* [autoconfigure](#) [ipv4](#) [dhcp-client](#) [client-id](#) [mac](#)

Tree

[mac](#)

Description

This command configures the node to use the MAC address as the client ID.

Notes

The following elements are part of a choice: **ascii-string**, **hex-string**, **interface**, or **mac**.

Introduced

25.3.R2

Platforms

7705 SAR-1

lease-time (*number* | *keyword*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis

Lease time the DHCP client requests

Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>autoconfigure</i> <i>ipv4</i> <i>dhcp-client</i> <i>lease-time</i> (<i>number</i> <i>keyword</i>)
Tree	<i>lease-time</i>
Description	This command configures the lease time that the DHCP client requests to the DHCP server. The DHCP server can override the configured value.
Range	10 to 315446399
Units	seconds
Options	infinite – Request an infinite lease with no expiry
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

request-options

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the request-options context
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>autoconfigure</i> <i>ipv4</i> <i>dhcp-client</i> <i>request-options</i>
Tree	<i>request-options</i>
Description	Commands in this context configure the DHCP options to include in the parameter request list as part of the DHCPREQUEST message to the server.
Introduced	25.3.R2
Platforms	7705 SAR-1

dns-server *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the DNS server option
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>autoconfigure</i> <i>ipv4</i> <i>dhcp-client</i> <i>request-options</i> <i>dns-server</i> <i>boolean</i>
Tree	<i>dns-server</i>

Description	When configured to true , the node includes the DNS server option (Option 54) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

router *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the router option
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options router <i>boolean</i>
Tree	router
Description	When configured to true , the node includes the router option (Option 3) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static-route *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the static route option
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options static-route <i>boolean</i>
Tree	static-route
Description	When configured to true , the node includes the static route option (Option 121) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *very-long-description*

Synopsis	Text description
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> description <i>very-long-description</i>
Tree	description
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection *reference*

Synopsis	DCP policy name for interface
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Description	<p>This command configures a Distributed CPU Protection (DCP) policy for the associated IP interface or SAP. The user can only assign a valid created DCP policy to a SAP or network interface (this rule does not apply to templates such as an MSAP policy).</p> <p>If the operator does not assign a DCP policy to a router interface, the system uses the default network DCP policy.</p>
Reference	configure <i>system</i> <i>security</i> <i>dist-cpu-protection</i> <i>policy</i> <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> egress
Tree	egress
Description	<p>Commands in this context configure egress network filter policies for the IP interface. The system does not filter unless an operator defines a filter.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> egress filter
Tree	filter
Description	Commands in this context configure the names of the egress IPv4 and IPv6 network filter policies for the interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> egress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> egress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm
Tree	eth-cfm
Description	Commands in this context configure the Ethernet CFM parameters for the associated IP interface.

Introduced 25.3.R2
 Platforms 7705 SAR-1

mep *md-admin-name reference* *ma-admin-name reference* *mep-id number*

Synopsis Enter the **mep** list instance

Context **configure** *router named-item-64 interface interface-name eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number*

Tree *mep*

Description Commands in this context configure an 802.1ag Maintenance Endpoint (MEP) instance.

Max. instances 1

Introduced 25.3.R2

Platforms 7705 SAR-1

md-admin-name *reference*

Synopsis Maintenance Domain (MD) name

Context **configure** *router named-item-64 interface interface-name eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number*

Tree *mep*

Reference **configure** *eth-cfm domain admin-name*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

ma-admin-name *reference*

Synopsis Maintenance Association (MA) name

Context **configure** *router named-item-64 interface interface-name eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number*

Tree *mep*

Reference **configure** *eth-cfm domain admin-name association admin-name*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

ccm *boolean*

Synopsis	Generate CCM messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> ccm <i>boolean</i>
Tree	ccm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
----------	---

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

ccm-tlv-ignore *keyword*

Synopsis	TLV to ignore on reception
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> ccm-tlv-ignore <i>keyword</i>
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-test

Synopsis	Enable the eth-test context
----------	------------------------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>eth-test</i>
Tree	<i>eth-test</i>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR-1

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>eth-test</i> <i>bit-error-threshold</i> <i>number</i>
Tree	<i>bit-error-threshold</i>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-pattern

Synopsis	Enter the test-pattern context
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>eth-test</i> <i>test-pattern</i>
Tree	<i>test-pattern</i>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR-1

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>eth-test</i> <i>test-pattern</i> <i>crc-tlv</i> <i>boolean</i>

Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern keyword

Synopsis	Test pattern for Ethernet Test frames
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR-1

facility-fault boolean

Synopsis	Allow the facility MEP to generate a network action
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> facility-fault <i>boolean</i>
Tree	facility-fault
Description	When configured to true , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to false , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

low-priority-defect keyword

Synopsis	Lowest priority defect for fault alarm generation
----------	---

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Description	This command specifies the lowest priority defect that generates a fault alarm and also configures the fault state of the MEP that causes a network reaction.
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> mac-address mac-unicast-address-no-zero
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	25.3.R2
Platforms	7705 SAR-1

flavor *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Network interface flavor
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> flavor <i>keyword</i>
Tree	flavor
Options	regular – Regular network interface pdn – PDN interface unnumbered-mpls-tp – Unnumbered MPLS-TP interface
Default	regular
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time
Tree	hold-time
Description	Commands in this context configure the interface-level up and down hold timers for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv4
Tree	ipv4
Description	Commands in this context configure the interface-level IPv4 hold timers for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

down

Synopsis	Enter the down context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR-1

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv4 down init-only <i>boolean</i>

Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

up

Synopsis	Enter the up context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv4 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200

Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv6
Tree	ipv6
Description	Commands in this context configure the interface-level IPv6 hold timers for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

down

Synopsis	Enter the down context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv6 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR-1

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> hold-time ipv6 down init-only <i>boolean</i>
Tree	init-only
Description	When configured to true , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>hold-time</i> <i>ipv6</i> <i>down</i> <i>seconds</i> <i>number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

up

Synopsis	Enter the up context
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>hold-time</i> <i>ipv6</i> <i>up</i>
Tree	<i>up</i>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>hold-time</i> <i>ipv6</i> <i>up</i> <i>seconds</i> <i>number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

if-attribute

Synopsis	Enter the if-attribute context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> if-attribute
Tree	if-attribute
Description	Commands in this context configure attributes of the IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group *reference*

Synopsis	Administrative group name for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> if-attribute admin-group <i>reference</i>
Tree	admin-group
Description	This command specifies the administrative group membership to an interface. The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

delay

Synopsis	Enter the delay context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> if-attribute delay
Tree	delay
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic

Synopsis	Enter the dynamic context
----------	----------------------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>if-attribute</i> <i>delay</i> <i>dynamic</i>
Tree	<i>dynamic</i>
Description	Commands in this context configure dynamic link delay measurement options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

static *number*

Synopsis	Unidirectional link delay static information
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>if-attribute</i> <i>delay</i> <i>static</i> <i>number</i>
Tree	<i>static</i>
Description	This command configures the unidirectional link delay. By default there is no configured delay, and the link delay metric TLV is pruned in the IGP.
Range	1 to 16777214
Units	microseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

srlg-group [*name*] *reference*

Synopsis	Add a list entry for srlg-group
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>if-attribute</i> <i>srlg-group</i> <i>reference</i>
Tree	<i>srlg-group</i>
Description	<p>Commands in this context add a list entry for a Shared Risk Link Group (SRLG) that can be associated with an IP or MPLS interface to tag IP or MPLS interfaces that share a specific outcome with the same identifier. For example, an SRLG group identifier could represent all links that use separate fibers but are carried in the same fiber conduit.</p> <p>The name and identifier of each SRLG group must be configured locally on each router before the user configures the SRLG membership of an interface. A maximum of 1024 SRLGs can be configured per system. The user can apply SRLGs to an IES, VPRN, network IP, or MPLS interface. A maximum of 64 SRLGs can be applied to an interface.</p> <p>See "Shared Risk Link Groups" in the <i>7705 SAR Gen 2 MPLS Guide</i> for more information about SRLGs.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] reference

Synopsis	SRLG name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Reference	configure routing-options if-attribute srlg-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ingress
Tree	ingress
Description	Commands in this context configure ingress network filter policies for the IP interface. If an ingress filter is not defined, the system performs no filtering.
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ingress filter
Tree	filter
Description	Commands in this context associate an IP filter policy with an IP interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ingress filter ip <i>reference</i>
Tree	ip

Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ingress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu number

Synopsis	Interface IP MTU
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	<p>This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.</p> <p>The operational IP MTU used for the interface is based on the configured IP MTU and the port MTU of the port bound to this interface; that is, the operational MTU is set to the lesser of the values configured by this command and the port MTU value less the Ethernet header size.</p> <p>If the interface supports IPv6 packets, this command must be set to at least 1280, in accordance with RFC 2460 <i>Internet Protocol, Version 6 (IPv6) Specification</i>.</p>
Range	512 to 9786
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec

Synopsis	Enable the ipsec context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec
Tree	ipsec

Description	Commands in this context configure an IPsec secured interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-exception *reference*

Synopsis	IP exception filter
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ip-exception <i>reference</i>
Tree	ip-exception
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	configure filter ip-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-tunnel [[name](#)] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec tunnel name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-designate *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-designate <i>boolean</i>
Tree	bfd-designate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
----------	--

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness service-name <i>service-name</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-df-bit *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> description <i>description</i>

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

encapsulated-ip-mtu *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-generation

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-1

frag-required

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp-generation frag-required interval</i> <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp-generation frag-required message-count</i> <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6-generation

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-too-big

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big
Tree	packet-too-big
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big admin-state</i> <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big interval</i> <i>number</i>
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big message-count</i> <i>number</i>
Tree	message-count
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000

Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

key-exchange

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-exchange context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange
Tree	key-exchange
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the dynamic context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic
Tree	dynamic
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-establish *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish <i>boolean</i>
Tree	auto-establish
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cert context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert
Tree	cert

Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the status-verify context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good

Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile

Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

id

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the id context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none">• Psk: local tunnel IP address• Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *fully-qualified-domain-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ike-policy <i>reference</i>
Tree	ike-policy

Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ppk context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id reference

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

list reference

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK list instance name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>
Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key

String length 1 to 115

Introduced 25.3.R2

Platforms 7705 SAR-1

manual

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable the **manual** context

Context **configure** *router* *named-item-64* *interface* *interface-name* *ipsec ipsec-tunnel* *named-item* *key-exchange* **manual**

Tree *manual*

Description Commands in this context configure settings for manually configured security associations for the IPsec tunnel.

Notes The following elements are part of a choice: **dynamic** or **manual**.

Introduced 25.3.R2

Platforms 7705 SAR-1

keys [*security-association*] *number* *direction* *keyword*

Synopsis Enter the **keys** list instance

Context **configure** *router* *named-item-64* *interface* *interface-name* *ipsec ipsec-tunnel* *named-item* *key-exchange* **manual** **keys** *number* *direction* *keyword*

Tree *keys*

Description Commands in this context configure the security association list for the tunnel.

Introduced 25.3.R2

Platforms 7705 SAR-1

[security-association] *number*

Synopsis SA entry ID

Context **configure** *router* *named-item-64* *interface* *interface-name* *ipsec ipsec-tunnel* *named-item* *key-exchange* **manual** **keys** *number* *direction* *keyword*

Tree *keys*

Range 1 to 16

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Direction of the IPsec tunnel
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *hex-string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> authentication-key <i>hex-string</i>
Tree	authentication-key
String length	1 to 130
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-key *hex-string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
----------	---------------------------------------

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> encryption-key <i>hex-string</i>
Tree	encryption-key
String length	1 to 66
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

spi *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i>
Tree	spi
Description	<p>This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.</p> <p>The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p>

Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-gateway-address-override (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> local-gateway-address-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

esp number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

pmtu-discovery-aging number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging

Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

private-sap *number*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-sap <i>number</i>
Tree	private-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

private-service *service-name*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
----------	----------------------

Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-service <i>service-name</i>
Tree	private-service
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

private-tcp-mss-adjust *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v4 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4

Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v6 *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto

Introduced25.3.R2

Platforms7705 SAR-1

remote-gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisRemote IPsec tunnel endpoint address

Context**configure** **router** *named-item-64* **interface** *interface-name* **ipsec** **ipsec-tunnel** *named-item* **remote-gateway-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree**remote-gateway-address**

Introduced25.3.R2

Platforms7705 SAR-1

replay-window *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisAnti-replay window size

Context**configure** **router** *named-item-64* **interface** *interface-name* **ipsec** **ipsec-tunnel** *named-item* **replay-window** *number*

Tree**replay-window**

DescriptionThis command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.

Range32 | 64 | 128 | 256 | 512

Unitspackets

Introduced25.3.R2

Platforms7705 SAR-1

security-policy

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy
Tree	security-policy
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy id <i>number</i>
Tree	id
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-match *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy strict-match <i>boolean</i>
Tree	strict-match

Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-exception reference

Synopsis	IPv6 filter exception used to bypass encryption
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipv6-exception</i> <i>reference</i>
Tree	<i>ipv6-exception</i>
Description	<p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface.</p> <p>When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p>
Reference	configure <i>filter</i> <i>ipv6-exception</i> <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

public-sap number

	<p>WARNING:</p> <p>Modifying this element recreates the parent element automatically for the new value to take effect.</p>
Synopsis	Public SAP ID
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>public-sap</i> <i>number</i>
Tree	<i>public-sap</i>
Range	0 to 4094

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-group *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Reference	configure isa tunnel-group <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 allow-directed-broadcasts <i>boolean</i>
Tree	allow-directed-broadcasts
Description	<p>When configured to true, the router forwards packets received on a local router interface to the subnet broadcast address of another IP interface.</p> <p>When configured to false, this router does not allow directed broadcasts and the packets are discarded.</p>

Allowing directed broadcasts is a well-known mechanism used for denial-of-service attacks.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 bfd
Tree	bfd
Description	Commands in this context configure the Bidirectional Forwarding Detection (BFD) settings for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *number*

Synopsis	BFD receive interval over this interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals.
Range	10 to 100000
Units	milliseconds
Default	100

Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp

Synopsis	Enter the dhcp context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp
Tree	dhcp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp gi-address <i>ipv4-unicast-address</i>

Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

option-82

Synopsis	Enter the option-82 context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	25.3.R2
Platforms	7705 SAR-1

action keyword

Synopsis	Action to take with received DHCP Option 82
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 action keyword
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	25.3.R2
Platforms	7705 SAR-1

circuit-id

Synopsis	Enter the circuit-id context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id

Tree	circuit-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

if-name

Synopsis	Use the interface name for the circuit ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id if-name
Tree	if-name
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the circuit ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-id

Synopsis	Use the port ID for the circuit ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id port-id
Tree	port-id
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	<p>When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.</p> <p>When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.</p>
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-id

Synopsis	Enter the remote-id context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 32
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Use the MAC address for the remote ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the remote ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id none

Tree	none
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i>
Tree	client-mac-address
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i>
Tree	pool-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port-id *boolean*

Synopsis	Send the port ID in the VSO
Context	configure router named-item-64 interface interface-name ipv4 dhcp option-82 vendor-specific-option port-id <i>boolean</i>
Tree	port-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure router named-item-64 interface interface-name ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	configure router named-item-64 interface interface-name ipv4 dhcp option-82 vendor-specific-option string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure router named-item-64 interface interface-name ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

relay-plain-bootp *boolean*

Synopsis	Relay plain BOOTP messages
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>ipv4 dhcp relay-plain-bootp boolean</i>
Tree	<i>relay-plain-bootp</i>
Description	When configured to true , the system relays plain BOOTP messages. When configured to false , the system considers the plain BOOTP packets as malformed DHCP packets; therefore, the system does not relay the messages.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>ipv4 dhcp server ipv4-unicast-address</i>
Tree	<i>server</i>
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>ipv4 dhcp src-ip-addr keyword</i>

Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

trusted *boolean*

Synopsis	Relay untrusted packets
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	<p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp
Tree	icmp
Description	Commands in this context configure Internet Control Message Protocol (ICMP) parameters on a network IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp mask-reply <i>boolean</i>

Tree	mask-reply
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

param-problem

Synopsis	Enter the param-problem context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

redirects

Synopsis	Enter the redirects context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp redirects
Tree	redirects
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
----------	--

Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp ttl-expired admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp ttl-expired number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp ttl-expired seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

unreachables

Synopsis	Enter the unreachables context
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp unreachables
Tree	unreachables

Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp unreachablees admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp unreachablees number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 icmp unreachablees seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10

Introduced25.3.R2

Platforms7705 SAR-1

ip-helper-address *ipv4-unicast-address*

SynopsisIP address of the target UDP broadcast gateway

Context**configure** *router* *named-item-64* *interface* *interface-name* *ipv4* **ip-helper-address** *ipv4-unicast-address*

Tree*ip-helper-address*

DescriptionThis command configures the redirection of broadcast UDP packets received on the associated interface to the specified helper gateway address, and then to the gateway.

Introduced25.3.R2

Platforms7705 SAR-1

local-dhcp-server *reference*

SynopsisDHCP server for the interface

Context**configure** *router* *named-item-64* *interface* *interface-name* *ipv4* **local-dhcp-server** *reference*

Tree*local-dhcp-server*

Reference**configure** *router* *named-item-64* *dhcp-server* *dhcpv4* *named-item*

Introduced25.3.R2

Platforms7705 SAR-1

nat

SynopsisEnable the **nat** context

Context**configure** *router* *named-item-64* *interface* *interface-name* *ipv4* **nat**

Tree**nat**

Description

Commands in this context enable NAT and configure CPM NAT policies for the IPv4 interface.

These commands must be used in conjunction with NAT pools where the pool application is configured with the **configure router nat outside pool applications use-interface-ip** command.

Introduced25.7.R1

Platforms7705 SAR-1

cpm-nat-policy *reference*

Synopsis	CPM NAT policy association with public IPv4 interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 nat cpm-nat-policy <i>reference</i>
Tree	cpm-nat-policy
Description	<p>This command associates a CPM NAT policy to the interface. The NAT policy applies to traffic that either originates from, or is destined to, the local node itself (CPM traffic). Specifically, it is used when the traffic is routed through a public NAT IPv4 interface in the outside routing context.</p> <p>A CPM NAT policy should be used when the local node communicates with public networks over NAT, and the source or destination is a local interface within the outside routing context. This can include the public IPv4 interface or any other interface assigned to that routing context.</p>
Reference	configure service nat cpm-nat-policy <i>external-named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR-1

cpm-spf-nat-policy *reference*

Synopsis	CPM NAT policy for static port forwards
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 nat cpm-spf-nat-policy <i>reference</i>
Tree	cpm-spf-nat-policy
Description	<p>This command associates a CPM NAT policy to the interface for static port forwards. The configurations for traffic using static port forwards to a local IP address in the outside routing context are separate from those used for other CPM traffic going through NAT. This command allows the router to apply different NAT behavior for port-forwarded traffic than for general traffic originating from the local node.</p>
Reference	configure service nat cpm-nat-policy <i>external-named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery

Introduced	25.3.R2
Platforms	7705 SAR-1

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i>
Tree	learn-unsolicited
Description	<p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

limit

Synopsis	Enter the limit context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit
Tree	limit
Description	<p>Commands in this context configure the maximum number of dynamic neighbor entries that can be learned on the interface</p> <p>When the number of entries reaches the threshold (the configured percentage) of this limit, the system sends an SNMP trap.</p> <p>When the limit is exceeded, the system learns no new entries until an entry expires and traffic to these destinations is dropped. Already learned entries are refreshed.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Range	0 to 524288
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold value that triggers a warning message
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
----------	-------------------------------------

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	25.3.R2
Platforms	7705 SAR-1

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i>
Tree	proactive-refresh
Description	When configured to true , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to false , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i>
Tree	proxy-arp-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i>
Tree	remote-proxy-arp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-timer *number*

Synopsis	ARP retry interval
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery retry-timer <i>number</i>
Tree	retry-timer
Range	1 to 300
Units	deciseconds
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor [*ipv4-address*] *ipv4-address*

Synopsis	Enter the static-neighbor list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Description	Commands in this context configure a static ARP entry that associates an IP address with a MAC address for the core router instance.
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
----------	---

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor-unnumbered

Synopsis	Enable the static-neighbor-unnumbered context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Description	Commands in this context configure the static ARP MAC for an unnumbered interface. This entry overrides the dynamic ARP entry on the unnumbered interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address for the static neighbor
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered mac-address <i>mac-address</i>

Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR-1

primary

Synopsis	Enable the primary context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 primary address <i>ipv4-unicast-address</i>
Tree	address
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Description	<p>This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts.</p> <p>This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.</p>
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR-1

gre-termination *boolean*

Synopsis	Enable GRE termination
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 primary gre-termination <i>boolean</i>
Tree	gre-termination
Description	<p>When configured to true, the router terminates MPLS-over-GRE and IP-over-GRE packets for destination IP addresses from a user-defined subnet. The user defines a subnet for the termination of GRE packets by executing this command on a numbered network IP interface or a loopback interface.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>

Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary [[address](#)] *ipv4-unicast-address*

Synopsis	Enter the secondary list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *ipv4-unicast-address*

Synopsis	Secondary IPv4 address assigned to the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> broadcast <i>keyword</i>
Tree	broadcast
Description	<p>This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts.</p> <p>This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.</p>
Options	all-ones, host-ones

Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-inhibit *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> igp-inhibit <i>boolean</i>
Tree	igp-inhibit
Description	When configured to true , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 tcp-mss <i>number</i>
Tree	tcp-mss
Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR-1

unnumbered

Synopsis	Enter the unnumbered context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 unnumbered
Tree	unnumbered
Description	Commands in this context configure an IP interface as an unnumbered interface and specify the IP address to use for the interface. An operator can configure unnumbered interfaces to conserve IP addresses.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-unicast-address*

Synopsis	IP address to associate with unnumbered IP interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 unnumbered ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
Notes	The following elements are part of a choice: ip-address , ip-int-name , or system .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-int-name *interface-name*

Synopsis	Unnumbered IP interface name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 unnumbered ip-int-name <i>interface-name</i>
Tree	ip-int-name
String length	1 to 32
Notes	The following elements are part of a choice: ip-address , ip-int-name , or system .
Introduced	25.3.R2
Platforms	7705 SAR-1

system

Synopsis	Use system IP address for the unnumbered IP interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 unnumbered system

Tree	system
Notes	The following elements are part of a choice: ip-address , ip-int-name , or system .
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-check

Synopsis	Enable the urpf-check context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default *boolean*

Synopsis	Ignore default routes when performing a uRPF check
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Description	When configured to true , the router ignores default routes while performing a uRPF check to determine the validity of incoming packets. When configured to false , default routes are considered eligible.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict

Introduced	25.3.R2
Platforms	7705 SAR-1

vrrp [*virtual-router-id*] *number*

Synopsis	Enter the vrrp list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its Virtual Router Identifier (VRID) and a set of IP addresses.
Introduced	25.3.R2
Platforms	7705 SAR-1

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p>

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Password for simple text authentication
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String length	1 to 38
Introduced	25.3.R2
Platforms	7705 SAR-1

backup *ipv4-unicast-address*

Synopsis	Virtual router IP addresses for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> backup <i>ipv4-unicast-address</i>
Tree	backup
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p>

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified *unicast-ipv4-address* must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context assign a Bidirectional Forwarding Detection (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism that speeds up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP advertisement message. In addition, the standby VRRP routers transition to a master state to speed up convergence.</p> <p>The VRRP election process takes place based on the advertisement messages sent by all VRRP routers.</p> <p>Only one BFD session can be assigned to any VRRP or SRRP instance, but multiple SRRP or VRRP sessions can use the same BFD session.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip *ipv4-address*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IP address to use for BFD session
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness dest-ip <i>ipv4-address</i>
Tree	dest-ip

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> bfd-liveness <i>interface-name</i> <i>interface-name</i>
Tree	<i>interface-name</i>
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> bfd-liveness <i>service-name</i> <i>service-name</i>
Tree	<i>service-name</i>
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

init-delay *number*

Synopsis	VRRP initialization delay timer
----------	---------------------------------

Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> init-delay <i>number</i>
Tree	init-delay
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> master-int-inherit <i>boolean</i>
Tree	master-int-inherit

Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.
Range	1 to 2559
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group

Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

owner *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> passive <i>boolean</i>
Tree	passive
Description	When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance

does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	VRRP priority control policy
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p>

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference	configure vrrp policy number
Introduced	25.3.R2
Platforms	7705 SAR-1

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure router named-item-64 interface interface-name ipv4 vrrp number preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority number

Synopsis	Base priority for the VRRP
Context	configure router named-item-64 interface interface-name ipv4 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2

Platforms 7705 SAR-1

ssh-reply *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number ssh-reply <i>boolean</i>
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number telnet-reply <i>boolean</i>
Tree	telnet-reply

Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv4 vrrp number traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enable the ipv6 context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

address [*ipv6-address*] *ipv6-address*

Synopsis	Enter the address list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>

Tree	address
Description	<p>Commands in this context assign an IPv6 address to the interface.</p> <p>A global IPv6 address and <i>prefix-length</i> combined create a locally configured interface IPv6 prefix and subnet. The defined global IP prefix must be unique within the context of a routing instance. It cannot overlap with any other existing global IP prefix defined on another IP interface within the same routing context.</p> <p>This overlap restriction is not applicable for IPv6 host addresses configured on loopback interfaces. For example, an IPv6 loopback host address configured on a loopback interface may overlap with another prefix subnet configured on another IP interface within the same routing context.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[**ipv6-address**] *ipv6-address*

Synopsis	IPv6 address assigned to the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	<p>When configured to true, the router enables Duplicate Address Detection (DAD).</p> <p>When configured to false, the router disables DAD and sets the address to preferred, even if there is a duplicated address.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

eui-64 *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> eui-64 <i>boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> primary-preference <i>number</i>
Tree	primary-preference
Description	This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from

the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.

If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.

Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2

Platforms 7705 SAR-1

multiplier *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** *router* *named-item-64* *interface* *interface-name* *ipv6 bfd multiplier number*

Tree *multiplier*

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 25.3.R2

Platforms 7705 SAR-1

receive *number*

Synopsis BFD receive interval over this interface

Context **configure** *router* *named-item-64* *interface* *interface-name* *ipv6 bfd receive number*

Tree *receive*

Description This command specifies the receive interval for the BFD session.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 25.3.R2

Platforms 7705 SAR-1

transmit-interval *number*

Synopsis BFD transmit interval over this interface

Context **configure** *router* *named-item-64* *interface* *interface-name* *ipv6 bfd transmit-interval number*

Tree *transmit-interval*

Description This command configures the transmit intervals.

Range 10 to 100000

Units milliseconds

Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	<p>When configured to true, the router enables Duplicate Address Detection (DAD) on the interface.</p> <p>When configured to false, the router disables DAD on a per-interface basis. This prevents the router from performing a DAD check on the interface. All IPv6 addresses on an interface with DAD disabled, immediately enter a preferred state, without checking for uniqueness on the interface. This is useful for interfaces that enter a looped state during troubleshooting and are operationally disabled when the loop is detected, requiring manual intervention to clear the DAD violation.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

forward-ipv4-packets *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 forward-ipv4-packets <i>boolean</i>
Tree	forward-ipv4-packets
Description	<p>When configured to true, the router can use an IPv6-only interface, with no configured IPv4 addresses, to forward IPv4 packets that originate or terminate locally.</p> <p>The interface reports that its IPv4 operational state is up if its IPv6 operational state is up. Not all protocols observe the interface as up from an IPv4 perspective. This command mostly supports BGP routing use cases; see RFC 5549 for details.</p> <p>When configured to false, the router prevents IPv4 packets from being forwarded if there are no configured IPv4 subnets.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6

Synopsis	Enter the icmp6 context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6
Tree	icmp6
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-too-big

Synopsis	Enter the packet-too-big context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big
Tree	packet-too-big
Description	Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big number <i>number</i>
Tree	number
Range	10 to 1000

Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit Packet Too Big messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

param-problem

Synopsis	Enter the param-problem context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 param-problem
Tree	param-problem
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Parameter Problem message sends
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number used to limit ICMPv6 Parameter Problem messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Parameter Problem messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

redirects

Synopsis	Enter the redirects context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 redirects
Tree	redirects
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Redirect message sends
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 redirects admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number to limit ICMPv6 Redirect messages per time frame
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Redirect messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

time-exceeded

Synopsis	Enter the time-exceeded context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded
Tree	time-exceeded
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Time Exceeded message sends
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number to limit Time Exceeded messages per time frame
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Time Exceeded messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

unreachables

Synopsis	Enter the unreachables context
----------	---------------------------------------

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 unreachableables
Tree	unreachables
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Unreachable message sends
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 unreachableables admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number to limit Unreachable messages per time frame
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 unreachableables number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Unreachable messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 icmp6 unreachableables seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2

Platforms 7705 SAR-1

link-local-address

Synopsis	Enter the link-local-address context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 link-local-address
Tree	link-local-address
Description	<p>Commands in this context configure the IPv6 link-local address that is used as a virtual SRRP IPv6 address by the master SRRP node. This address is sent in the Router Advertisements initiated by the master SRRP node. Clients use this address as IPv6 default-gateway. Both SRRP nodes, master and backup, must be configured with the same link-local address.</p> <p>Only one link-local address is allowed per interface.</p> <p>Caution: Removing a manually configured link-local address may impact routing protocols or static routes that have a dependency on that address. Nokia does not recommend removing a link-local address when there are active IPv6 subscriber hosts on an IES or VPRN interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-address*

Synopsis	IPv6 link-local address
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 link-local-address address <i>ipv6-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 link-local-address duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	<p>When configured to true, the router enables Duplicate Address Detection (DAD) on the interface.</p> <p>When configured to false, the router disables DAD and sets the address to preferred, even if there is a duplicated address.</p>

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 local-dhcp-server <i>reference</i>
Tree	local-dhcp-server
Description	This command instantiates a local DHCP server. A local DHCP server can serve multiple interfaces but is limited to the routing context in which it was created.
Reference	configure router <i>named-item-64</i> dhcp-server dhcpv6 <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery learn-unsolicited <i>keyword</i>
Tree	learn-unsolicited
Description	<p>This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.</p> <p>When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.</p>
Options	global, link-local, both
Introduced	25.3.R2

Platforms 7705 SAR-1

limit

Synopsis Enter the **limit** context

Context **configure** [router](#) *named-item-64* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) **limit**

Tree [limit](#)

Description Commands in this context configure the maximum amount of dynamic IPv6 neighbor entries that can be learned on an IP interface.

When the number of dynamic neighbor entries reaches the configured percentage of this limit the system sends an SNMP trap. When the limit is exceeded, no new entries are learned until an entry expires and traffic to these destinations is dropped. Entries that have already been learned are refreshed.

Introduced 25.3.R2

Platforms 7705 SAR-1

log-only *boolean*

Synopsis Generate log entries when limit is reached

Context **configure** [router](#) *named-item-64* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) **limit** [log-only](#) *boolean*

Tree [log-only](#)

Description When configured to **true**, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.

When configured to **false**, the router does not send the warning message.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

max-entries *number*

Synopsis Maximum number of entries learned on an IP interface

Context **configure** [router](#) *named-item-64* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) **limit** [max-entries](#) *number*

Tree [max-entries](#)

Description This command configures the maximum number of entries that can be learned on an IP interface.

When unconfigured, no maximum limit is imposed.

Range	0 to 102400
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i>
Tree	local-proxy-nd
Description	<p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
----------	---------------------------------------

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i>
Tree	proxy-nd-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-time *number*

Synopsis	Neighbor reachability detection timer
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery reachable-time <i>number</i>
Tree	reachable-time
Range	30 to 3600
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-time *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
----------	---

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery stale-time <i>number</i>
Tree	stale-time
Range	60 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor [**ipv6-address**] *ipv6-address*

Synopsis	Enter the static-neighbor list instance
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i>
Tree	static-neighbor
Description	<p>Commands in this context configure an IPv6-to-MAC address mapping on the interface. Use this command if a directly attached IPv6 node does not support ICMPv6 neighbor discovery, or for some reason, a static address must be used. This command can only be used on Ethernet media.</p> <p>The IPv6 address must be on the subnet that was configured from the IPv6 address or a link-local-address commands.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-address*

Synopsis	IPv6 address corresponding to the physical address
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i> mac-address <i>mac-address</i>

Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size for the IPv6 interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 tcp-mss <i>number</i>
Tree	tcp-mss
Range	1220 to 9726
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-check

Synopsis	Enable the urpf-check context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Unicast RPF check mode
----------	------------------------

Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv6 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR-1

vrrp [*virtual-router-id*] *number*

Synopsis	Enter the vrrp list instance
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its virtual router identifier (VRID) and a set of IP addresses.
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[*virtual-router-id*] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure <i>router</i> <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i>

Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

backup ipv6-address

Synopsis	Virtual router IP addresses for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> backup ipv6-address
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7705 SAR Gen 2 Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>

Introduced25.3.R2

Platforms7705 SAR-1

bfd-liveness

SynopsisEnable the **bfd-liveness** context

Context**configure** **router** *named-item-64* **interface** *interface-name* **ipv6 vrrp number** **bfd-liveness**

Tree**bfd-liveness**

Description

Commands in this context assign a bidirectional forwarding detect (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism for use in speeding up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP Advertisement message. In addition, the standby VRRP routers transition to a Master state to speed convergence.

The normal VRRP election process takes place based on the Advertisement messages sent by all VRRP routers.

There can be only one BFD session assigned to any specific VRRP or SRRP instance, but there can be multiple SRRP or VRRP sessions using the same BFD session.

Introduced25.3.R2

mac mac-unicast-address

Synopsis	Virtual MAC address to use in ARP responses
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

master-int-inherit boolean

Synopsis	Allow master instance to dictate the master down timer
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number master-int-inherit <i>boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none">• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master.• When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.• When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.
Range	10 to 4095
Units	centiseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
----------	---

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2

Platforms7705 SAR-1

owner boolean

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis

Designate the virtual router instance as owner

Context

configure router *named-item-64* interface *interface-name* ipv6 vrrp number owner boolean

Tree

owner

Description

When configured to **true**, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to **false**, this virtual router instance is designated as a non-owner.

Default

false

Introduced

25.3.R2

Platforms

7705 SAR-1

passive boolean

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis

Suppress the processing of VRRP advertisement messages

Context

configure router *named-item-64* interface *interface-name* ipv6 vrrp number passive boolean

Tree

passive

Description

When configured to **true**, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default

false

Introduced

25.3.R2

Platforms 7705 SAR-1

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	VRRP priority control policy
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Base priority for the VRRP
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp number standby-forwarding boolean
Tree	standby-forwarding

Description	When configured to true , the standby router forwards all traffic. When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> telnet-reply <i>boolean</i>
Tree	telnet-reply
Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

lag

Synopsis Enter the **lag** context

Context **configure** *router* *named-item-64* *interface* *interface-name* **lag**

Tree **lag**

Introduced 25.3.R2

Platforms 7705 SAR-1

ldp-sync-timer

Synopsis Enter the **ldp-sync-timer** context

Context **configure** *router* *named-item-64* *interface* *interface-name* **ldp-sync-timer**

Tree **ldp-sync-timer**

Description Commands in this context set associated parameters for the synchronization of an IGP and LDP.

Introduced 25.3.R2

Platforms 7705 SAR-1

end-of-lib *boolean*

Synopsis Terminate LDP synchronization timer

Context **configure** *router* *named-item-64* *interface* *interface-name* **ldp-sync-timer** **end-of-lib** *boolean*

Tree **end-of-lib**

Description This command configures the system to terminate the LDP synchronization timer early for a specific session to an LDP peer, if the IGP interface receives LDP End-of-LIB Typed Wildcard FEC messages for every FEC type negotiated.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

seconds *number*

Synopsis Time interval for the LDP synchronization timer

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> ldp-sync-timer seconds <i>number</i>
Tree	seconds
Range	1 to 1800
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing

Synopsis	Enter the load-balancing context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> load-balancing
Tree	load-balancing
Description	Commands in this context configure interface per-flow load-balancing options that apply to traffic that enters this interface and that egresses over a LAG or ECMP. This is a per-interface setting. Load-balancing options enabled on the interface level overwrite options that can also be enabled on the system level.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

lsr-load-balancing *keyword*

Synopsis	LSR load-balancing algorithm
----------	------------------------------

Context	configure router <i>named-item-64</i> interface <i>interface-name</i> load-balancing lsr-load-balancing <i>keyword</i>
Tree	lsr-load-balancing
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	25.3.R2
Platforms	7705 SAR-1

loopback

Synopsis	Use interface as a loopback interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> loopback
Tree	loopback
Description	When configured, this interface is used as a loopback interface. This command and the vas-if-type command are mutually exclusive.
Notes	The following elements are part of a choice: loopback or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

mac *mac-unicast-address*

Synopsis	MAC address of the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	This command assigns a specific MAC address to an IP interface. Only one MAC address can be assigned to an IP interface. When multiple mac commands are entered, the last command overwrites the previous command.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-accounting *boolean*

Synopsis	Enable MAC accounting functionality
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> mac-accounting <i>boolean</i>
Tree	mac-accounting

Description	When configured to true , the router enables MAC accounting functionality.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

network-domains

Synopsis	Enter the network-domains context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> network-domains
Tree	network-domains
Introduced	25.3.R2
Platforms	7705 SAR-1

network-domain [[domain-name](#)] *reference*

Synopsis	Add a list entry for network-domain
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> network-domains network-domain <i>reference</i>
Tree	network-domain
Description	<p>Commands in this context assign an interface to a network domain. The router then takes the network domain into account during SAP ingress queue allocation for VPLS SAP.</p> <p>The network domain association can only be done in the base routing context. An operator can associate a network domain with an interface without a physical port being specified, but the configuration has no effect until a corresponding port, or LAG, is defined.</p> <p>Single interfaces can be associated with multiple network domains.</p>
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[domain-name] *reference*

Synopsis	Network domain name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> network-domains network-domain <i>reference</i>

Tree	network-domain
Reference	configure router <i>named-item-64</i> network-domains network-domain <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

port (*port-and-encap* | *keyword*)

Synopsis	Port to bind to this interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> port (<i>port-and-encap</i> <i>keyword</i>)
Tree	port
Description	This command creates an association between a logical IP interface and a physical port. An operator can also associate an interface with the system (loopback address).
String length	1 to 45
Options	system
Notes	The following elements are part of a choice: loopback or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> qos
Tree	qos
Description	Commands in this context associate a network QoS policy with a network IP interface. Only one network QoS policy can be associated with an IP interface at one time. Attempts to associate a second QoS policy return an error.
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-instance *number*

Synopsis	Port egress queue group instance for this interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> qos egress-instance <i>number</i>
Tree	egress-instance

Description	This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-port-redirect-group *reference*

Synopsis	QoS queue group name
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> qos egress-port-redirect-group <i>reference</i>
Tree	egress-port-redirect-group
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.
Reference	configure qos queue-group-templates egress queue-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress-fp-redirect-group *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> qos ingress-fp-redirect-group <i>reference</i>
Tree	ingress-fp-redirect-group
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress-instance *number*

Synopsis	Forwarding plane ingress queue group for this interface
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>qos</i> <i>ingress-instance</i> <i>number</i>
Tree	<i>ingress-instance</i>
Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

network-policy *reference*

Synopsis	Network policy name associated with a network interface
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>qos</i> <i>network-policy</i> <i>reference</i>
Tree	<i>network-policy</i>
Description	This command associates an existing network policy name with the IP interface.
Reference	configure <i>qos</i> <i>network</i> <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> <i>tos-marking-state</i> <i>keyword</i>
Tree	<i>tos-marking-state</i>
Description	<p>This command configures the ToS marking state.</p> <p>This command is used to alter the default trusted state to a non-trusted state. When configured to trusted or default, the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in which case the egress network interface treats all VPRN and network IP interfaces as untrusted.</p> <p>When configured to untrusted, all egress network IP interfaces remark IP packets received on the network interface according to the egress marking definitions on each network interface.</p>
Options	trusted, untrusted
Default	trusted
Introduced	25.3.R2
Platforms	7705 SAR-1

untrusted

Synopsis	Enable the untrusted context
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> untrusted
Tree	untrusted
Description	<p>Commands in this context configure the untrusted state for a network IP interface.</p> <p>The untrusted state identifies the participating interfaces in the label security feature for prefixes of a VPN family at an inter-AS boundary. The router supports a maximum of 15 network interfaces that can participate in this feature.</p> <p>The user normally applies this command to an inter-AS interface. PIP keeps track of the untrusted status of each interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

default-forwarding *keyword*

Synopsis	Default action for selective ILM
Context	configure router <i>named-item-64</i> interface <i>interface-name</i> untrusted default-forwarding <i>keyword</i>
Tree	default-forwarding
Description	<p>This command specifies the default forwarding behavior of labeled packets received on this interface.</p> <p>This command sets the default behavior for an untrusted interface in the datapath and for all ILMs. When enabling the label security for VPN IPv4 or VPN IPv6 prefixes, BGP programs the data path to provide an exception to the normal way of forwarding away from the default for those VPRN ILMs.</p> <p>When the default behavior is to forward packets, the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a L2 service context.</p> <p>When the specified behavior is to drop packets, all labeled packets received on the interface are automatically dropped.</p>
Options	forward, drop
Default	forward
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-selected-vprns *boolean*

Synopsis	Enable uRPF checking of incoming traffic on interface
Context	configure <i>router</i> <i>named-item-64</i> <i>interface</i> <i>interface-name</i> urpf-selected-vprns <i>boolean</i>
Tree	urpf-selected-vprns
Description	<p>When configured to true, the router performs uRPF checks of incoming traffic on the network interface for the following:</p> <ul style="list-style-type: none"> • Packets associated with the global routing table (base router) context • Packets associated with VPRNs that have enabled the uRPF check using the configure service vprn network ingress urpf-check command <p>When configured to false, the router performs uRPF checks for all ingress traffic on the network interface (associated with the base router and all VPRNs) based on the IPv4 and IPv6 urpf-check command configuration options of the network interface.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec

Synopsis	Enter the ipsec context

remote-ipv6

Synopsis	Enter the remote-ipv6 context
Context	configure <i>router</i> <i>named-item-64</i> <i>ipsec security-policy</i> <i>number</i> <i>entry</i> <i>number</i> <i>remote-ipv6</i>
Tree	<i>remote-ipv6</i>
Description	Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry. The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public.
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-prefix*

Synopsis	Destination IPv6 address of the aggregate route
Context	configure <i>router</i> <i>named-item-64</i> <i>ipsec security-policy</i> <i>number</i> <i>entry</i> <i>number</i> <i>remote-ipv6</i> <i>address</i> <i>ipv6-prefix</i>
Tree	<i>address</i>
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-1

any *boolean*

Synopsis	Use any IP address
Context	configure <i>router</i> <i>named-item-64</i> <i>ipsec security-policy</i> <i>number</i> <i>entry</i> <i>number</i> <i>remote-ipv6</i> <i>any</i> <i>boolean</i>
Tree	<i>any</i>

Default	false
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router named-item-64 ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure router named-item-64 ipv6 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-time *number*

Synopsis	Neighbor reachability detection timer
Context	configure router named-item-64 ipv6 neighbor-discovery reachable-time <i>number</i>
Tree	reachable-time
Range	30 to 3600
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-time *number*

Synopsis	Neighbor discovery cache entry stale time
Context	configure router named-item-64 ipv6 neighbor-discovery stale-time <i>number</i>

Tree	stale-time
Range	60 to 65535
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR-1

router-advertisement

Synopsis	Enter the router-advertisement context
Context	configure router <i>named-item-64</i> ipv6 router-advertisement
Tree	router-advertisement
Introduced	25.3.R2
Platforms	7705 SAR-1

dns-options

Synopsis	Enable the dns-options context
Context	configure router <i>named-item-64</i> ipv6 router-advertisement dns-options
Tree	dns-options
Introduced	25.3.R2
Platforms	7705 SAR-1

rdnss-lifetime (*keyword* | *number*)

Synopsis	Maximum time over which the RDNSS address is valid
Context	configure router <i>named-item-64</i> ipv6 router-advertisement dns-options rdnss-lifetime (<i>keyword</i> <i>number</i>)
Tree	rdnss-lifetime
Description	This command specifies the maximum time that the RDNSS address is used for name resolution by the client.
Range	0 4 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	25.3.R2

Platforms 7705 SAR-1

server *ipv6-address*

Synopsis RAs that are forwarded to IPv6 DNS servers

Context **configure** **router** *named-item-64* **ipv6** **router-advertisement** **dns-options** **server** *ipv6-address*

managed-configuration *boolean*

Synopsis Set the managed address configuration flag

Context **configure** [router](#) *named-item-64* [ipv6](#) [router-advertisement](#) [interface](#) *interface-name*
[managed-configuration](#) *boolean*

Tree [managed-configuration](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

max-advertisement-interval *number*

Synopsis	Maximum time between sending advertisement messages
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> max-advertisement-interval <i>number</i>
Tree	max-advertisement-interval
Range	4 to 1800
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

min-advertisement-interval *number*

Synopsis	Minimum interval between router advertisement messages
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> min-advertisement-interval <i>number</i>
Tree	min-advertisement-interval
Range	3 to 1350
Units	seconds
Default	200
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu *number*

Synopsis	MTU for sending packets to the router
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> mtu <i>number</i>
Tree	mtu
Range	1280 to 9800
Introduced	25.3.R2
Platforms	7705 SAR-1

nd-router-preference *keyword*

Synopsis	Default router preference for Router Advertisements
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> nd-router-preference <i>keyword</i>
Tree	nd-router-preference
Description	<p>This command configures the default router preference for Router Advertisements (RAs) and allows IPv6 hosts to discover and select a default gateway address by listening to RAs.</p> <p>This feature provides basic traffic engineering functionality for host devices. When this command is applied, the router advertises the respective router preference to the connected host to assist in its selection of the most appropriate default gateway on a link.</p> <p>This extension is backward compatible, both for routers (setting the router preference bits) and hosts (interpreting the router preference bits). These bits are ignored by hosts that do not implement the RFC 4191 functionality by configuring this command. Similarly, hosts that do not implement the RFC 4191 functionality interpret the values sent by devices that do not implement the RFC 4191 extension as a medium preference.</p>
Options	medium, high, low
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

other-stateful-configuration *boolean*

Synopsis	Set the other configuration flag
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> other-stateful-configuration <i>boolean</i>
Tree	other-stateful-configuration
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [**ipv6-prefix**] *ipv6-prefix*

Synopsis	Enter the prefix list instance
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> prefix <i>ipv6-prefix</i>

Tree	prefix
Max. instances	254
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-prefix*

Synopsis	IPv6 address prefix
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> prefix <i>ipv6-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

autonomous *boolean*

Synopsis	Set the autonomous flag value
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> prefix <i>ipv6-prefix</i> autonomous <i>boolean</i>
Tree	autonomous
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

on-link *boolean*

Synopsis	Use prefix for on-link determination
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> prefix <i>ipv6-prefix</i> on-link <i>boolean</i>
Tree	on-link
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

preferred-lifetime (*keyword* | *number*)

Synopsis	Remaining time that the prefix remains preferred
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> prefix <i>ipv6-prefix</i> preferred-lifetime (<i>keyword</i> <i>number</i>)
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	604800
Introduced	25.3.R2
Platforms	7705 SAR-1

valid-lifetime (*keyword* | *number*)

Synopsis	Remaining time in which the prefix is still valid
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> prefix <i>ipv6-prefix</i> valid-lifetime (<i>keyword</i> <i>number</i>)
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	2592000
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-time *number*

Synopsis	Time the router is reachable by other hosts or nodes
Context	configure router <i>named-item-64</i> ipv6 router-advertisement interface <i>interface-name</i> reachable-time <i>number</i>
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	25.3.R2

Platforms 7705 SAR-1

retransmit-time *number*

Synopsis Time to advertise neighbor advertisement messages

Context **configure** [router](#) *named-item-64* [ipv6](#) [router-advertisement](#) [interface](#) *interface-name*

admin-state *keyword*

Synopsis	Administrative state of the IS-IS instance
Context	configure router <i>named-item-64</i> isis <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-passive-only *boolean*

Synopsis	Advertise prefixes that belong to passive interfaces
Context	configure router <i>named-item-64</i> isis <i>number</i> advertise-passive-only <i>boolean</i>
Tree	advertise-passive-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability *keyword*

Synopsis	Router capabilities advertisement to neighbors
Context	configure router <i>named-item-64</i> isis <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	area, as
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-tunnel-link *boolean*

Synopsis	Allow use of forwarding adjacency
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> advertise-tunnel-link <i>boolean</i>
Tree	advertise-tunnel-link
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

all-l1isis *mac-address*

Synopsis	Destination MAC address for all L1 IS-IS routers
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> all-l1isis <i>mac-address</i>
Tree	all-l1isis
Default	01:80:C2:00:00:14
Introduced	25.3.R2
Platforms	7705 SAR-1

all-l2isis *mac-address*

Synopsis	Destination MAC address for all L2 IS-IS routers
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> all-l2isis <i>mac-address</i>
Tree	all-l2isis
Default	01:80:C2:00:00:15
Introduced	25.3.R2
Platforms	7705 SAR-1

area-address *area-address*

Synopsis	Area address portion of the NSAP address
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> area-address <i>area-address</i>
Tree	area-address
String length	2 to 38
Max. instances	3

Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-check *boolean*

Synopsis Perform authentication check to reject mismatch PDUs
Context **configure** [router](#) *named-item-64* [isis](#) *number* [authentication-check](#) *boolean*
Tree [authentication-check](#)
Default true
Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis Authentication key to verify PDUs sent from neighbors
Context **configure** [router](#) *named-item-64* [isis](#) *number* [authentication-key](#) *encrypted-leaf*
Tree [authentication-key](#)
String length 1 to 366
Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-keychain *reference*

Synopsis Keychain used to sign and authenticate
Context **configure** [router](#) *named-item-64* [isis](#) *number* [authentication-keychain](#) *reference*
Tree [authentication-keychain](#)
Reference **configure** [system](#) [security](#) [keychains](#) [keychain](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-type *keyword*

Synopsis Authentication type
Context **configure** [router](#) *named-item-64* [isis](#) *number* [authentication-type](#) *keyword*
Tree [authentication-type](#)

Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

csnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS packets of the CSNP type
Context	configure router <i>named-item-64</i> isis <i>number</i> csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

csnp-on-p2p *boolean*

Synopsis	Send periodic CSNP PDUs on point-to-point interfaces
Context	configure router <i>named-item-64</i> isis <i>number</i> csnp-on-p2p <i>boolean</i>
Tree	csnp-on-p2p
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

database-export

Synopsis	Enable the database-export context
Context	configure router <i>named-item-64</i> isis <i>number</i> database-export
Tree	database-export
Description	<p>Commands in this context enable the population of the extended TE Database (TE-DB) with the link-state information from a specific IGP instance.</p> <p>This information includes the IGP, TE, and SR information, prefix SID sub-TLV, adjacency SID sub-TLV, and router SR capability TLV.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-ls-identifier

Synopsis	Enable the bgp-ls-identifier context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>database-export</i> <i>bgp-ls-identifier</i>
Tree	<i>bgp-ls-identifier</i>
Description	Commands in this context correlate, along with the Autonomous System Number (ASN), the BGP-LS NLRI advertisements of multiple BGP-LS speakers of the same IGP domain.
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	BGP-LS ID sent in the BGP-LS NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>database-export</i> <i>bgp-ls-identifier</i> <i>value</i> <i>number</i>
Tree	<i>value</i>
Description	<p>This command configures the BGP-LS ID to export.</p> <p>If an NRC-P network domain has multiple IGP domains, a user must configure BGP-LS speakers within each IGP domain with the same unique ASN, BGP-LS ID tuple. The BGP-LS identifier is optional and is only sent in a BGP-LS NLRI if configured in the IGP instance of an IGP domain.</p> <p>Note: If this IGP instance participates in traffic engineering with RSVP-TE or SR-TE, the traffic-engineering command configuration is not strictly required because enabling the extended TE-DB populates this information automatically. However, Nokia recommends enabling the traffic-engineering command to make the configuration consistent with other routers in the network that do not require the enabling of the extended TE-DB.</p>
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-identifier *number*

Synopsis	IGP instance ID in the BGP-LS NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>database-export</i> <i>igp-identifier</i> <i>number</i>
Tree	<i>igp-identifier</i>

Description	<p>This command configures the unique identifier for the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances.</p> <p>The concept of instance ID defined in IS-IS (RFC 6822) is unique within a routing domain. A user can remove any overlap by configuring the new identifier value to be unique within an IGP domain when this router sends the IGP link-state information using BGP-LS.</p>
Max. range	0 to 18446744073709551615
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-ls-only *boolean*

Synopsis	Encode only reachable link-state information
Context	configure router <i>named-item-64</i> isis <i>number</i> database-export reachable-ls-only <i>boolean</i>
Tree	reachable-ls-only
Description	<p>When configured to true, the router, acting as a BGP-LS producer, must withdraw all link-state objects it has advertised in BGP, in accordance with section 5.9 of RFC 9552. This withdrawal occurs when the node that originated the corresponding LSPs is determined to be unreachable in the IGP based on the failure of a reachability check for that node. This withdrawal operation assists network controllers in assessing a reachable IGP topology, even in networks with segmented areas. For backward compatibility, the default behavior remains unchanged.</p> <p>When configure to false, the router continues to send link-state objects even for links that fail an IGP reachability check.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-route-tag *number*

Synopsis	Route tag for the default route
Context	configure router <i>named-item-64</i> isis <i>number</i> default-route-tag <i>number</i>
Tree	default-route-tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label

Synopsis	Enter the entropy-label context
Context	configure router <i>named-item-64</i> isis <i>number</i> entropy-label
Tree	entropy-label
Introduced	25.3.R2
Platforms	7705 SAR-1

override-tunnel-elc *boolean*

Synopsis	Enable override of received ELC advertisements
Context	configure router <i>named-item-64</i> isis <i>number</i> entropy-label override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure router <i>named-item-64</i> isis <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router <i>named-item-64</i> isis <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>export-limit</i> <i>number</i> <i>number</i>
Tree	<i>number</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>export-policy</i> <i>reference</i>
Tree	<i>export-policy</i>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

flexible-algorithms

Synopsis	Enter the flexible-algorithms context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>flexible-algorithms</i>
Tree	<i>flexible-algorithms</i>

Description	Commands in this context configure IS-IS parameters for flexible algorithm participation.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	configure router <i>named-item-64</i> isis <i>number</i> flexible-algorithms admin-state <i>keyword</i>
Tree	admin-state
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-admin-group *keyword*

Synopsis	Administrative group TLV to advertise
Context	configure router <i>named-item-64</i> isis <i>number</i> flexible-algorithms advertise-admin-group <i>keyword</i>
Tree	advertise-admin-group
Description	This command configures the type of Administrative Group TLV the router advertises as an IGP link attribute. This command is configured for this IGP instance.
Options	prefer-ag, eag-only, ag-eag
Default	prefer-ag
Introduced	25.3.R2
Platforms	7705 SAR-1

flex-algo [[flex-algo-id](#)] *number*

Synopsis	Enter the flex-algo list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> flexible-algorithms flex-algo <i>number</i>
Tree	flex-algo
Description	Commands in this context configure an IS-IS flexible algorithm.

When flexible algorithm is configured in an IS-IS instance, the IS-IS instance is configured for all levels (Level 1 and Level 2).

Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

[flex-algo-id] *number*

Synopsis	Flexible algorithm ID
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i>
Tree	<i>flex-algo</i>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise *reference*

Synopsis	Flexible Algorithm Definition advertisement
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i> <i>advertise</i> <i>reference</i>
Tree	<i>advertise</i>
Description	<p>This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).</p> <p>The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.</p>
Reference	configure <i>routing-options</i> <i>flexible-algorithm-definitions</i> <i>flex-algo</i> <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
----------	--

Context	configure router <i>named-item-64</i> isis <i>number</i> flexible-algorithms flex-algo <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR-1

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure router <i>named-item-64</i> isis <i>number</i> flexible-algorithms flex-algo <i>number</i> micro-loop-avoidance
Tree	micro-loop-avoidance
Description	<p>This command configure flexible-algorithms-aware microloop avoidance. When enabled, the microloop configuration parameters are inherited from the base SPF.</p> <p>This command enables microloop avoidance with flexible algorithms for MT0. Microloop avoidance with flexible algorithms for MT2 is enabled when this command is enabled along with SR-MPLS MT2 using the configure router isis segment-routing multi-topology mt2 command.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	configure router <i>named-item-64</i> isis <i>number</i> flexible-algorithms flex-algo <i>number</i> participate <i>boolean</i>
Tree	participate
Description	<p>When configured to true, the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.</p> <p>When configured to false, flexible algorithm participation is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
----------	--

Context	configure router <i>named-item-64</i> isis <i>number</i> graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-mode *boolean*

Synopsis	Enable the Graceful Restart helper for IS-IS
Context	configure router <i>named-item-64</i> isis <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure router <i>named-item-64</i> isis <i>number</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	IS-IS Hello message padding
Context	configure router <i>named-item-64</i> isis <i>number</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-attached-bit *boolean*

Synopsis	Ignore attached bit on received Layer 1 LSPs
----------	--

Context	configure router <i>named-item-64</i> isis <i>number</i> ignore-attached-bit <i>boolean</i>
Tree	ignore-attached-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-lsp-errors *boolean*

Synopsis	Ignore LSP packets with errors
Context	configure router <i>named-item-64</i> isis <i>number</i> ignore-lsp-errors <i>boolean</i>
Tree	ignore-lsp-errors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-narrow-metric *boolean*

Synopsis	Ignore links with narrow metrics
Context	configure router <i>named-item-64</i> isis <i>number</i> ignore-narrow-metric <i>boolean</i>
Tree	ignore-narrow-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-shortcut

Synopsis	Enter the igp-shortcut context
Context	configure router <i>named-item-64</i> isis <i>number</i> igp-shortcut
Tree	igp-shortcut
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of RSVP-TE or SR-TE shortcut
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>igp-shortcut</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-sr-over-srte *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable SR over SR-TE LSPs
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>igp-shortcut</i> <i>allow-sr-over-srte</i> <i>boolean</i>
Tree	<i>allow-sr-over-srte</i>
Description	<p>When configured to true, the router only allows SR-MPLS SRv4 and SRv6 IGP shortcuts to use SR-TE LSPs with allow-sr-over-srte explicitly enabled with an adjacency SID as top SID in the SR-TE LSP. IPv4 and IPv6 addresses can use all available SR-TE LSPs as IGP shortcuts regardless of the explicit allow-sr-over-srte configuration.</p> <p>Under ECMP, when this command is configured to true, preference is given to the SR-TE LSPs with allow-sr-over-srte explicitly configured over the LSPs that do not have allow-sr-over-srte configured.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-next-hop

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the tunnel-next-hop context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>igp-shortcut</i> <i>tunnel-next-hop</i>
Tree	<i>tunnel-next-hop</i>
Introduced	25.3.R2

Platforms 7705 SAR-1

family [family-type] keyword

Synopsis Enter the **family** list instance

Context **configure** [router](#) *named-item-64* [isis](#) *number* [igp-shortcut](#) [tunnel-next-hop](#) [family](#) *keyword*

Default none

Introduced 25.3.R2

Platforms 7705 SAR-1

resolution-filter

Synopsis Enter the **resolution-filter** context

Context	configure router <i>named-item-64</i> isis <i>number</i> igp-shortcut tunnel-next-hop family keyword resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> isis <i>number</i> igp-shortcut tunnel-next-hop family keyword resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> isis <i>number</i> igp-shortcut tunnel-next-hop family keyword resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

iid-tlv *boolean*

Synopsis	Use IID TLVs with IS-IS multi-instance
Context	configure router <i>named-item-64</i> isis <i>number</i> iid-tlv <i>boolean</i>
Tree	iid-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure router <i>named-item-64</i> isis <i>number</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-set [[id](#)] *reference*

Synopsis	Add a list entry for adjacency-set
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> adjacency-set <i>reference</i>

Tree	adjacency-set
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] reference

Synopsis	Adjacency set ID
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> adjacency-set <i>reference</i>
Tree	adjacency-set
Reference	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the IS-IS interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.
Introduced	25.3.R2

Platforms 7705 SAR-1

ipv4

Synopsis Enable the **ipv4** context

Context **configure** [router](#) *named-item-64* [isis](#) *number* [interface](#) *interface-name* [bfd-liveness](#) [ipv4](#)

Tree [ipv4](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

include-bfd-tlv *boolean*

Synopsis Enable IS-IS BFD TLVs on the interface

Context **configure** [router](#) *named-item-64* [isis](#) *number* [interface](#) *interface-name* [bfd-liveness](#) [ipv4](#)
[include-bfd-tlv](#) *boolean*

Tree [include-bfd-tlv](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6

Synopsis Enable the **ipv6** context

Context **configure** [router](#) *named-item-64* [isis](#) *number* [interface](#) *interface-name* [bfd-liveness](#) [ipv6](#)

Tree [ipv6](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

include-bfd-tlv *boolean*

Synopsis Enable IS-IS BFD TLVs on the interface

Context **configure** [router](#) *named-item-64* [isis](#) *number* [interface](#) *interface-name* [bfd-liveness](#) [ipv6](#)
[include-bfd-tlv](#) *boolean*

Tree [include-bfd-tlv](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

csnp-interval *number*

Synopsis	Time interval between successive CSN PDUs sent
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> csnp-interval <i>number</i>
Tree	csnp-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

default-instance *boolean*

Synopsis	Allow non-MI capable router to establish an adjacency
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> default-instance <i>boolean</i>
Tree	default-instance
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

delay-normalization

Synopsis	Enable the delay-normalization context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> delay-normalization
Tree	delay-normalization
Description	<p>Commands in this context configure delay normalization for the interface within the IGP instance. When configured, the normalized delay is used by the TLVs within the IGP link-state packets.</p> <p>When unconfigured, the measured delay is used by the respective TLVs within the IGP link-state packets.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-tolerance-interval *number*

Synopsis	Interval between two delay values on the interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> delay-normalization delay-tolerance-interval <i>number</i>
Tree	delay-tolerance-interval
Description	This command defines the interval used by the IGP to differentiate between two delay values.
Range	1 to 100000000
Units	microseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-delay *number*

Synopsis	Minimum delay on the interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> delay-normalization minimum-delay <i>number</i>
Tree	minimum-delay

Range	1 to 10000000
Units	microseconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

flex-algo [[flex-algo-id](#)] *number*

Synopsis	Enter the flex-algo list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i>
Tree	flex-algo
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

[flex-algo-id] *number*

Synopsis	Flexible algorithm ID
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i>
Tree	flex-algo
Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-node-sid

Synopsis	Enable the ipv4-node-sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i> ipv4-node-sid
Tree	ipv4-node-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

index number

Synopsis	Node SID index for this interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i> ipv4-node-sid index <i>number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

label number

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i> ipv4-node-sid label <i>number</i>
Tree	label
Range	1 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-node-sid

Synopsis	Enable the ipv6-node-sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i> ipv6-node-sid
Tree	ipv6-node-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

index number

Synopsis	Node SID index for this interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i> ipv6-node-sid index <i>number</i>

Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> flex-algo <i>number</i> ipv6-node-sid label <i>number</i>
Tree	label
Range	1 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-key *encrypted-leaf*

Synopsis	Authentication key or hash string for Hello PDUs
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-key <i>encrypted-leaf</i>
Tree	hello-authentication-key
String length	1 to 366
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-type *keyword*

Synopsis	Hello authentication type
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-type <i>keyword</i>
Tree	hello-authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-type *keyword*

Synopsis	Interface type to broadcast, point-to-point, or to be default
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> interface-type <i>keyword</i>
Tree	interface-type

Options	point-to-point, broadcast
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-adjacency-sid

Synopsis	Enable the ipv4-adjacency-sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-adjacency-sid
Tree	ipv4-adjacency-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

label *number*

Synopsis	Adjacency SID label
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-adjacency-sid label <i>number</i>
Tree	label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast *boolean*

Synopsis	Enable IPv4 multicast routing for the interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-multicast <i>boolean</i>
Tree	ipv4-multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-node-sid

Synopsis	Enable the ipv4-node-sid context
----------	---

Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-node-sid
Tree	ipv4-node-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-n-flag *boolean*

Synopsis	Clear the node-sid flag (N-flag)
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-node-sid clear-n-flag <i>boolean</i>
Tree	clear-n-flag
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

index *number*

Synopsis	Node SID index for this interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-node-sid index <i>number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv4-node-sid label <i>number</i>
Tree	label
Range	1 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-adjacency-sid

Synopsis	Enable the ipv6-adjacency-sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-adjacency-sid
Tree	ipv6-adjacency-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

label *number*

Synopsis	Adjacency SID label
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-adjacency-sid label <i>number</i>
Tree	label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-multicast *boolean*

Synopsis	Enable IPv6 multicast routing for the interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-multicast <i>boolean</i>
Tree	ipv6-multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-node-sid

Synopsis	Enable the ipv6-node-sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-node-sid
Tree	ipv6-node-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-n-flag *boolean*

Synopsis	Clear the node-sid flag (N-flag)
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-node-sid clear-n-flag <i>boolean</i>
Tree	clear-n-flag
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

index *number*

Synopsis	Node SID index for this interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-node-sid index <i>number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> ipv6-node-sid label <i>number</i>
Tree	label
Range	1 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-unicast *boolean*

Synopsis	Enable IPv6 unicast routing for the interface
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>interface</i> <i>interface-name</i> <i>ipv6-unicast</i> <i>boolean</i>
Tree	<i>ipv6-unicast</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

level [*level-number*] *keyword*

Synopsis	Enter the level list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>interface</i> <i>interface-name</i> <i>level</i> <i>keyword</i>
Tree	<i>level</i>
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[level-number] *keyword*

Synopsis	ISIS protocol level number
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>interface</i> <i>interface-name</i> <i>level</i> <i>keyword</i>
Tree	<i>level</i>
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-key *encrypted-leaf*

Synopsis	Authentication key for Hello PDUs
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>interface</i> <i>interface-name</i> <i>level</i> <i>keyword</i> <i>hello-authentication-key</i> <i>encrypted-leaf</i>
Tree	<i>hello-authentication-key</i>
Description	This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.

If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.

String length	1 to 366
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-type *keyword*

Synopsis	Hello authentication enabled on the context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-type <i>keyword</i>
Tree	hello-authentication-type
Description	This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello authentication-key statement must also be included.
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Interval between Hello messages sent on this level
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 20000

Units	seconds
Default	9
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-multiplier *number*

Synopsis	Hello messages missed from neighbor before router declares adjacency down
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	2 to 100
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv4 multicast
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> ipv4-multicast-metric <i>number</i>
Tree	ipv4-multicast-metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-multicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv6 multicast
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> ipv6-multicast-metric <i>number</i>
Tree	ipv6-multicast-metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-unicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv6 unicast
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> ipv6-unicast-metric <i>number</i>
Tree	ipv6-unicast-metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	IS-IS interface metric applied for IPv4 unicast
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> metric <i>number</i>
Tree	metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Passive interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> passive <i>boolean</i>
Tree	passive

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Router to become the designated router on a multi-access network
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> priority <i>number</i>
Tree	priority
Range	0 to 127
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

sd-offset *number*

Synopsis	Value of the signal degrade offset
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> sd-offset <i>number</i>
Tree	sd-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

sf-offset *number*

Synopsis	Value of the signal fail offset
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> sf-offset <i>number</i>
Tree	sf-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

level-capability *keyword*

Synopsis	IS-IS levels for this interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-weight *number*

Synopsis	Load balancing weight
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude *boolean*

Synopsis	Exclude Loopfree Alternative at the interface level
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

policy-map

Synopsis	Enable the policy-map context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2
Platforms	7705 SAR-1

route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate policy-map route-nh-template <i>reference</i>
Tree	route-nh-template
Reference	configure routing-options route-next-hop-policy template <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-pacing-interval *number*

Synopsis	Interval for sending LSPs from interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> lsp-pacing-interval <i>number</i>
Tree	lsp-pacing-interval
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

mesh-group

Synopsis	Enable the mesh-group context
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> mesh-group
Tree	mesh-group
Introduced	25.3.R2
Platforms	7705 SAR-1

blocked

Synopsis	Prevent the interface from flooding LSPs
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> mesh-group blocked
Tree	blocked
Notes	The following elements are part of a choice: blocked or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	Mesh group for the interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> mesh-group value <i>number</i>
Tree	value
Range	1 to 2000000000
Notes	The following elements are part of a choice: blocked or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Passive interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> passive <i>boolean</i>
Tree	passive
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 65535
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

sid-protection *boolean*

Synopsis	Allow adjacency SID protection by LFA and remote LFA
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> sid-protection <i>boolean</i>
Tree	sid-protection
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tag *number*

Synopsis	Route tag for IP address of interface
Context	configure router <i>named-item-64</i> isis <i>number</i> interface <i>interface-name</i> tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast-routing *keyword*

Synopsis	IS-IS topology for IPv4 multicast routing
Context	configure router <i>named-item-64</i> isis <i>number</i> ipv4-multicast-routing <i>keyword</i>
Tree	ipv4-multicast-routing
Options	false, native, mt
Default	native
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-routing *boolean*

Synopsis	Support IPv4 routing for IS-IS instance
Context	configure router <i>named-item-64</i> isis <i>number</i> ipv4-routing <i>boolean</i>
Tree	ipv4-routing
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-multicast-routing *keyword*

Synopsis	Topology to populate the IPv6 multicast RTM
Context	configure router <i>named-item-64</i> isis <i>number</i> ipv6-multicast-routing <i>keyword</i>
Tree	ipv6-multicast-routing
Options	false, native, mt
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-routing *keyword*

Synopsis	Routing topology for IPv6
Context	configure router <i>named-item-64</i> isis <i>number</i> ipv6-routing <i>keyword</i>
Tree	ipv6-routing
Options	false, native, mt
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

ldp-over-rsvp *boolean*

Synopsis	Allow LDP over RSVP processing
Context	configure router <i>named-item-64</i> isis <i>number</i> ldp-over-rsvp <i>boolean</i>
Tree	ldp-over-rsvp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp-sync *boolean*

Synopsis	Use IGP-LDP synchronization feature on all interfaces participating in IS-IS routing protocol
Context	configure router <i>named-item-64</i> isis <i>number</i> ldp-sync <i>boolean</i>
Tree	ldp-sync
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i>
Tree	level
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[level-number] *keyword*

Synopsis	ISIS protocol level number
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i>

Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key to verify PDUs sent on the interface
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.</p> <p>Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included.</p>
String length	1 to 366
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	Keychain used to sign and authenticate
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain

Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type to be used
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

csnp-authentication *boolean*

Synopsis	Enable authentication of CSNP IS-IS protocol packets
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

database-export-exclude *boolean*

Synopsis	Exclude IGP link-state information of a specific IS-IS level from being exported into extended TE-DB
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> database-export-exclude <i>boolean</i>
Tree	database-export-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-ipv4-multicast-metric *number*

Synopsis	Default metric for IPv4 unicast
----------	---------------------------------

Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> default-ipv4-multicast-metric <i>number</i>
Tree	default-ipv4-multicast-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

default-ipv6-multicast-metric *number*

Synopsis	Default metric for IPv6 unicast
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> default-ipv6-multicast-metric <i>number</i>
Tree	default-ipv6-multicast-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

default-ipv6-unicast-metric *number*

Synopsis	Default metric for IPv6 unicast
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> default-ipv6-unicast-metric <i>number</i>
Tree	default-ipv6-unicast-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

default-metric *number*

Synopsis	Default metric
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777215

Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

external-preference *number*

Synopsis	External route preference for IS-IS level
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interface participating in specific IS-IS level in SPF LFA computation
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> loopfree-alternate-exclude <i>boolean</i>

Tree	loopfree-alternate-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-mtu-size number

Synopsis	LSP MTU size
Context	configure router <i>named-item-64</i> isis <i>number</i> level keyword lsp-mtu-size <i>number</i>
Tree	lsp-mtu-size
Range	490 to 9778
Units	bytes
Default	1492
Introduced	25.3.R2
Platforms	7705 SAR-1

preference number

Synopsis	External route preference at level
Context	configure router <i>named-item-64</i> isis <i>number</i> level keyword preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

psnp-authentication boolean

Synopsis	Enable authentication on PSNP IS-IS protocol packets
Context	configure router <i>named-item-64</i> isis <i>number</i> level keyword psnp-authentication <i>boolean</i>
Tree	psnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

wide-metrics-only *boolean*

Synopsis	Use wide metrics advertisements in the LSPs
Context	configure router <i>named-item-64</i> isis <i>number</i> level <i>keyword</i> wide-metrics-only <i>boolean</i>
Tree	wide-metrics-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

level-capability *keyword*

Synopsis	Routing level for instance
Context	configure router <i>named-item-64</i> isis <i>number</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR-1

link-group [**link-group-name**] *named-item*

Synopsis	Enter the link-group list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> link-group <i>named-item</i>
Tree	link-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[link-group-name] *named-item*

Synopsis	Link group name for the IS-IS protocol
Context	configure router <i>named-item-64</i> isis <i>number</i> link-group <i>named-item</i>
Tree	link-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

prefix-policy reference

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>loopfree-alternate</i> <i>exclude</i> <i>prefix-policy</i> <i>reference</i>
Tree	<i>prefix-policy</i>
Description	<p>This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.</p> <p>An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.</p>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

multi-homed-prefix

Synopsis	Enable the multi-homed-prefix context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>loopfree-alternate</i> <i>multi-homed-prefix</i>
Tree	<i>multi-homed-prefix</i>
Description	<p>Commands in this context enable multihomed prefix LFA for IS-IS routes (IP FRR), SR-ISIS tunnels, and SRv6-ISIS tunnels.</p> <p>This feature uses the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of intra-area anycast prefixes.</p> <p>The computed IP next hop-based backup path is added to IS-IS routes of external /32 prefixes or /128 prefixes and intra-area /32 or /128 anycast prefixes in the RTM if the prefix is not protected by the base LFA or if the user set leaf preference command option is configured to all. The user must enable the configure routing-options ip-fast-reroute command to have these backup paths programmed into the FIB in the datapath.</p> <p>The computed IP next hop or repair tunnel-based backup path is also programmed for:</p> <ul style="list-style-type: none"> SR-ISIS node SID tunnels of external /32 IPv4 prefixes and /128 IPv6 prefixes, and node SID tunnels of intra-area /32 IPv4 anycast prefixes and /128 anycast IPv6 prefixes, in both algorithm 0 and flexible-algorithms

- SRv6-ISIS locator routes and tunnels of external prefixes and of intra-area anycast prefixes of any size, in both algorithm 0 and flexible algorithm numbers.

As a result, an SR-TE LSP, an SR-MPLS policy, or an SRv6 policy which uses an SR-ISIS SID or an SRv6-ISIS SID of those same prefixes in its configured or computed SID list benefits from the multihomed prefix LFA protection.

Once the IP next-hop based multihomed prefix LFA is enabled, the extensions to compute an SR-TE repair tunnel for the multihomed prefix LFA in the case of SR-ISIS and SRv6-ISIS are automatically enabled if the user also enabled TI-LFA or Remote LFA. The computation reuses the SID list of the primary path or of the TI-LFA or Remote LFA backup path of the alternate ABR or ASBR or alternate owner router.

Introduced 25.3.R2
Platforms 7705 SAR-1

preference *keyword*

Synopsis Multihomed prefix LFA backup path preference
Context **configure** *router* *named-item-64* *isis* *number* *loopfree-alternate* *multi-homed-prefix* *preference* *keyword*

Platforms	7705 SAR-1

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> isis <i>number</i> loopfree-alternate remote-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR-1

max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPFs
Context	configure router <i>named-item-64</i> isis <i>number</i> loopfree-alternate remote-lfa node-protect max-pq-nodes <i>number</i>
Tree	max-pq-nodes
Range	1 to 32
Default	16
Introduced	25.3.R2
Platforms	7705 SAR-1

ti-lfa

Synopsis	Enable the ti-lfa context
Context	configure router <i>named-item-64</i> isis <i>number</i> loopfree-alternate ti-lfa
Tree	ti-lfa
Description	Commands in this context configure the Topology-Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this IS-IS instance.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>loopfree-alternate</i> <i>ti-lfa</i> max-sr-frr-labels <i>number</i>
Tree	max-sr-frr-labels
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

node-protect

Synopsis	Enable the node-protect context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>loopfree-alternate</i> <i>ti-lfa</i> node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-lifetime *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of time during which an LSP is considered valid
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> lsp-lifetime <i>number</i>
Tree	lsp-lifetime
Range	350 to 65535
Units	seconds
Default	1200
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-minimum-remaining-lifetime *number*

Synopsis	Minimum value for the Remaining Lifetime of an LSP
Context	configure router <i>named-item-64</i> isis <i>number</i> lsp-minimum-remaining-lifetime <i>number</i>
Tree	lsp-minimum-remaining-lifetime
Range	350 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-mtu-size *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP MTU size
Context	configure router <i>named-item-64</i> isis <i>number</i> lsp-mtu-size <i>number</i>
Tree	lsp-mtu-size
Range	490 to 9778
Units	bytes
Default	1492
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-refresh

Synopsis	Enter the lsp-refresh context
Context	configure router <i>named-item-64</i> isis <i>number</i> lsp-refresh
Tree	lsp-refresh
Introduced	25.3.R2
Platforms	7705 SAR-1

half-lifetime *boolean*

Synopsis	Set the refresh interval to always be half the LSP lifetime
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>lsp-refresh</i> <i>half-lifetime</i> <i>boolean</i>
Tree	<i>half-lifetime</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Refresh timer interval
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>lsp-refresh</i> <i>interval</i> <i>number</i>
Tree	<i>interval</i>
Range	150 to 65535
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

multi-topology

Synopsis	Enable the multi-topology context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>multi-topology</i>
Tree	<i>multi-topology</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast *boolean*

Synopsis	Support IPv4 topology (MT3)
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>multi-topology</i> <i>ipv4-multicast</i> <i>boolean</i>
Tree	<i>ipv4-multicast</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-multicast *boolean*

Synopsis	Support IPv6 topology (MT4)
Context	configure router named-item-64 isis number multi-topology ipv6-multicast <i>boolean</i>
Tree	ipv6-multicast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-unicast *boolean*

Synopsis	Support multi-topology TLVs
Context	configure router named-item-64 isis number multi-topology ipv6-unicast <i>boolean</i>
Tree	ipv6-unicast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-import

Synopsis	Enter the multicast-import context
Context	configure router named-item-64 isis number multicast-import
Tree	multicast-import
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Submit IPv4 routes into the multicast RPF of the RTM
Context	configure router named-item-64 isis number multicast-import ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Submit IPv6 routes into the multicast RPF of the RTM
Context	configure router <i>named-item-64</i> isis <i>number</i> multicast-import ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload

Synopsis	Enable the overload context
Context	configure router <i>named-item-64</i> isis <i>number</i> overload
Tree	overload
Introduced	25.3.R2
Platforms	7705 SAR-1

max-metric *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	configure router <i>named-item-64</i> isis <i>number</i> overload max-metric <i>boolean</i>
Tree	max-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-export-external *boolean*

Synopsis	Advertise the external routes when router is in overloaded
Context	configure router <i>named-item-64</i> isis <i>number</i> overload-export-external <i>boolean</i>
Tree	overload-export-external
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-export-interlevel *boolean*

Synopsis	Advertise the inter-level routes when router is overloaded
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> overload-export-interlevel <i>boolean</i>
Tree	overload-export-interlevel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-fib-error-notify-only

Synopsis	Enable the overload-fib-error-notify-only context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> overload-fib-error-notify-only
Tree	overload-fib-error-notify-only
Description	<p>Commands in this context configure the IS-IS router to send a notification when an overload condition occurs while programming the FIB, instead of advertising the overload condition of the router in the IS-IS LSP.</p> <p>Note: Nokia recommends being careful using this command. When you configure the router not to advertise the IS-IS overload state in the IS-IS LSP, other routers are not instructed to take the overloaded router out of the IS-IS forwarding topology and this will cause suboptimal forwarding and non-deterministic behavior on the overloaded router. To avoid changing the default IS-IS overflow behavior, leave this command disabled.</p> <p>When this command is configured, the IS-IS router enters a suboptimal state where it sends only a notification trap; transit traffic can still use the router in this state.</p> <p>The IS-IS router tracks the segment routing prefix SIDs where FIB programming failed. With the retry command configured, the router retries programming the segment routing prefix SIDs in the FIB using this tracked information.</p> <p>When this command is not configured, during normal operation, the system may force the router to enter an overload state because of a lack of FIB resources. In this state, the router is used to terminate traffic and is not used to transit traffic.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

retry *number*

Synopsis	Time to retry programming failed entries in the FIB
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> overload-fib-error-notify-only retry <i>number</i>
Tree	retry

Description	<p>This command configures the time the router uses to retry programming the failed entries in the FIB.</p> <p>The overload-fib-error-notify-only command must be configured to use the retry timer. The removal of the overload-fib-error-notify-only configuration causes the system to program the failed entries in the FIB by triggering an immediate SPF.</p>
Range	10 to 1800
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-locators *boolean*

Synopsis	Advertise SRv6 locators if IS-IS instance overloads
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> overload-include-locators <i>boolean</i>
Tree	overload-include-locators
Description	When configured to true , if the IS-IS instance goes into overload (because of resource depletion or manual configuration), the router includes SRv6 locators when it advertises links and prefixes with max-metric .
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-on-boot

Synopsis	Enable the overload-on-boot context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> overload-on-boot
Tree	overload-on-boot
Introduced	25.3.R2
Platforms	7705 SAR-1

max-metric *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> overload-on-boot max-metric <i>boolean</i>
Tree	max-metric

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time during which the router operates in overload state after reboot
Context	configure router <i>named-item-64</i> isis <i>number</i> overload-on-boot timeout <i>number</i>
Tree	timeout
Range	60 to 1800
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

poi-tlv *boolean*

Synopsis	Purge Originator Identification TLV
Context	configure router <i>named-item-64</i> isis <i>number</i> poi-tlv <i>boolean</i>
Tree	poi-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-attributes-tlv *boolean*

Synopsis	Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information
Context	configure router <i>named-item-64</i> isis <i>number</i> prefix-attributes-tlv <i>boolean</i>
Tree	prefix-attributes-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-limit

Synopsis	Enable the prefix-limit context
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-limit</i>
Tree	<i>prefix-limit</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

limit *number*

Synopsis	Maximum number of prefixes for IS-IS instance
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-limit</i> <i>limit</i> <i>number</i>
Tree	<i>limit</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Send warning message when the prefix limit is reached
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-limit</i> <i>log-only</i> <i>boolean</i>
Tree	<i>log-only</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-timeout (*number* | *keyword*)

Synopsis	Time in overload state when prefix limit is reached
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-limit</i> <i>overload-timeout</i> (<i>number</i> <i>keyword</i>)
Tree	<i>overload-timeout</i>
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2

Platforms 7705 SAR-1

warning-threshold *number*

Synopsis Threshold value to trigger a warning message to be sent

Context **configure** *router* *named-item-64* *isis* *number* *prefix-limit* **warning-threshold** *number*

Tree *warning-threshold*

Range 0 to 100

Units percent

Default 0

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix-unreachable

Synopsis Enter the **prefix-unreachable** context

Context **configure** *router* *named-item-64* *isis* *number* **prefix-unreachable**

Tree *prefix-unreachable*

Introduced 25.3.R2

Platforms 7705 SAR-1

maximum-number-upas *number*

Synopsis Maximum number of UPAs the router can advertise

Context **configure** *router* *named-item-64* *isis* *number* *prefix-unreachable* **maximum-number-upas** *number*

Tree *maximum-number-upas*

Description This command configures a limit for the number of UPAs the router can advertise. If overrun, a system log is generated and additional UPAs are not advertised.

Range 1 to 8192

Default 32

Introduced 25.3.R2

Platforms 7705 SAR-1

process-received-upa *boolean*

Synopsis	Process received UPA
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-unreachable</i> <i>process-received-upa</i> <i>boolean</i>
Tree	<i>process-received-upa</i>
Description	<p>When configured to true, the router enables processing of received UPAs from other routers. Received UPAs are inserted into the unicast routing table as unreachable prefixes. When configured on an Area Boundary Router (ABR), received UPAs are inserted into the unreachable prefix table and redistributed into the other areas.</p> <p>When configured to false, received UPAs are ignored by the router.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

upa-lifetime *number*

Synopsis	Time during which a UPA is advertised
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-unreachable</i> <i>upa-lifetime</i> <i>number</i>
Tree	<i>upa-lifetime</i>
Range	30 to 1800
Units	seconds
Default	180
Introduced	25.3.R2
Platforms	7705 SAR-1

upa-metric *number*

Synopsis	Metric to an advertised UPA
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>prefix-unreachable</i> <i>upa-metric</i> <i>number</i>
Tree	<i>upa-metric</i>
Range	4261412865 to 4294967294
Default	4261412865
Introduced	25.3.R2
Platforms	7705 SAR-1

psnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type
Context	configure router <i>named-item-64</i> isis <i>number</i> psnp-authentication <i>boolean</i>
Tree	psnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-bandwidth *number*

Synopsis	Reference bandwidth for bandwidth relative costing
Context	configure router <i>named-item-64</i> isis <i>number</i> reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 18446744073709551615
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-priority

Synopsis	Enter the rib-priority context
Context	configure router <i>named-item-64</i> isis <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR-1

high

Synopsis	Enter the high context
Context	configure router <i>named-item-64</i> isis <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list *reference*

Synopsis	List used to select routes processed at higher priority through OSPF route calculation process
Context	configure router <i>named-item-64</i> isis <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Notes	The following elements are part of a choice: prefix-list or tag .
Introduced	25.3.R2
Platforms	7705 SAR-1

tag *number*

Synopsis	Tag value that is used to match IS-IS routes
Context	configure router <i>named-item-64</i> isis <i>number</i> rib-priority high tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Notes	The following elements are part of a choice: prefix-list or tag .
Introduced	25.3.R2
Platforms	7705 SAR-1

router-id *router-id*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the ISIS instance
Context	configure router <i>named-item-64</i> isis <i>number</i> router-id <i>router-id</i>
Tree	router-id
Introduced	25.3.R2
Platforms	7705 SAR-1

segment-routing

Synopsis	Enter the segment-routing context
----------	--

Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing
Tree	segment-routing
Introduced	25.3.R2
Platforms	7705 SAR-1

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adj-sid-hold (<i>number</i> <i>keyword</i>)
Tree	adj-sid-hold
Description	<p>This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.</p> <p>When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.</p> <ul style="list-style-type: none"> • IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV. • The adjacency SID hold timer starts. • The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges. • If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value. • If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value. • A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.
Range	1 to 1800
Units	seconds

Options	none
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-set *[id] number*

Synopsis	Enter the adjacency-set list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i>
Tree	adjacency-set
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] number

Synopsis	Identifier for specified adjacency set
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i>
Tree	adjacency-set
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise *boolean*

Synopsis	Advertise the adjacency set when all links terminate on the same neighboring node
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i> advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

family keyword

Synopsis	Address family for the adjacency set
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i> family <i>keyword</i>
Tree	family
Options	ipv4, ipv6
Default	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

parallel boolean

Synopsis	Require all members of the adjacency set to terminate on the same neighboring node
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i> parallel <i>boolean</i>
Tree	parallel
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

sid

Synopsis	Enable the sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i> sid
Tree	sid
Introduced	25.3.R2
Platforms	7705 SAR-1

label number

Synopsis	Adjacency SID label
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i> sid label <i>number</i>
Tree	label
Range	1 to 1048575

Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-sid

Synopsis	Enter the adjacency-sid context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-sid
Tree	adjacency-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

allocate-dual-sids *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-sid allocate-dual-sids <i>boolean</i>
Tree	allocate-dual-sids
Description	<p>When configured to true, the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.</p> <p>When configured to false, the router disables the support of two SR-MPLS adjacency SIDs per interface.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of segment routing
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label *boolean*

Synopsis	Enable processing of received ELC signaled in the IGP
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing entropy-label <i>boolean</i>
Tree	entropy-label
Introduced	25.3.R2
Platforms	7705 SAR-1

export-tunnel-table *keyword*

Synopsis	Tunnel table export policies to export tunneled routes
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing export-tunnel-table <i>keyword</i>
Tree	export-tunnel-table
Options	ldp
Introduced	25.3.R2
Platforms	7705 SAR-1

mapping-server

Synopsis	Enter the mapping-server context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing mapping-server
Tree	mapping-server
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IS-IS mapping server
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing mapping-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

node-sid-map [[sid-index](#)] *number*

Synopsis	Enter the node-sid-map list instance
Context	configure router named-item-64 isis number segment-routing mapping-server node-sid-map number
Tree	node-sid-map
Introduced	25.3.R2
Platforms	7705 SAR-1

[sid-index] *number*

Synopsis	SID index of a mapping server Prefix-SID
Context	configure router named-item-64 isis number segment-routing mapping-server node-sid-map number
Tree	node-sid-map
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-n-flag *boolean*

Synopsis	Clear the node-sid flag (N-flag)
Context	configure router named-item-64 isis number segment-routing mapping-server node-sid-map number clear-n-flag boolean
Tree	clear-n-flag
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix *ipv4-unicast-prefix*

Synopsis	Prefix of a mapping server Prefix-SID
Context	configure router named-item-64 isis number segment-routing mapping-server node-sid-map number ip-prefix ipv4-unicast-prefix
Tree	ip-prefix

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

level-capability *keyword*

Synopsis	Flags to assign in SID Label Binding TLV advertised by Segment Routing Mapping Server
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing mapping-server node-sid-map <i>number</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR-1

range *number*

Synopsis	Range of addresses and their associated prefix SIDs
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing mapping-server node-sid-map <i>number</i> range <i>number</i>
Tree	range
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

set-flags

Synopsis	Enter the set-flags context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing mapping-server node-sid-map <i>number</i> set-flags
Tree	set-flags
Introduced	25.3.R2
Platforms	7705 SAR-1

bit-s *boolean*

Synopsis	SID Label Binding TLV to be flooded across the entire routing domain
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing mapping-server node-sid-map <i>number</i> set-flags bit-s <i>boolean</i>
Tree	bit-s
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-sid-depth

Synopsis	Enter the maximum-sid-depth context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing maximum-sid-depth
Tree	maximum-sid-depth
Introduced	25.3.R2
Platforms	7705 SAR-1

override-bmi *number*

Synopsis	Value to override the announced node MSD-BMI value
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing maximum-sid-depth override-bmi <i>number</i>
Tree	override-bmi
Description	<p>This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.</p> <p>When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.</p>
Range	0 to 12
Introduced	25.3.R2
Platforms	7705 SAR-1

override-erld *number*

Synopsis	Value to override the announced node MSD-ERLD value
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>maximum-sid-depth</i> <i>override-erld</i> <i>number</i>
Tree	<i>override-erld</i>
Description	<p>This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing.</p> <p>When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.</p>
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR-1

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>micro-loop-avoidance</i>
Tree	<i>micro-loop-avoidance</i>
Description	<p>Commands in this context configure the microloop avoidance feature in the IGP instance. This feature prevents microloops from using Segment Routing (SR) loop-free tunnels for packets that are forwarded over SR IS-IS node SID tunnels.</p> <p>These commands enable microloop avoidance for MT0. Microloop avoidance for MT2 is enabled when this command is enabled along with SR-MPLS MT2 using the configure router isis segment-routing multi-topology mt2 command.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

fib-delay *number*

Synopsis	FIB delay before programming new primary next-hops
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>micro-loop-avoidance</i> <i>fib-delay</i> <i>number</i>
Tree	<i>fib-delay</i>
Description	This command specifies the delay time before programming the new next-hops for the SR tunnel.
Range	1 to 300
Units	deciseconds
Default	15

Introduced	25.3.R2
Platforms	7705 SAR-1

multi-topology

Synopsis	Enter the multi-topology context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing multi-topology
Tree	multi-topology
Introduced	25.3.R2
Platforms	7705 SAR-1

mt2 boolean

Synopsis	Support IPv6 routing topology (MT2)
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing multi-topology mt2 boolean
Tree	mt2
Description	When configured to true , the router enables SR-MPLS for MS-ISIS MT, which enables Segment Routing in MT2.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-sid-range

Synopsis	Enable the prefix-sid-range context
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing prefix-sid-range
Tree	prefix-sid-range
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	25.3.R2
Platforms	7705 SAR-1

global

Synopsis	BGP global SR range allocation
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing prefix-sid-range global

Tree	global
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the configure router mpls-labels sr-labels context.
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR-1

max-index *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing prefix-sid-range max-index <i>number</i>
Tree	max-index
Range	0 to 1048575
Default	1
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR-1

start-label *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	configure router <i>named-item-64</i> isis <i>number</i> segment-routing prefix-sid-range start-label <i>number</i>
Tree	start-label
Range	0 to 1048575
Default	0
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2

Platforms 7705 SAR-1

srlb *reference*

Synopsis Segment routing local block

Context **configure** **router** *named-item-64* **isis** *number* **segment-routing** **srlb** *reference*

Tree **srlb**

Reference **configure** **router** *named-item-64* **mpls-labels** **reserved-label-block** *named-item-64*

Platforms 7705 SAR-1

tunnel-mtu *number*

Synopsis Tunnel MTU size

Context **configure** **router** *named-item-64* **isis** *number* **segment-routing** **tunnel-mtu** *number*

Tree **tunnel-mtu**

Range 512 to 9786

Introduced 25.3.R2

Platforms 7705 SAR-1

tunnel-table-pref *number*

Synopsis Preference of SR tunnels created by the IGP instance

Context **configure** **router** *named-item-64* **isis** *number* **segment-routing** **tunnel-table-pref** *number*

Tree **tunnel-table-pref**

Description This command configures the TTM preference of SR tunnels created by the IGP instance. This is used in the case of BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the new tunnel binding commands are configured to the **any** value which parses the TTM for tunnels in the protocol preference order. The user can choose to either go with the global TTM preference or list explicitly the tunnel types they want to use. When they list the tunnel types explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected one fails. Also, a reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to TTM a SR tunnel entry for each resolved remote node SID prefix and programs the data path with the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting

their current deployment when they enable segment routing. The following is the setting of the default preference of the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as **SR-ISIS** and **SR-OSPF**).

The global default TTM preference for the tunnel types is as follows:

- `ROUTE_PREF_RSVP` 7
- `ROUTE_PREF_SR_TE` 8
- `ROUTE_PREF_LDP` 9
- `ROUTE_PREF_OSPF_TTM` 10
- `ROUTE_PREF_ISIS_TTM` 11
- `ROUTE_PREF_BGP_TTM` 12
- `ROUTE_PREF_GRE` 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more instances of that protocol programmed a tunnel for the same prefix. The selection of a SR tunnel in this case is based on the lowest preference IGP instance. In the case of a tie, the instance with the lowest metric SR tunnel is selected over the lowest numbered IGP instance.

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	11
Introduced	25.3.R2
Platforms	7705 SAR-1

standard-multi-instance *boolean*

Synopsis	Enable RFC standards compliant multi-instance behavior
Context	configure router <i>named-item-64</i> isis <i>number</i> standard-multi-instance <i>boolean</i>
Tree	standard-multi-instance
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-adjacency-check *boolean*

Synopsis	Enable strict checking of address families for IS-IS adjacencies
Context	configure router <i>named-item-64</i> isis <i>number</i> strict-adjacency-check <i>boolean</i>
Tree	strict-adjacency-check

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

summary-address [ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Enter the summary-address list instance
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (ipv4-prefix ipv6-prefix)
Tree	summary-address
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	IP prefix for the summary address
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (ipv4-prefix ipv6-prefix)
Tree	summary-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-unreachable

Synopsis	Enable the advertise-unreachable context
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (ipv4-prefix ipv6-prefix) advertise-unreachable
Tree	advertise-unreachable
Description	Commands in this context enable Unreachable Prefix Announcements (UPAs) for summary member routes. A UPA is advertised for IPv4 and IPv6 summary member prefixes when a summary member prefix suddenly becomes unreachable. By default, all summary member prefixes are monitored for reachability.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-route-tag *number*

Synopsis	Route tag to advertise in UPA
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise-unreachable advertise-route-tag <i>number</i>
Tree	advertise-route-tag
Description	This command configures a UPA route tag to add to the advertised UPA. The UPA route tag can be used when there are multiple Autonomous System Boundary Routers (ASBRs) redistributing prefixes between two Interior Gateway Protocol (IGP) areas.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

match-route-tag *number*

Synopsis	Route tag to match UPA
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise-unreachable match-route-tag <i>number</i>
Tree	match-route-tag
Description	This command specifies the route tag to be used (by the router) as the basis to select a subset of summary member prefixes to monitor for reachability.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

level-capability *keyword*

Synopsis	IS-IS level for the summary address
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR-1

route-tag *number*

Synopsis	Route tag assigned to the summary address
Context	configure router <i>named-item-64</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-tag <i>number</i>
Tree	route-tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress-attached-bit *boolean*

Synopsis	Allow IS-IS to suppress setting attached bit on LSPs
Context	configure router <i>named-item-64</i> isis <i>number</i> suppress-attached-bit <i>boolean</i>
Tree	suppress-attached-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id *system-id*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System ID
Context	configure router <i>named-item-64</i> isis <i>number</i> system-id <i>system-id</i>
Tree	system-id
String length	14
Default	0000.0000.0000
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enter the timers context
----------	---------------------------------

Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-wait

Synopsis	Enter the lsp-wait context
Context	configure router <i>named-item-64</i> isis <i>number</i> timers lsp-wait
Tree	lsp-wait
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-initial-wait *number*

Synopsis	Initial LSP generation delay
Context	configure router <i>named-item-64</i> isis <i>number</i> timers lsp-wait lsp-initial-wait <i>number</i>
Tree	lsp-initial-wait
Range	10 to 100000
Units	milliseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-max-wait *number*

Synopsis	Maximum time between two consecutive LSP occurrences
Context	configure router <i>named-item-64</i> isis <i>number</i> timers lsp-wait lsp-max-wait <i>number</i>
Tree	lsp-max-wait
Range	10 to 120000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-second-wait *number*

Synopsis	Delay between first and second LSP generation
Context	configure router <i>named-item-64</i> isis <i>number</i> timers lsp-wait lsp-second-wait <i>number</i>
Tree	lsp-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-wait

Synopsis	Enter the spf-wait context
Context	configure router <i>named-item-64</i> isis <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after topology change
Context	configure router <i>named-item-64</i> isis <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-max-wait *number*

Synopsis	Maximum interval amid two consecutive SPF calculations
Context	configure router <i>named-item-64</i> isis <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait

Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-second-wait *number*

Synopsis	Hold time between first and second SPF calculations
Context	configure router <i>named-item-64</i> isis <i>number</i> timers spf-wait spf-second-wait <i>number</i>
Tree	spf-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

traffic-engineering *boolean*

Synopsis	Enable traffic engineering for the router
Context	configure router <i>named-item-64</i> isis <i>number</i> traffic-engineering <i>boolean</i>
Tree	traffic-engineering
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traffic-engineering-options

Synopsis	Enter the traffic-engineering-options context
Context	configure router <i>named-item-64</i> isis <i>number</i> traffic-engineering-options
Tree	traffic-engineering-options
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-delay *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>traffic-engineering-options</i> <i>advertise-delay</i> <i>boolean</i>
Tree	<i>advertise-delay</i>
Description	<p>When configured to true, the router advertises link delay in the IGP LSDB within legacy Traffic Engineering (TE) attributes in IS-IS or within the Application-Specific Link Attribute (ASLA) when ASLA is enabled for SR-TE or RSVP-TE applications.</p> <p>When the application-link-attributes legacy command is configured for SR-TE or RSVP-TE, link delay is advertised as a legacy TE TLV with the ASLA legacy bit set.</p> <p>When configured to false, the router disables link delay advertisement.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

application-link-attributes

Synopsis	Enable the application-link-attributes context
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>traffic-engineering-options</i> <i>application-link-attributes</i>
Tree	<i>application-link-attributes</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

legacy *boolean*

Synopsis	Advertise legacy TE attributes
Context	configure <i>router</i> <i>named-item-64</i> <i>isis</i> <i>number</i> <i>traffic-engineering-options</i> <i>application-link-attributes</i> <i>legacy</i> <i>boolean</i>
Tree	<i>legacy</i>
Description	<p>When configured to true, the router supports the legacy mode of advertising TE attributes.</p> <p>When configured to false, legacy mode is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Advertise IS-IS IPv6 Traffic Engineering
Context	configure router <i>named-item-64</i> isis <i>number</i> traffic-engineering-options ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

unicast-import

Synopsis	Enter the unicast-import context
Context	configure router <i>named-item-64</i> isis <i>number</i> unicast-import
Tree	unicast-import
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Submit IPv4 routes into unicast RTM
Context	configure router <i>named-item-64</i> isis <i>number</i> unicast-import ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Submit IPv6 routes into unicast RTM
Context	configure router <i>named-item-64</i> isis <i>number</i> unicast-import ipv6 <i>boolean</i>
Tree	ipv6
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp

Synopsis	Enable the ldp context
Context	configure router <i>named-item-64</i> ldp
Tree	ldp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of LDP
Context	configure router <i>named-item-64</i> ldp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregate-prefix-match

Synopsis	Enable the aggregate-prefix-match context
Context	configure router <i>named-item-64</i> ldp aggregate-prefix-match
Tree	aggregate-prefix-match
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LDP aggregate prefix match
Context	configure router <i>named-item-64</i> ldp aggregate-prefix-match admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-exclude *reference*

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	configure router <i>named-item-64</i> ldp aggregate-prefix-match prefix-exclude <i>reference</i>
Tree	prefix-exclude
Reference	configure policy-options policy-statement <i>named-item-64</i>

Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *named-item-or-empty*

Synopsis	Interface name for this static FEC prefix
Context	configure router <i>named-item-64</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) interface <i>named-item-or-empty</i>
Tree	interface
String length	0 to 32
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .

Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop
Context	configure router <i>named-item-64</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	25.3.R2
Platforms	7705 SAR-1

pop *boolean*

Synopsis	Pop the label and transmit without the label
Context	configure router <i>named-item-64</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pop <i>boolean</i>
Tree	pop
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	25.3.R2
Platforms	7705 SAR-1

swap-label *number*

Synopsis	Value mapped to egress label associated with next-hop entry that LSR uses to swap incoming label
Context	configure router <i>named-item-64</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) swap-label <i>number</i>
Tree	swap-label
Range	6 to 1048575
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enter the graceful-restart context
Context	configure router <i>named-item-64</i> ldp graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-mode *boolean*

Synopsis	Enable graceful restart helper
Context	configure router <i>named-item-64</i> ldp graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-recovery-time *number*

Synopsis	Value for the local maximum recovery time
Context	configure router <i>named-item-64</i> ldp graceful-restart maximum-recovery-time <i>number</i>
Tree	maximum-recovery-time
Range	15 to 1800
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-liveness-time *number*

Synopsis	Value for the neighbor liveness timer
Context	configure router <i>named-item-64</i> ldp graceful-restart neighbor-liveness-time <i>number</i>
Tree	neighbor-liveness-time
Range	5 to 300
Units	seconds

Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

implicit-null-label *boolean*

Synopsis	Signal the implicit null label value for all LDP FECs for which the node is the egress LER
Context	configure router <i>named-item-64</i> ldp implicit-null-label <i>boolean</i>
Tree	implicit-null-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-pmsi-routes

Synopsis	Enter the import-pmsi-routes context
Context	configure router <i>named-item-64</i> ldp import-pmsi-routes
Tree	import-pmsi-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	configure router <i>named-item-64</i> ldp import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>

Context	configure router <i>named-item-64</i> ldp interface-parameters
Tree	interface-parameters
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[ip-int-name](#)] *reference*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-int-name] *reference*

Synopsis	Interface name
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i>
Tree	interface
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Allow BFD tracking of IPv4 LDP Session for interface
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> bfd-liveness ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enable the ipv4 context
----------	--------------------------------

Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-type-capability

Synopsis	Enter the fec-type-capability context
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 fec-type-capability
Tree	fec-type-capability
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-ipv4 *boolean*

Synopsis	Enable IPv4 prefix FEC capability
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 fec-type-capability prefix-ipv4 <i>boolean</i>
Tree	prefix-ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello

Synopsis	Enable the hello context
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 hello
Tree	hello
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Factor value for Hello
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 hello factor <i>number</i>
Tree	factor
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 hello timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive

Synopsis	Enable the keepalive context
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 keepalive
Tree	keepalive
Introduced	25.3.R2

Platforms 7705 SAR-1

factor number

Synopsis Factor value for keepalive

Context **configure** [router](#) [named-item-64](#) [ldp interface-parameters interface](#) [reference](#) [ipv4](#)
[keepalive factor number](#)

Tree [factor](#)

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

timeout number

Synopsis Time that LDP waits before tearing down session

Context **configure** [router](#) [named-item-64](#) [ldp interface-parameters interface](#) [reference](#) [ipv4](#)
[keepalive timeout number](#)

Tree [timeout](#)

Range 3 to 65535

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR-1

local-lsr-id

Synopsis Enter the **local-lsr-id** context

Context **configure** [router](#) [named-item-64](#) [ldp interface-parameters interface](#) [reference](#) [ipv4](#) [local-lsr-id](#)

Tree [local-lsr-id](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name reference

Synopsis Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP

Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 local-lsr-id interface-name <i>reference</i>
Tree	interface-name
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> ipv4 transport-address <i>keyword</i>
Tree	transport-address
Options	interface, system
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-weight *number*

Synopsis	Load balancing weight for the LDP interface
Context	configure router <i>named-item-64</i> ldp interface-parameters interface <i>reference</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> ldp interface-parameters ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

hello

Synopsis	Enter the hello context
Context	configure router <i>named-item-64</i> ldp interface-parameters ipv4 hello
Tree	hello
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Value for the Hello factor
Context	configure router <i>named-item-64</i> ldp interface-parameters ipv4 hello factor <i>number</i>
Tree	factor
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router <i>named-item-64</i> ldp interface-parameters ipv4 hello timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive

Synopsis	Enter the keepalive context
Context	configure router <i>named-item-64</i> ldp interface-parameters ipv4 keepalive
Tree	keepalive
Introduced	25.3.R2

Platforms 7705 SAR-1

factor *number*

Synopsis Value for the keep-alive factor

Context **configure** [router](#) *named-item-64* [ldp interface-parameters ipv4 keepalive factor](#) *number*

Tree [factor](#)

Range 1 to 255

Default 3

Introduced 25.3.R2

Platforms 7705 SAR-1

timeout *number*

Synopsis Timeout value for keepalive

Context **configure** [router](#) *named-item-64* [ldp interface-parameters ipv4 keepalive timeout](#) *number*

Tree [timeout](#)

Range 3 to 65535

Units seconds

Default 30

Introduced 25.3.R2

Platforms 7705 SAR-1

transport-address *keyword*

Synopsis Transport address to set up the LDP TCP sessions

Context **configure** [router](#) *named-item-64* [ldp interface-parameters ipv4 transport-address](#) *keyword*

Tree [transport-address](#)

Options interface, system

Default system

Introduced 25.3.R2

Platforms 7705 SAR-1

label-withdrawal-delay *number*

Synopsis	Time interval during which LDP delays for the withdrawal of FEC-label binding
Context	configure router <i>named-item-64</i> ldp label-withdrawal-delay <i>number</i>
Tree	label-withdrawal-delay
Range	3 to 120
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp-shortcut

Synopsis	Enter the ldp-shortcut context
Context	configure router <i>named-item-64</i> ldp ldp-shortcut
Tree	ldp-shortcut
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Forward IPv4 packets by using LDP shortcuts
Context	configure router <i>named-item-64</i> ldp ldp-shortcut ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

legacy-ipv4-lsr-interop *boolean*

Synopsis	Allow interoperability with legacy IPv4 LSR implementations
Context	configure router <i>named-item-64</i> ldp legacy-ipv4-lsr-interop <i>boolean</i>
Tree	legacy-ipv4-lsr-interop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-bfd [[prefix-list](#)] *reference*

Synopsis	Enter the lsp-bfd list instance
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i>
Tree	lsp-bfd
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix-list] *reference*

Synopsis	Name of a router policy options prefix list
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i>
Tree	lsp-bfd
Reference	configure policy-options prefix-list <i>named-item-64</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD on LDP LSPs with FECs that match the prefix list
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-template *reference*

Synopsis	BFD template to apply to BFD sessions associated with the prefix list
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i> bfd-template <i>reference</i>
Tree	bfd-template
Reference	configure bfd bfd-template <i>named-item</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

failure-action *keyword*

Synopsis	Reaction to BFD session failure for the prefix list
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i> failure-action <i>keyword</i>
Tree	failure-action
Options	down
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-ping-interval (*number* | *keyword*)

Synopsis	LSP ping transmit interval for periodic verification
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i> lsp-ping-interval (<i>number</i> <i>keyword</i>)
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Prefix list to control the search order
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i> priority <i>number</i>
Tree	priority
Range	1 to 99
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source address in LSP ping packets and BFD control packets associated with prefix list
Context	configure router <i>named-item-64</i> ldp lsp-bfd <i>reference</i> source-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

max-ecmp-routes *number*

Synopsis	Maximum ECMP value for LDP
Context	configure router <i>named-item-64</i> ldp max-ecmp-routes <i>number</i>
Tree	max-ecmp-routes
Description	<p>This command sets the maximum number of ECMP routes that LDP may use to resolve the next hop for a FEC as permitted by the RTM or TTM.</p> <p>The system-wide maximum number of ECMP routes is set by the configure router ecmp command; therefore, the operational maximum number used by LDP is set to the lesser of the values configured by this command and the configure router ecmp command.</p>
Range	1 to 64
Default	32
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-protocol-stitching *boolean*

Synopsis	Stitch LDP ILM to SR NHLFE even if LDP NHLFE exists
Context	configure router <i>named-item-64</i> ldp prefer-protocol-stitching <i>boolean</i>
Tree	prefer-protocol-stitching
Description	<p>When configured to true, an LDP ILM stitches to an SR NHLFE, even if an LDP NHLFE exists.</p> <p>When configured to false, the stitching preference of an LDP ILM is to an LDP NHLFE.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-tunnel-in-tunnel *boolean*

Synopsis	Preference tunnel-in-tunnel over a simple LDP tunnel
Context	configure router <i>named-item-64</i> ldp prefer-tunnel-in-tunnel <i>boolean</i>
Tree	prefer-tunnel-in-tunnel
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

session-parameters

Synopsis	Enter the session-parameters context
Context	configure router <i>named-item-64</i> ldp session-parameters
Tree	session-parameters
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the LDP peer
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-adj-addr-only *boolean*

Synopsis	Distribute only the local addresses used to establish the Hello adjacencies with a peer
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) adv-adj-addr-only <i>boolean</i>
Tree	adv-adj-addr-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-local-lsr-id *boolean*

Synopsis	Advertise local LSR ID over a specified LDP session
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) adv-local-lsr-id <i>boolean</i>
Tree	adv-local-lsr-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

community *policy-string*

Synopsis	Community string associated with a session to a specified peer
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) community <i>policy-string</i>
Tree	community
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

dod-label-distribution *boolean*

Synopsis	Use LDP Downstream-on-Demand (DoD) label distribution procedures
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) dod-label-distribution <i>boolean</i>
Tree	dod-label-distribution

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-addresses *reference*

Synopsis	Export policies to determine which local addresses should be distributed to this peer
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) export-addresses <i>reference</i>
Tree	export-addresses
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-prefixes *reference*

Synopsis	Export policies to determine which FEC prefixes are redistributed to LDP and TLDP peers
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) export-prefixes <i>reference</i>
Tree	export-prefixes
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-limit

Synopsis	Enter the fec-limit context
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit

Tree	fec-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

limit *number*

Synopsis	Maximum number of FECs to be accepted from this peer LSR
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit limit <i>number</i>
Tree	limit
Range	0 1 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Trap and syslog message to generate when reaching the threshold and limit
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold that generates trap and warning when reached
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

fec-type-capability

Synopsis	Enter the fec-type-capability context
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-type-capability
Tree	fec-type-capability
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-ipv4 *boolean*

Synopsis	Enable IPv4 prefix FEC capability for the session
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-type-capability prefix-ipv4 <i>boolean</i>
Tree	prefix-ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

fec129-cisco-interop *boolean*

Synopsis	Allow translation between non-compliant FEC 129 formats of Cisco
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec129-cisco-interop <i>boolean</i>
Tree	fec129-cisco-interop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-prefixes *reference*

Synopsis	FEC prefixes to be redistributed to this LDP peer
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) import-prefixes <i>reference</i>
Tree	import-prefixes
Reference	configure policy-options policy-statement <i>named-item-64</i>

Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

pe-id-mac-flush-interop *boolean*

Synopsis	Send PE-ID TLV in LDP MAC withdrawal message
Context	configure router <i>named-item-64</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) pe-id-mac-flush-interop <i>boolean</i>
Tree	pe-id-mac-flush-interop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

shortcut-local-ttl-propagate *boolean*

Synopsis	Propagate TTL over LSP shortcut for local packets
Context	configure router <i>named-item-64</i> ldp shortcut-local-ttl-propagate <i>boolean</i>
Tree	shortcut-local-ttl-propagate
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

shortcut-transit-ttl-propagate *boolean*

Synopsis	Enable TTL propagation over LSP shortcut
Context	configure router <i>named-item-64</i> ldp shortcut-transit-ttl-propagate <i>boolean</i>
Tree	shortcut-transit-ttl-propagate
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

targeted-session

Synopsis	Enter the targeted-session context
Context	configure router <i>named-item-64</i> ldp targeted-session
Tree	targeted-session
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-rx

Synopsis	Enter the auto-rx context
Context	configure router <i>named-item-64</i> ldp targeted-session auto-rx
Tree	auto-rx
Description	Commands in this context specify the LDP session configuration to accept targeted Hello messages from any peer.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> ldp targeted-session auto-rx ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of IPv4 capabilities for peers
Context	configure router <i>named-item-64</i> ldp targeted-session auto-rx ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

tunneling *boolean*

Synopsis	Enable tunneling for targeted peers
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp targeted-session auto-rx ipv4 tunneling boolean</i>
Tree	<i>tunneling</i>
Description	<p>When configured to true, this command enables the local system to use the targeted LDP session to send FEC label bindings that are advertised to other LDP peers. For LDP rLFA, the source node requires the PQ node's label binding information in order to reach the destination.</p> <p>If the auto-rx and auto-tx contexts are both administratively enabled, this command must be set to true for LDP rLFA to function properly.</p> <p>When configured to false, FEC label bindings are not sent via the LDP session.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-tx

Synopsis	Enter the auto-tx context
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp targeted-session auto-tx</i>
Tree	<i>auto-tx</i>
Description	Commands in this context specify the LDP session configuration to send targeted Hello messages toward PQ nodes determined by the rLFA algorithm.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp targeted-session auto-tx ipv4</i>
Tree	<i>ipv4</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of IPv4 capabilities for peers
----------	---

Context	configure router <i>named-item-64</i> ldp targeted-session auto-tx ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

tunneling *boolean*

Synopsis	Enable tunneling for targeted peers
Context	configure router <i>named-item-64</i> ldp targeted-session auto-tx ipv4 tunneling <i>boolean</i>
Tree	tunneling
Description	<p>When configured to true, this command enables the local system to use the targeted LDP session to send FEC label bindings that are advertised to other LDP peers. For LDP rLFA, the source node requires the PQ node's label binding information in order to reach the destination.</p> <p>If the auto-rx context is administratively disabled, this command should be set to true for LDP rLFA to function properly.</p> <p>When configured to false, FEC label bindings are not sent via the LDP session.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-prefixes *reference*

Synopsis	Export route policy to determine which routes are exported to this targeted LDP session
Context	configure router <i>named-item-64</i> ldp targeted-session export-prefixes <i>reference</i>
Tree	export-prefixes
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

import-prefixes *reference*

Synopsis	Import route policy to determine which routes are accepted from targeted LDP neighbors
Context	configure router <i>named-item-64</i> ldp targeted-session import-prefixes <i>reference</i>
Tree	import-prefixes
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> ldp targeted-session ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

hello

Synopsis	Enter the hello context
Context	configure router <i>named-item-64</i> ldp targeted-session ipv4 hello
Tree	hello
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Factor value for Hello
Context	configure router <i>named-item-64</i> ldp targeted-session ipv4 hello factor <i>number</i>
Tree	factor
Range	1 to 255
Default	3

Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router <i>named-item-64</i> ldp targeted-session ipv4 hello timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Default	45
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-reduction

Synopsis	Enter the hello-reduction context
Context	configure router <i>named-item-64</i> ldp targeted-session ipv4 hello-reduction
Tree	hello-reduction
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	configure router <i>named-item-64</i> ldp targeted-session ipv4 hello-reduction admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Hello reduction dampening factor
----------	----------------------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>ipv4</i> <i>hello-reduction</i> <i>factor</i> <i>number</i>
Tree	<i>factor</i>
Range	3 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive

Synopsis	Enter the keepalive context
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>ipv4</i> <i>keepalive</i>
Tree	<i>keepalive</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Factor value for keepalive
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>ipv4</i> <i>keepalive</i> <i>factor</i> <i>number</i>
Tree	<i>factor</i>
Range	1 to 255
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout value for keepalive
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>ipv4</i> <i>keepalive</i> <i>timeout</i> <i>number</i>
Tree	<i>timeout</i>
Range	3 to 65535
Units	seconds
Default	40
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the LDP peer
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LDP peer
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD tracking of LDP session for the peer
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

hello

Synopsis	Enable the hello context
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) hello
Tree	hello
Introduced	25.3.R2
Platforms	7705 SAR-1

factor number

Synopsis	Factor value for Hello
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) hello factor <i>number</i>
Tree	factor
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout number

Synopsis	Timeout value for Hello
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) hello timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-reduction

Synopsis	Enable the hello-reduction context
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) hello-reduction
Tree	hello-reduction
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) hello-reduction admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Hello reduction dampening factor
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) hello-reduction factor <i>number</i>
Tree	factor
Range	3 to 20
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive

Synopsis	Enable the keepalive context
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) keepalive
Tree	keepalive
Introduced	25.3.R2

Platforms 7705 SAR-1

factor number

Synopsis Factor value for keepalive

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [keepalive factor number](#)

Tree [factor](#)

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

timeout number

Synopsis Time that LDP waits before tearing down session

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [keepalive timeout number](#)

Tree [timeout](#)

Range 3 to 65535

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR-1

local-lsr-id

Synopsis Enter the **local-lsr-id** context

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [local-lsr-id](#)

Tree [local-lsr-id](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

format-32bit boolean

Synopsis Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [local-lsr-id format-32bit boolean](#)

Tree	format-32bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) local-lsr-id interface-name <i>reference</i>
Tree	interface-name
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tunneling

Synopsis	Enable the tunneling context
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunneling
Tree	tunneling
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp [[lsp-name](#)] *named-item-64*

Synopsis	Add a list entry for lsp
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunneling lsp <i>named-item-64</i>
Tree	lsp
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[lsp-name] *named-item-64*

Synopsis	LSP name
Context	configure router <i>named-item-64</i> ldp targeted-session peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunneling lsp <i>named-item-64</i>
Tree	lsp
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-template [template-name] *named-item*

Synopsis	Enter the peer-template list instance
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i>
Tree	peer-template
Max. instances	500
Introduced	25.3.R2
Platforms	7705 SAR-1

[template-name] *named-item*

Synopsis	Name for the targeted peer template
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i>
Tree	peer-template
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the peer template
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-local-lsr-id *boolean*

Synopsis	Advertise local LSR ID over a specified LDP session
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> adv-local-lsr-id <i>boolean</i>
Tree	adv-local-lsr-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD tracking of T-LDP peer session
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, the router uses BFD to track the selected T-LDP session. By enabling BFD for a selected targeted session, the state of that session is tied to the state of the underneath BFD session between the two nodes.</p> <p>The command options used for the BFD are configured under the IP interface.</p> <p>When configured to false, the router does not use the central BFD session to track the T-LDP session operational state.</p> <p>On the 7705 SAR Gen 2, BFD is supported only for IPv4 T-LDP sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

community *policy-string*

Synopsis	Community string associated with a session to a specified peer
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>peer-template</i> <i>named-item</i> <i>community</i> <i>policy-string</i>
Tree	<i>community</i>
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

hello

Synopsis	Enable the hello context
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>peer-template</i> <i>named-item</i> <i>hello</i>
Tree	<i>hello</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Factor value for Hello
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>peer-template</i> <i>named-item</i> <i>hello</i> <i>factor</i> <i>number</i>
Tree	<i>factor</i>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout value for Hello
Context	configure <i>router</i> <i>named-item-64</i> <i>ldp</i> <i>targeted-session</i> <i>peer-template</i> <i>named-item</i> <i>hello</i> <i>timeout</i> <i>number</i>
Tree	<i>timeout</i>
Range	3 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-reduction

Synopsis	Enable the hello-reduction context
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> hello-reduction
Tree	hello-reduction
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> hello-reduction admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

factor *number*

Synopsis	Hello reduction dampening factor
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> hello-reduction factor <i>number</i>
Tree	factor
Range	3 to 20
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive

Synopsis	Enable the keepalive context
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> keepalive
Tree	keepalive
Introduced	25.3.R2

Platforms 7705 SAR-1

factor number

Synopsis Factor value for keepalive

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer-template](#) *named-item* [keepalive factor](#) *number*

Tree [factor](#)

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

timeout number

Synopsis Time that LDP waits before tearing down session

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer-template](#) *named-item* [keepalive timeout](#) *number*

Tree [timeout](#)

Range 3 to 65535

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR-1

local-lsr-id

Synopsis Enter the **local-lsr-id** context

Context **configure** [router](#) *named-item-64* [ldp targeted-session peer-template](#) *named-item* [local-lsr-id](#)

Tree [local-lsr-id](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name reference

Synopsis Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP

Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> local-lsr-id interface-name <i>reference</i>
Tree	interface-name
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tunneling *boolean*

Synopsis	Allow LDP over tunnels
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i> tunneling <i>boolean</i>
Tree	tunneling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-template-map [[template-map-name](#)] *reference*

Synopsis	Enter the peer-template-map list instance
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template-map <i>reference</i>
Tree	peer-template-map
Max. instances	500
Introduced	25.3.R2
Platforms	7705 SAR-1

[[template-map-name](#)] *reference*

Synopsis	Name to identify the targeted peer template
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template-map <i>reference</i>
Tree	peer-template-map
Reference	configure router <i>named-item-64</i> ldp targeted-session peer-template <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

policy-map *reference*

Synopsis	Targeted peer template to apply to the given policies
Context	configure router <i>named-item-64</i> ldp targeted-session peer-template-map <i>reference</i> policy-map <i>reference</i>
Tree	policy-map
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

resolve-v6-prefix-over-shortcut *boolean*

Synopsis	Resolve IPv6 prefix over IGP shortcuts
Context	configure router <i>named-item-64</i> ldp targeted-session resolve-v6-prefix-over-shortcut <i>boolean</i>
Tree	resolve-v6-prefix-over-shortcut
Description	When configured to true , the system enables the resolution of IPv6 LDP unicast prefix FECs over IGP shortcuts. When configured to false , the resolution is not allowed.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-auto-targeted-session *boolean*

Synopsis	Allow auto-creation of targeted sessions by SDP
Context	configure router <i>named-item-64</i> ldp targeted-session sdp-auto-targeted-session <i>boolean</i>
Tree	sdp-auto-targeted-session
Default	true

Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-session-parameters

Synopsis	Enter the tcp-session-parameters context
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters
Tree	tcp-session-parameters
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key between LDP peers
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command specifies the authentication key used to establish a session between LDP peers.</p> <p>Authentication uses the MD-5 message-based digest. The peer address used in authentication must be the TCP session transport address. If one or more transport addresses used in the Hello adjacencies to the same peer LSR are different from the LSR ID value, the user must add each transport address to the authentication key configuration as a separate peer. As a result, when the TCP connection is bootstrapped by a specific Hello adjacency, the authentication can operate over that TCP connection by using its specific transport address.</p> <p>The per-peer authentication configuration takes precedence over global authentication configuration, and authentication keychain configuration takes precedence over authentication key configuration.</p>
String length	1 to 370
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	Authentication keychain to use for the TCP session
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters authentication-keychain reference
Tree	authentication-keychain

Description	This command configures the authentication keychain to use for the TCP session. The per-peer authentication configuration takes precedence over the global authentication configuration.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-transport [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer-transport list instance
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters peer-transport (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-transport
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the TCP connection to the LDP peer
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters peer-transport (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-transport
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key between LDP peers
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters peer-transport (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) authentication-key encrypted-leaf
Tree	authentication-key
Description	This command specifies the authentication key used to establish a session between LDP peers. Authentication uses the MD-5 message-based digest. The peer address used in authentication must be the TCP session transport address. If one or more transport addresses used in the Hello adjacencies to the same peer LSR are different from the LSR ID value, the user must add each transport address to the authentication key

configuration as a separate peer. As a result, when the TCP connection is bootstrapped by a specific Hello adjacency, the authentication can operate over that TCP connection by using its specific transport address.

The per-peer authentication configuration takes precedence over global authentication configuration, and authentication keychain configuration takes precedence over authentication key configuration.

String length	1 to 370
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	Authentication keychain to use for the TCP session
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters peer-transport (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command configures the authentication keychain to use for the TCP session. The per-peer authentication configuration takes precedence over the global authentication configuration.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu-discovery *boolean*

Synopsis	Allow Path MTU Discovery for associated TCP connections
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters peer-transport (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
Context	configure router <i>named-item-64</i> ldp tcp-session-parameters peer-transport (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ttl-security <i>number</i>

Tree	ttl-security
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-down-damp-time *number*

Synopsis	Time interval for an LDP to damp a tunnel down event before posting to the Route Table Manager (RTM)
Context	configure router <i>named-item-64</i> ldp tunnel-down-damp-time <i>number</i>
Tree	tunnel-down-damp-time
Range	0 to 20
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-table-pref *number*

Synopsis	Tunnel table preference value for address FECs
Context	configure router <i>named-item-64</i> ldp tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref
Description	<p>This command configures the tunnel table preference for an LDP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	9
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp *boolean*

Synopsis	Allow weighted ECMP load-balancing
Context	configure router <i>named-item-64</i> ldp weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, the system allows weighted ECMP on LDP using RSVP LSPs or SR-TE LSPs. LDP labeled packets are sprayed across the RSVP or SR-TE LSP ECMP set in proportion to the configured load-balancing weight of LSPs.</p> <p>When configured to false, the system removes weighted ECMP load-balancing.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

leak-export

Synopsis	Enter the leak-export context
Context	configure router <i>named-item-64</i> leak-export
Tree	leak-export
Introduced	25.3.R2
Platforms	7705 SAR-1

leak-export-limit *number*

Synopsis	Maximum limit on number of GRT routes leaked into VPRNs
Context	configure router <i>named-item-64</i> leak-export leak-export-limit <i>number</i>
Tree	leak-export-limit
Range	1 to 10000
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	configure router <i>named-item-64</i> leak-export policy-name (<i>policy-expr-string</i> <i>string</i>)
Tree	policy-name

String length	1 to 255
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-bfd

Synopsis	Enter the lsp-bfd context
Context	configure router <i>named-item-64</i> lsp-bfd
Tree	lsp-bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-sessions *number*

Synopsis	Maximum number of LSP BFD session tail-ends
Context	configure router <i>named-item-64</i> lsp-bfd bfd-sessions <i>number</i>
Tree	bfd-sessions
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

tail-end

Synopsis	Enter the tail-end context
Context	configure router <i>named-item-64</i> lsp-bfd tail-end
Tree	tail-end
Introduced	25.10.R1
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Missed message threshold before session is set to down
----------	--

Context	configure router <i>named-item-64</i> lsp-bfd tail-end multiplier <i>number</i>
Tree	multiplier
Range	1 to 20
Default	3
Introduced	25.10.R1
Platforms	7705 SAR-1

receive-interval *number*

Synopsis	The BFD receive interval for LSP tail-end
Context	configure router <i>named-item-64</i> lsp-bfd tail-end receive-interval <i>number</i>
Tree	receive-interval
Range	100 to 1000
Units	milliseconds
Default	1000
Introduced	25.10.R1
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	The BFD transmit interval for LSP tail-end
Context	configure router <i>named-item-64</i> lsp-bfd tail-end transmit-interval <i>number</i>
Tree	transmit-interval
Range	100 to 1000
Units	milliseconds
Default	1000
Introduced	25.10.R1
Platforms	7705 SAR-1

mc-maximum-routes

Synopsis	Enter the mc-maximum-routes context
Context	configure router <i>named-item-64</i> mc-maximum-routes
Tree	mc-maximum-routes
Introduced	25.3.R2

Platforms 7705 SAR-1

log-only *boolean*

Synopsis Log and allow learning of new multicast routes

Context **configure** *router* *named-item-64* *mc-maximum-routes* *log-only* *boolean*

Tree *log-only*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

threshold *number*

Synopsis Maximum multicast routes which the VRF holds

Context **configure** *router* *named-item-64* *mc-maximum-routes* *threshold* *number*

Tree *threshold*

Range 1 to 100

Units percent

Introduced 25.3.R2

Platforms 7705 SAR-1

value *number*

Synopsis Maximum multicast routes configured on virtual router

Context **configure** *router* *named-item-64* *mc-maximum-routes* *value* *number*

Tree *value*

Range 1 to 2147483647

Introduced 25.3.R2

Platforms 7705 SAR-1

mld

Synopsis Enable the **mld** context

Context **configure** *router* *named-item-64* *mld*

Tree *mld*

Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of MLD
Context **configure** [router](#) *named-item-64* **mld** [admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default enable
Introduced 25.3.R2
Platforms 7705 SAR-1

group-if-query-source-address *ipv6-unicast-or-linklocal-address*

Synopsis Source address in queries for group interfaces when not configured at group interface level
Context **configure** [router](#) *named-item-64* **mld** [group-if-query-source-address](#) *ipv6-unicast-or-linklocal-address*
Tree [group-if-query-source-address](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

interface [[ip-interface-name](#)] *interface-name*

Synopsis Enter the **interface** list instance
Context **configure** [router](#) *named-item-64* **mld** [interface](#) *interface-name*
Tree [interface](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[ip-interface-name] *interface-name*

Synopsis IP interface name
Context **configure** [router](#) *named-item-64* **mld** [interface](#) *interface-name*
Tree [interface](#)

String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MLD interface
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy to filter MLD packets
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000

Introduced 25.3.R2
Platforms 7705 SAR-1

maximum-number-groups *number*

Synopsis Maximum number of groups for this interface
Context **configure** [router](#) *named-item-64* **mld** [interface](#) *interface-name* **maximum-number-groups** *number*
Tree [maximum-number-groups](#)
Range 1 to 16000
Introduced 25.3.R2
Platforms 7705 SAR-1

maximum-number-sources *number*

Synopsis Maximum number of sources that are allowed per group
Context **configure** [router](#) *named-item-64* **mld** [interface](#) *interface-name* **maximum-number-sources** *number*
Tree [maximum-number-sources](#)
Range 1 to 1000
Introduced 25.3.R2
Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages
Context **configure** [router](#) *named-item-64* **mld** [interface](#) *interface-name* **query-interval** *number*
Tree [query-interval](#)
Range 2 to 1024
Introduced 25.3.R2
Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR-1

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range *start* *ipv6-multicast-address* *end* *ipv6-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> ssm-translate <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	<i>group-range</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

start *ipv6-multicast-address*

Synopsis	Lower bound of the group range
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> ssm-translate <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	<i>group-range</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *ipv6-multicast-address*

Synopsis	Upper bound of the group range
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> ssm-translate <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	<i>group-range</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [*source-address*] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> ssm-translate <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	<i>source</i>

Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

group [group-address] *ipv6-multicast-address*

Synopsis	Enter the group list instance
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-address] *ipv6-multicast-address*

Synopsis	Group address of multicast channel
----------	------------------------------------

Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i>
Tree	group
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range *start* *ipv6-multicast-address* *end* *ipv6-multicast-address* *step* *ipv6-address*

Synopsis	Enter the group-range list instance
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> static <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	<i>group-range</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

start *ipv6-multicast-address*

Synopsis	Lower bound of the static multicast group
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> static <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	<i>group-range</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *ipv6-multicast-address*

Synopsis	Upper bound of the static multicast group
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> static <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	<i>group-range</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

step *ipv6-address*

Synopsis	Step interval for the group-range addresses
Context	configure <i>router</i> <i>named-item-64</i> mld <i>interface</i> <i>interface-name</i> static <i>group-range</i> start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	<i>group-range</i>

MD-CLI	::1
default	
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure router <i>named-item-64</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2

Platforms 7705 SAR-1

version *keyword*

Synopsis MLD protocol version

Context **configure** *router* *named-item-64* **mld** *interface* *interface-name* **version** *keyword*

Tree **version**

Options 1, 2

Default 2

Introduced 25.3.R2

Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** *router* *named-item-64* **mld** **query-interval** *number*

Tree **query-interval**

Range 2 to 1024

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** *router* *named-item-64* **mld** **query-last-member-interval** *number*

Tree **query-last-member-interval**

Range 1 to 1023

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure router <i>named-item-64</i> mld query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure router <i>named-item-64</i> mld robust-count <i>number</i>
Tree	robust-count
Range	2 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure router <i>named-item-64</i> mld ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [start](#) *ipv6-multicast-address* [end](#) *ipv6-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure router <i>named-item-64</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range

Introduced 25.3.R2
Platforms 7705 SAR-1

start *ipv6-multicast-address*

Synopsis Lower bound of the group range
Context **configure** *router* *named-item-64* *mld* *ssm-translate* *group-range* **start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Tree *group-range*
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

end *ipv6-multicast-address*

Synopsis Upper bound of the group range
Context **configure** *router* *named-item-64* *mld* *ssm-translate* *group-range* **start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Tree *group-range*
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

source [*source-address*] *ipv6-unicast-address*

Synopsis Add a list entry for **source**
Context **configure** *router* *named-item-64* *mld* *ssm-translate* *group-range* **start** *ipv6-multicast-address* **end** *ipv6-multicast-address* *source* *ipv6-unicast-address*
Tree *source*
Min. instances 1
Introduced 25.3.R2
Platforms 7705 SAR-1

[source-address] ipv6-unicast-address

Synopsis	Source IP address
Context	configure router <i>named-item-64</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls

Synopsis	Enable the mpls context
Context	configure router <i>named-item-64</i> mpls
Tree	mpls
Description	Commands in this context configure MPLS.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group-frr boolean

Synopsis	Use admin group constraints for FRR path computation
Context	configure router <i>named-item-64</i> mpls admin-group-frr <i>boolean</i>
Tree	admin-group-frr
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the MPLS instance
Context	configure router <i>named-item-64</i> mpls admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	25.3.R2
Platforms	7705 SAR-1

auto-bandwidth-multipliers

Synopsis	Enter the auto-bandwidth-multipliers context
Context	configure router <i>named-item-64</i> mpls auto-bandwidth-multipliers
Tree	auto-bandwidth-multipliers
Description	Commands in this context configure the multipliers for the auto-bandwidth adjustment.
Introduced	25.3.R2
Platforms	7705 SAR-1

adjust-multiplier *number*

Synopsis	Collection intervals in an adjust interval
Context	configure router <i>named-item-64</i> mpls auto-bandwidth-multipliers adjust-multiplier <i>number</i>
Tree	adjust-multiplier
Range	1 to 16383
Default	288
Introduced	25.3.R2
Platforms	7705 SAR-1

sample-multiplier *number*

Synopsis	Collection intervals in a sample interval
Context	configure router <i>named-item-64</i> mpls auto-bandwidth-multipliers sample-multiplier <i>number</i>
Tree	sample-multiplier
Range	1 to 511
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-lsp [[template-name](#)] *reference*

Synopsis	Enter the auto-lsp list instance
Context	configure router <i>named-item-64</i> mpls auto-lsp <i>reference</i>
Tree	auto-lsp
Max. instances	500
Introduced	25.3.R2
Platforms	7705 SAR-1

[template-name] *reference*

Synopsis	LSP template name
Context	configure router <i>named-item-64</i> mpls auto-lsp <i>reference</i>
Tree	auto-lsp
Reference	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

one-hop *boolean*

Synopsis	Enable one-hop point-to-point LSP automatic signaling
Context	configure router <i>named-item-64</i> mpls auto-lsp <i>reference</i> one-hop <i>boolean</i>
Tree	one-hop
Description	This command enables the automatic signaling of one-hop point-to-point LSPs.
Default	false
Notes	The following elements are part of a choice: one-hop or policy .
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	Peer prefix policy name
Context	configure router <i>named-item-64</i> mpls auto-lsp <i>reference</i> policy <i>reference</i>

Tree	policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	The following elements are part of a choice: one-hop or policy . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

bypass-resignal-timer *number*

Synopsis	Resignal timer for bypass
Context	configure router <i>named-item-64</i> mpls bypass-resignal-timer <i>number</i>
Tree	bypass-resignal-timer
Range	1 to 10080
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

cspf-on-loose-hop *boolean*

Synopsis	Calculate CSPF until next loose hop on LSR
Context	configure router <i>named-item-64</i> mpls cspf-on-loose-hop <i>boolean</i>
Tree	cspf-on-loose-hop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-bypass *boolean*

Synopsis	Create dynamic bypass LSPs in FRR
Context	configure router <i>named-item-64</i> mpls dynamic-bypass <i>boolean</i>
Tree	dynamic-bypass
Default	true
Introduced	25.3.R2

Platforms 7705 SAR-1

entropy-label

Synopsis Enter the **entropy-label** context

Context **configure** [router](#) *named-item-64* [mpls](#) [entropy-label](#)

Tree [entropy-label](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

rsvp-te boolean

Synopsis Apply entropy labels to RSVP-TE LSPs

Context **configure** [router](#) *named-item-64* [mpls](#) [entropy-label](#) [rsvp-te](#) *boolean*

Tree [rsvp-te](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

sr-te boolean

Synopsis Apply entropy labels to SR-TE LSPs

Context **configure** [router](#) *named-item-64* [mpls](#) [entropy-label](#) [sr-te](#) *boolean*

Tree [sr-te](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

exponential-backoff-retry boolean

Synopsis Use exponential back-off timer when retrying an LSP

Context **configure** [router](#) *named-item-64* [mpls](#) [exponential-backoff-retry](#) *boolean*

Tree [exponential-backoff-retry](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

forwarding-policies

Synopsis	Enable the forwarding-policies context
Context	configure router <i>named-item-64</i> mpls forwarding-policies
Tree	forwarding-policies
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of MPLS forwarding policies
Context	configure router <i>named-item-64</i> mpls forwarding-policies admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-policy [[policy-name](#)] *named-item-64*

Synopsis	Enter the forwarding-policy list instance
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i>
Tree	forwarding-policy
Max. instances	65536
Introduced	25.3.R2
Platforms	7705 SAR-1

[[policy-name](#)] *named-item-64*

Synopsis	Forwarding policy name
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i>
Tree	forwarding-policy
String length	1 to 64

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MPLS forwarding policy
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

binding-label *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Binding label
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> binding-label <i>number</i>
Tree	binding-label
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-statistics

Synopsis	Enable the egress-statistics context
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> egress-statistics
Tree	egress-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of egress or ingress statistics
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> egress-statistics admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress-statistics

Synopsis	Enable the ingress-statistics context
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> ingress-statistics
Tree	ingress-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of egress or ingress statistics
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> ingress-statistics admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

metric number

Synopsis	Metric of an MPLS forwarding policy
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> metric number

Tree	metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-group [[index](#)] *number*

Synopsis	Enter the next-hop-group list instance
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> next-hop-group <i>number</i>
Tree	next-hop-group
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	Index for next hop group
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> next-hop-group <i>number</i>
Tree	next-hop-group
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of NHG in MPLS forwarding policy
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> next-hop-group <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR-1

backup-next-hop

Synopsis Enable the **backup-next-hop** context

Context **configure** [router](#) *named-item-64* [mpls forwarding-policies forwarding-policy](#) *named-item-64* [next-hop-group](#) *number* [backup-next-hop](#)

Tree [backup-next-hop](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Next hop address

Context **configure** [router](#) *named-item-64* [mpls forwarding-policies forwarding-policy](#) *named-item-64* [next-hop-group](#) *number* [backup-next-hop](#) [next-hop](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [next-hop](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

pushed-labels [[index](#)] *number*

Synopsis Enter the **pushed-labels** list instance

Context **configure** [router](#) *named-item-64* [mpls forwarding-policies forwarding-policy](#) *named-item-64* [next-hop-group](#) *number* [backup-next-hop](#) [pushed-labels](#) *number*

Tree [pushed-labels](#)

Max. instances 10

Introduced 25.3.R2

Platforms 7705 SAR-1

[[index](#)] *number*

Synopsis Index for push label

Context **configure** [router](#) *named-item-64* [mpls forwarding-policies forwarding-policy](#) *named-item-64* [next-hop-group](#) *number* [backup-next-hop](#) [pushed-labels](#) *number*

Tree	pushed-labels
Range	1 to 10
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

label *number*

resolution-type *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Resolution type for next hop group
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> next-hop-group <i>number</i> resolution-type <i>keyword</i>
Tree	resolution-type
Options	direct, indirect
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference number
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

revert-timer *number*

Synopsis	Revert timer
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> revert-timer <i>number</i>
Tree	revert-timer
Range	1 to 600

Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-table-pref *number*

Synopsis	Tunnel table preference
Context	configure router <i>named-item-64</i> mpls forwarding-policies forwarding-policy <i>named-item-64</i> tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref
Description	<p>This command configures the TTM preference value of an MPLS forwarding policy. It is used by applications to select one tunnel type to bind to in TTM when multiple tunnel types are enabled for the application.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

reserved-label-block *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	configure router <i>named-item-64</i> mpls forwarding-policies reserved-label-block <i>reference</i>

frr-object *boolean*

Synopsis	Signal with fast reroute object
----------	---------------------------------

Context	configure router <i>named-item-64</i> mpls frr-object <i>boolean</i>
Tree	frr-object
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-timer *number*

Synopsis	Hold timer value
Context	configure router <i>named-item-64</i> mpls hold-timer <i>number</i>
Tree	hold-timer
Range	0 to 1000
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *reference*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i>
Tree	interface
Description	<p>Commands in this context configure the attributes for MPLS protocol support on an IP interface.</p> <p>MPLS commands are not executed on an IP interface where MPLS is not enabled. An MPLS interface must be explicitly enabled (admin-state enabled).</p> <p>The MPLS interface must be admin-state disabled to delete the interface definition.</p> <p>A corresponding RSVP interface must also be configured. The MPLS interface cannot be deleted without also deleting the RSVP interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *reference*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i>

Tree	interface
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group *reference*

Synopsis	Administrative groups supported by the interface
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> admin-group <i>reference</i>
Tree	admin-group
Description	<p>This command specifies the administrative groups that the interface supports.</p> <p>This information is advertised as part of OSPF and IS-IS to help CSPF compute constrained LSPs that must include or exclude certain administrative groups. An MPLS interface is assumed to belong to all the administrative groups unless this command is issued under the interface configuration. With this command configured, the interface is assumed to belong to only the groups specifically configured in this command.</p> <p>Only the administrative groups bound to an MPLS interface are advertised in TE link TLVs and sub-TLVs when the traffic-engineering option is enabled in IS-IS or OSPF. IES and VPRN interfaces do not have their attributes advertised in TE TLVs.</p>
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MPLS interface
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

label-map [[in-label](#)] *number*

Synopsis	Enter the label-map list instance
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i>
Tree	label-map
Introduced	25.3.R2
Platforms	7705 SAR-1

[in-label] *number*

Synopsis	Match the incoming MPLS label
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i>
Tree	label-map
Range	32 to 1048575
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the label map
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

pop**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Pop (remove) the incoming label and forward packet based on service header
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i> pop
Tree	pop
Notes	The following elements are part of a choice: pop or swap .
Introduced	25.3.R2
Platforms	7705 SAR-1

swap

Synopsis	Enable the swap context
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i> swap
Tree	swap
Notes	The following elements are part of a choice: pop or swap .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop *ipv4-unicast-address*

Synopsis	IP address for the next hop
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i> swap next-hop <i>ipv4-unicast-address</i>
Tree	next-hop
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

out-label (*number* | *keyword*)

Synopsis	Push specific label onto the top of the outgoing packet's label stack
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> label-map <i>number</i> swap out-label (<i>number</i> <i>keyword</i>)
Tree	out-label

Range	16 to 1048575
Options	implicit-null-label
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

srlg-group [\[name\]](#) *reference*

Synopsis	Add a list entry for srlg-group
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> srlg-group <i>reference</i>
Tree	srlg-group
Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *reference*

Synopsis	Shared Risk Link Group (SRLG) name
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> srlg-group <i>reference</i>
Tree	srlg-group
Reference	configure routing-options if-attribute srlg-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

te-metric *number*

Synopsis	TE metric for the interface
Context	configure router <i>named-item-64</i> mpls interface <i>reference</i> te-metric <i>number</i>
Tree	te-metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

least-fill-min-thd *number*

Synopsis	Percentage of the least fill minimum threshold value
Context	configure router <i>named-item-64</i> mpls least-fill-min-thd <i>number</i>
Tree	least-fill-min-thd
Range	0 to 100
Units	percent
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

least-fill-reoptim-thd *number*

Synopsis	Percentage of the least fill reoptimization threshold value
Context	configure router <i>named-item-64</i> mpls least-fill-reoptim-thd <i>number</i>
Tree	least-fill-reoptim-thd
Range	0 to 100
Units	percent
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

logger-event-bundling *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Merge and bundle MPLS traps
Context	configure router <i>named-item-64</i> mpls logger-event-bundling <i>boolean</i>
Tree	logger-event-bundling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp [*lsp-name*] *named-item-64*

Synopsis	Enter the lsp list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>lsp</i> <i>named-item-64</i>
Tree	<i>lsp</i>
Description	<p>Commands in this context create or configure an LSP that is either signaled dynamically by the router, or is a statically provisioned MPLS-TP LSP.</p> <p>Use the to command to specify the egress router. At least one primary or secondary path (for signaled LSPs or at least one working path for MPL-TP LSPs) must be specified when the LSP is created. All other statements under the LSP hierarchy are optional.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[lsp-name] *named-item-64*

Synopsis	Labeled Switch path name
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>lsp</i> <i>named-item-64</i>
Tree	<i>lsp</i>
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptive *boolean*

Synopsis	Enable make-before-break functionality
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>lsp</i> <i>named-item-64</i> <i>adaptive</i> <i>boolean</i>
Tree	<i>adaptive</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LSP
----------	---------------------------------

Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-tag [[name](#)] *reference*

Synopsis	Add a list entry for admin-tag
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> admin-tag <i>reference</i>
Tree	admin-tag
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *reference*

Synopsis	Name of the admin tags
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> admin-tag <i>reference</i>
Tree	admin-tag
Reference	configure routing-options admin-tags admin-tag <i>string</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adspec *boolean*

Synopsis	Include ADSPEC object in RSVP messages
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> adspec <i>boolean</i>
Tree	adspec
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> bfd
Tree	bfd
Description	Commands in this context configure BFD on LSPs. These commands apply to BFD on RSVP LSPs.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> bfd bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	When configured to true , the system enables LSP BFD on the LSP. LSP BFD must also be configured under the configure router context. The named BFD template provides the configuration settings for the BFD session, which must be configured and associated with the service using the BFD template. When configured to false , the system disables LSP BFD on the LSP. This command applies to BFD on RSVP LSPs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-template *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> bfd bfd-template <i>reference</i>
Tree	bfd-template
Reference	configure bfd bfd-template <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

failure-action *keyword*

Synopsis	Action when LSP BFD fails on the RSVP SR-TE LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> bfd failure-action <i>keyword</i>
Tree	failure-action
Description	<p>This command specifies the action when LSP BFD fails on a LSP.</p> <p>Regardless of the failure action specified, when the BFD session goes down on the LSP, the system generates an SNMP trap.</p>
Options	none, down, failover, failover-or-down
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-ping-interval (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> bfd lsp-ping-interval (<i>number</i> <i>keyword</i>)
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

wait-for-up-timer *number*

Synopsis	Time to wait for BFD to become operationally available
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Description	<p>This command configures the time to wait for BFD to become operationally up.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none">• a path undergoing MBB when BFD is up• the initial administrative state of the LSP

- the retry signaling of non-standby secondary paths

Range	1 to 60
Units	seconds
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-shortcut *boolean*

Synopsis	Include LSP for BGP routes
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> bgp-shortcut <i>boolean</i>
Tree	<i>bgp-shortcut</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-transport-tunnel *boolean*

Synopsis	Include LSP as transport LSP for labeled BGP routes
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> bgp-transport-tunnel <i>boolean</i>
Tree	<i>bgp-transport-tunnel</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

binding-sid *number*

Synopsis	Binding SID for the LSP
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> binding-sid <i>number</i>
Tree	<i>binding-sid</i>
Description	This command binds a label to the LSP. The label value must belong to the reserved label block that is configured with the configure router mpls lsp-bsid-block command.
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

class-type *number*

Synopsis	Class type for an LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> class-type <i>number</i>
Tree	class-type
Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label *keyword*

Synopsis	Entropy label
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> entropy-label <i>keyword</i>
Tree	entropy-label
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-admin-group *reference*

Synopsis	Name of admin group excluded when LSP is set up
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> exclude-admin-group <i>reference</i>
Tree	exclude-admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-node (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Exclude Routers object to be included in the bypass path message
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> exclude-node (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)

Tree	exclude-node
Introduced	25.3.R2
Platforms	7705 SAR-1

fallback-path-computation-method *keyword*

Synopsis	Fallback path computation method
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> fallback-path-computation-method <i>keyword</i>
Tree	fallback-path-computation-method
Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-reroute

Synopsis	Enable the fast-reroute context
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> fast-reroute
Tree	fast-reroute
Introduced	25.3.R2
Platforms	7705 SAR-1

frr-method *keyword*

Synopsis	Fast Reroute method
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> fast-reroute frr-method <i>keyword</i>
Tree	frr-method
Options	one-to-one, facility
Introduced	25.3.R2
Platforms	7705 SAR-1

hop-limit *number*

Synopsis	Total number of hops a detour or backup LSP can take
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> fast-reroute hop-limit <i>number</i>
Tree	hop-limit
Range	0 to 255
Default	16
Introduced	25.3.R2
Platforms	7705 SAR-1

node-protect *boolean*

Synopsis	Enable node and link protection for the specified LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> fast-reroute node-protect <i>boolean</i>
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-admin-group *boolean*

Synopsis	Enable admin group constraints on a FRR backup LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> fast-reroute propagate-admin-group <i>boolean</i>
Tree	propagate-admin-group
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

from (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IP address of this LSP
----------	-------------------------------

Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> from (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	from
Introduced	25.3.R2
Platforms	7705 SAR-1

hop-limit *number*

Synopsis	Maximum number of hops that an LSP can traverse including ingress and egress routers
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> hop-limit <i>number</i>
Tree	hop-limit
Range	2 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-shortcut

Synopsis	Enter the igp-shortcut context
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> igp-shortcut
Tree	igp-shortcut
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of LSP for shortcut or forwarding
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> igp-shortcut admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-sr-over-srte *boolean*

Synopsis	Use as eligible SRv4 or SRv6 IGP shortcut
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>igp-shortcut</i> allow-sr-over-srte <i>boolean</i>
Tree	<i>allow-sr-over-srte</i>
Description	When configured to true , the router performs the local SPF and the SR-TE LSP is used as an eligible IGP SR-MPLS shortcut for SR-MPLS SRv4 or SRv6 only if the SR-TE is explicitly allowed using this command when the top SID in the SR-TE LSP is an adjacency SID.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lfa-type *keyword*

Synopsis	LSP usage in LFA SPF
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>igp-shortcut</i> lfa-type <i>keyword</i>
Tree	<i>lfa-type</i>
Options	lfa-protect, lfa-only
Notes	The following elements are part of a choice: lfa-type or relative-metric .
Introduced	25.3.R2
Platforms	7705 SAR-1

relative-metric *number*

Synopsis	Shortest IGP cost between the endpoints of the LSP plus the configured offset
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>igp-shortcut</i> relative-metric <i>number</i>
Tree	<i>relative-metric</i>
Range	-10 to 10
Notes	The following elements are part of a choice: lfa-type or relative-metric .
Introduced	25.3.R2
Platforms	7705 SAR-1

include-admin-group *reference*

Synopsis	Admin group name included when LSP is set up
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> include-admin-group reference
Tree	include-admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

label-stack-reduction *boolean*

Synopsis	Enable label compression for LSP path
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> label-stack-reduction <i>boolean</i>
Tree	label-stack-reduction
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp-over-rsvp *boolean*

Synopsis	Include this LSP in LDP over RSVP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> ldp-over-rsvp <i>boolean</i>
Tree	ldp-over-rsvp
Introduced	25.3.R2
Platforms	7705 SAR-1

least-fill *boolean*

Synopsis	Enable least-fill path selection for this LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> least-fill <i>boolean</i>
Tree	least-fill
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

load-balancing-weight *number*

Synopsis Load balancing weight for an MPLS LSP

Context **configure** [router](#) *named-item-64* [mpls lsp](#) *named-item-64* [load-balancing-weight](#) *number*

Tree [load-balancing-weight](#)

Range 1 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

local-sr-protection *keyword*

Synopsis Local SR protection preference for LSP path computation

Context **configure** [router](#) *named-item-64* [mpls lsp](#) *named-item-64* [local-sr-protection](#) *keyword*

Tree [local-sr-protection](#)

Options none, preferred, mandatory

Default preferred

Introduced 25.3.R2

Platforms 7705 SAR-1

main-ct-retry-limit *number*

Synopsis Maximum number of retries before reverting to backup CT

Context **configure** [router](#) *named-item-64* [mpls lsp](#) *named-item-64* [main-ct-retry-limit](#) *number*

Tree [main-ct-retry-limit](#)

Range 1 to 10000

Introduced 25.3.R2

Platforms 7705 SAR-1

max-sr-labels

Synopsis Enter the **max-sr-labels** context

Context **configure** [router](#) *named-item-64* [mpls lsp](#) *named-item-64* [max-sr-labels](#)

Tree [max-sr-labels](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

additional-frr-labels *number*

Synopsis	Value for the maximum additional overhead labels
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> max-sr-labels additional-frr-labels <i>number</i>
Tree	additional-frr-labels
Range	0 to 4
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

label-stack-size *number*

Synopsis	Maximum label stack size
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> max-sr-labels label-stack-size <i>number</i>
Tree	label-stack-size
Description	This command configures the maximum label stack size of the primary path of the SR-TE LSP.
Range	1 to 11
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	LSP metric that forces to a constant value
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> metric <i>number</i>
Tree	metric
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-type *keyword*

Synopsis	Metric type used for LSP path computation
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> metric-type <i>keyword</i>
Tree	metric-type
Options	igp, te, delay
Default	igp
Introduced	25.3.R2
Platforms	7705 SAR-1

override-tunnel-elc *boolean*

Synopsis	Override any received entropy label capability
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Description	When configured to true , this command allows the system to override any received entropy label capability advertisement. When configured to false , this command disables the override.
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

path-computation-method *keyword*

Synopsis	Path computation method
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> path-computation-method <i>keyword</i>
Tree	path-computation-method
Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the hop-to-label translation is used for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP. See "SR-TE LSP path computation using hop-to-label translation" in the <i>7705 SAR Gen 2 Segment Routing nad PCE User Guide</i> for more information.
Options	local-cspf, pce
Introduced	25.3.R2

Platforms 7705 SAR-1

path-profile *[profile-id] number*

Synopsis	Enter the path-profile list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> path-profile <i>number</i>
Tree	<i>path-profile</i>
Description	Commands in this context configure the attributes of the PCE path profile.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[profile-id] *number*

Synopsis	Profile ID for the specified LSP
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> path-profile <i>number</i>
Tree	<i>path-profile</i>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

path-group *number*

Synopsis	Path-group ID for the specified LSP
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> path-profile <i>number</i> path-group <i>number</i>
Tree	<i>path-group</i>
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

pce-associations

Synopsis	Enter the pce-associations context
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> pce-associations
Tree	pce-associations
Description	Commands in this context configure the LSP binding with one or more PCEP associations.
Introduced	25.3.R2
Platforms	7705 SAR-1

diversity [[diversity-name](#)] *reference*

Synopsis	Add a list entry for diversity
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> pce-associations diversity <i>reference</i>
Tree	diversity
Description	Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[diversity-name] *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> pce-associations diversity <i>reference</i>
Tree	diversity
Reference	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

policy [*policy-name*] *reference*

Synopsis	Add a list entry for policy
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>pce-associations</i> <i>policy</i> <i>reference</i>
Tree	<i>policy</i>
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[policy-name] *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>pce-associations</i> <i>policy</i> <i>reference</i>
Tree	<i>policy</i>
Reference	configure <i>router</i> <i>named-item-64</i> <i>pcep pcc</i> <i>pce-associations</i> <i>policy</i> <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

pce-control *boolean*

Synopsis	Enable PCE controlled LSP mode of operation
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>pce-control</i> <i>boolean</i>
Tree	<i>pce-control</i>
Description	<p>When configured to true, this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.</p> <p>When configured to false, the PCE-controlled mode of operation for the LSP has no effect.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

pce-report *keyword*

Synopsis	Global configuration of reporting to PCE to override
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> pce-report <i>keyword</i>
Tree	pce-report
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

primary [[path-name](#)] *reference*

Synopsis	Enter the primary list instance
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> primary <i>reference</i>
Tree	primary
Description	<p>Commands in this context configure a preferred path for the LSP. This command is optional only if the secondary path name is included in the LSP definition. Only one primary path can be defined for an LSP.</p> <p>Some attributes of the LSP, such as the bandwidth and hop-limit can be optionally specified as the attributes of the primary path. The attributes specified in this command override the LSP attributes.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[path-name] *reference*

Synopsis	Path name

rsvp-resv-style *keyword*

Synopsis Reservation style for RSVP

Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>rsvp-resv-style</i> <i>keyword</i>
Tree	<i>rsvp-resv-style</i>
Options	se, ff
Default	se
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary [*path-name*] *reference*

Synopsis	Enter the secondary list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp</i> <i>named-item-64</i> <i>secondary</i> <i>reference</i>
Tree	<i>secondary</i>
Description	<p>Commands in this context configure an alternative path that the LSP uses if the primary path is not available. This command is optional and is not required when the configure router mpls lsp primary command is specified. After the switchover from the primary to the secondary, the system continuously tries to revert to the primary path. The switch back to the primary path is based on the retry-timer interval.</p> <p>The system does not switch among secondary paths. The system starts the signaling (RSVP-TE) or programming (SR-TE) of all non-standby secondary paths at the same time. Retry counters are maintained for each unsuccessful attempt. After the retry limit is reached on a path, the system does not attempt to signal the path and administratively disables the path. The first successfully established non-standby secondary path is made the active path for the LSP.</p> <p>For RSVP-TE LSPs, up to eight secondary paths can be specified (or seven if a primary is configured). For SR-TE LSPs, up to three paths of any type (with a maximum of one primary) can be configured. By default, a secondary path is non-standby unless the standby keyword is configured. All non-standby secondary paths are considered equal, and the first available path is used.</p>
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary reference include-admin-group group reference
Tree	group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

path-preference *number*

Synopsis	Path preference for the secondary standby path
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary reference path-preference <i>number</i>
Tree	path-preference
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

priority

Synopsis	Enter the priority context
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary reference priority
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-priority *number*

Synopsis	Priority of an LSP session at preemption action
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary reference priority hold-priority <i>number</i>
Tree	hold-priority

Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

setup-priority *number*

Synopsis	Priority when insufficient bandwidth for LSP setup
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary <i>reference</i> priority <i>setup-priority</i> <i>number</i>
Tree	setup-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

record *boolean*

Synopsis	Enable recording of all hops that an LSP path traverses
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary <i>reference</i> record <i>boolean</i>
Tree	record
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

record-label *boolean*

Synopsis	Enable recording of labels at each node or instance
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary <i>reference</i> record-label <i>boolean</i>
Tree	record-label
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

srlg *boolean*

Synopsis	Use SRLG constraint in secondary path computation for an LSP at the head-end LER
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary reference srlg <i>boolean</i>
Tree	srlg
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

standby *boolean*

Synopsis	Keep secondary path indefinitely in hot standby state
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> secondary reference standby <i>boolean</i>
Tree	standby
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

to (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination IP address or the egress router for the LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> to (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	to
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	LSP for bypass protection, point to multipoint, segment routing or MPLS-TP static LSP
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> type <i>keyword</i>
Tree	type
Options	p2p-rsvp, p2p-static-mpls, p2p-rsvp-bypass, p2mp-rsvp, p2mp-rsvp-auto, p2p-rsvp-mesh, p2p-rsvp-one-hop, p2p-sr-te, p2p-sr-te-mesh, p2p-sr-te-one-hop, p2p-sr-te-pce-init, p2p-sr-te-on-demand, p2p-member
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

vprn-auto-bind boolean

Synopsis	Include this LSP in auto-bind for VPRN services
Context	configure router <i>named-item-64</i> mpls lsp <i>named-item-64</i> vprn-auto-bind <i>boolean</i>
Tree	vprn-auto-bind
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-bsid-block reference**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block for binding SIDs
Context	configure router <i>named-item-64</i> mpls lsp-bsid-block <i>reference</i>
Tree	lsp-bsid-block
Description	This command references a pre-existing reserved label block for statically configured binding SIDs.
Reference	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>
Introduced	25.3.R2

Platforms 7705 SAR-1

lsp-history

Synopsis Enable the **lsp-history** context

Context **configure** [router](#) *named-item-64* [mpls](#) [lsp-history](#)

Tree [lsp-history](#)

Description Commands in this context control the recording of LSP history events.

When the context is deleted, memory is deallocated.

When the context is created, memory is allocated for storing up to 100 of the most recent RSVP and SR-TE LSP history events.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of LSP history recording

Context **configure** [router](#) *named-item-64* [mpls](#) [lsp-history](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

lsp-init-retry-timeout *number*

Synopsis LSP initial retry timeout

Context **configure** [router](#) *named-item-64* [mpls](#) [lsp-init-retry-timeout](#) *number*

Tree [lsp-init-retry-timeout](#)

Range 10 to 600

Units seconds

Default 30

Introduced 25.3.R2

Platforms 7705 SAR-1

lsp-template [*template-name*] *named-item*

Synopsis	Enter the lsp-template list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> lsp-template <i>named-item</i>
Tree	lsp-template
Description	Commands in this context configure the attributes of an LSP template that can be referenced by a client application when dynamic LSPs must be created.
Max. instances	4096
Introduced	25.3.R2
Platforms	7705 SAR-1

[template-name] *named-item*

Synopsis	LSP template name
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> lsp-template <i>named-item</i>
Tree	lsp-template
Description	This command specifies the name of the LSP template. An LSP template name and LSP name must not be the same.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptive *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable make-before-break functionality
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> lsp-template <i>named-item</i> adaptive <i>boolean</i>
Tree	adaptive
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LSP template
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-tag [[name](#)] *reference*

Synopsis	Add a list entry for admin-tag
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> admin-tag <i>reference</i>
Tree	admin-tag
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *reference*

Synopsis	Name of the admin tags
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> admin-tag <i>reference</i>
Tree	admin-tag
Reference	configure routing-options admin-tags admin-tag <i>string</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adspec *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include ADSPEC objects in RSVP messages
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> adspec <i>boolean</i>
Tree	adspec
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

backup-class-type *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup class type for this LSP template
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> backup-class-type <i>number</i>
Tree	backup-class-type
Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

bandwidth *number*

Synopsis	Amount of bandwidth reserved for the P2MP instance
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> bandwidth <i>number</i>
Tree	bandwidth
Range	0 to 6400000
Units	megabps
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> bfd
Tree	bfd
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD (S-BFD) on SR-TE LSPs. These commands apply to BFD on RSVP LSPs.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> bfd bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	When configured to true , LSP BFD is enabled on the RSVP LSP or S-BFD is enabled for the SR-TE LSP. LSP BFD must also be configured under the configure router context. The named BFD template provides the configuration settings for the BFD session, which must be configured and associated with the service using the BFD template. When configured to false , LSP BFD is disabled on the RSVP LSP or S-BFD on the SR-TE LSP. These commands apply to BFD on RSVP LSPs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-template *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> bfd bfd-template <i>reference</i>

Tree	bfd-template
Reference	configure bfd bfd-template <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

failure-action *keyword*

Synopsis	Action to take when LSP BFD session fails
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> bfd failure-action <i>keyword</i>
Tree	failure-action
Options	none, down, failover-or-down
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-ping-interval (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> bfd lsp-ping-interval (<i>number</i> <i>keyword</i>)
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-shortcut *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable use of RSVP LSP for IPv4 BGP routes
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>lsp-template</i> <i>named-item</i> <i>bgp-shortcut</i> <i>boolean</i>
Tree	<i>bgp-shortcut</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-transport-tunnel *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow use of RSVP-TE LSP as transport for tunnel routes
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>lsp-template</i> <i>named-item</i> <i>bgp-transport-tunnel</i> <i>boolean</i>
Tree	<i>bgp-transport-tunnel</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

binding-sid *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Request to allocate and bind a label
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>lsp-template</i> <i>named-item</i> <i>binding-sid</i> <i>boolean</i>
Tree	<i>binding-sid</i>
Description	<p>When configured to true, the system allocates and binds a label to any LSP that is created using the template.</p> <p>When configured to false, this command removes the configuration but this does not affect LSPs that were already created using the template.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

class-type *number*

 **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Class type for an LSP template
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> class-type <i>number</i>
Tree	class-type
Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

default-path *reference*

 **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

 **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default path to be used for signaling LSP instances
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> default-path <i>reference</i>
Tree	default-path
Reference	configure <i>router</i> <i>named-item-64</i> <i>mpls path</i> <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-metric-limit *number*

 **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay metric limit
----------	--------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> delay-metric-limit <i>number</i>
Tree	delay-metric-limit
Description	<p>This command configures the upper limit of the delay metric used by the local CSPF in the LSP path computation. The computation uses this configuration value only if the metric type is configured to delay in the configure router mpls lsp-template metric-type context.</p> <p>If the configured metric type is delay and this command is not configured, the computation selects the lowest latency path.</p>
Range	1 to 16777215
Units	microseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Entropy label for an LSP template
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> entropy-label <i>keyword</i>
Tree	entropy-label
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-admin-group *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Admin group name excluded when LSP is set up
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> exclude-admin-group <i>reference</i>
Tree	exclude-admin-group
Reference	configure <i>routing-options</i> <i>if-attribute</i> admin-group <i>named-item</i>

Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

fallback-path-computation-method *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Fallback path computation method
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> fallback-path-computation-method <i>keyword</i>
Tree	fallback-path-computation-method
Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	25.3.R2
Platforms	7705 SAR-1

family *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Address family that specifies template use in SR-TE LSP
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> family <i>keyword</i>
Tree	family
Description	This command specifies the address family for which the LSP template applies in an SR-TE LSP. An LSP template is required for each address family.
Options	ipv4, ipv6
Default	ipv4
Introduced	25.3.R2

Platforms7705 SAR-1

fast-reroute

**WARNING:**

max-sr-labels

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-sr-labels context
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> max-sr-labels
Tree	max-sr-labels
Introduced	25.3.R2
Platforms	7705 SAR-1

additional-frr-labels *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of additional overhead labels
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> max-sr-labels additional-frr-labels <i>number</i>
Tree	additional-frr-labels
Range	0 to 4
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

label-stack-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size for the maximum segment routing label stack
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> max-sr-labels label-stack-size <i>number</i>
Tree	label-stack-size
Range	1 to 11
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP template metric
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> metric <i>number</i>
Tree	metric
Range	0 to 16777215
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Metric type used for LSP path computation
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> metric-type <i>keyword</i>
Tree	metric-type
Options	igp, te, delay
Default	igp
Introduced	25.3.R2
Platforms	7705 SAR-1

override-tunnel-elc *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Override any received entropy label capability
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Description	When configured to true , this command allows the system to override any received entropy label capability advertisement. When configured to false , this command disables the override.
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

path-computation-method *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Path computation method
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> path-computation-method <i>keyword</i>
Tree	path-computation-method
Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the hop-to-label translation is used for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP. See "SR-TE LSP path computation using hop-to-label translation" in the <i>7705 SAR Gen 2 Segment Routing nad PCE User Guide</i> for more information.
Options	local-cspf, pce
Introduced	25.3.R2
Platforms	7705 SAR-1

path-profile [[profile-id](#)] *number*

Synopsis	Enter the path-profile list instance
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> path-profile <i>number</i>
Tree	path-profile
Description	Commands in this context configure the attributes of the PCE path profile.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[profile-id] *number*

Synopsis	Profile ID for the specified LSP
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> path-profile <i>number</i>
Tree	path-profile
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

path-group *number*

Synopsis	Path-group ID for the specified LSP
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> path-profile <i>number</i> path-group <i>number</i>
Tree	path-group
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

pce-associations

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the pce-associations context
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> pce-associations
Tree	pce-associations
Description	Commands in this context configure the LSP binding with one or more PCEP associations.
Introduced	25.3.R2
Platforms	7705 SAR-1

diversity [[diversity-name](#)] *reference*

Synopsis	Add a list entry for diversity
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> pce-associations diversity <i>reference</i>
Tree	diversity
Description	Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[**diversity-name**] *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> pce-associations diversity <i>reference</i>
Tree	diversity
Reference	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

policy [*policy-name*] *reference*

Synopsis	Add a list entry for policy
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> <i>pce-associations</i> <i>policy</i> <i>reference</i>
Tree	<i>policy</i>
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[policy-name] *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> <i>pce-associations</i> <i>policy</i> <i>reference</i>
Tree	<i>policy</i>
Reference	configure <i>router</i> <i>named-item-64</i> <i>pcep pcc</i> <i>pce-associations</i> <i>policy</i> <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

pce-control *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PCE controlled LSP mode of operation
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls lsp-template</i> <i>named-item</i> <i>pce-control</i> <i>boolean</i>
Tree	<i>pce-control</i>
Description	When configured to true , this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.

	When configured to false , the PCE-controlled mode of operation for the LSP has no effect.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pce-report *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable reporting modes to PCE for RSVP-TE or SR-TE LSPs
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> pce-report <i>keyword</i>
Tree	pce-report
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the priority context

Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-priority *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold priority when insufficient bandwidth is available to set up LSP
----------	--

Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> priority hold-priority <i>number</i>
Tree	hold-priority
Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

setup-priority *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Setup priority when insufficient bandwidth is available to set up LSP
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> priority setup-priority <i>number</i>
Tree	setup-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-admin-group *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable admin groups via session attribute object
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> propagate-admin-group <i>boolean</i>
Tree	propagate-admin-group
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

record *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable recording of all hops for this LSP template
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> record <i>boolean</i>
Tree	record
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

record-label *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable recording of labels at each node or instance
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> record-label <i>boolean</i>
Tree	record-label
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-limit *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of attempts to re-establish LSP after it fails
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> retry-limit <i>number</i>
Tree	retry-limit
Range	1 to 10000
Introduced	25.3.R2

Platforms7705 SAR-1

retry-timer *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time for LSP re-establishment attempts after failure
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> retry-timer <i>number</i>
Tree	retry-timer
Range	1 to 600
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

template-id (*number* | *keyword*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Template ID
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> template-id (<i>number</i> <i>keyword</i>)
Tree	template-id
Description	This command specifies the value that is signaled in the PCE to identify the LSP template.
Range	1 to 4294967295
Options	default
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	LSP template type
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> type <i>keyword</i>
Tree	type
Description	This command configures the type of a template that can be referenced by a client application where dynamic LSP creation is required. The LSP template type is mandatory.
Options	p2mp-rsvp, p2p-rsvp-one-hop, p2p-rsvp-mesh, p2p-sr-te-one-hop, p2p-sr-te-mesh, p2p-sr-te-pce-init, p2p-sr-te-on-demand, p2p-rsvp-member
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

vprn-auto-bind *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Context	configure router <i>named-item-64</i> mpls pce-report sr-te <i>boolean</i>
Tree	sr-te
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

resignal-on-igp-event *boolean*

Synopsis	Reoptimize RSVP LSP paths upon IGP events
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>resignal-on-igp-event</i> <i>boolean</i>
Tree	<i>resignal-on-igp-event</i>
Description	<p>When configured to true, the system enables the ad hoc reoptimization of the active CSPF path of all RSVP-TE LSPs at the receipt of an IGP link event. The following link events are supported:</p> <ul style="list-style-type: none"> • link down • link up • IGP or TE metric change • SRLG change • admin group change <p>The ad hoc reoptimization follows the same behavior as in the timer-based resignal Make-Before-Break (MBB) feature. MPLS reevaluates the active paths of all RSVP-TE LSPs. The reevaluation consists of updating the total IGP or TE metric of the current path, checking the validity of the hops, and computing a new CSPF path. MPLS signals and programs the new path only if its total metric is different than the updated metric of the current path, or if one or more hops of the current path are invalid. Otherwise, the current path is considered to be the most optimal and retained.</p> <p>This feature does not require that the timer-based resignal (configure router mpls resignal-timer) command be enabled. If enabled, the resignal timer is aborted and an ad hoc reoptimization is performed.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

resignal-on-igp-overload *boolean*

Synopsis	Resignal all RSVP-TE LSPs upon IGP overload
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>resignal-on-igp-overload</i> <i>boolean</i>
Tree	<i>resignal-on-igp-overload</i>
Description	<p>When configured to true, the receipt of the IS-IS overload bit in the TE-DB triggers the immediate resignaling of all RSVP-TE LSPs. MPLS forces the expiry of the resignal timer and the TE-DB computes a new CSPF for each RSVP-TE LSP active path. The re-optimization causes the immediate transition of RSVP-TE LSP paths away from the IS-IS node in overload using the MBB operation.</p> <p>This command cannot be configured to true when the retry-on-igp-overload command is configured to true.</p> <p>When configured to false, the default behavior is maintained where MBB re-optimization occurs only when a timer-based resignal is performed or a manual resignal is executed.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

resignal-timer *number*

Synopsis Resignal timer for RSVP LSPs
Context **configure** [router](#) *named-item-64* [mpls](#) [resignal-timer](#) *number*

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te-resignal

Synopsis	Enter the sr-te-resignal context
Context	configure router <i>named-item-64</i> mpls sr-te-resignal
Tree	sr-te-resignal
Introduced	25.3.R2
Platforms	7705 SAR-1

resignal-on-igp-event *boolean*

Synopsis	Reoptimize SR-TE LSPs upon IGP link events
Context	configure router <i>named-item-64</i> mpls sr-te-resignal resignal-on-igp-event <i>boolean</i>
Tree	resignal-on-igp-event
Description	<p>When configured to true, the system enables the ad hoc reoptimization of all CSPF paths in the operational UP state of all SR-TE LSPs at the receipt of an IGP link event. The following link events are supported:</p> <ul style="list-style-type: none">• link down• link up• IGP or TE metric change• SRLG change• admin group change

The ad hoc reoptimization follows the same behavior as in the timer-based resignal Make-Before-Break (MBB) feature. MPLS reevaluates all the paths in the operational UP state of all SR-TE LSPs. The reevaluation consists of updating the total IGP or TE metric of the current path, checking the validity of the hops and labels, and computing a new CSPF path. MPLS programs the new path only if its total metric is different than the updated metric of the current path, or if one or more hops or labels of the current path are invalid. Otherwise, the current path is considered to be the most optimal and retained.

This feature does not require that the timer-based resignal (**configure router mpls sr-te-resignal resignal-timer**) command be enabled. If enabled, the resignal timer is aborted and an ad hoc reoptimization is performed.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

resignal-on-igp-overload *boolean*

Synopsis	Enable resignaling of SR-TE LSPs upon IGP overload
Context	configure router <i>named-item-64</i> mpls sr-te-resignal resignal-on-igp-overload <i>boolean</i>
Tree	resignal-on-igp-overload
Description	<p>When configured to true, the system enables ad-hoc re-optimization of the CSPF paths of all SR-TE LSPs when IS-IS receives an IS-IS overload bit advertisement from a remote router.</p> <p>When this command is enabled on the router and an IGP overload bit is set in a Layer 1 or Layer 2 IS-IS LSP received from a remote router, MPLS performs an ad-hoc re-optimization of all the paths of all the SR-TE LSPs that have paths computed by the local CSPF. For each SR-TE LSP current path that transits the router in overload, the CSPF looks for a new path that avoids the router. For each SR-TE LSP current path that terminates on the router in overload, the CSPF checks if a better path exists. In both cases, if a new path is not found the system maintains the current path when operationally up.</p> <p>The ad-hoc re-optimization triggers the timer-based re-optimization by forcing the resignal timer to expire. Therefore, the user must use the configure router mpls sr-te-resignal resignal-timer command to configure the resignal timer for the SR-TE application.</p> <p>When configured to false, MPLS does not act immediately on an IS-IS overload bit from a remote router. MPLS acts on it at the next timer-based or manual re-optimization of the SR-TE LSPs.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

resignal-timer *number*

Synopsis	Resignal timer for SR-TE LSPs
Context	configure router <i>named-item-64</i> mpls sr-te-resignal resignal-timer <i>number</i>
Tree	resignal-timer
Description	This command configures the time the system waits before signaling the re-optimization of all SR-TE LSPs.
Range	30 to 10080
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

static-lsp-fast-retry *number*

Synopsis	Fast retry timer for static LSPs
Context	configure <i>router</i> <i>named-item-64</i> mpls static-lsp-fast-retry <i>number</i>
Tree	static-lsp-fast-retry

Range	1 to 30
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-ero-nhop-direct-resolution *boolean*

Synopsis	Resolves RSVP-TE LSP ERO to local and host routes only
Context	configure router <i>named-item-64</i> mpls strict-ero-nhop-direct-resolution <i>boolean</i>
Tree	strict-ero-nhop-direct-resolution
Description	<p>When configured to true, the router enables the strict Explicit Route Object (ERO) next-hop direct resolution. The feature restricts the routes used to resolve the next hop of an ERO address to local and host routes. This command avoids using a next hop over a parallel link when a half link is up in the routing table.</p> <p>This command applies to an ERO when all of the following conditions are met:</p> <ul style="list-style-type: none">• the ERO next hop is an IPv4 address• the ERO object is a strict hop• the IPv4 address matches the primary subnet of a local numbered interface <p>If no such route exists, RSVP rejects the PATH message with ErrCode = Routing Error (24) and SubErrCode = Bad Strict Node (2).</p> <p>When configured to false, the router disables the strict ERO next-hop direct resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-table-pref

Synopsis	Enter the tunnel-table-pref context
Context	configure router <i>named-item-64</i> mpls tunnel-table-pref
Tree	tunnel-table-pref
Description	Commands in this context configure the tunnel table preference for RSVP-TE LSP and SR-TE LSP tunnel types.
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-te number

Synopsis	RSVP-TE tunnel table preference
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>tunnel-table-pref</i> <i>rsvp-te</i> <i>number</i>
Tree	<i>rsvp-te</i>
Description	<p>This command configures the tunnel table preference for RSVP-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>Nokia recommends that tunnel types have unique preference values. In a situation where two or more tunnel types are set to the same preference value, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te number

Synopsis	SR-TE tunnel table preference
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>tunnel-table-pref</i> <i>sr-te</i> <i>number</i>
Tree	<i>sr-te</i>
Description	<p>This command configures the tunnel table preference for SR-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	8
Introduced	25.3.R2

Platforms 7705 SAR-1

user-srlg-db *boolean*

Synopsis Enable the use of user SRLG database

Context **configure** *router* *named-item-64* *mpls* *user-srlg-db* *boolean*

Tree [user-srlg-db](#)

Tree [mpls-labels](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

bgp-labels-hold-timer *number*

Synopsis BGP labels hold timer for the ingress router

Context **configure** *router* *named-item-64* *mpls-labels* *bgp-labels-hold-timer* *number*

Tree [bgp-labels-hold-timer](#)

Description This command configures the time to delay before the label-forwarding entries programmed by BGP are removed from the datapath. A non-zero delay is useful in the following situations:

- label-unicast route is readvertised by an ABR/ASBR operating in label-per-next-hop mode to choose a new primary path
- IP VPN route is readvertised by an ABR/ASBR operating in label-per-next-hop mode to choose a new primary path
- IP VPN best-external route is readvertised by a VPRN to choose a new backup path
- IP VPN route is readvertised by a VPRN in label-per-next-hop mode to choose a new primary path

In the preceding situations, configure the hold timer to be large enough to account for the propagation delay of the route withdrawal to all ingress routers.

Range 0 to 255

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

reserved-label-block [[label-block-name](#)] *named-item-64*

Synopsis	Enter the reserved-label-block list instance
Context	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>
Tree	reserved-label-block
Description	Commands in this context configure a block of labels from the dynamic range to be locally assigned for specific applications, such as segment routing adjacency SIDs. The reserved label block is not advertised by the IGP. Note: Changes to the reserved label block range do not impact the actual MPLS datapath table sizes.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[label-block-name] *named-item-64*

Synopsis	Name for the reserved label block
Context	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>

cpm-reserved-ports *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of ports per protocol reserved for CPM traffic
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> large-scale use-interface-ip cpm-reserved-ports <i>number</i>
Tree	cpm-reserved-ports
Description	This command configures the router to reserve ports specifically for local (CPM) traffic. On the public IPv4 address of a NAT interface, the ports are shared between CPM traffic

and transit traffic passing through the node. This reservation ensures that NAT traffic destined for the local node (CPM traffic) is guaranteed a minimum number of available ports, even if the public IPv4 port pool becomes exhausted.

Range	0 to 65535
Default	10
Introduced	25.7.R1
Platforms	7705 SAR-1

dynamic-block-reservation *boolean*

 **WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

SynopsisReserve dynamic block for subscriber

Context**configure** [router](#) [named-item-64](#) [nat](#) [outside](#) [pool](#) [named-item](#) [port-forwarding](#) [dynamic-block-reservation](#) *boolean*

Tree[dynamic-block-reservation](#)

Description

When configured to **true**, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.

The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.

Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.

When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.

Defaultfalse

Introduced25.3.R2

Platforms7705 SAR-1

range-end *number*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> port-forwarding range-end <i>number</i>
Tree	range-end
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0 1023 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

port-reservation

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> port-reservation port-blocks <i>number</i>
Tree	port-blocks
Description	<p>In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the I2-aware port-block-extension hierarchy in the NAT pool.</p>
Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-1

ports *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> port-reservation ports <i>number</i>
Tree	ports
Description	<p>For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.</p> <p>For Layer 2 aware NAT, this command specifies the size of the initial port block of a subscriber in the pool. Additional port blocks (extended port blocks) for the Layer 2 aware subscriber must be explicitly enabled under the I2-aware port-block-extension hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port blocks.</p>

	For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.
Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-1

rpki-session [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the rpki-session list instance
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	rpki-session
Description	This command configures a session with an RPKI local cache server by using the RPKI to Router (RPKI-RTR) protocol. Using these sessions, the router learns dynamic VRP entries expressing valid origin AS and prefix associations. SR OS supports the RPKI-RTR protocol over TCP/IPv4 or TCP/IPv6 transport. The router can set up an RPKI-RTR session using the base routing table (in-band) or the management router (out-of-band). Use the configure router management command to configure a session using the management port.
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address for the RPKI local cache server
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	rpki-session
Description	This command specifies an IPv4 address or an IPv6 address for the RPKI local cache server. If the IPv6 address is link-local, the interface name must be appended to the IPv6 address after a hyphen (-).
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

refresh-time

Synopsis	Enter the refresh-time context
Context	configure router <i>named-item-64</i> origin-validation rpk-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) refresh-time
Tree	refresh-time
Description	Commands in this context configure the refresh-time and hold-time intervals that are used for liveness detection of the RPKI-RTR session.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time number

Synopsis	Length of time that the session is considered Up
Context	configure router <i>named-item-64</i> origin-validation rpk-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) refresh-time hold-time <i>number</i>
Tree	hold-time
Description	This command specifies the length of time that the session is considered Up without any indication that the cache server is alive and reachable. The hold time must be at least twice the refresh time, otherwise the command configuration is not accepted. The timer

is reset when any PDU from the cache server is received. When the hold time expires, the session is considered Down and the stale timer starts.

Range	60 to 65535
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

value number

Synopsis	Periodic Serial Query PDUs sent for liveness detection
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) refresh-time value number
Tree	value
Description	This command configures the refresh-time interval used for liveness detection of the RPKI-RTR session. The refresh time is reset when a Reset Query PDU or Serial Query PDU is sent to the cache server. When the timer expires, a new Serial Query PDU is sent with the last known serial number.
Range	30 to 32767
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-time number

Synopsis	Maximum time prefix origin validation remains usable
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) stale-time number
Tree	stale-time
Description	This command configures the maximum length of time that prefix origin validation records learned from the cache server remain usable after the RPKI-RTR session goes down. When the timer expires, all remaining stale entries associated with the session are deleted.
Range	60 to 3600
Units	seconds
Default	3600

Introduced	25.3.R2
Platforms	7705 SAR-1

static-entry [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*) **upto** *number* **origin-as** *number*

Synopsis	Enter the static-entry list instance
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i>
Tree	static-entry
Description	<p>Commands in this context configure a static VRP entry indicating that a specific origin AS is either valid or invalid for a specific IP prefix range. Static VRP entries are stored, along with dynamic VRP entries (learned from local cache servers using the RPKI-RTR protocol), in the origin validation database of the router. This database is used for determining the origin validation state of IPv4 and IPv6 BGP routes received over sessions with origin validation enabled.</p> <p>Static entries can be configured only in the configure router origin-validation context of the base router.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IPv4 or IPv6 address with the minimum prefix and length
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i>

interface [**interface-name**] *interface-name*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> ospf number <i>area ipv4-address</i> interface <i>interface-name</i>
Tree	interface
Description	Commands in this context configure the attributes of the OSPF area interface. Unless they are explicitly configured, interfaces are not activated by default in any interior gateway protocol such as OSPF.
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> ospf number <i>area ipv4-address</i> interface <i>interface-name</i>
Tree	interface
Description	This command specifies the IP interface name. Interface names must be unique within the group of defined IP interfaces for configure router interface and configure service ies interface commands. An interface name cannot be in the form of an IP address. Interface names can be a string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. If the IP interface name does not exist or does not have an IP address configured, an error message is returned. If the IP interface exists in a different area it is moved to this area.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-set [[id](#)] *reference*

Synopsis	Add a list entry for adjacency-set
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> adjacency-set <i>reference</i>
Tree	adjacency-set
Max. instances	1024
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *reference*

Tree [remain-down-on-failure](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

strict *boolean*

Synopsis Enable BFD strict mode

Context **configure** *router* *named-item-64* *ospf* *number* *area* *ipv4-address* *interface* *interface-name* *bfd-liveness* **strict** *boolean*

Tree [strict](#)

Description When configured to **true**, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.

During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

strict-mode-holddown *number*

Synopsis Adjacency up time delay after BFD session establishment

Context **configure** *router* *named-item-64* *ospf* *number* *area* *ipv4-address* *interface* *interface-name* *bfd-liveness* **strict-mode-holddown** *number*

Tree [strict-mode-holddown](#)

Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down

node-sid

Synopsis	Enable the node-sid context
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid
Tree	node-sid

Description Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.

In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.

This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.

The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.

The **clear-n-flag** option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is

tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.

Introduced 25.3.R2
Platforms 7705 SAR-1

clear-n-flag *boolean*

Synopsis Clear the N-flag in an OSPF prefix

Context **configure** *router* *named-item-64* *ospf* *number* *area* *ipv4-address* *interface* *interface-name* *node-sid* **clear-n-flag** *boolean*

Tree [clear-n-flag](#)

Description When configured to **true**, this command allows the user to clear the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system.

When configured to **false**, the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.

When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

Platforms 7705 SAR-1

type-nssa *boolean*

Synopsis Generate a default route using NSSA-LSA type

Context **configure** [router](#) *named-item-64* [ospf](#) *number* [area](#) *ipv4-address* [nssa](#) [originate-default-route](#) [type-nssa](#) *boolean*

Tree [type-nssa](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

redistribute-external *boolean*

Synopsis Redistribute external routes into the NSSA

Context **configure** [router](#) *named-item-64* [ospf](#) *number* [area](#) *ipv4-address* [nssa](#) [redistribute-external](#) *boolean*

Tree [redistribute-external](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the NSSA on an ABR

Context **configure** [router](#) *named-item-64* [ospf](#) *number* [area](#) *ipv4-address* [nssa](#) [summaries](#) *boolean*

Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

stub

Synopsis	Enable the stub context
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> stub
Tree	stub
Introduced	25.3.R2
Platforms	7705 SAR-1

default-metric *number*

Synopsis	Metric used by ABR for default route into the stub area
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> stub default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777214
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> stub summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-link [[router-id](#)] [ipv4-address](#) [transit-area](#) *reference*

Synopsis	Enter the virtual-link list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> area ipv4-address virtual-link ipv4-address transit-area <i>reference</i>
Tree	virtual-link
Introduced	25.3.R2
Platforms	7705 SAR-1

[router-id] [ipv4-address](#)

Synopsis	Router identity of the virtual link neighbor
Context	configure router <i>named-item-64</i> ospf <i>number</i> area ipv4-address virtual-link ipv4-address transit-area <i>reference</i>
Tree	virtual-link
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-area *reference*

Synopsis	Transit area linking the backbone to not-connected area
Context	configure router <i>named-item-64</i> ospf <i>number</i> area ipv4-address virtual-link ipv4-address transit-area <i>reference</i>
Tree	virtual-link
Reference	configure router <i>named-item-64</i> ospf <i>number</i> area ipv4-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	configure router <i>named-item-64</i> ospf <i>number</i> area ipv4-address virtual-link ipv4-address transit-area <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure router named-item-64 ospf number area ipv4-address virtual-link ipv4-address transit-area reference authentication-key encrypted-leaf
Tree	authentication-key
String length	1 to 38
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router named-item-64 ospf number area ipv4-address virtual-link ipv4-address transit-area reference authentication-keychain reference
Tree	authentication-keychain
Reference	configure system security keychains keychain named-item
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type used on OSPF interface
Context	configure router named-item-64 ospf number area ipv4-address virtual-link ipv4-address transit-area reference authentication-type keyword
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-digest-key [*key-id*] *number*

Synopsis	Enter the message-digest-key list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Introduced	25.3.R2
Platforms	7705 SAR-1

[key-id] *number*

Synopsis	Message digest index
----------	----------------------

Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

md5 encrypted-leaf

Synopsis	MD5 hash key
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i> md5 <i>encrypted-leaf</i>
Tree	md5
String length	1 to 51
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval number

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay number

Synopsis	Required LSA transmit time
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> transit-delay <i>number</i>

Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

asbr

Synopsis	Enable the asbr context
Context	configure router <i>named-item-64</i> ospf <i>number</i> asbr
Tree	asbr
Introduced	25.3.R2
Platforms	7705 SAR-1

trace-path (*number* | *keyword*)

Synopsis	Domain identity
Context	configure router <i>named-item-64</i> ospf <i>number</i> asbr trace-path (<i>number</i> <i>keyword</i>)
Tree	trace-path
Range	0 to 31
Options	none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

compatible-rfc1583 *boolean*

Synopsis	OSPF summary and external route calculations
Context	configure router <i>named-item-64</i> ospf <i>number</i> compatible-rfc1583 <i>boolean</i>
Tree	compatible-rfc1583
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

database-export

Synopsis	Enable the database-export context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> database-export
Tree	database-export
Description	<p>Commands in this context enable the population of the extended TE Database (TE-DB) with the link-state information from a specific IGP instance.</p> <p>This information includes the IGP, TE, and SR information, prefix SID sub-TLV, adjacency SID sub-TLV, and router SR capability TLV.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-ls-identifier

Synopsis	Enable the bgp-ls-identifier context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> database-export bgp-ls-identifier
Tree	bgp-ls-identifier
Description	Commands in this context correlate, along with the Autonomous System Number (ASN), the BGP-LS NLRI advertisements of multiple BGP-LS speakers of the same IGP domain.
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	BGP-LS ID sent in the BGP-LS NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> database-export bgp-ls-identifier value <i>number</i>
Tree	value
Description	<p>This command configures the BGP-LS ID to export.</p> <p>If an NRC-P network domain has multiple IGP domains, a user must configure BGP-LS speakers within each IGP domain with the same unique ASN, BGP-LS ID tuple. The BGP-LS identifier is optional and is only sent in a BGP-LS NLRI if configured in the IGP instance of an IGP domain.</p> <p>Note: If this IGP instance participates in traffic engineering with RSVP-TE or SR-TE, the traffic-engineering command configuration is not strictly required because enabling the extended TE-DB populates this information automatically. However, Nokia recommends enabling the traffic-engineering command to make the configuration consistent with other routers in the network that do not require the enabling of the extended TE-DB.</p>

Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-identifier *number*

Synopsis	IGP instance in the BGP-LS NLRI
Context	configure router <i>named-item-64</i> ospf <i>number</i> database-export igp-identifier <i>number</i>
Tree	igp-identifier
Description	This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a specified IGP domain when the router sends the IGP link state information using BGP-LS.
Max. range	0 to 18446744073709551615
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-ls-only *boolean*

Synopsis	Encode only reachable link-state information
Context	configure router <i>named-item-64</i> ospf <i>number</i> database-export reachable-ls-only <i>boolean</i>
Tree	reachable-ls-only
Description	<p>When configured to true, the router, acting as a BGP-LS producer, must withdraw all link-state objects it has advertised in BGP, in accordance with section 5.9 of RFC 9552. This withdrawal occurs when the node that originated the corresponding LSPs is determined to be unreachable in the IGP based on the failure of a reachability check for that node. This withdrawal operation assists network controllers in assessing a reachable IGP topology, even in networks with segmented areas. For backward compatibility, the default behavior remains unchanged.</p> <p>When configure to false, the router continues to send link-state objects even for links that fail an IGP reachability check.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label

Synopsis	Enter the entropy-label context
Context	configure router <i>named-item-64</i> ospf <i>number</i> entropy-label
Tree	entropy-label
Introduced	25.3.R2
Platforms	7705 SAR-1

override-tunnel-elc *boolean*

Synopsis	Enable override of received ELC advertisements
Context	configure router <i>named-item-64</i> ospf <i>number</i> entropy-label override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure router <i>named-item-64</i> ospf <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router <i>named-item-64</i> ospf <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>export-limit</i> <i>number</i> <i>number</i>
Tree	<i>number</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>export-policy</i> <i>reference</i>
Tree	<i>export-policy</i>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

external-db-overflow

Synopsis	Enable the external-db-overflow context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>external-db-overflow</i>
Tree	<i>external-db-overflow</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time during which the router operates in overload
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-db-overflow limit <i>number</i>
Tree	limit
Range	0 to 2147483647
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

flexible-algorithms

Synopsis	Enter the flexible-algorithms context
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms
Tree	flexible-algorithms
Description	Commands in this context configure the OSPFv2 parameters for flexible algorithm participation.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms admin-state <i>keyword</i>
Tree	admin-state
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-admin-group *keyword*

Synopsis	Administrative group TLV to advertise
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms advertise-admin-group <i>keyword</i>
Tree	advertise-admin-group
Description	This command configures the type of Administrative Group TLV the router advertises as an IGP link attribute. This command is configured for this IGP instance.
Options	prefer-ag, eag-only, ag-eag
Default	prefer-ag
Introduced	25.3.R2
Platforms	7705 SAR-1

flex-algo [*flex-algo-id*] *number*

Synopsis	Enter the flex-algo list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i>
Tree	<i>flex-algo</i>
Description	<p>Commands in this context configure the attributes of the OSPFv2 flexible algorithm.</p> <p>The maximum unique flexible algorithms can be configured on a router across all configured OSPFv2 instances. In each OSPF flexible algorithm configuration context, the OSPFv2 instance participation can be either enabled or disabled, and it configures the advertising of a locally-configured flexible algorithm definition.</p> <p>When flexible algorithm is enabled in an OSPF instance, it is enabled for all areas within the OSPF instance.</p>
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

[flex-algo-id] *number*

Synopsis	Flexible algorithm ID
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i>
Tree	<i>flex-algo</i>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise *reference*

Synopsis	Flexible Algorithm Definition advertisement
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i> <i>advertise</i> <i>reference</i>
Tree	<i>advertise</i>
Description	<p>This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).</p> <p>The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected</p>

using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.

Reference	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR-1

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> micro-loop-avoidance
Tree	micro-loop-avoidance
Description	<p>When configured, the system enables micro-loop avoidance for an SR-OSPF flexible algorithm, and consequently, inherits the FIB delay timer from the SR-OSPF configure router ospf segment-routing context.</p> <p>When this command is configured, FIB updates are delayed before the system programs new primary next hops to avoid micro-loops.</p> <p>When configured, the feature applies to the following contexts:</p> <ul style="list-style-type: none"> • OSPFv2 SR-OSPF IPv4 tunnel (node SID) • IPv4 and IPv6 SR-TE LSPs that use a node SID in their segment list • IPv4 and IPv6 SR policies that use a node SID in their segment list <p>When micro-loop-avoidance is disabled (by removing this command from the configuration), the system forces any running FIB delay to expire immediately and programs the new next hops for all impacted node SIDs. When disabled, micro-loop avoidance is disabled instantaneously and will be disabled for the next SPF runs. Micro-loop avoidance remains disabled until it is re-enabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> participate <i>boolean</i>
Tree	participate
Description	<p>When configured to true, the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.</p> <p>When configured to false, flexible algorithm participation is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i>

Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-shortcut

Synopsis	Enter the igp-shortcut context
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut
Tree	igp-shortcut
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IGP shortcuts
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-sr-over-srte *boolean*

Synopsis	Enable SR over SR-TE LSPs
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut allow-sr-over-srte <i>boolean</i>
Tree	allow-sr-over-srte
Description	<p>When configured to true, the router only allows SR-MPLS SRv4 and SRv6 IGP shortcuts to use SR-TE LSPs with allow-sr-over-srte explicitly enabled with an adjacency SID as top SID in the SR-TE LSP. IPv4 and IPv6 addresses can use all available SR-TE LSPs as IGP shortcuts regardless of the explicit allow-sr-over-srte configuration.</p> <p>Under ECMP, when this command is configured to true, preference is given to the SR-TE LSPs with allow-sr-over-srte explicitly configured over the LSPs that do not have allow-sr-over-srte configured.</p>
Default	false

Introduced 25.3.R2
Platforms 7705 SAR-1

tunnel-next-hop

Synopsis Enter the **tunnel-next-hop** context
Context **configure** [router](#) *named-item-64* [ospf](#) *number* [igp-shortcut](#) [tunnel-next-hop](#)

Platforms	7705 SAR-1

multi-homed-prefix

Synopsis	Enable the multi-homed-prefix context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate multi-homed-prefix
Tree	multi-homed-prefix
Description	<p>Commands in this context configure a multihomed prefix LFA for both RTM routes (IP FRR) and SR-OSPF tunnels. SR-OSPF tunnels enable multihomed prefix extension in both algorithm 0 and flexible-algorithm numbers.</p> <p>This feature makes use of the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of local anycast prefixes.</p> <p>The computed IP next-hop based backup path is added to OSPF routes of external /32 prefixes (OSPFv2 routes types 3, 4, 5, and 7) and local /32 anycast prefixes in the RTM if the prefix is not protected by base LFA or if the user set leaf preference value to all. The user must enable the ip-fast-reroute leaf to have these backup paths programmed into the FIB in datapath.</p> <p>The computed IP next hop or repair tunnel based backup path is also programmed for SR-OSPF node SID tunnels of external /32 prefixes and to /32 prefixes in same area as the computing node S and which are advertised by multiple routers (anycast prefix) in both algorithm 0 and flexible-algorithm numbers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *keyword*

Synopsis	Multi-homed prefix LFA backup path preference
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate multi-homed-prefix preference <i>keyword</i>
Tree	preference
Options	none, all
Default	none
Introduced	25.3.R2

Platforms 7705 SAR-1

max-pq-nodes *number*

Synopsis Maximum number of PQ nodes found in the LFA SPF's

Context **configure** [router](#) *named-item-64* [ospf](#) *number* [loopfree-alternate](#) [remote-lfa](#) [node-protect](#) [max-pq-nodes](#) *number*

Tree [max-pq-nodes](#)

Range 1 to 32

Default	16
Introduced	25.3.R2
Platforms	7705 SAR-1

ti-lfa

Synopsis	Enable the ti-lfa context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa
Tree	ti-lfa
Description	Commands in this context configure the Topology Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this OSPF instance.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa max-sr-frr-labels <i>number</i>
Tree	max-sr-frr-labels
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR-1

multi-instance *boolean*

Synopsis	Enable OSPF Multi Instance Extensions
Context	configure router <i>named-item-64</i> ospf <i>number</i> multi-instance <i>boolean</i>
Tree	multi-instance
Description	When configured to true , the Base router supports RFC 6549, OSPFv2 Multi-Instance Extensions. This support is enabled per instance and allows flexibility when migrating a particular instance from classic OSPFv2 to a multi-instance OSPFv2.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-import *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	configure router <i>named-item-64</i> ospf <i>number</i> multicast-import <i>boolean</i>
Tree	multicast-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-import-policy *reference*

Synopsis	Import policy to submit IGP routes to the multicast RTM
Context	configure router <i>named-item-64</i> ospf <i>number</i> multicast-import-policy <i>reference</i>
Tree	multicast-import-policy
Description	This command specifies the policy used by OSPF to submit routes to the multicast RTM. This command applies only when the configure router ospf multicast-import command is enabled. By default, enabling multicast-import causes OSPF to submit all IGP routes to the multicast RTM. Configuring this command allows the user to specify prefixes in the policy prefix list to control OSPF route submission.
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	1
Notes	This element is ordered by the user.

Introduced 25.10.R1
Platforms 7705 SAR-1

overload *boolean*

Synopsis Change local router state to appear overloaded
Context **configure** *router* *named-item-64* *ospf* *number* **overload** *boolean*
Tree **overload**
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

overload-include-ext-1 *boolean*

Synopsis Advertise routes with maximum metric value for overload
Context **configure** *router* *named-item-64* *ospf* *number* **overload-include-ext-1** *boolean*
Tree **overload-include-ext-1**
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

overload-include-ext-2 *boolean*

Synopsis Advertise routes with maximum metric value for overload
Context **configure** *router* *named-item-64* *ospf* *number* **overload-include-ext-2** *boolean*
Tree **overload-include-ext-2**
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

overload-include-stub *boolean*

Synopsis Advertise all stub interfaces with max metric value
Context **configure** *router* *named-item-64* *ospf* *number* **overload-include-stub** *boolean*
Tree **overload-include-stub**

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-on-boot

Synopsis	Enable the overload-on-boot context
Context	configure router <i>named-item-64</i> ospf <i>number</i> overload-on-boot

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing
Tree	segment-routing
Introduced	25.3.R2
Platforms	7705 SAR-1

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing adj-sid-hold (<i>number</i> <i>keyword</i>)
Tree	adj-sid-hold
Description	<p>This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.</p> <p>When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.</p> <ul style="list-style-type: none"> • IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV. • The adjacency SID hold timer starts. • The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges. • If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value. • If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value. • A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.
Range	1 to 1800
Units	seconds
Options	none
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-set [*id*] *number*

Synopsis	Enter the adjacency-set list instance

override-bmi *number*

Synopsis	Value to override the announced node MSD-BMI value
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>segment-routing</i> <i>maximum-sid-depth</i> <i>override-bmi</i> <i>number</i>
Tree	<i>override-bmi</i>
Description	<p>This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.</p> <p>When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.</p>
Range	0 to 12
Introduced	25.3.R2
Platforms	7705 SAR-1

override-erld *number*

Synopsis	Value to override the announced node MSD-ERLD value
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>segment-routing</i> <i>maximum-sid-depth</i> <i>override-erld</i> <i>number</i>
Tree	<i>override-erld</i>
Description	<p>This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing.</p> <p>When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.</p>
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR-1

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>segment-routing</i> <i>micro-loop-avoidance</i>
Tree	<i>micro-loop-avoidance</i>
Description	Commands in this context configure micro-loop avoidance for SR-OSPF.

Introduced	25.3.R2
Platforms	7705 SAR-1

fib-delay *number*

Synopsis	FIB delay
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing micro-loop-avoidance fib-delay <i>number</i>
Tree	fib-delay
Description	<p>This command configures the FIB delay before programming new primary next hops.</p> <p>Configure the FIB delay timer to a value that corresponds to the worst-case IGP convergence in a network domain. The default FIB delay timer value corresponds to a network with a nominal convergence time.</p> <p>When configured, the feature applies to the following contexts:</p> <ul style="list-style-type: none"> • SPfv2 SR-OSPF IPv4 tunnel (node SID) • IPv4 and IPv6 SR-TE LSPs that use a node SID in their segment list • IPv4 and IPv6 SR policies that use a node SID in their segment list <p>When micro-loop avoidance is disabled, the system forces any running FIB delay to expire immediately and the system programs new next hops for all impacted node SIDs. When disabled, micro-loop avoidance is disabled instantaneously and will be disabled for the next SPF runs. Micro-loop avoidance remains disabled until it is re-enabled.</p>
Range	1 to 300
Units	deciseconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-sid-range

Synopsis	Enable the prefix-sid-range context
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing prefix-sid-range
Tree	prefix-sid-range
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	25.3.R2
Platforms	7705 SAR-1

global

Synopsis	BGP global SR range allocation
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing prefix-sid-range global
Tree	global
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the configure router mpls-labels sr-labels context.
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR-1

max-index *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

tunnel-table-pref number

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref
Description	This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the any value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

Note: The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more instances of that protocol programmed a tunnel for the same prefix. The selection of a SR tunnel in this case is based on the lowest preference IGP instance. In the case of a tie, the instance with the lowest metric SR tunnel is selected over the lowest numbered IGP instance. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255

Introduced	25.3.R2
Platforms	7705 SAR-1

remain-down-on-failure *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict *boolean*

Synopsis	Enable BFD strict mode
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict <i>boolean</i>
Tree	strict
Description	<p>When configured to true, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.</p> <p>During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict-mode-holddown <i>number</i>
Tree	strict-mode-holddown

Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1

node-sid

Synopsis	Enable the node-sid context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid
Tree	node-sid
Description	<p>Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.</p> <p>In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.</p> <p>This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.</p> <p>The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.</p> <p>The clear-n-flag option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p> <p>The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-n-flag boolean

Synopsis	Clear the N-flag in an OSPF3 prefix
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid clear-n-flag <i>boolean</i>
Tree	clear-n-flag

Description	<p>When configured to true, this command allows the user to clear the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system.</p> <p>When configured to false, the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.</p> <p>When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

index number

Synopsis	Node SID index for this interface
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid index <i>number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

label number

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid label <i>number</i>
Tree	label
Range	1 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

passive boolean

Synopsis	Advertise passive interfaces as OSPF interfaces
----------	---

Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> passive <i>boolean</i>
Tree	passive
Introduced	25.3.R2
Platforms	7705 SAR-1

poll-interval *number*

Synopsis	Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> poll-interval <i>number</i>
Tree	poll-interval
Max. range	0 to 4294967295
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Interface priority in the DR election on the subnet
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> priority <i>number</i>
Tree	priority
Range	0 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800

Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-priority *keyword*

Synopsis	RIB priority for OSPF
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> rib-priority <i>keyword</i>
Tree	rib-priority
Options	high
Introduced	25.3.R2
Platforms	7705 SAR-1

sid-protection *boolean*

Synopsis	Allow adjacency SID protection by LFA and remote LFA
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> sid-protection <i>boolean</i>
Tree	sid-protection
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

key-rollover-interval *number*

Synopsis	Key rollover interval
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>key-rollover-interval</i> <i>number</i>
Tree	<i>key-rollover-interval</i>
Range	10 to 300
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>loopfree-alternate-exclude</i> <i>boolean</i>
Tree	<i>loopfree-alternate-exclude</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nssa

Synopsis	Enable the nssa context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>nssa</i>
Tree	<i>nssa</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

area-range [*ip-prefix-mask*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the area-range list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>nssa</i> <i>area-range</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	<i>area-range</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Addresses on ABR for route summarization or suppression

Context **configure** *router* *named-item-64* *ospf3* *number* *area* *ipv4-address* *nssa* *area-range* (*ipv4-prefix* | *ipv6-prefix*)

Tree *area-range*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

advertise *boolean*

Synopsis Advertise summarized range of addresses to other areas

Context **configure** *router* *named-item-64* *ospf3* *number* *area* *ipv4-address* *nssa* *area-range* (*ipv4-prefix* | *ipv6-prefix*) *advertise* *boolean*

Tree *advertise*

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

originate-default-route

Synopsis Enable the **originate-default-route** context

Context **configure** *router* *named-item-64* *ospf3* *number* *area* *ipv4-address* *nssa* *originate-default-route*

Tree *originate-default-route*

Introduced 25.3.R2

Platforms 7705 SAR-1

adjacency-check *boolean*

Synopsis Default route to remove if there is no adjacency

Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa originate-default-route adjacency-check <i>boolean</i>
Tree	adjacency-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

type-nssa *boolean*

Synopsis	Generate a default route using NSSA-LSA type
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa originate-default-route type-nssa <i>boolean</i>
Tree	type-nssa
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

redistribute-external *boolean*

Synopsis	Redistribute external routes into the NSSA
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa redistribute-external <i>boolean</i>
Tree	redistribute-external
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the NSSA on an ABR
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

stub

Synopsis	Enable the stub context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> stub
Tree	stub
Introduced	25.3.R2
Platforms	7705 SAR-1

default-metric *number*

Synopsis	Metric used by ABR for default route into the stub area
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> stub default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777214
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> stub summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-link [[router-id](#)] *ipv4-address* [transit-area](#) *reference*

Synopsis	Enter the virtual-link list instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
Introduced	25.3.R2

Platforms 7705 SAR-1

[**router-id**] *ipv4-address*

Synopsis Router ID of the virtual link neighbor

Context **configure** **router** *named-item-64* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *reference*

Tree **virtual-link**

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

transit-area *reference*

Synopsis Transit area linking backbone and non-connected area

Context **configure** **router** *named-item-64* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *reference*

Tree **virtual-link**

Reference **configure** **router** *named-item-64* **ospf3** *number* **area** *ipv4-address*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the OSPF interface

Context **configure** **router** *named-item-64* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *reference* **admin-state** *keyword*

asbr

Synopsis	Enable the asbr context
Context	configure router <i>named-item-64</i> ospf3 <i>number asbr</i>
Tree	asbr
Introduced	25.3.R2
Platforms	7705 SAR-1

database-export

Synopsis	Enable the database-export context
Context	configure router <i>named-item-64</i> ospf3 <i>number database-export</i>
Tree	database-export
Description	<p>Commands in this context enable the population of the extended TE Database (TE-DB) with the link-state information from a specific IGP instance.</p> <p>This information includes the IGP, TE, and the SR information, prefix SID sub-TLV, adjacency SID sub-TLV, and router SR capability TLV.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-ls-identifier

Synopsis	Enable the bgp-ls-identifier context
Context	configure router <i>named-item-64</i> ospf3 <i>number database-export</i> bgp-ls-identifier
Tree	bgp-ls-identifier
Description	Commands in this context correlate, along with the Autonomous System Number (ASN), the BGP-LS NLRI advertisements of multiple BGP-LS speakers of the same IGP domain.
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	BGP-LS ID sent in the BGP-LS NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>database-export</i> <i>bgp-ls-identifier</i> <i>value</i> <i>number</i>
Tree	<i>value</i>
Description	<p>This command configures the BGP-LS ID to export.</p> <p>If an NRC-P network domain has multiple IGP domains, a user must configure BGP-LS speakers within each IGP domain with the same unique ASN, BGP-LS ID tuple. The BGP-LS identifier is optional and is only sent in a BGP-LS NLRI if configured in the IGP instance of an IGP domain.</p> <p>Note: If this IGP instance participates in traffic engineering with RSVP-TE or SR-TE, the traffic-engineering command configuration is not strictly required because enabling the extended TE-DB populates this information automatically. However, Nokia recommends enabling the traffic-engineering command to make the configuration consistent with other routers in the network that do not require the enabling of the extended TE-DB.</p>
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-identifier *number*

Synopsis	IGP instance in the BGP-LS NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>database-export</i> <i>igp-identifier</i> <i>number</i>
Tree	<i>igp-identifier</i>
Description	<p>This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a specified IGP domain when the router sends the IGP link state information using BGP-LS.</p>
Max. range	0 to 18446744073709551615
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-ls-only *boolean*

Synopsis	Encode only reachable link-state information
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>database-export</i> <i>reachable-ls-only</i> <i>boolean</i>
Tree	<i>reachable-ls-only</i>
Description	<p>When configured to true, the router, acting as a BGP-LS producer, must withdraw all link-state objects it has advertised in BGP, in accordance with section 5.9 of RFC 9552. This withdrawal occurs when the node that originated the corresponding LSPs is determined to be unreachable in the IGP based on the failure of a reachability check for that node. This withdrawal operation assists network controllers in assessing a reachable IGP topology, even in networks with segmented areas. For backward compatibility, the default behavior remains unchanged.</p> <p>When configure to false, the router continues to send link-state objects even for links that fail an IGP reachability check.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>export-limit</i>
Tree	<i>export-limit</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>export-limit</i> <i>log-percent</i> <i>number</i>
Tree	<i>log-percent</i>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>export-limit</i> <i>number</i> <i>number</i>
Tree	<i>number</i>

Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-lsa *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Extended LSA format in an OSPFv3 area
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> extended-lsa <i>keyword</i>

ti-lfa

Synopsis	Enable the ti-lfa context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate ti-lfa
Tree	ti-lfa
Description	Commands in this context configure the Topology Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this OSPFv3 instance.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate ti-lfa max-sr-frr-labels <i>number</i>
Tree	max-sr-frr-labels
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate ti-lfa node-protect

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing adj-sid-hold (<i>number</i> <i>keyword</i>)
Tree	adj-sid-hold
Description	<p>This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.</p> <p>When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.</p> <ul style="list-style-type: none"> • IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV. • The adjacency SID hold timer starts. • The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges. • If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value. • If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value. • A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.
Range	1 to 1800
Units	seconds
Options	none

Default	15
Introduced	25.3.R2

tunnel-table-pref *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref
Description	This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the any value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to

use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

Note: The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more instances of that protocol programmed a tunnel for the same prefix. The selection of a SR tunnel in this case is based on the lowest preference IGP instance. In the case of a tie, the instance with the lowest metric SR tunnel is selected over the lowest numbered IGP instance. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Synopsis	Source IP address of the diversity association
----------	--

Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i> association-source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	association-source
Introduced	25.3.R2
Platforms	7705 SAR-1

disjointness-reference *boolean*

Synopsis	Configure P-flag in the disjointness configuration TLV
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i> disjointness-reference <i>boolean</i>
Tree	disjointness-reference
Description	<p>When configured to true, the router sets the P-flag in the disjointness configuration TLV. When the P-flag is set, it indicates that this LSP path is the reference path for the disjoint set of paths. The PCE must first compute the path of this LSP and then apply the requested disjointness type to compute the path of all other paths in the same diversity association ID.</p> <p>When configured to false, the router does not set the P-flag in the disjointness configuration TLV.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

disjointness-type *keyword*

Synopsis	Disjointness type for the association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i> disjointness-type <i>keyword</i>
Tree	disjointness-type
Options	strict, loose
Default	loose
Introduced	25.3.R2
Platforms	7705 SAR-1

diversity-type *keyword*

Synopsis	Diversity type for the association group
----------	--

Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item diversity-type keyword</i>
Tree	diversity-type
Description	This command configures the diversity type for the association group.
Options	none, link, node, srlg-link, srlg-node
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

policy [*assoc-name*] *named-item*

Synopsis	Enter the policy list instance
Context	configure router <i>named-item-64</i> pcep pcc pce-associations policy <i>named-item</i>
Tree	policy
Description	Commands in this context create a named policy association from which the parameters for the specified policy association are configured.
Introduced	25.3.R2
Platforms	7705 SAR-1

[assoc-name] *named-item*

Synopsis	Name of the association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations policy <i>named-item</i>
Tree	policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

association-id *number*

Synopsis	Association ID for the policy association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations policy <i>named-item association-id number</i>
Tree	association-id

Description	This command configures the policy association ID. The user must specify an association ID.
Range	0 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

association-source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for the association
Context	configure router <i>named-item-64</i> pcep pcc pce-associations policy <i>named-item</i> association-source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	association-source
Description	This command configures the source IP address of the policy association.
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination IP address of a PCE peer in a PCEP session
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the PCC peer
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Keychain for TCP-AO authentication between PCC and PCE
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Preference value of the peer
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) preference <i>number</i>
Tree	preference
Range	0 to 100

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

route-preference *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route preference to reach the PCE server
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) route-preference <i>keyword</i>
Tree	route-preference
Description	This command specifies the routing preference to reach the PCE server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the management routing instance are used to reach the PCE server before the in-band routes in the Base routing instance.
Options	inband, outband, both
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS client profile name assigned to this PCC peer
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-wait-timer *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time the PCC waits until declaring handshake failure
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tls-wait-timer <i>number</i>
Tree	tls-wait-timer
Range	60 to 255
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

redelegation-timer *number*

Synopsis	Configure redelegation-timer
Context	configure router <i>named-item-64</i> pcep pcc redelegation-timer <i>number</i>
Tree	redelegation-timer
Range	1 to 3600
Units	seconds
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

report-path-constraints *boolean*

Synopsis	Include LSP path constraints in PCE report messages
Context	configure router <i>named-item-64</i> pcep pcc report-path-constraints <i>boolean</i>
Tree	report-path-constraints
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

state-timer

Synopsis	Enter the state-timer context
Context	configure router <i>named-item-64</i> pcep pcc state-timer
Tree	state-timer
Introduced	25.3.R2
Platforms	7705 SAR-1

timer *number*

Synopsis	Configure state-timer
Context	configure router <i>named-item-64</i> pcep pcc state-timer timer <i>number</i>
Tree	timer
Range	1 to 3600
Units	seconds
Default	180
Introduced	25.3.R2
Platforms	7705 SAR-1

timer-action *keyword*

Synopsis	State timer action remove/none
Context	configure router <i>named-item-64</i> pcep pcc state-timer timer-action <i>keyword</i>
Tree	timer-action
Options	none, remove
Default	remove
Introduced	25.3.R2
Platforms	7705 SAR-1

unknown-message-rate *number*

Synopsis	Configure unknown message rate
Context	configure router <i>named-item-64</i> pcep pcc unknown-message-rate <i>number</i>
Tree	unknown-message-rate
Range	1 to 255

Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

pce

Synopsis	Enable the pce context
Context	configure router <i>named-item-64</i> pcep pce
Tree	pce
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the PCEP session element
Context	configure router <i>named-item-64</i> pcep pce admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Keychain for TCP-AO authentication between PCC and PCE
Context	configure router <i>named-item-64</i> pcep pce authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dead-timer *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure dead timer
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pce dead-timer</i> <i>number</i>
Tree	<i>dead-timer</i>
Range	1 to 255
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure keepalive
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pce keepalive</i> <i>number</i>
Tree	<i>keepalive</i>
Range	1 to 255
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

local-address *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
----------	--

Context	configure router <i>named-item-64</i> pcep pce local-address <i>ipv4-unicast-address</i>
Tree	local-address
Description	This command configures the local IPv4 address of the PCEP speaker.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-address-ipv6 *ipv6-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	configure router <i>named-item-64</i> pcep pce local-address-ipv6 <i>ipv6-unicast-address</i>
Tree	local-address-ipv6
Description	This command configures the local IPv6 address of the PCEP speaker.
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-server-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS server profile name assigned to this PCE
Context	configure router <i>named-item-64</i> pcep pce tls-server-profile <i>reference</i>
Tree	tls-server-profile
Reference	configure system security tls server-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-wait-timer *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure tls-wait-timer
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pce</i> tls-wait-timer <i>number</i>
Tree	<i>tls-wait-timer</i>
Range	60 to 255
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

unknown-message-rate *number*

Synopsis	Configure unknown message rate
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pce</i> unknown-message-rate <i>number</i>
Tree	<i>unknown-message-rate</i>
Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

pim

Synopsis	Enable the pim context
Context	configure <i>router</i> <i>named-item-64</i> pim
Tree	<i>pim</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of PIM
----------	-----------------------------

Context	configure router <i>named-item-64</i> pim admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

apply-to *keyword*

Synopsis	IES and non-IES interfaces to create in PIM
Context	configure router <i>named-item-64</i> pim apply-to <i>keyword</i>
Tree	apply-to
Options	ies, non-ies, all, none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Enter the import context
Context	configure router <i>named-item-64</i> pim import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR-1

join-policy *reference*

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim import join-policy <i>reference</i>
Tree	join-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms 7705 SAR-1

register-policy *reference*

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim import register-policy <i>reference</i>
Tree	register-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the PIM interface
----------	---

Context	configure <i>router</i> <i>named-item-64</i> pim interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

assert-period *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	configure <i>router</i> <i>named-item-64</i> pim interface <i>interface-name</i> assert-period <i>number</i>
Tree	assert-period
Range	1 to 300
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure <i>router</i> <i>named-item-64</i> pim interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Context	configure <i>router</i> <i>named-item-64</i> pim interface <i>interface-name</i> bfd-liveness ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> bfd-liveness ipv6 boolean
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bsm-check-rtr-alert *boolean*

Synopsis	Check router alert option in bootstrap messages received
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> bsm-check-rtr-alert boolean
Tree	bsm-check-rtr-alert
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> hello-interval <i>number</i>
Tree	hello-interval
Range	0 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-multiplier *number*

Synopsis	Multiplier to determine the hold time for PIM neighbor
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	20 to 100

Default	35
Introduced	25.3.R2
Platforms	7705 SAR-1

improved-assert *boolean*

Synopsis	Allow improved assert processing on interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> improved-assert <i>boolean</i>
Tree	improved-assert
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

instant-prune-echo *boolean*

Synopsis	Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> instant-prune-echo <i>boolean</i>
Tree	instant-prune-echo
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group

Tree	monitor-oper-group
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	Operational group identifier
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group priority-delta <i>number</i>
Tree	priority-delta
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 multicast <i>boolean</i>
Tree	multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group
Tree	monitor-oper-group
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	Operational group identifier
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group priority-delta <i>number</i>
Tree	priority-delta
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6 multicast <i>boolean</i>
Tree	multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

max-groups *number*

Synopsis	Maximum number of groups for the interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> max-groups <i>number</i>
Tree	max-groups
Range	0 1 to 16000
Default	0

Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-senders *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> multicast-senders <i>keyword</i>
Tree	multicast-senders
Options	auto, always, never
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	DR election priority for this interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> priority <i>number</i>
Tree	priority
Description	This command sets the priority value to elect the DR. The DR election priority is a 32-bit unsigned number and the numerically larger priority is always preferred.
Range	1 to 4294967295
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

sticky-dr

Synopsis	Enable the sticky-dr context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> sticky-dr
Tree	sticky-dr
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	DR election priority for this interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> sticky-dr <i>priority</i> <i>number</i>
Tree	priority
Range	1 to 4294967295
Default	1024
Introduced	25.3.R2
Platforms	7705 SAR-1

three-way-hello *boolean*

Synopsis	Allow three-way hello compatibility mode
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> three-way-hello <i>boolean</i>
Tree	three-way-hello
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tracking-support *boolean*

Synopsis	Allow upstream routers to explicitly track join membership
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> tracking-support <i>boolean</i>
Tree	tracking-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> pim ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of PIM operation for IPv4
Context	configure router <i>named-item-64</i> pim ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

rpf-table keyword

Synopsis	Route tables for RPF lookup
Context	configure router <i>named-item-64</i> pim ipv4 rpf-table <i>keyword</i>
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure router <i>named-item-64</i> pim ipv4 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

register-message ipv4-unicast-address

Synopsis	Source IPv4 address for PIM register messages
Context	configure router <i>named-item-64</i> pim ipv4 source-address register-message <i>ipv4-unicast-address</i>
Tree	register-message

Description	<p>This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-assert-compatible-mode *boolean*

Synopsis	Enable SSM assert compatible mode
Context	configure router <i>named-item-64</i> pim ipv4 ssm-assert-compatible-mode <i>boolean</i>
Tree	ssm-assert-compatible-mode
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-default-range *boolean*

Synopsis	SSM default range
Context	configure router <i>named-item-64</i> pim ipv4 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> pim ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv6
Context	configure router <i>named-item-64</i> pim ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

rpf-table *keyword*

Synopsis	Route tables for RPF lookup
Context	configure router <i>named-item-64</i> pim ipv6 rpf-table <i>keyword</i>
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure router <i>named-item-64</i> pim ipv6 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

register-message *ipv6-unicast-address*

Synopsis	Source IPv6 address for PIM register messages
Context	configure router <i>named-item-64</i> pim ipv6 source-address register-message <i>ipv6-unicast-address</i>
Tree	register-message

Description	<p>This command configures the source IPv6 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-default-range *boolean*

Synopsis	SSM default range
Context	configure router <i>named-item-64</i> pim ipv6 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mdt-spt *boolean*

Synopsis	Use SPT switchover for default MDT
Context	configure router <i>named-item-64</i> pim mdt-spt <i>boolean</i>
Tree	mdt-spt
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

non-dr-attract-traffic *boolean*

Synopsis	Attract traffic when the router is not the designated one
Context	configure router <i>named-item-64</i> pim non-dr-attract-traffic <i>boolean</i>
Tree	non-dr-attract-traffic
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pim-ssm-scaling *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PIM-SSM scaling
Context	configure <i>router</i> <i>named-item-64</i> pim pim-ssm-scaling <i>boolean</i>
Tree	pim-ssm-scaling
Description	<p>When configured to true, this command enables an increase of PIM SSM (S,G) scaling to a maximum of 256000 per system. The total maximum multicast capacity is, however, constrained by the lowest-performance FP.</p> <p>When the maximum link capacity from the fabric to the lowest-performance FP is reached, the link to that FP is overloaded, resulting in packet loss for all FPs. This capacity constraint is independent of whether the lowest-performance FP has a receiver on it or not. If the multicast management chassis per-plane total capacity is configured to an explicit value larger than that supported by the lowest-performance FP, then IMPM believes that there is more plane capacity available than there actually is and the result is (S,G) packet loss instead of blackholing. By setting the multicast management chassis per-plane total capacity to dynamic, the system automatically sets the switch fabric multicast plane capacity to the minimum value supported by the fabric and all line cards in the system.</p> <p>When PIM SSM scaling is enabled, the following multicast features are disabled:</p> <ul style="list-style-type: none">• DM• MoFRR• JP policy• InBand features (BIER and MLDP)• Extranet• ASM <p>When configured to false, there is no increase of PIM SSM (S,G) scaling.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rp

Synopsis	Enter the rp context
Context	configure <i>router</i> <i>named-item-64</i> pim rp
Tree	rp

Introduced	25.3.R2
Platforms	7705 SAR-1

bootstrap

Synopsis	Enter the bootstrap context
Context	configure router <i>named-item-64</i> pim rp bootstrap
Tree	bootstrap
Introduced	25.3.R2
Platforms	7705 SAR-1

export reference

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim rp bootstrap export reference
Tree	export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

import reference

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim rp bootstrap import reference
Tree	import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> pim rp ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

anycast [[ipv4-address](#)] *ipv4-unicast-address* [rp-set-peer](#) *ipv4-unicast-address*

Synopsis	Add a list entry for anycast
Context	configure router <i>named-item-64</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-unicast-address*

Synopsis	Loopback IP address shared by routes in RP set
Context	configure router <i>named-item-64</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-set-peer *ipv4-unicast-address*

Synopsis	Peer in the anycast RP-set
Context	configure router <i>named-item-64</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-rp-discovery *boolean*

Synopsis	Enable auto-RP discovery mode and auto-RP listener
Context	configure router <i>named-item-64</i> pim rp ipv4 auto-rp-discovery <i>boolean</i>
Tree	auto-rp-discovery
Description	When configured to true , the system enables the auto-RP protocol in discovery mode and the auto-RP listener functionality.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate address <i>ipv4-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR-1

hash-mask-len *number*

Synopsis Length for bootstrap hash mask

Context **configure** [router](#) *named-item-64* [pim rp ipv4 bsr-candidate](#) [hash-mask-len](#) *number*

Tree [hash-mask-len](#)

Range 0 to 32

Default 30

Introduced 25.3.R2

Platforms 7705 SAR-1

priority *number*

Synopsis Bootstrap priority of the router

Context **configure** [router](#) *named-item-64* [pim rp ipv4 bsr-candidate](#) [priority](#) *number*

Tree [priority](#)

Range 0 to 255

Default 0

Introduced 25.3.R2

Platforms 7705 SAR-1

candidate *boolean*

Synopsis Enable auto-RP to advertise candidate RP information

Context **configure** [router](#) *named-item-64* [pim rp ipv4 candidate](#) *boolean*

Tree [candidate](#)

Description When configured to **true**, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.

When configured to **false**, the candidate RP information is not specified.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

mapping-agent *boolean*

Synopsis	Enable the mapping agent on the node
Context	configure router <i>named-item-64</i> pim rp ipv4 mapping-agent <i>boolean</i>
Tree	mapping-agent
Description	When configured to true , the mapping agent is enabled on the node. The auto-RP MA observes the auto-rp-announcement messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-candidate

Synopsis	Enter the rp-candidate context
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate
Tree	rp-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Local RP address
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate address <i>ipv4-unicast-address</i>
Tree	address
Description	This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [\[ipv4-prefix\]](#) *ipv4-multicast-prefix*

Synopsis	Add a list entry for group-range
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate group-range <i>ipv4-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[\[ipv4-prefix\]](#) *ipv4-multicast-prefix*

Synopsis	IPv4 address and prefix length
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate group-range <i>ipv4-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate holdtime <i>number</i>
Tree	holdtime
Range	5 to 255
Units	seconds
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Candidate RP priority
Context	configure <i>router</i> <i>named-item-64</i> <i>pim rp ipv4 rp-candidate</i> <i>priority</i> <i>number</i>
Tree	<i>priority</i>
Range	0 to 255
Default	192
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure <i>router</i> <i>named-item-64</i> <i>pim rp ipv4 static</i>
Tree	<i>static</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

address [*ipv4-address*] *ipv4-unicast-address*

Synopsis	Enter the address list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>pim rp ipv4 static address</i> <i>ipv4-unicast-address</i>
Tree	<i>address</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-unicast-address*

Synopsis	IPv4 address for the static RP
Context	configure <i>router</i> <i>named-item-64</i> <i>pim rp ipv4 static address</i> <i>ipv4-unicast-address</i>
Tree	<i>address</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

group-prefix [[ipv4-prefix](#)] *ipv4-multicast-prefix*

Synopsis	Add a list entry for group-prefix
Context	configure router <i>named-item-64</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-prefix] *ipv4-multicast-prefix*

Synopsis	IPv4 address and prefix length
Context	configure router <i>named-item-64</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

override *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	configure router <i>named-item-64</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> override <i>boolean</i>
Tree	override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> pim rp ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

anycast [[ipv6-address](#)] *ipv6-unicast-address* **rp-set-peer** [ipv6-unicast-address](#)

Synopsis	Add a list entry for anycast
Context	configure router <i>named-item-64</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-unicast-address*

Synopsis	Loopback IP address shared by routes in RP set
Context	configure router <i>named-item-64</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-set-peer *ipv6-unicast-address*

Synopsis	Peer in the anycast RP set
Context	configure router <i>named-item-64</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure router <i>named-item-64</i> pim rp ipv6 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure router <i>named-item-64</i> pim rp ipv6 bsr-candidate address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure router <i>named-item-64</i> pim rp ipv6 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-mask-len *number*

Synopsis	Length for bootstrap hash mask
Context	configure router <i>named-item-64</i> pim rp ipv6 bsr-candidate hash-mask-len <i>number</i>
Tree	hash-mask-len
Range	0 to 128
Default	126
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Bootstrap priority of the router
Context	configure router <i>named-item-64</i> pim rp ipv6 bsr-candidate priority <i>number</i>
Tree	priority
Range	0 to 255

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

embedded-rp

Synopsis	Enable the embedded-rp context
Context	configure router <i>named-item-64</i> pim rp ipv6 embedded-rp
Tree	embedded-rp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of embedded RP
Context	configure router <i>named-item-64</i> pim rp ipv6 embedded-rp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis	Add a list entry for group-range
Context	configure router <i>named-item-64</i> pim rp ipv6 embedded-rp group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
Context	configure router <i>named-item-64</i> pim rp ipv6 embedded-rp group-range <i>ipv6-multicast-prefix</i>

Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-candidate

Synopsis	Enter the rp-candidate context
Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate
Tree	rp-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-unicast-address*

Synopsis	Local RP address
Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis	Add a list entry for group-range
----------	---

Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[**ipv6-prefix**] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate holdtime <i>number</i>
Tree	holdtime
Range	5 to 255
Units	seconds
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Candidate RP priority
Context	configure router <i>named-item-64</i> pim rp ipv6 rp-candidate priority <i>number</i>
Tree	priority
Range	0 to 255
Default	192
Introduced	25.3.R2

Platforms 7705 SAR-1

static

Synopsis Enter the **static** context

Context **configure** *router* *named-item-64* *pim rp* *ipv6 static*

Tree *static*

Introduced 25.3.R2

Platforms 7705 SAR-1

address [*ipv6-address*] *ipv6-unicast-address*

Synopsis Enter the **address** list instance

Context **configure** *router* *named-item-64* *pim rp* *ipv6 static address* *ipv6-unicast-address*

Tree *address*

Introduced 25.3.R2

Platforms 7705 SAR-1

[ipv6-address] *ipv6-unicast-address*

Synopsis Static IP address of the RP

Context **configure** *router* *named-item-64* *pim rp* *ipv6 static address* *ipv6-unicast-address*

Tree *address*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

group-prefix [*ipv6-prefix*] *ipv6-multicast-prefix*

Synopsis Add a list entry for **group-prefix**

Context **configure** *router* *named-item-64* *pim rp* *ipv6 static address* *ipv6-unicast-address* *group-prefix* *ipv6-multicast-prefix*

Tree *group-prefix*

Introduced 25.3.R2

Platforms 7705 SAR-1

[ipv6-prefix] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
Context	configure router <i>named-item-64</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> group-prefix <i>ipv6-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

override *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	configure router <i>named-item-64</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> override <i>boolean</i>
Tree	override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rpfv

Synopsis	Enter the rpfv context
Context	configure router <i>named-item-64</i> pim rpfv
Tree	rpfv
Introduced	25.3.R2
Platforms	7705 SAR-1

core *boolean*

Synopsis	Include proxy RPF vector for core
Context	configure router <i>named-item-64</i> pim rpfv core <i>boolean</i>
Tree	core
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

mvpn *boolean*

Synopsis Include proxy RPF vector for Inter-AS Rosen MVPN

Context **configure** *router* *named-item-64* *pim rpfv mvpn boolean*

Tree *mvpn*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

spt-switchover [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **spt-switchover** list instance

Context **configure** *router* *named-item-64* *pim spt-switchover* (*ipv4-prefix* | *ipv6-prefix*)

Tree *spt-switchover*

Introduced 25.3.R2

Platforms 7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IP address and mask length

Context **configure** *router* *named-item-64* *pim spt-switchover* (*ipv4-prefix* | *ipv6-prefix*)

Tree *spt-switchover*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

threshold (*number* | *keyword*)

Synopsis SPT switchover threshold

Context **configure** *router* *named-item-64* *pim spt-switchover* (*ipv4-prefix* | *ipv6-prefix*) **threshold** (*number* | *keyword*)

Tree *threshold*

Range 1 to 4294967294

Units	kilobps
Options	infinity
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-groups

Synopsis	Enter the ssm-groups context
Context	configure router <i>named-item-64</i> pim ssm-groups
Tree	ssm-groups
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for group-range
Context	configure router <i>named-item-64</i> pim ssm-groups group-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	configure router <i>named-item-64</i> pim ssm-groups group-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure router <i>named-item-64</i> radius

Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

server [\[name\]](#) *named-item*

Synopsis	Enter the server list instance
Context	configure router <i>named-item-64</i> radius server <i>named-item</i>
Tree	server
Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	External RADIUS server name
Context	configure router <i>named-item-64</i> radius server <i>named-item</i>
Tree	server
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> accept-coa <i>boolean</i>
Tree	accept-coa
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

acct-port *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> acct-port <i>number</i>
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> auth-port <i>number</i>
Tree	auth-port
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> description <i>description</i>
Tree	description

String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

pending-requests-limit *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> pending-requests-limit <i>number</i>
Tree	pending-requests-limit
Range	1 to 4096
Default	4096
Introduced	25.3.R2
Platforms	7705 SAR-1

secret *encrypted-leaf*

Synopsis	Secret key associated with this RADIUS server
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> secret <i>encrypted-leaf</i>
Tree	secret
String length	1 to 115
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

rip

Synopsis	Enable the rip context
Context	configure router <i>named-item-64</i> rip
Tree	rip
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the RIP instance
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> admin-state <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> authentication-key <i>encrypted-leaf</i>
Tree	<i>authentication-key</i>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> authentication-type <i>keyword</i>
Tree	<i>authentication-type</i>
Description	<p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20

Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> rip bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>named-item-64</i> rip check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> rip description <i>description</i>
Tree	description
String length	1 to 80

Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure router <i>named-item-64</i> rip export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router <i>named-item-64</i> rip export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure router <i>named-item-64</i> rip export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Policies to determine exported routes
Context	configure router <i>named-item-64</i> rip export-policy <i>reference</i>
Tree	export-policy

Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

group [[group-name](#)] *named-item*

Synopsis	Enter the group list instance
Context	configure router <i>named-item-64</i> rip group <i>named-item</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *named-item*

Synopsis	RIP group name
Context	configure router <i>named-item-64</i> rip group <i>named-item</i>
Tree	group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of RIP neighbor interface group
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, the authentication password is removed from the configuration and authentication is disabled.</p>
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> authentication-type keyword
Tree	authentication-type
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> bfd-liveness boolean
Tree	bfd-liveness
Description	When configured to true , this command enables BFD to control the state of the associated protocol adjacency.

	When configured to false , this command removes BFD from the associated protocol adjacency.
Introduced	25.3.R2
Platforms	7705 SAR-1

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> description <i>description</i>
Tree	description

Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> export-policy <i>reference</i>
Tree	export-policy
Description	This command specifies the export route policies used to determine which routes are exported to RIP. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>

Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> import-policy <i>reference</i>
Tree	import-policy
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

message-size *number*

Synopsis	Maximum number of routes per RIP update message
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> metric-in <i>number</i>
Tree	metric-in

Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [**interface-name**] *interface-name*

Synopsis	Enter the neighbor list instance
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Neighbor added through the interface to the RIP group
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the RIP neighbor interface
----------	--

Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> authentication-type <i>keyword</i>
Tree	authentication-type
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	25.3.R2

Platforms 7705 SAR-1

bfd-liveness *boolean*

Synopsis Enable BFD to control the state of protocol adjacency

Context **configure** **router** *named-item-64* **rip group** *named-item* **neighbor** *interface-name* **bfd-liveness** *boolean*

Tree **bfd-liveness**

Description When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.
When configured to **false**, this command removes BFD from the associated protocol adjacency.

Introduced 25.3.R2

Platforms 7705 SAR-1

check-zero *boolean*

Synopsis Enable checking of mandatory zero fields

Context **configure** **router** *named-item-64* **rip group** *named-item* **neighbor** *interface-name* **check-zero** *boolean*

Tree **check-zero**

Description When configured to **true**, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.
When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.

Introduced 25.3.R2

Platforms 7705 SAR-1

Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

message-size *number*

Synopsis	Maximum number of routes per RIP update message
----------	---

Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

receive keyword

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> receive keyword
Tree	receive
Options	version-1, version-2, both, none
Introduced	25.3.R2
Platforms	7705 SAR-1

send keyword

Synopsis	RIP version and method used to send RIP updates
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> send keyword
Tree	send
Options	none, version-1, broadcast, multicast, unicast
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> split-horizon boolean
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enable the timers context
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

flush number

Synopsis	RIP flush timer
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers flush number
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout number

Synopsis	RIP timeout timer
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers timeout number
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

update *number*

Synopsis Timer that controls the frequency of updates

Context **configure** **router** *named-item-64* **rip group** *named-item* **neighbor** *interface-name* **timers**
update *number*

Tree **update**

Range 1 to 600

Units seconds

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

unicast-address [**address**] *ipv4-unicast-address*

Synopsis Add a list entry for **unicast-address**

Context **configure** **router** *named-item-64* **rip group** *named-item* **neighbor** *interface-name* **unicast-**
address *ipv4-unicast-address*

Tree **unicast-address**

Introduced 25.3.R2

Platforms 7705 SAR-1

[address] *ipv4-unicast-address*

Synopsis Unicast address for the neighbor

Context **configure** **router** *named-item-64* **rip group** *named-item* **neighbor** *interface-name* **unicast-**
address *ipv4-unicast-address*

Tree **unicast-address**

Notes This element is part of a list key.

Introduced 25.3.R2

Synopsis	Metric added to routes exported into RIPng
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> preference <i>number</i>
Tree	preference

Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> receive <i>keyword</i>
Tree	receive
Options	none, ripng
Introduced	25.3.R2
Platforms	7705 SAR-1

send *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> send <i>keyword</i>
Tree	send
Options	none, ripng, unicast
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enable the timers context
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

flush *number*

Synopsis	RIP flush timer
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	RIP timeout timer
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200

Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

unicast-address [*address*] *ipv6-unicast-address*

Synopsis	Add a list entry for unicast-address
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> unicast-address <i>ipv6-unicast-address</i>
Tree	unicast-address
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *ipv6-unicast-address*

Synopsis	Unicast address for the neighbor
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> unicast-address <i>ipv6-unicast-address</i>
Tree	unicast-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> receive <i>keyword</i>
Tree	receive
Options	none, ripng
Introduced	25.3.R2
Platforms	7705 SAR-1

send *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> send <i>keyword</i>
Tree	send
Options	none, ripng
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	When configured to true , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

Introduced 25.3.R2
Platforms 7705 SAR-1

timers

Synopsis Enable the **timers** context
Context **configure** *router* *named-item-64* *ripng group* *named-item* **timers**
Tree **timers**
Introduced 25.3.R2
Platforms 7705 SAR-1

flush number

Synopsis RIP flush timer
Context **configure** *router* *named-item-64* *ripng group* *named-item* **timers** **flush** *number*
Tree **flush**
Description This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range 1 to 1200
Units seconds
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

timeout number

Synopsis RIP timeout timer
Context **configure** *router* *named-item-64* *ripng group* *named-item* **timers** **timeout** *number*
Tree **timeout**
Description This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR-1

authentication-over-bypass *boolean*

Synopsis	Enable MD5 authentication over bypass LSP of PLR and MP
Context	configure router <i>named-item-64</i> rsvp authentication-over-bypass <i>boolean</i>
Tree	authentication-over-bypass
Description	<p>When configured to true, this command configures the MD5 authentication over the bypass LSP of all Point of Local Repairs (PLRs) and Merge Points (MPs) on the router. Only enable this command when the TE interfaces in the RSVP-TE network use the same MD5 authentication parameters.</p> <p>When a Point of Local Repair (PLR) activates a bypass LSP towards a Merge Point (MP), by default, the INTEGRITY object corresponding to the bypass LSP interface is not added to a transmitted RSVP message except for packets of routed RSVP messages (Resv, Srefresh, and ACK), and only when the packet is intended for a bypass LSP endpoint (PLR or MP) that is a directly connected neighbor.</p> <p>When this command is enabled, the INTEGRITY object of the interface corresponding to the bypass LSP is added to a transmitted RSVP message regardless of whether the bypass LSP endpoint (PLR or MP) is a directly connected RSVP neighbor. The INTEGRITY object is included with the following RSVP messages: Path, PathTear, PathErr, Resv, ResvTear, ResvErr, Srefresh, and ACK.</p> <p>In all cases, an RSVP message received from a PLR or a MP (sender address in the SenderTemplate or FilterSpec is different from an Extended Tunnel Id in a Session Object), and which includes the INTEGRITY object is authenticated against the bypass LSP interface. An RSVP message received from a PLR or MP without the INTEGRITY object is also accepted.</p> <p>When configured to false, the router disables MD5 authentication over bypass LSP of the PLRs and MPs.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

diffserv-te

Synopsis	Enable the diffserv-te context
Context	configure router <i>named-item-64</i> rsvp diffserv-te
Tree	diffserv-te
