

7705 Service Aggregation Router Gen 2

Release 25.10.R1

MD-CLI Command Reference Guide

3HE 21572 AAAD TQZZA 01

Edition: 01

October 2025

Nokia is committed to diversity and inclusion. We are continuously reviewing our customer documentation and consulting with standards bodies to ensure that terminology is inclusive and aligned with the industry. Our future customer documentation will be updated accordingly.

This document includes Nokia proprietary and confidential information, which may not be distributed or disclosed to any third parties without the prior written consent of Nokia.

This document is intended for use by Nokia's customers ("You"/"Your") in connection with a product purchased or licensed from any company within Nokia Group of Companies. Use this document as agreed. You agree to notify Nokia of any errors you may find in this document; however, should you elect to use this document for any purpose(s) for which it is not intended, You understand and warrant that any determinations You may make or actions You may take will be based upon Your independent judgment and analysis of the content of this document.

Nokia reserves the right to make changes to this document without notice. At all times, the controlling version is the one available on Nokia's site.

No part of this document may be modified.

NO WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF AVAILABILITY, ACCURACY, RELIABILITY, TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, IS MADE IN RELATION TO THE CONTENT OF THIS DOCUMENT. IN NO EVENT WILL NOKIA BE LIABLE FOR ANY DAMAGES, INCLUDING BUT NOT LIMITED TO SPECIAL, DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL OR ANY LOSSES, SUCH AS BUT NOT LIMITED TO LOSS OF PROFIT, REVENUE, BUSINESS INTERRUPTION, BUSINESS OPPORTUNITY OR DATA THAT MAY ARISE FROM THE USE OF THIS DOCUMENT OR THE INFORMATION IN IT, EVEN IN THE CASE OF ERRORS IN OR OMISSIONS FROM THIS DOCUMENT OR ITS CONTENT.

1 Getting started

1.1 About this guide

This document describes the commands available in the MD-CLI that can be used to manage the router.

See the *7250 IXR, 7450 ESS, 7705 SAR Gen 2, 7750 SR, 7950 XRS, and VSR Acronyms Reference Guide* for expansions of acronyms used in this guide.

For a list of unsupported features by platform and chassis, see the *SR OS R25.x.Rx Software Release Notes*, part number 3HE 21562 000x TQZZA.

Command outputs shown in this guide are examples only; actual output may differ depending on supported functionality and user configuration.

Note: This guide generically covers Release 25.x.Rx content and may contain some content that will be released in later maintenance loads. See the *SR OS R25.x.Rx Software Release Notes*, part number 3HE 21562 000x TQZZA, for information about features supported in each load of the Release 25.x.Rx software. For a list of features and CLI commands that are present in SR OS but not supported on the 7705 SAR Gen 2 platforms, see "SR OS Features not Supported on SAR Gen 2" in the *SR OS R25.x.Rx Software Release Notes*.

To access the configuration statements within the MD-CLI, the MD-CLI engine must be enabled and the configuration mode must be **mixed** or **model-driven**. For information about using the MD-CLI, see the *7705 SAR Gen 2 MD-CLI User Guide*.

1.2 Platforms and terminology

Note: Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 1: Platforms and terminology

Platform	Collective platform designation
7705 SAR-1	7705 SAR Gen 2

1.3 Conventions

This section describes the general conventions used in this guide.

1.3.1 Precautionary and information messages

The following information symbols are used in the documentation.

DANGER: Danger warns that the described activity or situation may result in serious personal injury or death. An electric shock hazard could exist. Before you begin work on this equipment, be aware of hazards involving electrical circuitry, be familiar with networking environments, and implement accident prevention procedures.

WARNING: Warning indicates that the described activity or situation may, or will, cause equipment damage, serious performance problems, or loss of data.

Caution: Caution indicates that the described activity or situation may reduce your component or system performance.

Note: Note provides additional operational information.

Tip: Tip provides suggestions for use or best practices.

1.3.2 Options or substeps in procedures and sequential workflows

Options in a procedure or a sequential workflow are indicated by a bulleted list. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform one of the listed options to complete the step.

Example: Options in a procedure

1. User must perform this step.
2. This step offers three options. User must perform one option to complete this step.
 - This is one option.
 - This is another option.
 - This is yet another option.

Substeps in a procedure or a sequential workflow are indicated by letters. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step.

Example: Substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
 - a. This is one substep.
 - b. This is another substep.

1.4 MD-CLI command reference

1.4.1 MD-CLI tree hierarchy

Table 2: Command syntax symbols

Symbol	Description
	A vertical bar represents an “or” condition, indicating that only one of the parameters in the brackets or parentheses can be selected.
()	Parentheses indicate that one of the parameters must be selected.
[]	Brackets indicate optional parameters.
Bold	Commands in bold indicate commands and keywords.
Italic	Commands in <i>italics</i> indicate that you must enter text for the parameter.

In the following examples, **location** and **graceful-shutdown** are command names. For the **location** command, *keyword* must be one of the keywords **cf1**, **cf2**, or **cf3**. For the **graceful-shutdown** command, *boolean* must be one of the keywords **true** or **false**, although explicitly using the keyword **true** is optional.

```
location keyword  
keyword - (cf1 | cf2 | cf3)  
  
graceful-shutdown boolean  
boolean - ([true] | false)
```

The configuration branch of the MD-CLI shows the commands and parameters (also known as elements) that are available, shown in a hierarchical structure as in the following figure.

Figure 1: MD-CLI configuration tree example

The **configure** context is the root level of the configuration branch within the configuration mode in the MD-CLI. Each chapter of this guide describes a configuration branch in the MD-CLI configuration tree.

Commands are linked to their command descriptions in the configuration tree with some exceptions (for example, to reduce repeated content), including the **apply-groups**, **apply-groups-exclude**, and **groups** commands. These commands are used to direct the use of configuration templates called configuration groups in the configure region at all configuration levels. The **apply-groups** command applies a configuration group at a configuration level and the **apply-groups-exclude** command excludes a configuration group at a configuration level. See "Using configuration groups" in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

Some commands require one or more keys to be entered with the command. For example, the **collector** command has two keys which must be entered: the IP address and the port number. The key name for the IP address (**ip-address**) is optional, however, the key name **port** must be entered before the port number.

```
- collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
```

The command description indicates the required syntax for each command. See [MD-CLI command descriptions](#) for more information.

collector [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Italicized names after a command or parameter name indicate the parameter type. The parameter types include (but are not limited to):

- Boolean (true and false values)
- keyword (enumerated values)
- string

- number
- IPv4 address
- IPv6 address
- MAC address

The **summary-only** parameter, for example, requires a Boolean value. The **autonomous-system** parameter requires a number. For more information about the input values, click the command or parameter name from the MD-CLI tree to be linked to the command description.

```
- summary-only boolean
- autonomous-system number
```

A parameter type may also be a combination of different base types. These parameters are displayed in the MD-CLI tree with the individual parameter types enclosed in round brackets (()), separated by a vertical bar (|). For example, the **indirect** parameter can be configured with either an IPv4 address or IPv6 address:

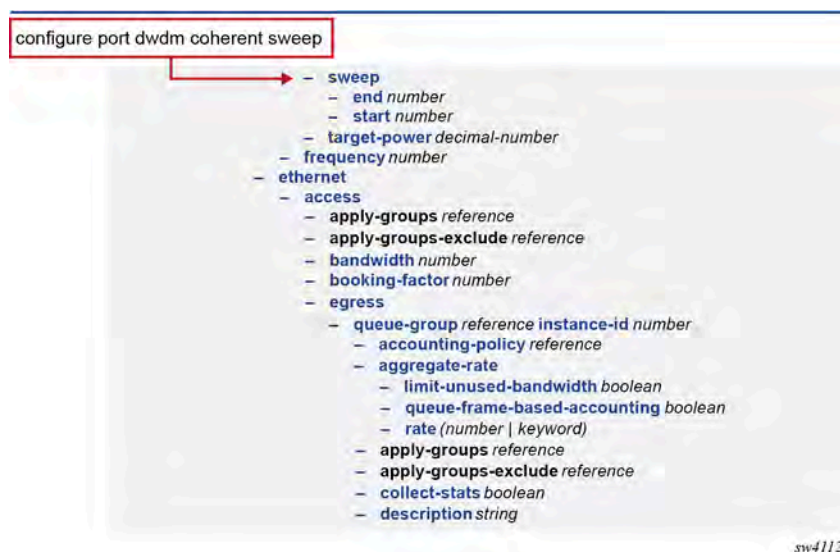

```
- indirect (ipv4-address-no-zone | ipv6-address-no-zone)
```

Allowed values in strings are printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotation marks. Double quotation marks within a string are not supported.

1.4.1.1 Context path

In the CLI tree section, a contextual path at the top of a page refers to the full context of the first command on the page, as shown in the following figure.

Figure 2: Command tree navigation

1.4.2 MD-CLI command descriptions

The command syntax is shown in the command description, where the command is displayed in bold, followed by any key names and a type. From the MD-CLI tree, the **configure log accounting-policy** command shows that the key for the command is a number:

```
- log
  - accounting-policy number
```

The command description for **accounting-policy** shows that the key for the command is a policy identifier:

accounting-policy [**policy-id**] *number*

The square brackets ([]) indicate that the **policy-id** key name is optional. From the **policy-id** command description, the range of the identifier is a number from 1 to 99. Therefore, when using the **accounting-policy** command, the following inputs are acceptable:

```
accounting-policy policy-id 15
accounting-policy 25
accounting-policy 1
accounting-policy policy-id 99
```

The following table describes the fields that may be displayed for a command. Not all fields are applicable for all commands.

Table 3: Command descriptions fields

Field	Description
Element Name	Name of the element (command or parameter) and its syntax
Synopsis	Summary description of the element
Context	Full path to the command (with links to parent commands)
Tree	Link to the command in the CLI tree. For key elements, the link is to the parent element.
Description	Detailed description of the element, as needed
String length	For string elements, the range of the number of characters allowed
Range/Max. range	For number elements, the range of allowed values. A maximum range may be overridden by a platform-specific range.
Units	Base unit type of the element
Options	Enumerated values allowed for the element. Not all options are available on all platforms.
MD-CLI default	MD-CLI default value for the element

Field	Description
Default	YANG default value when there is no MD-CLI default. Platform-specific defaults are not displayed.
Reference	Reference to an element instance in the configuration or state datastore
Min./Max. instances	For lists and leaf-lists, the minimum or maximum number of instances for this element
Notes	Information about special attributes of the element, including whether the element is: <ul style="list-style-type: none"> • a key for an element • mandatory • ordered by the user (instead of by the system) • part of a choice of elements
Introduced	Release in which the element was introduced
Deprecated	Release in which the element was deprecated
Platforms	Hardware platforms on which the element is available. See Platforms and terminology for more information about the platforms. <div>  <p>Note: Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the <i>SR OS R25.x.Rx Software Release Notes</i>, part number 3HE 21562 000x TQZZA, for information about platform support.</p> </div>

A description of the element is also available from the online help for the element. For information about using the online help in the MD-CLI, see the *7705 SAR Gen 2 MD-CLI User Guide*.

Note:

All options for enumerated types and numerical ranges are listed in the MD-CLI command descriptions, however, not all options or ranges are valid on all platforms.

2 Operational commands

This section lists the commands available at the operation level of the MD-CLI.

2.1 admin commands

The **admin** commands are used to perform administrative functions, such as displaying configuration that is not subject to AAA, manually saving the configuration, clearing user sessions, and rebooting the system.

```
admin
- clear
  - security
    - lockout
      - all
      - user named-item
    - password-history
      - all
      - user named-item
  - disconnect
    - address (ipv4-address-no-zone | ipv6-address-no-zone)
    - op-table-bypass boolean
    - session-id number
    - session-type keyword
    - username named-item
  - ipsec
    - show
      - key
        - gateway named-item
        - ip-tunnel interface-name
        - ipsec-tunnel named-item
        - peer-tunnel-ip-address (ipv4-address-no-zone | ipv6-address-no-zone)
        - peer-tunnel-port number
        - type keyword
  - nat
    - save-deterministic-script
  - reboot
    - [card] keyword
    - hold
    - now
  - redundancy
    - force-switchover
      - now
    - synchronize
      - boot-environment
      - certificate
      - configuration
  - save
    - bof
    - cleartext
    - configure
    - debug
    - password string
    - [url] string
  - set
    - time
      - [system-time] date-and-time
  - show
    - configuration
      - bof
      - booted
      - cflash-id cflash-id
      - [cli-path] cli-path-type
      - configure
      - debug
      - depth number
```

admin show configuration detail

```

- detail
- flat
- full-context
- inheritance
- intended
- json
- running
- units
- xml
- support-mode
- disable
- kernel
- password encrypted-leaf
- shell
- password encrypted-leaf

2.1.1 admin command descriptions

admin

Synopsis	Enter the administrative context for system operations
Context	admin
Tree	admin
Introduced	25.3.R2
Platforms	7705 SAR-1

clear

Synopsis	Enter the clear context
Context	admin clear
Tree	clear
Introduced	25.3.R2
Platforms	7705 SAR-1

security

Synopsis	Enter the security context
Context	admin clear security
Tree	security
Introduced	25.3.R2
Platforms	7705 SAR-1

lockout

Synopsis	Reset the lockout timer
Context	admin clear security lockout
Tree	lockout
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Clear lockout of all users
Context	admin clear security lockout all
Tree	all
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	25.3.R2
Platforms	7705 SAR-1

user *named-item*

Synopsis	User to be cleared of lockout
Context	admin clear security lockout user <i>named-item</i>
Tree	user
String length	1 to 32
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	25.3.R2
Platforms	7705 SAR-1

password-history

Synopsis	Clear the password history
Context	admin clear security password-history
Tree	password-history
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Clear password history of all users
Context	admin clear security password-history all
Tree	all
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	25.3.R2
Platforms	7705 SAR-1

user *named-item*

Synopsis	User to be cleared of password history information
Context	admin clear security password-history user <i>named-item</i>
Tree	user
String length	1 to 32
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	25.3.R2
Platforms	7705 SAR-1

disconnect

Synopsis	Disconnect a user session
Context	admin disconnect
Tree	disconnect
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the session to disconnect
Context	admin disconnect address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin disconnect op-table-bypass <i>boolean</i>
Tree	op-table-bypass
Description	When configured to true , the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or admin disconnect is required.
Introduced	25.3.R2

Platforms 7705 SAR-1

session-id *number*

Synopsis ID of the session to disconnect
Context [admin disconnect session-id number](#)
Tree [session-id](#)
Range 1 to 4294967295
Introduced 25.3.R2
Platforms 7705 SAR-1

session-type *keyword*

Synopsis Type of session to disconnect
Context [admin disconnect session-type keyword](#)
Tree [session-type](#)
Options console, bluetooth, telnet, ssh, ftp, netconf, grpc, cron-ehs
Introduced 25.3.R2
Platforms 7705 SAR-1

username *named-item*

Synopsis Username to disconnect
Context [admin disconnect username named-item](#)
Tree [username](#)
String length 1 to 32
Introduced 25.3.R2
Platforms 7705 SAR-1

ipsec

Synopsis Perform IPsec operations
Context [admin ipsec](#)
Tree [ipsec](#)
Introduced 25.3.R2

Platforms 7705 SAR-1

show

Synopsis Display IPsec information
Context [admin ipsec show](#)
Tree [show](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

key

Synopsis Display IPsec key history
Context [admin ipsec show key](#)
Tree [key](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

gateway *named-item*

Synopsis IPsec gateway name
Context [admin ipsec show key gateway *named-item*](#)
Tree [gateway](#)
String length 1 to 32
Notes The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced 25.3.R2
Platforms 7705 SAR-1

ip-tunnel *interface-name*

Synopsis IPsec transport mode IP tunnel name
Context [admin ipsec show key ip-tunnel *interface-name*](#)
Tree [ip-tunnel](#)
String length 1 to 32

Notes	The following elements are part of a mandatory choice: (gateway , peer-tunnel-ip-address , and peer-tunnel-port), ip-tunnel , or ipsec-tunnel .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-tunnel *named-item*

Synopsis	IPsec tunnel name
Context	admin ipsec show key ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
String length	1 to 32
Notes	The following elements are part of a mandatory choice: (gateway , peer-tunnel-ip-address , and peer-tunnel-port), ip-tunnel , or ipsec-tunnel .
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-tunnel-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Dynamic tunnel IP address
Context	admin ipsec show key peer-tunnel-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-tunnel-ip-address
Notes	The following elements are part of a mandatory choice: (gateway , peer-tunnel-ip-address , and peer-tunnel-port), ip-tunnel , or ipsec-tunnel .
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-tunnel-port *number*

Synopsis	Dynamic tunnel port
Context	admin ipsec show key peer-tunnel-port <i>number</i>
Tree	peer-tunnel-port
Range	0 1 to 65535
Notes	The following elements are part of a mandatory choice: (gateway , peer-tunnel-ip-address , and peer-tunnel-port), ip-tunnel , or ipsec-tunnel .
Introduced	25.3.R2

Platforms	7705 SAR-1
-----------	------------

type *keyword*

Synopsis	Key type
Context	admin ipsec show key type <i>keyword</i>
Tree	type
Options	ike, child
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

nat

Synopsis	Enter the nat context
Context	admin nat
Tree	nat
Introduced	25.3.R2
Platforms	7705 SAR-1

save-deterministic-script

Synopsis	Save script that computes deterministic NAT map entries
Context	admin nat save-deterministic-script
Tree	save-deterministic-script
Introduced	25.3.R2
Platforms	7705 SAR-1

reboot

Synopsis	Reboot CPM or force an upgrade of system boot ROMs
Context	admin reboot
Tree	reboot
Introduced	25.3.R2
Platforms	7705 SAR-1

[card] keyword

Synopsis	Card to reboot
Context	admin reboot [card] keyword
Tree	[card]
Options	active, standby, upgrade
Introduced	25.3.R2
Platforms	7705 SAR-1

hold

Synopsis	Hold a rebooted standby CPM from coming back online
Context	admin reboot hold
Tree	hold
Introduced	25.3.R2
Platforms	7705 SAR-1

now

Synopsis	Reboot immediately without prompts or confirmation
Context	admin reboot now
Tree	now
Introduced	25.3.R2
Platforms	7705 SAR-1

redundancy

Synopsis	Enter the redundancy context
Context	admin redundancy
Tree	redundancy
Introduced	25.3.R2
Platforms	7705 SAR-1

force-switchover

Synopsis	Force a switchover to the standby CPM
Context	admin redundancy force-switchover
Tree	force-switchover
Introduced	25.3.R2
Platforms	7705 SAR-1

now

Synopsis	Force the switchover to the standby CPM immediately
Context	admin redundancy force-switchover now
Tree	now
Introduced	25.3.R2
Platforms	7705 SAR-1

synchronize

Synopsis	Synchronize the standby CPM
Context	admin redundancy synchronize
Tree	synchronize
Introduced	25.3.R2
Platforms	7705 SAR-1

boot-environment

Synopsis	Synchronize all files required for the boot process
Context	admin redundancy synchronize boot-environment
Tree	boot-environment
Notes	The following elements are part of a mandatory choice: boot-environment , certificate , or configuration .
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate

Synopsis	Synchronize the PKI certificate files
Context	admin redundancy synchronize certificate
Tree	certificate
Notes	The following elements are part of a mandatory choice: boot-environment , certificate , or configuration .
Introduced	25.3.R2
Platforms	7705 SAR-1

configuration

Synopsis	Synchronize the configuration files
Context	admin redundancy synchronize configuration
Tree	configuration
Description	When specified, the system synchronizes the primary, secondary, and tertiary configuration files.
Notes	The following elements are part of a mandatory choice: boot-environment , certificate , or configuration .
Introduced	25.3.R2
Platforms	7705 SAR-1

save

Synopsis	Perform configuration save operations
Context	admin save
Tree	save
Introduced	25.3.R2
Platforms	7705 SAR-1

bof

Synopsis	Save the BOF region configuration
Context	admin save bof
Tree	bof
Notes	The following elements are part of a choice: bof , configure , debug , or li .

Introduced	25.3.R2
Platforms	7705 SAR-1

cleartext

Synopsis	Force the configuration to save in cleartext
Context	admin save cleartext
Tree	cleartext
Description	When configured, the system saves the configuration in cleartext format. The system prompts the user to enter the OS security password or the BOF encryption key.
Introduced	25.3.R2
Platforms	7705 SAR-1

configure

Synopsis	Save the configure region configuration
Context	admin save configure
Tree	configure
Notes	The following elements are part of a choice: bof , configure , debug , or li .
Introduced	25.3.R2
Platforms	7705 SAR-1

debug

Synopsis	Save the debug region configuration
Context	admin save debug
Tree	debug
Notes	The following elements are part of a choice: bof , configure , debug , or li .
Introduced	25.3.R2
Platforms	7705 SAR-1

password *string*

Synopsis	Password to force the configuration save in cleartext
----------	---

Context	admin save password <i>string</i>
Tree	password
String length	8 to 32
Introduced	25.10.R1
Platforms	7705 SAR-1

[url] *string*

Synopsis	Location to save the configuration
Context	admin save [url] <i>string</i>
Tree	[url]
Introduced	25.3.R2
Platforms	7705 SAR-1

set

Synopsis	Enter the set context
Context	admin set
Tree	set
Introduced	25.3.R2
Platforms	7705 SAR-1

time

Synopsis	System date and time
Context	admin set time
Tree	time
Introduced	25.3.R2
Platforms	7705 SAR-1

[system-time] *date-and-time*

Synopsis	System date and time
Context	admin set time [system-time] <i>date-and-time</i>
Tree	[system-time]

Description	This command sets the system date and time. The time zone may optionally be specified. When the time zone is not specified, the system uses the configured system time zone.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

show

Synopsis	Enter the show context
Context	admin show
Tree	show
Description	The admin show commands display the same configuration as the info command but are not subject to command authorization and do not require configuration mode access.
Introduced	25.3.R2
Platforms	7705 SAR-1

configuration

Synopsis	Show the current configuration
Context	admin show configuration
Tree	configuration
Introduced	25.3.R2
Platforms	7705 SAR-1

bof

Synopsis	Show the BOF region configuration
Context	admin show configuration bof
Tree	bof
Notes	The following elements are part of a choice: bof , configure , debug , or li .
Introduced	25.3.R2
Platforms	7705 SAR-1

booted

Synopsis	Show the booted BOF configuration
Context	admin show configuration booted
Tree	booted
Notes	The following elements are part of a choice: booted or cflash-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

cflash-id *cflash-id*

Synopsis	Show the BOF configuration file on a compact flash
Context	admin show configuration cflash-id cflash-id
Tree	cflash-id
String length	4 to 6
Notes	The following elements are part of a choice: booted or cflash-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

[cli-path] *cli-path-type*

Synopsis	Absolute path or relative path from '/'
Context	admin show configuration [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR-1

configure

Synopsis	Show the configure region configuration
Context	admin show configuration configure
Tree	configure
Notes	The following elements are part of a choice: bof , configure , debug , or li .
Introduced	25.3.R2
Platforms	7705 SAR-1

debug

Synopsis	Show the debug region configuration
Context	admin show configuration debug
Tree	debug
Notes	The following elements are part of a choice: bof , configure , debug , or li .
Introduced	25.3.R2
Platforms	7705 SAR-1

depth *number*

Synopsis	Depth limit from the pwc
Context	admin show configuration depth <i>number</i>
Tree	depth
Range	1 to 4294967040
Introduced	25.3.R2
Platforms	7705 SAR-1

detail

Synopsis	Include default and unconfigured values
Context	admin show configuration detail
Tree	detail
Introduced	25.3.R2
Platforms	7705 SAR-1

flat

Synopsis	Show the context from the pwc on each line
Context	admin show configuration flat
Tree	flat
Notes	The following elements are part of a choice: flat , full-context , json , or xml .
Introduced	25.3.R2
Platforms	7705 SAR-1

full-context

Synopsis	Show the full context on each line
Context	admin show configuration full-context
Tree	full-context
Notes	The following elements are part of a choice: flat , full-context , json , or xml .
Introduced	25.3.R2
Platforms	7705 SAR-1

inheritance

Synopsis	Include configuration inherited from configuration groups
Context	admin show configuration inheritance
Tree	inheritance
Description	<p>This option specifies the inclusion of configuration inherited from configuration groups in the output.</p> <p>This option should only be used in the configure region when configuration groups are used. The output with this option is the same as admin show configuration when used in other configuration regions.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

intended

Synopsis	Show the intended configuration
Context	admin show configuration intended
Tree	intended
Notes	The following elements are part of a choice: intended or running .
Introduced	25.3.R2
Platforms	7705 SAR-1

json

Synopsis	Show the output in indented JSON format
Context	admin show configuration json
Tree	json

Notes	The following elements are part of a choice: flat , full-context , json , or xml .
Introduced	25.3.R2
Platforms	7705 SAR-1

running

Synopsis	Show the running configuration
Context	admin show configuration running
Tree	running
Notes	The following elements are part of a choice: intended or running .
Introduced	25.3.R2
Platforms	7705 SAR-1

units

Synopsis	Include unit types for applicable elements
Context	admin show configuration units
Tree	units
Introduced	25.3.R2
Platforms	7705 SAR-1

xml

Synopsis	Show the output in indented XML format
Context	admin show configuration xml
Tree	xml
Notes	The following elements are part of a choice: flat , full-context , json , or xml .
Introduced	25.3.R2
Platforms	7705 SAR-1

support-mode

Synopsis	Enable technical support commands
Context	admin support-mode
Tree	support-mode

Description	Commands in this context enable the kernel , shell , and vmhost commands used only by Nokia technical support for troubleshooting.
Introduced	25.3.R4
Platforms	7705 SAR-1

disable

Synopsis	Disable technical support commands
Context	admin support-mode disable
Tree	disable
Description	This command disables the kernel , shell , and vmhost commands used only by Nokia technical support for troubleshooting.
Notes	The following elements are part of a choice: disable , kernel , or shell .
Introduced	25.3.R2
Platforms	7705 SAR-1

kernel

Synopsis	Kernel command password
Context	admin support-mode kernel
Tree	kernel
Description	This command allows Nokia technical support to access the kernel and vmhost commands. These commands are used only by Nokia technical support for troubleshooting.
Notes	The following elements are part of a choice: disable , kernel , or shell .
Introduced	25.3.R2
Platforms	7705 SAR-1

password *encrypted-leaf*

Synopsis	Kernel command password
Context	admin support-mode kernel password encrypted-leaf
Tree	password
Description	This command specifies the password to access kernel and vmhost commands. These commands are used only by Nokia technical support for troubleshooting.
String length	1 to 199

Introduced	25.3.R2
Platforms	7705 SAR-1

shell

Synopsis	Shell command password
Context	admin support-mode shell
Tree	shell
Description	This command allows Nokia technical support to access the shell commands. shell commands are used only by Nokia technical support for troubleshooting.
Notes	The following elements are part of a choice: disable , kernel , or shell .
Introduced	25.3.R2
Platforms	7705 SAR-1

password *encrypted-leaf*

Synopsis	Shell command password
Context	admin support-mode shell password <i>encrypted-leaf</i>
Tree	password
Description	This command specifies the password to access the shell commands. This command is used only by Nokia technical support for troubleshooting.
String length	1 to 199
Introduced	25.3.R2
Platforms	7705 SAR-1

system

Synopsis	Enter the system context
Context	admin system
Tree	system
Introduced	25.3.R6
Platforms	7705 SAR-1

license

Synopsis	Enter the license context
----------	----------------------------------

Context	admin system license
Tree	license
Introduced	25.3.R2
Platforms	7705 SAR-1

activate

Synopsis	Load and activate a system license
Context	admin system license activate
Tree	activate
Introduced	25.3.R2
Platforms	7705 SAR-1

[file-url] *string*

Synopsis	Location of the license file to activate
Context	admin system license activate [file-url] string
Tree	[file-url]
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

now

Synopsis	Activate the license immediately
Context	admin system license activate now
Tree	now
Introduced	25.3.R2
Platforms	7705 SAR-1

clear

Synopsis	Clear system license
Context	admin system license clear
Tree	clear

Description	This command removes the entitlements that were installed using a license file. All the entitlements must be unallocated; otherwise, the command fails.
Introduced	25.3.R2
Platforms	7705 SAR-1

now

Synopsis	Clear license entitlements immediately
Context	admin system license clear now
Tree	now
Introduced	25.3.R2
Platforms	7705 SAR-1

validate

Synopsis	Load and validate a system license
Context	admin system license validate
Tree	validate
Introduced	25.3.R2
Platforms	7705 SAR-1

[file-url] *string*

Synopsis	Location of the license file to validate
Context	admin system license validate [file-url] string
Tree	[file-url]
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

management-interface

Synopsis	Enter the management-interface context
Context	admin system management-interface
Tree	management-interface

Introduced	25.3.R2
Platforms	7705 SAR-1

commit

Synopsis	Enter the commit context
Context	admin system management-interface commit
Tree	commit
Introduced	25.3.R2
Platforms	7705 SAR-1

confirmed

Synopsis	Enter the confirmed context
Context	admin system management-interface commit confirmed
Tree	confirmed
Description	Commands in this context accept or cancel a confirmed commit that is in progress and that was started by another configuration session.
Introduced	25.3.R2
Platforms	7705 SAR-1

accept

Synopsis	Accept commit confirmed and cancel automatic rollback
Context	admin system management-interface commit confirmed accept
Tree	accept
Introduced	25.3.R2
Platforms	7705 SAR-1

cancel

Synopsis	Cancel commit confirmed and roll back changes
Context	admin system management-interface commit confirmed cancel
Tree	cancel
Description	When specified, the router rolls back the configuration and returns the changes to the candidate.

Introduced 25.3.R2
Platforms 7705 SAR-1

commit-management

Synopsis Perform commit-management operations
Context [admin system management-interface commit-management](#)
Tree [commit-management](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

python-scripts

Synopsis Perform operations on pre- and post-commit-python-scripts.
Context [admin system management-interface commit-management python-scripts](#)
Tree [python-scripts](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

disable-next-run

Synopsis Disable pre- and post-commit-python-script run for the next commit, regardless of which interface it is coming from.
Context [admin system management-interface commit-management python-scripts disable-next-run](#)
Tree [disable-next-run](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

operations

Synopsis Enter the **operations** context
Context [admin system management-interface operations](#)
Tree [operations](#)
Description Commands in this context are used to manage YANG-based operations (for example, **admin reboot**, or **ping**) in model-driven interfaces.

Introduced	25.3.R2
Platforms	7705 SAR-1

delete-operation

Synopsis	Stop and remove an operation
Context	admin system management-interface operations delete-operation
Tree	delete-operation
Description	This command removes an operation and all status and data associated with it. If the operation was executing, it is stopped before removal.
Introduced	25.3.R2
Platforms	7705 SAR-1

[delete-id] *number*

Synopsis	ID of the operation to remove
Context	admin system management-interface operations delete-operation [delete-id] <i>number</i>
Tree	[delete-id]
Range	1 to 10000
Notes	This element is mandatory.
Introduced	25.3.R1
Platforms	7705 SAR-1

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin system management-interface operations delete-operation op-table-bypass <i>boolean</i>
Tree	op-table-bypass
Description	When configured to true , the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or admin disconnect is required.
Introduced	25.3.R2
Platforms	7705 SAR-1

stop-operation

Synopsis	Stop the execution of an operational command
Context	admin system management-interface operations stop-operation
Tree	stop-operation
Description	<p>This command stops the execution of an operational command.</p> <p>An operation launched as "asynchronous" is not deleted from the system when it is stopped. Status and other data associated with the operation persist until the operation is explicitly deleted using the delete operation command or a retention timeout.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin system management-interface operations stop-operation op-table-bypass <i>boolean</i>
Tree	op-table-bypass
Description	<p>When configured to true, the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or admin disconnect is required.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[stop-id] *number*

Synopsis	ID of the operation to stop
Context	admin system management-interface operations stop-operation [stop-id] <i>number</i>
Tree	[stop-id]
Range	1 to 10000
Notes	This element is mandatory.
Introduced	25.3.R1
Platforms	7705 SAR-1

security

Synopsis	Enter the security context
Context	admin system security
Tree	security
Introduced	25.3.R6
Platforms	7705 SAR-1

hash-control

Synopsis	Enter the hash-control context
Context	admin system security hash-control
Tree	hash-control
Introduced	25.3.R6
Platforms	7705 SAR-1

custom-hash

Synopsis	Custom encryption
Context	admin system security hash-control custom-hash
Tree	custom-hash
Introduced	25.3.R6
Platforms	7705 SAR-1

algorithm *keyword*

Synopsis	Algorithm for custom encryption
Context	admin system security hash-control custom-hash algorithm <i>keyword</i>
Tree	algorithm
Description	This command configures the algorithm for custom encryption. The encryption uses ECB mode, PKCS#7 padding, and Base64 encoding.
Options	3des – DES-EDE3-ECB with PKCS #5 padding aes128 – AES-128-ECB with PKCS #7 padding aes192 – AES-192-ECB with PKCS #7 padding aes256 – AES-256-ECB with PKCS #7 padding
Notes	This element is mandatory.

Introduced	25.3.R6
Platforms	7705 SAR-1

key *string*

Synopsis	Key for encryption algorithm
Context	admin system security hash-control custom-hash key <i>string</i>
Tree	key
String length	1 to 71
Notes	This element is mandatory.
Introduced	25.3.R6
Platforms	7705 SAR-1

remove-custom-hash

Synopsis	Remove the custom encryption
Context	admin system security hash-control remove-custom-hash
Tree	remove-custom-hash
Introduced	25.3.R2
Platforms	7705 SAR-1

os-security

Synopsis	Perform operating-system-level security operations
Context	admin system security os-security
Tree	os-security
Introduced	25.3.R2
Platforms	7705 SAR-1

activate-password

Synopsis	Activate the new password used to protect the system
Context	admin system security os-security activate-password
Tree	activate-password

Description	When configured, the system activates the new password, then reboots the system to encrypt the BOF or configuration using the new password. Anti-theft does not need to be deactivated to change the OS security password using this command.
Introduced	25.10.R1
Platforms	7705 SAR-1

card reference

Synopsis	CPM slot to apply anti-theft settings
Context	admin system security os-security activate-password card <i>reference</i>
Tree	card
Reference	state cpm cpm-card-slot
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

force

Synopsis	Proceed without further prompting from the system. Required for non-interactive interfaces
Context	admin system security os-security activate-password force
Tree	force
Introduced	25.10.R1
Platforms	7705 SAR-1

password string

Synopsis	Preconfigured anti-theft password
Context	admin system security os-security activate-password password <i>string</i>
Tree	password
String length	8 to 32
Introduced	25.10.R1
Platforms	7705 SAR-1

anti-theft

Synopsis	Perform anti-theft operations
Context	admin system security os-security anti-theft
Tree	anti-theft
Introduced	25.3.R2
Platforms	7705 SAR-1

activate

Synopsis	Enable anti-theft for the specified CPM card
Context	admin system security os-security anti-theft activate
Tree	activate
Introduced	25.3.R2
Platforms	7705 SAR-1

card reference

Synopsis	CPM slot to apply anti-theft settings
Context	admin system security os-security anti-theft activate card reference
Tree	card
Reference	state cpm cpm-card-slot
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security anti-theft activate force
Tree	force
Description	When configured, this command ignores further prompts from the system. This command is required for non-interactive interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

password *string*

Synopsis	Preconfigured anti-theft password
Context	admin system security os-security anti-theft activate password <i>string</i>
Tree	password
String length	8 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

deactivate

Synopsis	Disables anti-theft for the specified CPM card
Context	admin system security os-security anti-theft deactivate
Tree	deactivate
Introduced	25.3.R2
Platforms	7705 SAR-1

card *reference*

Synopsis	CPM slot to apply anti-theft settings
Context	admin system security os-security anti-theft deactivate card <i>reference</i>
Tree	card
Reference	state cpm <i>cpm-card-slot</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security anti-theft deactivate force
Tree	force
Description	When configured, this command ignores further prompts from the system. This command is required for non-interactive interfaces.
Introduced	25.3.R2

Platforms 7705 SAR-1

password *string*

Synopsis Preconfigured anti-theft password

Context [admin system security os-security anti-theft deactivate password *string*](#)

Tree [password](#)

String length 8 to 32

Introduced 25.3.R2

Platforms 7705 SAR-1

unlock

Synopsis Disable anti-theft locking for the CPM

Context [admin system security os-security anti-theft unlock](#)

Tree [unlock](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

password *string*

Synopsis Preconfigured anti-theft password

Context [admin system security os-security anti-theft unlock password *string*](#)

Tree [password](#)

String length 8 to 32

Introduced 25.3.R2

Platforms 7705 SAR-1

remove-password

Synopsis Remove the OS security password

Context [admin system security os-security remove-password](#)

Tree [remove-password](#)

Description When configured, this command removes the OS security password. Any applications using the password must first be disabled before removing the password. Anti-theft must be deactivated to remove the OS security password.

Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security remove-password force
Tree	force
Description	When configured, this command ignores further prompts from the system. This command is required for non-interactive interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

password *string*

Synopsis	Preconfigured anti-theft password
Context	admin system security os-security remove-password password <i>string</i>
Tree	password
String length	8 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

set-password

Synopsis	Configure the password used to protect the system
Context	admin system security os-security set-password
Tree	set-password
Description	When configured, if there was no password previously configured, a new password must be configured using the new-password command. If a password has already been configured, the user must enter the current-password .
Introduced	25.3.R2
Platforms	7705 SAR-1

current-password *anti-theft-password-cleartext*

Synopsis	Existing OS security password
----------	-------------------------------

Context	admin system security os-security set-password current-password <i>anti-theft-password-cleartext</i>
Tree	current-password
String length	8 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security set-password force
Tree	force
Description	When configured, this command ignores the requirement to enter the new-password twice. Configuring this command is required for non-interactive interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

new-password *anti-theft-password-cleartext*

Synopsis	New OS security password
Context	admin system security os-security set-password new-password <i>anti-theft-password-cleartext</i>
Tree	new-password
Description	This command configures the new OS security password. When configured, the user is prompted to reenter the new password.
String length	8 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

pki

Synopsis	Perform PKI related operations
Context	admin system security pki
Tree	pki
Description	Commands in this context specify options for public key infrastructure operations.
Introduced	25.3.R2

Platforms 7705 SAR-1

clear-ocsp-cache

Synopsis Clear the current OCSP response cache
Context [admin system security pki clear-ocsp-cache](#)
Tree [clear-ocsp-cache](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[entry-id] *number*

Synopsis Local OCSP response cache entry ID to clear
Context [admin system security pki clear-ocsp-cache \[entry-id\] number](#)
Tree [\[entry-id\]](#)
Range 1 to 2000
Introduced 25.3.R2
Platforms 7705 SAR-1

cmpv2

Synopsis Perform CMPv2 operations
Context [admin system security pki cmpv2](#)
Tree [cmpv2](#)
Description Commands in this context specify options for Certificate Management Protocol v2 (CMPv2) operations.
Introduced 25.3.R2
Platforms 7705 SAR-1

cert-request

Synopsis Request an additional certificate
Context [admin system security pki cmpv2 cert-request](#)
Tree [cert-request](#)
Description When specified, the system requests an additional certificate after the initial certificate has been obtained from the CA.

The request is authenticated by a signature signed by the current key, along with the current certificate. The hash algorithm used for the signature depends on the key type:

- DSA key - SHA1
- RSA key: MD5 | SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA1)
- ECDSA key: SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA256)

CA may not return a certificate immediately, for example, if the request process requires manual intervention. The **poll** command can be used to poll the status of the request.

Introduced 25.3.R2
Platforms 7705 SAR-1

ca-profile *reference*

Synopsis PKI CA profile name
Context [admin system security pki cmpv2 cert-request ca-profile](#) *reference*
Tree [ca-profile](#)
Description This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference **state system security pki ca-profile** *named-item*
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

current-certificate *pki-file-name*

Synopsis Existing imported certificate file to create request
Context [admin system security pki cmpv2 cert-request current-certificate](#) *pki-file-name*
Tree [current-certificate](#)
String length 1 to 95
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

current-key *pki-file-name*

Synopsis Imported key file used to create the request
Context [admin system security pki cmpv2 cert-request current-key](#) *pki-file-name*

Tree	current-key
Description	This command specifies the imported key file corresponding to the existing imported certificate file used to create the request.
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

domain-name *string*

Synopsis	FQDNs for the Subject Alternative Name
Context	admin system security pki cmpv2 cert-request domain-name <i>string</i>
Tree	domain-name
Description	This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length	1 to 512
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki cmpv2 cert-request hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki cmpv2 cert-request ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.

Introduced 25.3.R2
Platforms 7705 SAR-1

new-key *pki-file-name*

Synopsis New imported key file to create certificate request
Context [admin system security pki cmpv2 cert-request new-key pki-file-name](#)
Tree [new-key](#)
String length 1 to 95
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

save-as *cflash-url*

Synopsis Full path to save the result certificate
Context [admin system security pki cmpv2 cert-request save-as cflash-url](#)
Tree [save-as](#)
String length 1 to 200
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

subject-dn *string*

Synopsis Subject of the requesting certificate
Context [admin system security pki cmpv2 cert-request subject-dn string](#)
Tree [subject-dn](#)
Description This command specifies the subject DN attributes used in the certificate request. The format is a comma separated list with the format attr1=val1, attr2=val2, where attrN={C | ST | O | OU | CN}.
String length 1 to 256
Introduced 25.3.R2
Platforms 7705 SAR-1

clear-request

Synopsis	Clear pending CMPv2 requests
Context	admin system security pki cmpv2 clear-request
Tree	clear-request
Description	When specified, the system clears pending CMPv2 requests for the specified CA. If no requests are pending, the system clears the saved result of the previous request
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 clear-request ca-profile <i>reference</i>
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	state system security pki ca-profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-registration

Synopsis	Request initial certificate using the CMPv2 protocol
Context	admin system security pki cmpv2 initial-registration
Tree	initial-registration
Description	<p>When specified, the system requests the initial certificate from the CA using the CMPv2 initial registration procedure.</p> <p>The ca-profile parameter specifies a CA profile which includes CMP server information.</p> <p>The key-to-certify parameter is an imported key file to be certified by the CA.</p> <p>The request is authenticated via one of the following methods:</p> <ul style="list-style-type: none">• A password and a reference number that pre-distributed by CA via out-of-band means. The specified password and reference number are not necessarily in the key-list configured in the corresponding CA-Profile. If key-list is not configured in the corresponding CA profile, the system uses the existing password to authenticate the CMPv2 packets from server if it is in password protection. If key-list is configured in

the corresponding CA profile and the server does not send SenderKID, the system uses the lexicographical first key in the key-list to authenticate the CMPv2 packets from the server in case it is in password protection mode.

- A signature signed by the protection-key or key-to-certify, optionally with with the corresponding certificate. If the **protection-key** command is not specified, the system uses the **key-to-certify** configuration for message protection. The hash algorithm used for the signature depends on the key type. See the **cert-request** command for details. Optionally, the system may send a certificate or a chain of certificates in the extraCertsfield. The certificate is specified by the **certificate** parameter and must include the public key of the key used for message protection. Sending a chain is enabled by specifying the **send-chain** and **with-ca** command options.

The **subject-dn** command specifies the subject of the requesting certificate.

The **save-as** command specifies the full path name for saving the result certificate.

The CA may not return the certificate immediately, for example, if the request process requires manual intervention. In such cases, the **poll** command can be used to poll the status of the request.

Introduced 25.3.R2
Platforms 7705 SAR-1

ca-profile *reference*

Synopsis PKI CA profile name

Context [admin system security pki cmpv2 initial-registration ca-profile *reference*](#)

Tree [ca-profile](#)

Description This command configures the CA profile that contains the CMPv2 configuration like server URL.

Reference **state system security pki ca-profile *named-item***

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

certificate *pki-file-name*

Synopsis Filename of the certificate for the protection key

Context [admin system security pki cmpv2 initial-registration certificate *pki-file-name*](#)

Tree [certificate](#)

String length 1 to 95

Notes	The following elements are part of a mandatory choice: (certificate , hash-algorithm , protection-key , send-chain , and with-ca) or (password and reference).
Introduced	25.3.R2
Platforms	7705 SAR-1

domain-name *string*

Synopsis	FQDNs for the Subject Alternative Name
Context	admin system security pki cmpv2 initial-registration domain-name <i>string</i>
Tree	domain-name
Description	This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length	1 to 512
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki cmpv2 initial-registration hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Notes	The following elements are part of a mandatory choice: (certificate , hash-algorithm , protection-key , send-chain , and with-ca) or (password and reference).
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki cmpv2 initial-registration ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.
Introduced	25.3.R2

Platforms 7705 SAR-1

key-to-certify *pki-file-name*

Synopsis Name of the key file used to create initial request

Context [admin system security pki cmpv2 initial-registration key-to-certify](#) *pki-file-name*

Tree [key-to-certify](#)

String length 1 to 95

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

password *string*

Synopsis Password for message protection

Context [admin system security pki cmpv2 initial-registration password](#) *string*

Tree [password](#)

String length 1 to 64

Notes The following elements are part of a mandatory choice: (**certificate**, **hash-algorithm**, **protection-key**, **send-chain**, and **with-ca**) or (**password** and **reference**).

Introduced 25.3.R2

Platforms 7705 SAR-1

protection-key *pki-file-name*

Synopsis Key file used to generate message protection signature

Context [admin system security pki cmpv2 initial-registration protection-key](#) *pki-file-name*

Tree [protection-key](#)

String length 1 to 95

Notes The following elements are part of a mandatory choice: (**certificate**, **hash-algorithm**, **protection-key**, **send-chain**, and **with-ca**) or (**password** and **reference**).

Introduced 25.3.R2

Platforms 7705 SAR-1

reference string

Synopsis	Password reference number
Context	admin system security pki cmpv2 initial-registration reference string
Tree	reference
String length	1 to 64
Notes	The following elements are part of a mandatory choice: (certificate , hash-algorithm , protection-key , send-chain , and with-ca) or (password and reference).
Introduced	25.3.R2
Platforms	7705 SAR-1

save-as cflash-url

Synopsis	Full path to save the result certificate
Context	admin system security pki cmpv2 initial-registration save-as cflash-url
Tree	save-as
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

send-chain

Synopsis	Send a certificate chain
Context	admin system security pki cmpv2 initial-registration send-chain
Tree	send-chain
Notes	The following elements are part of a mandatory choice: (certificate , hash-algorithm , protection-key , send-chain , and with-ca) or (password and reference).
Introduced	25.3.R2
Platforms	7705 SAR-1

subject-dn string

Synopsis	Subject of the requesting certificate
Context	admin system security pki cmpv2 initial-registration subject-dn string

Tree	subject-dn
Description	This command specifies the subject DN attributes used in the certificate request. The format is a comma separated list with the format attr1=val1, attr2=val2, where attrN={C ST O OU CN}.
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

with-ca reference

Synopsis	Name of CA profile with certificate in the send chain
Context	admin system security pki cmpv2 initial-registration with-ca reference
Tree	with-ca
Reference	state system security pki ca-profile <i>named-item</i>
Notes	The following elements are part of a mandatory choice: (certificate , hash-algorithm , protection-key , send-chain , and with-ca) or (password and reference).
Introduced	25.3.R2
Platforms	7705 SAR-1

key-update

Synopsis	Request new certificate to update existing certificate
Context	admin system security pki cmpv2 key-update
Tree	key-update
Description	<p>When specified, the system requests a new certificate from the CA to update an existing certificate due to reasons such as a key refresh or to replace a compromised key.</p> <p>The CA may not return the certificate immediately, for example, if the request process requires manual intervention. In these cases, the poll command can be used to poll the status of the request.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile reference

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 key-update ca-profile reference
Tree	ca-profile

Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	state system security pki ca-profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki cmpv2 key-update hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Introduced	25.3.R2
Platforms	7705 SAR-1

new-key *pki-file-name*

Synopsis	Name of new imported key file used for the key update
Context	admin system security pki cmpv2 key-update new-key <i>pki-file-name</i>
Tree	new-key
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

old-certificate *pki-file-name*

Synopsis	Name of the old certificate file to be replaced
Context	admin system security pki cmpv2 key-update old-certificate <i>pki-file-name</i>
Tree	old-certificate
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

old-key *pki-file-name*

Synopsis	Name of the old key file to be replaced
Context	admin system security pki cmpv2 key-update old-key <i>pki-file-name</i>
Tree	old-key
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

save-as *cflash-url*

Synopsis	Full path to save the result certificate file
Context	admin system security pki cmpv2 key-update save-as <i>cflash-url</i>
Tree	save-as
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

poll

Synopsis	Poll the CMPv2 server for pending request status
Context	admin system security pki cmpv2 poll
Tree	poll
Description	<p>When specified, the system polls the status of the pending CMPv2 request toward the specified CA.</p> <p>If the response is ready, the system resumes the CMPv2 protocol exchange with the server.</p> <p>SR OS allows only one pending CMP request per CA; therefore, no new request is allowed when a pending request is present.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 poll ca-profile <i>reference</i>
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	state system security pki ca-profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

convert-file

Synopsis	Convert imported file between secure and legacy format
Context	admin system security pki convert-file
Tree	convert-file
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Force the conversion
Context	admin system security pki convert-file <i>force</i>
Tree	force
Description	When specified, the system forces the conversion of imported certificates and keys even if files with the same output names exist.
Introduced	25.3.R2
Platforms	7705 SAR-1

format *keyword*

Synopsis	File format to convert to
Context	admin system security pki convert-file <i>format keyword</i>
Tree	format

Options	secure, legacy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

[input-file] *pki-file-name*

Synopsis	Name of the file to be converted
Context	admin system security pki convert-file [input-file] <i>pki-file-name</i>
Tree	[input-file]
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

[output-file] *pki-file-name*

Synopsis	Output filename
Context	admin system security pki convert-file [output-file] <i>pki-file-name</i>
Tree	[output-file]
Description	This command specifies the output filename. If the filename already exists, the system prompts the user to proceed or aborts if the force command is unconfigured.
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

crl-update

Synopsis	Trigger the CRL update for the CA profile
Context	admin system security pki crl-update
Tree	crl-update
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki crl-update ca-profile <i>reference</i>
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	state system security pki ca-profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

est

Synopsis	Perform Enrollment over Secure Transport operations
Context	admin system security pki est
Tree	est
Description	Commands in this context configure command options for Enrollment over Secure Transport (EST) protocol operations.
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-certificates

Synopsis	Download CA certificates from the EST server
Context	admin system security pki est ca-certificates
Tree	ca-certificates
Description	This command downloads a Certificate Authority (CA) certificate from an EST server specified by the profile name.
Introduced	25.3.R2
Platforms	7705 SAR-1

est-profile *string*

Synopsis	PKI EST profile name
----------	----------------------

Context	admin system security pki est ca-certificates est-profile <i>string</i>
Tree	est-profile
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Force an overwrite of the result file
Context	admin system security pki est ca-certificates force
Tree	force
Introduced	25.3.R2
Platforms	7705 SAR-1

output-url *cflash-url*

Synopsis	Path to the result file
Context	admin system security pki est ca-certificates output-url <i>cflash-url</i>
Tree	output-url
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

enroll

Synopsis	Enroll a new certificate with CA with the EST protocol
Context	admin system security pki est enroll
Tree	enroll
Description	<p>When specified, the system enrolls a new certificate with Certificate Authority (CA) by the EST protocol specified with the est-profile command with a imported private key specified by the key command.</p> <p>The est-profile command specifies the authentication between the system and EST server.</p>

The **hash-alg**, **subject-dn**, **domain-name**, and **ip-address** commands are used to generate the Certificate Signing Request (CSR) in the EST request message. The **domain-name** and **ip-address** commands are used as subject alternative names.

If **validate-certificate-chain** is specified, the system validates the chain of result certificate before importing it. The certificate chain is the chain of all certificates from the result certificate to the issuing CA. The result certificate is the new certificate returned by the EST server.

The result certificate is imported and saved with the filename specified by the **output-file** command. If the **force** command is specified, the system overwrites the existing file with same name as the output file.

Introduced 25.3.R2
Platforms 7705 SAR-1

domain-name *string*

Synopsis FQDNs for the Subject Alternative Name
Context [admin system security pki est enroll domain-name string](#)
Tree [domain-name](#)
Description This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length 1 to 512
Introduced 25.3.R2
Platforms 7705 SAR-1

est-profile *string*

Synopsis PKI EST profile name
Context [admin system security pki est enroll est-profile string](#)
Tree [est-profile](#)
String length 1 to 32
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

force

Synopsis Force an overwrite of the result file
Context [admin system security pki est enroll force](#)

Tree	force
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki est enroll hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki est enroll ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.
Introduced	25.3.R2
Platforms	7705 SAR-1

key *cflash-url*

Synopsis	Name of the imported the key file to enroll
Context	admin system security pki est enroll key <i>cflash-url</i>
Tree	key
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

output-file *pki-file-name*

Synopsis	Name of the result file
Context	admin system security pki est enroll output-file <i>pki-file-name</i>
Tree	output-file
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

subject-dn *string*

Synopsis	Subject of the requesting certificate
Context	admin system security pki est enroll subject-dn <i>string</i>
Tree	subject-dn
Description	This command specifies the subject DN attributes used in the certificate request. The format is a comma separated list with the format attr1=val1, attr2=val2, where attrN={C ST O OU CN}.
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

validate-certificate-chain

Synopsis	Validate result certificate chain before importing
Context	admin system security pki est enroll validate-certificate-chain
Tree	validate-certificate-chain
Introduced	25.3.R2
Platforms	7705 SAR-1

renew

Synopsis	Renew a CA certificate using the EST protocol
Context	admin system security pki est renew
Tree	renew

Description	<p>When specified, the system renews an imported certificate (specified by the certificate command) with a Certificate Authority (CA) using the EST protocol specified by the est-profile parameter, with an imported private key specified the key command. The key can be either the key of the certificate to be renewed or a new key.</p> <p>The authentication between system and EST server is specified by the est-profile parameter.</p> <p>The system uses the hash-alg command to generate the CSR in the EST request message.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate *cflash-url*

Synopsis	Name of the imported certificate file to renew
Context	admin system security pki est renew certificate <i>cflash-url</i>
Tree	certificate
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

est-profile *string*

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki generate-csr ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.
Introduced	25.3.R2
Platforms	7705 SAR-1

key-url *cflash-url*

Synopsis	Full path to the key file used to generate the request
Context	admin system security pki generate-csr key-url <i>cflash-url</i>
Tree	key-url
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

output-url *cflash-url*

Synopsis	Full path to result certificate signing request file
Context	admin system security pki generate-csr output-url <i>cflash-url</i>
Tree	output-url
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

subject-dn *string*

Synopsis	Subject of the requesting certificate
Context	admin system security pki generate-csr subject-dn <i>string</i>

Tree	subject-dn
Description	This command specifies the subject DN attributes used in the certificate request. The format is a comma separated list with the format attr1=val1, attr2=val2, where attrN={C ST O OU CN}.
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

use-printable

Synopsis	Force ASCII encoding for input subject DN attributes
Context	admin system security pki generate-csr use-printable
Tree	use-printable
Description	When specified, the system forces the use of ASCII encoding for the input subject DN attributes. Otherwise, the system uses UTF-8 encoding.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate-keypair

Synopsis	Generate PKI key pair
Context	admin system security pki generate-keypair
Tree	generate-keypair
Description	When specified, the system generates an RSA, DSA, or ECDSA private/public key pair file
Introduced	25.3.R2
Platforms	7705 SAR-1

dsa-key-size *number*

Synopsis	Length of the DSA key to be generated
Context	admin system security pki generate-keypair dsa-key-size <i>number</i>
Tree	dsa-key-size
Range	512 to 8192
Default	2048

Notes	The following elements are part of a mandatory choice: dsa-key-size , ecdsa-curve , or rsa-key-size .
Introduced	25.3.R2
Platforms	7705 SAR-1

ecdsa-curve *keyword*

Synopsis	Elliptic curve of the ECDSA key to be generated
Context	admin system security pki generate-keypair ecdsa-curve <i>keyword</i>
Tree	ecdsa-curve
Options	secp256r1, secp384r1, secp521r1
Default	secp256r1
Notes	The following elements are part of a mandatory choice: dsa-key-size , ecdsa-curve , or rsa-key-size .
Introduced	25.3.R2
Platforms	7705 SAR-1

rsa-key-size *number*

Synopsis	Length of the RSA key to be generated
Context	admin system security pki generate-keypair rsa-key-size <i>number</i>
Tree	rsa-key-size
Range	512 to 8192
Default	2048
Notes	The following elements are part of a mandatory choice: dsa-key-size , ecdsa-curve , or rsa-key-size .
Introduced	25.3.R2
Platforms	7705 SAR-1

[save-path] *cflash-url*

Synopsis	Full path to save the result key file
Context	admin system security pki generate-keypair [save-path] <i>cflash-url</i>
Tree	[save-path]
String length	1 to 200

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Import a certificate related file
Context	admin system security pki import
Tree	import
Description	<p>When specified, the system imports an input file (key/certificate/CRL) to be used by SROS applications. The following summarizes the supported formats:</p> <ul style="list-style-type: none">• Certificate - PKCS #12, PKCS #7 PEM encoded, PKCS #7 DER encoded, PEM, DER• Key - PKCS #12, PEM, DER• CRL - PKCS #7 PEM encoded, PKCS #7 DER encoded, PEM, DER
Introduced	25.3.R2
Platforms	7705 SAR-1

format *keyword*

Synopsis	Output file format
Context	admin system security pki import format <i>keyword</i>
Tree	format
Options	pkcs12, pkcs7-der, pkcs7-pem, pem, der
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

input-url *cflash-url*

Synopsis	Full path to the file to import
Context	admin system security pki import input-url <i>cflash-url</i>
Tree	input-url
String length	1 to 200
Notes	This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR-1

output-file *pki-file-name*

Synopsis Name of the result file
Context [admin system security pki import output-file](#) *pki-file-name*
Tree [output-file](#)
String length 1 to 95
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

password *string*

Synopsis Password used to encrypt the output file
Context [admin system security pki import password](#) *string*
Tree [password](#)
String length 1 to 32
Introduced 25.3.R2
Platforms 7705 SAR-1

type *keyword*

Synopsis Type of file to be exported
Context [admin system security pki import type](#) *keyword*
Tree [type](#)
Options certificate, key, crl
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

validate-certificate-chain

Synopsis Validate the certificate chain

Context	admin system security pki import validate-certificate-chain
Tree	validate-certificate-chain
Description	When specified, the system validates the result certificate chain before it is imported.
Introduced	25.3.R2
Platforms	7705 SAR-1

reload

Synopsis	Reload key or certificate files
Context	admin system security pki reload
Tree	reload
Description	When specified, the system reloads the key or certificate files for the specified application. This command can be used to ensure a changed imported file takes effect.
Introduced	25.3.R2
Platforms	7705 SAR-1

application keyword

Synopsis	Application to be reloaded
Context	admin system security pki reload application keyword
Tree	application
Options	ipsec
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate pki-file-name

Synopsis	Name of the certificate file to reload
Context	admin system security pki reload certificate pki-file-name
Tree	certificate
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

key *pki-file-name*

Synopsis	Name of the key file to reload
Context	admin system security pki reload key <i>pki-file-name</i>
Tree	key
String length	1 to 95
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

show

Synopsis	Enter the show context
Context	admin system security pki show
Tree	show
Description	Commands in this context include operations to display the PKI file.
Introduced	25.3.R2
Platforms	7705 SAR-1

file-content

Synopsis	Display content of certificate related files
Context	admin system security pki show file-content
Tree	file-content
Introduced	25.3.R2
Platforms	7705 SAR-1

[file-path] *cflash-url*

Synopsis	Full path to the file to display
Context	admin system security pki show file-content [file-path] <i>cflash-url</i>
Tree	[file-path]
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

format *keyword*

Synopsis Format of the file to display
Context [admin system security pki show file-content format keyword](#)
Tree [format](#)
Options pkcs10, pkcs12, pkcs7-der, pkcs7-pem, pem, der
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

password *string*

Synopsis File decryption password
Context [admin system security pki show file-content password string](#)
Tree [password](#)
String length 1 to 32
Introduced 25.3.R2
Platforms 7705 SAR-1

type *keyword*

Synopsis Type of the file to display
Context [admin system security pki show file-content type keyword](#)
Tree [type](#)
Options certificate, key, crt, csr
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

update-certificate

Synopsis Update End Entity certificate
Context [admin system security pki update-certificate](#)

Tree	update-certificate
Description	When specified, the system triggers an update for the specified certificate according to the corresponding configure system security pki certificate-auto-update configuration.
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate *reference*

Synopsis	Name of the certificate file to be updated
Context	admin system security pki update-certificate certificate <i>reference</i>
Tree	certificate
Reference	state system security pki certificate-auto-update <i>pki-file-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

secure-boot

Synopsis	Enter the secure-boot context
Context	admin system security secure-boot
Tree	secure-boot
Introduced	25.3.R2
Platforms	7705 SAR-1

activate

Synopsis	Activate secure boot on a CPM
Context	admin system security secure-boot activate
Tree	activate
Description	<p>This command activates Secure Boot to enforce digital signature verification of the software on every boot.</p> <p>Once Secure Boot is activated on a CPM, the capability is permanently enabled and cannot be disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

card reference

Synopsis	CPM slot where secure boot is activated or modified
Context	admin system security secure-boot activate card <i>reference</i>
Tree	card
Reference	state cpm <i>cpm-card-slot</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

confirmation-code string-not-all-spaces

Synopsis	Confirmation code
Context	admin system security secure-boot activate confirmation-code <i>string-not-all-spaces</i>
Tree	confirmation-code
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

serial-number string-not-all-spaces

Synopsis	CPM card serial number which secure-boot activates
Context	admin system security secure-boot activate serial-number <i>string-not-all-spaces</i>
Tree	serial-number
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

revoke-key

Synopsis	Revoke secure boot keys
Context	admin system security secure-boot revoke-key
Tree	revoke-key
Introduced	25.3.R2
Platforms	7705 SAR-1

card reference

Synopsis	CPM slot where secure boot is activated or modified
Context	admin system security secure-boot revoke-key card <i>reference</i>
Tree	card
Reference	state cpm <i>cpm-card-slot</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

confirmation-code *string-not-all-spaces*

Synopsis	Confirmation code
Context	admin system security secure-boot revoke-key confirmation-code <i>string-not-all-spaces</i>
Tree	confirmation-code
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

serial-number *string-not-all-spaces*

Synopsis	CPM card serial number which secure-boot activates
Context	admin system security secure-boot revoke-key serial-number <i>string-not-all-spaces</i>
Tree	serial-number
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

update-key

Synopsis	Update secure boot keys
Context	admin system security secure-boot update-key
Tree	update-key
Introduced	25.3.R2
Platforms	7705 SAR-1

card reference

Synopsis	CPM slot where secure boot is activated or modified
Context	admin system security secure-boot update-key card <i>reference</i>
Tree	card
Reference	state cpm <i>cpm-card-slot</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

confirmation-code string-not-all-spaces

Synopsis	Confirmation code
Context	admin system security secure-boot update-key confirmation-code <i>string-not-all-spaces</i>
Tree	confirmation-code
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

serial-number string-not-all-spaces

Synopsis	CPM card serial number which secure-boot activates
Context	admin system security secure-boot update-key serial-number <i>string-not-all-spaces</i>
Tree	serial-number
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

software-image cflash-and-url

Synopsis	Location of the target software image
Context	admin system security secure-boot update-key software-image <i>cflash-and-url</i>
Tree	software-image
String length	1 to 180
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

validate

Synopsis	Validate software signature for the specified image
Context	admin system security secure-boot validate
Tree	validate
Introduced	25.3.R2
Platforms	7705 SAR-1

software-image *cflash-and-url*

Synopsis	Location of the target software image
Context	admin system security secure-boot validate software-image <i>cflash-and-url</i>
Tree	software-image
String length	1 to 180
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

system-password

Synopsis	Change a local system password
Context	admin system security system-password
Tree	system-password
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-password

Synopsis	Administrative password
Context	admin system security system-password admin-password
Tree	admin-password
Notes	This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR-1

telemetry

Synopsis Enter the **telemetry** context
Context [admin system telemetry](#)
Tree [telemetry](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

grpc

Synopsis Enter the **grpc** context
Context [admin system telemetry grpc](#)
Tree [grpc](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

cancel

Synopsis Cancel the gRPC dynamic telemetry subscription
Context [admin system telemetry grpc cancel](#)
Tree [cancel](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

all

Synopsis Cancel gRPC dynamic telemetry for all subscriptions
Context [admin system telemetry grpc cancel all](#)
Tree [all](#)
Notes The following elements are part of a mandatory choice: **all** or **subscription-id**.
Introduced 25.3.R2
Platforms 7705 SAR-1

subscription-id *reference*

Synopsis	ID of the telemetry subscription to cancel
Context	admin system telemetry grpc cancel subscription-id <i>reference</i>
Tree	subscription-id
Reference	state system telemetry grpc subscription <i>number</i>
Notes	The following elements are part of a mandatory choice: all or subscription-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

tech-support

Synopsis	Save technical support information to a file
Context	admin tech-support
Tree	tech-support
Introduced	25.3.R2
Platforms	7705 SAR-1

[url] *url*

Synopsis	URL to save technical support information
Context	admin tech-support [url] <i>url</i>
Tree	[url]
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

2.2 environment commands

See “Environment commands” in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

```
environment
- command-alias
- alias string
  - admin-state keyword
  - cli-command string
  - description string-not-all-spaces
  - mount-point (keyword | string)
- command-completion
- enter boolean
- space boolean
- tab boolean
- commit-options
  - comment boolean
  - confirm boolean
- console
  - length number
  - width number
- history
  - recall boolean
  - size number
- info-output
  - always-display
    - admin-state boolean
- message-severity-level
  - cli keyword
- more boolean
- progress-indicator
  - admin-state keyword
  - delay number
  - type keyword
- prompt
  - context boolean
  - newline boolean
  - timestamp boolean
  - uncommitted-changes-indicator boolean
- python
  - memory-reservation number
  - minimum-available-memory number
  - timeout number
- time-display keyword
- time-format keyword
```

2.2.1 environment command descriptions

environment

Synopsis	Configure the environment settings for this session
Context	environment
Tree	environment
Introduced	25.3.R2
Platforms	7705 SAR-1

command-alias

Synopsis	Enter the command-alias context
Context	environment command-alias
Tree	command-alias
Description	<p>Commands in this context create aliases to existing MD-CLI commands or to Python scripts.</p> <p>Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

alias [[alias-name](#)] *string*

Synopsis	Enter the alias list instance
Context	environment command-alias alias <i>string</i>
Tree	alias
Description	<p>Commands in this context create aliases to existing MD-CLI commands or to Python applications.</p> <p>Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[alias-name] *string*

Synopsis	Alias name
Context	environment command-alias alias <i>string</i>
Tree	alias
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the alias
Context	environment command-alias alias <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>This command controls the administrative state of the MD-CLI alias.</p> <p>MD-CLI aliases that are administratively disabled cannot be executed, do not autocomplete in operational mode, and do not appear in ? help.</p>
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	environment command-alias alias <i>string</i> cli-command <i>string</i>
Tree	cli-command
String length	1 to 255
Notes	The following elements are part of a mandatory choice: cli-command or python-script .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *string-not-all-spaces*

Synopsis	Text description
----------	------------------

Context	environment command-alias alias <i>string</i> description <i>string-not-all-spaces</i>
Tree	description
String length	1 to 110
Introduced	25.3.R2
Platforms	7705 SAR-1

mount-point [[path](#)] (*keyword* | *string*)

Synopsis	Add a list entry for mount-point
Context	environment command-alias alias <i>string</i> mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[path] (*keyword* | *string*)

Synopsis	Mount point where the alias is available
Context	environment command-alias alias <i>string</i> mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
String length	1 to 255
Options	global
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

command-completion

Synopsis	Enter the command-completion context
Context	environment command-completion
Tree	command-completion
Introduced	25.3.R2
Platforms	7705 SAR-1

enter *boolean*

Synopsis	Complete the command when the Enter key is pressed
Context	environment command-completion enter <i>boolean</i>
Tree	enter
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

space *boolean*

Synopsis	Complete the command when the Space key is pressed
Context	environment command-completion space <i>boolean</i>
Tree	space
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tab *boolean*

Synopsis	Complete the command when the Tab key is pressed
Context	environment command-completion tab <i>boolean</i>
Tree	tab
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

commit-options

Synopsis	Enter the commit-options context
Context	environment commit-options
Tree	commit-options
Introduced	25.3.R2
Platforms	7705 SAR-1

comment *boolean*

Synopsis	Require a commit comment when committing configuration
Context	environment commit-options comment <i>boolean</i>
Tree	comment
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

confirm *boolean*

Synopsis	Require confirmed commit when committing configuration
Context	environment commit-options confirm <i>boolean</i>
Tree	confirm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

console

Synopsis	Enter the console context
Context	environment console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR-1

length *number*

Synopsis	Number of lines displayed on the console
Context	environment console length <i>number</i>
Tree	length
Range	24 to 512
Default	24
Introduced	25.3.R2
Platforms	7705 SAR-1

width *number*

Synopsis	Number of columns displayed on the console
Context	environment console width <i>number</i>
Tree	width
Range	80 to 512
Default	80
Introduced	25.3.R2
Platforms	7705 SAR-1

history

Synopsis	Enter the history context
Context	environment history
Tree	history
Introduced	25.3.R2
Platforms	7705 SAR-1

recall *boolean*

Synopsis	Allow command history recall and search execution
Context	environment history recall <i>boolean</i>
Tree	recall
Description	<p>When configured to true, the command history recall (!), substitution (!\$), display (:p, Esc+.), and backward search (Ctrl-R) are enabled.</p> <p>When configured to false, the command history can be displayed using the history command, but commands in the history cannot be executed.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

size *number*

Synopsis	Command history size
Context	environment history size <i>number</i>
Tree	size

Description	This command specifies the maximum size of the command history. A value of 0 disables the command history.
Range	0 to 1000
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

info-output

Synopsis	Enter the info-output context
Context	environment info-output
Tree	info-output
Introduced	25.3.R2
Platforms	7705 SAR-1

always-display

Synopsis	Enter the always-display context
Context	environment info-output always-display
Tree	always-display
Description	Commands in this context specify elements that are always displayed, regardless of whether they are set to their default value.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *boolean*

Synopsis	Always display admin-state elements
Context	environment info-output always-display admin-state <i>boolean</i>
Tree	admin-state
Description	When configured to true , the values of the admin-state elements in info output (without the detail option) are always displayed, even if they are the default values.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

message-severity-level

Synopsis	Enter the message-severity-level context
Context	environment message-severity-level
Tree	message-severity-level
Introduced	25.3.R2
Platforms	7705 SAR-1

cli keyword

Synopsis	Message severity threshold for CLI messages
Context	environment message-severity-level cli keyword
Tree	cli
Options	warning, info
Default	info
Introduced	25.3.R2
Platforms	7705 SAR-1

more boolean

Synopsis	Activate the pager when output is longer than a screen
Context	environment more boolean
Tree	more
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

progress-indicator

Synopsis	Enter the progress-indicator context
Context	environment progress-indicator
Tree	progress-indicator
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the progress indicator
Context	environment progress-indicator admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

delay *number*

Synopsis	Delay before the progress indicator is displayed
Context	environment progress-indicator delay <i>number</i>
Tree	delay
Range	0 to 10000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Progress indicator output style
Context	environment progress-indicator type <i>keyword</i>
Tree	type
Options	dots
Default	dots
Introduced	25.3.R2
Platforms	7705 SAR-1

prompt

Synopsis	Enter the prompt context
Context	environment prompt

Tree	prompt
Introduced	25.3.R2
Platforms	7705 SAR-1

context *boolean*

Synopsis	Show the current command context in the prompt
Context	environment prompt context <i>boolean</i>
Tree	context
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	environment prompt newline <i>boolean</i>
Tree	newline
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	environment prompt timestamp <i>boolean</i>
Tree	timestamp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	environment prompt uncommitted-changes-indicator <i>boolean</i>

Tree	uncommitted-changes-indicator
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

python

Synopsis	Enter the python context
Context	environment python
Tree	python
Introduced	25.3.R2
Platforms	7705 SAR-1

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	environment python memory-reservation <i>number</i>
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	environment python minimum-available-memory <i>number</i>
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	environment python timeout <i>number</i>
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

time-display *keyword*

Synopsis	Time zone to display time
Context	environment time-display <i>keyword</i>
Tree	time-display
Description	<p>This command configures the time zone for a timestamp displayed in outputs, such as event logs and show commands for the current CLI session.</p> <p>In event logs, the selected time is used to control the timestamps in the CLI output of show log log-id and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF).</p> <p>Also see the configure log log-id time-format command.</p>
Options	local, utc
Default	local
Introduced	25.3.R2
Platforms	7705 SAR-1

time-format *keyword*

Synopsis	Format to display the date and time
Context	environment time-format <i>keyword</i>
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain show command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339

Introduced	25.3.R2
Platforms	7705 SAR-1

2.3 file commands

See “File management” in the *7705 SAR Gen 2 Basic System Configuration Guide* for more information.

```
file
- change-directory
- router-instance string
- [url] (sat-url | cflash-url | string-not-all-spaces | ftp-url | sftp-url)
- checksum
- router-instance string
- [type] keyword

2.3.1 file command descriptions

file

Synopsis	Perform file operations
Context	file
Tree	file
Description	Commands in this context execute file management operations.
Introduced	25.3.R2
Platforms	7705 SAR-1

change-directory

Synopsis	Change the working directory
Context	file change-directory
Tree	change-directory
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file change-directory router-instance <i>string</i>
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *sftp-url*)

Synopsis	New working directory URL
Context	file change-directory [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>sftp-url</i>)
Tree	[url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 180 (<i>ftp-url</i> , <i>sftp-url</i>)
Default	.

Introduced	25.3.R2
Platforms	7705 SAR-1

checksum

Synopsis	Compute and display checksums
Context	file checksum
Tree	checksum
Description	This command computes and displays an image file or a checksum for a file.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file checksum router-instance <i>string</i>
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[type] keyword

Synopsis	Checksum option type
Context	file checksum [type] keyword
Tree	[type]
Options	image, md5, sha256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *sftp-url*)

Synopsis	File URL
Context	file checksum [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>sftp-url</i>)
Tree	[url]

String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 199 (<i>ftp-tftp-url</i>) 1 to 180 (<i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

copy

Synopsis	Copy files
Context	file copy
Tree	copy
Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file copy client-tls-profile <i>string</i>
Tree	client-tls-profile
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

[**destination-url**] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *http-url-loose* | *scp-url* | *sftp-url*)

Synopsis	Destination URL or '.' for the working directory
Context	file copy [destination-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>http-url-loose</i> <i>scp-url</i> <i>sftp-url</i>)
Tree	[destination-url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 199 (<i>ftp-tftp-url</i>) 1 to 180 (<i>http-url-loose</i> , <i>scp-url</i> , <i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

direct-http

Synopsis Allow direct HTTP connection, do not follow redirects
Context [file copy direct-http](#)
Tree [direct-http](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

force

Synopsis Force copy without prompting before overwriting
Context [file copy force](#)
Tree [force](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

proxy *http-url*

Synopsis Connect over HTTP with a proxy
Context [file copy proxy http-url](#)
Tree [proxy](#)
String length 1 to 255
Introduced 25.3.R2
Platforms 7705 SAR-1

recursive

Synopsis Copy sub-directories encountered at the source URL
Context [file copy recursive](#)
Tree [recursive](#)
Description This command recursively copies files and directories. If files or directories already exist, the operator is prompted to overwrite them. When the **force** command is enabled, a positive response to the overwrite prompts is assumed, and the operator is not prompted for confirmation. The existing files or directories are overwritten.

Introduced 25.3.R2
 Platforms 7705 SAR-1

router-instance *string*

Synopsis Router name or VPRN service name
 Context [file copy router-instance string](#)
 Tree [router-instance](#)
 Introduced 25.3.R2
 Platforms 7705 SAR-1

[source-url] (*sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose | sftp-url*)

Synopsis Source URL
 Context [file copy \[source-url\] \(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose | sftp-url\)](#)
 Tree [\[source-url\]](#)
 String length 1 to 200 (*sat-url, cflash-url, string-not-all-spaces*)
 1 to 199 (*ftp-tftp-url*)
 1 to 180 (*http-url-loose, sftp-url*)
 Notes This element is mandatory.
 Introduced 25.3.R2
 Platforms 7705 SAR-1

disable

Synopsis Disable storage devices
 Context [file disable](#)
 Tree [disable](#)
 Introduced 25.3.R2
 Platforms 7705 SAR-1

active

Synopsis Disable all devices on the active CPM
 Context [file disable active](#)

Tree	active
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	25.3.R2
Platforms	7705 SAR-1

cflash-id *cflash-id*

Synopsis	Disable the storage device
Context	file disable cflash-id cflash-id
Tree	cflash-id
String length	4 to 6
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	25.3.R2
Platforms	7705 SAR-1

standby

Synopsis	Disable all devices on the standby CPM
Context	file disable standby
Tree	standby
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	25.3.R2
Platforms	7705 SAR-1

edit

Synopsis	Edit files with the text editor
Context	file edit
Tree	edit
Description	<p>This command allows users to edit files with the text editor.</p> <p>See "Text editor" in the <i>7705 SAR Gen 2 Basic System Configuration Guide</i> for more information.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces*)

Synopsis	File URL
Context	file edit [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i>)
Tree	[url]
String length	1 to 200
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

enable

Synopsis	Enable storage devices
Context	file enable
Tree	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

active

Synopsis	Enable all devices on the active CPM
Context	file enable active
Tree	active
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	25.3.R2
Platforms	7705 SAR-1

cflash-id *cflash-id*

Synopsis	Enable the compact flash device
Context	file enable cflash-id cflash-id
Tree	cflash-id
String length	4 to 6
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	25.3.R2

Platforms 7705 SAR-1

standby

Synopsis Enable all devices on the standby CPM

Context [file enable standby](#)

Tree [standby](#)

Notes The following elements are part of a choice: **active**, **cflash-id**, or **standby**.

Introduced 25.3.R2

Platforms 7705 SAR-1

format

Synopsis Format a storage device

Context [file format](#)

Tree [format](#)

Description This command formats a storage device with a new file system without erasing the data. The device must be administratively disabled first.

Introduced 25.3.R2

Platforms 7705 SAR-1

[cflash-id] cflash-id

Synopsis Format a storage device

Context [file format \[cflash-id\] cflash-id](#)

Tree [\[cflash-id\]](#)

String length 4 to 6

Introduced 25.3.R2

Platforms 7705 SAR-1

list

Synopsis List directory contents

Context [file list](#)

Tree [list](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

reverse

Synopsis	List files in reverse sort order
Context	file list reverse
Tree	reverse
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file list router-instance <i>string</i>
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[sort-order] *keyword*

Synopsis	Sort order for the directory
Context	file list [sort-order] <i>keyword</i>
Tree	[sort-order]
Options	date, name, size
Introduced	25.3.R2
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *sftp-url*)

Synopsis	Location of the directory to be listed
Context	file list [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>sftp-url</i>)
Tree	[url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 180 (<i>ftp-url</i> , <i>sftp-url</i>)
Default	.

Introduced 25.3.R2
 Platforms 7705 SAR-1

make-directory

Synopsis Make a directory
 Context [file make-directory](#)
 Tree [make-directory](#)
 Introduced 25.3.R2
 Platforms 7705 SAR-1

router-instance *string*

Synopsis Router name or service name
 Context [file make-directory router-instance string](#)
 Tree [router-instance](#)
 Introduced 25.10.R1
 Platforms 7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *sftp-url*)

Synopsis Directory location
 Context [file make-directory \[url\] \(sat-url | cflash-url | string-not-all-spaces | ftp-url | sftp-url\)](#)
 Tree [\[url\]](#)
 String length 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
 1 to 180 (*ftp-url*, *sftp-url*)
 Notes This element is mandatory.
 Introduced 25.3.R2
 Platforms 7705 SAR-1

move

Synopsis Move or rename files or directories
 Context [file move](#)
 Tree [move](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file move client-tls-profile <i>string</i>
Tree	client-tls-profile
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

[destination-url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *http-url-loose* | *sftp-url*)

Synopsis	Destination URL or '.' for the working directory
Context	file move [destination-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>http-url-loose</i> <i>sftp-url</i>)
Tree	[destination-url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 180 (<i>ftp-url</i> , <i>http-url-loose</i> , <i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file move direct-http
Tree	direct-http
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Force move without prompting before overwriting
----------	---

Context	file move force
Tree	force
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy *http-url*

Synopsis	Connect over HTTP with a proxy
Context	file move proxy http-url
Tree	proxy
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file move router-instance string
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[source-url] (*sat-url | cflash-url | string-not-all-spaces | ftp-url | http-url-loose | sftp-url*)

Synopsis	Source URL
Context	file move [source-url] (<i>sat-url cflash-url string-not-all-spaces ftp-url http-url-loose sftp-url</i>)
Tree	[source-url]
String length	1 to 200 (<i>sat-url, cflash-url, string-not-all-spaces</i>) 1 to 180 (<i>ftp-url, http-url-loose, sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

permission

Synopsis	Show or set file permissions
Context	file permission
Tree	permission
Introduced	25.3.R2
Platforms	7705 SAR-1

[attribute] keyword

Synopsis	File permission
Context	file permission [attribute] <i>keyword</i>
Tree	[attribute]
Options	read-only, read-write
Introduced	25.3.R2
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces*)

Synopsis	File URL to set permissions
Context	file permission [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i>)
Tree	[url]
String length	1 to 200
Introduced	25.3.R2
Platforms	7705 SAR-1

remove

Synopsis	Remove files
Context	file remove
Tree	remove
Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file remove client-tls-profile <i>string</i>
Tree	client-tls-profile
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file remove direct-http
Tree	direct-http
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Force removal without prompting
Context	file remove force
Tree	force
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy *http-url*

Synopsis	Connect over HTTP with a proxy
Context	file remove proxy <i>http-url</i>
Tree	proxy
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file remove router-instance <i>string</i>
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *http-url-loose* | *sftp-url*)

Synopsis	File URL
Context	file remove [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>http-url-loose</i> <i>sftp-url</i>)
Tree	[url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 180 (<i>ftp-url</i> , <i>http-url-loose</i> , <i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

remove-directory

Synopsis	Remove directories
Context	file remove-directory
Tree	remove-directory
Introduced	25.3.R2
Platforms	7705 SAR-1

force

Synopsis	Force removal without prompting
Context	file remove-directory force
Tree	force
Introduced	25.3.R2
Platforms	7705 SAR-1

recursive

Synopsis	Remove directory and contents recursively
Context	file remove-directory recursive
Tree	recursive
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file remove-directory router-instance string
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *sftp-url*)

Synopsis	Directory URL
Context	file remove-directory [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>sftp-url</i>)
Tree	[url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 180 (<i>ftp-url</i> , <i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

repair

Synopsis	Repair a storage device file system
Context	file repair
Tree	repair
Introduced	25.3.R2
Platforms	7705 SAR-1

[cflash-id] cflash-id

Synopsis	Storage device to repair
Context	file repair [cflash-id] cflash-id
Tree	[cflash-id]
String length	4 to 6
Introduced	25.3.R2
Platforms	7705 SAR-1

secure-erase

Synopsis	Secure erase and format a storage device
Context	file secure-erase
Tree	secure-erase
Description	This command secure erases and formats a storage device with a new file system. The device must be administratively disabled first.
Introduced	25.10.R1
Platforms	7705 SAR-1

[cflash-id] cflash-id

Synopsis	Storage device to secure erase and format
Context	file secure-erase [cflash-id] cflash-id
Tree	[cflash-id]
Description	[
String length	4 to 6
Introduced	25.10.R1
Platforms	7705 SAR-1

show

Synopsis	Display the contents of a file
Context	file show
Tree	show
Introduced	25.3.R2

Platforms 7705 SAR-1

client-tls-profile *string*

Synopsis Connect over HTTP with a client TLS profile
Context [file show client-tls-profile](#) *string*
Tree [client-tls-profile](#)
String length 1 to 32
Introduced 25.3.R2
Platforms 7705 SAR-1

direct-http

Synopsis Allow direct HTTP connection, do not follow redirects
Context [file show direct-http](#)
Tree [direct-http](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

proxy *http-url*

Synopsis Connect over HTTP with a proxy
Context [file show proxy](#) *http-url*
Tree [proxy](#)
String length 1 to 255
Introduced 25.3.R2
Platforms 7705 SAR-1

router-instance *string*

Synopsis Router name or service name
Context [file show router-instance](#) *string*
Tree [router-instance](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *http-url-loose* | *sftp-url*)

Synopsis	File URL
Context	file show [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>http-url-loose</i> <i>sftp-url</i>)
Tree	[url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 199 (<i>ftp-tftp-url</i>) 1 to 180 (<i>http-url-loose</i> , <i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

unzip

Synopsis	Unzip files
Context	file unzip
Tree	unzip
Introduced	25.3.R2
Platforms	7705 SAR-1

create-destination

Synopsis	Create destination directory if it does not exist
Context	file unzip create-destination
Tree	create-destination
Introduced	25.3.R2
Platforms	7705 SAR-1

[destination-url] (*sat-url* | *cflash-url* | *string-not-all-spaces*)

Synopsis	Destination URL or '.' for the working directory
Context	file unzip [destination-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i>)
Tree	[destination-url]
String length	1 to 200
Introduced	25.3.R2

Platforms	7705 SAR-1
-----------	------------

force

Synopsis	Force the unzip operation without prompting
Context	file unzip force
Tree	force
Description	<p>When configured, files and directories that already exist in the destination URL are overwritten without prompting.</p> <p>The system does not automatically create directories explicitly specified by the destination URL. To allow the system to create new directories, use the create-destination command.</p> <p>When unconfigured, the system prompts the user before overwriting a file or directory.</p>
Notes	The following elements are part of a choice: force or list .
Introduced	25.3.R2
Platforms	7705 SAR-1

list

Synopsis	List the file contents without the unzip operation
Context	file unzip list
Tree	list
Notes	The following elements are part of a choice: force or list .
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or service name
Context	file unzip router-instance <i>string</i>
Tree	router-instance
Introduced	25.10.R1
Platforms	7705 SAR-1

[source-url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *http-url-loose* | *sftp-url*)

Synopsis	Source URL
Context	file unzip [source-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>http-url-loose</i> <i>sftp-url</i>)
Tree	[source-url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 199 (<i>ftp-tftp-url</i>) 1 to 180 (<i>http-url-loose</i> , <i>sftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

version

Synopsis	Display the version of an SR OS image file
Context	file version
Tree	version
Introduced	25.3.R2
Platforms	7705 SAR-1

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url*)

Synopsis	File URL
Context	file version [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i>)
Tree	[url]
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i> , <i>string-not-all-spaces</i>) 1 to 199 (<i>ftp-tftp-url</i>)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

2.4 Global commands

Global commands are used for operational functions, such as entering configuration sessions, navigating the CLI, executing OAM commands, and logging into remote hosts.

info [[from](#)] *keyword*

Synopsis Show the information under the present working context

Context [info](#) *keyword*

Tree [info](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[from] *keyword*

Synopsis Source datastore

Context [info](#) *keyword*

Tree [info](#)

Description This command specifies the source datastore. This option is not supported for **state** elements.

Options candidate – The candidate datastore
 running – The running datastore
 baseline – The baseline candidate configuration
 intended – The intended datastore

MD-CLI default candidate

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[cli-path] *cli-path-type*

Synopsis Absolute path or relative path from pwc

Context [info](#) *keyword* [[cli-path](#)] *cli-path-type*

Tree [[cli-path](#)]

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

converted

Synopsis	Include converted third-party model configuration from the running datastore
Context	info keyword converted
Tree	converted
Description	<p>This option specifies the inclusion of converted configuration values from third-party models in the output and is only available when configure system management-interface yang-modules openconfig-modules is set to true.</p> <p>This option should only be used in the configure region when third-party models are used. The output with this option is the same as info when used in other configuration regions.</p> <p>This option is not supported for state elements.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

depth *number*

Synopsis	Depth limit from the pwc
Context	info keyword depth number
Tree	depth
Range	1 to 4294967040
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

detail

Synopsis	Include default and unconfigured values
Context	info keyword detail
Tree	detail
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

differences

Synopsis	Show the different values each model tries to set
Context	info keyword differences

Tree	differences
Description	<p>When specified, this command shows only the values that are different when multiple models try to set the same configuration element.</p> <p>This option is supported only with the converted option and is available only when configure system management-interface yang-modules openconfig-modules is set to true.</p> <p>This option is not supported for state elements.</p>
Notes	The following elements are part of a choice: differences , model , or values .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flat

Synopsis	Show the context from the pwc on each line
Context	info keyword flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: flat , json , or xml .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

full-context

Synopsis	Show the full context on each line
Context	info keyword full-context
Tree	full-context
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inheritance

Synopsis	Include configuration inherited from configuration groups
Context	info keyword inheritance
Tree	inheritance
Description	This option specifies the inclusion of configuration inherited from configuration groups in the output.

This option should only be used in the **configure** region when configuration groups are used. The output with this option is the same as **info** when used in other configuration regions.

This option is not supported for **state** elements.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

json

Synopsis Show the output in indented JSON IETF format
Context [info keyword json](#)
Tree [json](#)
Notes The following elements are part of a choice: **flat**, **json**, or **xml**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

model keyword

Synopsis Data model for which to display converted output
Context [info keyword model keyword](#)
Tree [model](#)
Description This option specifies the data model for which to display the converted output.
This option is supported only with the **converted** option and is available only when **configure system management-interface yang-modules openconfig-modules** is set to **true**.
This option is not supported for **state** elements.
Options all – All models
openconfig – OpenConfig models
Default all
Notes The following elements are part of a choice: **differences**, **model**, or **values**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

units

Synopsis Include unit types for applicable elements

Context	info keyword units
Tree	units
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

values

Synopsis	Show all the values each model tries to set
Context	info keyword values
Tree	values
Description	<p>When specified, this command shows all the values that each model tries to set.</p> <p>This option is supported only with the converted option and is available only when configure system management-interface yang-modules openconfig-modules is set to true.</p> <p>This option is not supported for state elements.</p>
Notes	The following elements are part of a choice: differences , model , or values .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

xml

Synopsis	Show the output in indented XML format
Context	info keyword xml
Tree	xml
Notes	The following elements are part of a choice: flat , json , or xml .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

li

Synopsis	Enter a candidate configuration mode
Context	li
Tree	li
Introduced	25.3.R1
Platforms	7705 SAR Gen 2

exclusive

Synopsis	Enter exclusive configuration mode
Context	li exclusive
Tree	exclusive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

private

Synopsis	Enter private configuration mode
Context	li private
Tree	private
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

read-only

Synopsis	Enter read-only configuration mode
Context	li read-only
Tree	read-only
Introduced	25.3.R1
Platforms	7705 SAR Gen 2

logout

Synopsis	Exit the CLI session
Context	logout
Tree	logout
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrinfo

Synopsis	Request multicast router information
----------	--------------------------------------

Context	mrinfo
Tree	mrinfo
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

[router] (*ipv4-address* | *string-not-all-spaces*)

Synopsis	Router IPv4 address or DNS name
Context	mrinfo [router] (<i>ipv4-address</i> <i>string-not-all-spaces</i>)
Tree	[router]
String length	1 to 128
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mrinfo router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

mstat

Synopsis	Trace multicast path from a source to a receiver and display multicast packet rate and loss information (IGMP based)
Context	mstat
Tree	mstat
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination (*ipv4-address* | *string-not-all-spaces*)

Synopsis	Destination IPv4 address or DNS name
Context	mstat destination (<i>ipv4-address</i> <i>string-not-all-spaces</i>)
Tree	destination
String length	1 to 128
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

group (*ipv4-multicast-address* | *string-not-all-spaces*)

Synopsis	Multicast group IPv4 address or DNS name
Context	mstat group (<i>ipv4-multicast-address</i> <i>string-not-all-spaces</i>)
Tree	group
String length	1 to 128
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mstat router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

source (*ipv4-address* | *string-not-all-spaces*)

Synopsis	Source IPv4 address or DNS name
Context	mstat source (<i>ipv4-address</i> <i>string-not-all-spaces</i>)
Tree	source
String length	1 to 128
Notes	This element is mandatory.

Introduced	25.10.R1
Platforms	7705 SAR Gen 2

tll *number*

Synopsis	Time to Live (TTL) included in the Mtrace Query packet
Context	mstat tll <i>number</i>
Tree	tll
Range	1 to 255
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

wait *number*

Synopsis	Wait time for the Mtrace Response packet
Context	mstat wait <i>number</i>
Tree	wait
Range	1 to 60
Units	seconds
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

mstat2

Synopsis	Show the multicast route taken from a source to a destination with packet rate and loss information (UDP-based)
Context	mstat2
Tree	mstat2
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination (*ipv4-address* | *ipv6-address* | *string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	mstat2 destination (<i>ipv4-address</i> <i>ipv6-address</i> <i>string-not-all-spaces</i>)
Tree	destination

String length 1 to 128
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

group (*ipv4-multicast-address* | *ipv6-multicast-address* | *string-not-all-spaces*)

Synopsis Multicast group IPv4 address or DNS name
Context [mstat2 group](#) (*ipv4-multicast-address* | *ipv6-multicast-address* | *string-not-all-spaces*)
Tree [group](#)
String length 1 to 128
Notes This element is mandatory.
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

router-instance *string*

Synopsis Router name or VPRN service name
Context [mstat2 router-instance](#) *string*
Tree [router-instance](#)
Default Base
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

source (*keyword* | *ipv4-address* | *ipv6-address* | *string-not-all-spaces*)

Synopsis Source IP address or DNS name
Context [mstat2 source](#) (*keyword* | *ipv4-address* | *ipv6-address* | *string-not-all-spaces*)
Tree [source](#)
String length 1 to 128
Options starg – Use a static (*,G) address
Notes This element is mandatory.
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

tll *number*

Synopsis	Time to Live (TTL) included in the Mtrace Query packet
Context	mstat2 tll <i>number</i>
Tree	tll
Range	1 to 255
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

wait *number*

Synopsis	Wait time for the Mtrace Response packet
Context	mstat2 wait <i>number</i>
Tree	wait
Range	1 to 60
Units	seconds
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

mtrace

Synopsis	Show the multicast route taken from a source to a destination (IGMP-based)
Context	mtrace
Tree	mtrace
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination (*ipv4-address* | *string-not-all-spaces*)

Synopsis	Destination IPv4 address or DNS name
Context	mtrace destination (<i>ipv4-address</i> <i>string-not-all-spaces</i>)
Tree	destination
String length	1 to 128
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

group (*ipv4-multicast-address* | *string-not-all-spaces*)

Synopsis	Multicast group IPv4 address or DNS name
Context	mtrace group (<i>ipv4-multicast-address</i> <i>string-not-all-spaces</i>)
Tree	group
String length	1 to 128
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mtrace router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

source (*ipv4-address* | *string-not-all-spaces*)

Synopsis	Source IPv4 address or DNS name
Context	mtrace source (<i>ipv4-address</i> <i>string-not-all-spaces</i>)
Tree	source
String length	1 to 128
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Time to Live (TTL) included in the Mtrace Query packet
Context	mtrace ttl <i>number</i>
Tree	ttl
Range	1 to 255

Introduced 25.10.R1
Platforms 7705 SAR Gen 2

wait *number*

Synopsis Wait time for the Mtrace Response packet
Context [mtrace wait](#) *number*
Tree [wait](#)
Range 1 to 60
Units seconds
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

mtrace2

Synopsis Show the multicast route taken from a source to a destination (UDP-based)
Context [mtrace2](#)
Tree [mtrace2](#)
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

destination (*ipv4-address* | *ipv6-address* | *string-not-all-spaces*)

Synopsis Destination IP address or DNS name
Context [mtrace2 destination](#) (*ipv4-address* | *ipv6-address* | *string-not-all-spaces*)
Tree [destination](#)
String length 1 to 128
Introduced 25.10.R1
Platforms 7705 SAR Gen 2

group (*ipv4-multicast-address* | *ipv6-multicast-address* | *string-not-all-spaces*)

Synopsis Multicast group IPv4 address or DNS name
Context [mtrace2 group](#) (*ipv4-multicast-address* | *ipv6-multicast-address* | *string-not-all-spaces*)
Tree [group](#)

String length	1 to 128
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mtrace2 router-instance string
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

source (*keyword* | *ipv4-address* | *ipv6-address* | *string-not-all-spaces*)

Synopsis	Source IP address or DNS name
Context	mtrace2 source (<i>keyword</i> <i>ipv4-address</i> <i>ipv6-address</i> <i>string-not-all-spaces</i>)
Tree	source
String length	1 to 128
Options	starg – Use a static (*,G) address
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Time to Live (TTL) included in the Mtrace Query packet
Context	mtrace2 ttl number
Tree	ttl
Range	1 to 255
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

wait *number*

Synopsis	Wait time for the Mtrace Response packet
Context	mtrace2 wait <i>number</i>
Tree	wait
Range	1 to 60
Units	seconds
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

oam

Synopsis	Perform OAM tests
Context	oam
Tree	oam
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

efm

Synopsis	Enter the efm context
Context	oam efm
Tree	efm
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-loopback

Synopsis	Start or stop local loopback test on a port
Context	oam efm local-loopback
Tree	local-loopback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[action] keyword

Synopsis	Action type for the test
Context	oam efm local-loopback [action] keyword
Tree	[action]
Options	start, stop
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port-id port

Synopsis	Port ID for the test
Context	oam efm local-loopback port-id port
Tree	port-id
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-loopback

Synopsis	Start or stop remote loopback test on a port
Context	oam efm remote-loopback
Tree	remote-loopback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[action] keyword

Synopsis	Action type for the test
Context	oam efm remote-loopback [action] keyword
Tree	[action]
Options	start, stop
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

port-id *port*

Synopsis Port ID for the test

Context [oam efm remote-loopback port-id](#) *port*

Tree [port-id](#)

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

eth-cfm

Synopsis Initiate an Ethernet Connectivity Fault Management test

Context [oam eth-cfm](#)

Tree [eth-cfm](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

eth-test

Synopsis Initiate an OAM ETH-CFM test

Context [oam eth-cfm eth-test](#)

Tree [eth-test](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

data-length *number*

Synopsis Size of the padding to be added to the frame

Context [oam eth-cfm eth-test data-length](#) *number*

Tree [data-length](#)

Range 64 to 1500

Default 64

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[destination] (*mac-unicast-address-no-zero | number*)

Synopsis Destination MAC address or remote MEP ID of the peer

Context [oam eth-cfm eth-test \[destination\]](#) (*mac-unicast-address-no-zero | number*)

Tree [\[destination\]](#)

Range 1 to 8191

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ma-admin-name *reference*

Synopsis Association name

Context [oam eth-cfm eth-test ma-admin-name](#) *reference*

Tree [ma-admin-name](#)

Reference **state eth-cfm domain admin-name association admin-name**

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

md-admin-name *reference*

Synopsis Domain name

Context [oam eth-cfm eth-test md-admin-name](#) *reference*

Tree [md-admin-name](#)

Reference **state eth-cfm domain admin-name**

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mep-id *number*

Synopsis Local Maintenance Association Endpoint (MEP) ID

Context	oam eth-cfm eth-test mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm eth-test priority number
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

linktrace

Synopsis	Initiate a linktrace test
Context	oam eth-cfm linktrace
Tree	linktrace
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[destination] (mac-unicast-address-no-zero | number)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm linktrace [destination] (mac-unicast-address-no-zero number)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm linktrace ma-admin-name reference
Tree	ma-admin-name
Reference	state eth-cfm domain admin-name association admin-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm linktrace md-admin-name reference
Tree	md-admin-name
Reference	state eth-cfm domain admin-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm linktrace mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Time to live for a returned linktrace
Context	oam eth-cfm linktrace ttl number

Tree	ttl
Range	0 to 255
Default	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopback

Synopsis	Initiate a loopback test
Context	oam eth-cfm loopback
Tree	loopback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**destination**] (*mac-unicast-address-no-zero* | *keyword* | *number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm loopback [destination] (<i>mac-unicast-address-no-zero</i> <i>keyword</i> <i>number</i>)
Tree	[destination]
Range	1 to 8191
Options	multicast – Class one destination multicast address based on the level of the local MEP
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Time between probes within the test run
Context	oam eth-cfm loopback interval <i>number</i>
Tree	interval
Range	0 to 600
Units	deciseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lbn-padding *number*

Synopsis	Data portion size of the data TLV, no octet string
Context	oam eth-cfm loopback lbn-padding <i>number</i>
Tree	lbn-padding
Description	<p>This command specifies the size of the data portion of the data TLV which does not allow for an optional octet string.</p> <p>MSDU is not processed when setting is in use. This command option and size are mutually exclusive.</p> <p>A value of 0 means that no data TLV is added to the packet. This is specified with an octet string.</p>
Range	0 3 to 9778
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm loopback ma-admin-name <i>reference</i>
Tree	ma-admin-name
Reference	state eth-cfm domain <i>admin-name</i> association <i>admin-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm loopback md-admin-name <i>reference</i>
Tree	md-admin-name
Reference	state eth-cfm domain <i>admin-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm loopback mep-id <i>number</i>
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm loopback priority <i>number</i>
Tree	priority
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of loopback messages to send
Context	oam eth-cfm loopback send-count <i>number</i>
Tree	send-count
Range	1 to 1024
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Data portion size of the data TLV, octet string allowed
Context	oam eth-cfm loopback size <i>number</i>
Tree	size

Description	<p>This command specifies the size of the data portion of the data TLV allowing for an optional octet string to be included.</p> <p>This command option and lbm-padding are mutually exclusive.</p> <p>A value of 0 means that no data TLV is added to the packet.</p>
Range	0 to 1500
Units	bytes
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Wait time for a reply to a sent message request
Context	oam eth-cfm loopback timeout number
Tree	timeout
Description	<p>This command specifies the time the router waits for a message reply after sending a message request.</p> <p>After expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.</p>
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

one-way-delay-test

Synopsis	Initiate a one-way delay test
Context	oam eth-cfm one-way-delay-test
Tree	one-way-delay-test
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[destination] (*mac-unicast-address-no-zero* | *number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
----------	--

Context	oam eth-cfm one-way-delay-test [destination] (<i>mac-unicast-address-no-zero number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm one-way-delay-test ma-admin-name <i>reference</i>
Tree	ma-admin-name
Reference	state eth-cfm domain admin-name association admin-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm one-way-delay-test md-admin-name <i>reference</i>
Tree	md-admin-name
Reference	state eth-cfm domain admin-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm one-way-delay-test mep-id <i>number</i>
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm one-way-delay-test <i>priority number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

two-way-delay-test

Synopsis	Initiate a two-way delay test
Context	oam eth-cfm two-way-delay-test
Tree	two-way-delay-test
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[destination] (*mac-unicast-address-no-zero | number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm two-way-delay-test [destination] (<i>mac-unicast-address-no-zero number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm two-way-delay-test ma-admin-name <i>reference</i>

Tree	ma-admin-name
Reference	state eth-cfm domain <i>admin-name association admin-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm two-way-delay-test md-admin-name reference
Tree	md-admin-name
Reference	state eth-cfm domain <i>admin-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm two-way-delay-test mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm two-way-delay-test priority number
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

two-way-slm-test

Synopsis Initiate a two-way SLM test in SAA

Context [oam eth-cfm two-way-slm-test](#)

Tree [two-way-slm-test](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[destination] (*mac-unicast-address-no-zero* | *number*)

Synopsis Destination MAC address or remote MEP ID of the peer

Context [oam eth-cfm two-way-slm-test \[destination\]](#) (*mac-unicast-address-no-zero* | *number*)

Tree [\[destination\]](#)

Range 1 to 8191

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

interval (*number* | *decimal-number*)

Synopsis Time between probes within the test run

Context [oam eth-cfm two-way-slm-test interval](#) (*number* | *decimal-number*)

Tree [interval](#)

Range 1 to 10

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ma-admin-name *reference*

Synopsis Association name

Context [oam eth-cfm two-way-slm-test ma-admin-name](#) *reference*

Tree	ma-admin-name
Reference	state eth-cfm domain <i>admin-name association admin-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm two-way-slm-test md-admin-name <i>reference</i>
Tree	md-admin-name
Reference	state eth-cfm domain <i>admin-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm two-way-slm-test mep-id <i>number</i>
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm two-way-slm-test priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

send-count *number*

Synopsis Number of two-way SLM test messages to send

Context [oam eth-cfm two-way-slm-test send-count](#) *number*

Tree [send-count](#)

Range 1 to 1000

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

size *number*

Synopsis Data portion size of the data TLV, octet string allowed

Context [oam eth-cfm two-way-slm-test size](#) *number*

Tree [size](#)

Description This command specifies the size of the data portion of the Data TLV, allowing for an optional octet string to be included.

Range 0 to 1500

Units bytes

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Wait time for a reply to a sent message request

Context [oam eth-cfm two-way-slm-test timeout](#) *number*

Tree [timeout](#)

Description This command specifies the time the router waits for a message reply after sending a message request.

After the expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.

Range 1 to 10

Units seconds

Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-ping

Synopsis	Perform a Label Switched Path (LSP) ping test
Context	oam lsp-ping
Tree	lsp-ping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-label

Synopsis	Perform a BGP-label LSP trace test
Context	oam lsp-ping bgp-label
Tree	bgp-label
Description	This command option performs a Border Gateway Protocol (BGP-label) LSP trace test using Target FEC Stack code point "BGP labeled IPv4 prefix".
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping bgp-label fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

interface *reference*

Synopsis Egress router interface to use with path destination

Context [oam lsp-ping bgp-label interface reference](#)

Tree [interface](#)

Reference **state router** *named-item-64 interface interface-name*

Notes The following elements are part of a choice: **interface** or **next-hop**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

interval *number*

Synopsis Minimum time to expire before next echo request is sent

Context [oam lsp-ping bgp-label interval number](#)

Tree [interval](#)

Range 1 to 10

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Egress IP next hop address to use with path destination

Context [oam lsp-ping bgp-label next-hop \(ipv4-address-no-zone | ipv6-address-no-zone\)](#)

Tree [next-hop](#)

Notes The following elements are part of a choice: **interface** or **next-hop**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

path-destination (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the path destination

Context	oam lsp-ping bgp-label path-destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-ping bgp-label prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping bgp-label profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping bgp-label send-count <i>number</i>
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Echo request packet pad size
Context	oam lsp-ping bgp-label size number
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-ping bgp-label source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout number

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping bgp-label timeout number
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl number

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping bgp-label ttl number

Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp

Synopsis	Perform an LDP LSP ping test
Context	oam lsp-ping ldp
Tree	ldp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping ldp fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface reference

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping ldp interface reference
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>

Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping ldp interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-ping ldp next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-ping ldp path-destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
----------	------------------------------------

Context	oam lsp-ping ldp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping ldp profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping ldp send-count <i>number</i>
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-ping ldp size <i>number</i>
Tree	size
Range	1 to 9786
Units	bytes

Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-ping ldp source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping ldp timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping ldp ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp-te

Synopsis	Perform an RSVP-TE LSP ping test
Context	oam lsp-ping rsvp-te
Tree	rsvp-te
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping rsvp-te fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval number

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping rsvp-te interval number
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *reference*

Synopsis	Name of the LSP to test
Context	oam lsp-ping rsvp-te lsp-name <i>reference</i>
Tree	lsp-name
Reference	state router <i>named-item-64</i> mpls lsp <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path *reference*

Synopsis	Name of the MPLS path to test
Context	oam lsp-ping rsvp-te path <i>reference</i>
Tree	path
Reference	state router <i>named-item-64</i> mpls path <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping rsvp-te profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping rsvp-te send-count <i>number</i>
Tree	send-count

Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-ping rsvp-te size <i>number</i>
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-ping rsvp-te source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping rsvp-te timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl number

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping rsvp-te ttl number
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis

Synopsis	Perform an SR-ISIS LSP ping test
Context	oam lsp-ping sr-isis
Tree	sr-isis
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping sr-isis fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo *number*

Synopsis	Segment Routing Flexible Algorithm for the test
Context	oam lsp-ping sr-isis flex-algo <i>number</i>
Tree	flex-algo
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR-ISIS test
Context	oam lsp-ping sr-isis igp-instance <i>number</i>
Tree	igp-instance
Range	0 to 127
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping sr-isis interface <i>reference</i>
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping sr-isis interval <i>number</i>
Tree	interval
Range	1 to 10

Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-ping sr-isis next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-ping sr-isis path-destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-ping sr-isis prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping sr-isis profile <i>keyword</i>

Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping sr-isis send-count <i>number</i>
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-ping sr-isis size <i>number</i>
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-ping sr-isis source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Time to wait for a reply after sending an echo request

Context [oam lsp-ping sr-isis timeout *number*](#)

Tree [timeout](#)

Range 1 to 10

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ttl *number*

Synopsis TTL value for the MPLS label of the echo request

Context [oam lsp-ping sr-isis ttl *number*](#)

Tree [ttl](#)

Range 1 to 255

Default 255

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

sr-ospf

Synopsis Perform an SR-OSPF LSP ping test

Context [oam lsp-ping sr-ospf](#)

Tree [sr-ospf](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

fc *keyword*

Synopsis QoS forwarding class for the sent echo request packet

Context [oam lsp-ping sr-ospf fc *keyword*](#)

Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo *number*

Synopsis	Segment Routing Flexible Algorithm for the test
Context	oam lsp-ping sr-ospf flex-algo <i>number</i>
Tree	flex-algo
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR-OSPF test
Context	oam lsp-ping sr-ospf igp-instance <i>number</i>
Tree	igp-instance
Range	0 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping sr-ospf interface <i>reference</i>
Tree	interface

Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping sr-ospf interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop *ipv4-address*

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-ping sr-ospf next-hop <i>ipv4-address</i>
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination *ipv4-address*

Synopsis	IP address of the path destination
Context	oam lsp-ping sr-ospf path-destination <i>ipv4-address</i>
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-ping sr-ospf prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping sr-ospf profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping sr-ospf send-count <i>number</i>
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-ping sr-ospf size <i>number</i>

Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address *ipv4-address*

Synopsis	Source IP address
Context	oam lsp-ping sr-ospf source-ip-address <i>ipv4-address</i>
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping sr-ospf timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping sr-ospf ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3

Synopsis	Perform an SR-OSPFv3 LSP ping test
Context	oam lsp-ping sr-ospf3
Tree	sr-ospf3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping sr-ospf3 fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance number

Synopsis	IGP instance for the SR-OSPFv3 test
Context	oam lsp-ping sr-ospf3 igp-instance number
Tree	igp-instance
Range	0 to 31 64 to 95
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface reference

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping sr-ospf3 interface reference
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval number

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping sr-ospf3 interval number
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-ping sr-ospf3 next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-ping sr-ospf3 path-destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	path-destination

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-ping sr-ospf3 prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping sr-ospf3 profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping sr-ospf3 send-count <i>number</i>
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Echo request packet pad size
Context	oam lsp-ping sr-ospf3 size number
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-ping sr-ospf3 source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout number

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping sr-ospf3 timeout number
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl number

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping sr-ospf3 ttl number
Tree	ttl

Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-policy

Synopsis	Perform an SR policy LSP ping test
Context	oam lsp-ping sr-policy
Tree	sr-policy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

color number

Synopsis	Segment Routing color for the test
Context	oam lsp-ping sr-policy color number
Tree	color
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	oam lsp-ping sr-policy endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
----------	---

Context	oam lsp-ping sr-policy fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping sr-policy interface <i>reference</i>
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping sr-policy interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-ping sr-policy next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-ping sr-policy path-destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-ping sr-policy profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-list *number*

Synopsis	Segment Routing segment list for the test
Context	oam lsp-ping sr-policy segment-list <i>number</i>
Tree	segment-list
Range	1 to 32
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

send-count *number*

Synopsis Number of echo request packets to send
Context [oam lsp-ping sr-policy send-count](#) *number*
Tree [send-count](#)
Range 1 to 100
Units packets
Default 1
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

size *number*

Synopsis Echo request packet pad size
Context [oam lsp-ping sr-policy size](#) *number*
Tree [size](#)
Range 1 to 9786
Units bytes
Default 1
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Source IP address
Context [oam lsp-ping sr-policy source-ip-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Tree [source-ip-address](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Time to wait for a reply after sending an echo request

Context	oam lsp-ping sr-policy timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping sr-policy ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te

Synopsis	Perform an SR-TE LSP ping test
Context	oam lsp-ping sr-te
Tree	sr-te
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc *keyword*

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping sr-te fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority)

	h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping sr-te interface <i>reference</i>
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-ping sr-te interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *reference*

Synopsis	Name of the LSP to test
Context	oam lsp-ping sr-te lsp-name <i>reference</i>
Tree	lsp-name
Reference	state router <i>named-item-64</i> mpls lsp <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address to use with path destination

Context [oam lsp-ping sr-te next-hop](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [next-hop](#)

Notes The following elements are part of a choice: **interface** or **next-hop**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

path reference

Synopsis Name of the MPLS path to test

Context [oam lsp-ping sr-te path reference](#)

Tree [path](#)

Reference **state router** *named-item-64 mpls path named-item-64*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the path destination

Context [oam lsp-ping sr-te path-destination](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [path-destination](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile keyword

Synopsis QoS profile for the transmitted echo request packets

Context [oam lsp-ping sr-te profile keyword](#)

Tree [profile](#)

Options in – In profile
out – Out of profile

Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of echo request packets to send
Context	oam lsp-ping sr-te send-count <i>number</i>
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-ping sr-te size <i>number</i>
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-ping sr-te source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping sr-te timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping sr-te ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-trace

Synopsis	Perform a Label Switched Path (LSP) trace test
Context	oam lsp-trace
Tree	lsp-trace
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-label

Synopsis	Perform a BGP-label LSP trace test
Context	oam lsp-trace bgp-label
Tree	bgp-label

Description	This option performs an LSP trace test using Target FEC Stack sub-type "BGP labeled IPv4 prefix".
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace bgp-label downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace bgp-label fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface reference

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace bgp-label interface reference
Tree	interface

Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace bgp-label interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace bgp-label max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace bgp-label max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace bgp-label min-ttl <i>number</i>
Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace bgp-label next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace bgp-label output-format <i>keyword</i>
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-trace bgp-label path-destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test

Context [oam lsp-trace bgp-label prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

Tree [prefix](#)

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

probe-count *number*

Synopsis Number of OAM trace probes to send per TTL

Context [oam lsp-trace bgp-label probe-count](#) *number*

Tree [probe-count](#)

Range 1 to 10

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile *keyword*

Synopsis QoS profile for the transmitted echo request packets

Context [oam lsp-trace bgp-label profile](#) *keyword*

Tree [profile](#)

Options in – In profile
out – Out of profile

Default out

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

size *number*

Synopsis Echo request packet pad size

Context	oam lsp-trace bgp-label size <i>number</i>
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace bgp-label source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-trace bgp-label timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp

Synopsis	Perform an LDP LSP trace test
Context	oam lsp-trace ldp
Tree	ldp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace ldp downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace ldp fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface reference

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace ldp interface reference
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace ldp interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace ldp max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace ldp max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace ldp min-ttl <i>number</i>

Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace ldp next-hop (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace ldp output-format <i>keyword</i>
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-trace ldp path-destination (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-trace ldp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace ldp probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-trace ldp profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-trace ldp size <i>number</i>
Tree	size

Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace ldp source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-trace ldp timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp-te

Synopsis	Perform an RSVP-TE LSP trace test
Context	oam lsp-trace rsvp-te
Tree	rsvp-te
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace rsvp-te downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace rsvp-te fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval number

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace rsvp-te interval number
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *reference*

Synopsis	Name of the LSP to test
Context	oam lsp-trace rsvp-te lsp-name <i>reference</i>
Tree	lsp-name
Reference	state router <i>named-item-64</i> mpls lsp <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace rsvp-te max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace rsvp-te max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace rsvp-te min-ttl <i>number</i>
Tree	min-ttl

Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace rsvp-te output-format <i>keyword</i>
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path *reference*

Synopsis	Name of the MPLS path to test
Context	oam lsp-trace rsvp-te path <i>reference</i>
Tree	path
Reference	state router <i>named-item-64</i> mpls path <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace rsvp-te probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile keyword

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-trace rsvp-te profile keyword
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Echo request packet pad size
Context	oam lsp-trace rsvp-te size number
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace rsvp-te source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout number

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-trace rsvp-te timeout number
Tree	timeout

Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis

Synopsis	Perform an SR-ISIS LSP trace test
Context	oam lsp-trace sr-isis
Tree	sr-isis
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace sr-isis downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace sr-isis fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)

Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo *number*

Synopsis	Segment Routing Flexible Algorithm for the test
Context	oam lsp-trace sr-isis flex-algo number
Tree	flex-algo
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR-ISIS test
Context	oam lsp-trace sr-isis igp-instance number
Tree	igp-instance
Range	0 to 127
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace sr-isis interface reference
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace sr-isis interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace sr-isis max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace sr-isis max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace sr-isis min-ttl <i>number</i>

Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace sr-isis next-hop (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace sr-isis output-format <i>keyword</i>
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-trace sr-isis path-destination (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-trace sr-isis prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace sr-isis probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-trace sr-isis profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-trace sr-isis size <i>number</i>
Tree	size

Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace sr-isis source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-trace sr-isis timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf

Synopsis	Perform an SR-OSPF LSP trace test
Context	oam lsp-trace sr-ospf
Tree	sr-ospf
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace sr-ospf downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace sr-ospf fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo number

Synopsis	Segment Routing Flexible Algorithm for the test
Context	oam lsp-trace sr-ospf flex-algo number
Tree	flex-algo
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR-OSPF test
Context	oam lsp-trace sr-ospf igp-instance <i>number</i>
Tree	igp-instance
Range	0 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace sr-ospf interface <i>reference</i>
Tree	interface
Reference	state router <i>named-item-64 interface interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace sr-ospf interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace sr-ospf max-fail <i>number</i>

Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace sr-ospf max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace sr-ospf min-ttl <i>number</i>
Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop *ipv4-address*

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace sr-ospf next-hop <i>ipv4-address</i>
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace sr-ospf output-format <i>keyword</i>
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination *ipv4-address*

Synopsis	IP address of the path destination
Context	oam lsp-trace sr-ospf path-destination <i>ipv4-address</i>
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-trace sr-ospf prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace sr-ospf probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

profile *keyword*

Synopsis QoS profile for the transmitted echo request packets
Context [oam lsp-trace sr-ospf profile keyword](#)
Tree [profile](#)
Options in – In profile
 out – Out of profile
Default out
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

size *number*

Synopsis Echo request packet pad size
Context [oam lsp-trace sr-ospf size number](#)
Tree [size](#)
Range 1 to 9786
Units bytes
Default 1
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

source-ip-address *ipv4-address*

Synopsis Source IP address
Context [oam lsp-trace sr-ospf source-ip-address ipv4-address](#)
Tree [source-ip-address](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Time to wait for a reply after sending an echo request
Context [oam lsp-trace sr-ospf timeout number](#)

Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3

Synopsis	Perform an SR-OSPFv3 LSP trace test
Context	oam lsp-trace sr-ospf3
Tree	sr-ospf3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace sr-ospf3 downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace sr-ospf3 fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority)

	nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR-OSPFv3 test
Context	oam lsp-trace sr-ospf3 igp-instance <i>number</i>
Tree	igp-instance
Range	0 to 31 64 to 95
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace sr-ospf3 interface <i>reference</i>
Tree	interface
Reference	state router <i>named-item-64 interface interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace sr-ospf3 interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace sr-ospf3 max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace sr-ospf3 max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace sr-ospf3 min-ttl <i>number</i>
Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace sr-ospf3 next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop

Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace sr-ospf3 output-format keyword
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-trace sr-ospf3 path-destination (ipv4-address-no-zone ipv6-address-no-zone)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix | ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	oam lsp-trace sr-ospf3 prefix (ipv4-prefix ipv6-prefix)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace sr-ospf3 probe-count number

Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-trace sr-ospf3 profile keyword
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-trace sr-ospf3 size number
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace sr-ospf3 source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Time to wait for a reply after sending an echo request

Context [oam lsp-trace sr-ospf3 timeout *number*](#)

Tree [timeout](#)

Range 1 to 10

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

sr-policy

Synopsis Perform an SR policy LSP trace test

Context [oam lsp-trace sr-policy](#)

Tree [sr-policy](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

color *number*

Synopsis Segment Routing color for the test

Context [oam lsp-trace sr-policy color *number*](#)

Tree [color](#)

Max. range 0 to 4294967295

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

downstream-map-tlv *keyword*

Synopsis Type of downstream mapping TLV in MPLS echo request PDU

Context [oam lsp-trace sr-policy downstream-map-tlv *keyword*](#)

Tree	downstream-map-tlv
Options	dsmmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	oam lsp-trace sr-policy endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace sr-policy fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface reference

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace sr-policy interface reference
Tree	interface

Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace sr-policy interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace sr-policy max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace sr-policy max-ttl <i>number</i>
Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace sr-policy min-ttl number
Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace sr-policy next-hop (ipv4-address-no-zone ipv6-address-no-zone)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace sr-policy output-format keyword
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-trace sr-policy path-destination (ipv4-address-no-zone ipv6-address-no-zone)
Tree	path-destination
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

probe-count *number*

Synopsis Number of OAM trace probes to send per TTL

Context [oam lsp-trace sr-policy probe-count](#) *number*

Tree [probe-count](#)

Range 1 to 10

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile *keyword*

Synopsis QoS profile for the transmitted echo request packets

Context [oam lsp-trace sr-policy profile](#) *keyword*

Tree [profile](#)

Options in – In profile
out – Out of profile

Default out

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

segment-list *number*

Synopsis Segment Routing segment list for the test

Context [oam lsp-trace sr-policy segment-list](#) *number*

Tree [segment-list](#)

Range 1 to 32

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

size *number*

Synopsis Echo request packet pad size

Context [oam lsp-trace sr-policy size](#) *number*

Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace sr-policy source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-trace sr-policy timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te

Synopsis	Perform an SR-TE LSP trace test
Context	oam lsp-trace sr-te
Tree	sr-te
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

downstream-map-tlv keyword

Synopsis	Type of downstream mapping TLV in MPLS echo request PDU
Context	oam lsp-trace sr-te downstream-map-tlv keyword
Tree	downstream-map-tlv
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV none – No mapping TLV
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-trace sr-te fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface reference

Synopsis	Egress router interface to use with path destination
Context	oam lsp-trace sr-te interface reference
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace sr-te interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *reference*

Synopsis	Name of the LSP to test
Context	oam lsp-trace sr-te lsp-name <i>reference</i>
Tree	lsp-name
Reference	state router <i>named-item-64</i> mpls lsp <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace sr-te max-fail <i>number</i>
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace sr-te max-ttl <i>number</i>

Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace sr-te min-ttl number
Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address to use with path destination
Context	oam lsp-trace sr-te next-hop (ipv4-address-no-zone ipv6-address-no-zone)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace sr-te output-format keyword
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path reference

Synopsis	Name of the MPLS path to test
Context	oam lsp-trace sr-te path reference
Tree	path
Reference	state router <i>named-item-64</i> mpls path <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	oam lsp-trace sr-te path-destination (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count number

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace sr-te probe-count number
Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile keyword

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-trace sr-te profile keyword
Tree	profile
Options	in – In profile out – Out of profile
Default	out

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-trace sr-te size <i>number</i>
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	oam lsp-trace sr-te source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-trace sr-te timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oam-pm

Synopsis	Initiate an on-demand OAM Performance Monitoring test
Context	oam oam-pm
Tree	oam-pm
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action keyword

Synopsis	OAM-PM test action
Context	oam oam-pm action keyword
Tree	action
Options	start, stop
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

session reference

Synopsis	OAM-PM session name
Context	oam oam-pm session reference
Tree	session
Reference	state oam-pm session <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-type keyword

Synopsis	Test type
Context	oam oam-pm test-type keyword
Tree	test-type
Options	dm – MPLS Delay Measurement test dmm – Ethernet Delay Measurement Message test

	Imm – Ethernet Loss Measurement Message test slm – Ethernet Synthetic Loss Message test twamp-light – IP Two-Way Active Measurement Protocol (Light) test
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

saa

Synopsis	Start or stop a Service Assurance Agent test
Context	oam saa
Tree	saa
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner [[owner-name](#)] *reference* [test](#) *reference*

Synopsis	SAA owner name
Context	oam saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[owner-name] *reference*

Synopsis	Name of the owner of SAA test to be stopped or started
Context	oam saa owner <i>reference</i> test <i>reference</i>
Tree	owner
MD-CLI default	TIMOS CLI
Reference	state saa owner <i>named-item</i> test <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test reference

Synopsis	Name of the SAA test to be stopped or started
Context	oam saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Reference	state saa owner <i>named-item</i> test <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start

Synopsis	Start the SAA test
Context	oam saa owner <i>reference</i> test <i>reference</i> start
Tree	start
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting boolean

Synopsis	Disable recording results in accounting policy
Context	oam saa owner <i>reference</i> test <i>reference</i> start accounting boolean
Tree	accounting
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stop

Synopsis	Stop the SAA test
Context	oam saa owner <i>reference</i> test <i>reference</i> stop
Tree	stop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting *boolean*

Synopsis	Disable recording results in accounting policy
Context	oam saa owner <i>reference</i> test <i>reference</i> stop accounting <i>boolean</i>
Tree	accounting
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-activation-testhead

Synopsis	Start or stop Service Activation Testhead service test
Context	oam service-activation-testhead
Tree	service-activation-testhead
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-test [[service-test-name](#)] *reference*

Synopsis	Service test name
Context	oam service-activation-testhead service-test <i>reference</i>
Tree	service-test
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[service-test-name] *reference*

Synopsis	Name of the service test to be started or stopped
Context	oam service-activation-testhead service-test <i>reference</i>
Tree	service-test
Reference	state test-oam <i>named-item-64</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start

Synopsis	Start OAM SATH service test
Context	oam service-activation-testhead service-test <i>reference</i> start
Tree	start
Description	<p>This command starts an OAM Service Activation Testhead (SATH) service test.</p> <p>Only one instance of a service test is allowed for the specified <i>service-test-name</i>. If the user attempts to start another instance of a service test for the same <i>service-test-name</i> while the current instance is still running, an error is generated.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stop

Synopsis	Stop OAM SATH service test
Context	oam service-activation-testhead service-test <i>reference</i> stop
Tree	stop
Description	<p>This command stops an OAM Service Activation Testhead (SATH) service test.</p> <p>If the user attempts to stop a service test that is already complete, an error is generated.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

password

Synopsis	Change the local user password
Context	password
Tree	password
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ping

Synopsis	Ping an IP address or DNS name
Context	ping
Tree	ping
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

bypass-routing

Synopsis Bypass routing table when sending ping request to host

Context [ping bypass-routing](#)

Tree [bypass-routing](#)

Description When configured, the system bypasses the routing table when sending the ping request to a host on a directly-attached network. If the host is not on a directly-attached network, an error is returned.

Notes The following elements are part of a choice: **bypass-routing**, **interface**, **next-hop-address**, or **subscriber**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

candidate-path

Synopsis Ping candidate path of the SRv6 policy

Context [ping candidate-path](#)

Tree [candidate-path](#)

Description When configured, this command allows the user to specify a candidate path of the SRv6 policy to ping. The candidate path does not need to be the currently active candidate path.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

color *number*

Synopsis Color identifier of the Segment Routing IPv6 policy

Context [ping color *number*](#)

Tree [color](#)

Max. range 0 to 4294967295

Notes The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

count *number*

Synopsis	Number of ping requests to send to the remote host
Context	ping count <i>number</i>
Tree	count
Range	1 to 100000
Units	packets
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[destination] (*ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	ping [destination] (<i>ipv4-address-with-zone ipv6-address-with-zone string-not-all-spaces</i>)
Tree	[destination]
String length	1 to 128
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

distinguisher *number*

Synopsis	SRv6 policy candidate path distinguisher
Context	ping distinguisher <i>number</i>
Tree	distinguisher
Description	This command specifies the distinguisher of the SRv6 policy candidate path to send the ping probe on. This command must be configured if the protocol-owner command is configured to bgp .
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

do-not-fragment

Synopsis	Do not fragment echo request packets (valid for IPv4)
Context	ping do-not-fragment
Tree	do-not-fragment
Description	This command sets the Do Not Fragment (DF) bit in the IPv4 header. This prevents packet fragmentation along the path when there is an MTU mismatch.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint *ipv6-unicast-or-zero-address*

Synopsis	Endpoint identifier of the Segment Routing IPv6 policy to be pinged
Context	ping endpoint <i>ipv6-unicast-or-zero-address</i>
Tree	endpoint
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	Forwarding class option for the transmitted packet
Context	ping fc keyword
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	nc
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface (*reference* | *reference* | *reference* | *reference* | *reference*)

Synopsis	Sending interface name
Context	ping interface (<i>reference</i> <i>reference</i> <i>reference</i> <i>reference</i> <i>reference</i>)
Tree	interface
Reference	state router <i>named-item-64</i> interface <i>interface-name</i> state service ies <i>service-name</i> interface <i>interface-name</i> state service ies <i>service-name</i> <i>interface-name</i> state service vprn <i>service-name</i> interface <i>interface-name</i> state service vprn <i>service-name</i> <i>interface-name</i>
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval (*number* | *decimal-number*)

Synopsis	Time between consecutive ping requests
Context	ping interval (<i>number</i> <i>decimal-number</i>)
Tree	interval
Range	1 to 10000
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop address to send packet, ignoring routing table
Context	ping next-hop-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop-address
Description	This command specifies the next-hop address. The system does not use the routing table and the address must be on an adjacent router attached to a common subnet.
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format
Context	ping output-format <i>keyword</i>
Tree	output-format
Options	summary, detail
Default	detail
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern (*keyword* | *number*)

Synopsis	Pattern string to include in the packet
Context	ping pattern (<i>keyword</i> <i>number</i>)
Tree	pattern
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	SRv6 policy candidate path preference
Context	ping preference <i>number</i>
Tree	preference
Description	This command specifies the preference of the SRv6 policy candidate path to send the ping probe on.
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-owner keyword

Synopsis	Protocol owner
Context	ping protocol-owner keyword
Tree	protocol-owner
Description	This command specifies the protocol owner of the SRv6 policy candidate path to ping. The bgp option specifies a BGP SRv6 policy. The static option specifies a locally configured static SRv6 policy.
Options	bgp, static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance (reference | reference)

Synopsis	Router name or VPRN service name
Context	ping router-instance (reference reference)
Tree	router-instance
Default	Base
Reference	state router <i>named-item-64</i> state service vprn <i>service-name</i>
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-list number

Synopsis	Segment Routing IPv6 segment list to be pinged
Context	ping segment-list number
Tree	segment-list
Range	1 to 32
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Request packet size including ICMP header and payload
Context	ping size number
Tree	size
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address (ipv4-address-no-zone | ipv6-address-no-zone)

Synopsis	Source IP address used in the ICMP Echo Request packet
Context	ping source-address (ipv4-address-no-zone ipv6-address-no-zone)
Tree	source-address
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srv6-policy

Synopsis	Ping a Segment Routing IPv6 policy
Context	ping srv6-policy
Tree	srv6-policy
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

subscriber subscriber-id

Synopsis	Subscriber ID for sending ICMP Echo Request packets
Context	ping subscriber subscriber-id

Tree	subscriber
String length	1 to 64
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Wait time for the ICMP Echo Reply packet
Context	ping timeout <i>number</i>
Tree	timeout
Description	This command specifies the time to wait for the ICMP Echo Reply packet. The timer is started when the last ICMP Echo Request is sent.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tos *number*

Synopsis	Type of Service (ToS) bits in the IP header
Context	ping tos <i>number</i>
Tree	tos
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Time to Live (TTL) included in the request packet
Context	ping ttl <i>number</i>
Tree	ttl

Range	1 to 128
Default	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pwc

Synopsis	Show the present working context
Context	pwc
Tree	pwc
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[path-type] keyword

Synopsis	Alternative format to display the path
Context	pwc [path-type] keyword
Tree	[path-type]
Description	This command provides alternative formats to display the present working context. The gnmi-path option replaces the xpath option.
Options	model-path – YANG-modeled format for RESTCONF gnmi-path – gNMI format for streaming telemetry cli-path – MD-CLI format on a single line for copying and pasting json-instance-path – YANG-modeled format for pySROS
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

previous

Synopsis	Display previous working context
Context	pwc previous
Tree	previous
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pyexec [[url](#)] (*string* | *string*)

Synopsis	Execute a Python application
Context	pyexec (<i>string</i> <i>string</i>)
Tree	pyexec
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[url] (*string* | *string*)

Synopsis	Location of the script to be executed
Context	pyexec (<i>string</i> <i>string</i>)
Tree	pyexec
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[argument-01] *string*

Synopsis	First argument
Context	pyexec (<i>string</i> <i>string</i>) [argument-01] <i>string</i>
Tree	[argument-01]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[argument-02] *string*

Synopsis	Second argument
Context	pyexec (<i>string</i> <i>string</i>) [argument-02] <i>string</i>
Tree	[argument-02]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[argument-03] *string*

Synopsis	Third argument
Context	pyexec (<i>string</i> <i>string</i>) [argument-03] <i>string</i>
Tree	[argument-03]
Introduced	25.3.R2

Introduced	25.7.R1
Platforms	7705 SAR Gen 2

quit-config

Synopsis	Exit the candidate configuration mode
Context	quit-config
Tree	quit-config
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssh

Synopsis	SSH to an IP address or DNS name
Context	ssh
Tree	ssh
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**destination**] (*ipv4-address-with-zone* | *ipv6-address-with-zone* | *string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	ssh [destination] (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>string-not-all-spaces</i>)
Tree	[destination]
String length	1 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-re-exchange

Synopsis	Enter the key-re-exchange context
----------	--

Context	ssh key-re-exchange
Tree	key-re-exchange
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbytes (*number* | *keyword*)

Synopsis	Maximum bytes before initiating key re-exchange
Context	ssh key-re-exchange mbytes (<i>number</i> <i>keyword</i>)
Tree	mbytes
Description	This command specifies the number of bytes transmitted on an SSH session, after which the SSH client initiates the key re-exchange.
Range	1 to 64000
Units	megabytes
Options	infinite
Default	1024
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minutes (*number* | *keyword*)

Synopsis	Time after which SSH client initiates key re-exchange
Context	ssh key-re-exchange minutes (<i>number</i> <i>keyword</i>)
Tree	minutes
Range	1 to 1440
Units	minutes
Options	infinite
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

login-name *string-not-all-spaces*

Synopsis	SSH login username
Context	ssh login-name <i>string-not-all-spaces</i>

Tree	login-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP listening port on SSH client for SSH session
Context	ssh port <i>number</i>
Tree	port
Description	This command configures the listening port for the SR OS SSH client to establish the SSH session with the SSH server.
Range	1 to 65535
Default	22
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

private-key-file *string*

Synopsis	SSH private key file for public-key authentication
Context	ssh private-key-file <i>string</i>
Tree	private-key-file
Description	This command configures the name of the file containing the private key for public-key authentication on the SR OS SSH client, up to 255 characters. (The public key must be provided to the SSH server.) If the file containing the private key is encrypted, the system asks for the password to decrypt the file.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance (*string* | *string*)

Synopsis	Router name or VPRN service name
Context	ssh router-instance (<i>string</i> <i>string</i>)
Tree	router-instance
Default	Base
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

telnet

Synopsis Telnet to an IP address or DNS name

Context [telnet](#)

Tree [telnet](#)

Description This command opens a Telnet session to a remote host. In SR OS, the Telnet servers limit Telnet clients to three login attempts; if unsuccessful, the Telnet client session disconnects. The number is not user configurable.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[**destination**] (*ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces*)

Synopsis Destination IP address or DNS name

Context [telnet](#) [\[destination\]](#) (*ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces*)

Tree [\[destination\]](#)

Description This command specifies the IP address or DNS name (if DNS name resolution is configured) of the remote host for the Telnet session.

String length 1 to 128

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

port *number*

Synopsis Remote host TCP port for the Telnet connection

Context [telnet](#) [port](#) *number*

Tree [port](#)

Range 1 to 65535

Default 23

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

router-instance (*string* | *string*)

Synopsis	Router name or VPRN service name
Context	telnet router-instance (<i>string</i> <i>string</i>)
Tree	router-instance
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address of the Telnet packets
Context	telnet source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

top

Synopsis	Move to the top level of the context
Context	top
Tree	top
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traceroute

Synopsis	Show the route taken to an IP address or DNS name
Context	traceroute
Tree	traceroute
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

candidate-path

Synopsis	Trace route of the candidate path of the SRv6 policy
Context	traceroute candidate-path
Tree	candidate-path
Description	When configured, this command allows the user to specify a candidate path of the SRv6 policy to traceroute. The candidate path does not need to be the currently active candidate path.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

color *number*

Synopsis	Color ID of the SRv6 policy to trace
Context	traceroute color <i>number</i>
Tree	color
Description	This command launches a traceroute of an SRv6 policy that matches a specific color.
Max. range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

decode *keyword*

Synopsis	Perform original datagram parsing functions
Context	traceroute decode <i>keyword</i>
Tree	decode
Options	none, original-datagram
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-port *number*

Synopsis	Transport protocol destination port number
----------	--

Context	traceroute dest-port <i>number</i>
Tree	dest-port
Range	1 to 65535
Default	33434
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-port-udp-fixed

Synopsis	Avoid increment of destination port number for UDP test
Context	traceroute dest-port-udp-fixed
Tree	dest-port-udp-fixed
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[destination] (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	traceroute [destination] (<i>ipv4-address-no-zone ipv6-address-no-zone string-not-all-spaces</i>)
Tree	[destination]
String length	1 to 128
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

detail

Synopsis	Display MPLS label stack information or TCP port status
Context	traceroute detail
Tree	detail
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

distinguisher *number*

Synopsis	SRv6 policy candidate path distinguisher
Context	traceroute distinguisher <i>number</i>
Tree	distinguisher
Description	<p>This command specifies the distinguisher of the SRv6 policy candidate path to send the traceroute probe on.</p> <p>This command must be configured if the protocol-owner command is configured to bgp.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint *ipv6-unicast-or-zero-address*

Synopsis	Endpoint of the SRv6 policy to trace
Context	traceroute endpoint <i>ipv6-unicast-or-zero-address</i>
Tree	endpoint
Description	This command configures an IPv6 endpoint address for an SRv6 policy as the target of the traceroute.
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	First hop traceroute probes using the TTL value
Context	traceroute min-ttl <i>number</i>
Tree	min-ttl
Description	This command specifies the first hop traceroute probes, using the ttl value.
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

numeric

Synopsis	Display IP addresses instead of DNS names
Context	traceroute numeric
Tree	numeric
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	SRv6 policy candidate path preference
Context	traceroute preference <i>number</i>
Tree	preference
Description	This command specifies the preference of the SRv6 policy candidate path to send the traceroute probe on.
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of probes to send per hop
Context	traceroute probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol *keyword*

Synopsis	Packet type to send
Context	traceroute protocol <i>keyword</i>
Tree	protocol

Description	This command sets the transport protocol, UDP or TCP, for the traceroute packet. A targeted VPRN service silently discards TCP traceroutes and only responds to UDP traceroutes.
Options	udp, tcp
Default	udp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-owner *keyword*

Synopsis	Protocol owner
Context	traceroute protocol-owner <i>keyword</i>
Tree	protocol-owner
Description	<p>This command specifies the protocol owner of the SRv6 policy candidate path to traceroute.</p> <p>The bgp option specifies a BGP SRv6 policy.</p> <p>The static option specifies a locally configured static SRv6 policy.</p>
Options	bgp, static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	traceroute router-instance <i>string</i>
Tree	router-instance
Default	Base
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-list *number*

Synopsis	SR IPv6 segment list to trace
Context	traceroute segment-list <i>number</i>

Tree	segment-list
Description	This command configures the traceroute probe to target a specific segment list of an SRv6 policy. When the segment list is not specified, the traceroute probe is sent on the lowest available segment list.
Range	1 to 32
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Number of pad bytes in each transmitted packet
Context	traceroute size number
Tree	size
Range	0 to 9786
Units	bytes
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address of the probe packets
Context	traceroute source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Description	This command specifies the source address of the probe packets. If the IP address is not one of the interfaces of the device, the system returns an error.
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srv6-policy

Synopsis	Trace an SRv6 policy
----------	----------------------

Context	traceroute srv6-policy
Tree	srv6-policy
Description	This command launches a traceroute of a Segment Routing IPv6 (SRv6) policy.
Notes	The following elements are part of a mandatory choice: (destination , router-instance , and source-address) or (color , endpoint , segment-list , and srv6-policy).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tos number

Synopsis	Type of Service (ToS) bits in the IP header
Context	traceroute tos number
Tree	tos
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl number

Synopsis	Maximum number of hops (TTL) to probe
Context	traceroute ttl number
Tree	ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

wait number

Synopsis	Time to wait for a response to the probe
Context	traceroute wait number
Tree	wait
Range	10 to 60000
Units	milliseconds

Default	5000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tree

Synopsis	Show the command tree under the present working context
Context	tree
Tree	tree
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] cli-path-type

Synopsis	Absolute path or relative path from pwc
Context	tree [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

detail

Synopsis	Display the tree with keys and field values
Context	tree detail
Tree	detail
Notes	The following elements are part of a choice: (detail and flat) or path-format .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flat

Synopsis	Show the context from the pwc on each line
Context	tree flat
Tree	flat
Notes	The following elements are part of a choice: (detail and flat) or path-format .

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[path-format] *keyword*

Synopsis Alternative format to display the path

Context [tree \[path-format\]](#) *keyword*

Tree [\[path-format\]](#)

Description This option outputs the tree information in alternative YANG formats for use in external tools, such as pySROS, gNMI, or the Network Services Platform (NSP).

Options model-path – YANG-modeled format for RESTCONF
gnmi-path – gNMI format for streaming telemetry
json-instance-path – YANG-modeled format for pySROS

Notes The following elements are part of a choice: (**detail** and **flat**) or **path-format**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

2.5 Output modifier commands

See “Using output modifiers in the MD-CLI” in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

2.5.1 Output modifier command descriptions

|

Synopsis	Apply an output modifier
Context	
Tree	
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count

Synopsis	Show the line count of the output
Context	count
Tree	count
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match [pattern] string

Synopsis	Match on a string (") or regular expression (')
Context	match string
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[pattern] string

Synopsis	String (") or regular expression (') pattern to match
Context	match string
Tree	match
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-case *boolean*

Synopsis	Ignore case in pattern match
Context	match <i>string</i> ignore-case <i>boolean</i>
Tree	ignore-case
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

invert-match *boolean*

Synopsis	Invert the pattern match selection
Context	match <i>string</i> invert-match <i>boolean</i>
Tree	invert-match
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-count *number*

Synopsis	Maximum number of displayed matches
Context	match <i>string</i> max-count <i>number</i>
Tree	max-count
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

post-lines *number*

Synopsis	Number of lines to display following the matched line
Context	match <i>string</i> post-lines <i>number</i>
Tree	post-lines
Range	0 to 4294967295
Default	0
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

pre-lines *number*

Synopsis Number of lines to display preceding the matched line

Context | [match](#) *string* [pre-lines](#) *number*

Tree [pre-lines](#)

Range 0 to 4294967295

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

no-more

Synopsis Prevent pagination for the displayed output

Context | [no-more](#)

Tree [no-more](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

pyexec [[url](#)] (*string* | *reference*)

Synopsis Execute a Python application

Context | [pyexec](#) (*string* | *reference*)

Tree [pyexec](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[url] (*string* | *reference*)

Synopsis Location of the script to be executed

Context | [pyexec](#) (*string* | *reference*)

Tree [pyexec](#)

Reference **state python python-script name**

Notes This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[argument-01] string

Synopsis First argument
Context | [pyexec](#) (*string* | *reference*) [\[argument-01\]](#) *string*
Tree [\[argument-01\]](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

Context	pyexec (<i>string</i> <i>reference</i>) [argument-20] <i>string</i>
Tree	[argument-20]
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

repeat

Synopsis	Repeat the command
Context	repeat
Tree	repeat
Description	Commands in this context configure the command to repeat.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count *number*

Synopsis	Command repetition count
Context	repeat count <i>number</i>
Tree	count
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interval] *number*

Synopsis	Command repetition interval
Context	repeat [interval] <i>number</i>
Tree	[interval]
Description	This command configures the command repetition interval. If this command is not specified, the command repeats until interrupted with Ctrl-C.
Range	10 to 86400000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timestamp

Synopsis	Display the timestamp before each repetition
Context	repeat timestamp
Tree	timestamp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reverse-dns

Synopsis	Resolve IP addresses to DNS names in input
Context	reverse-dns
Tree	reverse-dns

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

> **[url]** (*cflash-url* | *ftp-tftp-url*)

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

2.6 perform commands

The **perform** commands are YANG-modeled versions of the **tools perform** commands and are available in MD-CLI and NETCONF interfaces. The **perform** commands execute actions in the router, such as:

- force a LAG subgroup to become active
- set an IS-IS overload condition
- terminate a Python script

```
perform
- card number
- power-cycle
- chassis reference chassis-number reference
- check-backplane-eprom
- filter
- ip-filter reference
- entry reference
- activate-primary-action
- ipv6-filter reference
- entry reference
- activate-primary-action
- redirect-policy reference
- activate-best-dest
- lag
- clear-force
- lag
- [lag-name] reference
- sub-group number
- multi-chassis
- all
- peer
- [ip-address] reference
- force-active
- lag
- [lag-name] reference
- sub-group number
- multi-chassis
- all
- peer
- [ip-address] reference
- force-standby
- lag
- [lag-name] reference
- sub-group number
- multi-chassis
- all
- peer
- [ip-address] reference
- load-balance
- class number
- [lag-name] reference
- log
- custom-event
- [event-number] number
- message-string string
- parameter1 string
- parameter2 string
- parameter3 string
- parameter4 string
- parameter5 string
```

perform log custom-event parameter6

```

    - parameter6 string
    - parameter7 string
    - parameter8 string
    - subject string
  - test-event
    - custom-text string
- pcap reference
- capture
  - start
    - timestamp boolean
    - url-suffix string
  - stop
- router string
- isis reference
  - ldp-sync-exit
  - overload
    - max-metric boolean
    - [seconds] number
  - run-manual-spf
- mcast-umh-red
  - show
    - pair
      - card number
      - pair-id number
      - summary
- pim
  - mc-ecmp-rebalance
  - threshold number
  - show
    - iom-failures
      - detail boolean
- service
  - ies reference
  - vprn reference
- system
  - script-control
    - script-policy
      - stop
        - all
        - owner reference
        - policy-name reference
  - security
    - secure-boot
      - show
        - uefi-variables
          - card reference
- ssh
  - generate-keypair
    - ecdsa-curve keyword
    - ed25519
    - rsa-key-size number
    - [save-path] cflash-url

```

2.6.1 perform command descriptions

perform

Synopsis	Perform troubleshooting and debugging
Context	perform

Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *reference*

Synopsis	ID for the IPv6 filter entry
Context	perform filter ipv6-filter <i>reference</i> entry <i>reference</i>
Tree	entry
Reference	state filter ipv6-filter <i>filter-name</i> entry <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

activate-primary-action

Synopsis	Switch from the secondary to the primary action
Context	perform filter ipv6-filter <i>reference</i> entry <i>reference</i> activate-primary-action
Tree	activate-primary-action
Description	This command activates the primary action for the specified filter policy entry. If the primary action is already active, the command has no effect. If a secondary action is active, the primary action is activated unless the primary target is down. If the configure filter redirect sticky-dest command is configured, the timer expires.
Introduced	25.3.R2
Platforms	7705 SAR-1

redirect-policy [[redirect-policy-name](#)] *reference*

Synopsis	Enter the redirect-policy list instance
Context	perform filter redirect-policy <i>reference</i>
Tree	redirect-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

[redirect-policy-name] *reference*

Synopsis	Name of the redirect policy
Context	perform filter redirect-policy <i>reference</i>
Tree	redirect-policy
Reference	state filter redirect-policy <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

activate-best-dest

Synopsis	Activate the current best destination
Context	perform filter redirect-policy <i>reference</i> activate-best-dest
Tree	activate-best-dest
Description	This command forces a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If the configure filter redirect sticky-dest command is configured, the timer expires.
Introduced	25.3.R2
Platforms	7705 SAR-1

lag

Synopsis	Perform LAG operations
Context	perform lag
Tree	lag
Introduced	25.3.R2

Context [perform log](#)

Tree [log](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

custom-event

Synopsis	Send a custom generic log event
Context	perform log custom-event
Tree	custom-event
Description	When specified, the system sends a custom generic log event. The total length of the message string and all parameter strings must be less than or equal to 2400 characters.
Introduced	25.3.R2
Platforms	7705 SAR-1

[event-number] *number*

Synopsis	Custom event to send
Context	perform log custom-event [event-number] <i>number</i>
Tree	[event-number]
Range	1 to 6
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

message-string *string*

Synopsis	Message for the log event
Context	perform log custom-event message-string <i>string</i>
Tree	message-string
Description	This command specifies the string for the message field of the log event. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	1 to 2000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

parameter1 string

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter1 string
Tree	parameter1
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Default	
Introduced	25.3.R2
Platforms	7705 SAR-1

parameter2 string

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter2 string
Tree	parameter2
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Default	
Introduced	25.3.R2
Platforms	7705 SAR-1

parameter3 string

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter3 string
Tree	parameter3
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Default	

Introduced	25.3.R2
Platforms	7705 SAR-1

parameter4 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter4 <i>string</i>
Tree	parameter4
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Default	
Introduced	25.3.R2
Platforms	7705 SAR-1

parameter5 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter5 <i>string</i>
Tree	parameter5
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Default	
Introduced	25.3.R2
Platforms	7705 SAR-1

parameter6 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter6 <i>string</i>
Tree	parameter6
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").

String length 0 to 2000
Default
Introduced 25.3.R2
Platforms 7705 SAR-1

parameter7 *string*

Synopsis Custom text of the parameter
Context [perform log custom-event parameter7](#) *string*
Tree [parameter7](#)
Description This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length 0 to 2000
Default
Introduced 25.3.R2
Platforms 7705 SAR-1

parameter8 *string*

Synopsis Custom text of the parameter
Context [perform log custom-event parameter8](#) *string*
Tree [parameter8](#)
Description This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length 0 to 2000
Default
Introduced 25.3.R2
Platforms 7705 SAR-1

subject *string*

Synopsis Subject of the log event
Context [perform log custom-event subject](#) *string*
Tree [subject](#)

Description	This command specifies the string in the subject field of the log event. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

test-event

Synopsis	Send a test log event
Context	perform log test-event
Tree	test-event
Introduced	25.3.R2
Platforms	7705 SAR-1

custom-text *string*

Synopsis	Custom text of the test event message field
Context	perform log test-event custom-text <i>string</i>
Tree	custom-text
Description	This command specifies custom text for the message section of the test log event. Embedded double quotes are not supported in the custom-text string. There is no special treatment for or \r sequences. For example, in the custom-text string is output as the backslash character (\) and "n" (the equivalent of ASCII 0x5C and 0x6e).
String length	0 to 800
Default	
Introduced	25.3.R2
Platforms	7705 SAR-1

pcap [[session-name](#)] *reference*

Synopsis	Enter the pcap list instance
Context	perform pcap <i>reference</i>
Tree	pcap
Description	Commands in this context configure a PCAP instance used for packet capture.

Introduced	25.7.R1
Platforms	7705 SAR-1

[session-name] *reference*

Synopsis	PCAP session name for the packet capture
Context	perform pcap reference
Tree	pcap
Reference	state mirror mirror-dest service-name pcap named-item
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7705 SAR-1

capture

Synopsis	Enter the capture context
Context	perform pcap reference capture
Tree	capture
Description	Commands in this context configure the packet capture process for a specified PCAP session.
Introduced	25.7.R1
Platforms	7705 SAR-1

start

Synopsis	Start PCAP capture
Context	perform pcap reference capture start
Tree	start
Description	When specified, the system starts the packet capture process and also starts the FTP or TFTP session. If the FTP or TFTP server is unreachable, the command prompt rejects further input until the retry mechanism times out after 24 seconds (four attempts of about six seconds each). If the filename (configured using the configure mirror mirror-dest pcap command) is unchanged between captures, this command overwrites the file content. To avoid this, configure the url-suffix option, the timestamp option, or both, to create a new filename when starting a capture.
Introduced	25.7.R1
Platforms	7705 SAR-1

timestamp *boolean*

Synopsis	Add a timestamp to the PCAP capture filename
Context	perform pcap <i>reference</i> capture start timestamp <i>boolean</i>
Tree	timestamp
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-1

url-suffix *string*

Synopsis	pcap capture file-url suffix string.
Context	perform pcap <i>reference</i> capture start url-suffix <i>string</i>
Tree	url-suffix
String length	1 to 19
Introduced	25.7.R1
Platforms	7705 SAR-1

stop

Synopsis	Stop PCAP capture
Context	perform pcap <i>reference</i> capture stop
Tree	stop
Description	When specified, the system stops the packet capture process and also stops the FTP or TFTP session. If the FTP or TFTP server is unreachable, the command prompt rejects further input until the retry mechanism times out after 24 seconds (four attempts of about six seconds each).
Introduced	25.7.R1
Platforms	7705 SAR-1

router [[router-instance](#)] *string*

Synopsis	Enter the router list instance
Context	perform router <i>string</i>

2.7.1 reset command descriptions

reset

Synopsis	Clear statistics or reset operational state
Context	reset
Tree	reset
Description	Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).
Introduced	25.3.R2
Platforms	7705 SAR-1

card [[slot-number](#)] *reference*

Synopsis	Enter the card list instance
Context	reset card <i>reference</i>
Tree	card
Description	Commands in this context perform reset operations on a specific card.
Introduced	25.3.R2
Platforms	7705 SAR-1

[[slot-number](#)] *reference*

Synopsis	Slot number
Context	reset card <i>reference</i>
Tree	card
Reference	state card <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fp [[fp-number](#)] *reference*

Synopsis	Enter the fp list instance
----------	-----------------------------------

Context	reset card <i>reference</i> fp <i>reference</i>
Tree	fp
Description	Commands in this context display information for the specified forwarding plane (FP).
Introduced	25.3.R2
Platforms	7705 SAR-1

[fp-number] *reference*

Synopsis	FP number
Context	reset card <i>reference</i> fp <i>reference</i>
Tree	fp
Reference	state card <i>number</i> fp <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

distributed-cpu-protection

Synopsis	Enter the distributed-cpu-protection context
Context	reset card <i>reference</i> fp <i>reference</i> distributed-cpu-protection
Tree	distributed-cpu-protection
Description	Commands in this context reset the distributed CPU protection information.
Introduced	25.3.R2
Platforms	7705 SAR-1

information

Synopsis	Reset distributed CPU protection information
Context	reset card <i>reference</i> fp <i>reference</i> distributed-cpu-protection information
Tree	information
Introduced	25.3.R2
Platforms	7705 SAR-1

forward-engine-drop-reason

Synopsis	Enter the forward-engine-drop-reason context
Context	reset card <i>reference</i> fp <i>reference</i> forward-engine-drop-reason
Tree	forward-engine-drop-reason
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset forwarding engine drop reason statistics
Context	reset card <i>reference</i> fp <i>reference</i> forward-engine-drop-reason statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	reset card <i>reference</i> fp <i>reference</i> ingress
Tree	ingress
Description	Commands in this context reset the ingress information.
Introduced	25.3.R2
Platforms	7705 SAR-1

per-egress-fp-statistics

Synopsis	Reset per egress FP statistics
Context	reset card <i>reference</i> fp <i>reference</i> ingress per-egress-fp-statistics
Tree	per-egress-fp-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group

Synopsis	Enter the queue-group context
Context	reset card <i>reference</i> fp <i>reference</i> ingress queue-group
Tree	queue-group
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset the queue group statistics
Context	reset card <i>reference</i> fp <i>reference</i> ingress queue-group statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

instance *number*

Synopsis	Queue group instance ID
Context	reset card <i>reference</i> fp <i>reference</i> ingress queue-group statistics instance number
Tree	instance
Max. range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Queue group statistics mode
Context	reset card <i>reference</i> fp <i>reference</i> ingress queue-group statistics mode keyword
Tree	mode
Options	access, network
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-group-name *string*

Synopsis	Queue group name
Context	reset card <i>reference</i> fp <i>reference</i> ingress queue-group statistics queue-group-name string
Tree	queue-group-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

reinitialize

Synopsis	Reset the specified card
Context	reset card <i>reference</i> reinitialize
Tree	reinitialize
Introduced	25.3.R2
Platforms	7705 SAR-1

hard-reset-unsupported-mdas

Synopsis	Perform a hard reset on MDAs incapable of soft reset
Context	reset card <i>reference</i> reinitialize hard-reset-unsupported-mdas
Tree	hard-reset-unsupported-mdas
Description	This command allows a soft reset operation when some of the MDAs cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset, and a hard reset is performed on MDAs that do not support soft resets.
Introduced	25.3.R2
Platforms	7705 SAR-1

soft

Synopsis	Perform a soft reset on the card
Context	reset card <i>reference</i> reinitialize soft
Tree	soft
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	reset filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-exception

Synopsis	Reset operation on the specified IP exception filter
Context	reset filter ip-exception
Tree	ip-exception
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Statistics direction for IP exception filter entries
Context	reset filter ip-exception direction keyword
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

entry *reference*

Synopsis	Entry ID for the filter
Context	reset filter ip-exception entry reference
Tree	entry
Reference	state filter ip-exception <i>filter-name entry number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] reference

Synopsis	IP exception filter name
Context	reset filter ip-exception [filter-name] reference
Tree	[filter-name]
Reference	state filter ip-exception <i>filter-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-filter

Synopsis	Reset operation on the specified IP filter
Context	reset filter ip-filter
Tree	ip-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

direction keyword

Synopsis	Statistics direction for IP filter entries
Context	reset filter ip-filter direction keyword
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

entry reference

Synopsis	Entry ID for the filter
Context	reset filter ip-filter entry reference
Tree	entry
Reference	state filter ip-filter <i>filter-name</i> entry <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] reference

Synopsis	IP filter name
Context	reset filter ip-filter [filter-name] reference
Tree	[filter-name]
Reference	state filter ip-filter <i>filter-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-exception

Synopsis	Reset operation on the specified IPv6 exception filter
Context	reset filter ipv6-exception
Tree	ipv6-exception
Introduced	25.3.R2
Platforms	7705 SAR-1

direction keyword

Synopsis	Statistics direction for IPv6 exception filter entries
Context	reset filter ipv6-exception direction keyword
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

entry reference

Synopsis	Entry ID for the filter
Context	reset filter ipv6-exception entry reference
Tree	entry
Reference	state filter ipv6-exception <i>filter-name entry number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] reference

Synopsis	IPv6 exception filter name
Context	reset filter ipv6-exception [filter-name] reference
Tree	[filter-name]
Reference	state filter ipv6-exception <i>filter-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-filter

Synopsis	Reset operation on the specified IPv6 filter
Context	reset filter ipv6-filter
Tree	ipv6-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

direction keyword

Synopsis	Statistics direction of IPv6 filter entries
Context	reset filter ipv6-filter direction keyword
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

entry reference

Synopsis	Entry ID for the IPv6 filter
Context	reset filter ipv6-filter entry reference
Tree	entry
Reference	state filter ipv6-filter <i>filter-name</i> entry <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] reference

Synopsis	IPv6 exception filter name
Context	reset filter ipv6-filter [filter-name] reference
Tree	[filter-name]
Reference	state filter ipv6-filter <i>filter-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

log

Synopsis	Reset the specified filter log
Context	reset filter log
Tree	log
Description	<p>This command reinitializes or rolls over the specified memory filter log. Memory filter logs are reinitialized and cleared of contents.</p> <p>This command is applicable only to filter logs that are directed to memory destinations. Filter logs with destinations other than memory are not affected by this command.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[log-id] reference

Synopsis	ID of the filter log to reset
Context	reset filter log [log-id] reference
Tree	[log-id]
Reference	state filter log <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [policer-name] reference

Synopsis	Enter the policer list instance
----------	--

Context	reset filter policer <i>reference</i>
Tree	policer
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-name] *reference*

Synopsis	Filter policer name
Context	reset filter policer <i>reference</i>
Tree	policer
Reference	state filter policer <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

instance

Synopsis	Enter the instance context
Context	reset filter policer <i>reference</i> instance
Tree	instance
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset counters for all policer instances
Context	reset filter policer <i>reference</i> instance all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Filter policer instance statistics counters to be reset
Context	reset filter policer <i>reference</i> instance all direction <i>keyword</i>

Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	reset filter policer <i>reference</i> instance filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Reset instance statistics counters
Context	reset filter policer <i>reference</i> instance filter ip
Tree	ip
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Filter policer instance statistics counters to be reset
Context	reset filter policer <i>reference</i> instance filter ip direction <i>keyword</i>
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *reference*

Synopsis	Filter policer instance name
Context	reset filter policer <i>reference</i> instance filter ip [name] <i>reference</i>
Tree	[name]

Reference	state filter policer <i>named-item</i> statistics instance filter ip <i>named-item-64-or-empty</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	reset filter policer <i>reference</i> instance filter ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

direction keyword

Synopsis	Filter policer instance statistics counters to be reset
Context	reset filter policer <i>reference</i> instance filter ipv6 direction <i>keyword</i>
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] reference

Synopsis	Filter policer instance name
Context	reset filter policer <i>reference</i> instance filter ipv6 [name] <i>reference</i>
Tree	[name]
Reference	state filter policer <i>named-item</i> statistics instance filter ipv6 <i>named-item-64-or-empty</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

system

Synopsis	Enter the system context
----------	--------------------------

Context	reset filter policer <i>reference</i> instance system
Tree	system
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Filter policer instance statistics counters to be reset
Context	reset filter policer <i>reference</i> instance system direction <i>keyword</i>
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

lag [[lag-name](#)] *reference*

Synopsis	Enter the lag list instance
Context	reset lag <i>reference</i>
Tree	lag
Description	Commands in this context configure LAG reset operations.
Introduced	25.3.R2
Platforms	7705 SAR-1

[lag-name] *reference*

Synopsis	LAG name, starting with lag-
Context	reset lag <i>reference</i>
Tree	lag
Reference	state lag <i>lag-interface</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregate-queue-statistics

Synopsis	Reset LAG aggregate queue statistics
Context	reset lag <i>reference</i> aggregate-queue-statistics
Tree	aggregate-queue-statistics
Description	This command clears aggregate queue statistics on a PXC-based LAG.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-session

Synopsis	Enter the bfd-session context
Context	reset lag <i>reference</i> bfd-session
Tree	bfd-session
Description	Commands in this context reset the LAG BFD session data.
Introduced	25.3.R2
Platforms	7705 SAR-1

port

Synopsis	Port identifier in the LAG
Context	reset lag <i>reference</i> bfd-session port
Tree	port
Introduced	25.3.R2
Platforms	7705 SAR-1

family keyword

Synopsis	BFD session family type
Context	reset lag <i>reference</i> bfd-session port family <i>keyword</i>
Tree	family
Options	ipv4, ipv6
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

[lag-port] reference

Synopsis	Member port of the LAG
Context	reset lag reference bfd-session port [lag-port] reference
Tree	[lag-port]
Reference	state lag lag-interface port reference
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP-statistics

Synopsis	Reset LACP statistics
Context	reset lag reference lACP-statistics
Tree	lACP-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset LAG statistics
Context	reset lag reference statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

log

Synopsis	Enter the log context
Context	reset log
Tree	log
Description	Commands in this context provide reset operations for events, logs, and the event handling system (EHS).
Introduced	25.3.R2
Platforms	7705 SAR-1

event-handling

Synopsis	Enter the event-handling context
Context	reset log event-handling
Tree	event-handling
Description	Commands in this context provide reset operations for the EHS.
Introduced	25.3.R2
Platforms	7705 SAR-1

handlers

Synopsis	Enter the handlers context
Context	reset log event-handling handlers
Tree	handlers
Description	Commands in this context reset statistics related to EHS handlers.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset statistics for all EHS handlers
Context	reset log event-handling handlers all
Tree	all
Description	This command resets all statistics for all handlers in the state log event-handling handler context and in the output of the show log event-handling handler command.
Introduced	25.3.R2
Platforms	7705 SAR-1

handler

Synopsis	Reset statistics for a specified EHS handler
Context	reset log event-handling handlers handler
Tree	handler
Description	This command resets all statistics for the specified handler in the state log event-handling handler context and in the output of the show log event-handling handler command.

Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *reference*

Synopsis Handler name to reset
Context [reset log event-handling handlers handler \[name\] reference](#)
Tree [\[name\]](#)
Reference **state log event-handling handler** *named-item*
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

information

Synopsis Reset general EHS operational data
Context [reset log event-handling information](#)
Tree [information](#)
Description This command resets all data in the **state log event-handling summary-statistics** context and in the output of the **show log event-handling information** command.
Introduced 25.3.R2
Platforms 7705 SAR-1

log-events

Synopsis Enter the **log-events** context
Context [reset log log-events](#)
Tree [log-events](#)
Description Commands in this context reset the operational state related to log events.
Introduced 25.3.R2
Platforms 7705 SAR-1

repeating-events

Synopsis Enter the **repeating-events** context

Context	reset log log-events repeating-events
Tree	repeating-events
Description	Commands in this context reset the operational state related to repeating log events.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset operation for all repeating log events
Context	reset log log-events repeating-events all
Tree	all
Description	This command cancels the repetition of all log events that are currently repeating. All repeating log events stop repeating.
Introduced	25.3.R2
Platforms	7705 SAR-1

log-id

Synopsis	Reset the specified event log
Context	reset log log-id
Tree	log-id
Description	<p>This command reinitializes or rolls over the specified memory or file event log. Memory logs are reinitialized and cleared of contents. File logs are manually rolled over by this command.</p> <p>This command is applicable only to event logs that are directed to file destinations and memory destinations. This command does not affect SNMP, syslog, console, CLI, or session logs.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] reference

Synopsis	Name of the event log to reset
Context	reset log log-id [name] reference
Tree	[name]
Reference	state log log-id log-name

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mda

Synopsis	Enter the mda context
Context	reset mda
Tree	mda
Description	Commands in this context perform reset operations on an MDA in a specified slot.
Introduced	25.3.R2
Platforms	7705 SAR-1

card-slot [[slot-number](#)] *reference*

Synopsis	Enter the card-slot list instance
Context	reset mda card-slot reference
Tree	card-slot
Introduced	25.3.R2
Platforms	7705 SAR-1

[slot-number] *reference*

Synopsis	Slot number
Context	reset mda card-slot reference
Tree	card-slot
Reference	state card <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mda-slot [[mda](#)] *reference*

Synopsis	Enter the mda-slot list instance
Context	reset mda card-slot reference mda-slot reference

Tree	mda-slot
Introduced	25.3.R2
Platforms	7705 SAR-1

[mda] reference

Synopsis	Card MDA slot
Context	reset mda card-slot <i>reference</i> mda-slot <i>reference</i>
Tree	mda-slot
Reference	state card <i>number</i> mda <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-statistics

Synopsis	Reset MDA IPsec statistics
Context	reset mda card-slot <i>reference</i> mda-slot <i>reference</i> ipsec-statistics
Tree	ipsec-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

reinitialize

Synopsis	Reset the specified MDA
Context	reset mda card-slot <i>reference</i> mda-slot <i>reference</i> reinitialize
Tree	reinitialize
Introduced	25.3.R2
Platforms	7705 SAR-1

router [\[router-instance\]](#) *string*

Synopsis	Enter the router list instance
Context	reset router <i>string</i>
Tree	router

Introduced	25.3.R2
Platforms	7705 SAR-1

[router-instance] string

Synopsis	Router name or VPRN service name
Context	reset router string
Tree	router
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

arp

Synopsis	Enter the arp context
Context	reset router string arp
Tree	arp
Description	Commands in this context reset ARP cache entries.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Reset the ARP cache entries for the IPv4 address
Context	reset router string arp address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-address ipv4-address

Synopsis	IPv4 address
Context	reset router string arp address ipv4-address ipv4-address

Tree	ipv4-address
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all ARP cache entries
Context	reset router <i>string</i> arp all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset ARP cache entries for the interface
Context	reset router <i>string</i> arp interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> arp interface interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	reset router <i>string</i> bfd
Tree	bfd
Description	Commands in this context reset bidirectional forwarding (BFD) sessions and statistics.

Introduced	25.3.R2
Platforms	7705 SAR-1

session

Synopsis	Enter the session context
Context	reset router string bfd session
Tree	session
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-ldp

Synopsis	Enter the lsp-ldp context
Context	reset router string bfd session lsp-ldp
Tree	lsp-ldp
Introduced	25.3.R2
Platforms	7705 SAR-1

head

Synopsis	Enter the head context
Context	reset router string bfd session lsp-ldp head
Tree	head
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router string bfd session lsp-ldp head session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd session lsp-ldp head session-key prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd session lsp-ldp head session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tail

Synopsis	Enter the tail context
Context	reset router <i>string</i> bfd session lsp-ldp tail
Tree	tail
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd session lsp-ldp tail session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd session lsp-ldp tail session-key dst-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dst-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd session lsp-ldp tail session-key prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-rsvp

Synopsis	Enter the lsp-rsvp context
Context	reset router <i>string</i> bfd session lsp-rsvp
Tree	lsp-rsvp
Introduced	25.3.R2
Platforms	7705 SAR-1

head

Synopsis	Enter the head context
Context	reset router <i>string</i> bfd session lsp-rsvp head
Tree	head
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name

Synopsis	Reset information for the RSVP session name
Context	reset router <i>string</i> bfd session lsp-rsvp head rsvp-session-name
Tree	rsvp-session-name
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name *string-not-all-spaces*

Synopsis	RSVP session name
Context	reset router <i>string</i> bfd session lsp-rsvp head rsvp-session-name rsvp-session-name <i>string-not-all-spaces</i>
Tree	rsvp-session-name
String length	1 to 256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd session lsp-rsvp head session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd session lsp-rsvp head session-key dst-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dst-ip
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

lsp-id *number*

Synopsis LSP ID

Context [reset router](#) *string* [bfd session](#) [lsp-rsvp head session-key](#) [lsp-id](#) *number*

Tree [lsp-id](#)

Max. range 0 to 4294967295

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

src-ip (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Source address

Context [reset router](#) *string* [bfd session](#) [lsp-rsvp head session-key](#) [src-ip](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [src-ip](#)

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

tunnel-id *number*

Synopsis Tunnel ID

Context [reset router](#) *string* [bfd session](#) [lsp-rsvp head session-key](#) [tunnel-id](#) *number*

Tree [tunnel-id](#)

Max. range 0 to 4294967295

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

tail

Synopsis Enter the **tail** context

Context	reset router <i>string</i> bfd session lsp-rsvp tail
Tree	tail
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name

Synopsis	Reset information for the RSVP session name
Context	reset router <i>string</i> bfd session lsp-rsvp tail rsvp-session-name
Tree	rsvp-session-name
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name *string-not-all-spaces*

Synopsis	RSVP session name
Context	reset router <i>string</i> bfd session lsp-rsvp tail rsvp-session-name rsvp-session-name <i>string-not-all-spaces</i>
Tree	rsvp-session-name
String length	1 to 256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sender-ip (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	RSVP session sender IP address
Context	reset router <i>string</i> bfd session lsp-rsvp tail rsvp-session-name sender-ip (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	sender-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd session lsp-rsvp tail session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd session lsp-rsvp tail session-key dst-ip (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	dst-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-id *number*

Synopsis	LSP ID
Context	reset router <i>string</i> bfd session lsp-rsvp tail session-key lsp-id <i>number</i>
Tree	lsp-id
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd session lsp-rsvp tail session-key src-ip (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR-1

tunnel-id *number*

Synopsis Tunnel ID
Context [reset router](#) *string* [bfd session](#) [lsp-rsvp tail session-key](#) **tunnel-id** *number*
Tree [tunnel-id](#)
Max. range 0 to 4294967295
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

mpls-tp

Synopsis Enter the **mpls-tp** context
Context [reset router](#) *string* [bfd session](#) **mpls-tp**
Tree [mpls-tp](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

lsp-id

Synopsis Reset information for the LSP ID
Context [reset router](#) *string* [bfd session](#) [mpls-tp](#) **lsp-id**
Tree [lsp-id](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

lsp-name *string-not-all-spaces*

Synopsis LSP name
Context [reset router](#) *string* [bfd session](#) [mpls-tp](#) [lsp-id](#) **lsp-name** *string-not-all-spaces*
Tree [lsp-name](#)
String length 1 to 256

Introduced	25.3.R2
Platforms	7705 SAR-1

path *keyword*

Synopsis	Path status
Context	reset router <i>string</i> bfd session mpls-tp lsp-id path <i>keyword</i>
Tree	path
Options	working, protecting
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

point-to-multipoint

Synopsis	Enter the point-to-multipoint context
Context	reset router <i>string</i> bfd session point-to-multipoint
Tree	point-to-multipoint
Introduced	25.3.R2
Platforms	7705 SAR-1

p2mp-interface-name

Synopsis	Reset information for the P2MP interface
Context	reset router <i>string</i> bfd session point-to-multipoint p2mp-interface-name
Tree	p2mp-interface-name
Introduced	25.3.R2
Platforms	7705 SAR-1

[p2mp-interface-name] *string*

Synopsis	P2MP interface name
Context	reset router <i>string</i> bfd session point-to-multipoint p2mp-interface-name [p2mp-interface-name] <i>string</i>
Tree	[p2mp-interface-name]

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

point-to-point

Synopsis	Enter the point-to-point context
Context	reset router <i>string</i> bfd session point-to-point
Tree	point-to-point
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd session point-to-point session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd session point-to-point session-key dst (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dst
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd session point-to-point session-key src (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

seamless-lsp-path

Synopsis	Enter the seamless-lsp-path context
Context	reset router <i>string</i> bfd session seamless-lsp-path
Tree	seamless-lsp-path
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all sessions
Context	reset router <i>string</i> bfd session seamless-lsp-path all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd session seamless-lsp-path session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-index number

Synopsis	LSP index
Context	reset router <i>string</i> bfd session seamless-lsp-path session-key <i>lsp-index number</i>
Tree	lsp-index
Max. range	0 to 4294967295
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

path-lspid *number*

Synopsis	LSP path ID
Context	reset router <i>string</i> bfd session seamless-lsp-path session-key path-lspid <i>number</i>
Tree	path-lspid
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd session seamless-lsp-path session-key prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd session seamless-lsp-path session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2

seamless-sr-policy

Synopsis	Enter the seamless-sr-policy context
----------	---

Context	reset router <i>string</i> bfd session seamless-sr-policy
Tree	seamless-sr-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all sessions
Context	reset router <i>string</i> bfd session seamless-sr-policy all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd session seamless-sr-policy session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-index *number*

Synopsis	LSP index
Context	reset router <i>string</i> bfd session seamless-sr-policy session-key lsp-index <i>number</i>
Tree	lsp-index
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

path-lspid *number*

Synopsis	LSP path ID
Context	reset router <i>string</i> bfd session seamless-sr-policy session-key path-lspid <i>number</i>

Tree	path-lspid
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd session seamless-sr-policy session-key prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd session seamless-sr-policy session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Enter the statistics context
Context	reset router <i>string</i> bfd statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-ldp

Synopsis	Enter the lsp-ldp context
Context	reset router string bfd statistics lsp-ldp
Tree	lsp-ldp
Introduced	25.3.R2
Platforms	7705 SAR-1

head

Synopsis	Enter the head context
Context	reset router string bfd statistics lsp-ldp head
Tree	head
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router string bfd statistics lsp-ldp head session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix | ipv6-prefix*)

Synopsis	Prefix
Context	reset router string bfd statistics lsp-ldp head session-key prefix (ipv4-prefix ipv6-prefix)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd statistics lsp-ldp head session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tail

Synopsis	Enter the tail context
Context	reset router <i>string</i> bfd statistics lsp-ldp tail
Tree	tail
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd statistics lsp-ldp tail session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd statistics lsp-ldp tail session-key dst-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dst-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix | ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd statistics lsp-ldp tail session-key prefix (<i>ipv4-prefix ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-rsvp

Synopsis	Enter the lsp-rsvp context
Context	reset router <i>string</i> bfd statistics lsp-rsvp
Tree	lsp-rsvp
Introduced	25.3.R2
Platforms	7705 SAR-1

head

Synopsis	Enter the head context
Context	reset router <i>string</i> bfd statistics lsp-rsvp head
Tree	head
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name

Synopsis	Reset information for the RSVP session name
Context	reset router <i>string</i> bfd statistics lsp-rsvp head rsvp-session-name
Tree	rsvp-session-name
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name *string-not-all-spaces*

Synopsis	RSVP session name
Context	reset router <i>string</i> bfd statistics lsp-rsvp head rsvp-session-name rsvp-session-name <i>string-not-all-spaces</i>
Tree	rsvp-session-name
String length	1 to 256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd statistics lsp-rsvp head session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd statistics lsp-rsvp head session-key dst-ip (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	dst-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-id *number*

Synopsis	LSP ID
Context	reset router <i>string</i> bfd statistics lsp-rsvp head session-key lsp-id <i>number</i>
Tree	lsp-id
Max. range	0 to 4294967295

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd statistics lsp-rsvp head session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-id *number*

Synopsis	Tunnel ID
Context	reset router <i>string</i> bfd statistics lsp-rsvp head session-key tunnel-id <i>number</i>
Tree	tunnel-id
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tail

Synopsis	Enter the tail context
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail
Tree	tail
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name

Synopsis	Reset information for the RSVP session name
----------	---

Context	reset router <i>string</i> bfd statistics lsp-rsvp tail rsvp-session-name
Tree	rsvp-session-name
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-session-name *string-not-all-spaces*

Synopsis	RSVP session name
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail rsvp-session-name rsvp-session-name <i>string-not-all-spaces</i>
Tree	rsvp-session-name
String length	1 to 256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sender-ip (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	RSVP session sender IP address
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail rsvp-session-name sender-ip (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	sender-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail session-key dst-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dst-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-id *number*

Synopsis	LSP ID
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail session-key lsp-id <i>number</i>
Tree	lsp-id
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-id *number*

Synopsis	Tunnel ID
Context	reset router <i>string</i> bfd statistics lsp-rsvp tail session-key tunnel-id <i>number</i>
Tree	tunnel-id

Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls-tp

Synopsis	Enter the mpls-tp context
Context	reset router <i>string</i> bfd statistics mpls-tp
Tree	mpls-tp
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-id

Synopsis	Reset information for the LSP ID
Context	reset router <i>string</i> bfd statistics mpls-tp lsp-id
Tree	lsp-id
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-name *string-not-all-spaces*

Synopsis	LSP name
Context	reset router <i>string</i> bfd statistics mpls-tp lsp-id lsp-name <i>string-not-all-spaces</i>
Tree	lsp-name
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

path *keyword*

Synopsis	Path status
Context	reset router <i>string</i> bfd statistics mpls-tp lsp-id path <i>keyword</i>
Tree	path

Options	working, protecting
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

point-to-multipoint

Synopsis	Enter the point-to-multipoint context
Context	reset router <i>string</i> bfd statistics point-to-multipoint
Tree	point-to-multipoint
Introduced	25.3.R2
Platforms	7705 SAR-1

p2mp-interface-name

Synopsis	Reset information for the P2MP interface
Context	reset router <i>string</i> bfd statistics point-to-multipoint p2mp-interface-name
Tree	p2mp-interface-name
Introduced	25.3.R2
Platforms	7705 SAR-1

[p2mp-interface-name] *string*

Synopsis	P2MP interface name
Context	reset router <i>string</i> bfd statistics point-to-multipoint p2mp-interface-name [p2mp-interface-name] <i>string</i>
Tree	[p2mp-interface-name]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

point-to-point

Synopsis	Enter the point-to-point context
Context	reset router <i>string</i> bfd statistics point-to-point

Tree	point-to-point
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd statistics point-to-point session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

dst (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination address
Context	reset router <i>string</i> bfd statistics point-to-point session-key dst (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dst
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd statistics point-to-point session-key src (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

seamless-lsp-path

Synopsis	Enter the seamless-lsp-path context
Context	reset router <i>string</i> bfd statistics seamless-lsp-path

Tree	seamless-lsp-path
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all sessions
Context	reset router <i>string</i> bfd statistics seamless-lsp-path all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd statistics seamless-lsp-path session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-index *number*

Synopsis	LSP index
Context	reset router <i>string</i> bfd statistics seamless-lsp-path session-key lsp-index <i>number</i>
Tree	lsp-index
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

path-lspid *number*

Synopsis	LSP path ID
Context	reset router <i>string</i> bfd statistics seamless-lsp-path session-key path-lspid <i>number</i>
Tree	path-lspid

Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd statistics seamless-lsp-path session-key prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd statistics seamless-lsp-path session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

seamless-sr-policy

Synopsis	Enter the seamless-sr-policy context
Context	reset router <i>string</i> bfd statistics seamless-sr-policy
Tree	seamless-sr-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all sessions
----------	--------------------

Context	reset router <i>string</i> bfd statistics seamless-sr-policy all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

session-key

Synopsis	Reset information for the session key
Context	reset router <i>string</i> bfd statistics seamless-sr-policy session-key
Tree	session-key
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-index *number*

Synopsis	LSP index
Context	reset router <i>string</i> bfd statistics seamless-sr-policy session-key lsp-index <i>number</i>
Tree	lsp-index
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

path-lspid *number*

Synopsis	LSP path ID
Context	reset router <i>string</i> bfd statistics seamless-sr-policy session-key path-lspid <i>number</i>
Tree	path-lspid
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix
Context	reset router <i>string</i> bfd statistics seamless-sr-policy session-key prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> bfd statistics seamless-sr-policy session-key src-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	src-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp

Synopsis	Enter the bgp context
Context	reset router <i>string</i> bgp
Tree	bgp
Introduced	25.3.R2
Platforms	7705 SAR-1

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	reset router <i>string</i> bgp family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] keyword

Synopsis	Address family for BGP reset actions
Context	reset router <i>string</i> bgp family <i>keyword</i>
Tree	family
Options	label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

traffic-statistics

Synopsis	Reset BGP-LU traffic statistics counters to zero
Context	reset router <i>string</i> bgp family <i>keyword</i> traffic-statistics
Tree	traffic-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

direction keyword

Synopsis	Specifies the direction of the data-path
Context	reset router <i>string</i> bgp family <i>keyword</i> traffic-statistics direction <i>keyword</i>
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

group [group-name] reference

Synopsis	Enter the group list instance
Context	reset router <i>string</i> bgp group <i>reference</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] reference

Synopsis	Group name
Context	reset router string bgp group reference
Tree	group
Reference	state router <i>named-item-64</i> bgp group <i>named-item-64</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

damping

Synopsis	Reset the route damping information for received routes
Context	reset router string bgp group reference damping
Tree	damping
Introduced	25.3.R2
Platforms	7705 SAR-1

flap-statistics

Synopsis	Reset counter to zero for selected subset of RIB-INs
Context	reset router string bgp group reference flap-statistics
Tree	flap-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [neighbor-id] (ipv4-address-with-zone | ipv6-address-with-zone | keyword)

Synopsis	Enter the neighbor list instance
Context	reset router string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone keyword)
Tree	neighbor
Description	Commands in this context reset the specified peers or set of peers. By default, the TCP connection is brought down and the state of the BGP session returns to the idle state.
Introduced	25.3.R2

Platforms 7705 SAR-1

[neighbor-id] (*ipv4-address-with-zone | ipv6-address-with-zone | keyword*)

Synopsis Neighbor ID

Context [reset router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone | ipv6-address-with-zone | keyword*)

Tree [neighbor](#)

Options external – Reset all eBGP neighbors
all – Reset all BGP neighbors

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

damping

Synopsis Reset the route damping information for received routes

Context [reset router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone | ipv6-address-with-zone | keyword*) [damping](#)

Tree [damping](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

end-of-rib

Synopsis Reset the Routing Information Base (RIB)

Context [reset router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone | ipv6-address-with-zone | keyword*) [end-of-rib](#)

Tree [end-of-rib](#)

Description When configured, the router immediately deletes stale routes from the neighbor and aborts graceful restart procedures.

Introduced 25.3.R2

Platforms 7705 SAR-1

flap-statistics

Synopsis Reset counter to zero for selected subset of RIB-INS

Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) flap-statistics
Tree	flap-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

hard

Synopsis	Reset BGP neighbors with TCP connection teardown
Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) hard
Tree	hard
Introduced	25.3.R2
Platforms	7705 SAR-1

soft

Synopsis	Reevaluate routes against configured export policies
Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) soft
Tree	soft
Introduced	25.3.R2
Platforms	7705 SAR-1

soft-inbound

Synopsis	Reevaluate routes against configured import policies
Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) soft-inbound
Tree	soft-inbound
Introduced	25.3.R2
Platforms	7705 SAR-1

soft-route-refresh

Synopsis	Reset a session by sending messages to the peer
----------	---

Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) soft-route-refresh
Tree	soft-route-refresh
Description	<p>When configured, the router sends one or more Route Refresh messages to the peer, but the session remains up.</p> <p>If this command is configured and an address family is not provided, the session remains established, and one Route Refresh message is transmitted to the peer for each address family active on the session. If this command is configured and an address family is also provided, the session remains established and a single Route Refresh message is transmitted to the peer requesting that it resend only its routes belonging to that one address family.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

family keyword

Synopsis	Address family
Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) soft-route-refresh family keyword
Tree	family
Description	This command configures the address family encoded in the Route Refresh request sent to the peer.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset BGP neighbor statistics
Context	reset router string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>keyword</i>) statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-as [[as-number](#)] *number*

Synopsis	Enter the neighbor-as list instance
Context	reset router <i>string</i> bgp neighbor-as <i>number</i>
Tree	neighbor-as
Description	Commands in this context reset all BGP neighbors with the specified peer Autonomous System (AS).
Introduced	25.3.R2
Platforms	7705 SAR-1

[as-number] *number*

Synopsis	AS number
Context	reset router <i>string</i> bgp neighbor-as <i>number</i>
Tree	neighbor-as
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-of-rib

Synopsis	Reset the Routing Information Base (RIB)
Context	reset router <i>string</i> bgp neighbor-as <i>number</i> end-of-rib
Tree	end-of-rib
Description	When configured, the router immediately deletes stale routes from the neighbor and aborts graceful restart procedures.
Introduced	25.3.R2
Platforms	7705 SAR-1

hard

Synopsis	Reset BGP neighbors with TCP connection teardown
Context	reset router <i>string</i> bgp neighbor-as <i>number</i> hard
Tree	hard

Introduced	25.3.R2
Platforms	7705 SAR-1

soft

Synopsis	Reevaluate routes against configured export policies
Context	reset router <i>string</i> bgp neighbor-as <i>number</i> soft
Tree	soft
Introduced	25.3.R2
Platforms	7705 SAR-1

soft-inbound

Synopsis	Reevaluate routes against configured import policies
Context	reset router <i>string</i> bgp neighbor-as <i>number</i> soft-inbound
Tree	soft-inbound
Introduced	25.3.R2
Platforms	7705 SAR-1

soft-route-refresh

Synopsis	Reset a session by sending messages to the peer
Context	reset router <i>string</i> bgp neighbor-as <i>number</i> soft-route-refresh
Tree	soft-route-refresh
Description	<p>When configured, the router sends one or more Route Refresh messages to the peer, but the session remains up.</p> <p>If this command is configured and an address family is not provided, the session remains established, and one Route Refresh message is transmitted to the peer for each address family active on the session. If this command is configured and an address family is also provided, the session remains established and a single Route Refresh message is transmitted to the peer requesting that it resend only its routes belonging to that one address family.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

family keyword

Synopsis	Address family
Context	reset router string bgp neighbor-as number soft-route-refresh family keyword
Tree	family
Description	This command configures the address family encoded in the Route Refresh request sent to the peer.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset BGP neighbor statistics
Context	reset router string bgp neighbor-as number statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Enter the prefix list instance
Context	reset router string bgp prefix (ipv4-prefix ipv6-prefix)
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	IP prefix
Context	reset router string bgp prefix (ipv4-prefix ipv6-prefix)
Tree	prefix
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

damping

Synopsis	Reset RFD route history block for a subset of RIB-INs
Context	reset router <i>string</i> bgp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) damping
Tree	damping
Description	When configured, this command removes the Route Flap Damping (RFD) route history block for the selected subset of RIB-INs when the neighbor IP address is also provided.
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor reference

Synopsis	IP address of the BGP neighbor
Context	reset router <i>string</i> bgp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) damping neighbor reference
Tree	neighbor
Reference	state router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Introduced	25.3.R2
Platforms	7705 SAR-1

flap-statistics

Synopsis	Resets the route flap statistics
Context	reset router <i>string</i> bgp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) flap-statistics
Tree	flap-statistics
Description	When configured, the router resets the counter (number of flaps) to zero for the selected subset of RIB-INs when the neighbor IP address is also provided.
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor reference

Synopsis	IP address of the BGP neighbor
----------	--------------------------------

Context	reset router <i>string</i> bgp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) flap-statistics neighbor <i>reference</i>
Tree	neighbor
Reference	state router <i>named-item-64</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Introduced	25.3.R2
Platforms	7705 SAR-1

traffic-statistics

Synopsis	Reset BGP-LU traffic statistics counters to zero
Context	reset router <i>string</i> bgp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) traffic-statistics
Tree	traffic-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Specifies the direction of the data-path
Context	reset router <i>string</i> bgp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) traffic-statistics direction <i>keyword</i>
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Resets the BGP instance, causing all sessions to restart (return to IDLE)
Context	reset router <i>string</i> bgp protocol
Tree	protocol
Introduced	25.3.R2
Platforms	7705 SAR-1

traffic-statistics

Synopsis	Reset BGP-LU traffic statistics counters to zero
----------	--

Context	reset router string bgp traffic-statistics
Tree	traffic-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Specifies the direction of the data-path
Context	reset router string bgp traffic-statistics direction keyword
Tree	direction
Options	ingress, egress
Introduced	25.3.R2
Platforms	7705 SAR-1

bier

Synopsis	Enter the bier context
Context	reset router string bier
Tree	bier
Description	Commands in this context perform reset operations on Bit Index Explicit Replication (BIER) entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

database

Synopsis	Enter the database context
Context	reset router string bier database
Tree	database
Description	Commands in this context reset the BIER database.
Introduced	25.3.R2
Platforms	7705 SAR-1

sub-domain

Synopsis	Reset the sub-domain
Context	reset router <i>string</i> bier database sub-domain
Tree	sub-domain
Introduced	25.3.R2
Platforms	7705 SAR-1

bsl *number*

Synopsis	Sub-domain BSL
Context	reset router <i>string</i> bier database sub-domain bsl <i>number</i>
Tree	bsl
Max. range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

sub-domain-id *number*

Synopsis	Sub-domain ID
Context	reset router <i>string</i> bier database sub-domain sub-domain-id <i>number</i>
Tree	sub-domain-id
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset statistics
Context	reset router <i>string</i> bier statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp-server

Synopsis	Enter the dhcp-server context
Context	reset router string dhcp-server
Tree	dhcp-server
Description	Commands in this context reset DHCPv4 server entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcpv4 [[server-name](#)] *named-item*

Synopsis	Enter the dhcpv4 list instance
Context	reset router string dhcp-server dhcpv4 named-item
Tree	dhcpv4
Introduced	25.3.R2
Platforms	7705 SAR-1

[[server-name](#)] *named-item*

Synopsis	Server name
Context	reset router string dhcp-server dhcpv4 named-item
Tree	dhcpv4
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

declined-addresses

Synopsis	Enter the declined-addresses context
Context	reset router string dhcp-server dhcpv4 named-item declined-addresses
Tree	declined-addresses
Description	Commands in this context make declined DHCPv4 addresses available.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Make the specified declined addresses available
Context	reset router string dhcp-server dhcpv4 named-item declined-addresses address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] ipv4-address

Synopsis	IPv4 address
Context	reset router string dhcp-server dhcpv4 named-item declined-addresses address [address] ipv4-address
Tree	[address]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask number

Synopsis	IPv4 address mask
Context	reset router string dhcp-server dhcpv4 named-item declined-addresses address mask number
Tree	mask
Range	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Make declined addresses in the pool available
Context	reset router string dhcp-server dhcpv4 named-item declined-addresses pool
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> declined-addresses pool [pool] <i>named-item</i>
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

failover-pool-statistics

Synopsis	Enter the failover-pool-statistics context
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> failover-pool-statistics
Tree	failover-pool-statistics
Description	Commands in this context reset the per pool failover statistics.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset failover statistics for all pools
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> failover-pool-statistics all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset failover statistics for the specified pool
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> failover-pool-statistics pool
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router string dhcp-server dhcpv4 named-item failover-pool-statistics pool [pool] named-item
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

leases

Synopsis	Enter the leases context
Context	reset router string dhcp-server dhcpv4 named-item leases
Tree	leases
Description	Commands in this context delete leases in the specified DHCPv4 server.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Delete the specified DHCPv4 lease
Context	reset router string dhcp-server dhcpv4 named-item leases address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv4 address
Context	reset router string dhcp-server dhcpv4 named-item leases address [address] (ipv4-address-no-zone ipv6-address-no-zone)
Tree	[address]
Notes	This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR-1

state keyword

Synopsis Lease state
Context [reset router string dhcp-server dhcpv4 named-item leases address state keyword](#)
Tree [state](#)
Options offered, stable, force-renew-pending, remove-pending, held, internal, internal-orphan, internal-offered, internal-held, sticky
Introduced 25.3.R2
Platforms 7705 SAR-1

all

Synopsis Delete all DHCPv4 leases
Context [reset router string dhcp-server dhcpv4 named-item leases all](#)
Tree [all](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

state keyword

Synopsis Lease state
Context [reset router string dhcp-server dhcpv4 named-item leases all state keyword](#)
Tree [state](#)
Options offered, stable, force-renew-pending, remove-pending, held, internal, internal-orphan, internal-offered, internal-held, sticky
Introduced 25.3.R2
Platforms 7705 SAR-1

prefix

Synopsis Delete all DHCPv4 leases in the specified prefix
Context [reset router string dhcp-server dhcpv4 named-item leases prefix](#)
Tree [prefix](#)

Introduced 25.3.R2
Platforms 7705 SAR-1

[prefix] *ipv4-unicast-prefix*

Synopsis IPv4 prefix
Context [reset router string dhcp-server dhcpv4 named-item leases prefix \[prefix\] *ipv4-unicast-prefix*](#)
Tree [\[prefix\]](#)
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

state *keyword*

Synopsis Lease state
Context [reset router string dhcp-server dhcpv4 named-item leases prefix state *keyword*](#)
Tree [state](#)
Options offered, stable, force-renew-pending, remove-pending, held, internal, internal-orphan, internal-offered, internal-held, sticky
Introduced 25.3.R2
Platforms 7705 SAR-1

pool-extended-statistics

Synopsis Enter the **pool-extended-statistics** context
Context [reset router string dhcp-server dhcpv4 named-item pool-extended-statistics](#)
Tree [pool-extended-statistics](#)
Description Commands in this context reset the pool extended statistics peak values.
Introduced 25.3.R2
Platforms 7705 SAR-1

all

Synopsis Reset extended statistics peak values for all pools
Context [reset router string dhcp-server dhcpv4 named-item pool-extended-statistics all](#)

Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset extended statistics peak values for the pool
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> pool-extended-statistics pool
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> pool-extended-statistics pool [pool] <i>named-item</i>
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset DHCPv4 server statistics
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

sticky-leases

Synopsis	Enter the sticky-leases context
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> sticky-leases

Tree	sticky-leases
Description	Commands in this context delete sticky leases.
Introduced	25.3.R2
Platforms	7705 SAR-1

host-name

Synopsis	Delete the sticky lease associated with the hostname
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> sticky-leases host-name
Tree	host-name
Introduced	25.3.R2
Platforms	7705 SAR-1

[host-name] *named-item*

Synopsis	Hostname
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> sticky-leases host-name [host-name] <i>named-item</i>
Tree	[host-name]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

host-name-prefix

Synopsis	Delete sticky leases associated with hostnames containing the prefix
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> sticky-leases host-name-prefix
Tree	host-name-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[host-name-prefix] *named-item*

Synopsis	Hostname prefix
----------	-----------------

Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> sticky-leases host-name-prefix [host-name-prefix] <i>named-item</i>
Tree	[host-name-prefix]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

subnet-extended-statistics

Synopsis	Enter the subnet-extended-statistics context
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> subnet-extended-statistics
Tree	subnet-extended-statistics
Description	Commands in this context reset the per subnet extended statistics peak values.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset extended statistics peak values for all subnets in the pool
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> subnet-extended-statistics pool
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> subnet-extended-statistics pool [pool] <i>named-item</i>
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix

Synopsis	Reset extended statistics peak values for the specified prefix
Context	reset router string dhcp-server dhcpv4 named-item subnet-extended-statistics prefix
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix] ipv4-unicast-prefix

Synopsis	IPv4 prefix
Context	reset router string dhcp-server dhcpv4 named-item subnet-extended-statistics prefix [prefix] ipv4-unicast-prefix
Tree	[prefix]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcpv6 [server-name] named-item

Synopsis	Enter the dhcpv6 list instance
Context	reset router string dhcp-server dhcpv6 named-item
Tree	dhcpv6
Description	Commands in this context reset DHCPv6 server entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

[server-name] named-item

Synopsis	Server name
Context	reset router string dhcp-server dhcpv6 named-item
Tree	dhcpv6
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

failover-pool-statistics

Synopsis Enter the **failover-pool-statistics** context

Context [reset router string dhcp-server dhcpv6 named-item failover-pool-statistics](#)

Tree [failover-pool-statistics](#)

Description Commands in this context reset the per pool failover statistics.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Reset failover statistics for all pools

Context [reset router string dhcp-server dhcpv6 named-item failover-pool-statistics all](#)

Tree [all](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

pool

Synopsis Reset failover statistics for the specified pool

Tree [pool](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[pool] named-item

Synopsis Pool name

Context [reset router string dhcp-server dhcpv6 named-item failover-pool-statistics pool \[pool\] named-item](#)

Tree [\[pool\]](#)

String length 1 to 32

Notes This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

leases

Synopsis	Enter the leases context
Context	reset router string dhcp-server dhcpv6 named-item leases
Tree	leases
Description	Commands in this context delete leases in the specified DHCPv6 server.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Delete the specified DHCPv6 lease
Context	reset router string dhcp-server dhcpv6 named-item leases address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IPv6 address
Context	reset router string dhcp-server dhcpv6 named-item leases address [address] (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	[address]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

state keyword

Synopsis	Lease state
Context	reset router string dhcp-server dhcpv6 named-item leases address state keyword
Tree	state

Options	advertised, stable, remove-pending, held, internal, internal-orphan, internal-offered, internal-held
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Lease type
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases address type <i>keyword</i>
Tree	type
Options	pd, slaac, wan
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Delete all DHCPv6 leases
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

state keyword

Synopsis	Lease state
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases all state <i>keyword</i>
Tree	state
Options	advertised, stable, remove-pending, held, internal, internal-orphan, internal-offered, internal-held
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Lease type
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases all type <i>keyword</i>

Tree	type
Options	pd, slaac, wan
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix

Synopsis	Delete all DHCPv6 leases in the specified prefix
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases prefix
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix] ipv6-prefix

Synopsis	IPv6 prefix
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases prefix [prefix] ipv6-prefix
Tree	[prefix]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

state keyword

Synopsis	Lease state
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> leases prefix state keyword
Tree	state
Options	advertised, stable, remove-pending, held, internal, internal-orphan, internal-offered, internal-held
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Lease type
----------	------------

Context	<code>reset router string dhcp-server dhcpv6 named-item leases prefix type keyword</code>
Tree	<code>type</code>
Options	pd, slaac, wan
Introduced	25.3.R2
Platforms	7705 SAR-1

pool-extended-statistics

Synopsis	Enter the pool-extended-statistics context
Context	<code>reset router string dhcp-server dhcpv6 named-item pool-extended-statistics</code>
Tree	<code>pool-extended-statistics</code>
Description	Commands in this context reset the pool extended statistics extended values.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset extended statistics peak values for all pools
Context	<code>reset router string dhcp-server dhcpv6 named-item pool-extended-statistics all</code>
Tree	<code>all</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset extended statistics peak values for the specified pool
Context	<code>reset router string dhcp-server dhcpv6 named-item pool-extended-statistics pool</code>
Tree	<code>pool</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] named-item

Synopsis	Pool name
----------	-----------

Context	reset router string dhcp-server dhcpv6 named-item pool-extended-statistics pool [pool] <i>named-item</i>
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool-threshold-statistics

Synopsis	Enter the pool-threshold-statistics context
Context	reset router string dhcp-server dhcpv6 named-item pool-threshold-statistics
Tree	pool-threshold-statistics
Description	Commands in this context reset the per pool threshold statistics peak values.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset threshold statistics peak values for all pools
Context	reset router string dhcp-server dhcpv6 named-item pool-threshold-statistics all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset threshold statistics peak values for the pool
Context	reset router string dhcp-server dhcpv6 named-item pool-threshold-statistics pool
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router string dhcp-server dhcpv6 named-item pool-threshold-statistics pool [pool] named-item
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-extended-statistics

Synopsis	Enter the prefix-extended-statistics context
Context	reset router string dhcp-server dhcpv6 named-item prefix-extended-statistics
Tree	prefix-extended-statistics
Description	Commands in this context reset the per prefix extended statistics peak values.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset extended statistics peak values for all prefixes in the pool
Context	reset router string dhcp-server dhcpv6 named-item prefix-extended-statistics pool
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router string dhcp-server dhcpv6 named-item prefix-extended-statistics pool [pool] named-item
Tree	[pool]
String length	1 to 32

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix

Synopsis	Reset extended statistics peak values for the prefix
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-extended-statistics prefix
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix] ipv6-prefix

Synopsis	IPv6 prefix
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-extended-statistics prefix [prefix] ipv6-prefix
Tree	[prefix]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-threshold-statistics

Synopsis	Enter the prefix-threshold-statistics context
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-threshold-statistics
Tree	prefix-threshold-statistics
Description	Commands in this context reset the per prefix threshold statistics peak values.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Reset threshold statistics peak values for all prefixes in the pool
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-threshold-statistics pool

Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR-1

[pool] *named-item*

Synopsis	Pool name
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-threshold-statistics pool [pool]
Tree	[pool]
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix

Synopsis	Reset threshold statistics peak values for the specified prefix
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-threshold-statistics prefix
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	reset router <i>string</i> dhcp-server dhcpv6 <i>named-item</i> prefix-threshold-statistics prefix [prefix] <i>ipv6-prefix</i>
Tree	[prefix]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset DHCPv6 server statistics
----------	--------------------------------

Context	reset router string dhcp-server dhcpv6 named-item statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-table

Synopsis	Enter the forwarding-table context
Context	reset router string forwarding-table
Tree	forwarding-table
Description	Commands in this context reset the router forwarding table for the IOM.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all router forwarding tables
Context	reset router string forwarding-table all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

slot

Synopsis	Reset the router forwarding table for the IOM slot
Context	reset router string forwarding-table slot
Tree	slot
Introduced	25.3.R2
Platforms	7705 SAR-1

slot-number *reference*

Synopsis	Slot number
Context	reset router string forwarding-table slot slot-number reference
Tree	slot-number

Reference **state card** *number*

Introduced 25.3.R2

Platforms 7705 SAR-1

grt-lookup

Synopsis Re-evaluate the route policies for GRT

icmp-redirect-route

Synopsis	Enter the icmp-redirect-route context
Context	reset router <i>string</i> icmp-redirect-route
Tree	icmp-redirect-route
Description	Commands in this context remove routes created as a result of ICMP redirects received on the management interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Reset the routes associated with the IP address
Context	reset router <i>string</i> icmp-redirect-route address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-address *ipv4-address*

Synopsis	IPv4 address
Context	reset router <i>string</i> icmp-redirect-route address ipv4-address <i>ipv4-address</i>
Tree	ipv4-address
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all routes
Context	reset router <i>string</i> icmp-redirect-route all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6

Synopsis	Enter the icmp6 context
Context	reset router <i>string</i> icmp6
Tree	icmp6
Description	Commands in this context reset ICMPv6 statistics.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all ICMPv6 router statistics
Context	reset router <i>string</i> icmp6 all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

global

Synopsis	Reset ICMPv6 global router statistics
Context	reset router <i>string</i> icmp6 global
Tree	global
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset ICMPv6 router statistics of the interface
Context	reset router <i>string</i> icmp6 interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> icmp6 interface <i>interface-name</i> <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6-redirect-route

Synopsis	Enter the icmp6-redirect-route context
Context	reset router <i>string</i> icmp6-redirect-route
Tree	icmp6-redirect-route
Description	Commands in this context delete routes created from ICMPv6 redirects received on the management interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Reset routes associated with the IPv6 address
Context	reset router <i>string</i> icmp6-redirect-route address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-address *ipv6-address*

Synopsis	IPv6 address
Context	reset router <i>string</i> icmp6-redirect-route address ipv6-address <i>ipv6-address</i>
Tree	ipv6-address
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all routes
Context	reset router <i>string</i> icmp6-redirect-route all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp

Synopsis	Enter the igmp context
Context	reset router <i>string</i> igmp
Tree	igmp
Description	Commands in this context perform reset operations on IGMP entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

database

Synopsis	Enter the database context
Context	reset router <i>string</i> igmp database
Tree	database
Description	Commands in this context reset IGMP database statistics on a specified interface or IP address.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset database for all interfaces, groups, and hosts
Context	reset router <i>string</i> igmp database all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

group *ipv4-multicast-address*

Synopsis	Group address
Context	reset router <i>string</i> igmp database all group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

source *ipv4-unicast-address*

Synopsis	Source address
Context	reset router <i>string</i> igmp database all source <i>ipv4-unicast-address</i>
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset the database on an interface
Context	reset router <i>string</i> igmp database interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

group *ipv4-multicast-address*

Synopsis	Group address
Context	reset router <i>string</i> igmp database interface group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> igmp database interface interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

source *ipv4-unicast-address*

Synopsis	Source address
Context	reset router <i>string</i> igmp database interface source <i>ipv4-unicast-address</i>
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Enter the statistics context
Context	reset router <i>string</i> igmp statistics
Tree	statistics
Description	Commands in this context reset IGMP statistics on a specified interface or IP address.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset statistics for all interfaces, groups, and hosts
Context	reset router <i>string</i> igmp statistics all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset statistics on an interface
Context	reset router <i>string</i> igmp statistics interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> igmp statistics interface interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

version

Synopsis	Enter the version context
Context	reset router <i>string</i> igmp version
Tree	version
Description	Commands in this context reset the IGMP version on a specified interface or IP address.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset the version for all interfaces, groups, and hosts
Context	reset router <i>string</i> igmp version all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset the version on an interface
Context	reset router <i>string</i> igmp version interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> igmp version interface interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	reset router <i>string</i> interface <i>interface-name</i>
Tree	interface
Description	Commands in this context reset IP interface statistics.
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Reset the IP interface activation hold timers
Context	reset router <i>string</i> interface <i>interface-name</i> hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Enter the mac context
Context	reset router <i>string</i> interface <i>interface-name</i> mac
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Reset specified MAC address from associated interface
Context	reset router <i>string</i> interface <i>interface-name</i> mac address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[**mac-address**] *mac-address*

Synopsis	MAC address
Context	reset router <i>string</i> interface <i>interface-name</i> mac address [mac-address] <i>mac-address</i>
Tree	[mac-address]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all MAC addresses for the specified interface
Context	reset router <i>string</i> interface <i>interface-name</i> mac all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset the interface traffic statistics
Context	reset router <i>string</i> interface <i>interface-name</i> statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-statistics

Synopsis	Reset the interface uRPF statistics
Context	reset router <i>string</i> interface <i>interface-name</i> urpf-statistics
Tree	urpf-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

isis [[isis-instance](#)] *reference*

Synopsis	Enter the isis list instance
Context	reset router <i>string</i> isis <i>reference</i>
Tree	isis
Description	Commands in this context reset the IS-IS protocol entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

[[isis-instance](#)] *reference*

Synopsis	IS-IS instance
Context	reset router <i>string</i> isis <i>reference</i>
Tree	isis
MD-CLI default	0
Reference	state router <i>named-item-64</i> isis <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency

Synopsis	Enter the adjacency context
Context	reset router <i>string</i> isis <i>reference</i> adjacency
Tree	adjacency
Description	Commands in this context reset the entries from the IS-IS adjacency database.

Introduced	25.3.R2
Platforms	7705 SAR-1

all-adjacencies

Synopsis	Reset all IS-IS adjacencies
Context	reset router <i>string</i> isis <i>reference</i> adjacency all-adjacencies
Tree	all-adjacencies
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id

Synopsis	Reset the IS-IS adjacency to a node
Context	reset router <i>string</i> isis <i>reference</i> adjacency system-id
Tree	system-id
Introduced	25.3.R2
Platforms	7705 SAR-1

[system-id] system-id

Synopsis	System ID for a specific node
Context	reset router <i>string</i> isis <i>reference</i> adjacency system-id [system-id] system-id
Tree	[system-id]
String length	14
Default	0000.0000.0000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

database

Synopsis	Enter the database context
Context	reset router <i>string</i> isis <i>reference</i> database
Tree	database

Description	Commands in this context reset the entries from the IS-IS link-state database.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-databases

Synopsis	Reset all IS-IS databases system wide
Context	reset router <i>string</i> isis <i>reference</i> database all-databases
Tree	all-databases
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id

Synopsis	Reset the IS-IS database for a node
Context	reset router <i>string</i> isis <i>reference</i> database system-id
Tree	system-id
Introduced	25.3.R2
Platforms	7705 SAR-1

[system-id] system-id

Synopsis	System ID for a specific node
Context	reset router <i>string</i> isis <i>reference</i> database system-id [system-id] <i>system-id</i>
Tree	[system-id]
String length	14
Default	0000.0000.0000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Reset and re-evaluate IS-IS route policies
Context	reset router <i>string</i> isis <i>reference</i> export

Tree	export
Description	When configured, the system re-evaluates route policies participating in the export mechanism, either as importers or exporters of routes.
Introduced	25.3.R2
Platforms	7705 SAR-1

overload

Synopsis	Reset the IS-IS overload
Context	reset router <i>string</i> isis <i>reference</i> overload
Tree	overload
Introduced	25.3.R2
Platforms	7705 SAR-1

[**overload-type**] *keyword*

Synopsis	Overload type
Context	reset router <i>string</i> isis <i>reference</i> overload [overload-type] <i>keyword</i>
Tree	[overload-type]
Options	fib, rtm, prefix-limit
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sid-egress-stats

Synopsis	Enter the sid-egress-stats context
Context	reset router <i>string</i> isis <i>reference</i> sid-egress-stats
Tree	sid-egress-stats
Introduced	25.3.R2
Platforms	7705 SAR-1

adj

Synopsis	Enter the adj context
----------	------------------------------

Context	reset router string isis reference sid-egress-stats adj
Tree	adj
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all egress SID statistics for all adjacencies
Context	reset router string isis reference sid-egress-stats adj all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset adjacency SID statistics for an interface
Context	reset router string isis reference sid-egress-stats adj interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] string

Synopsis	Interface name
Context	reset router string isis reference sid-egress-stats adj interface [interface-name] string
Tree	[interface-name]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

adj-set

Synopsis	Enter the adj-set context
Context	reset router string isis reference sid-egress-stats adj-set
Tree	adj-set

Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset egress SID statistics for all adjacency sets
Context	reset router <i>string</i> isis <i>reference</i> sid-egress-stats adj-set all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Reset adjacency set ID
Context	reset router <i>string</i> isis <i>reference</i> sid-egress-stats adj-set id
Tree	id
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] reference

Synopsis	Adjacency set ID
Context	reset router <i>string</i> isis <i>reference</i> sid-egress-stats adj-set id [id] <i>reference</i>
Tree	[id]
Reference	state router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all egress SID statistics
Context	reset router <i>string</i> isis <i>reference</i> sid-egress-stats all
Tree	all
Introduced	25.3.R2

Platforms 7705 SAR-1

node

Synopsis Enter the **node** context

Context [reset router string isis reference sid-egress-stats node](#)

Tree [node](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Reset all egress node SID statistics

Context [reset router string isis reference sid-egress-stats node all](#)

Tree [all](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix

Synopsis Reset egress statistics for a node prefix SID

Context [reset router string isis reference sid-egress-stats node prefix](#)

Tree [prefix](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[ip-prefix-prefix-length] (*ipv4-address-no-zone | ipv6-address-no-zone | ipv4-prefix | ipv6-prefix*)

Synopsis Node prefix

Context [reset router string isis reference sid-egress-stats node prefix \[ip-prefix-prefix-length\] \(ipv4-address-no-zone | ipv6-address-no-zone | ipv4-prefix | ipv6-prefix\)](#)

Tree [\[ip-prefix-prefix-length\]](#)

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

sid-ingress-stats

Synopsis	Enter the sid-ingress-stats context
Context	reset router string isis reference sid-ingress-stats
Tree	sid-ingress-stats
Introduced	25.3.R2
Platforms	7705 SAR-1

adj

Synopsis	Enter the adj context
Context	reset router string isis reference sid-ingress-stats adj
Tree	adj
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset ingress SID statistics for all adjacencies
Context	reset router string isis reference sid-ingress-stats adj all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset ingress SID statistics for an adjacency
Context	reset router string isis reference sid-ingress-stats adj interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] string

Synopsis	Interface name
----------	----------------

Context	reset router string isis reference sid-ingress-stats adj interface [interface-name] string
Tree	[interface-name]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

adj-set

Synopsis	Enter the adj-set context
Context	reset router string isis reference sid-ingress-stats adj-set
Tree	adj-set
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset ingress SID statistics for all adjacency sets
Context	reset router string isis reference sid-ingress-stats adj-set all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Reset ingress statistics for the adjacency set ID
Context	reset router string isis reference sid-ingress-stats adj-set id
Tree	id
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] reference

Synopsis	Adjacency set ID
Context	reset router string isis reference sid-ingress-stats adj-set id [id] reference
Tree	[id]

Reference	state router <i>named-item-64</i> isis <i>number</i> segment-routing adjacency-set <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all ingress SID statistics
Context	reset router <i>string</i> isis <i>reference</i> sid-ingress-stats all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

node

Synopsis	Enter the node context
Context	reset router <i>string</i> isis <i>reference</i> sid-ingress-stats node
Tree	node
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all ingress node SID statistics
Context	reset router <i>string</i> isis <i>reference</i> sid-ingress-stats node all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix

Synopsis	Reset ingress statistics for a node prefix SID
Context	reset router <i>string</i> isis <i>reference</i> sid-ingress-stats node prefix
Tree	prefix
Introduced	25.3.R2

Platforms 7705 SAR-1

[ip-prefix-prefix-length] (*ipv4-address-no-zone | ipv6-address-no-zone | ipv4-prefix | ipv6-prefix*)

Synopsis	Node prefix
Context	reset router <i>string</i> isis <i>reference</i> sid-ingress-stats node prefix [ip-prefix-prefix-length] (<i>ipv4-address-no-zone ipv6-address-no-zone ipv4-prefix ipv6-prefix</i>)
Tree	[ip-prefix-prefix-length]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-log

Synopsis	Reset the IS-IS SPF log
Context	reset router <i>string</i> isis <i>reference</i> spf-log
Tree	spf-log
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Reset IS-IS statistics
Context	reset router <i>string</i> isis <i>reference</i> statistics
Tree	statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp

Synopsis	Enter the ldp context
Context	reset router <i>string</i> ldp
Tree	ldp
Description	Commands in this context configure the LDP reset operations.
Introduced	25.10.R1

Platforms 7705 SAR-1

fec-egress-statistics

Synopsis Reset LDP FEC egress statistics
Context [reset router string ldp fec-egress-statistics](#)
Tree [fec-egress-statistics](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Prefix FEC
Context [reset router string ldp fec-egress-statistics \[ip-prefix\] \(*ipv4-prefix* | *ipv6-prefix*\)](#)
Tree [\[ip-prefix\]](#)
Notes This element is mandatory.
Introduced 25.10.R1
Platforms 7705 SAR-1

instance

Synopsis Reset LDP instance
Context [reset router string ldp instance](#)
Tree [instance](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

[address-family] keyword

Synopsis Address family type
Context [reset router string ldp instance \[address-family\] keyword](#)
Tree [\[address-family\]](#)
Options ipv4, ipv6
Introduced 25.10.R1
Platforms 7705 SAR-1

interface

Synopsis	Reset an LDP interface or its statistics
Context	reset router string ldp interface
Tree	interface
Introduced	25.10.R1
Platforms	7705 SAR-1

[interface-name] reference

Synopsis	LDP interface name
Context	reset router string ldp interface [interface-name] reference
Tree	[interface-name]
Reference	state router named-item-64 ldp interface-parameters interface reference
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

ipv4

Synopsis	Reset an IPv4 LDP sub-interface or its statistics
Context	reset router string ldp interface ipv4
Tree	ipv4
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	25.10.R1
Platforms	7705 SAR-1

ipv6

Synopsis	Reset an IPv6 LDP sub-interface or its statistics
Context	reset router string ldp interface ipv6
Tree	ipv6
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	25.10.R1

Platforms 7705 SAR-1

statistics

Synopsis Reset LDP interface statistics
Context [reset router string ldp interface statistics](#)
Tree [statistics](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

peer

Synopsis Reset statistics for LDP targeted peer
Context [reset router string ldp peer](#)
Tree [peer](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

[ip-address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Peer address
Context [reset router string ldp peer \[ip-address\] \(*ipv4-address-no-zone | ipv6-address-no-zone*\)](#)
Tree [\[ip-address\]](#)
Notes This element is mandatory.
Introduced 25.10.R1
Platforms 7705 SAR-1

statistics

Synopsis Reset LDP targeted peer statistics
Context [reset router string ldp peer statistics](#)
Tree [statistics](#)
Introduced 25.10.R1
Platforms 7705 SAR-1

resource-failures

Synopsis	Reset resource overload status of LDP instance
Context	reset router <i>string</i> ldp resource-failures
Tree	resource-failures
Introduced	25.10.R1
Platforms	7705 SAR-1

session

Synopsis	Reset overload or statistics for LDP session
Context	reset router <i>string</i> ldp session
Tree	session
Introduced	25.10.R1
Platforms	7705 SAR-1

fec-type keyword

Synopsis	Overload FEC type
Context	reset router <i>string</i> ldp session fec-type <i>keyword</i>
Tree	fec-type
Description	This command specifies the overload Forwarding Equivalence Class (FEC) type.
Options	p2mp, prefixes, svc-fec128, svc-fec129
Notes	The following elements are part of a choice: (fec-type , overload , and sub-type) or statistics .
Introduced	25.10.R1
Platforms	7705 SAR-1

overload

Synopsis	Reset resource overload status
Context	reset router <i>string</i> ldp session overload
Tree	overload
Notes	The following elements are part of a choice: (fec-type , overload , and sub-type) or statistics .

Introduced 25.10.R1
Platforms 7705 SAR-1

[peer-lsr-id] *reference*

Synopsis Peer LSR ID
Context [reset router string ldp session \[peer-lsr-id\] reference](#)
Tree [\[peer-lsr-id\]](#)
Reference **state router** *named-item-64 ldp session lsr-id*
Notes This element is mandatory.
Introduced 25.10.R1
Platforms 7705 SAR-1

statistics

Synopsis Reset LDP session statistics
Context [reset router string ldp session statistics](#)
Tree [statistics](#)
Notes The following elements are part of a choice: (**fec-type**, **overload**, and **sub-type**) or **statistics**.
Introduced 25.10.R1
Platforms 7705 SAR-1

sub-type *keyword*

Synopsis Overload FEC subtype for P2MP or prefixes
Context [reset router string ldp session sub-type keyword](#)
Tree [sub-type](#)
Options ipv4, ipv6
Notes The following elements are part of a choice: (**fec-type**, **overload**, and **sub-type**) or **statistics**.
Introduced 25.10.R1
Platforms 7705 SAR-1

statistics

Synopsis	Reset LDP statistics
Context	reset router <i>string</i> ldp statistics
Tree	statistics
Introduced	25.10.R1
Platforms	7705 SAR-1

targeted-auto-rx

Synopsis	Reset LDP auto-rx
Context	reset router <i>string</i> ldp targeted-auto-rx
Tree	targeted-auto-rx
Description	When specified, the system resets unneeded automatic T-LDP sessions on all applicable nodes.
Introduced	25.10.R1
Platforms	7705 SAR-1

hold-time *number*

Synopsis	Hold-time where auto-rx targeted peers do not generate
Context	reset router <i>string</i> ldp targeted-auto-rx hold-time <i>number</i>
Tree	hold-time
Range	1 to 65535
Units	seconds
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

mld

Synopsis	Enter the mld context
Context	reset router <i>string</i> mld
Tree	mld

Description	Commands in this context perform reset operations on Multicast Listener Discovery (MLD) entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

database

Synopsis	Enter the database context
Context	reset router <i>string</i> mld database
Tree	database
Description	Commands in this context reset MLD database entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset database for all interfaces, groups, and hosts
Context	reset router <i>string</i> mld database all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

group *ipv6-multicast-address*

Synopsis	Group address
Context	reset router <i>string</i> mld database all group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

source *ipv6-unicast-address*

Synopsis	Source address
Context	reset router <i>string</i> mld database all source <i>ipv6-unicast-address</i>
Tree	source

Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset the database on an interface
Context	reset router <i>string</i> mld database interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

group *ipv6-multicast-address*

Synopsis	Group address
Context	reset router <i>string</i> mld database interface group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> mld database interface interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

source *ipv6-unicast-address*

Synopsis	Source address
Context	reset router <i>string</i> mld database interface source <i>ipv6-unicast-address</i>
Tree	source
Introduced	25.3.R2

Platforms 7705 SAR-1

statistics

Synopsis Enter the **statistics** context

Context [reset router string mld statistics](#)

Tree [statistics](#)

Description Commands in this context reset MLD statistics entities.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Reset statistics for all interfaces, groups, and hosts

Context [reset router string mld statistics all](#)

Tree [all](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface

Synopsis Reset the statistics on an interface

Context [reset router string mld statistics interface](#)

Tree [interface](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name interface-name

Synopsis Interface name

Context [reset router string mld statistics interface interface-name interface-name](#)

Tree [interface-name](#)

String length 1 to 32

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

version

Synopsis Enter the **version** context

Context [reset router string mld version](#)

Tree [version](#)

Description Commands in this context reset the MLD version entities.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Reset the version for all interfaces, groups, and hosts

Context [reset router string mld version all](#)

Tree [all](#)

interface-name *interface-name*

Synopsis Interface name

Context [reset router string mld version interface interface-name interface-name](#)

Tree [interface-name](#)

String length 1 to 32

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

msdp

Synopsis Enter the **msdp** context

Context [reset router string msdp](#)

Tree [msdp](#)

Description Commands in this context perform reset operations on Multicast Source Discovery Protocol (MSDP) entities and statistics.

Introduced 25.3.R2

Platforms 7705 SAR-1

cache

Synopsis Reset the MSDP cache

Context [reset router string msdp cache](#)

Tree [cache](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

group-address *ipv4-multicast-address*

Synopsis Group address

Context [reset router string msdp cache group-address ipv4-multicast-address](#)

Tree [group-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

origin-rp-address *ipv4-unicast-address*

Synopsis Origin RP address

Context [reset router string msdp cache origin-rp-address ipv4-unicast-address](#)

Tree [origin-rp-address](#)

Description This command specifies the origin Rendezvous Point (RP) address type of the source-active (SA) entry to reset.

Introduced 25.3.R2

Platforms 7705 SAR-1

peer-address *ipv4-unicast-address*

Synopsis Peer address

Context [reset router](#) *string* [msdp cache peer-address](#) *ipv4-unicast-address*

Tree [peer-address](#)

Description This command specifies the peer address of the cache of the IP address for the peer where MSDP SA requests for groups matching the group range for this entry were sent.

Introduced 25.3.R2

Platforms 7705 SAR-1

source-address *ipv4-unicast-address*

Synopsis Source address

Context [reset router](#) *string* [msdp cache source-address](#) *ipv4-unicast-address*

Tree [source-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

statistics

Synopsis Reset the statistics

Context [reset router](#) *string* [msdp statistics](#)

Tree [statistics](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

peer-address *ipv4-unicast-address*

Synopsis Peer address

Context [reset router](#) *string* [msdp statistics peer-address](#) *ipv4-unicast-address*

Tree [peer-address](#)

Description This command specifies the peer address for resetting statistics where MSDP SA requests for groups matching the group range for this entry were sent.

Introduced 25.3.R2

Platforms 7705 SAR-1

neighbor

Synopsis Enter the **neighbor** context

Context [reset router string neighbor](#)

Tree [neighbor](#)

Description Commands in this context reset neighbor information.

Introduced 25.3.R2

Platforms 7705 SAR-1

address

Synopsis Reset the IPv6 neighbor information

Context [reset router string neighbor address](#)

Tree [address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6-address (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis IPv6 address

Context [reset router string neighbor address ipv6-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*)

Tree [ipv6-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Reset information for all neighbors of all interfaces

Context [reset router string neighbor all](#)

Tree [all](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface

Synopsis	Reset all neighbors of the router interface
Context	reset router <i>string</i> neighbor interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> neighbor interface <i>interface-name</i> <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf [[ospf-instance](#)] *number*

Synopsis	Enter the ospf list instance
Context	reset router <i>string</i> ospf <i>number</i>
Tree	ospf
Description	Commands in this context clear and reset OSPF protocol entities.
Introduced	25.3.R2
Platforms	7705 SAR-1

[ospf-instance] *number*

Synopsis	OSPF instance
Context	reset router <i>string</i> ospf <i>number</i>
Tree	ospf
Max. range	0 to 4294967295
MD-CLI default	0
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

database

Synopsis	Reset and refresh LSAs
Context	reset router <i>string</i> ospf number database
Tree	database
Description	When configured, the system clears all LSAs received from other nodes, sets all adjacencies other than two-way to one-way, and refreshes all self-originated LSAs.
Introduced	25.3.R2
Platforms	7705 SAR-1

purge

Synopsis	Reset LSAs
Context	reset router <i>string</i> ospf number database purge
Tree	purge
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Reset and re-evaluate export policies
Context	reset router <i>string</i> ospf number export
Tree	export
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor

Synopsis	Reset neighbor adjacencies
Context	reset router <i>string</i> ospf number neighbor
Tree	neighbor
Description	This command marks the neighbor as dead and re-initiates the affected adjacencies.

Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *string*

Synopsis Neighbor interface name
Context [reset router string ospf number neighbor interface-name string](#)
Tree [interface-name](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

router-id *ipv4-address*

Synopsis Neighbor router ID
Context [reset router string ospf number neighbor router-id ipv4-address](#)
Tree [router-id](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

overload

Synopsis Reset the OSPF overload
Context [reset router string ospf number overload](#)
Tree [overload](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[overload-type] *keyword*

Synopsis Overload type
Context [reset router string ospf number overload \[overload-type\] keyword](#)
Tree [\[overload-type\]](#)
Options fib, rtm, rtr-adv-lsa-limit
Notes This element is mandatory.
Introduced 25.3.R2

Platforms 7705 SAR-1

sid-egress-stats

Synopsis Enter the **sid-egress-stats** context
Context [reset router string ospf number sid-egress-stats](#)
Tree [sid-egress-stats](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

adj

Synopsis Enter the **adj** context
Context [reset router string ospf number sid-egress-stats adj](#)

ipv4

Synopsis IPv4 address
Context [reset router](#) *string* [pim neighbor all](#) [ipv4](#)
Tree [ipv4](#)
Notes The following elements are part of a choice: **ipv4** or **ipv6**.
Introduced 25.3.R2
Platforms 7705 SAR-1

ipv6

Synopsis IPv6 address
Context [reset router](#) *string* [pim neighbor all](#) [ipv6](#)
Tree [ipv6](#)
Notes The following elements are part of a choice: **ipv4** or **ipv6**.
Introduced 25.3.R2
Platforms 7705 SAR-1

interface

Synopsis Reset the neighbors on an interface
Context [reset router](#) *string* [pim neighbor interface](#)
Tree [interface](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Neighbor address
Context [reset router](#) *string* [pim neighbor interface](#) [address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Tree [address](#)
Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name

Context [reset router](#) *string* [pim neighbor interface](#) [interface-name](#) *interface-name*

Tree [interface-name](#)

String length 1 to 32

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4

Synopsis IPv4 address

Context [reset router](#) *string* [pim neighbor interface](#) [ipv4](#)

Tree [ipv4](#)

Notes The following elements are part of a choice: **ipv4** or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6

Synopsis IPv6 address

Context [reset router](#) *string* [pim neighbor interface](#) [ipv6](#)

Tree [ipv6](#)

Notes The following elements are part of a choice: **ipv4** or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

s-pmsi

Synopsis Enter the **s-pmsi** context

Context [reset router](#) *string* [pim](#) [s-pmsi](#)

Tree [s-pmsi](#)

Description	Commands in this context reset the PIM Selective Provider Multicast Service Interface (S-PMSI) cache.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset all
Context	reset router <i>string</i> pim s-pmsi all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

md

Synopsis	Reset the MD
Context	reset router <i>string</i> pim s-pmsi md
Tree	md
Description	This command specifies the source address used for the Multicast Distribution Tree (MDT) to reset.
Introduced	25.3.R2
Platforms	7705 SAR-1

group *ipv4-multicast-address*

Synopsis	Group address
Context	reset router <i>string</i> pim s-pmsi md group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

source *ipv4-unicast-address*

Synopsis	Source address
Context	reset router <i>string</i> pim s-pmsi md source <i>ipv4-unicast-address</i>
Tree	source

Introduced	25.3.R2
Platforms	7705 SAR-1

vprn

Synopsis	Reset the VPRN
Context	reset router <i>string</i> pim s-pmsi vprn
Tree	vprn
Introduced	25.3.R2
Platforms	7705 SAR-1

group (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Group address
Context	reset router <i>string</i> pim s-pmsi vprn group (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

md-group *ipv4-multicast-address*

Synopsis	MD group address
Context	reset router <i>string</i> pim s-pmsi vprn md-group <i>ipv4-multicast-address</i>
Tree	md-group
Introduced	25.3.R2
Platforms	7705 SAR-1

md-source *ipv4-unicast-address*

Synopsis	MD source address
Context	reset router <i>string</i> pim s-pmsi vprn md-source <i>ipv4-unicast-address</i>
Tree	md-source
Introduced	25.3.R2
Platforms	7705 SAR-1

source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router string pim s-pmsi vprn source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Enter the statistics context
Context	reset router string pim statistics
Tree	statistics
Description	Commands in this context reset PIM statistics on a specified interface or IP address.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset the statistics for all interfaces
Context	reset router string pim statistics all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

group (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Group address
Context	reset router string pim statistics all group (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	IPv4 address
Context	reset router <i>string</i> pim statistics all ipv4
Tree	ipv4
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	IPv6 address
Context	reset router <i>string</i> pim statistics all ipv6
Tree	ipv6
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address
Context	reset router <i>string</i> pim statistics all source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Reset the statistics for an interface
Context	reset router <i>string</i> pim statistics interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

group (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Group address
Context	reset router <i>string</i> pim statistics interface group (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> pim statistics interface interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	IPv4 address
Context	reset router <i>string</i> pim statistics interface ipv4
Tree	ipv4
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	IPv6 address
Context	reset router <i>string</i> pim statistics interface ipv6
Tree	ipv6
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	25.3.R2

Platforms 7705 SAR-1

source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Source address

Context [reset router](#) *string* [pim statistics interface source](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [source](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

vrrp

Synopsis Enter the **vrrp** context

Context [reset router](#) *string* [vrrp](#)

Tree [vrrp](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

instances

Synopsis Enter the **instances** context

Context [reset router](#) *string* [vrrp instances](#)

Tree [instances](#)

Description Commands in this context reset VRRP protocol instances.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis Enter the **interface** list instance

Context [reset router](#) *string* [vrrp instances interface](#) *interface-name*

Tree [interface](#)

Description Commands in this context reset VRRP protocol instances on an IP interface.

Introduced 25.3.R2

Platforms 7705 SAR-1

[interface-name] *interface-name*

Synopsis Interface name

Context [reset router](#) *string vrrp instances interface interface-name*

Tree [interface](#)

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

all-vrid

Synopsis Reset all VRRP instances on the interface

Context [reset router](#) *string vrrp instances interface interface-name all-vrid*

Tree [all-vrid](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4

Synopsis Enter the **ipv4** context

Context [reset router](#) *string vrrp instances interface interface-name ipv4*

Tree [ipv4](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

vrid

Synopsis Reset the IPv4 VRRP instance

Context [reset router](#) *string vrrp instances interface interface-name ipv4 vrid*

Tree [vrid](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

virtual-router-id *number*

Synopsis	VRRP instance to reset
Context	reset router <i>string</i> vrrp instances interface <i>interface-name</i> ipv4 vrid virtual-router-id <i>number</i>
Tree	virtual-router-id
Max. range	-2147483648 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	reset router <i>string</i> vrrp instances interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

vrid

Synopsis	Reset the IPv6 VRRP instance
Context	reset router <i>string</i> vrrp instances interface <i>interface-name</i> ipv6 vrid
Tree	vrid
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-router-id *number*

Synopsis	VRRP instance to reset
Context	reset router <i>string</i> vrrp instances interface <i>interface-name</i> ipv6 vrid virtual-router-id <i>number</i>
Tree	virtual-router-id
Max. range	-2147483648 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Enter the statistics context
Context	reset router <i>string</i> vrrp statistics
Tree	statistics
Description	Commands in this context reset statistics for VRRP instances on an IP interface or VRRP priority control policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-statistics

Synopsis	Reset statistics of VRRP instances on all interfaces
Context	reset router <i>string</i> vrrp statistics all-statistics
Tree	all-statistics
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	reset router <i>string</i> vrrp statistics interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[[interface-name](#)] *interface-name*

Synopsis	Interface name
Context	reset router <i>string</i> vrrp statistics interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-vrid

Synopsis	Reset statistics of all VRRP instances on the interface
Context	reset router <i>string</i> vrrp statistics interface <i>interface-name</i> all-vrid
Tree	all-vrid
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	reset router <i>string</i> vrrp statistics interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

vrid

Synopsis	Reset statistics of the IPv4 VRRP instance
Context	reset router <i>string</i> vrrp statistics interface <i>interface-name</i> ipv4 vrid
Tree	vrid
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-router-id *number*

Synopsis	VRRP instance to reset
Context	reset router <i>string</i> vrrp statistics interface <i>interface-name</i> ipv4 vrid virtual-router-id <i>number</i>
Tree	virtual-router-id
Max. range	-2147483648 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	reset router string vrrp statistics interface interface-name ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

vrid

Synopsis	Reset statistics of the IPv6 VRRP instance
Context	reset router string vrrp statistics interface interface-name ipv6 vrid
Tree	vrid
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-router-id *number*

Synopsis	VRRP instance to reset
Context	reset router string vrrp statistics interface interface-name ipv6 vrid virtual-router-id number
Tree	virtual-router-id
Max. range	-2147483648 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

saa

Synopsis	Enter the saa context
Context	reset saa
Tree	saa
Introduced	25.3.R2
Platforms	7705 SAR-1

owner [[owner-name](#)] *reference* [test](#) *reference*

Synopsis	Enter the owner list instance
Context	reset saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Introduced	25.3.R2
Platforms	7705 SAR-1

[owner-name] *reference*

Synopsis	Name of SAA test owner for which to reset statistics
Context	reset saa owner <i>reference</i> test <i>reference</i>
Tree	owner
MD-CLI default	TIMOS CLI
Reference	state saa owner <i>named-item</i> test <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

test *reference*

Synopsis	Name of the SAA test for which to reset statistics
Context	reset saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Reference	state saa owner <i>named-item</i> test <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

statistics

Synopsis	Clear the SAA test statistics
Context	reset saa owner <i>reference</i> test <i>reference</i> statistics
Tree	statistics

Description	This command clears historical statistics for a completed run. If this option is not configured, the reset operation has no impact.
Introduced	25.3.R2
Platforms	7705 SAR-1

service

Synopsis	Enter the service context
Context	reset service
Tree	service
Introduced	25.10.R1
Platforms	7705 SAR-1

statistics

Synopsis	Enter the statistics context
Context	reset service statistics
Tree	statistics
Introduced	25.10.R1
Platforms	7705 SAR-1

name [[service-name](#)] *service-name*

Synopsis	Enter the name list instance
Context	reset service statistics name <i>service-name</i>
Tree	name
Introduced	25.10.R1
Platforms	7705 SAR-1

[service-name] *service-name*

Synopsis	Service name
Context	reset service statistics name <i>service-name</i>
Tree	name
String length	1 to 64

Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	7705 SAR-1

counters

Synopsis	Reset counters
Context	reset service statistics name service-name counters
Tree	counters
Introduced	25.10.R1
Platforms	7705 SAR-1

l2pt

Synopsis	Reset L2PT statistics
Context	reset service statistics name service-name l2pt
Tree	l2pt
Introduced	25.10.R1
Platforms	7705 SAR-1

mesh-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the mesh-sdp list instance
Context	reset service statistics name service-name mesh-sdp sdp-bind-id
Tree	mesh-sdp
Introduced	25.10.R1
Platforms	7705 SAR-1

[[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter spoke-sdp context
Context	reset service statistics name service-name mesh-sdp sdp-bind-id
Tree	mesh-sdp
String length	3 to 16
Notes	This element is part of a list key.

Introduced	25.10.R1
Platforms	7705 SAR-1

all

Synopsis	Reset all
Context	reset service statistics name service-name mesh-sdp sdp-bind-id all
Tree	all
Introduced	25.10.R1
Platforms	7705 SAR-1

counters

Synopsis	Reset counters
Context	reset service statistics name service-name mesh-sdp sdp-bind-id counters
Tree	counters
Introduced	25.10.R1
Platforms	7705 SAR-1

l2pt

Synopsis	Reset L2PT statistics
Context	reset service statistics name service-name mesh-sdp sdp-bind-id l2pt
Tree	l2pt
Introduced	25.10.R1
Platforms	7705 SAR-1

stp

Synopsis	Reset STP statistics
Context	reset service statistics name service-name mesh-sdp sdp-bind-id stp
Tree	stp
Introduced	25.10.R1
Platforms	7705 SAR-1

pip

Synopsis	Reset PIP statistics
Context	reset service statistics name service-name pip
Tree	pip
Introduced	25.10.R1
Platforms	7705 SAR-1

spoke-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the spoke-sdp list instance
Context	reset service statistics name service-name spoke-sdp sdp-bind-id
Tree	spoke-sdp
Introduced	25.10.R1
Platforms	7705 SAR-1

[[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter spoke-sdp context
Context	reset service statistics name service-name spoke-sdp sdp-bind-id
Tree	spoke-sdp
String length	3 to 16
Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	7705 SAR-1

all

Synopsis	Reset all
Context	reset service statistics name service-name spoke-sdp sdp-bind-id all
Tree	all
Introduced	25.10.R1
Platforms	7705 SAR-1

counters

Synopsis	Reset counters
Context	<code>reset service statistics name service-name spoke-sdp sdp-bind-id counters</code>
Tree	<code>counters</code>
Introduced	25.10.R1
Platforms	7705 SAR-1

l2pt

Synopsis	Reset L2PT statistics
Context	<code>reset service statistics name service-name spoke-sdp sdp-bind-id l2pt</code>
Tree	<code>l2pt</code>
Introduced	25.10.R1
Platforms	7705 SAR-1

stp

Synopsis	Reset STP statistics
Context	<code>reset service statistics name service-name spoke-sdp sdp-bind-id stp</code>
Tree	<code>stp</code>
Introduced	25.10.R1
Platforms	7705 SAR-1

stp

Synopsis	Reset STP statistics
Context	<code>reset service statistics name service-name stp</code>
Tree	<code>stp</code>
Introduced	25.10.R1
Platforms	7705 SAR-1

sap [`sap-id`] sap

Synopsis	Enter the sap list instance
----------	------------------------------------

Context	reset service statistics sap sap

Introduced 25.7.R1

Platforms 7705 SAR-1

remote-management

Synopsis Enter the **remote-management** context

Context [reset system management-interface remote-management](#)

Tree [remote-management](#)

Description Commands in this context reset operational information related to the remote management feature that is used with the Network Interface Shell (NISH) Tool.

Introduced 25.3.R2

Platforms 7705 SAR-1

managers

Synopsis Enter the **managers** context

Context [reset system management-interface remote-management managers](#)

Tree [managers](#)

Description Commands in this context reset and restart the remote management manager connection process for NISH managers.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Reset connections for all remote NISH managers

Context [reset system management-interface remote-management managers all](#)

Tree [all](#)

Description This command resets and restarts the remote management manager connection process for all NISH managers.

Introduced 25.3.R2

Platforms 7705 SAR-1

manager

Synopsis Reset connection for a remote NISH manager

Context [reset system management-interface remote-management managers manager](#)

Tree [manager](#)

Description This command resets and restarts the remote management manager connection process for the specified NISH manager.

Introduced 25.3.R2

Platforms 7705 SAR-1

[name] reference

Synopsis Name of the manager

Context [reset system management-interface remote-management managers manager \[name\] reference](#)

Tree [\[name\]](#)

Reference **state system management-interface remote-management manager** *named-item-64*

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

statistics

Synopsis Enter the **statistics** context

Context	reset system management-interface remote-management statistics
Tree	statistics
Description	Commands in this context reset statistics for NISH remote management managers.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Reset statistics for all remote NISH managers
Context	reset system management-interface remote-management statistics all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

manager

Synopsis	Reset statistics for the specified remote NISH manager
Context	reset system management-interface remote-management statistics manager
Tree	manager
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] reference

Synopsis	Name of the manager
Context	reset system management-interface remote-management statistics manager [name] reference
Tree	[name]
Reference	state system management-interface remote-management manager <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp

Synopsis	Enter the ntp context
Context	reset system ntp
Tree	ntp
Introduced	25.10.R1
Platforms	7705 SAR-1

statistics

Synopsis	Reset NTP statistics
Context	reset system ntp statistics
Tree	statistics
Introduced	25.10.R1
Platforms	7705 SAR-1

reboot-required

Synopsis	Clear the reboot required state
Context	reset system reboot-required
Tree	reboot-required
Description	This command clears the reboot required information. Use this command after a configuration triggers the reboot required state, but the configuration is removed.
Introduced	25.3.R2
Platforms	7705 SAR-1

script-control

Synopsis	Enter the script-control context
Context	reset system script-control
Tree	script-control
Introduced	25.3.R2
Platforms	7705 SAR-1

script-policy

Synopsis	Enter the script-policy context
Context	reset system script-control script-policy
Tree	script-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

completed

Synopsis	Enter the completed context
Context	reset system script-control script-policy completed
Tree	completed
Description	Commands in this context delete completed script run history entries.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Delete script run entries for all script policies
Context	reset system script-control script-policy completed all
Tree	all
Introduced	25.3.R2
Platforms	7705 SAR-1

policy

Synopsis	Delete script run entries for specific policies
Context	reset system script-control script-policy completed policy
Tree	policy
Introduced	25.3.R2
Platforms	7705 SAR-1

owner reference

Synopsis	Script-policy owner for run history deletion
Context	reset system script-control script-policy completed policy owner reference
Tree	owner
Description	<p>This command specifies the script policy owner for run history deletion.</p> <p>The system only deletes run history entries for script policies with this owner and the specified policy name.</p>
Default	TIMOS CLI
Reference	state system script-control script-policy <i>named-item</i> owner <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[policy-name] reference

Synopsis	Script-policy name for run history deletion
Context	reset system script-control script-policy completed policy [policy-name] reference
Tree	[policy-name]
Reference	state system script-control script-policy <i>named-item</i> owner <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

security

Synopsis	Enter the security context
Context	reset system security
Tree	security
Introduced	25.3.R2
Platforms	7705 SAR-1

management-access-filter

Synopsis	Enter the management-access-filter context
Context	reset system security management-access-filter

Tree	management-access-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-filter

Synopsis	Reset operation on the specified IP filter
Context	reset system security management-access-filter ip-filter
Tree	ip-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

entry reference

Synopsis	Entry ID for the IP filter
Context	reset system security management-access-filter ip-filter entry reference
Tree	entry
Reference	state system security management-access-filter ip-filter entry <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-filter

Synopsis	Reset operation on the specified IPv6 filter
Context	reset system security management-access-filter ipv6-filter
Tree	ipv6-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

entry reference

Synopsis	Entry ID for the IPv6 filter
Context	reset system security management-access-filter ipv6-filter entry reference
Tree	entry
Reference	state system security management-access-filter ipv6-filter entry <i>number</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

mac-filter

Synopsis	Reset operation on the specified MAC filter
Context	reset system security management-access-filter mac-filter
Tree	mac-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

entry *reference*

Synopsis	Entry ID for the MAC filter
Context	reset system security management-access-filter mac-filter entry <i>reference</i>
Tree	entry
Reference	state system security management-access-filter mac-filter entry <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

3 Configuration mode commands

This section lists the commands available in MD-CLI configuration modes.

3.1 Configuration mode commands

See “Editing configuration” in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

```

- annotate comment-text-type
- [cli-path] cli-path-type
- commit
- comment string
- confirmed
- accept
- cancel
- comment string
- persist-id string
- [timeout] number
- compare string [to] string
- [cli-path] cli-path-type
- flat
- full-context
- lines number
- netconf-rpc
- summary
- copy
- [cli-path] cli-path-type
- to cli-path-type
- discard
- [cli-path] cli-path-type
- insert instance-id
- after
- [cli-path] instance-id
- before
- [cli-path] instance-id
- beginning
- end
- load keyword
- encryption-key string
- interactive
- [url] string
- rename
- [cli-path] cli-path-type
- to cli-path-type
- replace string with string
- [cli-path] cli-path-type
- continue-on-error
- depth number
- ignore-case
- rollback
- commit-id number
- [rollback-id] (keyword | number)
- update
- /configure
- /bof
- check
- /debug
- /li
- validate

```

3.1.1 Configuration mode command descriptions

annotate [[comment-text](#)] *comment-text-type*

Synopsis	Annotate a configuration element with a comment
Context	annotate <i>comment-text-type</i>
Tree	annotate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[comment-text] *comment-text-type*

Synopsis	Comment for the configuration element
Context	annotate <i>comment-text-type</i>
Tree	annotate
String length	0 to 2048
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] *cli-path-type*

Synopsis	Absolute path or relative path from pwc, or 'pwc'
Context	annotate <i>comment-text-type</i> [cli-path] <i>cli-path-type</i>
Tree	[cli-path]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

commit

Synopsis	Commit the candidate configuration
Context	commit
Tree	commit

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

comment *string*

Synopsis	Comment associated with the commit
Context	commit comment string
Tree	comment
String length	1 to 2048
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

confirmed

Synopsis	Enter the confirmed context
Context	commit confirmed
Tree	confirmed
Description	This context is not supported for the BOF or debug configuration regions.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accept

Synopsis	Accept commit confirmed and cancel automatic rollback
Context	commit confirmed accept
Tree	accept
Notes	The following elements are part of a choice: accept , cancel , or (comment and timeout).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cancel

Synopsis	Cancel commit confirmed and roll back changes
Context	commit confirmed cancel

Tree	cancel
Description	When specified, the router rolls back the configuration and returns the changes to the candidate.
Notes	The following elements are part of a choice: accept , cancel , or (comment and timeout).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

comment *string*

Synopsis	Comment associated with the commit
Context	commit confirmed comment <i>string</i>
Tree	comment
String length	1 to 2048
Notes	The following elements are part of a choice: accept , cancel , or (comment and timeout).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

persist-id *string*

Synopsis	Persistent confirmed commit ID
Context	commit confirmed persist-id <i>string</i>
Tree	persist-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[timeout] *number*

Synopsis	Confirmed commit expiration timeout interval
Context	commit confirmed [timeout] <i>number</i>
Tree	[timeout]
Range	1 to 65535
Units	minutes
Default	10

Notes	The following elements are part of a choice: accept , cancel , or (comment and timeout).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

compare [*from*] *string* *to* *string*

Synopsis	Compare changes between datastores
Context	compare <i>string</i> [<i>to</i>] <i>string</i>
Tree	compare
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[from] *string*

Synopsis	Source configuration from which to compare
Context	compare <i>string</i> [<i>to</i>] <i>string</i>
Tree	compare
MD-CLI default	baseline
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[to] *string*

Synopsis	Configuration to compare against source configuration
Context	compare <i>string</i> [<i>to</i>] <i>string</i>
Tree	compare
MD-CLI default	candidate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	compare string [to] string [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flat

Synopsis	Show the context from the pwc on each line
Context	compare string [to] string flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: flat or netconf-rpc .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

full-context

Synopsis	Show the full context on each line
Context	compare string [to] string full-context
Tree	full-context
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lines *number*

Synopsis	Number of lines of context to display before and after
Context	compare string [to] string lines number
Tree	lines
Description	This command specifies the number of lines of context to display before and after changed elements. The context is evaluated separately at each container. If the parameter value is larger than the available context, the maximum available context up to the container boundary is displayed.
Max. range	0 to 4294967295

Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf-rpc

Synopsis	Display changes in NETCONF <edit-config> RPC format
Context	compare string [to] string netconf-rpc
Tree	netconf-rpc
Description	This option specifies the display of changes in NETCONF <edit-config> RPC format. This option is only supported with the summary option.
Notes	The following elements are part of a choice: flat or netconf-rpc .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

summary

Synopsis	Suppress specific differences and display a summary
Context	compare string [to] string summary
Tree	summary
Description	This command allows the suppression of specific differences and displays a summarized comparison. The summarized differences in elements under the highest level container that was deleted is displayed with { ... }. A tilde (~) character is displayed to indicate the new value of an element that has changed.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

copy

Synopsis	Copy a configuration element to another
Context	copy
Tree	copy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] cli-path-type

Synopsis	Absolute path or relative path from pwc, or 'pwc'
Context	copy [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

to cli-path-type

Synopsis	Destination path, or 'pwc'
Context	copy to cli-path-type
Tree	to
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard

Synopsis	Discard changes in the candidate configuration
Context	discard
Tree	discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] cli-path-type

Synopsis	Absolute path or relative path from pwc
Context	discard [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

insert [\[new-entry\]](#) instance-id

Synopsis	Insert an element into a user-ordered list
----------	--

Context	insert <i>instance-id</i>
Tree	insert
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[new-entry] *instance-id*

Synopsis	Identification of the new entry
Context	insert <i>instance-id</i>
Tree	insert
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

after

Synopsis	Insert an entry after the specified entry
Context	insert <i>instance-id</i> after
Tree	after
Notes	The following elements are part of a choice: after , before , beginning , or end .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] *instance-id*

Synopsis	Absolute path or relative path from pwc
Context	insert <i>instance-id</i> after [cli-path] <i>instance-id</i>
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

before

Synopsis	Insert an entry before the specified entry
Context	insert <i>instance-id</i> before

Tree	before
Notes	The following elements are part of a choice: after , before , beginning , or end .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] *instance-id*

Synopsis	Absolute path or relative path from pwc
Context	insert <i>instance-id</i> before [cli-path] <i>instance-id</i>
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

beginning

Synopsis	Insert the new entry at the beginning of the list
Context	insert <i>instance-id</i> beginning
Tree	beginning
Notes	The following elements are part of a choice: after , before , beginning , or end .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end

Synopsis	Insert the new entry at the end of the list
Context	insert <i>instance-id</i> end
Tree	end
Notes	The following elements are part of a choice: after , before , beginning , or end .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load [[mode](#)] *keyword*

Synopsis	Load configuration into the candidate configuration
Context	load <i>keyword</i>

Tree	load
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[mode] keyword

Synopsis	Load mode
Context	load <i>keyword</i>
Tree	load
Options	merge – Merge with the candidate configuration full-replace – Replace the candidate configuration
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

encryption-key string

Synopsis	Encryption key of the file to be loaded
Context	load <i>keyword</i> encryption-key <i>string</i>
Tree	encryption-key
String length	8 to 32
Notes	The following elements are part of a mandatory choice: interactive or (encryption-key and url).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interactive

Synopsis	Load the configuration interactively
Context	load <i>keyword</i> interactive
Tree	interactive
Description	This command allows the user to enter configuration commands directly in an interactive session. This command is available with the merge option of the load command. See "Loading configuration interactively" in the <i>7705 SAR Gen 2 MD-CLI User Guide</i> for more information.

Notes	The following elements are part of a mandatory choice: interactive or (encryption-key and url).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[url] string

Synopsis	Location of the file to be loaded
Context	load keyword [url] string
Tree	[url]
String length	1 to 255
Notes	The following elements are part of a mandatory choice: interactive or (encryption-key and url).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rename

Synopsis	Rename a list element
Context	rename
Tree	rename
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] cli-path-type

Synopsis	Source element path to the list, or 'pwc'
Context	rename [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

to cli-path-type

Synopsis	Destination key name
Context	rename to cli-path-type

Tree	to
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

replace [\[pattern\]](#) *string with string*

Synopsis	Match and replace values in the candidate configuration
Context	replace string with string
Tree	replace
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[pattern] *string*

Synopsis	String (") or regular expression (') pattern to match
Context	replace string with string
Tree	replace
Description	This command configures a text string or regular expression that defines the values to match.
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

with string

Synopsis	String (") or regular expression (') pattern to replace
Context	replace string with string
Tree	replace
String length	0 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cli-path] cli-path-type

Synopsis	Absolute path or relative path from pwc
Context	replace string with string [cli-path] cli-path-type
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

continue-on-error

Synopsis	Continue the replace operation upon errors
Context	replace string with string continue-on-error
Tree	continue-on-error
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

depth number

Synopsis	Replace operation depth from the pwc
Context	replace string with string depth number
Tree	depth
Range	1 to 4294967040
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-case

Synopsis	Ignore case in pattern match
Context	replace string with string ignore-case
Tree	ignore-case
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rollback

Synopsis	Roll back to a previous configuration
Context	rollback
Tree	rollback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

commit-id *number*

Synopsis	Commit ID to roll back to
Context	rollback commit-id number
Tree	commit-id
Range	1 to 4294967295
Notes	The following elements are part of a choice: commit-id or rollback-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[rollback-id] (*keyword* | *number*)

Synopsis	Previous configuration to roll back to
Context	rollback [rollback-id] (keyword number)
Tree	[rollback-id]
Range	0 to 200
Options	startup – Configuration loaded when the system boots
Notes	The following elements are part of a choice: commit-id or rollback-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update

Synopsis	Update the candidate baseline
Context	update
Tree	update
Introduced	25.3.R4

Platforms 7705 SAR Gen 2

/configure

Synopsis Update the entire candidate

Context [update /configure](#)

Tree [/configure](#)

Introduced 25.3.R4

Platforms 7705 SAR Gen 2

/bof

Synopsis Update the entire BOF candidate

Context [update /bof](#)

Tree [/bof](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

check

Synopsis Perform dry-run update report without an actual update

Context [update check](#)

Tree [check](#)

Introduced 25.3.R4

Platforms 7705 SAR Gen 2

/debug

Synopsis Update the entire debug candidate

Context [update /debug](#)

Tree [/debug](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

/li

Synopsis	Update the entire LI candidate
Context	update /li
Tree	/li
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

validate

Synopsis	Validate changes in the candidate configuration
Context	validate
Tree	validate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

4 Configuration commands

This section lists MD-CLI configuration commands.

4.1 aaa commands

```

configure
- aaa
  - apply-groups reference
  - apply-groups-exclude reference
  - radius
    - coa-port number
  - server-policy named-item
    - acct-on-off
      - apply-groups reference
      - apply-groups-exclude reference
      - oper-state-change
    - apply-groups reference
    - apply-groups-exclude reference
    - description description
  - servers
    - access-algorithm keyword
    - buffering
      - acct-interim
        - lifetime number
        - max number
        - min number
      - acct-start
        - lifetime number
        - max number
        - min number
      - acct-stop
        - lifetime number
        - max number
        - min number
    - hold-down-time number
    - ipv6-source-address ipv6-address
    - retry-count number
    - router-instance string
    - server number
      - apply-groups reference
      - apply-groups-exclude reference
      - server-name named-item
    - source-address ipv4-address
    - stickiness boolean
    - timeout number

```

4.1.1 aaa command descriptions

aaa

Synopsis	Enter the aaa context
Context	configure aaa
Tree	aaa
Description	Commands in this context configure authentication, authorization, and accounting.
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure aaa radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

coa-port *number*

Synopsis	RADIUS listening port for CoA and Disconnect messages
Context	configure aaa radius coa-port <i>number</i>
Tree	coa-port
Description	This command configures the system-wide UDP port number that RADIUS is listening on for CoA and Disconnect messages.
Range	1647 1700 1812 3799
Default	3799
Introduced	25.3.R2
Platforms	7705 SAR-1

server-policy [[name](#)] *named-item*

Synopsis	Enter the server-policy list instance
Context	configure aaa radius server-policy <i>named-item</i>

Tree	server-policy
Description	<p>Commands in this context create a RADIUS server policy.</p> <p>A RADIUS server policy can be used in:</p> <ul style="list-style-type: none"> • radius-proxy, for applications like EAP authentication for WIFI access • authentication policy, for Enhanced Subscriber Management authentication • RADIUS accounting policy, for Enhanced Subscriber Management accounting • dynamic data service RADIUS accounting • AAA route downloader
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	RADIUS server policy name
Context	configure aaa radius server-policy <i>named-item</i>
Tree	server-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

acct-on-off

Synopsis	Enable the acct-on-off context
Context	configure aaa radius server-policy <i>named-item</i> acct-on-off
Tree	acct-on-off
Description	<p>Commands in this context control the sending of Accounting-On and Accounting-Off messages and the acct-on-off oper-state of the radius-server-policy:</p> <ul style="list-style-type: none"> • acct-on-off: enables the sending of Accounting-On and Accounting-Off messages for this radius-server-policy. The acct-on-off oper-state is always not blocked. • acct-on-off oper-state-change: enables the sending of Accounting-On and Accounting-Off messages for this radius-server-policy. The acct-on-off oper-state is function of the Accounting-response received for the Accounting-On and Accounting-Off. Optionally, sets the acct-on-off oper-state of the acct-on-off-group.

- **acct-on-off monitor**: no Accounting-On and Accounting-Off messages are sent for this radius-server-policy. The acct-on-off oper-state is inherited from the acct-on-off-group.

Introduced 25.3.R2
Platforms 7705 SAR-1

oper-state-change

Synopsis Enable the **oper-state-change** context
Context **configure** [aaa radius server-policy](#) *named-item* [acct-on-off oper-state-change](#)
Tree [oper-state-change](#)
Notes The following elements are part of a choice: **monitor** or **oper-state-change**.
Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Synopsis Text description
Context **configure** [aaa radius server-policy](#) *named-item* [description](#) *description*
Tree [description](#)
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

servers

Synopsis Enter the **servers** context
Context **configure** [aaa radius server-policy](#) *named-item* [servers](#)
Tree [servers](#)
Description Commands in this context configure RADIUS server policy command options.
Introduced 25.3.R2
Platforms 7705 SAR-1

access-algorithm *keyword*

Synopsis Algorithm to select a RADIUS server from the pool

Context	configure aaa radius server-policy <i>named-item</i> servers access-algorithm <i>keyword</i>
Tree	access-algorithm
Options	direct, round-robin, hash-based
Default	direct
Introduced	25.3.R2
Platforms	7705 SAR-1

buffering

Synopsis	Enter the buffering context
Context	configure aaa radius server-policy <i>named-item</i> servers buffering
Tree	buffering
Introduced	25.3.R2
Platforms	7705 SAR-1

acct-interim

Synopsis	Enable the acct-interim context
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-interim
Tree	acct-interim
Description	<p>Commands in this context enable RADIUS accounting interim update message buffering.</p> <ol style="list-style-type: none">1. The message is stored in the buffer, a lifetime timer is started and the message is sent to the RADIUS server2. If after <code>retry*timeout</code> seconds no RADIUS accounting response is received for the interim update then a new attempt to send the message is started after <code>minimum[(min-val*2n), max-val]</code> seconds.3. Repeat step 2 until one of the following occurs:<ul style="list-style-type: none">• a RADIUS accounting response is received• the lifetime of the buffered message expires• a new RADIUS accounting interim-update or a RADIUS accounting stop for the same accounting session ID and radius-server-policy is stored in the buffer• the message is manually purged from the message buffer via a clear command• The message is purged from the buffer.
Introduced	25.3.R2
Platforms	7705 SAR-1

lifetime number

Synopsis	Time accounting message can be in retransmission buffer
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-interim lifetime number
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

max number

Synopsis	Maximum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-interim max number
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

min number

Synopsis	Minimum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-interim min number
Tree	min
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

acct-start

Synopsis	Enable the acct-start context
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-start
Tree	acct-start
Introduced	25.3.R2
Platforms	7705 SAR-1

lifetime *number*

Synopsis	Time accounting message can be in retransmission buffer
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-start lifetime <i>number</i>
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

max *number*

Synopsis	Maximum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-start max <i>number</i>
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

min *number*

Synopsis	Minimum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-start min <i>number</i>

Tree	min
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

acct-stop

Synopsis	Enable the acct-stop context
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-stop
Tree	acct-stop
Description	<p>Commands in this context enable RADIUS accounting stop message buffering.</p> <ol style="list-style-type: none">1. The message is stored in the buffer, a lifetime timer is started and the message is sent to the RADIUS server2. If after $\text{retry} \times \text{timeout}$ seconds no RADIUS accounting response is received for the accounting stop, then a new attempt to send the message is started after $\text{minimum}[(\text{min-val} \times 2^n), \text{max-val}]$ seconds.3. Repeat step 2 until one of the following occurs:<ul style="list-style-type: none">• a RADIUS accounting response is received• the lifetime of the buffered message expires• The message is manually purged from the message buffer via a clear command.• The message is purged from the buffer.
Introduced	25.3.R2
Platforms	7705 SAR-1

lifetime number

Synopsis	Time accounting message can be in retransmission buffer
Context	configure aaa radius server-policy <i>named-item</i> servers buffering acct-stop lifetime number
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

max number

Synopsis Maximum time between accounting message resend attempts

Context **configure** [aaa radius server-policy](#) *named-item* [servers buffering acct-stop max number](#)

Tree [max](#)

Range 1 to 3600

Units seconds

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

min number

Synopsis Minimum time between accounting message resend attempts

Context **configure** [aaa radius server-policy](#) *named-item* [servers buffering acct-stop min number](#)

Tree [min](#)

Range 1 to 3600

Units seconds

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

hold-down-time number

Synopsis Hold time before reusing a RADIUS server that was down

Context **configure** [aaa radius server-policy](#) *named-item* [servers hold-down-time number](#)

Tree [hold-down-time](#)

Description This command configures the interval during which no new communication attempts are made to a RADIUS server that is marked down to prevent immediately overloading the server when it is starting up. The only exception is when all servers in the authentication policy are marked down; in that case, they will all be used again to prevent failures on new client connections.

Range 30 to 86400

Units seconds

Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-source-address *ipv6-address*

Synopsis	Source address for IPv6 RADIUS datagrams
Context	configure aaa radius server-policy <i>named-item</i> servers ipv6-source-address <i>ipv6-address</i>
Tree	ipv6-source-address
Description	<p>This command configures the source address of an IPv6 RADIUS packet.</p> <p>When ipv6-source-address is unconfigured, the system IPv6 address (inband RADIUS server connection) or Boot Option File (BOF) IPv6 address (outband RADIUS server connection) must be configured in order for the RADIUS client to work with an IPv6 RADIUS server.</p> <p>This address is also used in the NAS-IPv6-Address attribute.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-count *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	configure aaa radius server-policy <i>named-item</i> servers retry-count <i>number</i>
Tree	retry-count
Description	This command configures the number of times the router attempts to contact the RADIUS server, if not successful the first time.
Range	1 to 256
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	RADIUS routing instance
Context	configure aaa radius server-policy <i>named-item</i> servers router-instance <i>string</i>
Tree	router-instance

Description	This command specifies the virtual router instance applicable for the set of configured RADIUS servers. This value cannot be changed once a RADIUS server is configured for this policy.
Introduced	25.3.R2
Platforms	7705 SAR-1

server [server-index] *number*

Synopsis	Enter the server list instance
Context	configure aaa radius server-policy <i>named-item</i> servers server <i>number</i>
Tree	server
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[server-index] *number*

Synopsis	RADIUS server index
Context	configure aaa radius server-policy <i>named-item</i> servers server <i>number</i>
Tree	server
Range	1 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-name *named-item*

Synopsis	RADIUS server name
Context	configure aaa radius server-policy <i>named-item</i> servers server <i>number</i> server-name <i>named-item</i>
Tree	server-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address *ipv4-address*

Synopsis	Source address of RADIUS messages
Context	configure aaa radius server-policy <i>named-item</i> servers source-address <i>ipv4-address</i>
Tree	source-address
Description	<p>This command configures the source address of the RADIUS packet. The system IP address must be configured in order for the RADIUS client to work.</p> <p>The system IP address must only be configured if the source-address is not specified. When the no source-address command is executed, the source address is determined at the moment the request is sent. This address is also used in the NAS-IP-Address attribute; over there it is set to the system IP address if no source-address was given.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

stickiness *boolean*

Synopsis	Allow stickiness in a multi-server application
Context	configure aaa radius server-policy <i>named-item</i> servers stickiness <i>boolean</i>
Tree	stickiness
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time until the next retry to the RADIUS server
Context	configure aaa radius server-policy <i>named-item</i> servers timeout <i>number</i>
Tree	timeout
Range	1 to 340
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

4.2 bfd commands

```
configure
-  bfd
  -  apply-groups reference
  -  apply-groups-exclude reference
  -  bfd-template named-item
    -  apply-groups reference
    -  apply-groups-exclude reference
    -  echo-receive number
    -  multiplier number
    -  receive-interval number
    -  transmit-interval number
```

4.2.1 bfd command descriptions

bfd

Synopsis	Enter the bfd context
Context	configure bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-template [name] *named-item*

Synopsis	Enter the bfd-template list instance
Context	configure bfd bfd-template <i>named-item</i>
Tree	bfd-template
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	BFD template name
Context	configure bfd bfd-template <i>named-item</i>
Tree	bfd-template
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Echo receive interval
Context	configure bfd bfd-template <i>named-item</i> echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds

Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Detection multiplier
Context	configure bfd bfd-template <i>named-item</i> multiplier <i>number</i>
Tree	multiplier
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

receive-interval *number*

Synopsis	Receive interval
Context	configure bfd bfd-template <i>named-item</i> receive-interval <i>number</i>
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	Transmit interval
Context	configure bfd bfd-template <i>named-item</i> transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

  - persistent-indices boolean
  - profile keyword
```

4.3.1 bof command descriptions

bof

Synopsis	Configure system boot options
Context	bof
Tree	bof
Description	<p>This command creates or edits the boot option file (BOF) for the specified local storage device.</p> <p>A BOF file specifies where the system searches for runtime images, configuration files, and other operational parameters during system initialization.</p> <p>BOF parameters can be modified. Changes can be saved to a specified compact flash. The BOF must be located in the root directory of either an internal or external compact flash local to the system and have the mandatory filename of bof.cfg.</p> <p>When modifications are made to in-memory parameters that are currently in use or operating, the changes are effective immediately. For example, if the IP address of the management port is changed, the change takes place immediately.</p> <p>Only one entry of the BOF configuration command statement can be saved once the statement has been found to be syntactically correct.</p> <p>When opening an existing BOF that is not the BOF used in the most recent boot, a message is issued notifying the user that the parameters will not affect the operation of the node.</p> <p>No default boot option file exists. The router boots with the factory default boot sequence and options.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-boot

	<p>Note:</p> <p>The new value of this element takes effect when the router boots.</p>
Synopsis	Enable the auto-boot context
Context	bof auto-boot
Tree	auto-boot
Description	<p>Commands in this context enable the auto-boot flag in the BOF and configures the auto-boot options for ZTP. When modifying auto-boot options using CLI, all required options must be explicitly configured as the default cases will no longer be used.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

dhcp

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Enable the dhcp context
Context	bof auto-boot dhcp
Tree	dhcp
Description	Commands in this context configure the IPv4 DHCP client for OOB management. The OOB management IPv4 can be set using a DHCP server offer.
Notes	The following elements are part of a choice: dhcp or ospf .
Introduced	25.3.R2
Platforms	7705 SAR-1

client-id (*keyword* | *hex-string* | *string*)

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-boot dhcp client-id (<i>keyword</i> <i>hex-string</i> <i>string</i>)
Tree	client-id
Description	This command specifies the client ID for IPv4 Option 61 for auto-discovery. The identifier is opaque and is in string format. By default, this is the chassis serial number.
String length	3 to 118 (<i>hex-string</i>) 1 to 58 (<i>string</i>)
Options	use-chassis-mac-address
Introduced	25.3.R2
Platforms	7705 SAR-1

inband

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Enable the inband context
Context	bof auto-boot dhcp inband
Tree	inband
Description	Commands in this context enable in-band management through an Ethernet port for ZTP. Unless the vlan-discovery command is used, the inband command disables VLAN discovery.
Introduced	25.3.R2
Platforms	7705 SAR-1

disabled *boolean*

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Do not use in-band ports
Context	bof auto-boot dhcp inband disabled <i>boolean</i>
Tree	disabled
Default	true
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	25.3.R2
Platforms	7705 SAR-1

null-encapsulation *boolean*

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Use null encapsulation
Context	bof auto-boot dhcp inband null-encapsulation <i>boolean</i>
Tree	null-encapsulation
Default	true
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan *number*

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	In-band VLAN ID
Context	bof auto-boot dhcp inbound vlan <i>number</i>
Tree	vlan
Range	1 to 4094
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-discovery *boolean*

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Use VLAN discovery
Context	bof auto-boot dhcp inbound vlan-discovery <i>boolean</i>
Tree	vlan-discovery
Default	true
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	25.3.R2
Platforms	7705 SAR-1

include-user-class *boolean*

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Include user class in auto boot provisioning
Context	bof auto-boot dhcp include-user-class <i>boolean</i>
Tree	include-user-class
Description	When configured to true , the router includes Option 77 in DHCP messages.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv4
Context	bof auto-boot dhcp ipv4 boolean
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv6
Context	bof auto-boot dhcp ipv6 boolean
Tree	ipv6
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

management-port *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot on the management port
Context	bof auto-boot dhcp management-port boolean
Tree	management-port

Description	When configured to true , the out-of-band management port is used for ZTP.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the ospf context
Context	bof auto-boot ospf
Tree	ospf
Description	Commands in this context configure OSPF auto-discovery.
Notes	The following elements are part of a choice: dhcp or ospf .
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu number

Note:
The new value of this element takes effect when the router boots.

Synopsis	OSPF MTU
Context	bof auto-boot ospf mtu number
Tree	mtu
Range	512 to 9786
Units	bytes
Default	1500
Introduced	25.3.R2
Platforms	7705 SAR-1

neid *hex-string*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Network element ID
Context	bof auto-boot ospf neid <i>hex-string</i>
Tree	neid
Description	This command specifies a hexadecimal network element identification string.
String length	3
Introduced	25.3.R2
Platforms	7705 SAR-1

neip-ipv4 *ipv4-unicast-address*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Network element IPv4 address
Context	bof auto-boot ospf neip-ipv4 <i>ipv4-unicast-address</i>
Tree	neip-ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

neip-ipv6 *ipv6-address*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Network element IPv6 address
Context	bof auto-boot ospf neip-ipv6 <i>ipv6-address</i>
Tree	neip-ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-id *number*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Vendor ID
Context	bof auto-boot ospf vendor-id <i>number</i>
Tree	vendor-id
Description	This command specifies the vendor identification number. The number 140 corresponds to "Nokia".
Range	1 to 254
Default	140
Introduced	25.3.R2
Platforms	7705 SAR-1

port-mtu *number*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Port MTU setting
Context	bof auto-boot port-mtu <i>number</i>
Tree	port-mtu
Range	512 to 9800
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	ZTP timeout
Context	bof auto-boot timeout <i>number</i>
Tree	timeout

Description	This command configures the Zero Touch Provisioning timeout, which is the total time allowed for the ZTP process to execute successfully. If the ZTP process is unsuccessful (in the case of auto-boot using OSPF, if no OSPF adjacency is found), the node is first rebooted, then the ZTP process is retried.
Range	30 to 1440
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-configure

Synopsis	Enter the auto-configure context
Context	bof auto-configure
Tree	auto-configure
Description	Commands in this context autoconfigure the IP address for the BOF. The IPv4 DHCP client, IPv6 DHCP client, and NDP/RA can be configured on the management interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	bof auto-configure ipv4
Tree	ipv4
Description	Commands in this context autoconfigure the IPv4 DHCP client.
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the dhcp context
Context	bof auto-configure ipv4 dhcp
Tree	dhcp

Description	Commands in this context configure the IPv4 DHCP client for OOB management. The OOB management IPv4 can be set using a DHCP server offer.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-id (*hex-string* | *string*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-configure ipv4 dhcp client-id (<i>hex-string</i> <i>string</i>)
Tree	client-id
Description	This command configures the client ID for IPv4 Option 61 for auto-discovery. The identifier is opaque and is in string format. By default, this is the chassis serial number.
String length	3 to 256 (<i>hex-string</i>) 1 to 127 (<i>string</i>)
Introduced	25.3.R2
Platforms	7705 SAR-1

include-user-class *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	Include user class information
Context	bof auto-configure ipv4 dhcp include-user-class <i>boolean</i>
Tree	include-user-class
Default	false
Introduced	25.3.R2

Platforms7705 SAR-1

timeout *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Note:
The new value of this element takes effect when the router boots.

Synopsis	DHCP timeout
Context	bof auto-configure ipv4 dhcp timeout <i>number</i>
Tree	timeout
Range	1 to 65535
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	bof auto-configure ipv6
Tree	ipv6
Description	Commands in this context autoconfigure the IPv6 DHCP client.
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the dhcp context
Context	bof auto-configure ipv6 dhcp
Tree	dhcp

Description	Commands in this context configure the IPv6 DHCP client for OOB management. The OOB management IPv6 can be set using a DHCP server offer.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-id (*hex-string* | *string*)

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

**Note:**
The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-configure ipv6 dhcp client-id (<i>hex-string</i> <i>string</i>)
Tree	client-id
Description	This command specifies the client ID for IPv6 DHCP Option 1 to include for auto-discovery. The identifier is opaque and is in string format. By default, this is the chassis serial number.
String length	3 to 250 (<i>hex-string</i>) 1 to 124 (<i>string</i>)
Introduced	25.3.R2
Platforms	7705 SAR-1

client-type *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

**Note:**
The new value of this element takes effect when the router boots.

Synopsis	Type code of the server DUID
Context	bof auto-configure ipv6 dhcp client-type <i>keyword</i>
Tree	client-type
Options	duid-enterprise, duid-link-local
Introduced	25.3.R2

Platforms 7705 SAR-1

include-user-class *boolean*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

**Note:**
The new value of this element takes effect when the router boots.

Synopsis	Include user class information
Context	bof auto-configure ipv6 dhcp include-user-class <i>boolean</i>
Tree	include-user-class
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

**Note:**
The new value of this element takes effect when the router boots.

Synopsis	DHCP timeout
Context	bof auto-configure ipv6 dhcp timeout <i>number</i>
Tree	timeout
Range	1 to 65535
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

configuration

Synopsis Enter the **configuration** context

Context	bof configuration
Tree	configuration
Introduced	25.3.R2
Platforms	7705 SAR-1

encrypt *boolean*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Enable encryption of BOF configuration files
Context	bof configuration encrypt <i>boolean</i>
Tree	encrypt
Description	<p>When configured to true, this command enables encryption of the BOF using AES256 and SHA256.</p> <p>When the BOF is encrypted on the compact flash, it is still reachable using the BOF interactive menu during node startup, and fields can be modified using the BOF interactive menu.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-key *encrypted-leaf*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Secret key for encryption of configuration files
Context	bof configuration encryption-key <i>encrypted-leaf</i>
Tree	encryption-key
Description	<p>This command creates a key to be used by AES256 and SHA256 for configuration file encryption and hashing. This key is used for all configuration files (primary, secondary, and tertiary).</p> <p>After creating or deleting a key, save the configuration file with the current encryption key state.</p>
String length	1 to 71
Introduced	25.3.R2
Platforms	7705 SAR-1

password *encrypted-leaf*

 **Note:**
The new value of this element takes effect when the router boots.

Synopsis	Password for boot-time modification of boot options
Context	bof configuration password <i>encrypted-leaf</i>
Tree	password
Description	This command configures the password to access the BOF interactive menu at startup. If a password is configured, the BOF interactive menu is accessible only when the correct password is entered. If the correct password is not entered in 30 seconds, the node reboots.
String length	1 to 71
Introduced	25.3.R2
Platforms	7705 SAR-1

primary-location *bof-cflash-and-url*

 **Note:**
The new value of this element takes effect when the candidate is committed.

Synopsis	Primary configuration location
Context	bof configuration primary-location <i>bof-cflash-and-url</i>
Tree	primary-location
String length	1 to 199
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary-location *bof-cflash-and-url*

 **Note:**
The new value of this element takes effect when the candidate is committed.

Synopsis	Secondary configuration location
Context	bof configuration secondary-location <i>bof-cflash-and-url</i>
Tree	secondary-location
String length	1 to 199

Introduced	25.3.R2
Platforms	7705 SAR-1

tertiary-location *bof-cflash-and-url*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Tertiary configuration location
Context	bof configuration tertiary-location <i>bof-cflash-and-url</i>
Tree	tertiary-location
Description	<p>This command specifies the name and location of the tertiary configuration file.</p> <p>The system attempts to use the configuration specified in tertiary-location if both the primary and secondary configuration files cannot be located. If this file cannot be located, the system boots with the factory default configuration.</p> <p>Note that if an error in the configuration file is encountered, the boot process aborts.</p>
String length	1 to 199
Introduced	25.3.R2
Platforms	7705 SAR-1

console

Synopsis	Enter the console context
Context	bof console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR-1

speed *number*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Console port speed
Context	bof console speed <i>number</i>
Tree	speed
Description	This command configures the console port baud rate.

When this command is issued while editing the BOF file used for the most recent boot, both the BOF file and the active configuration are changed immediately.

Range	9600 19200 38400 57600 115200
Units	bps
Default	115200
Introduced	25.3.R2
Platforms	7705 SAR-1

wait-time *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Wait time for interrupt to change boot parameters
Context	bof console wait-time <i>number</i>
Tree	wait-time
Range	1 to 10
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

dns

Synopsis	Enter the dns context
Context	bof dns
Tree	dns
Introduced	25.3.R2
Platforms	7705 SAR-1

domain *string*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	System DNS domain name for DNS address resolution
----------	---

Context	bof dns domain <i>string</i>
Tree	domain
String length	1 to 178
Introduced	25.3.R2
Platforms	7705 SAR-1

primary-server (*ipv4-address-no-zone | ipv6-address-no-zone*)

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Primary DNS server
Context	bof dns primary-server (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	primary-server
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary-server (*ipv4-address-no-zone | ipv6-address-no-zone*)

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Secondary DNS server
Context	bof dns secondary-server (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	secondary-server
Introduced	25.3.R2
Platforms	7705 SAR-1

tertiary-server (*ipv4-address-no-zone | ipv6-address-no-zone*)

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Tertiary DNS server
Context	bof dns tertiary-server (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	tertiary-server

Description	<p>This command configures the tertiary DNS server for DNS name resolution. The tertiary DNS server is used only if the primary DNS server and the secondary DNS server do not respond.</p> <p>DNS name resolution can be used when executing ping, traceroute, and service-ping, and also when defining file URLs. DNS name resolution is not supported when DNS names are embedded in configuration files.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

image

Synopsis	Enter the image context
Context	bof image
Tree	image
Introduced	25.3.R2

4.4.1 card command descriptions

card [*slot-number*] *number*

Synopsis	Enter the card list instance
Context	configure <i>card</i> <i>number</i>
Tree	<i>card</i>
Description	Commands in this context cover attributes for specific chassis slots for physical cards. In SR OS, cards cover IOM, IMM, and XCM.
Introduced	25.3.R2
Platforms	7705 SAR-1

[slot-number] *number*

Synopsis	Slot number within the chassis
Context	configure <i>card</i> <i>number</i>
Tree	<i>card</i>
Description	This command configures a unique value that identifies the card slot within a chassis in the system.
Range	1 to 20
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the card
Context	configure <i>card</i> <i>number</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

card-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Card type
Context	configure card <i>number</i> card-type <i>keyword</i>
Tree	card-type
Description	<p>This command adds an IOM, IMM, XCM to the device configuration for the slot.</p> <p>The card type can be pre-provisioned, meaning that the card does not need to be installed in the chassis.</p> <p>A card must be provisioned before any contained object can be configured: MDA, XIOM, XMA, MDA-s, connector, or port. A card can only be provisioned in a slot if the card type is allowed in the slot. An error message is generated if an attempt is made to provision a card type that is not allowed.</p> <p>If a card is inserted that does not match the configured card type for the slot, a log event and facility alarm is raised. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event and facility alarm are raised if an administratively enabled card is removed from the chassis. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event is issued when a card is removed that is administratively disabled.</p> <p>Because IMM's do not have the capability to install separate MDAs, the configuration of the MDAs is automatic. This configuration only includes the default options such as default buffer policies. Commands to manage the MDA remain in the MDA configuration context.</p> <p>Some card hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two card types that are the same, except for a "-ptp" suffix to indicate the second loadset. A hard reset of the card occurs when switching between the two provisioned types.</p> <p>An appropriate alarm is raised if a partial or complete card failure is detected. The alarm is cleared when the error condition ceases.</p>

fail-on-error *boolean*

Synopsis	Set operational state of the card to Failed upon error
Context	configure card <i>number</i> fail-on-error <i>boolean</i>
Tree	fail-on-error
Description	<p>When configured to true, this command controls the behavior of the card when any one of a specific set of card level errors is encountered in the system.</p> <p>When this command is set to true, and any one (or more) of the specific errors is detected, the operational state of the card is set to failed. This failed state persists until the clear card command is issued (reset) or the card is removed and reinserted (reseated). If the condition persists after reseating the card, contact Nokia support to investigate more.</p> <p>Nokia only recommends configuring this command to true when the network is designed to be able to route traffic around a failed card (redundant cards, nodes, or other paths exist).</p> <p>The list of specific errors includes the following:</p> <p>CHASSIS event ID# 2063 - tmnxEqCardPChipMemoryEvent</p> <p>CHASSIS event ID# 2076 - tmnxEqCardPChipCamEvent</p> <p>CHASSIS event ID# 2059 - tmnxEqCardPChipError (for ingress Ethernet only)</p> <p>CHASSIS event ID# 2098 - tmnxEqCardQChipBufMemoryEvent</p> <p>CHASSIS event ID# 2099 - tmnxEqCardQChipStatsMemoryEvent</p> <p>CHASSIS event ID# 2101 - tmnxEqCardQChipIntMemoryEvent</p> <p>CHASSIS event ID# 2103 - tmnxEqCardChipIfCellEvent</p> <p>On platforms with integrated CPM and IOM, IMM, or XCM, the node is rebooted if this command is set to true and one of the card level errors is encountered. The tmnxEqCardPChipError is only considered as a trigger for this command for ingress FCS errors (not egress FCS errors).</p> <p>Note: On the detection of the event or error in the system, the reporting of the event (logs) and the fail-on-error behavior of the card are independent. Log event control configuration determines whether the events are reported in logs (or SNMP traps, and so on) and the fail-on-error configuration determines the behavior of the card. This implies that the card can be configured to fail-on-error even if the events are suppressed (some may be suppressed in the system by default). To facilitate post-failure analysis, Nokia recommends reporting the specific events or errors and that configure log log-events be enabled when this command is set to true.</p>
Default	false

max-rate (*number | keyword*)

Synopsis Maximum rate override

Context **configure** *card number fp number ingress access queue-group reference instance-id number policer-control-policy overrides max-rate (number | keyword)*

Tree *max-rate*

Description	<p>This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.</p> <p>For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.</p> <p>Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.</p> <p>If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.</p>
Range	1 to 2000000000

Description	Commands in this context configure specific overrides to one or more policers created on the SAP through SAP ingress QoS policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [**policer-id**] *reference*

Synopsis	Enter the policer list instance
Context	configure card <i>number</i> fp <i>number</i> ingress access queue-group <i>reference</i> instance-id <i>number</i> policer-overrides policer <i>reference</i>
Tree	policer
Description	<p>Commands in this context create, modify, or delete a policer. Policers are created and used in a similar manner to queues. Unlike queues that have dedicated counters, policers allow various stat-mode settings that define the counters to be associated with the policer. Packet byte offset provides a policer with the ability to modify the size of each packet based on a defined number of bytes. All policers must be created within the QoS policies.</p> <p>After a policer is created, it cannot be deleted from the QoS policy unless all forwarding classes mapped to the policer are first moved to other policers or queues.</p> <p>The system allows a policer to be created on a SAP QoS policy regardless of the ability to support policers on objects where the policy is currently applied. The system only scans the current objects for policer support and sufficient resources to create the policer when a forwarding class is first mapped to the policer ID. If the policer cannot be created because one or more instances of the policy do not support policing or have insufficient resources to create the policer, the forwarding class mapping fails.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-id] *reference*

Synopsis	Policer ID
Context	configure card <i>number</i> fp <i>number</i> ingress access queue-group <i>reference</i> instance-id <i>number</i> policer-overrides policer <i>reference</i>

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	CBS tolerance allowed by the policer
Context	configure card <i>number</i> fp <i>number</i> ingress access queue-group <i>reference</i> instance-id <i>number</i> policer-overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>)

Tree	cbs
Description	<p>This command configures the CIR leaky bucket exceed threshold of the policer.</p> <p>If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.</p>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	Maximum burst tolerance allowed by the policer
Context	configure card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Description	<p>This command configures the PIR leaky bucket violate threshold of the policer.</p> <p>Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold.</p> <p>If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate.</p> <p>The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.</p>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size adjustment
----------	------------------------

Context	configure <i>card number</i> <i>fp number</i> <i>ingress access queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference</i> <i>packet-byte-offset number</i>
Tree	<i>packet-byte-offset</i>
Description	<p>This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.</p> <p>Use this command to add downstream frame encapsulation or remove portions of packet headers.</p> <p>When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.</p>
Range	-32 to 31
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure <i>card number</i> <i>fp number</i> <i>ingress access queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference</i> <i>rate</i>
Tree	<i>rate</i>
Description	<p>Commands in this context configure the metering and optional profiling rates of the policer.</p> <p>The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR for the policer
Context	configure <i>card number</i> <i>fp number</i> <i>ingress access queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference</i> <i>rate cir (number keyword)</i>
Tree	<i>cir</i>
Description	<p>This command overrides the default CIR rate of the policer.</p> <p>When the policer is first created, the profiling rate defaults to 0 kb/s.</p>

When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.

Range	0 to 20000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR for the policer
Context	configure <i>card</i> <i>number</i> <i>fp</i> <i>number</i> <i>ingress</i> <i>access</i> <i>queue-group</i> <i>reference</i> <i>instance-id</i> <i>number</i> <i>policer-overrides</i> <i>policer</i> <i>reference</i> <i>rate</i> pir (<i>number</i> <i>keyword</i>)
Tree	<i>pir</i>
Description	This command configures the metering rate of the policer for the PIR leaky bucket. When the policer is first created, the metering rate defaults to max. When max is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.
Range	1 to 20000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	configure <i>card</i> <i>number</i> <i>fp</i> <i>number</i> <i>ingress</i> <i>access</i> <i>queue-group</i> <i>reference</i> <i>instance-id</i> <i>number</i> <i>policer-overrides</i> <i>policer</i> <i>reference</i> stat-mode <i>keyword</i>
Tree	<i>stat-mode</i>
Description	This command specifies the forwarding plane counters that allow offered, output, and discard accounting to occur for the policer.

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	25.3.R2
Platforms	7705 SAR-1

max-rate (*number* | *keyword*)

Synopsis	Maximum rate override
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides max-rate (number keyword)</i>
Tree	<i>max-rate</i>
Description	<p>This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.</p> <p>For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.</p> <p>Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.</p> <p>If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This</p>

	prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.

cbs (*number* | *keyword*)

Synopsis	CBS tolerance allowed by the policer
Context	configure card <i>number</i> fp <i>number</i> ingress network queue-group <i>reference</i> instance-id <i>number</i> policer-overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Description	<p>This command configures the CIR leaky bucket exceed threshold of the policer.</p> <p>If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.</p>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	Maximum burst tolerance allowed by the policer
Context	configure card <i>number</i> fp <i>number</i> ingress network queue-group <i>reference</i> instance-id <i>number</i> policer-overrides policer <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Description	<p>This command configures the PIR leaky bucket violate threshold of the policer.</p> <p>Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold.</p> <p>If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate.</p>

The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.

Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size adjustment
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference packet-byte-offset number</i>
Tree	packet-byte-offset
Description	<p>This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.</p> <p>Use this command to add downstream frame encapsulation or remove portions of packet headers.</p> <p>When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.</p>
Range	-32 to 31
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference rate</i>
Tree	rate
Description	<p>Commands in this context configure the metering and optional profiling rates of the policer.</p> <p>The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR for the policer
Context	configure <i>card number</i> <i>fp number</i> <i>ingress network queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference rate</i> <i>cir (number keyword)</i>
Tree	<i>cir</i>
Description	<p>This command overrides the default CIR rate of the policer.</p> <p>When the policer is first created, the profiling rate defaults to 0 kb/s.</p> <p>When max is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.</p>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR for the policer
Context	configure <i>card number</i> <i>fp number</i> <i>ingress network queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference rate</i> <i>pir (number keyword)</i>
Tree	<i>pir</i>
Description	<p>This command configures the metering rate of the policer for the PIR leaky bucket.</p> <p>When the policer is first created, the metering rate defaults to max.</p> <p>When max is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.</p>
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2

Platforms 7705 SAR-1

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	configure card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference stat-mode <i>keyword</i>
Tree	stat-mode
Description	This command specifies the forwarding plane counters that allow offered, output, and discard accounting to occur for the policer.
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir

event [*type*] *keyword*

Synopsis	Enter the event list instance
Context	configure <i>card number mda number</i> event keyword
Tree	event
Description	Commands in this context allow the user to control the action taken when a specific hardware error event is raised against the target MDA. If no event action has been created for a specific event type, the management plane of the router ignores the hardware errors related to that event type.

The log event raised for any event type (such as soft-error or memory-error) is tmnx EqHwEventDetected.

Introduced 25.3.R2
Platforms 7705 SAR-1

[type] keyword

Synopsis MDA event type being monitored

Context **configure** *card number* *mda number* *event keyword*

Tree *event*

Description This command configures the type of event to be acted upon.

- soft-error — Defines the action to take when soft errors are detected on the MDA.
- internal-frame-loss — Provides system detected frame loss in the traffic transiting the MDA.
- memory-error — Provides the user options to handle MDA memory error events on MDAs. This feature is supported on FP2- and FP3-based Ethernet MDAs and IMM.
- data-link-error — Provides the user options to handle datapath link errors on an MDA.

Options soft-error, internal-frame-loss, memory-error, datapath-link-error

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

action keyword

Synopsis Action when a specific hardware error event is raised

Context **configure** *card number* *mda number* *event keyword* *action keyword*

Tree *action*

Description This command defines the action taken when a specific hardware error event is detected on the target MDA.

When no event action is specified for an event type, the hardware errors related to the event type are ignored by the management plane of the router.

Actions include the following:

- log-only — Pass the log event to log management. No other action is taken.
- reset-mds — Reset the MDA.
- fail-mds — Set the operational state of the MDA to Failed. This Failed state persists until the clear mda command is issued (reset) or the MDA is removed and reinserted (re-seated).

Options	none, log-only, reset, fail
Introduced	25.3.R2
Platforms	7705 SAR-1

fail-on-error *boolean*

Synopsis	Set operational state to Failed if an error is detected
Context	configure <i>card number mda number fail-on-error boolean</i>
Tree	<i>fail-on-error</i>
Description	<p>When configured to true, the fail-on-error feature is enabled on the MDA. When a defined rate of egress or ingress XPL errors occur on an MDA within a specified time interval, the MDA is placed in the Failed state. This can force an APS switchover or traffic to be rerouted.</p> <p>The purpose of this feature is to avoid situations where traffic is forced to use a physical link that suffers from errors but is still technically operational. The feature uses values configured in the configure card mda egress-xpl and configure card mda ingress-xpl contexts.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mda-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MDA type for the slot
Context	configure <i>card number mda number mda-type keyword</i>
Tree	<i>mda-type</i>
Description	<p>This command provisions a specific MDA type to the device configuration for the slot. The MDA can be pre-provisioned and an MDA must be provisioned before connectors or ports can be configured.</p> <p>A maximum of two MDAs can be provisioned on an IOM or XCM. XMAs are provisioned using MDA commands.</p> <p>A medium severity alarm is generated if an MDA is inserted that does not match the MDA type configured for the slot. This alarm is cleared when the correct MDA is inserted or the configuration is modified. A high severity alarm is raised when an administratively enabled MDA is removed from the chassis. This alarm is cleared if either the correct</p>

MDA type is inserted or the configuration is modified. A low severity alarm is issued if an MDA is removed that is administratively disabled.

An MDA can only be provisioned in a slot if the MDA type is allowed in the MDA slot. An error message is generated when an MDA is provisioned in a slot where it is not allowed.

Some MDA hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two MDA types that are the same, except for a “-ptp” suffix to indicate the second loadset. A hard reset of the MDA occurs when switching between the two provisioned types.

An alarm is raised if partial or complete MDA failure is detected. The alarm is cleared when the error condition ceases.

New generations of XMAs include variants controlled through hardware and software licensing. For these XMAs, the license level must be provisioned in addition to the MDA type. An XMA cannot become operational unless the provisioned license level matches the license level of the XMA installed into the slot.

The set of license levels varies by MDA type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress queues and egress policers. Changes to the provisioned license level may be blocked if configuration that would not be permitted with the new target license level exists. If the license level is not specified, the level is set to the highest license level for that XMA.

4.7.1 debug command descriptions

debug

Synopsis	Configure application or protocol tracing
Context	debug
Tree	debug
Description	Commands in this context enable detailed debugging information for various protocols and router functions.
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate

Synopsis	Enter the certificate context
Context	debug certificate
Tree	certificate
Description	Commands in this context configure debugging for certificates.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-certificate-update [[filename](#)] *pki-file-name*

Synopsis	Add a list entry for auto-certificate-update
Context	debug certificate auto-certificate-update <i>pki-file-name</i>
Tree	auto-certificate-update
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[\[filename\]](#) *pki-file-name*

Synopsis	Certificate filename
Context	debug certificate auto-certificate-update <i>pki-file-name</i>

Tree	auto-certificate-update
String length	1 to 95
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-crl-update [[ca-profile-name](#)] *named-item*

Synopsis	Add a list entry for auto-crl-update
Context	debug certificate auto-crl-update <i>named-item</i>
Tree	auto-crl-update
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[ca-profile-name] *named-item*

Synopsis	Certificate Authority (CA) profile name
Context	debug certificate auto-crl-update <i>named-item</i>
Tree	auto-crl-update
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

cmpv2 [[ca-profile-name](#)] *named-item*

Synopsis	Add a list entry for cmpv2
Context	debug certificate cmpv2 <i>named-item</i>
Tree	cmpv2
Description	This command adds a list entry for a CA profile to debug Certificate Management Protocol version 2 (CMPv2).
Max. instances	128
Introduced	25.3.R2

Platforms 7705 SAR-1

[ca-profile-name] *named-item*

Synopsis CA profile name
Context [debug certificate cmpv2](#) *named-item*
Tree [cmpv2](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

est [[est-profile-name](#)] *named-item*

Synopsis Add a list entry for **est**
Context [debug certificate est](#) *named-item*
Tree [est](#)
Description This command adds a list entry for debugging Enrollment over Secure Transport Protocol (EST).
Max. instances 128
Introduced 25.3.R2
Platforms 7705 SAR-1

[est-profile-name] *named-item*

Synopsis EST profile name
Context [debug certificate est](#) *named-item*
Tree [est](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

ocsp [*ca-profile-name*] *named-item*

Synopsis	Add a list entry for ocsp
Context	debug certificate ocsp <i>named-item</i>
Tree	ocsp
Description	This command adds a list entry for a CA profile to debug the Online Certificate Status Protocol (OCSP).
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[ca-profile-name] *named-item*

Synopsis	CA profile name
Context	debug certificate ocsp <i>named-item</i>
Tree	ocsp
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec

Synopsis	Enter the ipsec context
Context	debug ipsec
Tree	ipsec
Description	Commands in this context configure debugging for IP security (IPsec) functionality.
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate [*filename*] *pki-file-name*

Synopsis	Add a list entry for certificate
Context	debug ipsec certificate <i>pki-file-name</i>

Tree	certificate
Description	This command adds a list entry for debugging certificate chain computation in the certificate profile.
Max. instances	200
Introduced	25.3.R2
Platforms	7705 SAR-1

[filename] *pki-file-name*

Synopsis	Imported IPsec certificate filename
Context	debug ipsec certificate <i>pki-file-name</i>
Tree	certificate
String length	1 to 95
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-db [[name](#)] *named-item*

Synopsis	Add a list entry for client-db
Context	debug ipsec client-db <i>named-item</i>
Tree	client-db
Description	This command adds a list entry for debugging the specified IPsec client database.
Max. instances	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec client database name
Context	debug ipsec client-db <i>named-item</i>
Tree	client-db
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

gateway *[name] named-item*

Synopsis	Enter the gateway list instance
Context	debug ipsec gateway <i>named-item</i>
Tree	gateway
Description	<p>Commands in this context configure debugging for dynamic IPsec tunnels that terminate on the specified IPsec gateway.</p> <p>Specify the tunnel to debug using either its source address or source subnet, by using the debug ipsec gateway tunnel command. If a subnet is specified, the system enables debugging for all tunnels with source addresses in the specified subnet.</p>
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec gateway name
Context	debug ipsec gateway <i>named-item</i>
Tree	gateway
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Introduced	25.3.R2
Platforms	7705 SAR-1

[[prefix](#)] *ipv4-prefix*

Synopsis	IPv4 prefix
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> lease <i>ipv4-prefix</i>
Tree	lease
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> lease <i>ipv4-prefix</i> detail-level <i>keyword</i>
Tree	detail-level
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> lease ipv4-prefix mode <i>keyword</i>
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	25.3.R2
Platforms	7705 SAR-1

mac [[mac-address](#)] *mac-address*

Synopsis	Enter the mac list instance
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> mac <i>mac-address</i>
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR-1

[mac-address] *mac-address*

Synopsis	MAC address matching the client hardware address field
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> mac <i>mac-address</i>
Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> mac <i>mac-address</i> detail-level <i>keyword</i>
Tree	detail-level
Options	high – High detail level output for debugging

	medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router <i>string</i> dhcp-server dhcpv4 <i>named-item</i> mac <i>mac-address</i> mode <i>keyword</i>
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcpv6 [[name](#)] *named-item*

Synopsis	Enter the dhcpv6 list instance
Context	debug router <i>string</i> dhcp-server dhcpv6 <i>named-item</i>
Tree	dhcpv6
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	DHCP server name
Context	debug router <i>string</i> dhcp-server dhcpv6 <i>named-item</i>
Tree	dhcpv6
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

all-packets

Synopsis Enable the **all-packets** context

Context [debug router string dhcp-server dhcpv6 named-item all-packets](#)

Tree [all-packets](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

detail-level *keyword*

Synopsis Detail level of the DHCP debug output

Context [debug router string dhcp-server dhcpv6 named-item all-packets detail-level keyword](#)

Tree [detail-level](#)

Options high – High detail level output for debugging
medium – Medium detail level output for debugging
low – Low detail level output for debugging

Default medium

Introduced 25.3.R2

Platforms 7705 SAR-1

mode *keyword*

Synopsis DHCP packets present in the debug output

Context [debug router string dhcp-server dhcpv6 named-item all-packets mode keyword](#)

Tree [mode](#)

Options egress-ingress-and-dropped – Display egress, ingress, and dropped packets
dropped-only – Display dropped packets only
ingress-and-dropped – Display ingress and dropped packets

Default dropped-only

Introduced 25.3.R2

Platforms 7705 SAR-1

lease [[prefix](#)] *ipv6-prefix*

Synopsis Enter the **lease** list instance

Context	<code>debug router string dhcp-server dhcpv6 named-item lease ipv6-prefix</code>
Tree	<code>lease</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	<code>debug router string dhcp-server dhcpv6 named-item lease ipv6-prefix</code>
Tree	<code>lease</code>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	<code>debug router string dhcp-server dhcpv6 named-item lease ipv6-prefix detail-level keyword</code>
Tree	<code>detail-level</code>
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	<code>debug router string dhcp-server dhcpv6 named-item lease ipv6-prefix mode keyword</code>
Tree	<code>mode</code>
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only

Introduced 25.3.R2
 Platforms 7705 SAR-1

link-local-address [[address](#)] *ipv6-address*

Synopsis Enter the **link-local-address** list instance
 Context [debug router](#) *string dhcp-server dhcpv6 named-item link-local-address ipv6-address*
 Tree [link-local-address](#)
 Introduced 25.3.R2
 Platforms 7705 SAR-1

[address] *ipv6-address*

Synopsis Link local address
 Context [debug router](#) *string dhcp-server dhcpv6 named-item link-local-address ipv6-address*
 Tree [link-local-address](#)
 Notes This element is part of a list key.
 Introduced 25.3.R2
 Platforms 7705 SAR-1

detail-level *keyword*

Synopsis Detail level of the DHCP debug output
 Context [debug router](#) *string dhcp-server dhcpv6 named-item link-local-address ipv6-address detail-level keyword*
 Tree [detail-level](#)
 Options high – High detail level output for debugging
 medium – Medium detail level output for debugging
 low – Low detail level output for debugging
 Default medium
 Introduced 25.3.R2
 Platforms 7705 SAR-1

mode *keyword*

Synopsis DHCP packets present in the debug output

Context	<code>debug router string dhcp-server dhcpv6 named-item link-local-address ipv6-address mode keyword</code>
Tree	<code>mode</code>
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp6

Synopsis	Enter the dhcp6 context
Context	<code>debug router string dhcp6</code>
Tree	<code>dhcp6</code>
Description	Commands in this context enable DHCPv6 debugging with optional interface, SAP, and client-identifier match criteria to filter debug output.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packets

Synopsis	Enable the all-packets context
Context	<code>debug router string dhcp6 all-packets</code>
Tree	<code>all-packets</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level keyword

Synopsis	Detail level of the DHCP debug output
Context	<code>debug router string dhcp6 all-packets detail-level keyword</code>
Tree	<code>detail-level</code>
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	high

Introduced 25.3.R2
Platforms 7705 SAR-1

mode *keyword*

Synopsis DHCP packets present in the debug output
Context [debug router](#) *string dhcp6 all-packets mode keyword*
Tree [mode](#)
Options egress-ingress-and-dropped – Display egress, ingress, and dropped packets
dropped-only – Display dropped packets only
ingress-and-dropped – Display ingress and dropped packets
Default egress-ingress-and-dropped
Introduced 25.3.R2
Platforms 7705 SAR-1

client-identifier

Synopsis Enter the **client-identifier** context
Context [debug router](#) *string dhcp6 client-identifier*
Tree [client-identifier](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

duid [[duid](#)] *hex-string*

Synopsis Enter the **duid** list instance
Context [debug router](#) *string dhcp6 client-identifier duid hex-string*
Tree [duid](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[duid] *hex-string*

Synopsis Client DUID to match
Context [debug router](#) *string dhcp6 client-identifier duid hex-string*
Tree [duid](#)

String length	1 to 260
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level *keyword*

Synopsis	Detail level of the DHCPv6 debug output
Context	debug router <i>string</i> dhcp6 client-identifier duid <i>hex-string</i> detail-level <i>keyword</i>
Tree	detail-level
Options	high – High detail level for debugging medium – Medium detail level for debugging low – Low detail level for debugging
Default	high
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *hex-string*

Synopsis	Mask for partial client DUID matching
Context	debug router <i>string</i> dhcp6 client-identifier duid <i>hex-string</i> mask <i>hex-string</i>
Tree	mask
String length	1 to 260
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	DHCPv6 packets present in the debug output
Context	debug router <i>string</i> dhcp6 client-identifier duid <i>hex-string</i> mode <i>keyword</i>
Tree	mode
Options	egress-ingress-and-dropped – Display ingress, egress, and dropped packets dropped-only – Display ingress, egress, and dropped packets ingress-and-dropped – Display only ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	25.3.R2

Platforms 7705 SAR-1

link-layer-address [[lla-id](#)] *hex-string*

Synopsis Enter the **link-layer-address** list instance

Context [debug router string dhcp6 client-identifier link-layer-address hex-string](#)

Tree [link-layer-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[lla-id] *hex-string*

Synopsis Link layer address matching DUID-LLT or DUID-LL

Context [debug router string dhcp6 client-identifier link-layer-address hex-string](#)

Tree [link-layer-address](#)

String length 1 to 252

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

detail-level *keyword*

Synopsis Detail level of the DHCP debug output

Context [debug router string dhcp6 client-identifier link-layer-address hex-string detail-level keyword](#)

Tree [detail-level](#)

Options high – High detail level output for debugging
medium – Medium detail level output for debugging
low – Low detail level output for debugging

Default high

Introduced 25.3.R2

Platforms 7705 SAR-1

mode *keyword*

Synopsis DHCP packets present in the debug output

Context	<code>debug router string dhcp6 client-identifier link-layer-address hex-string mode keyword</code>
Tree	<code>mode</code>
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	25.3.R2
Platforms	7705 SAR-1

interface `[interface-name] interface-name`

Synopsis	Enter the interface list instance
Context	<code>debug router string dhcp6 interface interface-name</code>
Tree	<code>interface</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] interface-name

Synopsis	Interface name
Context	<code>debug router string dhcp6 interface interface-name</code>
Tree	<code>interface</code>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level keyword

Synopsis	Detail level of the DHCP debug output
Context	<code>debug router string dhcp6 interface interface-name detail-level keyword</code>
Tree	<code>detail-level</code>
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	high

Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router <i>string</i> dhcp6 interface <i>interface-name</i> mode <i>keyword</i>
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [[sap-id](#)] *sap*

Synopsis	Enter the sap list instance
Context	debug router <i>string</i> dhcp6 sap <i>sap</i>
Tree	sap
Introduced	25.3.R2
Platforms	7705 SAR-1

[sap-id] *sap*

Synopsis	SAP ID
Context	debug router <i>string</i> dhcp6 sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
----------	---------------------------------------

Context	<code>debug router string dhcp6 sap sap detail-level keyword</code>
Tree	<code>detail-level</code>
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	high
Introduced	25.3.R2
Platforms	7705 SAR-1

mode keyword

Synopsis	DHCP packets present in the debug output
Context	<code>debug router string dhcp6 sap sap mode keyword</code>
Tree	<code>mode</code>
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp

Synopsis	Enter the igmp context
Context	<code>debug router string igmp</code>
Tree	<code>igmp</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

group-interface

Synopsis	Enable the group-interface context
Context	<code>debug router string igmp group-interface</code>
Tree	<code>group-interface</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

all-group-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> igmp group-interface all-group-interfaces
Tree	all-group-interfaces
Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	25.3.R2
Platforms	7705 SAR-1

host

Synopsis	Enable the host context
Context	debug router <i>string</i> igmp host
Tree	host
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-address*

Synopsis	IP address of the host to trace
Context	debug router <i>string</i> igmp host ip-address <i>ipv4-address</i>
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Enable the interface context
Context	debug router <i>string</i> igmp interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

all-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> igmp interface all-interfaces
Tree	all-interfaces
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> igmp interface interface-name interface-name
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

mcs

Synopsis	Enable the mcs context
Context	debug router <i>string</i> igmp mcs
Tree	mcs
Description	Commands in this context enable debugging for IGMP multicast servers.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> igmp mcs all-interfaces
Tree	all-interfaces

Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> igmp mcs interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

miscellaneous *boolean*

Synopsis	Enable tracing of miscellaneous events
Context	debug router <i>string</i> igmp miscellaneous <i>boolean</i>
Tree	miscellaneous
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router <i>string</i> igmp packet
Tree	packet
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Trace all origins
----------	-------------------

Context	<code>debug router string igmp packet all-origins</code>
Tree	<code>all-origins</code>
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

dropped *boolean*

Synopsis	Enable tracing for dropped packets
Context	<code>debug router string igmp packet dropped boolean</code>
Tree	<code>dropped</code>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	<code>debug router string igmp packet egress boolean</code>
Tree	<code>egress</code>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

host-ip-address *ipv4-address*

Synopsis	Address of the host to trace
Context	<code>debug router string igmp packet host-ip-address ipv4-address</code>
Tree	<code>host-ip-address</code>
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	<code>debug router string igmp packet ingress boolean</code>
Tree	<code>ingress</code>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-ip-address *ipv4-address*

Synopsis	Source address of the packet to trace
Context	<code>debug router string igmp packet interface-ip-address ipv4-address</code>
Tree	<code>interface-ip-address</code>
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	<code>debug router string igmp packet interface-name interface-name</code>
Tree	<code>interface-name</code>
String length	1 to 32
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Packet type to trace
Context	<code>debug router string igmp packet type keyword</code>
Tree	<code>type</code>

Options	all – All IGMP packets query – IGMP Query packets v1-report – IGMP version 1 Report packets v2-report – IGMP version 2 Report packets v2-leave – IGMP version 2 Leave packets v3-report – IGMP version 3 Report packets
Default	all
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Enter the ip context
Context	debug router string ip
Tree	ip
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	debug router string ip icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packets

Synopsis	Enable the all-packets context
Context	debug router string ip icmp all-packets
Tree	all-packets
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [\[interface-name\]](#) *interface-name*

Synopsis	Add a list entry for interface
----------	---------------------------------------

Context	<code>debug router string ip icmp interface interface-name</code>
Tree	<code>interface</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
Context	<code>debug router string ip icmp interface interface-name</code>
Tree	<code>interface</code>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6

Synopsis	Enter the icmp6 context
Context	<code>debug router string ip icmp6</code>
Tree	<code>icmp6</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packets

Synopsis	Enable the all-packets context
Context	<code>debug router string ip icmp6 all-packets</code>
Tree	<code>all-packets</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

interface `[interface-name]` *interface-name*

Synopsis	Add a list entry for interface
Context	<code>debug router string ip icmp6 interface interface-name</code>

Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
Context	debug router <i>string ip icmp6 interface interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-events

Synopsis	Enter the interface-events context
Context	debug router <i>string ip interface-events</i>
Tree	interface-events
Introduced	25.3.R2
Platforms	7705 SAR-1

all-events

Synopsis	Enable the all-events context
Context	debug router <i>string ip interface-events all-events</i>
Tree	all-events
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Add a list entry for interface
Context	debug router <i>string ip interface-events interface interface-name</i>
Tree	interface

Introduced 25.3.R2
Platforms 7705 SAR-1

[interface-name] *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [ip interface-events interface](#) *interface-name*
Tree [interface](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

neighbor

Synopsis Enter the **neighbor** context
Context [debug router](#) *string* [ip neighbor](#)
Tree [neighbor](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

all-events

Synopsis Enable the **all-events** context
Context [debug router](#) *string* [ip neighbor all-events](#)
Tree [all-events](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

address-family *keyword*

Synopsis Debug the specified address family
Context [debug router](#) *string* [ip neighbor all-events address-family](#) *keyword*
Tree [address-family](#)
Options ipv4, ipv6

Introduced 25.3.R2
Platforms 7705 SAR-1

interface *[interface-name] interface-name*

Synopsis Enter the **interface** list instance
Context [debug router](#) *string ip neighbor interface interface-name*
Tree [interface](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[interface-name] interface-name

Synopsis Interface name
Context [debug router](#) *string ip neighbor interface interface-name*
Tree [interface](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

address-family keyword

Synopsis Debug the specified address family
Context [debug router](#) *string ip neighbor interface interface-name address-family keyword*
Tree [address-family](#)
Options ipv4, ipv6
Introduced 25.3.R2
Platforms 7705 SAR-1

packet

Synopsis Enter the **packet** context
Context [debug router](#) *string ip packet*
Tree [packet](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

all-packets

Synopsis	Enable the all-packets context
Context	debug router <i>string</i> ip packet all-packets
Tree	all-packets
Introduced	25.3.R2
Platforms	7705 SAR-1

address-family *keyword*

Synopsis	Debug the specified address family
Context	debug router <i>string</i> ip packet all-packets address-family <i>keyword</i>
Tree	address-family
Options	ipv4, ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

headers *boolean*

Synopsis	Display information associated with packet header only
Context	debug router <i>string</i> ip packet all-packets headers <i>boolean</i>
Tree	headers
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-id *number*

Synopsis	IP protocol ID to trace
Context	debug router <i>string</i> ip packet all-packets protocol-id <i>number</i>
Tree	protocol-id
Range	0 to 255

Introduced 25.3.R2
Platforms 7705 SAR-1

interface [\[interface-name\]](#) *interface-name*

Synopsis Enter the **interface** list instance
Context [debug router](#) *string ip packet interface interface-name*
Tree [interface](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[interface-name] *interface-name*

Synopsis Interface name
Context [debug router](#) *string ip packet interface interface-name*
Tree [interface](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

address-family *keyword*

Synopsis Debug the specified address family
Context [debug router](#) *string ip packet interface interface-name address-family keyword*
Tree [address-family](#)
Options ipv4, ipv6
Introduced 25.3.R2
Platforms 7705 SAR-1

headers *boolean*

Synopsis Display information associated with packet header only
Context [debug router](#) *string ip packet interface interface-name headers boolean*
Tree [headers](#)

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-id *number*

Synopsis	IP protocol ID to trace
Context	<code>debug router string ip packet interface interface-name protocol-id number</code>
Tree	<code>protocol-id</code>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

route-table

Synopsis	Enable the route-table context
Context	<code>debug router string ip route-table</code>
Tree	<code>route-table</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Allow trace for all route updates
Context	<code>debug router string ip route-table all</code>
Tree	<code>all</code>
Notes	The following elements are part of a mandatory choice: all or filter .
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	<code>debug router string ip route-table filter</code>
Tree	<code>filter</code>

Notes	The following elements are part of a mandatory choice: all or filter .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	debug router <i>string ip route-table filter ipv4</i>
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[prefix](#)] *ipv4-prefix*

Synopsis	Enter the prefix list instance
Context	debug router <i>string ip route-table filter ipv4 prefix ipv4-prefix</i>
Tree	prefix
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[[prefix](#)] *ipv4-prefix*

Synopsis	IPv4 prefix
Context	debug router <i>string ip route-table filter ipv4 prefix ipv4-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

longest-prefix-match *boolean*

Synopsis	Allow match for greatest prefix values
Context	debug router <i>string ip route-table filter ipv4 prefix ipv4-prefix longest-prefix-match boolean</i>

Tree	longest-prefix-match
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	debug router <i>string ip route-table filter ipv6</i>
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[prefix](#)] *ipv6-prefix*

Synopsis	Enter the prefix list instance
Context	debug router <i>string ip route-table filter ipv6 prefix ipv6-prefix</i>
Tree	prefix
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[[prefix](#)] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	debug router <i>string ip route-table filter ipv6 prefix ipv6-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

longest-prefix-match *boolean*

Synopsis	Allow match for greatest prefix values
----------	--

Context	<code>debug router</code> <i>string</i> <code>ip route-table filter ipv6 prefix</code> <i>ipv6-prefix</i> <code>longest-prefix-match</code> <i>boolean</i>
Tree	<code>longest-prefix-match</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-table

Synopsis	Enable the tunnel-table context
Context	<code>debug router</code> <i>string</i> <code>ip tunnel-table</code>
Tree	<code>tunnel-table</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Allow trace for all tunnel updates
Context	<code>debug router</code> <i>string</i> <code>ip tunnel-table all</code>
Tree	<code>all</code>
Notes	The following elements are part of a mandatory choice: all or filter .
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	<code>debug router</code> <i>string</i> <code>ip tunnel-table filter</code>
Tree	<code>filter</code>
Notes	The following elements are part of a mandatory choice: all or filter .
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Enter the id context
Context	debug router <i>string</i> ip tunnel-table filter id
Tree	id
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-id *number*

Synopsis	SDP ID for tracing
Context	debug router <i>string</i> ip tunnel-table filter id sdp-id <i>number</i>
Tree	sdp-id
Range	1 to 32767
Notes	The following elements are part of a choice: sdp-id or tunnel-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-id *number*

Synopsis	Tunnel ID for tracing
Context	debug router <i>string</i> ip tunnel-table filter id tunnel-id <i>number</i>
Tree	tunnel-id
Max. range	0 to 4294967295
Notes	The following elements are part of a choice: sdp-id or tunnel-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	debug router <i>string</i> ip tunnel-table filter ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[prefix](#)] *ipv4-prefix*

Synopsis	Enter the prefix list instance
Context	debug router <i>string ip tunnel-table filter ipv4 prefix ipv4-prefix</i>
Tree	prefix
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[prefix] *ipv4-prefix*

Synopsis	IPv4 prefix
Context	debug router <i>string ip tunnel-table filter ipv4 prefix ipv4-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

longest-prefix-match *boolean*

Synopsis	Allow match for greatest prefix values
Context	debug router <i>string ip tunnel-table filter ipv4 prefix ipv4-prefix longest-prefix-match boolean</i>
Tree	longest-prefix-match
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-type (*keyword | keyword*)

Synopsis	Tunnel type
Context	debug router <i>string ip tunnel-table filter ipv4 prefix ipv4-prefix tunnel-type (keyword keyword)</i>
Tree	tunnel-type

Options	none, invalid, sdp, rsvp, ldp, ospf, isis, bypass, gre, bgp, sr-te, fpe, udp, ospfv3, mpls-fwd-policy, sr-policy, rib-api, bgp-epe, srv6-isis, srv6-policy, vxlan, srv6
Options	all
Default	all
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	debug router <i>string ip tunnel-table filter ipv6</i>
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[prefix](#)] *ipv6-prefix*

Synopsis	Enter the prefix list instance
Context	debug router <i>string ip tunnel-table filter ipv6 prefix ipv6-prefix</i>
Tree	prefix
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[[prefix](#)] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	debug router <i>string ip tunnel-table filter ipv6 prefix ipv6-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

longest-prefix-match *boolean*

Synopsis	Allow match for greatest prefix values
Context	debug router <i>string</i> ip tunnel-table filter ipv6 prefix <i>ipv6-prefix</i> longest-prefix-match <i>boolean</i>
Tree	longest-prefix-match
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-type (*keyword* | *keyword*)

Synopsis	Tunnel type
Context	debug router <i>string</i> ip tunnel-table filter ipv6 prefix <i>ipv6-prefix</i> tunnel-type (<i>keyword</i> <i>keyword</i>)
Tree	tunnel-type
Options	none, invalid, sdp, rsvp, ldp, ospf, isis, bypass, gre, bgp, sr-te, fpe, udp, ospfv3, mpls-fwd-policy, sr-policy, rib-api, bgp-epe, srv6-isis, srv6-policy, vxlan, srv6
Options	all
Default	all
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp

Synopsis	Enter the ldp context
Context	debug router <i>string</i> ldp
Tree	ldp
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	debug router <i>string</i> ldp interface <i>interface-name</i>
Tree	interface

Introduced25.3.R2

Platforms7705 SAR-1

[interface-name] *interface-name*

SynopsisInterface name

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mld

Synopsis	Enter the mld context
Context	debug router <i>string</i> mld
Tree	mld
Introduced	25.3.R2
Platforms	7705 SAR-1

group-interface

Synopsis	Enable the group-interface context
Context	debug router <i>string</i> mld group-interface
Tree	group-interface
Introduced	25.3.R2
Platforms	7705 SAR-1

all-group-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> mld group-interface all-group-interfaces
Tree	all-group-interfaces

Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	25.3.R2
Platforms	7705 SAR-1

host

Synopsis	Enable the host context
Context	debug router <i>string</i> mld host
Tree	host
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv6-address*

Synopsis	IP address of the host to trace
Context	debug router <i>string</i> mld host ip-address <i>ipv6-address</i>
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Enable the interface context
Context	debug router <i>string</i> mld interface
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

all-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> mld interface all-interfaces
Tree	all-interfaces
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .

Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [mld interface interface-name interface-name](#)
Tree [interface-name](#)
String length 1 to 32
Notes The following elements are part of a mandatory choice: **all-interfaces** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

mcs

Synopsis Enable the **mcs** context
Context [debug router](#) *string* [mld mcs](#)
Tree [mcs](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

all-interfaces

Synopsis Trace all interfaces
Context [debug router](#) *string* [mld mcs all-interfaces](#)
Tree [all-interfaces](#)
Notes The following elements are part of a mandatory choice: **all-interfaces** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [mld mcs interface-name interface-name](#)

Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

miscellaneous *boolean*

Synopsis	Enable the tracing of miscellaneous events
Context	debug router <i>string mld miscellaneous boolean</i>
Tree	miscellaneous
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router <i>string mld packet</i>
Tree	packet
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Allow trace for all origins
Context	debug router <i>string mld packet all-origins</i>
Tree	all-origins
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

dropped *boolean*

Synopsis	Enable tracing for dropped packets
Context	debug router <i>string</i> mld packet dropped <i>boolean</i>
Tree	dropped
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug router <i>string</i> mld packet egress <i>boolean</i>
Tree	egress
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

host-ip-address *ipv6-address*

Synopsis	Address of the host to trace
Context	debug router <i>string</i> mld packet host-ip-address <i>ipv6-address</i>
Tree	host-ip-address
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug router <i>string</i> mld packet ingress <i>boolean</i>
Tree	ingress
Default	true
Introduced	25.3.R2

Platforms 7705 SAR-1

interface-ip-address *ipv6-address*

Synopsis Source address of the packet to trace

Context [debug router string mld packet interface-ip-address ipv6-address](#)

Tree [interface-ip-address](#)

Notes The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name

Context [debug router string mld packet interface-name interface-name](#)

Tree [interface-name](#)

String length 1 to 32

Notes The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

type *keyword*

Synopsis Packet type

Context [debug router string mld packet type keyword](#)

Tree [type](#)

Options all – All MLD packets
query – MLD Query packets
v1-report – MLD version 1 Report packets
v2-report – MLD version 2 Report packets

Default all

Introduced 25.3.R2

Platforms 7705 SAR-1

msdp

Synopsis	Enter the msdp context
Context	debug router string msdp
Tree	msdp
Description	Commands in this context configure debugging for the Multicast Source Discovery Protocol (MSDP).
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router string msdp packet
Tree	packet
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packet-types

Synopsis	Enable MSDP debugging for all packets
Context	debug router string msdp packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-types

Synopsis	Enter the packet-types context
Context	debug router string msdp packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

keep-alive

Synopsis	Enable the keep-alive context
Context	debug router <i>string</i> msdp packet packet-types keep-alive
Tree	keep-alive
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router <i>string</i> msdp packet packet-types keep-alive peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	25.3.R2
Platforms	7705 SAR-1

sa-request

Synopsis	Enable the sa-request context
Context	debug router <i>string</i> msdp packet packet-types sa-request
Tree	sa-request
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router <i>string</i> msdp packet packet-types sa-request peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	25.3.R2
Platforms	7705 SAR-1

sa-response

Synopsis	Enable the sa-response context
Context	debug router string msdp packet packet-types sa-response
Tree	sa-response
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router string msdp packet packet-types sa-response peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-active

Synopsis	Enable the source-active context
Context	debug router string msdp packet packet-types source-active
Tree	source-active
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router string msdp packet packet-types source-active peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	25.3.R2
Platforms	7705 SAR-1

pim

Synopsis	Enable the pim context
Context	debug router string msdp pim
Tree	pim
Description	Commands in this context enable MSDP PIM debugging.
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address *ipv4-multicast-address*

Synopsis	IP multicast group address used to trace events
Context	debug router string msdp pim group-address ipv4-multicast-address
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

rtm

Synopsis	Enable the rtm context
Context	debug router string msdp rtm
Tree	rtm
Description	Commands in this context enable MSDP route table manager (RTM) debugging.
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-address *ipv4-address*

Synopsis	IP multicast RP address used to trace events
Context	debug router string msdp rtm rp-address ipv4-address
Tree	rp-address
Introduced	25.3.R2
Platforms	7705 SAR-1

sa-db

Synopsis	Enable the sa-db context
Context	debug router string msdp sa-db
Tree	sa-db
Description	Commands in this context enable MSDP source-active database debugging.
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address *ipv4-multicast-address*

Synopsis	IP multicast group address used to trace events
Context	debug router string msdp sa-db group-address ipv4-multicast-address
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-address *ipv4-address*

Synopsis	IP multicast RP address used to trace events
Context	debug router string msdp sa-db rp-address ipv4-address
Tree	rp-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address *ipv4-address*

Synopsis	Source address used to trace events
Context	debug router string msdp sa-db source-address ipv4-address
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

mtrace

Synopsis	Enter the mtrace context
Context	debug router <i>string</i> mtrace
Tree	mtrace
Introduced	25.3.R2
Platforms	7705 SAR-1

miscellaneous

Synopsis	Enable the miscellaneous context
Context	debug router <i>string</i> mtrace miscellaneous
Tree	miscellaneous
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router <i>string</i> mtrace packet
Tree	packet
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packet-types

Synopsis	Enable debugging for all packets
Context	debug router <i>string</i> mtrace packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-types

Synopsis	Enter the packet-types context
Context	debug router <i>string</i> mtrace packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

query *boolean*

Synopsis	Debug query packets
Context	debug router <i>string</i> mtrace packet packet-types query <i>boolean</i>
Tree	query
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

request *boolean*

Synopsis	Debug request packets
Context	debug router <i>string</i> mtrace packet packet-types request <i>boolean</i>
Tree	request
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

response *boolean*

Synopsis	Debug response packets
Context	debug router <i>string</i> mtrace packet packet-types response <i>boolean</i>
Tree	response
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mtrace2

Synopsis	Enter the mtrace2 context
Context	debug router string mtrace2
Tree	mtrace2
Introduced	25.3.R2
Platforms	7705 SAR-1

miscellaneous

Synopsis	Enable the miscellaneous context
Context	debug router string mtrace2 miscellaneous
Tree	miscellaneous
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router string mtrace2 packet
Tree	packet
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packet-types

Synopsis	Enable debugging for all packets
Context	debug router string mtrace2 packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-types

Synopsis	Enter the packet-types context
Context	debug router <i>string</i> mtrace2 packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

query *boolean*

Synopsis	Debug query packets
Context	debug router <i>string</i> mtrace2 packet packet-types query <i>boolean</i>
Tree	query
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

request *boolean*

Synopsis	Debug request packets
Context	debug router <i>string</i> mtrace2 packet packet-types request <i>boolean</i>
Tree	request
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

response *boolean*

Synopsis	Debug response packets
Context	debug router <i>string</i> mtrace2 packet packet-types response <i>boolean</i>
Tree	response
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf [*ospf-instance*] *number*

Synopsis	Enter the ospf list instance
Context	debug router <i>string ospf number</i>
Tree	ospf
Description	Commands in this context configure debugging for OSPF.
Introduced	25.3.R2
Platforms	7705 SAR-1

[ospf-instance] *number*

Synopsis	OSPF ID
Context	debug router <i>string ospf number</i>
Tree	ospf
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

area

Synopsis	Enable the area context
Context	debug router <i>string ospf number area</i>
Tree	area
Description	Commands in this context configure debugging for an OSPF area.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all OSPF areas
Context	debug router <i>string ospf number area all</i>
Tree	all
Notes	The following elements are part of a choice: all or area-id .
Introduced	25.3.R2

Platforms 7705 SAR-1

area-id *ipv4-address*

Synopsis OSPF area ID

Context [debug router](#) *string* [ospf](#) *number* [area](#) [area-id](#) *ipv4-address*

Tree [area-id](#)

Notes The following elements are part of a choice: **all** or **area-id**.

Introduced 25.3.R2

Platforms 7705 SAR-1

area-range

Synopsis Enable the **area-range** context

Context [debug router](#) *string* [ospf](#) *number* [area-range](#)

Tree [area-range](#)

Description Commands in this context configure debugging for an OSPF area range.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Debug all OSPF area ranges

Context [debug router](#) *string* [ospf](#) *number* [area-range](#) [all](#)

Tree [all](#)

Notes The following elements are part of a choice: **all** or **range-address**.

Introduced 25.3.R2

Platforms 7705 SAR-1

range-address *ipv4-address*

Synopsis OSPF area range address

Context [debug router](#) *string* [ospf](#) *number* [area-range](#) [range-address](#) *ipv4-address*

Tree [range-address](#)

Notes The following elements are part of a choice: **all** or **range-address**.

Introduced	25.3.R2
Platforms	7705 SAR-1

cspf

Synopsis	Enable the cspf context
Context	debug router <i>string ospf number cspf</i>
Tree	cspf
Description	Commands in this context configure debugging for an OSPF constraint-based SPF (CSPF).
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all CSPFs
Context	debug router <i>string ospf number cspf all</i>
Tree	all
Notes	The following elements are part of a choice: all or cspf-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

cspf-addr *ipv4-address*

Synopsis	CSPF destination address
Context	debug router <i>string ospf number cspf cspf-addr ipv4-address</i>
Tree	cspf-addr
Notes	The following elements are part of a choice: all or cspf-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart *boolean*

Synopsis	Debug OSPF graceful restart
Context	debug router <i>string ospf number graceful-restart boolean</i>

Tree	graceful-restart
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Enable the interface context
Context	debug router <i>string</i> ospf <i>number</i> interface
Tree	interface
Description	Commands in this context configure debugging for an OSPF interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-ip-address *ipv4-address*

Synopsis	OSPF interface address
Context	debug router <i>string</i> ospf <i>number</i> interface interface-ip-address <i>ipv4-address</i>
Tree	interface-ip-address
Notes	The following elements are part of a choice: interface-ip-address or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *string*

Synopsis	OSPF interface name
Context	debug router <i>string</i> ospf <i>number</i> interface interface-name <i>string</i>
Tree	interface-name
Notes	The following elements are part of a choice: interface-ip-address or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

leak

Synopsis	Enable the leak context
----------	--------------------------------

Context	<code>debug router string ospf number leak</code>
Tree	<code>leak</code>
Description	Commands in this context configure debugging for OSPF leaks.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all external route leaks
Context	<code>debug router string ospf number leak all</code>
Tree	<code>all</code>
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-addr *ipv4-address*

Synopsis	OSPF destination address
Context	<code>debug router string ospf number leak dest-addr ipv4-address</code>
Tree	<code>dest-addr</code>
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

lsdb

Synopsis	Enable the lsdb context
Context	<code>debug router string ospf number lsdb</code>
Tree	<code>lsdb</code>
Description	Commands in this context configure debugging for an OSPF link-state database (LSDB).
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-rtr-id *ipv4-address*

Synopsis	LSDb advertising router ID
Context	debug router <i>string</i> ospf <i>number</i> lsdb adv-rtr-id <i>ipv4-address</i>
Tree	adv-rtr-id
Introduced	25.3.R2
Platforms	7705 SAR-1

area *ipv4-address*

Synopsis	LSDb area ID
Context	debug router <i>string</i> ospf <i>number</i> lsdb area <i>ipv4-address</i>
Tree	area
Introduced	25.3.R2
Platforms	7705 SAR-1

ls-id *ipv4-address*

Synopsis	LSDb LS ID
Context	debug router <i>string</i> ospf <i>number</i> lsdb ls-id <i>ipv4-address</i>
Tree	ls-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ls-type *keyword*

Synopsis	LSDb type
Context	debug router <i>string</i> ospf <i>number</i> lsdb ls-type <i>keyword</i>
Tree	ls-type
Options	router, network, summary, asbr, external, nssa, link-opaque, area-opaque, as-opaque
Introduced	25.3.R2
Platforms	7705 SAR-1

misc boolean

Synopsis	Debug OSPF miscellaneous events
Context	debug router <i>string</i> ospf <i>number</i> misc <i>boolean</i>
Tree	misc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor

Synopsis	Enable the neighbor context
Context	debug router <i>string</i> ospf <i>number</i> neighbor
Tree	neighbor
Description	Commands in this context configure debugging for an OSPF neighbor.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-ip-address ipv4-address

Synopsis	OSPF neighbor interface address
Context	debug router <i>string</i> ospf <i>number</i> neighbor interface-ip-address <i>ipv4-address</i>
Tree	interface-ip-address
Notes	The following elements are part of a choice: interface-ip-address or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name string

Synopsis	OSPF neighbor interface name
Context	debug router <i>string</i> ospf <i>number</i> neighbor interface-name <i>string</i>
Tree	interface-name
Notes	The following elements are part of a choice: interface-ip-address or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

nssa-range

Synopsis	Enable the nssa-range context
Context	debug router string ospf number nssa-range
Tree	nssa-range
Description	Commands in this context configure debugging for a Not-So-Stubby area (NSSA) range.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all OSPF NSSA ranges
Context	debug router string ospf number nssa-range all
Tree	all
Notes	The following elements are part of a choice: all or range-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

range-address ipv4-address

Synopsis	OSPF NSSA range address
Context	debug router string ospf number nssa-range range-address ipv4-address
Tree	range-address
Notes	The following elements are part of a choice: all or range-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router string ospf number packet
Tree	packet
Description	Commands in this context configure debugging for OSPF packets.
Introduced	25.3.R2

Platforms 7705 SAR-1

detail *boolean*

Synopsis Display detailed debug information

Context [debug router](#) *string* [ospf](#) *number* [packet detail](#) *boolean*

Tree [detail](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

direction *keyword*

Synopsis OSPF packet direction

Context [debug router](#) *string* [ospf](#) *number* [packet direction](#) *keyword*

Tree [direction](#)

Options both, ingress, egress, dropped

Default both

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name *string*

Synopsis Interface name

Context [debug router](#) *string* [ospf](#) *number* [packet interface-name](#) *string*

Tree [interface-name](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

packet-type *keyword*

Synopsis Packet type

Context [debug router](#) *string* [ospf](#) *number* [packet packet-type](#) *keyword*

Tree [packet-type](#)

Options hello, db-description, ls-request, ls-update, ls-ack

Introduced 25.3.R2

Platforms 7705 SAR-1

rsvp-shortcut

Synopsis Enable the **rsvp-shortcut** context

Context [debug router string ospf number rsvp-shortcut](#)

Tree [rsvp-shortcut](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Debug all RSVP shortcuts

Context [debug router string ospf number rsvp-shortcut all](#)

Tree [all](#)

Notes The following elements are part of a choice: **all** or **rsvp-ep**.

Introduced 25.3.R2

Platforms 7705 SAR-1

rsvp-ep ipv4-address

Synopsis RSVP shortcut endpoint

Context [debug router string ospf number rsvp-shortcut rsvp-ep ipv4-address](#)

Tree [rsvp-ep](#)

Notes The following elements are part of a choice: **all** or **rsvp-ep**.

Introduced 25.3.R2

Platforms 7705 SAR-1

rtm

Synopsis Enable the **rtm** context

Context [debug router string ospf number rtm](#)

Tree [rtm](#)

Description Commands in this context configure debugging for the OSPF Routing Table Manager (RTM).

Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the RTM for all destinations
Context	debug router <i>string</i> ospf <i>number</i> rtm all
Tree	all
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-addr *ipv4-address*

Synopsis	RTM destination address
Context	debug router <i>string</i> ospf <i>number</i> rtm dest-addr <i>ipv4-address</i>
Tree	dest-addr
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

sham-neighbor

Synopsis	Enable the sham-neighbor context
Context	debug router <i>string</i> ospf <i>number</i> sham-neighbor
Tree	sham-neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the shamlink neighbor for all addresses
Context	debug router <i>string</i> ospf <i>number</i> sham-neighbor all
Tree	all
Notes	The following elements are part of a choice: all or dest-addr .

Introduced	25.3.R2
Platforms	7705 SAR-1

dest-addr *ipv4-address*

Synopsis	Shamlink neighbor address
Context	debug router <i>string</i> ospf <i>number</i> sham-neighbor dest-addr <i>ipv4-address</i>
Tree	dest-addr
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

spf

Synopsis	Enable the spf context
Context	debug router <i>string</i> ospf <i>number</i> spf
Tree	spf
Description	Commands in this context configure debugging for OSPF SPF. Debug information about overall SPF start and stop times are shown. To view detailed information about calculating the SPF of a specific route, the route must be specified as an optional argument.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the SPF for any destination address
Context	debug router <i>string</i> ospf <i>number</i> spf all
Tree	all
Notes	The following elements are part of a choice: all or destination-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-address *ipv4-address*

Synopsis	OSPF SPF destination address
----------	------------------------------

Context	<code>debug router string ospf number spf destination-address ipv4-address</code>
Tree	<code>destination-address</code>
Notes	The following elements are part of a choice: all or destination-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	OSPF SPF type
Context	<code>debug router string ospf number spf type keyword</code>
Tree	<code>type</code>
Options	intra-area, inter-area, external
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-endpoint

Synopsis	Enter the tunnel-endpoint context
Context	<code>debug router string ospf number tunnel-endpoint</code>
Tree	<code>tunnel-endpoint</code>
Description	Commands in this context configure debugging for an OSPF tunnel endpoint.
Introduced	25.3.R2
Platforms	7705 SAR-1

leak

Synopsis	Enable the leak context
Context	<code>debug router string ospf number tunnel-endpoint leak</code>
Tree	<code>leak</code>
Description	Commands in this context configure debugging for OSPF tunnel-endpoint leaks.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug OSPF leaked tunnels for all tunnel endpoints
Context	debug router string ospf number tunnel-endpoint leak all
Tree	all
Notes	The following elements are part of a choice: all or tunnel-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-endpoint ipv4-address

Synopsis	OSPF leaked tunnel endpoint
Context	debug router string ospf number tunnel-endpoint leak tunnel-endpoint ipv4-address
Tree	tunnel-endpoint
Notes	The following elements are part of a choice: all or tunnel-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

spf

Synopsis	Enable the spf context
Context	debug router string ospf number tunnel-endpoint spf
Tree	spf
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug SPF for all tunnel-endpoint destination addresses
Context	debug router string ospf number tunnel-endpoint spf all
Tree	all
Notes	The following elements are part of a choice: all or spf-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-endpoint *ipv4-address*

Synopsis	SPF tunnel-endpoint destination address
Context	debug router <i>string</i> ospf <i>number</i> tunnel-endpoint spf spf-endpoint <i>ipv4-address</i>
Tree	spf-endpoint
Notes	The following elements are part of a choice: all or spf-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-neighbor

Synopsis	Enable the virtual-neighbor context
Context	debug router <i>string</i> ospf <i>number</i> virtual-neighbor
Tree	virtual-neighbor
Description	Commands in this context configure debugging for an OSPF virtual neighbor.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the virtual neighbor for all router IDs
Context	debug router <i>string</i> ospf <i>number</i> virtual-neighbor all
Tree	all
Notes	The following elements are part of a choice: all or neighbor-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-id *ipv4-address*

Synopsis	Virtual neighbor router ID
Context	debug router <i>string</i> ospf <i>number</i> virtual-neighbor neighbor-id <i>ipv4-address</i>
Tree	neighbor-id
Notes	The following elements are part of a choice: all or neighbor-id .
Introduced	25.3.R2

Platforms 7705 SAR-1

ospf3 [[ospf-instance](#)] *number*

Synopsis Enter the **ospf3** list instance

Context [debug router](#) *string ospf3 number*

Tree [ospf3](#)

Description Commands in this context configure debugging for OSPF3.

Introduced 25.3.R2

Platforms 7705 SAR-1

[ospf-instance] *number*

Synopsis OSPF3 ID

Context [debug router](#) *string ospf3 number*

Tree [ospf3](#)

Max. range 0 to 4294967295

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

area

Synopsis Enable the **area** context

Context [debug router](#) *string ospf3 number area*

Tree [area](#)

Description Commands in this context configure debugging for an OSPF3 area.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Debug all OSPF3 areas

Context [debug router](#) *string ospf3 number area all*

Tree [all](#)

Notes	The following elements are part of a choice: all or area-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

area-id *ipv4-address*

Synopsis	OSPF3 area ID
Context	debug router <i>string ospf3 number area area-id ipv4-address</i>
Tree	area-id
Notes	The following elements are part of a choice: all or area-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

area-range

Synopsis	Enable the area-range context
Context	debug router <i>string ospf3 number area-range</i>
Tree	area-range
Description	Commands in this context configure debugging for an OSPF3 area range.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all OSPF3 area ranges
Context	debug router <i>string ospf3 number area-range all</i>
Tree	all
Notes	The following elements are part of a choice: all or range-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

range-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	OSPF3 area range address
----------	--------------------------

Context	<code>debug router string ospf3 number area-range range-address</code> (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	<code>range-address</code>
Notes	The following elements are part of a choice: all or range-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart *boolean*

Synopsis	Debug OSPF graceful restart
Context	<code>debug router string ospf3 number graceful-restart boolean</code>
Tree	<code>graceful-restart</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Enable the interface context
Context	<code>debug router string ospf3 number interface</code>
Tree	<code>interface</code>
Description	Commands in this context configure debugging for an OSPF3 interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all OSPF3 interfaces
Context	<code>debug router string ospf3 number interface all</code>
Tree	<code>all</code>
Notes	The following elements are part of a choice: all or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *string*

Synopsis	OSPF3 interface name
Context	<code>debug router string ospf3 number interface interface-name string</code>
Tree	<code>interface-name</code>
Notes	The following elements are part of a choice: all or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

leak

Synopsis	Enable the leak context
Context	<code>debug router string ospf3 number leak</code>
Tree	<code>leak</code>
Description	Commands in this context configure debugging for OSPF3 leaks.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug all external route leaks
Context	<code>debug router string ospf3 number leak all</code>
Tree	<code>all</code>
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-addr (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	OSPF3 destination address
Context	<code>debug router string ospf3 number leak dest-addr (ipv4-address-no-zone ipv6-address-no-zone)</code>
Tree	<code>dest-addr</code>
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2

Platforms 7705 SAR-1

lsdb

Synopsis Enable the **lsdb** context

Context [debug router string ospf3 number lsdb](#)

Tree [lsdb](#)

Description Commands in this context configure debugging for an OSPF3 LSDB.

Introduced 25.3.R2

Platforms 7705 SAR-1

adv-rtr-id ipv4-address

Synopsis LSDB advertising router ID

Context [debug router string ospf3 number lsdb adv-rtr-id ipv4-address](#)

Tree [adv-rtr-id](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

area ipv4-address

Synopsis LSDB area ID

Context [debug router string ospf3 number lsdb area ipv4-address](#)

Tree [area](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ls-id ipv4-address

Synopsis LSDB LS ID

Context [debug router string ospf3 number lsdb ls-id ipv4-address](#)

Tree [ls-id](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ls-type *keyword*

Synopsis	LSDB type
Context	<code>debug router string ospf3 number lsdb ls-type keyword</code>
Tree	<code>ls-type</code>
Options	router, network, inter-area-pfx, inter-area-rtr, nssa, intra-area-pfx, external, rtr-info-link, rtr-info-area, rtr-info-as
Introduced	25.3.R2
Platforms	7705 SAR-1

misc *boolean*

Synopsis	Debug OSPF miscellaneous events
Context	<code>debug router string ospf3 number misc boolean</code>
Tree	<code>misc</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor

Synopsis	Enable the neighbor context
Context	<code>debug router string ospf3 number neighbor</code>
Tree	<code>neighbor</code>
Description	Commands in this context configure debugging for an OSPF3 neighbor.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *string*

Synopsis	OSPF3 neighbor interface name
Context	<code>debug router string ospf3 number neighbor interface-name string</code>
Tree	<code>interface-name</code>
Notes	The following elements are part of a choice: interface-name or router-id .
Introduced	25.3.R2

Platforms 7705 SAR-1

router-id *ipv4-address*

Synopsis OSPF3 interface router ID

Context [debug router string ospf3 number neighbor router-id ipv4-address](#)

Tree [router-id](#)

Notes The following elements are part of a choice: **interface-name** or **router-id**.

Introduced 25.3.R2

Platforms 7705 SAR-1

nssa-range

Synopsis Enable the **nssa-range** context

Context [debug router string ospf3 number nssa-range](#)

Tree [nssa-range](#)

Description Commands in this context configure debugging for an NSSA range.

Introduced 25.3.R2

Platforms 7705 SAR-1

all

Synopsis Debug all OSPF3 NSSA ranges

Context [debug router string ospf3 number nssa-range all](#)

Tree [all](#)

Notes The following elements are part of a choice: **all** or **range-address**.

Introduced 25.3.R2

Platforms 7705 SAR-1

range-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis OSPF3 NSSA range address

Context [debug router string ospf3 number nssa-range range-address \(ipv4-address-no-zone | ipv6-address-no-zone\)](#)

Tree [range-address](#)

Notes	The following elements are part of a choice: all or range-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug router string ospf3 number packet
Tree	packet
Description	Commands in this context configure debugging for OSPF3 packets.
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Display detailed debug information
Context	debug router string ospf3 number packet detail boolean
Tree	detail
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	OSPF3 packet direction
Context	debug router string ospf3 number packet direction keyword
Tree	direction
Options	both, ingress, egress, dropped
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *string*

Synopsis	Interface name
Context	debug router string ospf3 number packet interface-name string

Tree	interface-name
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-type *keyword*

Synopsis	Packet type
Context	debug router <i>string</i> ospf3 <i>number</i> packet packet-type <i>keyword</i>
Tree	packet-type
Options	hello, db-description, ls-request, ls-update, ls-ack
Introduced	25.3.R2
Platforms	7705 SAR-1

rtm

Synopsis	Enable the rtm context
Context	debug router <i>string</i> ospf3 <i>number</i> rtm
Tree	rtm
Description	Commands in this context configure debugging for the OSPF3 RTM.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the RTM for all destinations
Context	debug router <i>string</i> ospf3 <i>number</i> rtm all
Tree	all
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-addr (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	RTM destination address
----------	-------------------------

Context	<code>debug router string ospf3 number rtm dest-addr</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>dest-addr</code>
Notes	The following elements are part of a choice: all or dest-addr .
Introduced	25.3.R2
Platforms	7705 SAR-1

spf

Synopsis	Enable the spf context
Context	<code>debug router string ospf3 number spf</code>
Tree	<code>spf</code>
Description	Commands in this context configure debugging for OSPF3 SPF. Debug information about overall SPF start and stop times are shown. To view detailed information about calculating the SPF of a specific route, the route must be specified as an optional argument.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the SPF for all destination addresses
Context	<code>debug router string ospf3 number spf all</code>
Tree	<code>all</code>
Notes	The following elements are part of a choice: all or destination-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	OSPF3 SPF destination address
Context	<code>debug router string ospf3 number spf destination-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>destination-address</code>
Notes	The following elements are part of a choice: all or destination-address .
Introduced	25.3.R2

Platforms 7705 SAR-1

type keyword

Synopsis OSPF3 SPF type
Context `debug router string ospf3 number spf type keyword`
Tree `type`
Options intra-area, inter-area, external
Introduced 25.3.R2
Platforms 7705 SAR-1

tunnel-endpoint

Synopsis Enter the **tunnel-endpoint** context
Context `debug router string ospf3 number tunnel-endpoint`
Tree `tunnel-endpoint`
Description Commands in this context configure debugging for an OSPF3 tunnel endpoint.
Introduced 25.3.R2
Platforms 7705 SAR-1

leak

Synopsis Enable the **leak** context
Context `debug router string ospf3 number tunnel-endpoint leak`
Tree `leak`
Description Commands in this context configure debugging for OSPF3 tunnel-endpoint leaks.
Introduced 25.3.R2
Platforms 7705 SAR-1

all

Synopsis Debug OSPF3 leaked tunnels for all tunnel endpoints
Context `debug router string ospf3 number tunnel-endpoint leak all`
Tree `all`
Notes The following elements are part of a choice: **all** or **tunnel-endpoint**.

Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-endpoint (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	OSPF3 leaked tunnel endpoint
Context	debug router <i>string</i> ospf3 <i>number</i> tunnel-endpoint leak tunnel-endpoint (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	tunnel-endpoint
Notes	The following elements are part of a choice: all or tunnel-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

spf

Synopsis	Enable the spf context
Context	debug router <i>string</i> ospf3 <i>number</i> tunnel-endpoint spf
Tree	spf
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug SPF for all tunnel-endpoint destination addresses
Context	debug router <i>string</i> ospf3 <i>number</i> tunnel-endpoint spf all
Tree	all
Notes	The following elements are part of a choice: all or spf-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-endpoint (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	SPF tunnel-endpoint destination address
Context	debug router <i>string</i> ospf3 <i>number</i> tunnel-endpoint spf spf-endpoint (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	spf-endpoint

Notes	The following elements are part of a choice: all or spf-endpoint .
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-neighbor

Synopsis	Enable the virtual-neighbor context
Context	<code>debug router string ospf3 number virtual-neighbor</code>
Tree	<code>virtual-neighbor</code>
Description	Commands in this context configure debugging for an OSPF3 virtual neighbor.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the virtual neighbor for all router IDs
Context	<code>debug router string ospf3 number virtual-neighbor all</code>
Tree	<code>all</code>
Notes	The following elements are part of a choice: all or neighbor-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-id ipv4-address

Synopsis	Virtual neighbor router ID
Context	<code>debug router string ospf3 number virtual-neighbor neighbor-id ipv4-address</code>
Tree	<code>neighbor-id</code>
Notes	The following elements are part of a choice: all or neighbor-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

pim

Synopsis	Enter the pim context
Context	<code>debug router string pim</code>

Tree	pim
Introduced	25.3.R2
Platforms	7705 SAR-1

events

Synopsis	Enable the events context
Context	debug router <i>string</i> pim events
Tree	events
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency

Synopsis	Enable the adjacency context
Context	debug router <i>string</i> pim events adjacency
Tree	adjacency
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Enable the all context
Context	debug router <i>string</i> pim events all
Tree	all
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events all detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router <i>string</i> pim events all group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	debug router <i>string</i> pim events all source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

assert

Synopsis	Enable the assert context
Context	debug router <i>string</i> pim events assert
Tree	assert
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2

Platforms 7705 SAR-1

detail *boolean*

Synopsis Enable detail tracing

Context [debug router](#) *string* [pim events assert detail](#) *boolean*

Tree [detail](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

group-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP multicast group address used to trace events

Context [debug router](#) *string* [pim events assert group-address](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [group-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Source address used to trace events

Context [debug router](#) *string* [pim events assert source-address](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [source-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

auto-rp

Synopsis Enable the **auto-rp** context

Context [debug router](#) *string* [pim events auto-rp](#)

Tree [auto-rp](#)

Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp

Synopsis	Enable the bgp context
Context	debug router string pim events bgp
Tree	bgp
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router string pim events bgp group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	BGP peer address used to trace events
Context	debug router string pim events bgp peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug router string pim events bgp source-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>source-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

bier-inband

Synopsis	Enable the bier-inband context
Context	<code>debug router string pim events bier-inband</code>
Tree	<code>bier-inband</code>
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug router string pim events bier-inband detail boolean</code>
Tree	<code>detail</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bsr

Synopsis	Enable the bsr context
Context	<code>debug router string pim events bsr</code>
Tree	<code>bsr</code>
Description	Commands in this context enable debugging for the PIM bootstrap mechanism.

Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events bsr detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

data

Synopsis	Enable the data context
Context	debug router <i>string</i> pim events data
Tree	data
Description	Commands in this context enable PIM data exception debugging.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events data detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	<code>debug router string pim events data group-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>group-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug router string pim events data source-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>source-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

db

Synopsis	Enable the db context
Context	<code>debug router string pim events db</code>
Tree	<code>db</code>
Description	Commands in this context enable PIM database debugging.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug router string pim events db detail boolean</code>
Tree	<code>detail</code>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router <i>string</i> pim events db group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	debug router <i>string</i> pim events db source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

dynmldp

Synopsis	Enable the dynmldp context
Context	debug router <i>string</i> pim events dynmldp
Tree	dynmldp
Description	Commands in this context enable dynamic MLDP debugging.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcach , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
----------	-----------------------

Context	<code>debug router string pim events dynmldp detail boolean</code>
Tree	<code>detail</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

extranet

Synopsis	Enable the extranet context
Context	<code>debug router string pim events extranet</code>
Tree	<code>extranet</code>
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug router string pim events extranet detail boolean</code>
Tree	<code>detail</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

graft

Synopsis	Enable the graft context
Context	<code>debug router string pim events graft</code>
Tree	<code>graft</code>
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events graft detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router <i>string</i> pim events graft group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	debug router <i>string</i> pim events graft source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

interface

Synopsis	Enable the interface context
Context	debug router <i>string</i> pim events interface
Tree	interface
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2

Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name

Context [debug router](#) *string* [pim events](#) [interface](#) *interface-name* *interface-name*

Tree [interface-name](#)

String length 1 to 32

Introduced 25.3.R2

Platforms 7705 SAR-1

jp

Synopsis Enable the **jp** context

Context [debug router](#) *string* [pim events](#) [jp](#)

Tree [jp](#)

Description Commands in this context enable debugging for PIM join and prune mechanisms.

Notes The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrrib**, **msg**, **mvpn-rtcache**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.

Introduced 25.3.R2

Platforms 7705 SAR-1

detail *boolean*

Synopsis Enable detail tracing

Context [debug router](#) *string* [pim events](#) [jp](#) [detail](#) *boolean*

Tree [detail](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP multicast group address used to trace events

Context	<code>debug router string pim events jp group-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>group-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug router string pim events jp source-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>source-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

mofrr

Synopsis	Enable the mofrr context
Context	<code>debug router string pim events mofrr</code>
Tree	<code>mofrr</code>
Description	Commands in this context enable debugging for PIM Multicast-only Fast Reroute (MoFRR).
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

mrrib

Synopsis	Enable the mrrib context
Context	<code>debug router string pim events mrrib</code>
Tree	<code>mrrib</code>
Description	Commands in this context enable Multicast Routing Information Base (MRIB) debugging.

Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events mrrib detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router <i>string</i> pim events mrrib group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	debug router <i>string</i> pim events mrrib source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

msg

Synopsis	Enable the msg context
----------	-------------------------------

Context	<code>debug router string pim events msg</code>
Tree	<code>msg</code>
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

mvpn-rtcache

Synopsis	Enable the mvpn-rtcache context
Context	<code>debug router string pim events mvpn-rtcache</code>
Tree	<code>mvpn-rtcache</code>
Description	Commands in this context enable debugging for the PIM MVPN route cache.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Group address used to trace events
Context	<code>debug router string pim events mvpn-rtcache group-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>group-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace events
Context	<code>debug router string pim events mvpn-rtcache peer-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>peer-address</code>
Introduced	25.3.R2

Platforms 7705 SAR-1

red

Synopsis Enable the **red** context

Context [debug router string pim events red](#)

Tree [red](#)

Description Commands in this context enable debugging for PIM redundancy messages to the standby CPM.

Notes The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrrib**, **msg**, **mvpn-rtcache**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.

Introduced 25.3.R2

Platforms 7705 SAR-1

detail *boolean*

Synopsis Enable detail tracing

Context [debug router string pim events red detail boolean](#)

Tree [detail](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

register

Synopsis Enable the **register** context

Context [debug router string pim events register](#)

Tree [register](#)

Notes The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrrib**, **msg**, **mvpn-rtcache**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.

Introduced 25.3.R2

Platforms 7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events register detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router <i>string</i> pim events register group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	debug router <i>string</i> pim events register source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

rpfv

Synopsis	Enable the rpfv context
Context	debug router <i>string</i> pim events rpfv
Tree	rpfv
Description	Commands in this context enable PIM RPF vector debugging.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .

Introduced	25.3.R2
Platforms	7705 SAR-1

detail boolean

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events rpfv detail boolean
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rtm

Synopsis	Enable the rtm context
Context	debug router <i>string</i> pim events rtm
Tree	rtm
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail boolean

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events rtm detail boolean
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

s-pmsi

Synopsis	Enable the s-pmsi context
Context	debug router <i>string</i> pim events s-pmsi

Tree	s-pmsi
Description	Commands in this context enable debugging for the PIM selective provider multicast service interface.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcach , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events s-pmsi detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VPN source address used to trace events
Context	debug router <i>string</i> pim events s-pmsi vpn-source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	vpn-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-interface

Synopsis	Enable the tunnel-interface context
Context	debug router <i>string</i> pim events tunnel-interface
Tree	tunnel-interface
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcach , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	25.3.R2

Platforms 7705 SAR-1

ldp-p2mp-id *number*

Synopsis LDP P2MP ID

Context [debug router](#) *string* [pim events tunnel-interface ldp-p2mp-id](#) *number*

Tree [ldp-p2mp-id](#)

Range 1 to 8192

Introduced 25.3.R2

Platforms 7705 SAR-1

sender-address *ipv4-unicast-address*

Synopsis IP address of the sender

Context [debug router](#) *string* [pim events tunnel-interface sender-address](#) *ipv4-unicast-address*

Tree [sender-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

packet

Synopsis Enable the **packet** context

Context [debug router](#) *string* [pim packet](#)

Tree [packet](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins

Context [debug router](#) *string* [pim packet all-origins](#)

Tree [all-origins](#)

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

all-packet-types

Synopsis	Enable PIM debugging for all packets
Context	debug router <i>string</i> pim packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug router <i>string</i> pim packet egress <i>boolean</i>
Tree	egress
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug router <i>string</i> pim packet ingress <i>boolean</i>
Tree	ingress
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2

Platforms	7705 SAR-1
-----------	------------

ipv4 boolean

Synopsis	Enable tracing for PIM IPv4 packets
Context	debug router <i>string</i> pim packet ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 boolean

Synopsis	Enable tracing for PIM IPv6 packets
Context	debug router <i>string</i> pim packet ipv6 <i>boolean</i>
Tree	ipv6
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-types

Synopsis	Enter the packet-types context
Context	debug router <i>string</i> pim packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

assert

Synopsis	Enable the assert context
Context	debug router <i>string</i> pim packet packet-types assert
Tree	assert
Introduced	25.3.R2

Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins

Context [debug router string pim packet packet-types assert all-origins](#)

Tree [all-origins](#)

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name

Context [debug router string pim packet packet-types assert interface-name interface-name](#)

Tree [interface-name](#)

String length 1 to 32

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

auto-rp-announcement

Synopsis Enable the **auto-rp-announcement** context

Context [debug router string pim packet packet-types auto-rp-announcement](#)

Tree [auto-rp-announcement](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins

Context [debug router string pim packet packet-types auto-rp-announcement all-origins](#)

Tree [all-origins](#)

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [pim packet packet-types auto-rp-announcement interface-name interface-name](#)
Tree [interface-name](#)
String length 1 to 32
Notes The following elements are part of a choice: **all-origins** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

auto-rp-mapping

Synopsis Enable the **auto-rp-mapping** context
Context [debug router](#) *string* [pim packet packet-types auto-rp-mapping](#)
Tree [auto-rp-mapping](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins
Context [debug router](#) *string* [pim packet packet-types auto-rp-mapping all-origins](#)
Tree [all-origins](#)
Notes The following elements are part of a choice: **all-origins** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [pim packet packet-types auto-rp-mapping interface-name interface-name](#)

Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

bsr

Synopsis	Enable the bsr context
Context	debug router <i>string</i> pim packet packet-types bsr
Tree	bsr
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Enable trace for all origins
Context	debug router <i>string</i> pim packet packet-types bsr all-origins
Tree	all-origins
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet packet-types bsr interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

crp

Synopsis	Enable the crp context
Context	debug router <i>string</i> pim packet packet-types crp
Tree	crp
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Enable trace for all origins
Context	debug router <i>string</i> pim packet packet-types crp all-origins
Tree	all-origins
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet packet-types crp interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

graft

Synopsis	Enable the graft context
Context	debug router <i>string</i> pim packet packet-types graft
Tree	graft
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Enable trace for all origins
Context	debug router <i>string</i> pim packet packet-types graft all-origins
Tree	all-origins
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet packet-types graft interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

graft-ack

Synopsis	Enable the graft-ack context
Context	debug router <i>string</i> pim packet packet-types graft-ack
Tree	graft-ack
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Enable trace for all origins
Context	debug router <i>string</i> pim packet packet-types graft-ack all-origins
Tree	all-origins
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet packet-types graft-ack interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

hello

Synopsis	Enable the hello context
Context	debug router <i>string</i> pim packet packet-types hello
Tree	hello
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Enable trace for all origins
Context	debug router <i>string</i> pim packet packet-types hello all-origins
Tree	all-origins
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet packet-types hello interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2

Platforms 7705 SAR-1

jp

Synopsis Enable the **jp** context
Context [debug router string pim packet packet-types jp](#)
Tree [jp](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins
Context [debug router string pim packet packet-types jp all-origins](#)
Tree [all-origins](#)
Notes The following elements are part of a choice: **all-origins** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router string pim packet packet-types jp interface-name interface-name](#)
Tree [interface-name](#)
String length 1 to 32
Notes The following elements are part of a choice: **all-origins** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

mdt-tlv

Synopsis Enable the **mdt-tlv** context
Context [debug router string pim packet packet-types mdt-tlv](#)
Tree [mdt-tlv](#)
Introduced 25.3.R2

Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins

Context [debug router string pim packet packet-types mdt-tlv all-origins](#)

Tree [all-origins](#)

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name

Context [debug router string pim packet packet-types mdt-tlv interface-name interface-name](#)

Tree [interface-name](#)

String length 1 to 32

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

register

Synopsis Enable the **register** context

Context [debug router string pim packet packet-types register](#)

Tree [register](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins

Context [debug router string pim packet packet-types register all-origins](#)

Tree [all-origins](#)

Notes The following elements are part of a choice: **all-origins** or **interface-name**.

Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [pim packet packet-types register interface-name interface-name](#)
Tree [interface-name](#)
String length 1 to 32
Notes The following elements are part of a choice: **all-origins** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

register-stop

Synopsis Enable the **register-stop** context
Context [debug router](#) *string* [pim packet packet-types register-stop](#)
Tree [register-stop](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

all-origins

Synopsis Enable trace for all origins
Context [debug router](#) *string* [pim packet packet-types register-stop all-origins](#)
Tree [all-origins](#)
Notes The following elements are part of a choice: **all-origins** or **interface-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

interface-name *interface-name*

Synopsis Interface name
Context [debug router](#) *string* [pim packet packet-types register-stop interface-name interface-name](#)

Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	debug router <i>string</i> radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

servers

Synopsis	Enable the servers context
Context	debug router <i>string</i> radius servers
Tree	servers
Introduced	25.3.R2
Platforms	7705 SAR-1

attribute [\[name\]](#) *string*

Synopsis	Enter the attribute list instance
Context	debug router <i>string</i> radius servers attribute <i>string</i>
Tree	attribute
Max. instances	10
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *string*

Synopsis	Attribute filter name
----------	-----------------------

Context	debug router <i>string</i> radius servers attribute <i>string</i>
Tree	attribute
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-type *number*

Synopsis	RADIUS attribute extended type
Context	debug router <i>string</i> radius servers attribute <i>string</i> extended-type <i>number</i>
Tree	extended-type
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

transaction *boolean*

Synopsis	Debug request and response transaction
Context	debug router <i>string</i> radius servers attribute <i>string</i> transaction <i>boolean</i>
Tree	transaction
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

type *number*

Synopsis	RADIUS attribute type
Context	debug router <i>string</i> radius servers attribute <i>string</i> type <i>number</i>
Tree	type
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

value

Synopsis	Enter the value context
Context	debug router string radius servers attribute string value
Tree	value
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Attribute value specified as an IP address
Context	debug router string radius servers attribute string value address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	The following elements are part of a choice: address , hex , integer , prefix , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex *hex-string*

Synopsis	Attribute value specified as a hexadecimal string
Context	debug router string radius servers attribute string value hex hex-string
Tree	hex
String length	1 to 253
Notes	The following elements are part of a choice: address , hex , integer , prefix , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

integer *number*

Synopsis	Attribute value specified as an integer
Context	debug router string radius servers attribute string value integer number
Tree	integer
Max. range	0 to 4294967295
Notes	The following elements are part of a choice: address , hex , integer , prefix , or string .

Introduced 25.3.R2
Platforms 7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Attribute value specified as an IP prefix
Context [debug router](#) [string](#) [radius servers attribute](#) [string](#) [value](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*)
Tree [prefix](#)
Notes The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.
Introduced 25.3.R2
Platforms 7705 SAR-1

string *string*

Synopsis Attribute value specified as a string
Context [debug router](#) [string](#) [radius servers attribute](#) [string](#) [value](#) [string](#) [string](#)
Tree [string](#)
String length 1 to 253
Notes The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.
Introduced 25.3.R2
Platforms 7705 SAR-1

vendor-specific

Synopsis Enter the **vendor-specific** context
Context [debug router](#) [string](#) [radius servers attribute](#) [string](#) [vendor-specific](#)
Tree [vendor-specific](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

encoding

Synopsis Enter the **encoding** context
Context [debug router](#) [string](#) [radius servers attribute](#) [string](#) [vendor-specific](#) [encoding](#)
Tree [encoding](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

length-size *number*

Synopsis	Size of the vendor-length field
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific encoding length-size <i>number</i>
Tree	length-size
Range	0 to 2
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

type-size *number*

Synopsis	Size of the vendor-type field
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific encoding type-size <i>number</i>
Tree	type-size
Range	1 to 4
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor (*number* | *keyword*)

Synopsis	RADIUS vendor ID
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific vendor (<i>number</i> <i>keyword</i>)
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-type *number*

Synopsis	RADIUS vendor specific type
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific vendor-type <i>number</i>
Tree	vendor-type
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

detail-level *keyword*

Synopsis	Detail level of the RADIUS debug output
Context	debug router <i>string</i> radius servers detail-level <i>keyword</i>
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-types

Synopsis	Enter the packet-types context
Context	debug router <i>string</i> radius servers packet-types
Tree	packet-types
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting *boolean*

Synopsis	Debug accounting packets
Context	debug router <i>string</i> radius servers packet-types accounting <i>boolean</i>
Tree	accounting
Default	true
Introduced	25.3.R2

Platforms 7705 SAR-1

authentication *boolean*

Synopsis Debug authentication packets

Context [debug router](#) *string* [radius servers packet-types authentication](#) *boolean*

Tree [authentication](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

coa *boolean*

Synopsis Debug CoA and DM packets

Context [debug router](#) *string* [radius servers packet-types coa](#) *boolean*

Tree [coa](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

server-address [[address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Add a list entry for **server-address**

Context [debug router](#) *string* [radius servers server-address](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [server-address](#)

Max. instances 10

Introduced 25.3.R2

Platforms 7705 SAR-1

[[address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the RADIUS server

Context [debug router](#) *string* [radius servers server-address](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree	server-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

vrrp

Synopsis	Enter the vrrp context
Context	debug router string vrrp
Tree	vrrp
Introduced	25.3.R2
Platforms	7705 SAR-1

events

Synopsis	Enter the events context
Context	debug router string vrrp events
Tree	events
Description	Commands in this context enable debugging for VRRP events and state changes.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-events

Synopsis	Enable the all-events context
Context	debug router string vrrp events all-events
Tree	all-events
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [\[interface-name\]](#) *interface-name*

Synopsis	Enter the interface list instance
Context	debug router string vrrp events interface interface-name
Tree	interface

Introduced 25.3.R2
Platforms 7705 SAR-1

[interface-name] *interface-name*

Synopsis Interface name
Context [debug router string vrrp events interface interface-name](#)
Tree [interface](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

all-vrids

Synopsis Enable the **all-vrids** context
Context [debug router string vrrp events interface interface-name all-vrids](#)
Tree [all-vrids](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

ipv4

Synopsis Enter the **ipv4** context
Context [debug router string vrrp events interface interface-name ipv4](#)
Tree [ipv4](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

vrid [[virtual-router-id](#)] *number*

Synopsis Add a list entry for **vrid**
Context [debug router string vrrp events interface interface-name ipv4 vrid number](#)
Tree [vrid](#)

Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[virtual-router-id] *number*

Synopsis	Virtual router ID to debug
Context	debug router <i>string</i> vrrp events interface <i>interface-name</i> ipv4 vrid <i>number</i>
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	debug router <i>string</i> vrrp events interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

vrid [[virtual-router-id](#)] *number*

Synopsis	Add a list entry for vrid
Context	debug router <i>string</i> vrrp events interface <i>interface-name</i> ipv6 vrid <i>number</i>
Tree	vrid
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[virtual-router-id] *number*

Synopsis	Virtual router ID to debug
----------	----------------------------

Context	<code>debug router string vrrp events interface interface-name ipv6 vrid number</code>
Tree	<code>vrid</code>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enter the packet context
Context	<code>debug router string vrrp packet</code>
Tree	<code>packet</code>
Description	Commands in this context enable debugging for VRRP packet exchanges.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packets

Synopsis	Enable the all-packets context
Context	<code>debug router string vrrp packet all-packets</code>
Tree	<code>all-packets</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [interface-name] interface-name

Synopsis	Enter the interface list instance
Context	<code>debug router string vrrp packet interface interface-name</code>
Tree	<code>interface</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] interface-name

Synopsis	Interface name
----------	----------------

Context	<code>debug router string vrrp packet interface interface-name</code>
Tree	<code>interface</code>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

all-vrids

Synopsis	Enable the all-vrids context
Context	<code>debug router string vrrp packet interface interface-name all-vrids</code>
Tree	<code>all-vrids</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	<code>debug router string vrrp packet interface interface-name ipv4</code>
Tree	<code>ipv4</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

vrid `[virtual-router-id] number`

Synopsis	Add a list entry for vrid
Context	<code>debug router string vrrp packet interface interface-name ipv4 vrid number</code>
Tree	<code>vrid</code>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[virtual-router-id] *number*

Synopsis	Virtual router ID to debug
Context	debug router <i>string</i> vrrp packet interface <i>interface-name</i> ipv4 vrid <i>number</i>
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	debug router <i>string</i> vrrp packet interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

vrid [virtual-router-id] *number*

Synopsis	Add a list entry for vrid
Context	debug router <i>string</i> vrrp packet interface <i>interface-name</i> ipv6 vrid <i>number</i>
Tree	vrid
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[virtual-router-id] *number*

Synopsis	Virtual router ID to debug
Context	debug router <i>string</i> vrrp packet interface <i>interface-name</i> ipv6 vrid <i>number</i>
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

service

Synopsis	Enter the service context
Context	debug service
Tree	service
Introduced	25.3.R2
Platforms	7705 SAR-1

vpls [\[service-name\]](#) *service-name*

Synopsis	Enter the vpls list instance
Context	debug service vpls <i>service-name</i>
Tree	vpls
Introduced	25.3.R2
Platforms	7705 SAR-1

[service-name] *service-name*

Synopsis	Administrative service name
Context	debug service vpls <i>service-name</i>
Tree	vpls
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	debug service vpls <i>service-name</i> igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2

Platforms 7705 SAR-1

packet

Synopsis Enable the **packet** context

Context [debug service vpls service-name igmp-snooping packet](#)

Tree [packet](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

detail keyword

Synopsis Detail level of the debug output

Context [debug service vpls service-name igmp-snooping packet detail keyword](#)

Tree [detail](#)

Options low, medium, high

Default medium

Introduced 25.3.R2

Platforms 7705 SAR-1

dropped boolean

Synopsis Enable tracing for dropped packets

Context [debug service vpls service-name igmp-snooping packet dropped boolean](#)

Tree [dropped](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

egress boolean

Synopsis Enable tracing for transmitted packets

Context [debug service vpls service-name igmp-snooping packet egress boolean](#)

Tree [egress](#)

Default true

Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-mpls *boolean*

Synopsis	Allow debugging for EVPN-MPLS destinations
Context	debug service vpls service-name igmp-snooping packet evpn-mpls boolean
Tree	evpn-mpls
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-vxlan [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [vni number](#)

Synopsis	Add a list entry for evpn-vxlan
Context	debug service vpls service-name igmp-snooping packet evpn-vxlan (ipv4-address-no-zone ipv6-address-no-zone) vni number
Tree	evpn-vxlan
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the VXLAN Tunnel Endpoint
Context	debug service vpls service-name igmp-snooping packet evpn-vxlan (ipv4-address-no-zone ipv6-address-no-zone) vni number
Tree	evpn-vxlan
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

vni number

Synopsis	VXLAN Network Identifier of the VXLAN binding
----------	---

Context	debug service vpls service-name igmp-snooping packet evpn-vxlan (ipv4-address-no-zone ipv6-address-no-zone) vni number
Tree	evpn-vxlan
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug service vpls service-name igmp-snooping packet ingress boolean
Tree	ingress
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mac [[mac-address](#)] *mac-address*

Synopsis	Add a list entry for mac
Context	debug service vpls service-name igmp-snooping packet mac mac-address
Tree	mac
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[mac-address] *mac-address*

Synopsis	MAC address
Context	debug service vpls service-name igmp-snooping packet mac mac-address
Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [**sap-id**] *sap*

Synopsis	Add a list entry for sap
Context	debug service vpls <i>service-name</i> igmp-snooping packet sap <i>sap</i>
Tree	sap
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[sap-id] *sap*

Synopsis	SAP ID
Context	debug service vpls <i>service-name</i> igmp-snooping packet sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-bind [**sdp-bind-id**] *sdp-bind-id*

Synopsis	Add a list entry for sdp-bind
Context	debug service vpls <i>service-name</i> igmp-snooping packet sdp-bind <i>sdp-bind-id</i>
Tree	sdp-bind
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[sdp-bind-id] *sdp-bind-id*

Synopsis	SDP bind ID
Context	debug service vpls <i>service-name</i> igmp-snooping packet sdp-bind <i>sdp-bind-id</i>
Tree	sdp-bind
String length	3 to 16

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mld-snooping

Synopsis	Enter the mld-snooping context
Context	debug service vpls service-name mld-snooping
Tree	mld-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	debug service vpls service-name mld-snooping packet
Tree	packet
Introduced	25.3.R2
Platforms	7705 SAR-1

detail keyword

Synopsis	Detail level of the debug output
Context	debug service vpls service-name mld-snooping packet detail keyword
Tree	detail
Options	low, medium, high
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

dropped boolean

Synopsis	Enable tracing for dropped packets
Context	debug service vpls service-name mld-snooping packet dropped boolean
Tree	dropped

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug service vpls <i>service-name</i> mld-snooping packet egress <i>boolean</i>
Tree	egress
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-mpls *boolean*

Synopsis	Allow debugging for EVPN-MPLS destinations
Context	debug service vpls <i>service-name</i> mld-snooping packet evpn-mpls <i>boolean</i>
Tree	evpn-mpls
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-vxlan [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [vni](#) *number*

Synopsis	Add a list entry for evpn-vxlan
Context	debug service vpls <i>service-name</i> mld-snooping packet evpn-vxlan (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) vni <i>number</i>
Tree	evpn-vxlan
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the VXLAN Tunnel Endpoint
----------	---

Context	debug service vpls service-name mld-snooping packet evpn-vxlan (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) <i>vni number</i>
Tree	evpn-vxlan
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

vni number

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls service-name mld-snooping packet evpn-vxlan (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) <i>vni number</i>
Tree	evpn-vxlan
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress boolean

Synopsis	Enable tracing for received packets
Context	debug service vpls service-name mld-snooping packet ingress <i>boolean</i>
Tree	ingress
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mac [[mac-address](#)] mac-address

Synopsis	Add a list entry for mac
Context	debug service vpls service-name mld-snooping packet mac <i>mac-address</i>
Tree	mac
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[mac-address] *mac-address*

Synopsis	MAC address
Context	debug service vpls <i>service-name</i> mld-snooping packet mac <i>mac-address</i>
Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [[sap-id](#)] *sap*

Synopsis	Add a list entry for sap
Context	debug service vpls <i>service-name</i> mld-snooping packet sap <i>sap</i>
Tree	sap
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[[sap-id](#)] *sap*

Synopsis	SAP ID
Context	debug service vpls <i>service-name</i> mld-snooping packet sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-bind [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Add a list entry for sdp-bind
Context	debug service vpls <i>service-name</i> mld-snooping packet sdp-bind <i>sdp-bind-id</i>
Tree	sdp-bind

Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[sdp-bind-id] *sdp-bind-id*

Synopsis	SDP bind ID
Context	debug service vpls service-name mld-snooping packet sdp-bind sdp-bind-id
Tree	sdp-bind
String length	3 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

pim-snooping

Synopsis	Enter the pim-snooping context
Context	debug service vpls service-name pim-snooping
Tree	pim-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

events

Synopsis	Enable the events context
Context	debug service vpls service-name pim-snooping events
Tree	events
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency

Synopsis	Enable the adjacency context
Context	debug service vpls service-name pim-snooping events adjacency

Tree	adjacency
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Enable the all context
Context	debug service vpls service-name pim-snooping events all
Tree	all
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug service vpls service-name pim-snooping events all detail boolean
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug service vpls service-name pim-snooping events all group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug service vpls service-name pim-snooping events all source-address</code> (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	<code>source-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

db

Synopsis	Enable the db context
Context	<code>debug service vpls service-name pim-snooping events db</code>
Tree	<code>db</code>
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug service vpls service-name pim-snooping events db detail</code> <i>boolean</i>
Tree	<code>detail</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	<code>debug service vpls service-name pim-snooping events db group-address</code> (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	<code>group-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug service vpls service-name pim-snooping events db source-address</code> (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	<code>source-address</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

jp

Synopsis	Enable the jp context
Context	<code>debug service vpls service-name pim-snooping events jp</code>
Tree	<code>jp</code>
Description	Commands in this context enable debugging for PIM join and prune mechanisms.
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug service vpls service-name pim-snooping events jp detail boolean</code>
Tree	<code>detail</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

group-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	<code>debug service vpls service-name pim-snooping events jp group-address</code> (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	<code>group-address</code>
Introduced	25.3.R2

Platforms 7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Source address used to trace events

Context `debug service vpls service-name pim-snooping events jp source-address` (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree `source-address`

Introduced 25.3.R2

Platforms 7705 SAR-1

mcs

Synopsis Enable the **mcs** context

Context `debug service vpls service-name pim-snooping events mcs`

Tree `mcs`

Description Commands in this context enable debugging for PIM snooping multi-chassis synchronization.

Notes The following elements are part of a choice: (**adjacency**, **db**, **jp**, **mcs**, **port**, and **red**) or **all**.

Introduced 25.3.R2

Platforms 7705 SAR-1

detail *boolean*

Synopsis Enable detail tracing

Context `debug service vpls service-name pim-snooping events mcs detail` *boolean*

Tree `detail`

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

port

Synopsis Enable the **port** context

Context `debug service vpls service-name pim-snooping events port`

Tree	port
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	debug service vpls <i>service-name</i> pim-snooping events port detail <i>boolean</i>
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-mpls

Synopsis	Enable tracing for EVPN-MPLS ports
Context	debug service vpls <i>service-name</i> pim-snooping events port evpn-mpls
Tree	evpn-mpls
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id *sap*

Synopsis	SAP ID
Context	debug service vpls <i>service-name</i> pim-snooping events port sap-id <i>sap</i>
Tree	sap-id
String length	1 to 45
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-bind-id *sdp-bind-id*

Synopsis	SDP bind ID
Context	debug service vpls <i>service-name</i> pim-snooping events port sdp-bind-id <i>sdp-bind-id</i>
Tree	sdp-bind-id
String length	3 to 16
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

vni *number*

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls <i>service-name</i> pim-snooping events port vni <i>number</i>
Tree	vni
Range	1 to 16777215
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

vtep (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the tunnel endpoint
Context	debug service vpls <i>service-name</i> pim-snooping events port vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	vtep
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

red

Synopsis	Enable the red context
----------	-------------------------------

Context	<code>debug service vpls service-name pim-snooping events red</code>
Tree	<code>red</code>
Description	Commands in this context enable debugging for PIM messages sent to the standby CPM.
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	25.3.R2
Platforms	7705 SAR-1

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug service vpls service-name pim-snooping events red detail boolean</code>
Tree	<code>detail</code>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

packet

Synopsis	Enable the packet context
Context	<code>debug service vpls service-name pim-snooping packet</code>
Tree	<code>packet</code>
Introduced	25.3.R2
Platforms	7705 SAR-1

all-origins

Synopsis	Allow tracing on all ports
Context	<code>debug service vpls service-name pim-snooping packet all-origins</code>
Tree	<code>all-origins</code>
Notes	The following elements are part of a choice: all-origins or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

all-packet-types

Synopsis	Enable PIM debugging for all packets
Context	debug service vpls <i>service-name</i> pim-snooping packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-types

Synopsis	Enter the packet-types context
Context	debug service vpls <i>service-name</i> pim-snooping packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

hello *boolean*

Synopsis	Debug Hello packets
Context	debug service vpls <i>service-name</i> pim-snooping packet packet-types hello <i>boolean</i>
Tree	hello
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

jp *boolean*

Synopsis	Debug join and prune packets
Context	debug service vpls <i>service-name</i> pim-snooping packet packet-types jp <i>boolean</i>
Tree	jp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port

Synopsis	Enable the port context
Context	debug service vpls <i>service-name</i> pim-snooping packet port
Tree	port
Notes	The following elements are part of a choice: all-origins or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-mpls

Synopsis	Enable tracing for EVPN-MPLS ports
Context	debug service vpls <i>service-name</i> pim-snooping packet port evpn-mpls
Tree	evpn-mpls
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id *sap*

Synopsis	SAP ID
Context	debug service vpls <i>service-name</i> pim-snooping packet port sap-id <i>sap</i>
Tree	sap-id
String length	1 to 45
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-bind-id *sdp-bind-id*

Synopsis	SDP bind ID
Context	debug service vpls <i>service-name</i> pim-snooping packet port sdp-bind-id <i>sdp-bind-id</i>
Tree	sdp-bind-id

String length	3 to 16
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

vni number

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls service-name pim-snooping packet port vni number
Tree	vni
Range	1 to 16777215
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

vtep (ipv4-address-no-zone | ipv6-address-no-zone)

Synopsis	IP address of the tunnel endpoint
Context	debug service vpls service-name pim-snooping packet port vtep (ipv4-address-no-zone ipv6-address-no-zone)
Tree	vtep
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-arp

Synopsis	Enter the proxy-arp context
Context	debug service vpls service-name proxy-arp
Tree	proxy-arp
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the proxy ARP function for all addresses
Context	debug service vpls <i>service-name</i> proxy-arp all
Tree	all
Notes	The following elements are part of a choice: all , ip , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Enter the ip context
Context	debug service vpls <i>service-name</i> proxy-arp ip
Tree	ip
Notes	The following elements are part of a choice: all , ip , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for address
Context	debug service vpls <i>service-name</i> proxy-arp ip address <i>ipv4-unicast-address</i>
Tree	address
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	IPv4 address of the proxy ARP session to debug
Context	debug service vpls <i>service-name</i> proxy-arp ip address <i>ipv4-unicast-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

mac

Synopsis Enter the **mac** context

Context [debug service vpls service-name proxy-arp mac](#)

Tree [mac](#)

Notes The following elements are part of a choice: **all**, **ip**, or **mac**.

Introduced 25.3.R2

Platforms 7705 SAR-1

address [[address](#)] *mac-address*

Synopsis Add a list entry for **address**

Context [debug service vpls service-name proxy-arp mac address mac-address](#)

Tree [address](#)

Max. instances 256

Introduced 25.3.R2

Platforms 7705 SAR-1

[[address](#)] *mac-address*

Synopsis MAC address of the proxy ARP session to debug

Context [debug service vpls service-name proxy-arp mac address mac-address](#)

Tree [address](#)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

proxy-nd

Synopsis Enter the **proxy-nd** context

Context [debug service vpls service-name proxy-nd](#)

Tree [proxy-nd](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Debug the proxy ND function for all addresses
Context	debug service vpls service-name proxy-nd all
Tree	all
Notes	The following elements are part of a choice: all , ip , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Enter the ip context
Context	debug service vpls service-name proxy-nd ip
Tree	ip
Notes	The following elements are part of a choice: all , ip , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ipv6-address](#)] *ipv6-address*

Synopsis	Add a list entry for address
Context	debug service vpls service-name proxy-nd ip address ipv6-address
Tree	address
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-address*

Synopsis	IPv6 address of the proxy ND session to debug
Context	debug service vpls service-name proxy-nd ip address ipv6-address

Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Enter the mac context
Context	debug service vpls <i>service-name</i> proxy-nd mac
Tree	mac
Notes	The following elements are part of a choice: all , ip , or mac .
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[address](#)] *mac-address*

Synopsis	Add a list entry for address
Context	debug service vpls <i>service-name</i> proxy-nd mac address <i>mac-address</i>
Tree	address
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *mac-address*

Synopsis	MAC address of the proxy ND session to debug
Context	debug service vpls <i>service-name</i> proxy-nd mac address <i>mac-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

stp

Synopsis	Enter the stp context
Context	debug service vpls service-name stp
Tree	stp
Introduced	25.3.R2
Platforms	7705 SAR-1

events

Synopsis	Enable the events context
Context	debug service vpls service-name stp events
Tree	events
Introduced	25.3.R2
Platforms	7705 SAR-1

all-events

Synopsis	Trace all STP events
Context	debug service vpls service-name stp events all-events
Tree	all-events
Notes	The following elements are part of a choice: all-events or event-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

event-types

Synopsis	Enter the event-types context
Context	debug service vpls service-name stp events event-types
Tree	event-types
Notes	The following elements are part of a choice: all-events or event-types .
Introduced	25.3.R2
Platforms	7705 SAR-1

bpd *boolean*

Synopsis	Trace received and transmitted BPDUs
Context	debug service vpls <i>service-name</i> stp events event-types bpd <i>boolean</i>
Tree	bpd
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

core-connectivity *boolean*

Synopsis	Trace STO core connectivity events
Context	debug service vpls <i>service-name</i> stp events event-types core-connectivity <i>boolean</i>
Tree	core-connectivity
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

exception *boolean*

Synopsis	Trace STP exception events
Context	debug service vpls <i>service-name</i> stp events event-types exception <i>boolean</i>
Tree	exception
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fsm-state-changes *boolean*

Synopsis	Trace STP FSM state change events
Context	debug service vpls <i>service-name</i> stp events event-types fsm-state-changes <i>boolean</i>
Tree	fsm-state-changes
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fsm-timers *boolean*

Synopsis	Trace STP FSM timer events
Context	debug service vpls <i>service-name</i> stp events event-types fsm-timers <i>boolean</i>
Tree	fsm-timers
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port-role *boolean*

Synopsis	Trace STP port role events
Context	debug service vpls <i>service-name</i> stp events event-types port-role <i>boolean</i>
Tree	port-role
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port-state *boolean*

Synopsis	Trace STP port state events
Context	debug service vpls <i>service-name</i> stp events event-types port-state <i>boolean</i>
Tree	port-state
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [[sap-id](#)] *sap*

Synopsis	Add a list entry for sap
Context	debug service vpls <i>service-name</i> stp sap <i>sap</i>
Tree	sap
Max. instances	256
Introduced	25.3.R2

Platforms 7705 SAR-1

[sap-id] sap

Synopsis SAP ID

Context [debug service vpls service-name stp sap sap](#)

Tree [sap](#)

String length 1 to 45

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

sdp-bind [sdp-bind-id] sdp-bind-id

Synopsis Add a list entry for **sdp-bind**

Context [debug service vpls service-name stp sdp-bind sdp-bind-id](#)

Tree [sdp-bind](#)

Max. instances 256

Introduced 25.3.R2

Platforms 7705 SAR-1

[sdp-bind-id] sdp-bind-id

Synopsis SDP bind ID

Context [debug service vpls service-name stp sdp-bind sdp-bind-id](#)

Tree [sdp-bind](#)

String length 3 to 16

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

subscriber-mgmt

Synopsis Enter the **subscriber-mgmt** context

Context	debug subscriber-mgmt
Tree	subscriber-mgmt
Introduced	25.3.R2
Platforms	7705 SAR-1

local-user-db [\[name\]](#) *named-item*

Synopsis	Enter the local-user-db list instance
Context	debug subscriber-mgmt local-user-db <i>named-item</i>
Tree	local-user-db
Max. instances	127
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Local user database name
Context	debug subscriber-mgmt local-user-db <i>named-item</i>
Tree	local-user-db
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Level of the local user database debug output
Context	debug subscriber-mgmt local-user-db <i>named-item</i> mode <i>keyword</i>
Tree	mode
Options	all – Display all lookup events failed – Display failed lookup events
Default	failed
Introduced	25.3.R2
Platforms	7705 SAR-1

system

Synopsis	Enter the system context
Context	debug system
Tree	system
Description	Commands in this context enable debugging of general system level functions and router management protocols.
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc

Synopsis	Enter the grpc context
Context	debug system grpc
Tree	grpc
Introduced	25.3.R2
Platforms	7705 SAR-1

client

Synopsis	Enter the client context
Context	debug system grpc client
Tree	client
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Set debugging for all clients
Context	debug system grpc client all
Tree	all
Notes	The following elements are part of a choice: all or ip-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address for debugging
Context	debug system grpc client ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: all or ip-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	RPCs or service types to debug
Context	debug system grpc type keyword
Tree	type
Options	gnmi-capabilities, gnmi-get, gnmi-set, gnmi-subscribe, rib-api-modify, rib-api-getversion, gnoi-cert-mgmt-rpcs, gnoi-file-rpcs, gnoi-system-rpcs
Max. instances	12
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc-tunnel

Synopsis	Enter the grpc-tunnel context
Context	debug system grpc-tunnel
Tree	grpc-tunnel
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel

Synopsis	Enter the tunnel context
Context	debug system grpc-tunnel tunnel
Tree	tunnel
Introduced	25.3.R2

Platforms 7705 SAR-1

all

Synopsis Set debug output for all tunnels

Context [debug system grpc-tunnel tunnel all](#)

Tree [all](#)

Notes The following elements are part of a choice: **all** or **name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

name *named-item*

Synopsis Name of the tunnel to restrict the debug output

Context [debug system grpc-tunnel tunnel name *named-item*](#)

Tree [name](#)

String length 1 to 32

Notes The following elements are part of a choice: **all** or **name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

management-interface

Synopsis Enter the **management-interface** context

Context [debug system management-interface](#)

Tree [management-interface](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

netconf *keyword*

Synopsis Debugging verbosity for NETCONF

Context [debug system management-interface netconf *keyword*](#)

Tree [netconf](#)

Options error – Error messages

	warning – Warning and error messages info – All messages
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-management

Synopsis	Enter the remote-management context
Context	debug system management-interface remote-management
Tree	remote-management
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	25.3.R2
Platforms	7705 SAR-1

manager

Synopsis	Enter the manager context
Context	debug system management-interface remote-management manager
Tree	manager
Description	Commands in this context configure specific manager-related commands. Commands configured in this context take precedence over command values specified directly in the configure management-interface remote-management context. If a command is not configured in this context, the command setting is inherited from the higher level context.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Enable debug of all managers
Context	debug system management-interface remote-management manager all
Tree	all
Notes	The following elements are part of a choice: all or manager-name .

Introduced 25.3.R2
Platforms 7705 SAR-1

manager-name [[name](#)] *named-item-64*

Synopsis Add a list entry for **manager-name**
Context [debug system management-interface remote-management manager manager-name](#)
named-item-64
Tree [manager-name](#)
Notes The following elements are part of a choice: **all** or **manager-name**.
Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *named-item-64*

Synopsis Manager name
Context [debug system management-interface remote-management manager manager-name](#)
named-item-64
Tree [manager-name](#)
String length 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

service *boolean*

Synopsis Enable service level debug
Context [debug system management-interface remote-management service](#) *boolean*
Tree [service](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

snmp *keyword*

Synopsis Debugging verbosity for SNMP

Context	<code>debug system management-interface snmp</code> <i>keyword</i>
Tree	<code>snmp</code>
Options	error – Error messages warning – Warning and error messages info – All messages
Introduced	25.3.R2
Platforms	7705 SAR-1

4.8 eth-cfm commands

```
configure
- eth-cfm
- apply-groups reference
- apply-groups-exclude reference
- domain admin-name
- apply-groups reference
- apply-groups-exclude reference
- association admin-name
- apply-groups reference
- apply-groups-exclude reference
- auto-mep-discovery boolean
- bridge-identifier service-name
- apply-groups reference
- apply-groups-exclude reference
- ccm-interval keyword
- icc-based string
- integer number
- ma-index number
- remote-mep number
- apply-groups reference
- apply-groups-exclude reference
- string string
- vid number
- vpn-id string
- dns string
- format keyword
- level number
- mac string
- md-index number
- name string
```

4.8.1 eth-cfm command descriptions

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM parameters.
Introduced	25.3.R2
Platforms	7705 SAR-1

domain [md-admin-name] admin-name

Synopsis	Enter the domain list instance
Context	configure eth-cfm domain admin-name
Tree	domain
Introduced	25.3.R2
Platforms	7705 SAR-1

[md-admin-name] admin-name

Synopsis	Unique domain name
Context	configure eth-cfm domain admin-name
Tree	domain
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

association [ma-admin-name] admin-name

Synopsis	Enter the association list instance
Context	configure eth-cfm domain admin-name association admin-name
Tree	association

Introduced 25.3.R2
Platforms 7705 SAR-1

[ma-admin-name] admin-name

Synopsis Domain association name
Context **configure** [eth-cfm domain](#) *admin-name* [association](#) *admin-name*
Tree [association](#)
String length 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

auto-mep-discovery boolean

Synopsis Allow remote MEP automatic discovery
Context **configure** [eth-cfm domain](#) *admin-name* [association](#) *admin-name* [auto-mep-discovery](#) *boolean*
Tree [auto-mep-discovery](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

bridge-identifier [[bridge-name](#)] service-name

Synopsis Enter the **bridge-identifier** list instance
Context **configure** [eth-cfm domain](#) *admin-name* [association](#) *admin-name* [bridge-identifier](#) *service-name*
Tree [bridge-identifier](#)
Max. instances 1
Introduced 25.3.R2
Platforms 7705 SAR-1

[bridge-name] service-name

Synopsis	Bridge name that links to the service
Context	configure eth-cfm domain admin-name association admin-name bridge-identifier service-name
Tree	bridge-identifier
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ccm-interval keyword

Synopsis	CCM transmission interval for all MEPs in association
Context	configure eth-cfm domain admin-name association admin-name ccm-interval keyword
Tree	ccm-interval
Options	300hz, 10ms, 100ms, 1s, 10s, 60s, 600s
Default	10s
Introduced	25.3.R2
Platforms	7705 SAR-1

icc-based string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in ICC-based format
Context	configure eth-cfm domain admin-name association admin-name icc-based string
Tree	icc-based
String length	8 to 13
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

integer *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in integer format
Context	configure eth-cfm domain <i>admin-name</i> association <i>admin-name</i> integer <i>number</i>
Tree	integer
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

ma-index *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association (MA) table index
Context	configure eth-cfm domain <i>admin-name</i> association <i>admin-name</i> ma-index <i>number</i>
Tree	ma-index
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-mep [**mep-id**] *number*

Synopsis	Enter the remote-mep list instance
Context	configure eth-cfm domain <i>admin-name</i> association <i>admin-name</i> remote-mep <i>number</i>
Tree	remote-mep
Introduced	25.3.R2
Platforms	7705 SAR-1

[mep-id] *number*

Synopsis	Remote MEP ID
Context	configure eth-cfm domain <i>admin-name</i> association <i>admin-name</i> remote-mep <i>number</i>
Tree	remote-mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in raw ASCII string format
Context	configure eth-cfm domain <i>admin-name</i> association <i>admin-name</i> string <i>string</i>
Tree	string
String length	1 to 45
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

vid *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Primary VLAN ID for the Maintenance Association name
Context	configure eth-cfm domain <i>admin-name</i> association <i>admin-name</i> vid <i>number</i>
Tree	vid
Range	0 to 4094
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .

Introduced25.3.R2

Platforms7705 SAR-1

vpn-id string

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis

VPN ID for the Maintenance Association name

Context

configure eth-cfm domain admin-name association admin-name vpn-id string

Tree

vpn-id

String length

0 to 15

Notes

The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.

Introduced

25.3.R2

Platforms

7705 SAR-1

dns string

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis

Domain name like text string derived from a DNS name

Context

configure eth-cfm domain admin-name dns string

Tree

dns

String length

1 to 43

Notes

The following elements are part of a mandatory choice: **dns**, **format**, **mac**, or **name**.

Introduced

25.3.R2

Platforms

7705 SAR-1

format keyword

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance domain name not to be provided
Context	configure <i>eth-cfm domain admin-name format keyword</i>
Tree	<i>format</i>
Options	none
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

level *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Domain Level (MD Level)
Context	configure <i>eth-cfm domain admin-name level number</i>
Tree	<i>level</i>
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance domain MAC name
Context	configure <i>eth-cfm domain admin-name mac string</i>
Tree	<i>mac</i>
String length	13 to 23
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

md-index *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	The index of the Maintenance Domain (MD)
Context	configure <i>eth-cfm domain admin-name md-index number</i>
Tree	<i>md-index</i>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

name *string*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Domain name
Context	configure <i>eth-cfm domain admin-name name string</i>
Tree	<i>name</i>
String length	1 to 43
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

4.9 filter commands

```

configure
- filter
  - apply-groups reference

4.9.1 filter command descriptions

filter

Synopsis	Enter the filter context
Context	configure filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp-filter [[filter-id](#)] *number*

Synopsis	Enter the dhcp-filter list instance
Context	configure filter dhcp-filter <i>number</i>
Tree	dhcp-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

[[filter-id](#)] *number*

Synopsis	Unique DHCP filter policy ID
Context	configure filter dhcp-filter <i>number</i>
Tree	dhcp-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action

Synopsis	Enable the default-action context
Context	configure filter dhcp-filter <i>number</i> default-action
Tree	default-action
Introduced	25.3.R2

Platforms 7705 SAR-1

drop

Synopsis DHCP host creation when the filter entry is matched

Context **configure** filter dhcp-filter number default-action drop

Tree drop

Notes The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.

Introduced 25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

Context **configure** filter dhcp-filter number description *description*

Tree description

String length 1 to 80

Introduced 25.3.R2

Platforms 7705 SAR-1

entry [entry-id] number

Synopsis Enter the **entry** list instance

Context **configure** filter dhcp-filter number entry number

Tree entry

Max. instances 10

Introduced 25.3.R2

Platforms 7705 SAR-1

[entry-id] number

Synopsis DHCP filter entry ID

Context **configure** filter dhcp-filter number entry number

Tree entry

Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enable the action context
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: bypass-host-creation or drop .
Introduced	25.3.R2
Platforms	7705 SAR-1

option

Synopsis	Enable the option context
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option
Tree	option
Introduced	25.3.R2
Platforms	7705 SAR-1

absent

Synopsis	Require the absence of related option
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option absent
Tree	absent

Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enable the match context
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option match
Tree	match
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	25.3.R2
Platforms	7705 SAR-1

exact *boolean*

Synopsis	Use an exact match pattern (not partial)
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option match exact <i>boolean</i>
Tree	exact
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

hex *string*

Synopsis	Matching pattern for the filtered option
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option match hex <i>string</i>
Tree	hex
String length	1 to 256
Notes	The following elements are part of a mandatory choice: hex or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

invert *boolean*

Synopsis	Invert (partial) matching criteria
----------	------------------------------------

Context	configure <i>filter dhcp-filter number entry number option match invert boolean</i>
Tree	<i>invert</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string*

Synopsis	Matching pattern for the filtered option
Context	configure <i>filter dhcp-filter number entry number option match string string</i>
Tree	<i>string</i>
String length	1 to 127
Notes	The following elements are part of a mandatory choice: hex or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	configure <i>filter dhcp-filter number entry number option number number</i>
Tree	<i>number</i>
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

present

Synopsis	Require the presence of related option
Context	configure <i>filter dhcp-filter number entry number option present</i>
Tree	<i>present</i>
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp6-filter *[filter-id] number*

Synopsis	Enter the dhcp6-filter list instance
Context	configure <i>filter dhcp6-filter number</i>
Tree	<i>dhcp6-filter</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-id] *number*

Synopsis	Unique DHCP filter policy ID
Context	configure <i>filter dhcp6-filter number</i>
Tree	<i>dhcp6-filter</i>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action

Synopsis	Enable the default-action context
Context	configure <i>filter dhcp6-filter number default-action</i>
Tree	<i>default-action</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

drop

Synopsis	Drop DHCPv6 message (do not process)
Context	configure <i>filter dhcp6-filter number default-action drop</i>
Tree	<i>drop</i>
Notes	The following elements are part of a mandatory choice: bypass-host-creation or drop .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter dhcp6-filter <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [*entry-id*] *number*

Synopsis	Enter the entry list instance
Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i>
Tree	entry
Max. instances	10
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	DHCP filter entry ID
Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enable the action context
Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i> action
Tree	action
Introduced	25.3.R2

Platforms 7705 SAR-1

drop

Synopsis Drop DHCPv6 message (do not process)

Context **configure** filter dhcp6-filter number entry number action drop

Tree drop

Notes The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.

Introduced 25.3.R2

Platforms 7705 SAR-1

option

Synopsis Enable the **option** context

Context **configure** filter dhcp6-filter number entry number option

Tree option

Introduced 25.3.R2

Platforms 7705 SAR-1

absent

Synopsis Require the absence of related option

Context **configure** filter dhcp6-filter number entry number option absent

Tree absent

Notes The following elements are part of a mandatory choice: **absent**, **match**, or **present**.

Introduced 25.3.R2

Platforms 7705 SAR-1

match

Synopsis Enable the **match** context

Context **configure** filter dhcp6-filter number entry number option match

Tree match

Notes The following elements are part of a mandatory choice: **absent**, **match**, or **present**.

Introduced 25.3.R2

Platforms 7705 SAR-1

exact *boolean*

Synopsis Use an exact match pattern (not partial)

Context **configure** *filter dhcp6-filter number entry number option match exact boolean*

Tree *exact*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

hex *string*

Synopsis Matching pattern for the filtered option

Context **configure** *filter dhcp6-filter number entry number option match hex string*

Tree *hex*

String length 1 to 256

Notes The following elements are part of a mandatory choice: **hex** or **string**.

Introduced 25.3.R2

Platforms 7705 SAR-1

invert *boolean*

Synopsis Invert (partial) matching criteria

Context **configure** *filter dhcp6-filter number entry number option match invert boolean*

Tree *invert*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

string *string*

Synopsis Matching pattern for the filtered option

Context **configure** *filter dhcp6-filter number entry number option match string string*

Tree *string*

String length	1 to 127
Notes	The following elements are part of a mandatory choice: hex or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	configure <i>filter dhcp6-filter number</i> <i>entry number option number number</i>
Tree	<i>number</i>
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

present

Synopsis	Require the presence of related option
Context	configure <i>filter dhcp6-filter number</i> <i>entry number option present</i>
Tree	<i>present</i>
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-exception [*filter-name*] *filter-name*

Synopsis	Enter the ip-exception list instance
Context	configure <i>filter ip-exception filter-name</i>
Tree	<i>ip-exception</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] *filter-name*

Synopsis	Filter name
----------	-------------

Context	configure filter ip-exception <i>filter-name</i>
Tree	ip-exception
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter ip-exception <i>filter-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [*entry-id*] *number*

Synopsis	Enter the entry list instance
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i>
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	IP address to match
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match dst-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	Mask applied as an AND to the IP address
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match dst-ip mask <i>ipv4-address</i>
Tree	mask
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact match criterion
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match dst-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than match criterion for the port number
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match dst-port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than match criterion for the port
Context	configure filter ip-exception <i>filter-name</i> entry number match dst-port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-exception <i>filter-name</i> entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range to match
Context	configure filter ip-exception <i>filter-name</i> entry number match dst-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range to match
Context	configure filter ip-exception <i>filter-name</i> entry number match dst-port range start <i>number</i>
Tree	start
Range	0 to 65534

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure filter ip-exception <i>filter-name</i> entry number match icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR-1

code number

Synopsis	ICMP code value to match
Context	configure filter ip-exception <i>filter-name</i> entry number match icmp code <i>number</i>
Tree	code
Description	<p>This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

type number

Synopsis	ICMP type value to match
Context	configure filter ip-exception <i>filter-name</i> entry number match icmp type <i>number</i>
Tree	type
Description	<p>This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0</p>

match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol (*number* | *keyword*)

Synopsis	IP protocol as the match criterion
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	IP address to match
Context	configure filter ip-exception <i>filter-name</i> entry <i>number</i> match src-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	Mask applied as an AND to the IP address
Context	configure filter ip-exception filter-name entry number match src-ip mask <i>ipv4-address</i>
Tree	mask
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure filter ip-exception filter-name entry number match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact match criterion
Context	configure filter ip-exception filter-name entry number match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than match criterion for the port number
Context	configure filter ip-exception filter-name entry number match src-port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than match criterion for the port
Context	configure filter ip-exception <i>filter-name</i> entry number match src-port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-exception <i>filter-name</i> entry number match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range to match
Context	configure filter ip-exception <i>filter-name</i> entry number match src-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range to match
Context	configure filter ip-exception <i>filter-name</i> entry number match src-port range start <i>number</i>
Tree	start
Range	0 to 65534

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

filter-id *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Filter ID
Context	configure filter ip-exception <i>filter-name</i> filter-id <i>number</i>
Tree	filter-id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-filter [filter-name] *filter-name*

Synopsis	Enter the ip-filter list instance
Context	configure filter ip-filter <i>filter-name</i>
Tree	ip-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] *filter-name*

Synopsis	Filter name
Context	configure filter ip-filter <i>filter-name</i>
Tree	ip-filter
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

chain-to-system-filter *boolean*

Synopsis	Chain filter policy to the active IPvX system filter policy
Context	configure filter ip-filter <i>filter-name</i> chain-to-system-filter <i>boolean</i>
Tree	chain-to-system-filter
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Action for packets that do not match any entry
Context	configure filter ip-filter <i>filter-name</i> default-action <i>keyword</i>
Tree	default-action
Options	drop, accept
Default	drop
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter ip-filter <i>filter-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

embed

Synopsis	Enter the embed context
Context	configure filter ip-filter <i>filter-name</i> embed
Tree	embed
Description	Commands in this context configure filter policy embedding. A previously defined IPv4 embedded filter policy or Hybrid OpenFlow switch instance can be embedded into an exclusive, template, or system filter policy at the specified

offset value. Rules derived from BGP FlowSpec can also be embedded into template filter policies only.

Introduced 25.3.R2
Platforms 7705 SAR-1

filter [**name**] *reference offset number*

Synopsis Enter the **filter** list instance
Context **configure filter ip-filter filter-name embed filter reference offset number**
Tree **filter**
Description Commands in this context embed a previously defined IPv4 filter policy into the filter policy at the specified offset value.
Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *reference*

Synopsis IPv4 policy to be embedded in the filter
Context **configure filter ip-filter filter-name embed filter reference offset number**
Tree **filter**
Reference **configure filter ip-filter filter-name**
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

offset number

Synopsis Offset of the embedded filter policy
Context **configure filter ip-filter filter-name embed filter reference offset number**
Tree **filter**
Description This command configures the offset of the embedded filter policy. The embedded filter entry X has an entry X + offset in the embedding filter.
Range 0 to 2097150
Notes This element is part of a list key.
Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the embedded filter

Context **configure** *filter ip-filter filter-name embed filter reference offset number admin-state keyword*

Tree *admin-state*

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

entry [*entry-id*] *number*

Synopsis Enter the **entry** list instance

Context **configure** *filter ip-filter filter-name entry number*

Tree *entry*

Introduced 25.3.R2

Platforms 7705 SAR-1

[entry-id] *number*

Synopsis ID for a match criteria and the corresponding action

Context **configure** *filter ip-filter filter-name entry number*

Tree *entry*

Range 1 to 2097151

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

action

Synopsis Enable the **action** context

Context **configure** *filter ip-filter filter-name entry number action*

Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

accept

Synopsis	Accept regular routing to forward a matching packet
Context	configure filter ip-filter <i>filter-name</i> entry number action accept
Tree	accept
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

drop

Synopsis	Drop a packet matching this entry
Context	configure filter ip-filter <i>filter-name</i> entry number action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-when

Synopsis	Enable the drop-when context
Context	configure filter ip-filter <i>filter-name</i> entry number action drop-when
Tree	drop-when
Introduced	25.3.R2
Platforms	7705 SAR-1

extracted-traffic

Synopsis	Drop traffic extracted to CPM
Context	configure filter ip-filter <i>filter-name</i> entry number action drop-when extracted-traffic

Tree	extracted-traffic
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-length

Synopsis	Enable the packet-length context
Context	configure filter ip-filter filter-name entry number action drop-when packet-length
Tree	packet-length
Notes	The following elements are part of a choice: packet-length or ttl .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ip-filter filter-name entry number action drop-when packet-length eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ip-filter filter-name entry number action drop-when packet-length gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than match criterion for the length
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when packet-length lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the length range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when packet-length range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the length range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when packet-length range start <i>number</i>

Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl

Synopsis	Enable the ttl context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when ttl
Tree	ttl
Notes	The following elements are part of a choice: packet-length or ttl .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Equal to condition match value
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when ttl eq <i>number</i>
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than condition match value
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when ttl gt <i>number</i>
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than condition match value
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when tll lt <i>number</i>
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when tll range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action drop-when tll range end <i>number</i>
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the range
----------	--------------------------

Context	configure <i>filter ip-filter filter-name entry number action drop-when ttl range start number</i>
Tree	<i>start</i>
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

forward

Synopsis	Enter the forward context
Context	configure <i>filter ip-filter filter-name entry number action forward</i>
Tree	<i>forward</i>
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop

Synopsis	Enable the next-hop context
Context	configure <i>filter ip-filter filter-name entry number action forward next-hop</i>
Tree	<i>next-hop</i>
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , srv6-policy , or vprn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

nh-ip

Synopsis	Enable the nh-ip context
Context	configure <i>filter ip-filter filter-name entry number action forward next-hop nh-ip</i>
Tree	<i>nh-ip</i>
Notes	The following elements are part of a mandatory choice: interface-name , nh-ip , or nh-ip-vrf .
Introduced	25.3.R2

Platforms7705 SAR-1

address *ipv4-address*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address of next hop to forward matching packets
Context	configure filter ip-filter filter-name entry number action forward next-hop nh-ip address ipv4-address
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ip-filter filter-name entry number action forward next-hop nh-ip indirect boolean
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nh-ip-vrf

Synopsis	Enable the nh-ip-vrf context
Context	configure filter ip-filter filter-name entry number action forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	The following elements are part of a mandatory choice: interface-name , nh-ip , or nh-ip-vrf .
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-address***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address of next hop to forward matching packets
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf address <i>ipv4-address</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf indirect <i>boolean</i>
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

redirect-policy *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop or forward next hop router that forwards a packet that matches this entry
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action forward redirect-policy <i>reference</i>
Tree	redirect-policy
Reference	configure filter redirect-policy <i>named-item</i>
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , srv6-policy , or vprn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action forward router-instance <i>string</i>
Tree	router-instance
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , srv6-policy , or vprn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-match

Synopsis	Ignore match criteria for the entry
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action ignore-match
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .

Introduced	25.3.R2
Platforms	7705 SAR-1

nat

Synopsis	Enable the nat context
Context	configure filter ip-filter filter-name entry number action nat
Tree	nat
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

nat-policy *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name when action is NAT
Context	configure filter ip-filter filter-name entry number action nat nat-policy reference
Tree	nat-policy
Reference	configure service nat nat-policy external-named-item
Introduced	25.3.R2
Platforms	7705 SAR-1

rate-limit

Synopsis	Enable the rate-limit context
Context	configure filter ip-filter filter-name entry number action rate-limit
Tree	rate-limit
Description	Commands in this context configure the rate-limit action for traffic that matches this filter entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-length

Synopsis	Enable the packet-length context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length
Tree	packet-length
Notes	The following elements are part of a choice: packet-length or ttl .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than match criterion for the length
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length lt <i>number</i>

Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the length range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the length range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit packet-length range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

pir (*number* | *keyword*)

Synopsis	Peak information rate
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	0 to 20000000000
Units	kilobps
Options	max
Notes	The following elements are part of a mandatory choice: pir , policer , or pps-pir .
Introduced	25.3.R2
Platforms	7705 SAR-1

policer *named-item*

Synopsis	Policer name to use for rate limiting traffic
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit policer <i>named-item</i>
Tree	policer
String length	1 to 32
Notes	The following elements are part of a mandatory choice: pir , policer , or pps-pir .
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl

Synopsis	Enable the ttl context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit ttl
Tree	ttl
Notes	The following elements are part of a choice: packet-length or ttl .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Equal to condition match value
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit tll eq <i>number</i>
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than condition match value
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit tll gt <i>number</i>
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than condition match value
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit tll lt <i>number</i>
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit tll range
Tree	range

Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit ttl range end <i>number</i>
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action rate-limit ttl range start <i>number</i>
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

reassemble

Synopsis	Forward matching packets to reassembly function
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> action reassemble
Tree	reassemble
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	25.3.R2

Platforms 7705 SAR-1

secondary

Synopsis Enable the **secondary** context

Context **configure** [filter ip-filter filter-name](#) [entry number](#) [action secondary](#)

Tree [secondary](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

forward

Synopsis Enter the **forward** context

Treerouter-instance

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
Context	configure filter ip-filter filter-name entry number action tcp-mss-adjust
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter ip-filter filter-name entry number description description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

log *reference*

Synopsis	Log that is used for packets matching this entry
Context	configure filter ip-filter filter-name entry number log reference
Tree	log
Reference	configure filter log number
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
----------	--------------------------------

Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match
Tree	match
Description	Commands in this context configure match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword

Synopsis	DSCP used as an IP filter match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	IPv4 address used as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address

Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure filter match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Exact value as the match criterion
Context	configure filter ip-filter filter-name entry number match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than value as the match criterion
Context	configure filter ip-filter filter-name entry number match dst-port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than value as the match criterion
Context	configure filter ip-filter filter-name entry number match dst-port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ip-filter filter-name entry number match dst-port port-list reference
Tree	port-list

Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match dst-port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment keyword

Synopsis	Match criterion for fragmented packets
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match fragment <i>keyword</i>
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IP filter match criteria.
Introduced	25.3.R2
Platforms	7705 SAR-1

code number

Synopsis	ICMP code value to match
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match icmp code <i>number</i>
Tree	code
Description	<p>This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

type number

Synopsis	ICMP type value to match
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match icmp type <i>number</i>
Tree	type
Description	<p>This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Enter the ip context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match ip
Tree	ip
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	25.3.R2
Platforms	7705 SAR-1

address (ipv4-prefix-with-host-bits | ipv4-address)

Synopsis	IPv4 address used as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match ip address (<i>ipv4-prefix-with-host-bits</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure filter match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-option

Synopsis	Enable the ip-option context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match ip-option
Tree	ip-option
Description	Commands in this context configure matching packets with a specific IP option, or a range of IP options, in the first option of the IP header as an IP filter match criterion.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *number*

Synopsis	Mask used with the IP option value in the packet header
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match ip-option mask <i>number</i>
Tree	mask

Description	This command specifies an optional value that can be used when specifying a range of option numbers to use as the match criteria.
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

type *number*

Synopsis	IP option to match
Context	configure filter ip-filter <i>filter-name</i> entry number match ip-option type <i>number</i>
Tree	type
Description	<p>This command specifies the 8-bit option type in decimal integer, binary, or hexadecimal format. The mask is applied as an AND to the option byte, and the result is compared with the option value.</p> <p>The decimal value entered for the match should be a combined value of the 8-bit option type field and not only the option number. For example, to match IP packets that contain the Router Alert option (option number = 20), enter the option type of 148 (10010100).</p>
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

multiple-option *boolean*

Synopsis	Match based on presence of multiple options in header
Context	configure filter ip-filter <i>filter-name</i> entry number match multiple-option <i>boolean</i>
Tree	multiple-option
Introduced	25.3.R2
Platforms	7705 SAR-1

option-present *boolean*

Synopsis	Match on any IP option present in the packet
Context	configure filter ip-filter <i>filter-name</i> entry number match option-present <i>boolean</i>
Tree	option-present

Description	When configured to true , the router matches on IP packets that contain any IP option in the IP header. An option field of zero is considered as no option present. When configured to false , the router matches on IP packets that do not have an IP option present in the IP header.
Introduced	25.3.R2
Platforms	7705 SAR-1

port

Synopsis	Enter the port context
Context	configure filter ip-filter filter-name entry number match port
Tree	port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Exact value as the match criterion
Context	configure filter ip-filter filter-name entry number match port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than value as the match criterion
Context	configure filter ip-filter filter-name entry number match port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than value as the match criterion
Context	configure filter ip-filter filter-name entry number match port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ip-filter filter-name entry number match port port-list reference
Tree	port-list
Reference	configure filter match-list port-list named-item
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter filter-name entry number match port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ip-filter filter-name entry number match port range end number
Tree	end
Range	1 to 65535

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ip-filter filter-name entry number match port range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol (number | keyword)

Synopsis	IP protocol identifier as a match criterion
Context	configure filter ip-filter filter-name entry number match protocol (<i>number keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: protocol or protocol-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-list reference

Synopsis	Name of the protocol list as a match criterion
Context	configure filter ip-filter filter-name entry number match protocol-list <i>reference</i>
Tree	protocol-list
Reference	configure filter match-list protocol-list <i>named-item</i>
Notes	The following elements are part of a choice: protocol or protocol-list .
Introduced	25.3.R2

Platforms 7705 SAR-1

src-ip

Synopsis Enter the **src-ip** context

Context **configure** filter ip-filter filter-name entry number match src-ip

Tree [src-ip](#)

Description Commands in this context configure a source address range that is used by filter policy match criteria.

Notes The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).

Introduced 25.3.R2

Platforms 7705 SAR-1

address (ipv4-prefix-with-host-bits | ipv4-address)

Synopsis IPv4 address used as the match criterion

Context **configure** filter ip-filter filter-name entry number match src-ip address (ipv4-prefix-with-host-bits | ipv4-address)

Tree [address](#)

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ip-prefix-list reference

Synopsis IPv4 address prefix list used as match criterion

Context **configure** filter ip-filter filter-name entry number match src-ip ip-prefix-list reference

Tree [ip-prefix-list](#)

Reference **configure** filter match-list ip-prefix-list named-item

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 25.3.R2

Platforms 7705 SAR-1

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port
Tree	src-port
Description	Commands in this context configure match criteria for the source port.
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact value as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than value as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 to 65534

Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than value as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port port-list <i>reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-route-option boolean

Synopsis	Match based on presence of source route option
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match src-route-option <i>boolean</i>
Tree	src-route-option
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match tcp-established
Tree	tcp-established
Description	When configured to true , a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.

Notes	The following elements are part of a choice: tcp-established or tcp-flags .
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-flags

Synopsis	Enter the tcp-flags context
Context	configure filter ip-filter filter-name entry number match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: tcp-established or tcp-flags .
Introduced	25.3.R2
Platforms	7705 SAR-1

ack boolean

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	configure filter ip-filter filter-name entry number match tcp-flags ack boolean
Tree	ack
Description	<p>When configured to true, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

cwr boolean

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	configure filter ip-filter filter-name entry number match tcp-flags cwr boolean
Tree	cwr
Description	<p>When configured to true, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet.</p>

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms 7705 SAR-1

ece boolean

Synopsis Use ECE TCP bit status in TCP header as match criterion

Context **configure** *filter ip-filter filter-name entry number match tcp-flags ece boolean*

Tree *ece*

Description When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms 7705 SAR-1

fin boolean

Synopsis Use FIN TCP bit status in TCP header as match criterion

Context **configure** *filter ip-filter filter-name entry number match tcp-flags fin boolean*

Tree *fin*

Description When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms 7705 SAR-1

ns boolean

Synopsis Use NS TCP bit status in TCP header as match criterion

Context **configure** *filter ip-filter filter-name entry number match tcp-flags ns boolean*

Tree *ns*

Description When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2
Platforms 7705 SAR-1

psh boolean

Synopsis Use PSH TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter filter-name entry number match tcp-flags psh boolean

Tree psh

Description When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2
Platforms 7705 SAR-1

rst boolean

Synopsis Use RST TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter filter-name entry number match tcp-flags rst boolean

Tree rst

Description When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2
Platforms 7705 SAR-1

syn boolean

Synopsis Use SYN TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter filter-name entry number match tcp-flags syn boolean

Tree syn

Description	<p>When configured to true, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> match tcp-flags urg <i>boolean</i>
Tree	urg
Description	<p>When configured to true, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> pbr-down-action-override <i>keyword</i>
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	25.3.R2
Platforms	7705 SAR-1

sticky-dest (*number* | *keyword*)

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	configure filter ip-filter <i>filter-name</i> entry <i>number</i> sticky-dest (<i>number</i> <i>keyword</i>)
Tree	sticky-dest
Range	0 to 65535

Units	seconds
Options	no-hold-time-up
Introduced	25.3.R2
Platforms	7705 SAR-1

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP filter ID
Context	configure filter ip-filter <i>filter-name</i> filter-id <i>number</i>
Tree	filter-id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

scope *keyword*

Synopsis	Scope of the filter definition
Context	configure filter ip-filter <i>filter-name</i> scope <i>keyword</i>
Tree	scope
Description	<p>This command configures the filter policy scope.</p> <p>If the scope of the policy is template and is applied to one or more services or network interfaces, the scope cannot be changed.</p>
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-exception [*filter-name*] *filter-name*

Synopsis	Enter the ipv6-exception list instance
Context	configure filter ipv6-exception <i>filter-name</i>
Tree	ipv6-exception

Introduced 25.3.R2
Platforms 7705 SAR-1

[filter-name] *filter-name*

Synopsis Filter name
Context **configure** **filter** **ipv6-exception** *filter-name*
Tree **ipv6-exception**
String length 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Synopsis Text description
Context **configure** **filter** **ipv6-exception** *filter-name* **description** *description*
Tree **description**
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

entry [**entry-id**] *number*

Synopsis Enter the **entry** list instance
Context **configure** **filter** **ipv6-exception** *filter-name* **entry** *number*
Tree **entry**
Introduced 25.3.R2
Platforms 7705 SAR-1

[entry-id] *number*

Synopsis ID for a match criteria and the corresponding action
Context **configure** **filter** **ipv6-exception** *filter-name* **entry** *number*
Tree **entry**

Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address used as the match criterion
Context	configure <i>filter</i> <i>ipv6-exception</i> <i>filter-name</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-ip</i> <i>address</i> (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)

Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Exact value as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than value as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than value as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port port-list <i>reference</i>

Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match dst-port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

icmp

Synopsis Enter the **icmp** context

Context **configure** **filter** **ipv6-exception** *filter-name* **entry** *number* **match** **icmp**

Tree **icmp**

Introduced 25.3.R2

Platforms 7705 SAR-1

code number

Synopsis ICMPv6 code value to match

Context **configure** **filter** **ipv6-exception** *filter-name* **entry** *number* **match** **icmp** **code** *number*

Tree **code**

Description This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range 0 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

type number

Synopsis ICMPv6 type value to match

Context **configure** **filter** **ipv6-exception** *filter-name* **entry** *number* **match** **icmp** **type** *number*

Tree **type**

Description This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR-1

port

Synopsis	Enter the port context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port
Tree	port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact value as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than value as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than value as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port port-list <i>reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port range
Tree	range

Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address used as the match criterion
----------	--

Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list reference

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask ipv6-address

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-ip mask ipv6-address
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-port
Tree	src-port
Description	Commands in this context configure match criteria for the source port.
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2

Platforms 7705 SAR-1

eq *number*

Synopsis Exact value as the match criterion

Context **configure** [filter ipv6-exception](#) *filter-name* [entry](#) *number* [match src-port eq](#) *number*

Tree [eq](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 25.3.R2

Platforms 7705 SAR-1

gt *number*

Synopsis Greater than value as the match criterion

Context **configure** [filter ipv6-exception](#) *filter-name* [entry](#) *number* [match src-port gt](#) *number*

Tree [gt](#)

Range 0 to 65534

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 25.3.R2

Platforms 7705 SAR-1

lt *number*

Synopsis Less than value as the match criterion

Context **configure** [filter ipv6-exception](#) *filter-name* [entry](#) *number* [match src-port lt](#) *number*

Tree [lt](#)

Range 1 to 65535

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 25.3.R2

Platforms 7705 SAR-1

port-list *reference*

Synopsis Name of the port list as the match criterion

Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-port port-list <i>reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ipv6-exception <i>filter-name</i> entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65534

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Filter ID
Context	configure filter ipv6-exception <i>filter-name</i> filter-id <i>number</i>
Tree	filter-id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-filter [*filter-name*] *filter-name*

Synopsis	Enter the ipv6-filter list instance
Context	configure filter ipv6-filter <i>filter-name</i>
Tree	ipv6-filter
Description	Commands in this context create a configuration context for the specified IPv6 filter entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] *filter-name*

Synopsis	Filter name
Context	configure filter ipv6-filter <i>filter-name</i>
Tree	ipv6-filter
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

chain-to-system-filter *boolean*

Synopsis	Chain filter policy to the active IPvX system filter policy
Context	configure filter ipv6-filter <i>filter-name</i> chain-to-system-filter <i>boolean</i>
Tree	chain-to-system-filter
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Action for packets that do not match any entry
Context	configure filter ipv6-filter <i>filter-name</i> default-action <i>keyword</i>
Tree	default-action
Options	drop, accept
Default	drop
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter ipv6-filter <i>filter-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

embed

Synopsis	Enter the embed context
Context	configure filter ipv6-filter <i>filter-name</i> embed
Tree	embed
Description	Commands in this context configure filter policy embedding. A previously defined IPv6 embedded filter policy or Hybrid OpenFlow switch instance can be embedded into an exclusive, template, or system filter policy at the specified

offset value. Rules derived from BGP FlowSpec can also be embedded into template filter policies only.

Introduced 25.3.R2
Platforms 7705 SAR-1

filter *[name]* *reference* *offset number*

Synopsis Enter the **filter** list instance
Context **configure filter ipv6-filter** *filter-name* **embed filter** *reference* *offset number*
Tree **filter**
Description Commands in this context embed a previously defined IPv6 filter policy into the filter policy at the specified offset value.
Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *reference*

Synopsis IPv6 policy to be embedded in the filter
Context **configure filter ipv6-filter** *filter-name* **embed filter** *reference* *offset number*
Tree **filter**
Reference **configure filter ipv6-filter** *filter-name*
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

offset *number*

Synopsis Offset of the embedded filter policy
Context **configure filter ipv6-filter** *filter-name* **embed filter** *reference* *offset number*
Tree **filter**
Description This command configures the offset of the embedded filter policy. The embedded filter entry X has an entry X + offset in the embedding filter.
Range 0 to 2097150
Notes This element is part of a list key.
Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the embedded filter
Context	configure filter ipv6-filter <i>filter-name</i> embed filter <i>reference</i> offset <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [**entry-id**] *number*

Synopsis	Enter the entry list instance
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i>
Tree	entry
Description	Commands in this context create or edit a configuration context for the specified IPv6 filter entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i>
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enable the action context
----------	----------------------------------

Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

accept

Synopsis	Accept regular routing to forward a matching packet
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action accept
Tree	accept
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

drop

Synopsis	Drop a packet matching this entry
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-when

Synopsis	Enable the drop-when context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when
Tree	drop-when
Introduced	25.3.R2
Platforms	7705 SAR-1

extracted-traffic

Synopsis	Drop traffic extracted to CPM
----------	-------------------------------

Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when extracted-traffic
Tree	extracted-traffic
Introduced	25.3.R2
Platforms	7705 SAR-1

hop-limit

Synopsis	Enable the hop-limit context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Equal to condition match value
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit eq <i>number</i>
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than condition match value
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit gt <i>number</i>
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than condition match value
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit lt <i>number</i>
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit range end <i>number</i>
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start *number*

Synopsis	Lower bound of the range
----------	--------------------------

Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when hop-limit range start <i>number</i>
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

payload-length

Synopsis	Enable the payload-length context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length
Tree	payload-length
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length gt <i>number</i>
Tree	gt
Range	0 to 65534

Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than match criterion for the length
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the length range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the length range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action drop-when payload-length range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

forward

Synopsis	Enter the forward context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward
Tree	forward
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop

Synopsis	Enable the next-hop context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , srv6-policy , or vpn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

nh-ip

Synopsis	Enable the nh-ip context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip

Tree	nh-ip
Notes	The following elements are part of a mandatory choice: nh-ip or nh-ip-vrf .
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip address <i>ipv6-address</i>
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip indirect boolean
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nh-ip-vrf

Synopsis	Enable the nh-ip-vrf context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	The following elements are part of a mandatory choice: nh-ip or nh-ip-vrf .
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	configure filter <i>ipv6-filter</i> <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf address <i>ipv6-address</i>
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter <i>ipv6-filter</i> <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf indirect <i>boolean</i>
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter <i>ipv6-filter</i> <i>filter-name</i> entry <i>number</i> action forward next-hop nh-ip-vrf router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

redirect-policy *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop or forward next hop router that forwards a packet that matches this entry
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward redirect-policy <i>reference</i>
Tree	redirect-policy
Reference	configure filter redirect-policy <i>named-item</i>
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , srv6-policy , or vprn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action forward router-instance <i>string</i>
Tree	router-instance
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , srv6-policy , or vprn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-match

Synopsis	Ignore match criteria for the entry
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action ignore-match
Tree	ignore-match

Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

rate-limit

Synopsis	Enable the rate-limit context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit
Tree	rate-limit
Description	Commands in this context configure the rate-limit action for traffic that matches this filter entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

hop-limit

Synopsis	Enable the hop-limit context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Equal to condition match value
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit hop-limit eq <i>number</i>
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than condition match value
Context	configure filter ipv6-filter filter-name entry number action rate-limit hop-limit gt number
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than condition match value
Context	configure filter ipv6-filter filter-name entry number action rate-limit hop-limit lt number
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter filter-name entry number action rate-limit hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the range
----------	--------------------------

Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit hop-limit range end <i>number</i>
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit hop-limit range start <i>number</i>
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

payload-length

Synopsis	Enable the payload-length context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length
Tree	payload-length
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Exact match criterion for the length
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length eq <i>number</i>
Tree	eq
Range	0 to 65535

Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than match criterion for the length
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the length range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the length range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit payload-length range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (number | keyword)

Synopsis	Peak information rate
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	0 to 20000000000
Units	kilobps
Options	max
Notes	The following elements are part of a mandatory choice: pir , policer , or pps-pir .
Introduced	25.3.R2
Platforms	7705 SAR-1

policer *named-item*

Synopsis	Policer name to use for rate limiting traffic
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action rate-limit policer <i>named-item</i>
Tree	policer
String length	1 to 32
Notes	The following elements are part of a mandatory choice: pir , policer , or pps-pir .
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary

Synopsis	Enable the secondary context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary
Tree	secondary
Introduced	25.3.R2
Platforms	7705 SAR-1

forward

Synopsis	Enter the forward context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary forward
Tree	forward
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop

Synopsis	Enable the next-hop context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vpn-target .
Introduced	25.3.R2
Platforms	7705 SAR-1

nh-ip-vrf

Synopsis	Enable the nh-ip-vrf context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary forward next-hop nh-ip-vrf address <i>ipv6-address</i>
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary forward next-hop nh-ip-vrf indirect <i>boolean</i>
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action secondary forward next-hop nh-ip-vrf router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> action tcp-mss-adjust
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

log *reference*

Synopsis	Log that is used for packets matching this entry
----------	--

Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> log <i>reference</i>
Tree	log
Reference	configure filter log <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match
Tree	match
Description	Commands in this context provide match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword

Synopsis	DSCP used as an IP filter match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-ip

Synopsis	Enter the dst-ip context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination address range that is used by filter policy match criteria.

Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address used as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enter the dst-port context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port lt <i>number</i>
Tree	lt

Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port port-list <i>reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match dst-port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

extension-header

Synopsis	Enter the extension-header context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match extension-header
Tree	extension-header
Introduced	25.3.R2
Platforms	7705 SAR-1

ah boolean

Synopsis	Match a packet as per the existence of an AH Extension Header
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match extension-header ah <i>boolean</i>
Tree	ah
Introduced	25.3.R2
Platforms	7705 SAR-1

esp boolean

Synopsis	Match a packet as per the existence of an Encapsulation security payload extension header
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match extension-header esp <i>boolean</i>
Tree	esp
Introduced	25.3.R2
Platforms	7705 SAR-1

hop-by-hop *boolean*

Synopsis	Match on Hop-by-Hop Options Extension Header existence
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match extension-header hop-by-hop <i>boolean</i>
Tree	hop-by-hop
Introduced	25.3.R2
Platforms	7705 SAR-1

routing-type0 *boolean*

Synopsis	Match a packet as per the existence of a routing Extension Header
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match extension-header routing-type0 <i>boolean</i>
Tree	routing-type0
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-label

Synopsis	Enable the flow-label context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match flow-label
Tree	flow-label
Description	Commands in this context configure the flow label and optional mask match condition.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *number*

Synopsis	Flow label mask for the IPv6 filter entry
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match flow-label mask <i>number</i>
Tree	mask
Description	This command specifies the IPv6 address mask for the flow label filter entry. This value can be expressed in decimal, hexadecimal, or binary format.
Range	1 to 1048575
Default	1048575

Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	Flow label as a match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match flow-label value <i>number</i>
Tree	value
Description	This command specifies the flow label to use as a match criterion. This value can be expressed in decimal, hexadecimal, or binary format.
Range	0 to 1048575
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

fragment *keyword*

Synopsis	Match criterion for fragmented packages
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match fragment <i>keyword</i>
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IPv6 filter match criteria.
Introduced	25.3.R2
Platforms	7705 SAR-1

code number

Synopsis	ICMPv6 code value to match
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match icmp code <i>number</i>
Tree	code
Description	<p>This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

type number

Synopsis	ICMPv6 type value to match
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match icmp type <i>number</i>
Tree	type
Description	<p>This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.</p> <p>An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.</p>
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Enter the ip context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match ip
Tree	ip
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).

Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address used as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
----------	----------------------

Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: next-header or next-header-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-header-list *reference*

Synopsis	Name of the protocol list as a match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match next-header-list <i>reference</i>
Tree	next-header-list
Reference	configure filter match-list protocol-list <i>named-item</i>
Notes	The following elements are part of a choice: next-header or next-header-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

port

Synopsis	Enter the port context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port
Tree	port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port eq <i>number</i>
Tree	eq

Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port port-list <i>reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip

Synopsis	Enter the src-ip context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-ip
Tree	src-ip

Description	Commands in this context configure a source address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address used as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-ip address (<i>ipv6-prefix-with-host-bits</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enter the src-port context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port
Tree	src-port
Description	Commands in this context configure match criteria for the source port.
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Exact value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt *number*

Synopsis	Greater than value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt *number*

Synopsis	Less than value as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port lt <i>number</i>
Tree	lt

Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port port-list <i>reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>named-item</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the port range
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-established
Tree	tcp-established
Description	When configured to true , a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: tcp-established or tcp-flags .
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-flags

Synopsis	Enter the tcp-flags context
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: tcp-established or tcp-flags .
Introduced	25.3.R2
Platforms	7705 SAR-1

ack boolean

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags ack <i>boolean</i>

Tree	ack
Description	<p>When configured to true, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

cwr boolean

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags cwr <i>boolean</i>
Tree	cwr
Description	<p>When configured to true, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ece boolean

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags ece <i>boolean</i>
Tree	ece
Description	<p>When configured to true, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

fin boolean

Synopsis	Use FIN TCP bit status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags fin boolean
Tree	fin
Description	<p>When configured to true, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ns boolean

Synopsis	Use NS TCP bit status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags ns boolean
Tree	ns
Description	<p>When configured to true, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

psh boolean

Synopsis	Use PSH TCP bit status in TCP header as match criterion
Context	configure filter ipv6-filter <i>filter-name</i> entry <i>number</i> match tcp-flags psh boolean
Tree	psh
Description	<p>When configured to true, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet.</p> <p>When configured to false, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet.</p> <p>When unconfigured, the system does not use the TCP flag as a match criterion.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

rst boolean

Synopsis Use RST TCP bit status in TCP header as match criterion

Context **configure** **filter** **ipv6-filter** *filter-name* **entry** *number* **match tcp-flags rst boolean**

Tree **rst**

Description When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms 7705 SAR-1

syn boolean

Synopsis Use SYN TCP bit status in TCP header as match criterion

Context **configure** **filter** **ipv6-filter** *filter-name* **entry** *number* **match tcp-flags syn boolean**

Tree **syn**

Description When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms 7705 SAR-1

urg boolean

Synopsis Use URG TCP bit status in TCP header as match criterion

Context **configure** **filter** **ipv6-filter** *filter-name* **entry** *number* **match tcp-flags urg boolean**

Tree **urg**

Description When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2
Platforms 7705 SAR-1

pbr-down-action-override *keyword*

Synopsis Action when PBR or PBF target for this entry is not available
Context **configure** [filter](#) [ipv6-filter](#) *filter-name* [entry](#) *number* [pbr-down-action-override](#) *keyword*
Tree [pbr-down-action-override](#)
Options drop, forward, filter-default-action
Introduced 25.3.R2
Platforms 7705 SAR-1

sticky-dest (*number* | *keyword*)

Synopsis Time before action with available PBR or PBF destination and highest priority
Context **configure** [filter](#) [ipv6-filter](#) *filter-name* [entry](#) *number* [sticky-dest](#) (*number* | *keyword*)
Tree [sticky-dest](#)
Range 0 to 65535
Units seconds
Options no-hold-time-up
Introduced 25.3.R2
Platforms 7705 SAR-1

filter-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis IPv6 filter identifier
Context **configure** [filter](#) [ipv6-filter](#) *filter-name* [filter-id](#) *number*
Tree [filter-id](#)
Range 1 to 65535
Introduced 25.3.R2
Platforms 7705 SAR-1

scope keyword

Synopsis	Scope of the filter definition
Context	configure filter <i>ipv6-filter filter-name scope keyword</i>
Tree	<i>scope</i>
Description	<p>This command configures the filter policy scope.</p> <p>If the scope of the policy is template and is applied to one or more services or network interfaces, the scope cannot be changed.</p>
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	25.3.R2
Platforms	7705 SAR-1

log [log-id] number

Synopsis	Enter the log list instance
Context	configure filter log <i>number</i>
Tree	<i>log</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[log-id] number

Synopsis	Filter log identifier
Context	configure filter log <i>number</i>
Tree	<i>log</i>
Range	101 to 199
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of filter logging
Context	configure filter log <i>number admin-state keyword</i>

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description-or-empty*

Synopsis	Text description
Context	configure filter log <i>number</i> description <i>description-or-empty</i>
Tree	description
String length	0 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination

Synopsis	Enter the destination context
Context	configure filter log <i>number</i> destination
Tree	destination
Introduced	25.3.R2
Platforms	7705 SAR-1

memory

Synopsis	Enter the memory context
Context	configure filter log <i>number</i> destination memory
Tree	memory
Notes	The following elements are part of a choice: memory or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

Synopsis	Maximum number of memory entries that the log can store
----------	---

Context	configure filter log number destination memory max-entries number
Tree	max-entries
Range	1 to 50000
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

stop-on-full *boolean*

Synopsis	Stop logging when maximum number of memory entries is reached or wrap-around is used
Context	configure filter log number destination memory stop-on-full boolean
Tree	stop-on-full
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

syslog

Synopsis	Enter the syslog context
Context	configure filter log number destination syslog
Tree	syslog
Notes	The following elements are part of a choice: memory or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	Syslog server definition ID
Context	configure filter log number destination syslog name reference
Tree	name
Reference	configure log syslog log-syslog-name
Introduced	25.3.R2
Platforms	7705 SAR-1

summary

Synopsis	Enter the summary context
Context	configure filter log number destination syslog summary
Tree	summary
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of filter log summarization
Context	configure filter log number destination syslog summary admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

summary-crit *keyword*

Synopsis	Summary for filter log entries
Context	configure filter log number destination syslog summary summary-crit keyword
Tree	summary-crit
Options	src-addr, dst-addr
Default	src-addr
Introduced	25.3.R2
Platforms	7705 SAR-1

match-list

Synopsis	Enter the match-list context
Context	configure filter match-list
Tree	match-list
Description	Commands in this context configure match lists to be used in filter policies (IOM/FP and CPM).

Introduced 25.3.R2
Platforms 7705 SAR-1

ip-prefix-list [[prefix-list-name](#)] *named-item*

Synopsis Enter the **ip-prefix-list** list instance
Context **configure** [filter match-list ip-prefix-list](#) *named-item*
Tree [ip-prefix-list](#)
Description Commands in this context configure a list of IPv4 prefixes for match criteria in IPv4 ACL and CPM filter policies.
Introduced 25.3.R2
Platforms 7705 SAR-1

[prefix-list-name] *named-item*

Synopsis IP prefix list name
Context **configure** [filter match-list ip-prefix-list](#) *named-item*
Tree [ip-prefix-list](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

apply-path

Synopsis Enter the **apply-path** context
Context **configure** [filter match-list ip-prefix-list](#) *named-item* [apply-path](#)
Tree [apply-path](#)
Description Commands in this context configure the autogeneration of address prefixes for IPv4 address prefix match lists.
Introduced 25.3.R2
Platforms 7705 SAR-1

bgp-peers [[criterion-index](#)] *number*

Synopsis Enter the **bgp-peers** list instance

Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path bgp-peers <i>number</i>
Tree	bgp-peers
Description	Commands in this context configure the unique index for BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

[criterion-index] *number*

Synopsis	Index defining BGP peers for prefix autogeneration
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path bgp-peers <i>number</i>
Tree	bgp-peers
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

group *regular-expression-not-all-spaces*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance group configuration
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path bgp-peers <i>number</i> group <i>regular-expression-not-all-spaces</i>
Tree	group
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor *regular-expression-not-all-spaces*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance neighbor configuration
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path bgp-peers <i>number</i> neighbor <i>regular-expression-not-all-spaces</i>
Tree	neighbor
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Target routing instance
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path bgp-peers <i>number</i> router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR-1

interfaces [**criterion-index**] *number*

Synopsis	Enter the interfaces list instance
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path interfaces <i>number</i>
Tree	interfaces
Description	Commands in this context configure the interfaces configuration to be used for autogeneration of IPv4 address filter prefix lists.
Introduced	25.10.R1
Platforms	7705 SAR-1

[criterion-index] *number*

Synopsis	Index defining interfaces for prefix autogeneration
----------	---

Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path interfaces <i>number</i>
Tree	interfaces
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	7705 SAR-1

interface *regular-expression-not-all-spaces*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression defining a match string
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path interfaces <i>number</i> interface <i>regular-expression-not-all-spaces</i>
Tree	interface
Description	This command configures a regular expression to match against interface names under the Base router, IES, and VPRN service configuration.
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing instance as part of apply-path interfaces
Context	configure filter match-list ip-prefix-list <i>named-item</i> apply-path interfaces <i>number</i> router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter match-list ip-prefix-list <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [**ip-prefix**] *ipv4-prefix*

Synopsis	Add a list entry for prefix
Context	configure filter match-list ip-prefix-list <i>named-item</i> prefix <i>ipv4-prefix</i>
Tree	prefix
Description	<p>Commands in this context add IPv4 prefixes to the prefix match list. Prefixes can overlap IPv4 address space.</p> <p>An IPv4 prefix addition is blocked if resource exhaustion is detected anywhere in the system due to filter policies that use the prefix list.</p>
Max. instances	8192
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] *ipv4-prefix*

Synopsis	IPv4 prefix to be added to the prefix list
Context	configure filter match-list ip-prefix-list <i>named-item</i> prefix <i>ipv4-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-exclude [**ip-prefix**] *ipv4-prefix*

Synopsis	Add a list entry for prefix-exclude
Context	configure filter match-list ip-prefix-list <i>named-item</i> prefix-exclude <i>ipv4-prefix</i>

Tree	prefix-exclude
Description	Commands in this context exclude IPv4 prefixes from the prefix match list. This command is mutually exclusive with the apply-path command.
Max. instances	512
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] *ipv4-prefix*

Synopsis	IPv4 prefix to be added to the prefix list
Context	configure filter match-list ip-prefix-list <i>named-item</i> prefix-exclude <i>ipv4-prefix</i>
Tree	prefix-exclude
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list [[prefix-list-name](#)] *named-item*

Synopsis	Enter the ipv6-prefix-list list instance
Context	configure filter match-list ipv6-prefix-list <i>named-item</i>
Tree	ipv6-prefix-list
Description	Commands in this context configure a list of IPv6 prefixes for match criteria in ACL and CPM IPv6 filter policies.
Introduced	25.3.R2
Platforms	7705 SAR-1

[[prefix-list-name](#)] *named-item*

Synopsis	IP prefix list name
Context	configure filter match-list ipv6-prefix-list <i>named-item</i>
Tree	ipv6-prefix-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

apply-path

Synopsis Enter the **apply-path** context

Context **configure** [filter match-list ipv6-prefix-list](#) *named-item* [apply-path](#)

Tree [apply-path](#)

Description Commands in this context configure the autogeneration of address prefixes for IPv6 address prefix match lists.

Introduced 25.3.R2

Platforms 7705 SAR-1

bgp-peers [[criterion-index](#)] *number*

Synopsis Enter the **bgp-peers** list instance

Context **configure** [filter match-list ipv6-prefix-list](#) *named-item* [apply-path bgp-peers](#) *number*

Tree [bgp-peers](#)

Description Commands in this context configure the unique index for BGP peers.

Introduced 25.3.R2

Platforms 7705 SAR-1

[[criterion-index](#)] *number*

Synopsis Index defining BGP peers for prefix autogeneration

Context **configure** [filter match-list ipv6-prefix-list](#) *named-item* [apply-path bgp-peers](#) *number*

prefix-exclude **[ipv6-prefix]** *ipv6-prefix*

Synopsis	Add a list entry for prefix-exclude
Context	configure filter match-list ipv6-prefix-list <i>named-item</i> prefix-exclude <i>ipv6-prefix</i>
Tree	prefix-exclude
Description	Commands in this context exclude IPv6 prefixes from the prefix match list. This command is mutually exclusive with the apply-path command.
Max. instances	512
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-prefix*

Synopsis	IPv6 prefix to be added to the prefix list
Context	configure filter match-list ipv6-prefix-list <i>named-item</i> prefix-exclude <i>ipv6-prefix</i>
Tree	prefix-exclude
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

port-list [[port-list-name](#)] *named-item*

Synopsis	Enter the port-list list instance
Context	configure filter match-list port-list <i>named-item</i>
Tree	port-list
Max. instances	5120
Introduced	25.3.R2
Platforms	7705 SAR-1

[port-list-name] *named-item*

Synopsis	Port list name
Context	configure filter match-list port-list <i>named-item</i>
Tree	port-list
Description	This command specifies the port list name. If special characters are used (#, \$, spaces, and so on), the string must be enclosed within double quotes.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter match-list port-list <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

port [[value](#)] *number*

Synopsis	Add a list entry for port
Context	configure filter match-list port-list <i>named-item</i> port <i>number</i>

Tree	port
Introduced	25.3.R2
Platforms	7705 SAR-1

[value] *number*

Synopsis	Port value
Context	configure filter match-list port-list <i>named-item</i> port <i>number</i>
Tree	port
Range	0 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

[range](#) [start](#) *number* [end](#) *number*

Synopsis	Add a list entry for range
Context	configure filter match-list port-list <i>named-item</i> range start <i>number</i> end <i>number</i>
Tree	range
Introduced	25.3.R2
Platforms	7705 SAR-1

[start](#) *number*

Synopsis	Lower bound of the port list range
Context	configure filter match-list port-list <i>named-item</i> range start <i>number</i> end <i>number</i>
Tree	range
Range	0 to 65534
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

[end](#) *number*

Synopsis	Upper bound of the port list range
----------	------------------------------------

Context	configure filter match-list port-list <i>named-item</i> range start <i>number</i> end <i>number</i>
Tree	range
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-list [[protocol-list-name](#)] *named-item*

Synopsis	Enter the protocol-list list instance
Context	configure filter match-list protocol-list <i>named-item</i>
Tree	protocol-list
Max. instances	512
Introduced	25.3.R2
Platforms	7705 SAR-1

[protocol-list-name] *named-item*

Synopsis	Protocol list name
Context	configure filter match-list protocol-list <i>named-item</i>
Tree	protocol-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter match-list protocol-list <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol [[protocol-id](#)] (*number* | *keyword*)

Synopsis	Add a list entry for protocol
Context	configure filter match-list protocol-list <i>named-item</i> protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[protocol-id] (*number* | *keyword*)

Synopsis	IP protocol identifier
Context	configure filter match-list protocol-list <i>named-item</i> protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

md-auto-id

Synopsis	Enter the md-auto-id context
Context	configure filter md-auto-id
Tree	md-auto-id
Introduced	25.3.R2
Platforms	7705 SAR-1

filter-id-range

Synopsis	Enable the filter-id-range context
Context	configure filter md-auto-id filter-id-range
Tree	filter-id-range

Introduced	25.3.R2
Platforms	7705 SAR-1

end number

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the ID range
Context	configure filter md-auto-id filter-id-range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the ID range
Context	configure filter md-auto-id filter-id-range start number
Tree	start
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [policer-name] named-item

Synopsis	Enter the policer list instance
Context	configure filter policer named-item
Tree	policer

Description	Commands in this context configure policer options.
Max. instances	8192
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-name] *named-item*

Synopsis	Name of the policer for use in a filter policy
Context	configure filter policer <i>named-item</i>
Tree	policer
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter policer <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	Maximum burst size
Context	configure filter policer <i>named-item</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Notes	The following elements are part of a choice: (mbs and pir) or pps-pir .

Introduced	25.3.R2
Platforms	7705 SAR-1

pir *number*

Synopsis	Peak information rate
Context	configure <i>filter</i> <i>policer</i> <i>named-item</i> pir <i>number</i>
Tree	<i>pir</i>
Range	0 to 2000000000
Units	kilobps
Notes	The following elements are part of a choice: (mbs and pir) or pps-pir .
Introduced	25.3.R2
Platforms	7705 SAR-1

scope *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Policer scope
Context	configure <i>filter</i> <i>policer</i> <i>named-item</i> scope <i>keyword</i>
Tree	<i>scope</i>
Description	<p>This command configures the scope for the policer object.</p> <p>When the system scope is configured, it creates an instance of the policer for each direction immediately after the policer is configured and shares the instance with all filter entries that reference that policer name applied in the same direction.</p> <p>When the filter scope is configured, it configures the policer instance to be shared by rate-limit entries that are part of the same filter policy and are applied in the same direction.</p>
Options	<i>filter</i> – Policer shared by entries in same filter <i>system</i> – Single policer shared by the system
Default	<i>filter</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

redirect-policy [[redirect-policy-name](#)] *named-item*

Synopsis	Enter the redirect-policy list instance
Context	configure filter redirect-policy <i>named-item</i>
Tree	redirect-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

[redirect-policy-name] *named-item*

Synopsis	Redirect policy name
Context	configure filter redirect-policy <i>named-item</i>
Tree	redirect-policy
Description	This command specifies the redirect policy name. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the redirect policy
Context	configure filter redirect-policy <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter redirect-policy <i>named-item</i> description <i>description</i>

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination [[destination-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the destination list instance
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	destination
Introduced	25.3.R2
Platforms	7705 SAR-1

[destination-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address and type of destination
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	destination
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the destination
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

ping-test

Synopsis	Enable the ping-test context
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ping-test
Tree	ping-test
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-count *number*

Synopsis	Number of consecutive requests that fail before destination is declared unreachable
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ping-test drop-count <i>number</i>
Tree	drop-count
Range	1 to 60
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-down *number*

Synopsis	Time for the system to be held down if this test has marked it unreachable
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ping-test hold-down <i>number</i>
Tree	hold-down

Range	0 to 86400
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time between consecutive requests which are sent to the far end host
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ping-test interval <i>number</i>
Tree	interval
Range	1 to 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address to use in the IP packet of the ping test
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ping-test source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time required to receive a response from the far end host
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) ping-test timeout <i>number</i>
Tree	timeout
Range	1 to 60
Units	seconds

Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Priority for this destination
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) priority <i>number</i>
Tree	priority
Range	1 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

unicast-rt-test

Synopsis	Enable the unicast-rt-test context
Context	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) unicast-rt-test
Tree	unicast-rt-test
Introduced	25.3.R2
Platforms	7705 SAR-1

notify-dest-change *boolean*

Synopsis	Send notifications when the active destination changes
Context	configure filter redirect-policy <i>named-item</i> notify-dest-change <i>boolean</i>
Tree	notify-dest-change
Description	<p>When configured to true, notifications (such as Log and SNMP) are sent when the active destination of a redirect policy changes. No notification is sent when there are no more active destinations (as this scenario is covered by another notification).</p> <p>When configured to false, the notification generation is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Routing context to use for route lookup
Context	configure filter redirect-policy <i>named-item</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

sticky-dest (*number* | *keyword*)

Synopsis	Time required by system before applying the current best destination as active destination
Context	configure filter redirect-policy <i>named-item</i> sticky-dest (<i>number</i> <i>keyword</i>)
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	25.3.R2
Platforms	7705 SAR-1

redirect-policy-binding [[binding-name](#)] *named-item*

Synopsis	Enter the redirect-policy-binding list instance
Context	configure filter redirect-policy-binding <i>named-item</i>
Tree	redirect-policy-binding
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[binding-name] *named-item*

Synopsis	Binding name
Context	configure filter redirect-policy-binding <i>named-item</i>
Tree	redirect-policy-binding
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

binding-operator *keyword*

Synopsis	Logical operator used to obtain the master test result
Context	configure filter redirect-policy-binding <i>named-item</i> binding-operator <i>keyword</i>
Tree	binding-operator
Description	This command configures the logical operator to use with the destinations' test results to obtain the master test result (the redirect policy binding test result).
Options	and, or
Default	and
Introduced	25.3.R2
Platforms	7705 SAR-1

redirect-policy [**redirect-policy-name**] *reference*

Synopsis	Enter the redirect-policy list instance
Context	configure filter redirect-policy-binding <i>named-item</i> redirect-policy <i>reference</i>
Tree	redirect-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

[redirect-policy-name] *reference*

Synopsis	Redirect policy name
Context	configure filter redirect-policy-binding <i>named-item</i> redirect-policy <i>reference</i>
Tree	redirect-policy
Reference	configure filter redirect-policy <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

destination [[destination-address](#)] *reference*

Synopsis	Add a list entry for destination
Context	configure filter redirect-policy-binding <i>named-item</i> redirect-policy <i>reference</i> destination <i>reference</i>
Tree	destination
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[destination-address] *reference*

Synopsis	IP address of redirect policy destination to binding
Context	configure filter redirect-policy-binding <i>named-item</i> redirect-policy <i>reference</i> destination <i>reference</i>
Tree	destination
Reference	configure filter redirect-policy <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

system-filter

Synopsis	Enter the system-filter context
Context	configure filter system-filter
Tree	system-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip [[ip-filter](#)] *reference*

Synopsis	Add a list entry for ip
Context	configure filter system-filter ip <i>reference</i>
Tree	ip

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-filter] *reference*

Synopsis	Active IPv4 system filter policy
Context	configure filter system-filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 [**ipv6-filter**] *reference*

Synopsis	Add a list entry for ipv6
Context	configure filter system-filter ipv6 <i>reference</i>
Tree	ipv6
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-filter] *reference*

Synopsis	Active IPv6 system filter policy
Context	configure filter system-filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

4.10 group-encryption commands

```
configure
- group-encryption
  - apply-groups reference
  - apply-groups-exclude reference
  - encryption-keygroup number
    - active-outbound-security-association reference
    - apply-groups reference
    - apply-groups-exclude reference
    - authentication-algorithm keyword
    - description description
    - encryption-algorithm keyword
    - keygroup-name named-item-64-or-empty
    - security-association number
      - apply-groups reference
      - apply-groups-exclude reference
      - authentication-key encrypted-leaf-hex
      - encryption-key encrypted-leaf-hex
  - group-encryption-label number
```

4.10.1 group-encryption command descriptions

group-encryption

Synopsis	Enter the group-encryption context
Context	configure group-encryption
Tree	group-encryption
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-keygroup [[id](#)] *number*

Synopsis	Enter the encryption-keygroup list instance
Context	configure group-encryption encryption-keygroup <i>number</i>
Tree	encryption-keygroup
Max. instances	127
Introduced	25.3.R2
Platforms	7705 SAR-1

[\[id\]](#) *number*

Synopsis	Encryption key group ID
Context	configure group-encryption encryption-keygroup <i>number</i>
Tree	encryption-keygroup
Range	1 to 127
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

active-outbound-security-association *reference*

Synopsis	SPI to use for egressing packets for the key group
Context	configure group-encryption encryption-keygroup <i>number</i> active-outbound-security-association <i>reference</i>

Tree	active-outbound-security-association
Reference	configure group-encryption encryption-keygroup <i>number</i> security-association <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-algorithm *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Hashing algorithm used for the authentication function
Context	configure group-encryption encryption-keygroup <i>number</i> authentication-algorithm <i>keyword</i>
Tree	authentication-algorithm
Options	sha256, sha512
Default	sha256
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure group-encryption encryption-keygroup <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-algorithm *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encryption algorithm for encryption on ESP
Context	configure group-encryption encryption-keygroup <i>number</i> encryption-algorithm <i>keyword</i>

Tree	encryption-algorithm
Options	aes128, aes256
Default	aes128
Introduced	25.3.R2
Platforms	7705 SAR-1

keygroup-name *named-item-64-or-empty*

Synopsis	Key group name
Context	configure group-encryption encryption-keygroup <i>number</i> keygroup-name <i>named-item-64-or-empty</i>
Tree	keygroup-name
String length	0 to 64
Default	
Introduced	25.3.R2
Platforms	7705 SAR-1

security-association [[security-parameter-index](#)] *number*

Synopsis	Enter the security-association list instance
Context	configure group-encryption encryption-keygroup <i>number</i> security-association <i>number</i>
Tree	security-association
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[security-parameter-index] *number*

Synopsis	Security Parameter Index (SPI)
Context	configure group-encryption encryption-keygroup <i>number</i> security-association <i>number</i>
Tree	security-association
Range	1 to 1023
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

authentication-key *encrypted-leaf-hex*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	configure group-encryption encryption-keygroup <i>number</i> security-association <i>number</i> authentication-key <i>encrypted-leaf-hex</i>
Tree	authentication-key
String length	1 to 115
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-key *encrypted-leaf-hex*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	configure group-encryption encryption-keygroup <i>number</i> security-association <i>number</i> encryption-key <i>encrypted-leaf-hex</i>
Tree	encryption-key

4.11.1 ipsec command descriptions

ipsec

Synopsis	Enter the ipsec context
Context	configure ipsec
Tree	ipsec
Description	Commands in this context configure Internet Protocol Security (IPsec) commands.
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile [[name](#)] *named-item*

Synopsis	Enter the cert-profile list instance
Context	configure ipsec cert-profile <i>named-item</i>
Tree	cert-profile
Description	Commands in this context configure the certificate profile.
Max. instances	10200
Introduced	25.3.R2
Platforms	7705 SAR-1

[[name](#)] *named-item*

Synopsis	Certificate profile name
Context	configure ipsec cert-profile <i>named-item</i>
Tree	cert-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the certificate profile
----------	---

Context	configure ipsec cert-profile <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure ipsec cert-profile <i>named-item</i> entry <i>number</i>
Tree	entry
Description	Commands in this context configure the certificate profile entry.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	Certificate profile entry ID
Context	configure ipsec cert-profile <i>named-item</i> entry <i>number</i>
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

cert *pki-file-name*

Synopsis	File name of the imported certificate for the entry
Context	configure ipsec cert-profile <i>named-item</i> entry <i>number</i> cert <i>pki-file-name</i>
Tree	cert
String length	1 to 95
Introduced	25.3.R2

Platforms 7705 SAR-1

compare-chain-include *reference*

Synopsis CA profile to include in the compare-chain

Context **configure** [ipsec cert-profile](#) *named-item* [entry number](#) [compare-chain-include](#) *reference*

Tree [compare-chain-include](#)

Description This command specifies the Certificate Authority (CA) that needs to be included in the compare-chain for the entry. This configuration is required in instances where the configured root CA is cross-signed by another CA.

Reference **configure** [system security pki ca-profile](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-1

key *pki-file-name*

Synopsis File name of the imported key used for authentication

Context **configure** [ipsec cert-profile](#) *named-item* [entry number](#) [key](#) *pki-file-name*

Tree [key](#)

String length 1 to 95

Introduced 25.3.R2

Platforms 7705 SAR-1

rsa-signature *keyword*

Synopsis Signature scheme for the RSA key

Context **configure** [ipsec cert-profile](#) *named-item* [entry number](#) [rsa-signature](#) *keyword*

Tree [rsa-signature](#)

Options pkcs1, pss

Default pkcs1

Introduced 25.3.R2

Platforms 7705 SAR-1

send-chain

Synopsis Enter the **send-chain** context

Context	configure ipsec cert-profile <i>named-item</i> entry <i>number</i> send-chain
Tree	send-chain
Description	Commands in this context allow the system to send additional CA certificates to the peer. These additional CA certificates must be in the certificate chain of the certificate specified by the cert command in the same entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile *reference*

Synopsis	CA certificate to send to the peer
Context	configure ipsec cert-profile <i>named-item</i> entry <i>number</i> send-chain ca-profile <i>reference</i>
Tree	ca-profile
Reference	configure system security pki ca-profile <i>named-item</i>
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

client-db [[name](#)] *named-item*

Synopsis	Enter the client-db list instance
Context	configure ipsec client-db <i>named-item</i>
Tree	client-db
Max. instances	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec client database name
Context	configure ipsec client-db <i>named-item</i>
Tree	client-db
String length	1 to 32
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the client database
Context	configure ipsec client-db <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

client [[id](#)] *number*

Synopsis	Enter the client list instance
Context	configure ipsec client-db <i>named-item</i> client <i>number</i>
Tree	client
Description	Commands in this context configure the IPsec client entry in the client database.
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	Client ID
Context	configure ipsec client-db <i>named-item</i> client <i>number</i>
Tree	client
Range	1 to 8000
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec client action
Context	configure <i>ipsec client-db</i> <i>named-item</i> <i>client</i> <i>number</i> <i>action</i> <i>keyword</i>
Tree	<i>action</i>
Options	accept – Accept the IPsec client reject – Reject the IPsec client
Default	accept
Introduced	25.7.R1
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the database client
Context	configure <i>ipsec client-db</i> <i>named-item</i> <i>client</i> <i>number</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

client-name *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client name
Context	configure <i>ipsec client-db</i> <i>named-item</i> <i>client</i> <i>number</i> <i>client-name</i> <i>named-item</i>
Tree	<i>client-name</i>
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

credential

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the credential context
Context	configure <i>ipsec client-db</i> <i>named-item</i> <i>client</i> <i>number</i> <i>credential</i>
Tree	<i>credential</i>
Description	Commands in this context authenticate peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf-hex-without-prefix*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key used to authenticate peers
Context	configure <i>ipsec client-db</i> <i>named-item</i> <i>client</i> <i>number</i> <i>credential</i> <i>pre-shared-key</i> <i>encrypted-leaf-hex-without-prefix</i>
Tree	<i>pre-shared-key</i>
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

identification

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the identification context
Context	configure <i>ipsec client-db</i> <i>named-item</i> <i>client</i> <i>number</i> <i>identification</i>
Tree	<i>identification</i>
Introduced	25.3.R2

Platforms7705 SAR-1

idi

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the idi context
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi
Tree	idi
Introduced	25.3.R2
Platforms	7705 SAR-1

any *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any IDi value as a match
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi <i>any</i> <i>boolean</i>
Tree	<i>any</i>
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regexp , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *display-string-or-empty*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the match criteria for the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi fqdn <i>display-string-or-empty</i>
Tree	fqdn

String length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn-suffix *display-string-or-empty*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN suffix used as the match criteria for the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi fqdn-suffix <i>display-string-or-empty</i>
Tree	fqdn-suffix
String length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-prefix *ipv4-prefix*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 prefix used as the match criteria for the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi ipv4-prefix <i>ipv4-prefix</i>
Tree	ipv4-prefix
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-prefix-any *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv4 prefix as a match for the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification <i>idi</i> ipv4-prefix-any <i>boolean</i>
Tree	ipv4-prefix-any
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix *ipv6-prefix*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 prefix used as the match criteria for the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification <i>idi</i> ipv6-prefix <i>ipv6-prefix</i>
Tree	ipv6-prefix
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-any *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv6 prefix as a match for the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification <i>idi</i> ipv6-prefix-any <i>boolean</i>

Tree	ipv6-prefix-any
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

regex *display-string-or-empty*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Regular expression pattern used to match the IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi regex <i>display-string-or-empty</i>
Tree	regex
String length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.7.R1
Platforms	7705 SAR-1

rfc822 *display-string-or-empty*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Email address (RFC 822) used as match criteria for IDi
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi rfc822 <i>display-string-or-empty</i>
Tree	rfc822
String length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regex , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

rfc822-suffix *display-string-or-empty***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Email address domain (RFC 822) as IDi match criteria
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification idi rfc822-suffix <i>display-string-or-empty</i>
Tree	rfc822-suffix
String length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , regexp , rfc822 , or rfc822-suffix .
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-prefix**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the peer-ip-prefix context
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification peer-ip-prefix
Tree	peer-ip-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP prefix used as the match criteria
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification peer-ip-prefix ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix

Notes	The following elements are part of a mandatory choice: ip-prefix , ipv4-only , or ipv6-only .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-only boolean

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv4 address as a match
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification peer-ip-prefix ipv4-only <i>boolean</i>
Tree	ipv4-only
Notes	The following elements are part of a mandatory choice: ip-prefix , ipv4-only , or ipv6-only .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-only boolean

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv6 address as a match
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> identification peer-ip-prefix ipv6-only <i>boolean</i>
Tree	ipv6-only
Notes	The following elements are part of a mandatory choice: ip-prefix , ipv4-only , or ipv6-only .
Introduced	25.3.R2
Platforms	7705 SAR-1

local

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the local context
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> local
Tree	local
Introduced	25.7.R1
Platforms	7705 SAR-1

address-assignment

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the address-assignment context
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> local address-assignment
Tree	address-assignment
Introduced	25.7.R1
Platforms	7705 SAR-1

ipv4

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ipv4 context
Context	configure ipsec client-db <i>named-item</i> client <i>number</i> local address-assignment ipv4
Tree	ipv4
Description	Commands in this context configure the local address assignment for IPv4.
Introduced	25.7.R1
Platforms	7705 SAR-1

dhcp-server *named-item*

**WARNING:**

Introduced	25.3.R2
Platforms	7705 SAR-1

idi *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use IDi type in the IPsec client matching process
Context	configure ipsec client-db <i>named-item</i> match-list idi <i>boolean</i>
Tree	idi
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-prefix *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the peer tunnel IP address in the matching process
Context	configure ipsec client-db <i>named-item</i> match-list peer-ip-prefix <i>boolean</i>
Tree	peer-ip-prefix
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-policy [[id](#)] *number*

Synopsis	Enter the ike-policy list instance
Context	configure ipsec ike-policy <i>number</i>
Tree	ike-policy
Description	Commands in this context configure an Internet Key Exchange (IKE) policy.
Max. instances	2048
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	IKE policy ID
Context	configure ipsec ike-policy <i>number</i>
Tree	ike-policy
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure ipsec ike-policy <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

dpd

Synopsis	Enable the dpd context
Context	configure ipsec ike-policy <i>number</i> dpd
Tree	dpd
Description	Commands in this context configure the dead peer detection mechanism.
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	DPD interval
Context	configure ipsec ike-policy <i>number</i> dpd interval <i>number</i>
Tree	interval
Description	This command specifies the DPD interval.

Because more time is necessary to determine if there is incoming traffic, the actual time needed to bring down the tunnel is larger than the DPD interval multiplied by the value configured for maximum retry attempts.

Range	10 to 300
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

max-retries *number*

Synopsis	Maximum number of retries before the tunnel is removed
Context	configure ipsec ike-policy <i>number</i> dpd max-retries <i>number</i>
Tree	max-retries
Range	2 to 5
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

reply-only *boolean*

Synopsis	Initiate DPD request for incoming ESP or IKE packets
Context	configure ipsec ike-policy <i>number</i> dpd reply-only <i>boolean</i>
Tree	reply-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-transform *reference*

Synopsis	IKE transform instance associated with the IKE policy
Context	configure ipsec ike-policy <i>number</i> ike-transform <i>reference</i>
Tree	ike-transform
Description	This command specifies the IKE transform instance associated with the IKE policy. If multiple IDs are specified, the system selects an IKE transform based on the proposal of the peer. If the system is a tunnel initiator, it uses the configured IKE transform to generate the SA payload.

Reference	configure ipsec ike-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-version-1

Synopsis	Enter the ike-version-1 context
Context	configure ipsec ike-policy <i>number</i> ike-version-1
Tree	ike-version-1
Description	Commands in this context configure the IKE version 1 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: ike-version-1 or ike-version-2 .
Introduced	25.3.R2
Platforms	7705 SAR-1

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	configure ipsec ike-policy <i>number</i> ike-version-1 auth-method <i>keyword</i>
Tree	auth-method
Options	psk, plain-psk-xauth
Default	psk
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-mode *keyword*

Synopsis	Mode of operation
Context	configure ipsec ike-policy <i>number</i> ike-version-1 ike-mode <i>keyword</i>
Tree	ike-mode
Options	main, aggressive
Default	main
Introduced	25.3.R2

Platforms 7705 SAR-1

own-auth-method *keyword*

Synopsis Authentication method used with policy on its own side

Context **configure** [ipsec ike-policy](#) *number* [ike-version-1](#) **own-auth-method** *keyword*

Tree [own-auth-method](#)

Options symmetric

Default symmetric

Introduced 25.3.R2

Platforms 7705 SAR-1

ph1-responder-delete-notify *boolean*

Synopsis Send delete notification for IKEv1 phase 1 removal

Context **configure** [ipsec ike-policy](#) *number* [ike-version-1](#) **ph1-responder-delete-notify** *boolean*

Tree [ph1-responder-delete-notify](#)

Description When configured to **true**, a delete notification is sent to the peer when deleting an IKEv1 phase 1 SA for which it was the responder.
When configured to **false**, no notification is sent.

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

ike-version-2

Synopsis Enable the **ike-version-2** context

Context **configure** [ipsec ike-policy](#) *number* [ike-version-2](#)

Tree [ike-version-2](#)

Description Commands in this context configure the IKE version 2 mode of operation that the IKE policy uses.

Notes The following elements are part of a choice: **ike-version-1** or **ike-version-2**.

Introduced 25.3.R2

Platforms 7705 SAR-1

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	configure ipsec ike-policy <i>number</i> ike-version-2 auth-method <i>keyword</i>
Tree	auth-method
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap
Default	psk
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-eap-method *keyword*

Synopsis	Authentication method used for the remote peer
Context	configure ipsec ike-policy <i>number</i> ike-version-2 auto-eap-method <i>keyword</i>
Tree	auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the remote peer.
Options	psk, cert, psk-or-cert
Default	cert
Introduced	25.3.R2
Platforms	7705 SAR-1

ikev2-fragment

Synopsis	Enable the ikev2-fragment context
Context	configure ipsec ike-policy <i>number</i> ike-version-2 ikev2-fragment
Tree	ikev2-fragment
Description	Commands in this context configure IKEv2 protocol level fragmentation (RFC 7383).
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu *number*

Synopsis	Maximum size of the IKEv2 packet
----------	----------------------------------

Context	configure ipsec ike-policy <i>number</i> ike-version-2 ikev2-fragment mtu <i>number</i>
Tree	mtu
Range	512 to 9000
Units	octets
Default	1500
Introduced	25.3.R2
Platforms	7705 SAR-1

reassemble-timeout *number*

Synopsis	Timeout for reassembly of IKEv2 message fragments
Context	configure ipsec ike-policy <i>number</i> ike-version-2 ikev2-fragment reassemble-timeout <i>number</i>
Tree	reassemble-timeout
Range	1 to 5
Units	seconds
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

own-auth-method *keyword*

Synopsis	Authentication method used with IKE policy on own side
Context	configure ipsec ike-policy <i>number</i> ike-version-2 own-auth-method <i>keyword</i>
Tree	own-auth-method
Options	symmetric, psk, cert, eap-only
Default	symmetric
Introduced	25.3.R2
Platforms	7705 SAR-1

own-auto-eap-method *keyword*

Synopsis	Authentication method used on its own side
Context	configure ipsec ike-policy <i>number</i> ike-version-2 own-auto-eap-method <i>keyword</i>
Tree	own-auto-eap-method

Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the peer.
Options	psk, cert
Default	cert
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk-required *boolean*

Synopsis	Force the use of PPK
Context	configure ipsec ike-policy <i>number</i> ike-version-2 ppk-required <i>boolean</i>
Tree	ppk-required
Description	When configured to true , the router is forced to use PPKs for the IKEv2 key derivation process. When configured to false , PPK use is optional, and the router can fall back to derive keys without PPK.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send-idr-after-eap-success *boolean*

Synopsis	Send IDr payload in last IKE authentication response
Context	configure ipsec ike-policy <i>number</i> ike-version-2 send-idr-after-eap-success <i>boolean</i>
Tree	send-idr-after-eap-success
Description	When configured to true , the Identification Responder (IDr) payload is added in the last IKE authentication response after an Extensible Authentication Protocol (EAP) Success packet is received. When configured to false , the IDr payload is not included in the last IKE.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-lifetime *number*

Synopsis	Lifetime of the Phase 2 IKE key
Context	configure ipsec ike-policy <i>number</i> ipsec-lifetime <i>number</i>

Tree	ipsec-lifetime
Range	1200 to 31536000
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

limit-init-exchange

Synopsis	Enter the limit-init-exchange context
Context	configure ipsec ike-policy <i>number</i> limit-init-exchange
Tree	limit-init-exchange
Description	Commands in this context limit the number of ongoing IKEv2 initial exchanges per tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of limiting initial IKE exchanges
Context	configure ipsec ike-policy <i>number</i> limit-init-exchange admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

reduced-max-exchange-timeout (*number* | *keyword*)

Synopsis	Maximum timeout for in-progress initial IKE exchange
Context	configure ipsec ike-policy <i>number</i> limit-init-exchange reduced-max-exchange-timeout (<i>number</i> <i>keyword</i>)
Tree	reduced-max-exchange-timeout
Description	This command configures the maximum timeout for the in-progress initial IKE exchange. If a new IKEv2 IKE_SA_INIT request is received when there is an ongoing IKEv2 initial exchange from the same peer, the timeout value of the existing exchange is set to this

specified value. If the **none** option is configured for this command, the timeout value remains unchanged.

Range	2 to 60
Units	seconds
Options	none
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

lockout

Synopsis	Enable the lockout context
Context	configure ipsec ike-policy <i>number</i> lockout
Tree	lockout
Description	Commands in this context specify the lockout mechanism for the IPsec tunnel. These commands apply only when the system acts as a tunnel responder.
Introduced	25.3.R2
Platforms	7705 SAR-1

block (*number* | *keyword*)

Synopsis	Time a client is blocked for failed authentications
Context	configure ipsec ike-policy <i>number</i> lockout block (<i>number</i> <i>keyword</i>)
Tree	block
Description	This command configures the time the client is blocked if the number of failed authentications exceeds the configured value within the specified duration.
Range	1 to 1440
Units	minutes
Options	infinite
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

duration *number*

Synopsis	Time interval for failed attempts threshold
----------	---

Context	configure ipsec ike-policy <i>number</i> lockout duration <i>number</i>
Tree	duration
Description	This command specifies the time interval in which the configured failed authentication count must be exceeded to trigger a lockout.
Range	1 to 60
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

failed-attempts *number*

Synopsis	Maximum failed authentications allowed in the duration
Context	configure ipsec ike-policy <i>number</i> lockout failed-attempts <i>number</i>
Tree	failed-attempts
Range	1 to 64
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

max-port-per-ip *number*

Synopsis	Maximum number of ports allowed under same IP address
Context	configure ipsec ike-policy <i>number</i> lockout max-port-per-ip <i>number</i>
Tree	max-port-per-ip
Description	This command configures the maximum number of ports allowed under the same IP address. When the threshold is exceeded and the client is locked out, all ports behind the IP address are blocked.
Range	1 to 32000
Default	16
Introduced	25.3.R2
Platforms	7705 SAR-1

match-peer-id-to-cert *boolean*

Synopsis	Check IKE peer ID during certificate authentication
----------	---

Context	configure ipsec ike-policy <i>number</i> match-peer-id-to-cert <i>boolean</i>
Tree	match-peer-id-to-cert
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nat-traversal

Synopsis	Enable the nat-traversal context
Context	configure ipsec ike-policy <i>number</i> nat-traversal
Tree	nat-traversal
Description	Commands in this context configure the Network Address Translation Traversal (NAT-T) functionality.
Introduced	25.3.R2
Platforms	7705 SAR-1

force *boolean*

Synopsis	Enable NAT-T in forced mode
Context	configure ipsec ike-policy <i>number</i> nat-traversal force <i>boolean</i>
Tree	force
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

force-keep-alive *boolean*

Synopsis	Continue sending keepalive packets (no expiry)
Context	configure ipsec ike-policy <i>number</i> nat-traversal force-keep-alive <i>boolean</i>
Tree	force-keep-alive
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

keep-alive-interval *number*

Synopsis	Keepalive interval for NAT-T
Context	configure ipsec ike-policy <i>number</i> nat-traversal keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Range	120 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

pfs

Synopsis	Enable the pfs context
Context	configure ipsec ike-policy <i>number</i> pfs
Tree	pfs
Description	Commands in this context configure perfect forward secrecy on the IPsec tunnel using the policy. PFS provides for a new Diffie-Hellman (DH) key exchange each time the Security Association (SA) key is renegotiated. When the SA key expires, another key is generated (if the SA remains up).
Introduced	25.3.R2
Platforms	7705 SAR-1

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	configure ipsec ike-policy <i>number</i> pfs dh-group <i>keyword</i>
Tree	dh-group
Description	This command specifies which DH group to use for calculating session keys. More bits provide a higher level of security, but require more processing.
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	25.3.R2
Platforms	7705 SAR-1

relay-unsolicited-cfg-attribute

Synopsis	Enter the relay-unsolicited-cfg-attribute context
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute
Tree	relay-unsolicited-cfg-attribute
Description	Commands in this context configure attributes returned from the source (such as a RADIUS server) that are returned to the IKEv2 remote-access tunnel client regardless if the client has requested the attribute in the CFG_REQUEST payload.
Introduced	25.3.R2
Platforms	7705 SAR-1

internal-ip4-address *boolean*

Synopsis	Return the IPv4 address from the source to the client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip4-address <i>boolean</i>
Tree	internal-ip4-address
Description	When configured to true , the system returns the IPv4 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

internal-ip4-dns *boolean*

Synopsis	Return IPv4 DNS server address from source to client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip4-dns <i>boolean</i>
Tree	internal-ip4-dns
Description	When configured to true , the system returns the IPv4 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

internal-ip4-netmask *boolean*

Synopsis	Return the IPv4 netmask from the source to the client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip4-netmask <i>boolean</i>
Tree	internal-ip4-netmask
Description	When configured to true , the system returns the IPv4 netmask from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the netmask in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

internal-ip6-address *boolean*

Synopsis	Return the IPv6 address from the source to the client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip6-address <i>boolean</i>
Tree	internal-ip6-address
Description	When configured to true , the system returns the IPv6 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

internal-ip6-dns *boolean*

Synopsis	Return IPv6 DNS server address from source to client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip6-dns <i>boolean</i>
Tree	internal-ip6-dns
Description	When configured to true , the system returns the IPv6 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

ike-transform *[id] number*

Synopsis Enter the **ike-transform** list instance

Context **configure ipsec ike-transform** *number*

Tree [ike-transform](#)

Max.
instances 4096

Introduced 25.3.R2

Platforms 7705 SAR-1

[id] number

Synopsis IKE transform instance ID

Context **configure ipsec ike-transform** *number*

Tree [ike-transform](#)

Range 1 to 4096

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

dh-group *keyword*

Synopsis Diffie-Helman group used to calculate session keys

Context **configure ipsec ike-transform** *number dh-group* *keyword*

Tree [dh-group](#)

Options group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21

Default group-2

Introduced 25.3.R2

Platforms 7705 SAR-1

ike-auth-algorithm *keyword*

Synopsis IKE authentication algorithm for IKE transform instance

Context	configure ipsec ike-transform <i>number</i> ike-auth-algorithm <i>keyword</i>
Tree	ike-auth-algorithm
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-encryption-algorithm *keyword*

Synopsis	IKE encryption algorithm for the IKE transform instance
Context	configure ipsec ike-transform <i>number</i> ike-encryption-algorithm <i>keyword</i>
Tree	ike-encryption-algorithm
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Default	aes-128
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-prf-algorithm *keyword*

Synopsis	PRF algorithm for the IKE transform instance
Context	configure ipsec ike-transform <i>number</i> ike-prf-algorithm <i>keyword</i>
Tree	ike-prf-algorithm
Description	<p>This command specifies the pseudo-random function algorithm used for IKE security association.</p> <p>If an encrypted algorithm such as AES-GCM is used for the IKE encryption algorithm, same-as-auth cannot be used for the IKE PRF algorithm.</p>
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, same-as-auth
Default	same-as-auth
Introduced	25.3.R2
Platforms	7705 SAR-1

isakmp-lifetime *number*

Synopsis	Phase 1 lifetime for the IKE transform instance
Context	configure ipsec ike-transform <i>number</i> isakmp-lifetime <i>number</i>

Tree	isakmp-lifetime
Range	1200 to 31536000
Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform [[id](#)] *number*

Synopsis	Enter the ipsec-transform list instance
Context	configure ipsec ipsec-transform <i>number</i>
Tree	ipsec-transform
Description	Commands in this context create an IPsec transform policy. IPsec transform policies can be shared. A change to the IPsec transform is allowed at any time. The change does not impact tunnels that have been established until they are renegotiated. If the change is required immediately, the tunnel must be cleared (reset) for force renegotiation.
Max. instances	2048
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	IPsec transform policy ID
Context	configure ipsec ipsec-transform <i>number</i>
Tree	ipsec-transform
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

esp-auth-algorithm *keyword*

Synopsis	Encapsulating Security Payload (ESP) authentication
Context	configure ipsec ipsec-transform <i>number</i> esp-auth-algorithm <i>keyword</i>
Tree	esp-auth-algorithm

Description	This command specifies the hashing algorithm used for the authentication function. Both ends of a manually configured tunnel must share the same configuration for the IPsec tunnel to enter the operational state.
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	25.3.R2
Platforms	7705 SAR-1

esp-encryption-algorithm *keyword*

Synopsis	Encryption algorithm for the IPsec transform session
Context	configure ipsec ipsec-transform <i>number</i> esp-encryption-algorithm <i>keyword</i>
Tree	esp-encryption-algorithm
Description	<p>This command specifies the encryption algorithm used for the IPsec session. Encryption applies only to ESP configurations. If encryption is not defined, ESP is not used.</p> <p>Both ends of a manually configured tunnel must share the same encryption algorithm for the IPsec tunnel to enter the operational state.</p> <p>When AES-GCM or AES-GMAC is configured:</p> <ul style="list-style-type: none"> the authentication encryption must be set to auth-encryption the system does not include the authentication algorithm in the ESP proposal of the SA payload IPsec transform cannot be used for manual keying
Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac
Default	aes-128
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-sequence-number *boolean*

Synopsis	Enable extended sequence numbering support
Context	configure ipsec ipsec-transform <i>number</i> extended-sequence-number <i>boolean</i>
Tree	extended-sequence-number
Description	When configured to true , this command enables 64-bit extended sequence numbering support. This numbering is used for high throughput CHILD_SA to avoid frequent re-keying caused by sequence numbering wrap around.

	When configured to false , only 32-bit sequence numbering is supported.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-lifetime *number*

Synopsis	Phase 2 lifetime for the IPsec transform session
Context	configure ipsec ipsec-transform <i>number</i> ipsec-lifetime <i>number</i>
Tree	ipsec-lifetime
Description	This command configures the lifetime of the Phase 2 IKE key. When unconfigured, the value is inherited from the IPsec lifetime configured in the corresponding IKE policy configured for the same IPsec gateway or IPsec tunnel.
Range	1200 to 31536000
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

pfs-dh-group *keyword*

Synopsis	Diffie-Hellman group used for PFS compilation
Context	configure ipsec ipsec-transform <i>number</i> pfs-dh-group <i>keyword</i>
Tree	pfs-dh-group
Description	This command specifies the DH group used for Perfect Forward Secrecy (PFS) compilation during CHILD_SA rekeying. When unconfigured, the value is inherited from the DH group value from the IPsec gateway or IPsec tunnel.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transport-mode-profile [[name](#)] *named-item*

Synopsis	Enter the ipsec-transport-mode-profile list instance
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i>
Tree	ipsec-transport-mode-profile

Description	Commands in this context configure IPsec-specific attributes that allow an IP tunnel (for example, GRE) to be protected by using IPsec transport mode.
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec transport mode profile name string
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i>
Tree	ipsec-transport-mode-profile
Description	This command specifies the name of the IPsec transport mode profile.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

key-exchange

Synopsis	Enter the key-exchange context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange
Tree	key-exchange
Description	Commands in this context configure the key exchange used each time the Security Association (SA) key is renegotiated.
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic

Synopsis	Enter the dynamic context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic
Tree	dynamic
Description	Commands in this context configure dynamic keying for the transport mode profile.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-establish *boolean*

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic auto-establish <i>boolean</i>
Tree	auto-establish
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cert

Synopsis	Enter the cert context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

Synopsis	Enter the status-verify context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl

Introduced	25.3.R2
Platforms	7705 SAR-1

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Enter the id context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none"> • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	25.3.R2

Platforms 7705 SAR-1

fqdn *fully-qualified-domain-name*

Synopsis FQDN used as the local ID IKE type

Context **configure ipsec ipsec-transport-mode-profile** *named-item* **key-exchange dynamic id**
fqdn *fully-qualified-domain-name*

Tree **fqdn**

String length 1 to 255

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4 *ipv4-unicast-address*

Synopsis IPv4 as the local ID type

Context **configure ipsec ipsec-transport-mode-profile** *named-item* **key-exchange dynamic id**
ipv4 *ipv4-unicast-address*

Tree **ipv4**

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IPv6 used as the local IKE ID type

Context **configure ipsec ipsec-transport-mode-profile** *named-item* **key-exchange dynamic id**
ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **ipv6**

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ike-policy *reference*

Synopsis IKE policy ID

Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic ike-policy reference
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform *reference*

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic ipsec-transform reference
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk

Synopsis	Enter the ppk context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id *reference*

Synopsis	PPK ID
----------	--------

Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

list *reference*

Synopsis	PPK list instance name
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>
Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for IKE authentication
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> key-exchange dynamic pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

esp number

Synopsis	Maximum number of recent records
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

Synopsis	Maximum number of historical IKE key records
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

replay-window number

Synopsis	Anti-replay window size
Context	configure ipsec ipsec-transport-mode-profile <i>named-item</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk-list [[name](#)] *named-item*

Synopsis	Enter the ppk-list list instance
Context	configure ipsec ppk-list <i>named-item</i>

Tree	ppk-list
Description	Commands in this context configure the list of Post-quantum Preshared Keys (PPKs) to use for IKEv2 key derivation, as described in RFC 8784.
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	PPK list instance name
Context	configure ipsec ppk-list <i>named-item</i>
Tree	ppk-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk [[ppk-id](#)] *named-item-64*

Synopsis	Enter the ppk list instance
Context	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Tree	ppk
Description	Commands in this context configure the attributes for a PPK within the list.
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[ppk-id] *named-item-64*

Synopsis	PPK ID
Context	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Tree	ppk
String length	1 to 64

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

value

Synopsis	Enable the value context
Context	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i> value
Tree	value
Description	Commands in this context configure the values for the specified PPK.
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii encrypted-leaf

Synopsis	PPK value as an ASCII string
Context	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i> value ascii <i>encrypted-leaf</i>
Tree	ascii
String length	1 to 115
Notes	The following elements are part of a mandatory choice: ascii or hex .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex encrypted-leaf-hex

Synopsis	PPK value as a hexadecimal string with prefix 0x
Context	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i> value hex <i>encrypted-leaf-hex</i>
Tree	hex
String length	1 to 115
Notes	The following elements are part of a mandatory choice: ascii or hex .
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure ipsec radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy [name] *named-item*

Synopsis	Enter the accounting-policy list instance
Context	configure ipsec radius accounting-policy <i>named-item</i>
Tree	accounting-policy
Description	Commands in this context configure RADIUS accounting policies to collect accounting statistics.
Max. instances	100
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	RADIUS accounting policy name
Context	configure ipsec radius accounting-policy <i>named-item</i>
Tree	accounting-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

include-radius-attribute

Synopsis	Enter the include-radius-attribute context
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute
Tree	include-radius-attribute

Description	Commands in this context specify the RADIUS attributes that are to be included in the RADIUS Authentication-Request messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

acct-stats *boolean*

Synopsis	Include accounting attributes in RADIUS packets
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute acct-stats <i>boolean</i>
Tree	acct-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute called-station-id <i>boolean</i>
Tree	called-station-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute calling-station-id <i>boolean</i>
Tree	calling-station-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

framed-ip-addr *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute framed-ip-addr <i>boolean</i>
Tree	framed-ip-addr
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute framed-ipv6-prefix <i>boolean</i>
Tree	framed-ipv6-prefix
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute nas-identifier <i>boolean</i>
Tree	nas-identifier
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute nas-ip-addr <i>boolean</i>
Tree	nas-ip-addr

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	configure ipsec radius accounting-policy <i>named-item</i> include-radius-attribute nas-port-id <i>boolean</i>
Tree	nas-port-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	configure ipsec radius accounting-policy <i>named-item</i> radius-server-policy <i>reference</i>
Tree	radius-server-policy
Reference	configure aaa radius server-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

update-interval

Synopsis	Enter the update-interval context
Context	configure ipsec radius accounting-policy <i>named-item</i> update-interval
Tree	update-interval
Description	Commands in this context determine how RADIUS interim-update packets are sent for IKEv2 remote-access tunnels.
Introduced	25.3.R2
Platforms	7705 SAR-1

jitter *number*

Synopsis	Jitter interval for sending each interim-update packet
----------	--

Context	configure ipsec radius accounting-policy <i>named-item</i> update-interval jitter <i>number</i>
Tree	jitter
Description	This command specifies the jitter interval for the RADIUS interim-update packets. When unconfigured, the system uses 10% of the update interval value.
Range	0 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	Update interval of the RADIUS accounting data
Context	configure ipsec radius accounting-policy <i>named-item</i> update-interval value <i>number</i>
Tree	value
Description	This command configures the update interval of the RADIUS accounting data. If a value of 0 is configured, no intermediate updates are sent.
Range	0 5 to 259200
Units	minutes
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-policy [[name](#)] *named-item*

Synopsis	Enter the authentication-policy list instance
Context	configure ipsec radius authentication-policy <i>named-item</i>
Tree	authentication-policy
Description	Commands in this context configure the RADIUS authentication policy associated with the IPsec gateway.
Max. instances	100
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	RADIUS authentication policy name
Context	configure ipsec radius authentication-policy <i>named-item</i>
Tree	authentication-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

include-radius-attribute

Synopsis	Enter the include-radius-attribute context
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes to be included in the RADIUS Authentication-Request messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute called-station-id <i>boolean</i>
Tree	called-station-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute calling-station-id <i>boolean</i>
Tree	calling-station-id

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

client-cert-subject-key-id *boolean*

Synopsis	Include the Subject Key Identifier
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute client-cert-subject-key-id <i>boolean</i>
Tree	client-cert-subject-key-id
Description	When configured to true , the Subject Key Identifier of the certificate of the peer is included in the RADIUS Access-Request packet as VSA: Alc-Subject-Key-Identifier.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute nas-identifier <i>boolean</i>
Tree	nas-identifier
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute nas-ip-addr <i>boolean</i>
Tree	nas-ip-addr
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	configure ipsec radius authentication-policy <i>named-item</i> include-radius-attribute nas-port-id <i>boolean</i>
Tree	nas-port-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

password *encrypted-leaf*

Synopsis	Password used in RADIUS access requests
Context	configure ipsec radius authentication-policy <i>named-item</i> password <i>encrypted-leaf</i>
Tree	password
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	configure ipsec radius authentication-policy <i>named-item</i> radius-server-policy <i>reference</i>
Tree	radius-server-policy
Reference	configure aaa radius server-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

show-ipsec-keys *boolean*

Synopsis	Show IPsec IKE and ESP keys in the output
Context	configure ipsec show-ipsec-keys <i>boolean</i>
Tree	show-ipsec-keys
Description	When configured to true , this command allows IPsec keys to be (optionally) included in the display output of certain debug and admin commands.

When configured to **false**, the key display is disabled.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static-sa [[name](#)] *named-item*

Synopsis	Enter the static-sa list instance
Context	configure ipsec static-sa <i>named-item</i>
Tree	static-sa
Max. instances	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Static SA name
Context	configure ipsec static-sa <i>named-item</i>
Tree	static-sa
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication

Synopsis	Enable the authentication context
Context	configure ipsec static-sa <i>named-item</i> authentication
Tree	authentication
Introduced	25.3.R2
Platforms	7705 SAR-1

algorithm *keyword*

Synopsis	Authentication algorithm used for an IPsec manual SA
Context	configure ipsec static-sa <i>named-item</i> authentication algorithm <i>keyword</i>
Tree	algorithm
Options	md5, sha1
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

key *encrypted-leaf*

Synopsis	Key used for the authentication algorithm
Context	configure ipsec static-sa <i>named-item</i> authentication key <i>encrypted-leaf</i>
Tree	key
String length	1 to 54
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *named-item*

Synopsis	Text description
Context	configure ipsec static-sa <i>named-item</i> description <i>named-item</i>
Tree	description
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Direction to which the static SA entry can be applied
Context	configure ipsec static-sa <i>named-item</i> direction <i>keyword</i>
Tree	direction
Options	inbound, outbound, bidirectional

Default	bidirectional
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol *keyword*

Synopsis	IPsec protocol used with the static SA
Context	configure ipsec static-sa <i>named-item</i> protocol <i>keyword</i>
Tree	protocol
Options	ah, esp
Default	esp
Introduced	25.3.R2
Platforms	7705 SAR-1

spi *number*

Synopsis	Security Parameter Index (SPI) for the static SA
Context	configure ipsec static-sa <i>named-item</i> spi <i>number</i>
Tree	spi
Description	<p>This command specifies the SPI for the static SA.</p> <p>When the direction command is set to inbound, the SPI is used to look up the instruction to verify and decrypt the incoming IPsec packets. When the direction command is set to outbound, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p> <p>When unconfigured, the static SA cannot be used.</p>
Range	256 to 16383
Introduced	25.3.R2
Platforms	7705 SAR-1

trust-anchor-profile [[name](#)] *named-item*

Synopsis	Enter the trust-anchor-profile list instance
Context	configure ipsec trust-anchor-profile <i>named-item</i>
Tree	trust-anchor-profile
Max. instances	10128

Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *named-item*

Synopsis Trust anchor profile name for IPsec tunnel or gateway
Context **configure** [ipsec trust-anchor-profile](#) *named-item*
Tree [trust-anchor-profile](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

trust-anchor [[ca-profile](#)] *reference*

Synopsis Add a list entry for **trust-anchor**
Context **configure** [ipsec trust-anchor-profile](#) *named-item* [trust-anchor](#) *reference*
Tree [trust-anchor](#)
Description Commands in this context configure a CA profile as a trust anchor CA.
Max. instances 8
Introduced 25.3.R2
Platforms 7705 SAR-1

[ca-profile] *reference*

Synopsis Name of the CA profile as a trust anchor profile
Context **configure** [ipsec trust-anchor-profile](#) *named-item* [trust-anchor](#) *reference*
Tree [trust-anchor](#)
Reference **configure** [system security pki ca-profile](#) *named-item*
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

ts-list [[name](#)] *named-item*

Synopsis	Enter the ts-list list instance
Context	configure ipsec ts-list <i>named-item</i>
Tree	ts-list
Description	Commands in this context configure Traffic Selector (TS) settings.
Max. instances	32768
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Traffic Selector (TS) list name
Context	configure ipsec ts-list <i>named-item</i>
Tree	ts-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

local

Synopsis	Enter the local context
Context	configure ipsec ts-list <i>named-item</i> local
Tree	local
Description	Commands in this context configure a local TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i>

Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	TS list entry ID
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i>
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Enable the address context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> address prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
----------	---------------------------------

Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> address range
Tree	range
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Lower bound of the IP address range for the entry
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> address range begin (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	begin
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Upper bound of the IP address range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> address range end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	end
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Enable the protocol context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	25.3.R2
Platforms	7705 SAR-1

any

Synopsis	Match any protocol ID
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Enable the id context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp
Tree	icmp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.

Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp port-range begin-icmp-type <i>number</i>
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp port-range end-icmp-code <i>number</i>
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp port-range end-icmp-type <i>number</i>
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6

Synopsis	Enter the icmp6 context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6 opaque

Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6 port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6 port-range begin-icmp-type <i>number</i>
Tree	begin-icmp-type
Range	0 to 255

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6 port-range end-icmp-code <i>number</i>
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id icmp6 port-range end-icmp-type <i>number</i>
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mipv6

Synopsis	Enter the mipv6 context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id mipv6
Tree	mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id mipv6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id mipv6 port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id mipv6 port-range begin <i>number</i>
Tree	begin
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id mipv6 port-range end <i>number</i>

Tree	end
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-id-with-any-port (*keyword* | *number*)

Synopsis	Protocol ID that accepts any port value
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id protocol-id-with-any-port (<i>keyword</i> <i>number</i>)
Tree	protocol-id-with-any-port
Range	1 to 255
Options	icmp, tcp, udp, icmp6, sctp, mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

sctp

Synopsis	Enter the sctp context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id sctp
Tree	sctp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id sctp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.

Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id sctp port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id sctp port-range begin <i>number</i>
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id sctp port-range end <i>number</i>
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id tcp
Tree	tcp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id tcp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id tcp port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id tcp port-range begin <i>number</i>
Tree	begin

Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id tcp port-range end number
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id udp
Tree	udp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> local entry <i>number</i> protocol id udp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2

Platforms 7705 SAR-1

port-range

Synopsis Enable the **port-range** context

Context **configure** [ipsec ts-list](#) *named-item* [local entry](#) *number* [protocol id](#) [udp](#) [port-range](#)

Tree [port-range](#)

Notes The following elements are part of a choice: **opaque** or **port-range**.

Introduced 25.3.R2

Platforms 7705 SAR-1

begin *number*

Synopsis Lower bound of the port range

Context **configure** [ipsec ts-list](#) *named-item* [local entry](#) *number* [protocol id](#) [udp](#) [port-range](#) [begin](#) *number*

Tree [begin](#)

Range 0 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

end *number*

Synopsis Upper bound of the port range

Context **configure** [ipsec ts-list](#) *named-item* [local entry](#) *number* [protocol id](#) [udp](#) [port-range](#) [end](#) *number*

Tree [end](#)

Range 0 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

remote

Synopsis Enter the **remote** context

Context	configure ipsec ts-list <i>named-item</i> remote
Tree	remote
Description	Commands in this context configure a remote TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	TS list entry ID
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i>
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address

Synopsis	Enable the address context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> address prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> address range
Tree	range
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Lower bound of the IP address range for the entry
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> address range begin (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	begin
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Upper bound of the IP address range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> address range end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	end
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

protocol

Synopsis	Enable the protocol context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	25.3.R2
Platforms	7705 SAR-1

any

Synopsis	Match any protocol ID
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Enable the id context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp
Tree	icmp

Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

begin-icmp-type *number*

Synopsis Lower bound of the ICMP type range

Context **configure** [ipsec ts-list](#) *named-item* [remote entry](#) *number* [protocol id icmp](#) [port-range](#) [begin-icmp-type](#) *number*

Tree [begin-icmp-type](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

end-icmp-code *number*

Synopsis Upper bound of the ICMP code range

Context **configure** [ipsec ts-list](#) *named-item* [remote entry](#) *number* [protocol id icmp](#) [port-range](#) [end-icmp-code](#) *number*

Tree [end-icmp-code](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

end-icmp-type *number*

Synopsis Upper bound of the ICMP type range

Context **configure** [ipsec ts-list](#) *named-item* [remote entry](#) *number* [protocol id icmp](#) [port-range](#) [end-icmp-type](#) *number*

Tree [end-icmp-type](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

icmp6

Synopsis	Enter the icmp6 context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
----------	------------------------------------

Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6 port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6 port-range begin-icmp-type <i>number</i>
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6 port-range end-icmp-code <i>number</i>
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id icmp6 port-range end-icmp-type <i>number</i>
Tree	end-icmp-type

Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mipv6

Synopsis	Enter the mipv6 context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id mipv6
Tree	mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id mipv6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id mipv6 port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id mipv6 port-range begin <i>number</i>
Tree	begin
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id mipv6 port-range end <i>number</i>
Tree	end
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-id-with-any-port (*keyword* | *number*)

Synopsis	Protocol ID that accepts any port value
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id protocol-id-with-any-port (<i>keyword</i> <i>number</i>)
Tree	protocol-id-with-any-port
Range	1 to 255
Options	icmp, tcp, udp, icmp6, sctp, mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

sctp

Synopsis	Enter the sctp context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id sctp
Tree	sctp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id sctp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id sctp port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id sctp port-range begin <i>number</i>
Tree	begin

Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id sctp port-range end number
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id tcp
Tree	tcp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id tcp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2

Platforms 7705 SAR-1

port-range

Synopsis Enable the **port-range** context

Context **configure** [ipsec ts-list](#) *named-item* [remote entry](#) *number* [protocol id tcp](#) [port-range](#)

Tree [port-range](#)

Notes The following elements are part of a choice: **opaque** or **port-range**.

Introduced 25.3.R2

Platforms 7705 SAR-1

begin *number*

Synopsis Lower bound of the port range

Context **configure** [ipsec ts-list](#) *named-item* [remote entry](#) *number* [protocol id tcp](#) [port-range](#) [begin](#) *number*

Tree [begin](#)

Range 0 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

end *number*

Synopsis Upper bound of the port range

Context **configure** [ipsec ts-list](#) *named-item* [remote entry](#) *number* [protocol id tcp](#) [port-range](#) [end](#) *number*

Tree [end](#)

Range 0 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

udp

Synopsis Enter the **udp** context

Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id udp
Tree	udp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	25.3.R2
Platforms	7705 SAR-1

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id udp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id udp port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	25.3.R2
Platforms	7705 SAR-1

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id udp port-range begin <i>number</i>
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>named-item</i> remote entry <i>number</i> protocol id udp port-range end <i>number</i>
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-template [id] number

Synopsis	Enter the tunnel-template list instance
Context	configure ipsec tunnel-template <i>number</i>
Tree	tunnel-template
Max. instances	2048
Introduced	25.3.R2
Platforms	7705 SAR-1

[id] number

Synopsis	Tunnel template ID
Context	configure ipsec tunnel-template <i>number</i>
Tree	tunnel-template
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-df-bit *boolean*

Synopsis	Clear the Do-not-Fragment (DF) bit
Context	configure ipsec tunnel-template <i>number</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean*

Synopsis	Enable traffic class copy upon decapsulation
Context	configure ipsec tunnel-template <i>number</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	<p>When configured to true, the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).</p> <p>When configured to false, the system does not copy the traffic class from the outer IP packet to the payload IP packet header upon decapsulation.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure ipsec tunnel-template <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

encapsulated-ip-mtu *number*

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure ipsec tunnel-template <i>number</i> encapsulated-ip-mtu <i>number</i>

Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	octets
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-generation

Synopsis	Enter the icmp-generation context
Context	configure ipsec tunnel-template <i>number</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-1

frag-required

Synopsis	Enter the frag-required context
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending ICMP messages
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state

Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Interval for sending ICMP messages
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6-generation

Synopsis	Enter the icmp6-generation context
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation
Tree	icmp6-generation
Introduced	25.3.R2
Platforms	7705 SAR-1

pkt-too-big

Synopsis	Enter the pkt-too-big context
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big
Tree	pkt-too-big
Description	Commands in this context configure values for the ICMPv6 Packet Too Big (PTB) messages. The system sends PTB messages if an IPv6 packet is received on the private side that is larger than 1280 bytes and also exceeds the private MTU of the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Maximum interval during which PTB messages can be sent
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big interval <i>number</i>
Tree	interval

Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

Synopsis	Max ICMPv6 messages that can be sent during interval
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big message-count <i>number</i>
Tree	message-count
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default-route *boolean*

Synopsis	Ignore any full range traffic selector in TSi
Context	configure ipsec tunnel-template <i>number</i> ignore-default-route <i>boolean</i>
Tree	ignore-default-route
Description	When configured to true , any full range traffic selector is ignored when creating a reverse route. When configured to false , no CHILD_SA is created if any full range traffic selector is included in TSi.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu *number*

Synopsis	Maximum size of the IP MTU for the payload packets
Context	configure ipsec tunnel-template <i>number</i> ip-mtu <i>number</i>
Tree	ip-mtu
Range	512 to 9000

Units	octets
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform *reference*

Synopsis	IPsec transform ID for the tunnel template
Context	configure ipsec tunnel-template <i>number</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

pmtu-discovery-aging *number*

Synopsis	Aging out time of the learned path MTU
Context	configure ipsec tunnel-template <i>number</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk-list *reference*

Synopsis	PPK list to use in the tunnel template
Context	configure ipsec tunnel-template <i>number</i> ppk-list <i>reference</i>
Tree	ppk-list
Description	This command specifies the PPK list to use in the tunnel template, which represents a list of PPKs available for the IPsec gateway. The actual PPK to use depends on the tunnel initiator.

Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

private-tcp-mss-adjust *number*

Synopsis	New TCP MSS value on the private side
Context	configure ipsec tunnel-template <i>number</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	<p>This command specifies the new (adjusted) TCP MSS value of TCP SYN packets on the private side.</p> <p>When unconfigured, the MSS value is derived from the received TCP SYN packet on the private side.</p>
Range	512 to 9000
Units	octets
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v4 *boolean*

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure ipsec tunnel-template <i>number</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v6 *boolean*

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure ipsec tunnel-template <i>number</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

Synopsis	New TCP MSS value on the public side
Context	configure ipsec tunnel-template <i>number</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	<p>This command specifies the new (adjusted) TCP MSS value for the TCP traffic in an IPsec tunnel which is sent from the public network to the private network. The system can use this value to adjust or insert the MSS option in the TCP SYN packet.</p> <p>When unconfigured, the MSS value is derived from the public MTU and IPsec overhead.</p>
Range	512 to 9000
Units	octets
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

replay-window *number*

Synopsis	Anti-replay window size for the tunnel template
Context	configure ipsec tunnel-template <i>number</i> replay-window <i>number</i>
Tree	replay-window
Range	32 64 128 256 512
Introduced	25.3.R2
Platforms	7705 SAR-1

reverse-route

Synopsis	Enter the reverse-route context
Context	configure ipsec tunnel-template <i>number</i> reverse-route
Tree	reverse-route
Description	Commands in this context configure the dynamic LAN-to-LAN (DL2L) tunnel reverse-route options for the tunnel template.
Introduced	25.3.R2

Platforms 7705 SAR-1

metric *number*

Synopsis	Metric used for DL2L tunnel reverse routes
Context	configure ipsec tunnel-template <i>number</i> reverse-route metric <i>number</i>
Tree	metric
Description	This command configures the metric for reverse routes. The system uses the metric when selecting a route to install in the route table.
Range	0 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Preference used for DL2L tunnel reverse routes
Context	configure ipsec tunnel-template <i>number</i> reverse-route preference <i>number</i>
Tree	preference
Description	This command specifies the route preference assigned to the DL2L tunnel reverse route. The system uses the preference when selecting a route to install in the route table.
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

sp-reverse-route *keyword*

Synopsis	Reverse route creation method in private service
Context	configure ipsec tunnel-template <i>number</i> sp-reverse-route <i>keyword</i>
Tree	sp-reverse-route
Description	This command allows the system to automatically create a reverse route based on dynamic LAN-to-LAN tunnel's TSi in private service.
Options	none, use-security-policy
Default	none

Introduced	25.3.R2
Platforms	7705 SAR-1

mda [mda-id] slot-mda

Synopsis	Add a list entry for mda
Context	configure isa nat-group number mda slot-mda
Tree	mda
Introduced	25.3.R2
Platforms	7705 SAR-1

[mda-id] slot-mda

Synopsis	MDA ID for ISA NAT group
Context	configure isa nat-group number mda slot-mda
Tree	mda
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

redundancy

Synopsis	Enter the redundancy context
Context	configure isa nat-group number redundancy
Tree	redundancy
Description	Commands in this context configure intra-chassis redundancy mode for the NAT group.
Introduced	25.3.R2
Platforms	7705 SAR-1

active-mda-limit *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of active ESA-VM or ISA members in the NAT group
Context	configure <i>isa nat-group number redundancy active-mda-limit number</i>
Tree	<i>active-mda-limit</i>
Description	<p>This command configures the number of active ESA-VM or ISA members in a NAT group.</p> <p>The system automatically selects which ESA-VMs or ISAs are active. In active/standby (A/S) redundancy mode, the correlation between ESA-VM or ISA members is direct, meaning each ESA-VM or ISA equates to one member. In active/active (A/A) redundancy mode, an individual ESA-VM or ISA may be associated with multiple members.</p> <p>For A/S redundancy, any surplus ESA-VMs or ISAs beyond the configured active threshold automatically transition to standby. These standby units remain idle until an active unit fails, at which point a standby unit takes over, handling traffic from only one failed active unit. This setup allows for the configuration of multiple standby units to provide resilience against several concurrent failures.</p> <p>In A/A redundancy, the combination of this command and the failed-mda-limit command guides the distribution of resources among ESA-VMs or ISAs, essentially defining how the members are structured.</p> <p>In both A/S and A/A modes, the system strives to maintain the configured number of active members as outlined by the active MDA limit, drawing from the pool of available spare resources to compensate for any failures. If the actual number of active members drops below this limit because of a lack of available spares, the NAT group status changes to degraded. In this state, traffic intended for the missing ESA-VM or ISA members (up to the active MDA limit) is blackholed. In Layer 2-aware NAT this condition can be circumvented where traffic can bypass NAT altogether and be directly routed within the internal network that may have an alternate path to a backup NAT system.</p>
Range	1 to 28
Introduced	25.3.R2
Platforms	7705 SAR-1

intra-chassis

Synopsis	Enter the intra-chassis context
----------	--

Context	configure isa nat-group <i>number</i> redundancy intra-chassis
Tree	intra-chassis
Notes	The following elements are part of a choice: inter-chassis or intra-chassis .

Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

isa [*isa-id*] *slot-mda*

Synopsis	Add a list entry for isa
Context	configure <i>isa</i> <i>tunnel-group</i> <i>number</i> <i>multi-active</i> <i>isa</i> <i>slot-mda</i>
Tree	<i>isa</i>
Notes	The following elements are part of a choice: esa , isa , or member-pool .
Introduced	25.3.R2
Platforms	7705 SAR-1

[isa-id] *slot-mda*

Synopsis	ISA ID associated with the tunnel member pool
Context	configure <i>isa</i> <i>tunnel-group</i> <i>number</i> <i>multi-active</i> <i>isa</i> <i>slot-mda</i>
Tree	<i>isa</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

member-pool *reference*

Synopsis	Tunnel-member pool name
Context	configure isa tunnel-group <i>number</i> multi-active member-pool <i>reference</i>
Tree	member-pool
Reference	configure isa tunnel-member-pool <i>named-item</i>
Notes	The following elements are part of a choice: esa , isa , or member-pool .
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *slot-mda*

Synopsis	Primary ISA IPsec module assigned for the tunnel group
Context	configure isa tunnel-group <i>number</i> primary <i>slot-mda</i>
Tree	primary
Notes	The following elements are part of a choice: multi-active or (backup and primary).
Introduced	25.3.R2
Platforms	7705 SAR-1

reassemble

Synopsis	Enter the reassemble context
Context	configure isa tunnel-group <i>number</i> reassemble
Tree	reassemble
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait-time *number*

Synopsis	Maximum time to receive fragments for packet reassembly
Context	configure isa tunnel-group <i>number</i> reassemble max-wait-time <i>number</i>
Tree	max-wait-time
Range	1 to 5000
Units	milliseconds
Introduced	25.3.R2

Platforms 7705 SAR-1

stats-collection

Synopsis Enter the **stats-collection** context

Context **configure** [isa](#) [tunnel-group](#) *number* [stats-collection](#)

Tree [stats-collection](#)

Description Commands in this context configure the ISA statistics collection.

Introduced 25.3.R2

Platforms 7705 SAR-1

isa-dp-cpu-usage *boolean*

Synopsis Collect statistics used to derive ISA DP CPU usage

Context **configure** [isa](#) [tunnel-group](#) *number* [stats-collection](#) [isa-dp-cpu-usage](#) *boolean*

Tree [isa-dp-cpu-usage](#)

Description When configured to **true**, this command collects statistics used to derive ISA CPU DP usage and impacts the ISA performance.

When configured to **false**, statistics are not collected.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

tunnel-member-pool [[name](#)] *named-item*

Synopsis Enter the **tunnel-member-pool** list instance

Context **configure** [isa](#) [tunnel-member-pool](#) *named-item*

Tree [tunnel-member-pool](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[[name](#)] *named-item*

Synopsis ISA tunnel-member pool name

Context **configure** [isa](#) [tunnel-member-pool](#) *named-item*

Tree	tunnel-member-pool
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure isa tunnel-member-pool <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

isa [[isa-id](#)] *slot-mda*

Synopsis	Add a list entry for isa
Context	configure isa tunnel-member-pool <i>named-item</i> isa <i>slot-mda</i>
Tree	isa
Max. instances	16
Notes	The following elements are part of a choice: esa or isa .
Introduced	25.3.R2
Platforms	7705 SAR-1

[isa-id] *slot-mda*

Synopsis	ISA ID associated with the tunnel member pool
Context	configure isa tunnel-member-pool <i>named-item</i> isa <i>slot-mda</i>
Tree	isa
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

4.13.1 lag command descriptions

lag [*lag-name*] *lag-interface*

Synopsis	Enter the lag list instance
Context	configure lag <i>lag-interface</i>
Tree	<i>lag</i>
Description	Commands in this context configure the Link Aggregation Group (LAG) attributes.
Introduced	25.3.R2
Platforms	7705 SAR-1

[lag-name] *lag-interface*

Synopsis	LAG name
Context	configure lag <i>lag-interface</i>
Tree	<i>lag</i>
Description	This command configures a LAG name or ID. The LAG name or ID must start with "lag-" followed by the lag name or ID, for example, <i>lag-newyork-to-boston</i> or <i>lag-700</i> .
String length	1 to 27
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

access

Synopsis	Enter the access context
Context	configure lag <i>lag-interface</i> access
Tree	<i>access</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

adapt-qos

Synopsis	Enter the adapt-qos context
Context	configure lag <i>lag-interface</i> access adapt-qos

Tree	adapt-qos
Introduced	25.3.R2
Platforms	7705 SAR-1

include-egr-hash-cfg *boolean*

Synopsis	Factor egress hashing into buffer and rate distribution
Context	configure lag <i>lag-interface</i> access adapt-qos include-egr-hash-cfg <i>boolean</i>
Tree	include-egr-hash-cfg
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	QoS adaptation mode
Context	configure lag <i>lag-interface</i> access adapt-qos mode <i>keyword</i>
Tree	mode
Options	link, distribute, port-fair
Introduced	25.3.R2
Platforms	7705 SAR-1

bandwidth *number*

Synopsis	Administrative bandwidth applied to this LAG
Context	configure lag <i>lag-interface</i> access bandwidth <i>number</i>
Tree	bandwidth
Range	1 to 6400000000
Units	bps
Introduced	25.3.R2
Platforms	7705 SAR-1

booking-factor *number*

Synopsis	Booking factor against the administrative bandwidth
----------	---

Context	configure lag lag-interface access booking-factor number
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the LAG
Context	configure lag lag-interface admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description very-long-description

Synopsis	Text description
Context	configure lag lag-interface description very-long-description
Tree	description
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-cost boolean

Synopsis	Allow LAG costing using operational aggregate bandwidth
Context	configure lag lag-interface dynamic-cost boolean
Tree	dynamic-cost
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

encap-type *keyword*

- 

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- 

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encapsulation type
Context	configure lag <i>lag-interface</i> encap-type <i>keyword</i>
Tree	encap-type
Options	null, dot1q, qinq
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-weight-threshold

Synopsis	Enter the hash-weight-threshold context
Context	configure lag <i>lag-interface</i> hash-weight-threshold
Tree	hash-weight-threshold
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword*

Synopsis	Action when the sum of the hash weight is not exceeded
Context	configure lag <i>lag-interface</i> hash-weight-threshold action <i>keyword</i>
Tree	action
Options	down, dynamic-cost, static-cost
Default	down
Introduced	25.3.R2
Platforms	7705 SAR-1

cost *number*

Synopsis	Static cost of the LAG
Context	configure lag <i>lag-interface</i> hash-weight-threshold cost <i>number</i>
Tree	cost
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	Sum of the hash weight values of all active LAG ports
Context	configure lag <i>lag-interface</i> hash-weight-threshold value <i>number</i>
Tree	value
Range	1 to 6400000
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time-down *number*

Synopsis	Delay time for reporting the LAG is down
Context	configure lag <i>lag-interface</i> hold-time-down <i>number</i>
Tree	hold-time-down
Range	1 to 2000
Units	deciseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP

Synopsis	Enable the lACP context
Context	configure lag <i>lag-interface</i> lACP
Tree	lACP
Introduced	25.3.R2
Platforms	7705 SAR-1

administrative-key *number*

Synopsis	Key to identify the channel group on each LACP port
Context	configure lag <i>lag-interface</i> lACP <i>administrative-key number</i>
Tree	<i>administrative-key</i>
Description	<p>This command configures the administrative key that identifies the channel group on each port configured to use LACP.</p> <p>In an MC-LAG configuration, both redundant nodes must be configured with the same key values. In any other case, the key is only locally significant.</p>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

fallback

Synopsis	Enable the fallback context
Context	configure lag <i>lag-interface</i> lACP <i>fallback</i>
Tree	<i>fallback</i>
Description	<p>Commands in this context enable LACP fallback. LACP fallback allows one or more designated links of an LACP-controlled LAG to go into forwarding mode if LACP is not yet operational after a configured timeout period. Links capable of forwarding traffic assume the Ethernet and IP characteristics configured for the LAG.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	LACP fallback mode
Context	configure lag <i>lag-interface</i> lACP <i>fallback mode keyword</i>
Tree	<i>mode</i>
Description	<p>This command configures the LACP fallback mode.</p> <p>The static mode enables a single member to forward traffic during fallback.</p>
Options	static
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

timeout *number*

Synopsis LACP fallback timeout interval

Context **configure** **lag** *lag-interface* **lACP** **fallback** **timeout** *number*

Tree **timeout**

Description This command configures the duration after which a link becomes active if no LACP PDUs are received within this timeout period.

Note: The user must first configure this command to a timeout interval of 90 before the **configure lag lACP-xmit-interval** command can change from **fast** to **slow**.

Range 4 to 3600

Units seconds

Default 4

Introduced 25.3.R2

Platforms 7705 SAR-1

mode *keyword*

Synopsis Mode in which LACP operates

Context **configure** **lag** *lag-interface* **lACP** **mode** *keyword*

Tree **mode**

Options passive, active

Default passive

Introduced 25.3.R2

Platforms 7705 SAR-1

system-id *mac-address*

Synopsis System ID

Context **configure** **lag** *lag-interface* **lACP** **system-id** *mac-address*

Tree **system-id**

Default 00:00:00:00:00:00

Introduced 25.3.R2

Platforms 7705 SAR-1

system-priority *number*

Synopsis	System priority value
Context	configure lag <i>lag-interface</i> lACP system-priority <i>number</i>
Tree	system-priority
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP-mux-control *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MUX machine control for LACP LAG in active/passive mode
Context	configure lag <i>lag-interface</i> lACP-mux-control <i>keyword</i>
Tree	lACP-mux-control
Options	coupled, independent
Default	coupled
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP-xmit-interval *keyword*

Synopsis	Time for periodic transmission
Context	configure lag <i>lag-interface</i> lACP-xmit-interval <i>keyword</i>
Tree	lACP-xmit-interval
Options	slow, fast
Default	fast
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP-xmit-stdby *boolean*

Synopsis	Allow LACP message transmission on standby links
----------	--

Context	configure lag <i>lag-interface</i> lACP-xmit-stdby <i>boolean</i>
Tree	lACP-xmit-stdby
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

lldp-member-template

Synopsis	Enter the lldp-member-template context
Context	configure lag <i>lag-interface</i> lldp-member-template
Tree	lldp-member-template
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-mac [[mac-type](#)] *keyword*

Synopsis	Enter the dest-mac list instance
Context	configure lag <i>lag-interface</i> lldp-member-template dest-mac <i>keyword</i>
Tree	dest-mac
Introduced	25.3.R2
Platforms	7705 SAR-1

[[mac-type](#)] *keyword*

Synopsis	Destination MAC address type
Context	configure lag <i>lag-interface</i> lldp-member-template dest-mac <i>keyword</i>
Tree	dest-mac
Options	nearest-bridge – Use the nearest bridge nearest-non-tpmr – Use nearest non-Two-Port MAC Relay (TPMR) nearest-customer – Use the nearest customer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

notification *boolean*

Synopsis	Enable LLDP notifications
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> notification <i>boolean</i>
Tree	notification
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port-id-subtype *keyword*

Synopsis	Encoding of the Port ID TLV transmitted to the peer
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> port-id-subtype <i>keyword</i>
Tree	port-id-subtype
Description	This command configures how to encode the Port ID TLV transmitted to the peer. The default setting tx-local (ifIndex value) is required by some versions of the NSP NSM-P to properly build the Layer 2 topology map using LLDP. Changing this value to transmit the ifName (tx-if-name) or ifAlias (tx-if-alias) in place of the ifIndex (tx-local) may affect the ability of the NSP NFM-P to build the Layer 2 topology map using LLDP.
Options	tx-if-alias – Transmit the ifAlias String (subtype 1) tx-if-name – Transmit the ifName string (subtype 5) tx-local – Transmit the interface ifIndex value (subtype 7)
Default	tx-local
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *boolean*

Synopsis	Enable LLDP received frame handling
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> receive <i>boolean</i>
Tree	receive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit *boolean*

Synopsis	Enable LLDP transmitted frame handling
Context	configure lag <i>lag-interface</i> lldp-member-template <i>dest-mac</i> keyword transmit <i>boolean</i>
Tree	transmit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-nearest-bridge *boolean*

Synopsis	Enable nearest bridge tunneling
Context	configure lag <i>lag-interface</i> lldp-member-template <i>dest-mac</i> keyword tunnel-nearest-bridge <i>boolean</i>
Tree	tunnel-nearest-bridge
Description	<p>When configured to true, this command enables nearest bridge tunneling.</p> <p>This command allows LLDP packets received on the port with the destination address of the nearest bridge to be tunneled without being intercepted on the local port. The dest-mac mac-type nearest-bridge must be disabled for tunneling to occur. This is applicable to NULL SAP Epipe and VPLS services only.</p> <p>When configured to false, nearest bridge tunneling is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-nearest-customer *boolean*

Synopsis	Enable nearest customer tunneling
Context	configure lag <i>lag-interface</i> lldp-member-template <i>dest-mac</i> keyword tunnel-nearest-customer <i>boolean</i>
Tree	tunnel-nearest-customer
Description	<p>When configured to true, the system allows LLDP packets received on the port with the destination address of the nearest customer to be tunneled without being intercepted on the local port.</p> <p>When configured to false, the system disables nearest customer tunneling.</p>
Default	true
Introduced	25.3.R2

Platforms 7705 SAR-1

tunnel-nearest-non-tpmr *boolean*

Synopsis	Enable the nearest non-TPMR tunneling
Context	configure lag <i>lag-interface</i> lldp-member-template <i>dest-mac</i> keyword tunnel-nearest-non-tpmr <i>boolean</i>
Tree	tunnel-nearest-non-tpmr
Description	When configured to true , the system allows LLDP packets received on the port with the destination address of the nearest non-TPMR to be tunneled without being intercepted on the local port. When configured to false , the system disables nearest non-TPMR tunneling.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-mgmt-address [**mgmt-address-system-type**] *keyword*

Synopsis	Enter the tx-mgmt-address list instance
Context	configure lag <i>lag-interface</i> lldp-member-template <i>dest-mac</i> keyword tx-mgmt-address <i>keyword</i>
Tree	tx-mgmt-address
Introduced	25.3.R2
Platforms	7705 SAR-1

[mgmt-address-system-type] *keyword*

Synopsis	Management address to transmit
Context	configure lag <i>lag-interface</i> lldp-member-template <i>dest-mac</i> keyword tx-mgmt-address <i>keyword</i>
Tree	tx-mgmt-address
Description	This command configures the management address to transmit. The user can choose to send the following addresses, or any combination of these: <ul style="list-style-type: none"> • system IPv4 address • system IPv6 address • out-of-band IPv4 address • out-of-band IPv6 address

	The system address is sent only once. The address must be configured for the specific version of the protocol to send the management address.
Options	oob – Transmit out-of-band IPv4 address for active CPM system – Transmit the system IP address system-ipv6 – Transmit the system IPv6 address oob-ipv6 – Transmit the out-of-band IPv6 address for active CPM
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of management address transmission
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> tx-mgmt-address <i>keyword</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-tlvs

Synopsis	Enter the tx-tlvs context
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> tx-tlvs
Tree	tx-tlvs
Description	<p>Commands in this context configure which LLDP TLVs to transmit. The TX TLVs, defined as a bitmap, include the basic set of LLDP TLVs whose transmission is allowed on the local LLDP agent by network management. Each bit in the bitmap corresponds to a TLV type associated with a specific optional TLV. Organizationally-specific TLVs are excluded from this bitmap.</p> <p>There is no bit reserved for the management address TLV type because transmission of management address TLVs are controlled by another object.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

port-desc *boolean*

Synopsis	Transmit port description TLVs
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> tx-tlvs port-desc <i>boolean</i>
Tree	port-desc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sys-cap *boolean*

Synopsis	Transmit system capabilities TLVs
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> tx-tlvs sys-cap <i>boolean</i>
Tree	sys-cap
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sys-desc *boolean*

Synopsis	Transmit system description TLVs
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> tx-tlvs sys-desc <i>boolean</i>
Tree	sys-desc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sys-name *boolean*

Synopsis	Transmit system name TLVs
Context	configure lag lag-interface lldp-member-template dest-mac <i>keyword</i> tx-tlvs sys-name <i>boolean</i>
Tree	sys-name

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address of the LAG
Context	configure lag <i>lag-interface</i> mac-address <i>mac-address</i>
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	7705 SAR-1

max-ports *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ports allowed in the LAG
Context	configure lag <i>lag-interface</i> max-ports <i>number</i>
Tree	max-ports
Description	<p>This command configures the maximum number of ports allowed in the LAG.</p> <p>This command must be configured to 64 when the LAG name is a numeric identifier in the range of 1 to 64. If the LAG name is a numeric identifier in the range of 65 to 800, this command must be configured to 32.</p>
Range	32 64
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operation mode of the LAG
Context	configure lag lag-interface mode <i>keyword</i>
Tree	mode
Options	access, network, hybrid
Default	network
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure lag lag-interface monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

port [[port-id](#)] *reference*

Synopsis	Enter the port list instance
Context	configure lag lag-interface port <i>reference</i>
Tree	port
Introduced	25.3.R2
Platforms	7705 SAR-1

[port-id] *reference*

Synopsis	Identifier to uniquely identify the port in the LAG
Context	configure lag lag-interface port <i>reference</i>
Tree	port
Reference	configure port <i>port</i>

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-weight (*number* | *keyword*)

Synopsis	Flow hashing distribution between LAG ports
Context	configure lag <i>lag-interface</i> port <i>reference</i> hash-weight (<i>number</i> <i>keyword</i>)
Tree	hash-weight
Range	1 to 100000
Options	port-speed
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Priority of the port in the LAG
Context	configure lag <i>lag-interface</i> port <i>reference</i> priority <i>number</i>
Tree	priority
Range	1 to 65535
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR-1

sub-group (*number* | *keyword*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subgroup of the port in the LAG
Context	configure lag <i>lag-interface</i> port <i>reference</i> sub-group (<i>number</i> <i>keyword</i>)
Tree	sub-group
Range	1 to 8
Options	auto-iom, auto-mds
Default	1

Introduced	25.3.R2
Platforms	7705 SAR-1

port-threshold

Synopsis	Enter the port-threshold context
Context	configure lag lag-interface port-threshold
Tree	port-threshold
Introduced	25.3.R2
Platforms	7705 SAR-1

action keyword

Synopsis	Action when the active links are at or below threshold
Context	configure lag lag-interface port-threshold action keyword
Tree	action
Options	down, dynamic-cost, static-cost
Default	down
Introduced	25.3.R2
Platforms	7705 SAR-1

cost number

Synopsis	Static cost of the LAG
Context	configure lag lag-interface port-threshold cost number
Tree	cost
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

value number

Synopsis	Active link threshold at which action is taken
Context	configure lag lag-interface port-threshold value number
Tree	value

Range	0 to 63
Introduced	25.3.R2
Platforms	7705 SAR-1

port-type *keyword*

Synopsis	Port type of the LAG
Context	configure lag <i>lag-interface</i> port-type <i>keyword</i>
Tree	port-type
Options	standard, hs
Default	standard
Introduced	25.3.R2
Platforms	7705 SAR-1

selection-criteria

Synopsis	Enter the selection-criteria context
Context	configure lag <i>lag-interface</i> selection-criteria
Tree	selection-criteria
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Criteria to select the active subgroup
Context	configure lag <i>lag-interface</i> selection-criteria mode <i>keyword</i>
Tree	mode
Options	highest-count, highest-weight, best-port
Default	highest-count
Introduced	25.3.R2
Platforms	7705 SAR-1

slave-to-partner *boolean*

Synopsis	Use slave-to-partner for selection criteria
----------	---

Context	configure lag lag-interface selection-criteria slave-to-partner <i>boolean</i>
Tree	slave-to-partner
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

subgroup-hold-time (*number* | *keyword*)

Synopsis	Delay time when switching to a new active subgroup
Context	configure lag lag-interface selection-criteria subgroup-hold-time (<i>number</i> <i>keyword</i>)
Tree	subgroup-hold-time
Range	0 to 2000
Units	deciseconds
Options	infinite
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-signaling *keyword*

Synopsis	Way of signaling a member port to the remote side
Context	configure lag lag-interface standby-signaling <i>keyword</i>
Tree	standby-signaling
Options	lacp, power-off
Default	lacp
Introduced	25.3.R2
Platforms	7705 SAR-1

4.14 log commands

4.14.1 log command descriptions

log

Synopsis	Enter the log context
Context	configure log
Tree	log
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy [[policy-id](#)] *number*

Synopsis	Enter the accounting-policy list instance
Context	configure log accounting-policy <i>number</i>
Tree	accounting-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

[[policy-id](#)] *number*

Synopsis	Accounting policy unique ID
Context	configure log accounting-policy <i>number</i>
Tree	accounting-policy
Range	1 to 99
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the accounting policy
Context	configure log accounting-policy <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	This command controls the administrative state of the accounting policy.

When an accounting policy is disabled, no accounting data is written to the destination log ID. Counters in the billing data reflect totals, and not increments. When the policy is re-enabled, the counters include the data collected during the period the policy was administratively disabled.

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

align *boolean*

Synopsis	Align statistics collection interval to absolute time
Context	configure log accounting-policy <i>number</i> align <i>boolean</i>
Tree	align
Description	<p>When the align command is configured to true, statistics collection is aligned to the nearest interval within an hour. Statistics are generated when the absolute time can be divided by the collection-interval value, after which the collection interval continues. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:15, 15:30, 15:45, 16:00, 16:15, and so on. This supports synchronized statistics intervals and collection across multiple nodes in the network.</p> <p>When the align command is configured to false, statistics collection occurs immediately after the configuration has been committed. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:03, 15:18, 15:33, 15:48, 16:03, and so on.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

collection-interval *number*

Synopsis	Accounting collection interval
Context	configure log accounting-policy <i>number</i> collection-interval <i>number</i>
Tree	collection-interval
Range	1 to 120
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

custom-record

Synopsis	Enter the custom-record context
Context	configure log accounting-policy <i>number</i> custom-record
Tree	custom-record
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [*id*] *number*

Synopsis	Enter the policer list instance
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i>
Tree	policer
Introduced	25.3.R2
Platforms	7705 SAR-1

[*id*] *number*

Synopsis	Policer ID
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

e-counters

Synopsis	Enter the e-counters context
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters
Tree	e-counters
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile-octets-discarded-count *boolean*

Synopsis	Include the exceed profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters exceed-profile-octets-discarded-count <i>boolean</i>
Tree	exceed-profile-octets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile-octets-forwarded-count *boolean*

Synopsis	Include the exceed profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters exceed-profile-octets-forwarded-count <i>boolean</i>
Tree	exceed-profile-octets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile-octets-offered-count *boolean*

Synopsis	Include the exceed profile octets offered count
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters exceed-profile-octets-offered-count <i>boolean</i>
Tree	exceed-profile-octets-offered-count

Introduced	25.3.R2
Platforms	7705 SAR-1

[id] *number*

Synopsis	Queue ID for which counters are collected in the record
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i>
Tree	queue
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

e-counters

Synopsis Enter the **e-counters** context

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [e-counters](#)

Tree [e-counters](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

in-profile-octets-discarded-count *boolean*

Synopsis Include the in-profile octets discarded count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [e-counters in-profile-octets-discarded-count](#) *boolean*

Tree [in-profile-octets-discarded-count](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

in-profile-octets-forwarded-count *boolean*

Synopsis Include the in-profile octets forwarded count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [e-counters in-profile-octets-forwarded-count](#) *boolean*

Tree [in-profile-octets-forwarded-count](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

in-profile-packets-discarded-count *boolean*

Synopsis Include the in-profile packets discarded count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [e-counters in-profile-packets-discarded-count](#) *boolean*

Tree [in-profile-packets-discarded-count](#)

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile-packets-forwarded-count *boolean*

Synopsis	Include the in-profile packets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters in-profile-packets-forwarded-count <i>boolean</i>
Tree	in-profile-packets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile-octets-discarded-count *boolean*

Synopsis	Include the out-profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters out-profile-octets-discarded-count <i>boolean</i>
Tree	out-profile-octets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile-octets-forwarded-count *boolean*

Synopsis	Include the out-of-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters out-profile-octets-forwarded-count <i>boolean</i>
Tree	out-profile-octets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile-packets-discarded-count *boolean*

Synopsis	Include the out-profile packets discarded count
Context	configure log accounting-policy <i>number</i> custom-record <i>queue number</i> e-counters out-profile-packets-discarded-count <i>boolean</i>
Tree	out-profile-packets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile-packets-forwarded-count *boolean*

Synopsis	Include the out-of-profile packets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record <i>queue number</i> e-counters out-profile-packets-forwarded-count <i>boolean</i>
Tree	out-profile-packets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

i-counters

Synopsis	Enter the i-counters context
Context	configure log accounting-policy <i>number</i> custom-record <i>queue number</i> i-counters
Tree	i-counters
Introduced	25.3.R2
Platforms	7705 SAR-1

all-octets-offered-count *boolean*

Synopsis	Include the all octets offered count
Context	configure log accounting-policy <i>number</i> custom-record <i>queue number</i> i-counters all-octets-offered-count <i>boolean</i>
Tree	all-octets-offered-count
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

all-packets-offered-count *boolean*

Synopsis Include all packets offered count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [i-counters](#) [all-packets-offered-count](#) *boolean*

Tree [all-packets-offered-count](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

high-octets-discarded-count *boolean*

Synopsis Include the high octets discarded count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [i-counters](#) [high-octets-discarded-count](#) *boolean*

Tree [high-octets-discarded-count](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

high-octets-offered-count *boolean*

Synopsis Include the high octets offered count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [i-counters](#) [high-octets-offered-count](#) *boolean*

Tree [high-octets-offered-count](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

high-packets-discarded-count *boolean*

Synopsis Include the high packets discarded count

Context **configure** [log accounting-policy](#) *number* [custom-record queue](#) *number* [i-counters](#) [high-packets-discarded-count](#) *boolean*

Tree	high-packets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

high-packets-offered-count *boolean*

Synopsis	Include the high packets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters high-packets-offered-count <i>boolean</i>
Tree	high-packets-offered-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile-octets-forwarded-count *boolean*

Synopsis	Include the in-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters in-profile-octets-forwarded-count <i>boolean</i>
Tree	in-profile-octets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile-packets-forwarded-count *boolean*

Synopsis	Include the in-profile packets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters in-profile-packets-forwarded-count <i>boolean</i>
Tree	in-profile-packets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

low-octets-discarded-count *boolean*

Synopsis	Include the low octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters low-octets-discarded-count <i>boolean</i>
Tree	low-octets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

low-octets-offered-count *boolean*

Synopsis	Include the low octets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters low-octets-offered-count <i>boolean</i>
Tree	low-octets-offered-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

low-packets-discarded-count *boolean*

Synopsis	Include the low packets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters low-packets-discarded-count <i>boolean</i>
Tree	low-packets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

low-packets-offered-count *boolean*

Synopsis	Include the low packets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters low-packets-offered-count <i>boolean</i>
Tree	low-packets-offered-count

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile-octets-forwarded-count *boolean*

Synopsis	Include the out-of-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters out-profile-octets-forwarded-count <i>boolean</i>
Tree	out-profile-octets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

out-profile-packets-forwarded-count *boolean*

Synopsis	Include the out-of-profile packets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters out-profile-packets-forwarded-count <i>boolean</i>
Tree	out-profile-packets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

uncoloured-octets-offered-count *boolean*

Synopsis	Include the uncolored octets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters uncoloured-octets-offered-count <i>boolean</i>
Tree	uncoloured-octets-offered-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

uncoloured-packets-offered-count *boolean*

Synopsis	Include the uncolored packets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters uncoloured-packets-offered-count <i>boolean</i>
Tree	uncoloured-packets-offered-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ref-policer

Synopsis	Enter the ref-policer context
Context	configure log accounting-policy <i>number</i> custom-record ref-policer
Tree	ref-policer
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Apply significant change to counters for all policers
Context	configure log accounting-policy <i>number</i> custom-record ref-policer all
Tree	all
Notes	The following elements are part of a choice: all or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

e-counters

Synopsis	Enter the e-counters context
Context	configure log accounting-policy <i>number</i> custom-record ref-policer e-counters
Tree	e-counters
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile-octets-discarded-count *boolean*

Synopsis	Include the exceed profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record ref-policer e-counters exceed-profile-octets-discarded-count <i>boolean</i>
Tree	exceed-profile-octets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

exceed-profile-octets-forwarded-count *boolean*

Synopsis	Include the exceed profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record ref-policer e-counters exceed-profile-octets-forwarded-count <i>boolean</i>
Tree	exceed-profile-octets-forwarded-count

Tree	uncoloured-packets-offered-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

id *reference*

Synopsis	Policer ID
Context	configure log accounting-policy <i>number</i> custom-record ref-policer id <i>reference</i>
Tree	id
Reference	configure log accounting-policy <i>number</i> custom-record policer <i>number</i>
Notes	The following elements are part of a choice: all or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

ref-queue

Synopsis	Enter the ref-queue context
Context	configure log accounting-policy <i>number</i> custom-record ref-queue
Tree	ref-queue

Description	Commands in this context configure reference queue counters for significant change only reporting. The custom record is only generated when the change in the sum of all queue and policer reference counters equals or exceeds the configured (non-zero) significant change value.
Introduced	25.3.R2
Platforms	7705 SAR-1

all

Synopsis	Apply significant change to counters for all queues
Context	configure log accounting-policy <i>number</i> custom-record ref-queue all
Tree	all
Notes	The following elements are part of a choice: all or id .
Introduced	25.3.R2
Platforms	7705 SAR-1

e-counters

Synopsis	Enter the e-counters context
Context	configure log accounting-policy <i>number</i> custom-record ref-queue e-counters
Tree	e-counters
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile-octets-discarded-count *boolean*

Synopsis	Include the in-profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record ref-queue e-counters in-profile-octets-discarded-count <i>boolean</i>
Tree	in-profile-octets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile-octets-forwarded-count *boolean*

Synopsis	Include the in-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record ref-queue e-counters in-profile-octets-forwarded-count <i>boolean</i>
Tree	in-profile-octets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

in-profile-packets-discarded-count *boolean*

Synopsis	Include the in-profile packets discarded count
Context	configure log accounting-policy <i>number</i> custom-record ref-queue e-counters in-profile-packets-discarded-count <i>boolean</i>
Tree	in-profile-packets-discarded-count
Default	false
Introduced	25.3.R2

Synopsis	Accounting policy record type
Context	configure log accounting-policy <i>number</i> record <i>keyword</i>
Tree	record
Description	<p>This command adds the accounting record type to the accounting policy that is forwarded to the configured accounting file. A record name can only be used in one accounting policy. To obtain a list of all record types that can be configured, use the show log accounting-records command.</p> <p>To configure an accounting policy for access ports, select a service record (for example, service-ingress-octets). To change the record name to another service record, configure the new record name with this command.</p> <p>When configuring an accounting policy for network ports, select a network record. To change the record name to another network record, configure the new record name with this command.</p>
Options	service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber, custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress,

filter *reference*

Synopsis Log filter for EHS event trigger entry

Context **configure** [log event-trigger adp event](#) *keyword* [entry](#) *number* [filter](#) *reference*

Tree [filter](#)

Description This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

Reference **configure** [log filter](#) *log-filter-name*

Introduced 25.3.R2

filter reference

Synopsis	Log filter for EHS event trigger entry
Context	configure log event-trigger chassis event <i>keyword</i> entry number filter reference
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler

execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter reference

Synopsis	Log filter for EHS event trigger entry
Context	configure log event-trigger ldp event keyword entry number filter reference
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler

execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter reference

Synopsis Log filter for EHS event trigger entry

Context **configure log event-trigger logger event** keyword *entry number filter reference*

Tree *filter*

Description This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

Context	configure log event-trigger pim-snooping event <i>keyword</i> entry <i>number</i> filter <i>reference</i>
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	configure log event-trigger system event <i>keyword</i> entry <i>number</i> filter <i>reference</i>
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

file-storage-control

Synopsis	Enter the file-storage-control context
Context	configure log file-storage-control
Tree	file-storage-control
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-files-total-size *number*

Synopsis	Per CF total accounting file storage limit
Context	configure log file-storage-control accounting-files-total-size <i>number</i>
Tree	accounting-files-total-size
Description	<p>This command configures the limit for the total space that all accounting files can occupy on each storage device on the active CPM.</p> <p>When this threshold is reached, new accounting files are no longer created in the \act-collect directory of the storage device until SR OS removes older accounting files from the \act directory and the occupancy is below the limit. Currently open, in-progress accounting files in the \act-collect directory are not affected by this limit and are completed.</p> <p>When unconfigured, there is no specific limit for the total size of all accounting files.</p> <p>Only accounting files in the \act directory with system generated names (including no file extension) are applicable toward the total size limit.</p> <p>If a user manually adds or deletes accounting files from the \act directory, the size of the files is not taken into account for up to 1 hour.</p> <p>The configured total size limit is not validated against the actual size of the installed storage devices. If the configured limit is larger than the installed compact flash (CF) device, the limit is never reached.</p>
Range	50 to 4194304
Units	megabytes
Introduced	25.3.R2
Platforms	7705 SAR-1

log-files-total-size *number*

Synopsis	Per CF total log file storage limit
Context	configure log file-storage-control log-files-total-size <i>number</i>
Tree	log-files-total-size
Description	<p>This command configures the limit for the total space that all log files can occupy on each storage device on the active CPM.</p> <p>When this threshold is reached, log events are no longer written to the files in the \log directory until SR OS removes older log files and the occupancy is below the limit.</p> <p>When unconfigured, there is no specific limit for the total size of all log files.</p> <p>Only log files in the \log directory with system generated names (including no file extension) are applicable toward the total size limit.</p> <p>If a user manually adds or deletes log files from the \log directory, the size of the files is not taken into account for up to 1 hour.</p>

The configured total size limit is not validated against the actual size of the installed storage devices. If the configured limit is larger than the installed CF device, the limit is never reached.

Range	50 to 4194304
Units	megabytes
Introduced	25.3.R2
Platforms	7705 SAR-1

filter *[filter-name] log-filter-name*

Synopsis	Enter the filter list instance
Context	configure log filter <i>log-filter-name</i>
Tree	<i>filter</i>
Max. instances	1500
Introduced	25.3.R2
Platforms	7705 SAR-1

[filter-name] *log-filter-name*

Synopsis	Filter name
Context	configure log filter <i>log-filter-name</i>
Tree	<i>filter</i>
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Default action for the event filter
Context	configure log filter <i>log-filter-name</i> default-action <i>keyword</i>
Tree	<i>default-action</i>
Options	drop, forward
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure log filter <i>log-filter-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

named-entry [**entry-name**] *log-filter-entry-name*

Synopsis	Enter the named-entry list instance
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i>
Tree	named-entry
Description	Commands in this context create or edit an event filter entry.
Max. instances	999
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-name] *log-filter-entry-name*

Synopsis	Entry name
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i>
Tree	named-entry
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword*

Synopsis	Action for this event filter entry
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> action <i>keyword</i>

Tree	action
Options	drop, forward
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

application

Synopsis	Enter the application context
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match application
Tree	application
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *keyword*

Synopsis	Application to match
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match application eq <i>keyword</i>

Tree	eq
Options	application-assurance, aps, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, dot1x, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, python, ripng, openflow, sflow, rpki, pcep, calltrace, satellite, ldap, pppoe-clnt, tls, adp, mgmt-core, macsec, sr-policy, pcap, auto-prov, bier, pfcp, tree-sid, srv6, sr-mpls, anysec
Notes	The following elements are part of a choice: eq or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

neq keyword

Synopsis	Application to be filtered out
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match application neq keyword
Tree	neq
Options	application-assurance, aps, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, dot1x, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, python, ripng, openflow, sflow, rpki, pcep, calltrace, satellite, ldap, pppoe-clnt, tls, adp, mgmt-core, macsec, sr-policy, pcap, auto-prov, bier, pfcp, tree-sid, srv6, sr-mpls, anysec
Notes	The following elements are part of a choice: eq or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

event

Synopsis	Enter the event context
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match event
Tree	event
Introduced	25.3.R2
Platforms	7705 SAR-1

eq number

Synopsis	Log event message to match
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match event eq <i>number</i>
Tree	eq
Range	1 to 4294967295
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Number of the log event to match
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match event gt <i>number</i>
Tree	gt
Range	1 to 4294967295
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

gte number

Synopsis	Number of the log event to match
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match event gte <i>number</i>
Tree	gte
Range	1 to 4294967295
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Number of the log event to match
----------	----------------------------------

Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> match event <i>lt number</i>
Tree	<i>lt</i>
Range	1 to 4294967295
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

lte number

Synopsis	Number of the log event to match
Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> match event <i>lte number</i>
Tree	<i>lte</i>
Range	1 to 4294967295
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

neq number

Synopsis	Log event message to filter out
Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> match event <i>neq number</i>
Tree	<i>neq</i>
Range	1 to 4294967295
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

message

Synopsis	Enter the message context
Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> match message
Tree	<i>message</i>
Introduced	25.3.R2

Platforms 7705 SAR-1

eq string

Synopsis Log event message to match

Context **configure log filter** *log-filter-name* *named-entry* *log-filter-entry-name* **match message eq string**

Tree **eq**

String length 1 to 400

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 25.3.R2

Platforms 7705 SAR-1

neq string

Synopsis Log event message to be filtered out

Context **configure log filter** *log-filter-name* *named-entry* *log-filter-entry-name* **match message neq string**

Tree **neq**

String length 1 to 400

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 25.3.R2

Platforms 7705 SAR-1

regexp boolean

Synopsis String comparison to determine if the log event matches the value of pattern

Context **configure log filter** *log-filter-name* *named-entry* *log-filter-entry-name* **match message regexp boolean**

Tree **regexp**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

severity

Synopsis	Enter the severity context
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity
Tree	severity
Introduced	25.3.R2
Platforms	7705 SAR-1

eq keyword

Synopsis	Log event severity level to match
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity eq <i>keyword</i>
Tree	eq
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt keyword

Synopsis	Log event severity level
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity gt <i>keyword</i>
Tree	gt
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

gte keyword

Synopsis	Log event severity level
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity gte <i>keyword</i>
Tree	gte

Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt keyword

Synopsis	Log event severity level
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity lt keyword
Tree	lt
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

lte keyword

Synopsis	Log event severity level
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity lte keyword
Tree	lte
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

neq keyword

Synopsis	Log event severity level to filter out
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match severity neq keyword
Tree	neq
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: eq , gt , gte , lt , lte , or neq .

Introduced	25.3.R2
Platforms	7705 SAR-1

subject

Synopsis	Enter the subject context
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match subject
Tree	subject
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *named-item*

Synopsis	Log event subject string to match
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match subject eq <i>named-item</i>
Tree	eq
String length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

neq *named-item*

Synopsis	Log event subject string to filter out
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match subject neq <i>named-item</i>
Tree	neq
String length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

regexp *boolean*

Synopsis	String comparison to determine if the log event matches the value of subject
----------	--

Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> <i>match subject</i> <i>regexp</i> <i>boolean</i>
Tree	<i>regexp</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vrtr-name

Synopsis	Enter the vrtr-name context
Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> <i>match vrtr-name</i>
Tree	<i>vrtr-name</i>
Description	<p>Commands in this context configure the criteria for the name of a router instance.</p> <p>The vrtr-name is a name for a router instance, in a special format, used in the logging system. Examples of names include Base and vprn101, where 101 is the service ID of the VPRN service. The name represents the router instance that generated the log event.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *named-item*

Synopsis	Log event router instance to match
Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> <i>match vrtr-name eq</i> <i>named-item</i>
Tree	<i>eq</i>
String length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

neq *named-item*

Synopsis	Log event router instance to filter out
Context	configure log filter <i>log-filter-name</i> <i>named-entry</i> <i>log-filter-entry-name</i> <i>match vrtr-name</i> <i>neq</i> <i>named-item</i>
Tree	<i>neq</i>

String length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	25.3.R2
Platforms	7705 SAR-1

regex *boolean*

Synopsis	Match the router instance string
Context	configure log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> match <i>vrtr-name</i> regex <i>boolean</i>
Tree	regex
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

log-events

Synopsis	Enter the log-events context
Context	configure log log-events
Tree	log-events
Introduced	25.3.R2
Platforms	7705 SAR-1

adp *event* *keyword*

Synopsis	Enter the adp list instance
Context	configure log log-events adp event <i>keyword</i>
Tree	adp
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events adp event <i>keyword</i>

Tree	adp
Options	tmnxDiscoveryEndNotify, tmnxDiscoveryCellularReq
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events adp event <i>keyword generate boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events adp event <i>keyword repeat boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events adp event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
----------	---

Context	configure log log-events adp event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events adp event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events adp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events adp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-prov event keyword

Synopsis	Enter the auto-prov list instance
Context	configure log log-events auto-prov event keyword
Tree	auto-prov
Introduced	25.3.R2
Platforms	7705 SAR-1

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events auto-prov event keyword
Tree	auto-prov
Options	autoNodeProv
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events auto-prov event keyword generate boolean
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events auto-prov event keyword repeat boolean
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events auto-prov event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events auto-prov event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events auto-prov event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events auto-prov event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events auto-prov event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd [event](#) *keyword*

Synopsis	Enter the bfd list instance
Context	configure log log-events bfd event <i>keyword</i>
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events bfd event <i>keyword</i>
Tree	bfd
Options	tmnxBfdOnLspSessDown , tmnxBfdOnLspSessUp , tmnxBfdOnLspSessDeleted , tmnxBfdOnLspSessProtChange , tmnxBfdOnLspSessNoCpmNpResources , tmnxBfdOnLspSessNoTailResources , tmnxBfdOnLspExtSessDown , tmnxBfdOnLspExtSessUp , tmnxBfdOnLspExtSessDeleted , tmnxBfdOnLspExtSessProtChange , tmnxBfdOnLspExtSessNoCpmNpResrcs
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events bfd event <i>keyword</i> generate <i>boolean</i>

Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events bfd event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events bfd event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events bfd event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events bfd event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval

Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events bfd event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events bfd event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp [event](#) *keyword*

Synopsis	Enter the bgp list instance
Context	configure log log-events bgp event <i>keyword</i>
Tree	bgp
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
----------	---

Context	configure log log-events bgp event <i>keyword</i>
Tree	bgp
Options	sendNotification, receiveNotification, bgpInterfaceDown, bgpConnNoKA, bgpConnNoOpenRcvd, bgpRejectConnBadLocAddr, bgpRemoteEndClosedConn, bgpPeerNotFound, bgpConnMgrTerminated, bgpTerminated, bgpNoMemoryPeer, bgpVariableRangeViolation, bgpCfgViol, tBgpPeerGRStatusChange, tBgpNgEstablished, tBgpNgBackwardTransition, tBgpPeerNgHoldTimeInconsistent, tBgpFlowspecUnsupportdComAction, tBgp4RouteInvalid, tBgp4PathAttrInvalid, tBgp4WithdrawnRtFromUpdateError, tBgp4UpdateInvalid, tBgpGeneral, tBgpFibResourceFailPeer, tBgpReceivedInvalidNlri, tBgpMaxNgPfxLmt, tBgpMaxNgPfxLmtThresholdReached, tBgpInstanceDynamicPeerLmtReached, tBgpPGDynamicPeerLmtReached, bgpEstablishedNotification, bgpBackwardTransNotification, tBgp4PathAttrDiscarded, tmnxBmpSessionStatusChange, tBgpInstConvStateTransition, tBgpPeerNgGRStatusChange, tBgpPGDynNbrIfMaxSessLmtReached
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events bgp event <i>keyword generate</i> <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events bgp event <i>keyword repeat</i> <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
----------	---

Context	configure log log-events bgp event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters that throttle this specific event
Context	configure log log-events bgp event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events bgp event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events bgp event <i>keyword specific-throttle-limit number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
----------	----------------------------------

Context	configure log log-events bgp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

chassis event *keyword*

Synopsis	Enter the chassis list instance
Context	configure log log-events chassis event <i>keyword</i>
Tree	chassis
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events chassis event <i>keyword</i>
Tree	chassis

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure** [log log-events chassis event](#) *keyword generate boolean*

Tree [generate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context **configure** [log log-events chassis event](#) *keyword repeat boolean*

Tree [repeat](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type

Context **configure** [log log-events chassis event](#) *keyword severity keyword*

Tree [severity](#)

Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events chassis event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events chassis event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events chassis event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events chassis event <i>keyword</i> throttle <i>boolean</i>

Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

debug [event](#) *keyword*

Synopsis	Enter the debug list instance
Context	configure log log-events debug event <i>keyword</i>

Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events dot1x event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events dot1x event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events dot1x event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events dot1x event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events dot1x event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

dynsvc *event* *keyword*

Synopsis	Enter the dynsvc list instance
Context	configure log log-events dynsvc event <i>keyword</i>
Tree	dynsvc
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events dynsvc event <i>keyword</i>
Tree	dynsvc
Options	tmnxDynSvcSapFailed
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events dynsvc event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events dynsvc event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events dynsvc event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events dynsvc event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events dynsvc event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events dynsvc event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events dynsvc event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

efm-oam *event keyword*

Synopsis	Enter the efm-oam list instance
Context	configure log log-events efm-oam event <i>keyword</i>
Tree	efm-oam
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events efm-oam event <i>keyword</i>
Tree	efm-oam
Options	tmnxDot3OamPeerChanged, tmnxDot3OamLoopDetected, tmnxDot3OamLoopCleared, dot3OamThresholdEvent, dot3OamNonThresholdEvent, tmnxDot3OamSdThresholdEvent, tmnxDot3OamThresholdEventClr, tmnxDot3OamNonThresholdEventClr

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events efm-oam event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events efm-oam event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events efm-oam event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events efm-oam event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle

Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
Context **configure** [log](#) [log-events](#) [efm-oam](#) [event](#) *keyword* [specific-throttle-interval](#) *number*
Tree [specific-throttle-interval](#)
Description This command specifies the number of seconds that the specific throttling intervals lasts.
Range 1 to 1200
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
Context **configure** [log](#) [log-events](#) [efm-oam](#) [event](#) *keyword* [specific-throttle-limit](#) *number*
Tree [specific-throttle-limit](#)
Range 1 to 20000
Introduced 25.3.R2
Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
Context **configure** [log](#) [log-events](#) [efm-oam](#) [event](#) *keyword* [throttle](#) *boolean*
Tree [throttle](#)
Description This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced 25.3.R2
Platforms 7705 SAR-1

ering [event](#) *keyword*

Synopsis Enter the **ering** list instance

Context	configure log log-events ering event <i>keyword</i>
Tree	ering
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ering event <i>keyword</i>
Tree	ering
Options	tmnxEthRingPathFwdStateChange, tmnxEthRingApsPrvsnRaiseAlarm, tmnxEthRingApsPrvsnClearAlarm
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ering event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ering event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ering event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ering event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ering event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ering event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ering event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-cfm [event](#) *keyword*

Synopsis	Enter the eth-cfm list instance
Context	configure log log-events eth-cfm event <i>keyword</i>
Tree	eth-cfm
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events eth-cfm event <i>keyword</i>
Tree	eth-cfm
Options	dot1agCfmFaultAlarm, tmnxDot1agCfmMepLbmTestComplete, tmnxDot1agCfmMepLtmTestComplete, tmnxDot1agCfmMepEthTestComplete, tmnxDot1agCfmMepDMTestComplete, tmnxDot1agCfmMepAisStateChanged, tmnxDot1agCfmMipEvaluation, tmnxDot1agCfmMepSLMTestComplete, tmnxDot1agCfmMepCsfStateChanged, tmnxDot1agCfmMepFciltyFaultRaise, tmnxDot1agCfmMepFciltyFaultClear, tmnxDot1agCfmMepOperGrpStateChgd
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events eth-cfm event <i>keyword</i> generate <i>boolean</i>

Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events eth-cfm event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events eth-cfm event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events eth-cfm event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events eth-cfm event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval

Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events eth-cfm event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events eth-cfm event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

etun [event](#) *keyword*

Synopsis	Enter the etun list instance
Context	configure log log-events etun event <i>keyword</i>
Tree	etun
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
----------	---

Context	configure log log-events etun event <i>keyword</i>
Tree	etun
Options	tmnxEthTunnelApsCfgRaiseAlarm, tmnxEthTunnelApsCfgClearAlarm, tmnxEthTunnelApsPrvsNRaiseAlarm, tmnxEthTunnelApsPrvsNClearAlarm, tmnxEthTunnelApsNoRspRaiseAlarm, tmnxEthTunnelApsNoRspClearAlarm, tmnxEthTunnelApsSwitchoverAlarm
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events etun event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events etun event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events etun event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events etun event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events etun event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events etun event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events etun event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2

Platforms 7705 SAR-1

filter *event keyword*

Synopsis Enter the **filter** list instance

Context **configure** **log** **log-events** **filter** *event keyword*

Tree **filter**

Introduced 25.3.R2

Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers

Context **configure** **log** **log-events** **filter** *event keyword*

Tree **filter**

Options tIPFilterPBRPacketsDrop, tFilterSubInsSpaceAlarmRaised, tFilterSubInsSpaceAlarmCleared, tFilterSubInsFltrEntryDropped, tFilterBgpFlowSpecProblem, tFilterApplyPathProblem, tFilterRadSharedFltrAlarmRaised, tFilterRadSharedFltrAlarmClear, tFilterEmbeddingOperStateChange, tFilterEmbedOpenflowOperStateChg, tFilterOpenflowRequestRejected, tFilterEmbedFlowspecOperStateChg, tFilterRPActiveDestChangeEvent

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure** **log** **log-events** **filter** *event keyword* **generate** *boolean*

Tree **generate**

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context	configure log log-events filter event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events filter event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events filter event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events filter event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events filter event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events filter event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

gsmp *event* *keyword*

Synopsis	Enter the gsmp list instance
Context	configure log log-events gsmp <i>event</i> <i>keyword</i>
Tree	gsmp
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events gsmp <i>event</i> <i>keyword</i>
Tree	gsmp
Options	tmnxAncpIngRateMonitorEvent, tmnxAncpIngRateMonitorEventL, tmnxAncpEgrRateMonitorEvent, tmnxAncpEgrRateMonitorEventL, tmnxAncpShcvDisabledEvent, tmnxAncpShcvDisabledEventL, tmnxAncpSesRejected, tmnxAncpStringRejected

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events gsmf event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events gsmf event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events gsmf event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events gsmf event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle

Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
Context **configure** [log log-events gsmp event](#) *keyword* [specific-throttle-interval](#) *number*
Tree [specific-throttle-interval](#)
Description This command specifies the number of seconds that the specific throttling intervals lasts.
Range 1 to 1200
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
Context **configure** [log log-events gsmp event](#) *keyword* [specific-throttle-limit](#) *number*
Tree [specific-throttle-limit](#)
Range 1 to 20000
Introduced 25.3.R2
Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
Context **configure** [log log-events gsmp event](#) *keyword* [throttle](#) *boolean*
Tree [throttle](#)
Description This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced 25.3.R2
Platforms 7705 SAR-1

igmp [event](#) *keyword*

Synopsis Enter the **igmp** list instance

Context	configure log log-events igmp event <i>keyword</i>
Tree	igmp
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events igmp event <i>keyword</i>
Tree	igmp
Options	vRtrIgmplfRxQueryVerMismatch, vRtrIgmplfCModeRxQueryMismatch, vRtrIgmplfMaxGrpsLimitExceeded, vRtrIgmplfMcacPlcyDropped, vRtrIgmplfHostInstantiationFail, vRtrIgmplfHostMaxGrpsLimitExceeded, vRtrIgmplfHostMcacPlcyDropped, vRtrIgmplfHostCModeRxQueryMismatch, vRtrIgmplfHostRxQueryVerMismatch, vRtrIgmplfHostMaxSrcsLimitExceeded, vRtrIgmplfMaxSrcsLimitExceeded, vRtrIgmplfGrpIfSapMaxGrpsLimExceed, vRtrIgmplfGrpIfSapMaxSrcsLimExceed, vRtrIgmplfGrpIfSapMcacPlcyDropped, vRtrIgmplfGrpIfSapCModeRxQueryMism, vRtrIgmplfGrpIfSapRxQueryVerMism, vRtrIgmplfHostMaxGrpSrcsLimitExcd, vRtrIgmplfMaxGrpSrcsLimitExceeded, vRtrIgmplfGrpIfSapMaxGrpSrcLimExcd, vRtrIgmplfHostQryIntervalConflict, vRtrIgmplfNotifyNumOfIPsecIfLowWm, vRtrIgmplfNotifyNumOfIPsecIfHighWm, vRtrIgmplfNotifyNumOfIPsecIfMaxRch, vRtrIgmplfSlaProfInstMcacPlcyDrop
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events igmp event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events igmp event <i>keyword</i> repeat <i>boolean</i>

Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events igmp event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events igmp event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events igmp event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
----------	--

Context	configure log log-events igmp event <i>keyword specific-throttle-limit number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events igmp event <i>keyword throttle boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp-snooping [event](#) *keyword*

Synopsis	Enter the igmp-snooping list instance
Context	configure log log-events igmp-snooping event <i>keyword</i>
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events igmp-snooping event <i>keyword</i>
Tree	igmp-snooping
Options	sapIgmPsnpgGrpLimitExceeded, sapIgmPsnpgMcacPlcyDropped, sdpBndIgmPsnpgGrpLimitExceeded, sdpBndIgmPsnpgMcacPlcyDropped, sapIgmPsnpgMcsFailure, sapIgmPsnpgSrcLimitExceeded, sdpBndIgmPsnpgSrcLimitExceeded, sdpBndIgmPsnpgGrpSrcLimitExceed, sapIgmPsnpgGrpSrcLimitExceeded, eMplslgmPsnpgMfibFailure
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs
Context **configure** [log log-events igmp-snooping event](#) *keyword generate boolean*
Tree [generate](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared
Context **configure** [log log-events igmp-snooping event](#) *keyword repeat boolean*
Tree [repeat](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type
Context **configure** [log log-events igmp-snooping event](#) *keyword severity keyword*
Tree [severity](#)
Options cleared, indeterminate, critical, major, minor, warning
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
Context **configure** [log log-events igmp-snooping event](#) *keyword specific-throttle boolean*
Tree [specific-throttle](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events igmp-snooping event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events igmp-snooping event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events igmp-snooping event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip [event](#) *keyword*

Synopsis	Enter the ip list instance
Context	configure log log-events ip event <i>keyword</i>
Tree	ip
Introduced	25.3.R2

Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers

Context **configure** [log](#) [log-events](#) [ip](#) [event](#) *keyword*

Tree [ip](#)

Options clearRTMError, ipEtherBroadcast, ipDuplicateAddress, ipArpInfoOverwritten, fibAddFailed, qosNetworkPolicyMallocFailed, ipArpBadInterface, ipArpDuplicateIpAddress, ipArpDuplicateMacAddress, ipAnyDuplicateAddress, labelIndexAllocFailed

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure** [log](#) [log-events](#) [ip](#) [event](#) *keyword* [generate](#) *boolean*

Tree [generate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context **configure** [log](#) [log-events](#) [ip](#) [event](#) *keyword* [repeat](#) *boolean*

Tree [repeat](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type

Context **configure** [log](#) [log-events](#) [ip](#) [event](#) *keyword* [severity](#) *keyword*

Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ip event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ip event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ip event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
----------	----------------------------------

Context	configure log log-events ip event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec [event](#) *keyword*

Synopsis	Enter the ipsec list instance
Context	configure log log-events ipsec event <i>keyword</i>
Tree	ipsec
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ipsec event <i>keyword</i>
Tree	ipsec
Options	tIPsecRUTnlFailToCreate, tIPsecRUSAFailToAddRoute, tIPsecBfdIntfSessStateChgd, tIPsecRadAcctPlcyFailure, tIPsecTrustAnchorPrfOprChg, tIPsecTunnelEncapIpMtuTooSmall, tIPsecRuTnlEncapIpMtuTooSmall, tmnxSecNotifCmptedCertHashChngd, tmnxSecNotifCmptedCertChnChngd, tmnxSecNotifSendChnNotInCmptChn, tmnxIPsecTunnelOperStateChange, tmnxIPsecGWOperStateChange, tIPsecRUTnlRemoved, tIPsecTunnelProtocolFailed
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ipsec event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ipsec event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ipsec event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ipsec event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ipsec event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ipsec event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ipsec event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

isis [event](#) *keyword*

Synopsis	Enter the isis list instance
Context	configure log log-events isis event <i>keyword</i>
Tree	isis
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events isis event <i>keyword</i>
Tree	isis

Tree [specific-throttle-limit](#)
Range 1 to 20000
Introduced 25.3.R2
Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
Context **configure** [log log-events isis event](#) *keyword* [throttle](#) *boolean*
Tree [throttle](#)

Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

lag event *keyword*

Synopsis	Enter the lag list instance
Context	configure log log-events lag event keyword
Tree	lag
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events lag event keyword
Tree	lag
Options	DynamicCostOn, DynamicCostOff, LagPortAddFailed, LagSubGroupSelected, LagPortAddFailureCleared, LagStateEvent, tLagMemberStateEvent, tmnxLagBfdMemStateChanged, tLagAdaptiveLoadbalancingChanged
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events lag event keyword generate boolean
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
----------	---

Context	configure log log-events lag event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events lag event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events lag event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events lag event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events lag event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events lag event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

ldap *event keyword*

Synopsis	Enter the ldap list instance
Context	configure log log-events ldap event <i>keyword</i>
Tree	ldap
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ldap event <i>keyword</i>
Tree	ldap
Options	tmnxLdapOperStateChange, tmnxLdapServerOperStateChange
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure** [log](#) [log-events](#) [mc-redundancy](#) [event](#) *keyword* [generate](#) *boolean*

Tree [generate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context **configure** [log](#) [log-events](#) [mc-redundancy](#) [event](#) *keyword* [repeat](#) *boolean*

Tree [repeat](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type

Context **configure** [log](#) [log-events](#) [mc-redundancy](#) [event](#) *keyword* [severity](#) *keyword*

Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events mc-redundancy event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events mc-redundancy event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events mc-redundancy event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events mc-redundancy event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

mcpath [event](#) *keyword*

Synopsis	Enter the mcpath list instance
Context	configure log log-events mcpath event <i>keyword</i>
Tree	mcpath
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events mcpath event <i>keyword</i>
Tree	mcpath
Options	tmnxMcPathSrcGrpBlackHole, tmnxMcPathSrcGrpBlackHoleCleared, tmnxMcPathAvailBwLimitExceeded, tmnxMcPathAvailBwLimitCleared
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events mcpath event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Tree [mgmt-core](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers
Context **configure** [log](#) [log-events](#) [mgmt-core](#) [event](#) *keyword*
Tree [mgmt-core](#)

Options	none, mdConfigChange, mdOcConfigChange, mdBofConfigChange, mdDebugConfigChange, asyncOperationStatusChange, syncOperationStatusChange, mdAutomaticRollbackFailed, mdRollbackFailed
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events mgmt-core event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events mgmt-core event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events mgmt-core event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
----------	---

Context	configure log log-events mgmt-core event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events mgmt-core event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events mgmt-core event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events mgmt-core event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

mirror event keyword

Synopsis	Enter the mirror list instance
Context	configure log log-events mirror event keyword
Tree	mirror
Introduced	25.3.R2
Platforms	7705 SAR-1

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events mirror event keyword
Tree	mirror
Options	sourceEnabled, sourceDisabled, destinationEnabled, destinationDisabled, sourceIpFilterChange, sourceMacFilterChange, sourceSapChange, sourceSubscriberChange, tMirrorSourceIpV6FilterChange, tMirrorSapUnavailSath, tMirrorSapUnavailSathClr, tMirrorFltrUnavailSath, tMirrorFltrUnavailSathClr, tMirrorPortUnavailSath, tMirrorPortUnavailSathClr
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events mirror event keyword generate boolean
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events mirror event keyword repeat boolean
Tree	repeat
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events mirror event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events mirror event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events mirror event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events mirror event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit

Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events mirror event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

mld [event](#) *keyword*

Synopsis	Enter the mld list instance
Context	configure log log-events mld event <i>keyword</i>
Tree	mld
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events mld event <i>keyword</i>
Tree	mld
Options	vRtrMldIfRxQueryVerMismatch, vRtrMldIfCModeRxQueryMismatch, vRtrMldMaxGrpsLimitExceeded, vRtrMldMcacPlyDropped, vRtrMldHostInstantiationFail, vRtrMldHostMaxGrpsLimitExceeded, vRtrMldHostMcacPlyDropped, vRtrMldHostCModeRxQueryMismatch, vRtrMldHostRxQueryVerMismatch, vRtrMldHostMaxSrcsLimitExceeded, vRtrMldMaxSrcsLimitExceeded, vRtrMldGrpIfSapMaxGrpsLimExceed, vRtrMldGrpIfSapMaxSrcsLimExceed, vRtrMldGrpIfSapMcacPlyDropped, vRtrMldGrpIfSapCModeRxQueryMism, vRtrMldGrpIfSapRxQueryVerMism, vRtrMldHostMaxGrpSrcsLimitExcd, vRtrMldMaxGrpSrcsLimitExceeded, vRtrMldGrpIfSapMaxGrpSrcLimExcd, vRtrMldHostQryIntervalConflict, vRtrMldSlaProfInstMcacPlyDrop

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events mld event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events mld event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events mld event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events mld event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle

Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
Context **configure** [log](#) [log-events](#) [mld event](#) *keyword* [specific-throttle-interval](#) *number*
Tree [specific-throttle-interval](#)
Description This command specifies the number of seconds that the specific throttling intervals lasts.
Range 1 to 1200
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
Context **configure** [log](#) [log-events](#) [mld event](#) *keyword* [specific-throttle-limit](#) *number*
Tree [specific-throttle-limit](#)
Range 1 to 20000
Introduced 25.3.R2
Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
Context **configure** [log](#) [log-events](#) [mld event](#) *keyword* [throttle](#) *boolean*
Tree [throttle](#)
Description This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced 25.3.R2
Platforms 7705 SAR-1

mld-snooping [event](#) *keyword*

Synopsis Enter the **mld-snooping** list instance

Context	configure log log-events mld-snooping event <i>keyword</i>

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events nat event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events nat event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events nat event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp event keyword

Synopsis	Enter the ntp list instance
Context	configure log log-events ntp event keyword
Tree	ntp
Introduced	25.3.R2
Platforms	7705 SAR-1

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ntp event keyword
Tree	ntp
Options	tmnxNtpAuthMismatch, tmnxNtpNoServersAvail, tmnxNtpServersAvail, tmnxNtpOperChange, tmnxNtpServerChange
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events ntp event keyword generate boolean
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ntp event keyword repeat boolean
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ntp event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ntp event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ntp event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ntp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ntp event keyword throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

oam [event](#) *keyword*

Synopsis	Enter the oam list instance
Context	configure log log-events oam event keyword
Tree	oam
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events oam event keyword
Tree	oam
Options	tmnxOamPingProbeFailedV3, tmnxOamPingTestFailedV3, tmnxOamPingTestCompletedV3, tmnxAncpLoopbackTestCompleted, tmnxAncpLoopbackTestCompletedL, tmnxOamTrPathChange, tmnxOamTrTestFailed, tmnxOamTrTestCompleted, svcldInvalid, svcldWrongType, tmnxOamLdpTtraceAutoDiscState, tmnxOamLdpTtraceFecProbeState, tmnxOamLdpTtraceFecDisStatus, tmnxOamLdpTtraceFecPFailUpdate, tmnxOamSaaThreshold, tmnxOamDiagTestCompleted, tmnxTwampSrvInactivityTimeout, tmnxTwampSrvMaxConnsExceeded, tmnxTwampSrvPfxMaxConnsExceeded, tmnxTwampSrvMaxSessExceeded, tmnxTwampSrvPfxMaxSessExceeded, tmnxTwampRflInactivityTimeout, tmnxOamPmThrRaise, tmnxOamPmThrClear, tmnxOamSathSvcTestCompleted, tmnxOamSathSvcStrmCompleted
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events oam event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events oam event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events oam event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events oam event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events oam event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events oam event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events oam event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf *event keyword*

Synopsis	Enter the ospf list instance
Context	configure log log-events ospf event <i>keyword</i>
Tree	ospf
Introduced	25.3.R2

Platforms 7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ospf event <i>keyword</i>
Tree	ospf
Options	tmnxOspfVirtIfStateChange, tmnxOspfVirtNbrStateChange, tmnxOspfVirtIfConfigError, tmnxOspfVirtIfAuthFailure, tmnxOspfVirtIfRxBadPacket, tmnxOspfAreaOriginateLsa, tmnxOspfAreaMaxAgeLsa, tmnxOspfLsdbOverflow, tmnxOspfLsdbApproachingOverflow, tmnxOspfNssaTranslatorStatusChg, tmnxOspfRestartStatusChange, tmnxOspfVirtNbrRestartHlprStsChg, tmnxOspfSpfRunsStopped, tmnxOspfSpfRunsRestarted, tmnxOspfOverloadEntered, tmnxOspfOverloadExited, tmnxOspfAsOriginateLsa, tmnxOspfAsMaxAgeLsa, tmnxOspfShamIfStateChange, tmnxOspfShamNbrStateChange, tmnxOspfShamIfConfigError, tmnxOspfShamIfAuthFailure, tmnxOspfShamIfRxBadPacket, tmnxOspfShamNbrRestartHlprStsChg, tmnxOspfFailureDisabled, tmnxOspfExportLimitReached, tmnxOspfExportLimitWarning, tmnxOspfRoutesExpLmtDropped, tmnxOspfNgNbrStateChange, tmnxOspfNgIfConfigError, tmnxOspfNgIfAuthFailure, tmnxOspfNgIfRxBadPacket, tmnxOspfNgIfStateChange, tmnxOspfNgNbrRestartHlprStsChg, tmnxOspfNgLinkOriginateLsa, tmnxOspfNgLinkMaxAgeLsa, tmnxOspfNgLdpSyncTimerStarted, tmnxOspfNgLdpSyncExit, tmnxOspfSrSidError, tmnxOspfSrSidNotInLabelRange, tmnxOspfOverloadWarning, tmnxOspfRejectedAdjacencySid, tmnxOspfAdjBfdSessionSetupFail, tmnxOspfSrgbBadLabelRange, tmnxOspfRejectedAdjacencySet, tmnxOspfSidStatsIndexAlloc, tmnxOspfDynHostnameDuplicate, tmnxOspfDynHostnameInconsistent, tmnxOspfFaOperParticipationDown, tmnxOspfNgNbrStrictBfdBlocked
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ospf event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ospf event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ospf event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ospf event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ospf event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ospf event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ospf event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

pcap *event keyword*

Synopsis	Enter the pcap list instance
Context	configure log log-events pcap event <i>keyword</i>
Tree	pcap
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events pcap event <i>keyword</i>
Tree	pcap
Options	tmnxPcapFileError, tmnxPcapBufferFull, tmnxPcapBufferReadWriteFailure, tmnxPcapSoftwareFailure
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs
Context **configure** [log log-events pcap event](#) *keyword generate boolean*
Tree [generate](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared
Context **configure** [log log-events pcap event](#) *keyword repeat boolean*
Tree [repeat](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type
Context **configure** [log log-events pcap event](#) *keyword severity keyword*
Tree [severity](#)
Options cleared, indeterminate, critical, major, minor, warning
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
Context **configure** [log log-events pcap event](#) *keyword specific-throttle boolean*
Tree [specific-throttle](#)
Introduced 25.3.R2

Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval

Context **configure** [log log-events pcap event](#) *keyword* [specific-throttle-interval](#) *number*

Tree [specific-throttle-interval](#)

Description This command specifies the number of seconds that the specific throttling intervals lasts.

Range 1 to 1200

Introduced 25.3.R2

Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged

Context **configure** [log log-events pcap event](#) *keyword* [specific-throttle-limit](#) *number*

Tree [specific-throttle-limit](#)

Range 1 to 20000

Introduced 25.3.R2

Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type

Context **configure** [log log-events pcap event](#) *keyword* [throttle](#) *boolean*

Tree [throttle](#)

Description This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.

Introduced 25.3.R2

Platforms 7705 SAR-1

pcep [event](#) *keyword*

Synopsis Enter the **pcep** list instance

Context **configure** [log log-events pcep event](#) *keyword*

Tree	pcep
Introduced	25.3.R2
Platforms	7705 SAR-1

event keyword

Synopsis	PCEP module events
Context	configure log log-events pcep event keyword
Tree	pcep
Options	tmnxPcepPccPeerStateChange
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events pcep event keyword generate boolean
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events pcep event keyword repeat boolean
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity keyword

Synopsis	Severity level associated with event type
Context	configure log log-events pcep event keyword severity keyword

Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events pcep event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events pcep event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events pcep event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
----------	----------------------------------

Context	configure log log-events pcep event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

pfcp event *keyword*

Synopsis	Enter the pfc p list instance
Context	configure log log-events pfc event <i>keyword</i>
Tree	pfc
Introduced	25.10.R1
Platforms	7705 SAR-1

event *keyword*

Synopsis	PFCP events
Context	configure log log-events pfc event <i>keyword</i>
Tree	pfc
Options	none, tmnxPfcplInvalidle, tmnxPfcNoSuchCalltraceProfile, tmnxPfcNoSecondaryInterface
Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events pfc event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.10.R1
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events pfcg event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events pfcg event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.10.R1
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events pfcg event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.10.R1
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events pfcg event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.10.R1
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events pfc event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.10.R1
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events pfc event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.10.R1
Platforms	7705 SAR-1

pim *event* *keyword*

Synopsis	Enter the pim list instance
Context	configure log log-events pim <i>event</i> <i>keyword</i>
Tree	pim
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events pim <i>event</i> <i>keyword</i>
Tree	pim
Options	vRtrPimNgIfNeighborLoss, vRtrPimNgIfNeighborUp, vRtrPimNgInvalidJoinPrune, vRtrPimNgInvalidRegister, vRtrPimNgGrpInSSMRange, vRtrPimNgBSRStateChange, vRtrPimNgHelloDropped, vRtrPimNgSGLimitExceeded, vRtrPimNgReplicationLmtExceeded, vRtrPimNgMDTLimitExceeded, vRtrPimNgMaxGrpsLimitExceeded, vRtrPimNgDataMtReused,

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure** [log log-events port event](#) *keyword generate boolean*

Tree [generate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context **configure** [log log-events port event](#) *keyword repeat boolean*

Tree [repeat](#)

Default false

Introduced 25.3.R2
Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type
Context **configure** [log log-events port event](#) *keyword severity keyword*
Tree [severity](#)
Options cleared, indeterminate, critical, major, minor, warning
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle *boolean*

Synopsis Use parameters that throttle this specific event
Context **configure** [log log-events port event](#) *keyword specific-throttle boolean*
Tree [specific-throttle](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
Context **configure** [log log-events port event](#) *keyword specific-throttle-interval number*
Tree [specific-throttle-interval](#)
Range 1 to 1200
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
Context **configure** [log log-events port event](#) *keyword specific-throttle-limit number*
Tree [specific-throttle-limit](#)
Range 1 to 20000

Introduced 25.3.R2
Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
Context **configure** [log log-events port event](#) *keyword* **throttle** *boolean*
Tree [throttle](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

python [event](#) *keyword*

Synopsis Enter the **python** list instance
Context **configure** [log log-events python event](#) *keyword*
Tree [python](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

event *keyword*

Synopsis Python module events
Context **configure** [log log-events python event](#) *keyword*
Tree [python](#)
Options tmnxPythonInterpreterRestarted, tmnxPythonPreComScrStarted, tmnxPythonPreComScrFinished, tmnxPythonPostComScrStarted, tmnxPythonPostComScrFinished, tmnxPythonPreComScrSkipped, tmnxPythonPostComScrSkipped
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs
Context **configure** [log log-events python event](#) *keyword* **generate** *boolean*

Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events python event <i>keyword repeat boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events python event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events python event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events python event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval

Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events python event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events python event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

radius [event](#) *keyword*

Synopsis	Enter the radius list instance
Context	configure log log-events radius event <i>keyword</i>
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
----------	---

Context	configure log log-events radius event <i>keyword</i>
Tree	radius
Options	tmnxRadSrvPlcySrvOperStateCh, tmnxRadRouteDownloadFailed, tmnxRadAcctOnOngoing
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events radius event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events radius event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events radius event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events radius event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events radius event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events radius event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events radius event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2

Platforms 7705 SAR-1

rip event *keyword*

Synopsis Enter the **rip** list instance

Context **configure log log-events rip event** *keyword*

Tree **rip**

Introduced 25.3.R2

Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers

Context **configure log log-events rip event** *keyword*

Tree **rip**

Options ripPacketDiscarded, vRtrRipAuthTypeMismatch, vRtrRipAuthTypeFailure, vRtrRipInstanceShuttingDown, vRtrRipInstanceRestarted, vRtrRipInstanceExpLmtReached, vRtrRipInstanceExpLmtWarning, vRtrRipInstanceRtsExpLmtDropped, vRtrRipPeerBfdDown

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure log log-events rip event** *keyword generate* *boolean*

Tree **generate**

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context **configure log log-events rip event** *keyword repeat* *boolean*

Tree **repeat**

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events rip event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events rip event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events rip event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events rip event <i>keyword specific-throttle-limit number</i>

Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events rip event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

ripng [event](#) *keyword*

Synopsis	Enter the ripng list instance
Context	configure log log-events ripng event <i>keyword</i>
Tree	ripng
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ripng event <i>keyword</i>
Tree	ripng
Options	tmnxRipNgPacketDiscarded, tmnxRipNgAuthTypeMismatch, tmnxRipNgAuthFailure, tmnxRipNgInstShuttingDown, tmnxRipNgInstRestarted, tmnxRipNgInstExpLmtReached, tmnxRipNgInstExpLmtWarning, tmnxRipNgInstRtsExpLmtDropped, tmnxRipNgIfUcastAddrNotUsed, tmnxRipNgPeerBfdDown
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ripng event <i>keyword generate boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ripng event <i>keyword repeat boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ripng event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ripng event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ripng event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ripng event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ripng event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-policy [event](#) *keyword*

Synopsis	Enter the route-policy list instance
Context	configure log log-events route-policy event <i>keyword</i>
Tree	route-policy
Introduced	25.3.R2

Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers

Context **configure** [log](#) [log-events](#) [route-policy](#) [event](#) *keyword*

Tree [route-policy](#)

Options trigPolicyPrevEval

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

generate *boolean*

Synopsis Generate log events when the event occurs

Context **configure** [log](#) [log-events](#) [route-policy](#) [event](#) *keyword* [generate](#) *boolean*

Tree [generate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared

Context **configure** [log](#) [log-events](#) [route-policy](#) [event](#) *keyword* [repeat](#) *boolean*

Tree [repeat](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level associated with event type

Context **configure** [log](#) [log-events](#) [route-policy](#) [event](#) *keyword* [severity](#) *keyword*

Tree [severity](#)

Options cleared, indeterminate, critical, major, minor, warning

Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
Context **configure** [log log-events route-policy event](#) *keyword* [specific-throttle](#) *boolean*
Tree [specific-throttle](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
Context **configure** [log log-events route-policy event](#) *keyword* [specific-throttle-interval](#) *number*
Tree [specific-throttle-interval](#)
Description This command specifies the number of seconds that the specific throttling intervals lasts.
Range 1 to 1200
Introduced 25.3.R2
Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
Context **configure** [log log-events route-policy event](#) *keyword* [specific-throttle-limit](#) *number*
Tree [specific-throttle-limit](#)
Range 1 to 20000
Introduced 25.3.R2
Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
Context **configure** [log log-events route-policy event](#) *keyword* [throttle](#) *boolean*
Tree [throttle](#)

Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

rpki event *keyword*

Synopsis	Enter the rpki list instance
Context	configure log log-events rpki event <i>keyword</i>
Tree	rpki
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events rpki event <i>keyword</i>
Tree	rpki
Options	tmnxRpkiNotifySession, tmnxRpkiStaleTimerExpiry
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events rpki event <i>keyword generate</i> <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events rpki event <i>keyword repeat</i> <i>boolean</i>

Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events rpki event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events rpki event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events rpki event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
----------	--

Context	configure log log-events rpki event <i>keyword specific-throttle-limit number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle boolean

Synopsis	Throttle log events of this type
Context	configure log log-events rpki event <i>keyword throttle boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp event keyword

Synopsis	Enter the rsvp list instance
Context	configure log log-events rsvp event <i>keyword</i>
Tree	rsvp
Introduced	25.3.R2
Platforms	7705 SAR-1

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events rsvp event <i>keyword</i>
Tree	rsvp
Options	vRtrRsvpStateChange, vRtrRsvplfStateChange, vRtrRsvplfNbrStateUp, vRtrRsvplfNbrStateDown, vRtrRsvpPEFailOverPriToStdBy, vRtrRsvpPEFailOverStdByToPri
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events rsvp event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events rsvp event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events rsvp event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events rsvp event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events rsvp event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events rsvp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events rsvp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

security *event keyword*

Synopsis	Enter the security list instance
Context	configure log log-events security event <i>keyword</i>
Tree	security
Introduced	25.3.R2

Platforms 7705 SAR-1

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events security event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp event *keyword*

Synopsis	Enter the snmp list instance
Context	configure log log-events snmp event <i>keyword</i>
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR-1

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events snmp event <i>keyword</i>
Tree	snmp
Options	coldStart, warmStart, authenticationFailure, linkDown, linkUp, risingAlarm, fallingAlarm, hcRisingAlarm, hcFallingAlarm, snmpdError
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
----------	---

Context	configure log log-events snmp event keyword generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events snmp event keyword repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events snmp event keyword severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events snmp event keyword specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events snmp event keyword specific-throttle-interval <i>number</i>

Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events snmp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events snmp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-mpls [event](#) *keyword*

Synopsis	Enter the sr-mpls list instance
Context	configure log log-events sr-mpls event <i>keyword</i>
Tree	sr-mpls
Introduced	25.3.R2
Platforms	7705 SAR-1

event keyword

Synopsis	SR MPLS event
Context	configure log log-events sr-mpls event <i>keyword</i>
Tree	sr-mpls
Options	tmnxSrMplsPfxSidFailure, tmnxSrMplsPfxSidFlexAlgoFailure
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events sr-mpls event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events sr-mpls event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity keyword

Synopsis	Severity level associated with event type
Context	configure log log-events sr-mpls event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events sr-mpls event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events sr-mpls event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events sr-mpls event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events sr-mpls event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2

Platforms 7705 SAR-1

sr-policy *event keyword*

Synopsis Enter the **sr-policy** list instance

Context **configure** **log** **log-events** **sr-policy** *event keyword*

Description This command specifies the number of seconds that the specific throttling intervals lasts.

Range 1 to 1200

Introduced 25.3.R2

Platforms 7705 SAR-1

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged

Context **configure** [log](#) [log-events](#) [tls event](#) *keyword specific-throttle-limit number*

Tree [specific-throttle-limit](#)

Range 1 to 20000

Introduced 25.3.R2
 Platforms 7705 SAR-1

throttle *boolean*

Synopsis Throttle log events of this type
 Context **configure** [log](#) [log-events](#) [tls event](#) *keyword throttle boolean*
 Tree [throttle](#)
 Description This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
 Introduced 25.3.R2
 Platforms 7705 SAR-1

user [event](#) *keyword*

Synopsis Enter the **user** list instance
 Context **configure** [log](#) [log-events](#) [user event](#) *keyword*
 Tree [user](#)
 Introduced 25.3.R2
 Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers
 Context **configure** [log](#) [log-events](#) [user event](#) *keyword*
 Tree [user](#)
 Options cli_user_login, cli_user_logout, cli_user_login_failed, cli_user_login_max_attempts, ftp_user_login, ftp_user_logout, ftp_user_login_failed, ftp_user_login_max_attempts, cli_user_io, snmp_user_set, cli_config_io, cli_unauth_user_io, cli_unauth_config_io, grpc_user_login, grpc_user_logout, grpc_user_login_failed, grpc_user_login_max_attempts, netconf_user_login, netconf_user_logout, netconf_user_login_failed, netconf_user_login_max_attempts
 Notes This element is part of a list key.
 Introduced 25.3.R2
 Platforms 7705 SAR-1

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events user event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events user event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events user event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events user event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events user event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	7705 SAR-1

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events user event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events user event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	7705 SAR-1

vrrp **event** *keyword*

Synopsis	Enter the vrrp list instance
Context	configure log log-events vrrp event <i>keyword</i>
Tree	vrrp
Introduced	25.3.R2

Platforms 7705 SAR-1

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers

Synopsis Text description

Context	configure log log-id log-name description description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination

Synopsis	Enter the destination context
Context	configure log log-id log-name destination
Tree	destination
Description	Commands in this context specify where log event data is to be sent.
Introduced	25.3.R2
Platforms	7705 SAR-1

cli

Synopsis	Enable the cli context
Context	configure log log-id log-name destination cli
Tree	cli
Description	Commands in this context configure log events directed to any subscribed CLI session. Subscribe to a CLI log from within a CLI session using the tools perform log subscribe-to log-id command. Events are sent to the CLI session for the duration of the CLI session or until a tools perform log unsubscribe-from command is issued. A local circular memory log is maintained for CLI logs.
Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries number

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this CLI log
----------	---

Context	configure log log-id <i>log-name</i> destination cli max-entries <i>number</i>
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

console

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Send log events to the system console port
Context	configure log log-id <i>log-name</i> destination console
Tree	console
Description	When specified, the system directs log events to the console port. If the console is not connected, the system drops all entries.
Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

file reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	File to send log events
Context	configure log log-id <i>log-name</i> destination file <i>reference</i>
Tree	file
Description	<p>This command specifies the file where the system directs log events.</p> <p>When the command is modified, log files are not written to the new location until a rollover occurs or the log is manually cleared. Use the clear log command to force a rollover. Subsequent log entries are then written to the new location. If a rollover does not occur or the log is not cleared, the system continues to use the old location.</p>
Reference	configure log file <i>file-policy-name</i>

Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

memory

Synopsis	Enable the memory context
Context	configure log log-id log-name destination memory
Tree	memory
Description	Commands in this context configure log events directed to a memory file. A memory file is a circular buffer. When the file is full, each new entry replaces the oldest entry in the log.
Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this memory log
Context	configure log log-id log-name destination memory max-entries <i>number</i>
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf

Synopsis	Enable the netconf context
Context	configure log log-id log-name destination netconf
Tree	netconf

Description	Commands in this context configure log events directed to a NETCONF session as notifications. A NETCONF client can subscribe to a NETCONF log using the configured netconf-stream for the log in a subscription request. One or more NETCONF sessions can subscribe to a NETCONF log or stream.
Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this NETCONF log
Context	configure log log-id log-name destination netconf max-entries number
Tree	max-entries
Range	50 to 3000
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp

Synopsis	Enable the snmp context
Context	configure log log-id log-name destination snmp
Tree	snmp
Description	Commands in this context configure log events directed to the snmp-trap-group associated with the log ID. A local circular memory log is maintained for SNMP logs.
Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this SNMP log
Context	configure log log-id log-name destination snmp max-entries <i>number</i>
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

syslog *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Syslog collector to send log events
Context	configure log log-id log-name destination syslog <i>reference</i>
Tree	syslog
Description	This command specifies the syslog collector to direct log events. To remain consistent with the standards governing syslog, messages to syslog are truncated to 1024 bytes.
Reference	configure log syslog <i>log-syslog-name</i>
Notes	The following elements are part of a choice: cli , console , file , memory , netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

filter *reference*

Synopsis	Event filter policy with the log destination
Context	configure log log-id log-name filter <i>reference</i>
Tree	filter
Reference	configure log filter <i>log-filter-name</i>

Introduced 25.3.R2

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

trap-target [\[name\]](#) *string*

Synopsis	Enter the trap-target list instance
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i>
Tree	trap-target
Max. instances	25
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *string*

Synopsis	Trap target name
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i>
Tree	trap-target
String length	1 to 28
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the trap receiver
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

notify-community *string*

Synopsis	SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> notify-community <i>string</i>
Tree	notify-community
String length	1 to 31
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	UDP port number to send messages to this remote SNMP notification collector
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	162
Introduced	25.3.R2
Platforms	7705 SAR-1

replay *boolean*

Synopsis	Retransmit missed notifications
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> replay <i>boolean</i>

Tree	replay
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

security-level *keyword*

Synopsis	Security level at which SNMP notification messages are sent to SNMP notification collector
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> security-level <i>keyword</i>
Tree	security-level
Options	no-auth-no-privacy, auth-no-privacy, privacy
Default	no-auth-no-privacy
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	SNMP version to format notification messages sent to this SNMP notification collector
Context	configure log snmp-trap-group <i>snmp-trap-group-name</i> trap-target <i>string</i> version <i>keyword</i>
Tree	version
Options	snmpv1, snmpv2c, snmpv3
Default	snmpv3
Introduced	25.3.R2
Platforms	7705 SAR-1

syslog [[syslog-name](#)] *log-syslog-name*

Synopsis	Enter the syslog list instance
Context	configure log syslog <i>log-syslog-name</i>
Tree	syslog
Max. instances	10
Introduced	25.3.R2

Platforms 7705 SAR-1

[syslog-name] *log-syslog-name*

Synopsis Syslog name
Context **configure** [log syslog](#) *log-syslog-name*
Tree [syslog](#)
String length 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the Syslog target host
Context **configure** [log syslog](#) *log-syslog-name* [address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Tree [address](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Synopsis Text description
Context **configure** [log syslog](#) *log-syslog-name* [description](#) *description*
Tree [description](#)
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

facility *keyword*

Synopsis Facility code for messages
Context **configure** [log syslog](#) *log-syslog-name* [facility](#) *keyword*
Tree [facility](#)

Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local7
Introduced	25.3.R2
Platforms	7705 SAR-1

hostname

Synopsis	Enter the hostname context
Context	configure log syslog log-syslog-name hostname
Tree	hostname
Description	Commands in this context control how the HOSTNAME field of syslog messages is populated.
Introduced	25.3.R2
Platforms	7705 SAR-1

use-system-name

Synopsis	Enable the use-system-name context
Context	configure log syslog log-syslog-name hostname use-system-name
Tree	use-system-name
Description	<p>This command configures the system to use the system name configured with the configure system name command as the HOSTNAME field of syslog messages.</p> <p>Do not use any spaces in the system name if it is being used for the syslog HOSTNAME.</p>
Notes	The following elements are part of a choice: use-system-name or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

value *named-item-255*

Synopsis	Syslog HOSTNAME field value
Context	configure log syslog log-syslog-name hostname value <i>named-item-255</i>
Tree	value
Description	This command configures the system to use a specified string as the HOSTNAME field of syslog messages.

	Do not use any spaces in the string used for the syslog HOSTNAME.
String length	1 to 255
Notes	The following elements are part of a choice: use-system-name or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

log-prefix (*keyword* | *string*)

Synopsis	String that is prepended to every log message sent to this target syslog host
Context	configure log syslog <i>log-syslog-name</i> log-prefix (<i>keyword</i> <i>string</i>)
Tree	log-prefix
String length	1 to 32
Options	no-prefix
Default	TMNX
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	Destination port when sending syslog over UDP
Context	configure log syslog <i>log-syslog-name</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	514
Introduced	25.3.R2
Platforms	7705 SAR-1

severity *keyword*

Synopsis	Severity level threshold for the syslog message
Context	configure log syslog <i>log-syslog-name</i> severity <i>keyword</i>
Tree	severity
Options	emergency, alert, critical, error, warning, notice, info, debug
Default	info
Introduced	25.3.R2

Platforms 7705 SAR-1

timestamp-format *keyword*

Synopsis	Syslog timestamp format
Context	configure log syslog <i>log-syslog-name</i> timestamp-format <i>keyword</i>
Tree	timestamp-format
Options	millisecond – Set timestamp format to milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TLS client profile used to encrypt syslog communication
Context	configure log syslog <i>log-syslog-name</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Description	<p>This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.</p> <p>Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.</p> <p>When this command is unconfigured, the syslog messages are sent over UDP.</p>
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

throttle-rate

Synopsis	Enter the throttle-rate context
Context	configure log throttle-rate
Tree	throttle-rate
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Duration of an event throttling interval
Context	configure log throttle-rate interval <i>number</i>
Tree	interval
Range	1 to 1200
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

limit *number*

Synopsis	Number of log events within the throttle interval
Context	configure log throttle-rate limit <i>number</i>
Tree	limit
Range	1 to 20000
Default	2000
Introduced	25.3.R2
Platforms	7705 SAR-1

4.15.1 macsec command descriptions

macsec

Synopsis	Enter the macsec context
Context	configure macsec
Tree	macsec
Introduced	25.3.R2
Platforms	7705 SAR-1

connectivity-association [[ca-name](#)] *string*

Synopsis	Enter the connectivity-association list instance
Context	configure macsec connectivity-association <i>string</i>
Tree	connectivity-association
Introduced	25.3.R2
Platforms	7705 SAR-1

[ca-name] *string*

Synopsis	Connectivity association name
Context	configure macsec connectivity-association <i>string</i>
Tree	connectivity-association
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the connectivity association
Context	configure macsec connectivity-association <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced 25.3.R2
Platforms 7705 SAR-1

cipher-suite *keyword*

Synopsis Data path encryption algorithm
Context **configure** **macsec** **connectivity-association** *string* **cipher-suite** *keyword*
Tree **cipher-suite**
Options gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
Default gcm-aes-128
Introduced 25.3.R2
Platforms 7705 SAR-1

clear-tag-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Clear tag mode for clear text before the SecTAG
Context **configure** **macsec** **connectivity-association** *string* **clear-tag-mode** *keyword*
Tree **clear-tag-mode**
Options none, single-tag, dual-tag
Default none
Introduced 25.3.R2
Platforms 7705 SAR-1

delay-protection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable delay protection
Context **configure** **macsec** **connectivity-association** *string* **delay-protection** *boolean*
Tree **delay-protection**
Default false

Introduced25.3.R2

Platforms7705 SAR-1

macsec-encrypt *boolean*

SynopsisEncrypt and authenticate all PDUs

Context**configure** [macsec connectivity-association](#) *string* [macsec-encrypt](#) *boolean*

Tree[macsec-encrypt](#)

Description

When configured to **true**, all PDUs are encrypted and authenticated.

When configured to **false**, all PDUs are transmitted in clear text, however, they are still authenticated and have the trailing ICV.

Defaulttrue

Introduced25.3.R2

Platforms7705 SAR-1

replay-protection *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Discard packet when not within the replay window size
Context	configure macsec connectivity-association <i>string</i> replay-protection <i>boolean</i>
Tree	replay-protection
Description	<p>When configured to true, replay protection is enabled and packets are discarded when they are not within the replay window size.</p> <p>With replay protection, the sequence of the ID number of received packets is checked. If a packet arrives out of sequence and the difference between the packet IDs exceeds the replay protection window size, the packet is counted by the receiving port and discarded. For example if the replay protection window size is configured to five and a packet with an ID of 1006 arrives on the receiving link immediately following the packet assigned an ID of 1000, the packet with ID 1006 is counted and discarded because it is outside the parameter of the window size.</p> <p>Replay protection is particularly useful for addressing man-in-the-middle attacks. A packet that is replayed by a man-in-the-middle attacker on the Ethernet link that arrives on the receiving link out of sequence will be detected and dropped instead of forwarded through the network.</p> <p>Replay protection should not be enabled in cases where packets are expected to arrive out of order.</p> <p>When configured to false, replay protection is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

replay-window-size *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Replay protection window size
Context	configure macsec connectivity-association <i>string</i> replay-window-size <i>number</i>
Tree	replay-window-size
Range	0 to 4294967294
Default	0

Introduced	25.3.R2
Platforms	7705 SAR-1

static-cak

Synopsis	Enter the static-cak context
Context	configure macsec connectivity-association <i>string</i> static-cak
Tree	static-cak
Description	Commands in this context configure the Connectivity Association Key (CAK) to manage the MACsec Key Agreement (MKA).
Introduced	25.3.R2
Platforms	7705 SAR-1

active-psk *number*

Synopsis	Active pre-shared-key (PSK)
Context	configure macsec connectivity-association <i>string</i> static-cak active-psk <i>number</i>
Tree	active-psk
Description	This command specifies the active transmitting PSK. If two PSKs are configured, the arriving MACsec MKA can be decrypted via CAKs using either PSK; however, only the active PSK is used for TX encryption of MKA PDUs.
Range	1 to 2
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

keychain

Synopsis	Enter the keychain context
Context	configure macsec connectivity-association <i>string</i> static-cak keychain
Tree	keychain
Introduced	25.10.R1
Platforms	7705 SAR-1

primary *reference*

Synopsis	Keychain name for primary use
Context	configure macsec connectivity-association <i>string</i> static-cak keychain primary <i>reference</i>
Tree	primary
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

mka-hello-interval *keyword*

Synopsis	MKA hello interval
Context	configure macsec connectivity-association <i>string</i> static-cak mka-hello-interval <i>keyword</i>
Tree	mka-hello-interval
Description	This command configures the interval at which MKA hello packets are sent or received for the connectivity association.
Options	1, 2, 3, 4, 5, 6, 500ms
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

mka-key-server-priority *number*

Synopsis	Key server priority used by the MKA protocol
Context	configure macsec connectivity-association <i>string</i> static-cak mka-key-server-priority <i>number</i>
Tree	mka-key-server-priority
Description	This command specifies the key server priority used by the MACsec Key Agreement (MKA) protocol to select the key server when MACsec is enabled using static connectivity association key (CAK) security mode.
Range	0 to 255
Default	16
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-shared-key [*psk-id*] *number*

Synopsis	Enter the pre-shared-key list instance
Context	configure macsec connectivity-association <i>string</i> static-cak pre-shared-key <i>number</i>
Tree	pre-shared-key
Description	<p>Commands in this context configure pre-shared key attributes to enable MACsec using static connectivity association key (CAK) security mode.</p> <p>A pre-shared key includes a connectivity association key name (CKN) and a connectivity association key (CAK). The pre-shared key, the CKN and the CAK, must match on both ends of a link.</p> <p>A pre-shared key is configured on both devices at each end of a point-to-point link to enable MACsec via static CAK security mode. The MACsec Key Agreement (MKA) protocol is enabled after the successful MKA liveness negotiation.</p> <p>The encryption type is used to encrypt the SAK and authenticate the MKA packet. The symmetric encryption key SAK (Security Association Key) must be encrypted (wrapped) via the MKA protocols. The AES key is derived from the pre-shared-key.</p>
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[psk-id] *number*

Synopsis	Pre-shared-key (PSK) ID
Context	configure macsec connectivity-association <i>string</i> static-cak pre-shared-key <i>number</i>
Tree	pre-shared-key
Range	1 to 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

cak *encrypted-leaf-hex-without-prefix*

Synopsis	Connectivity association key (CAK) for the PSK
Context	configure macsec connectivity-association <i>string</i> static-cak pre-shared-key <i>number</i> cak <i>encrypted-leaf-hex-without-prefix</i>
Tree	cak

Description	This command specifies the connectivity association key (CAK) for the pre-shared key. Two values are derived from the CAK: <ul style="list-style-type: none"> • Key Encryption Key (KEK), used to encrypt the MKA and SAK (symmetric key used for data path PDUs) distributed between all members • Integrity Check Value (ICV), used to authenticate the MKA and SAK PDUs distributed between all members
String length	1 to 71
Introduced	25.3.R2
Platforms	7705 SAR-1

cak-name *cak-name*

Synopsis	Connectivity association key name (CKN) for the PSK
Context	configure macsec connectivity-association <i>string static-cak pre-shared-key number cak-name cak-name</i>
Tree	<i>cak-name</i>
Description	This command specifies the connectivity association key name (CKN) for the pre-shared key. The CKN is appended to the MKA for identification of the appropriate CAK by the peer.
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-type *keyword*

Synopsis	Encryption for authentication of the MKA packet
Context	configure macsec connectivity-association <i>string static-cak pre-shared-key number encryption-type keyword</i>
Tree	<i>encryption-type</i>
Options	aes-128-cmac, aes-256-cmac
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-policy [*mac-policy-id*] *number*

Synopsis	Enter the mac-policy list instance
----------	---

Context	configure macsec mac-policy <i>number</i>
Tree	mac-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

[mac-policy-id] *number*

Synopsis	MAC address policy ID
Context	configure macsec mac-policy <i>number</i>
Tree	mac-policy
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-mac-address [[dest-mac-addr](#)] *mac-address*

Synopsis	Add a list entry for destination-mac-address
Context	configure macsec mac-policy <i>number</i> destination-mac-address <i>mac-address</i>
Tree	destination-mac-address
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[dest-mac-addr] *mac-address*

Synopsis	Destination MAC address added to the MAC policy
Context	configure macsec mac-policy <i>number</i> destination-mac-address <i>mac-address</i>
Tree	destination-mac-address
Notes	This element is part of a list key.
Introduced	25.3.R2

revert-time (*number* | *keyword*)

Synopsis Time to wait before reverting back to primary spoke SDP
Context **configure** **mirror** **mirror-dest** *service-name* **endpoint** *named-item* **revert-time** (*number* | *keyword*)
Tree **revert-time**
Range 1 to 600
Units seconds
Options never, immediate
Default immediate
Introduced 25.3.R2
Platforms 7705 SAR-1

fc keyword

Synopsis	Forwarding class for destination traffic
Context	configure mirror mirror-dest <i>service-name</i> fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR-1

pcap [[session-name](#)] *named-item*

Synopsis	Enter the pcap list instance
Context	configure mirror mirror-dest <i>service-name</i> pcap <i>named-item</i>
Tree	pcap
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[session-name] *named-item*

Synopsis	PCAP session name
Context	configure mirror mirror-dest <i>service-name</i> pcap <i>named-item</i>
Tree	pcap
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

file-url *ts-url*

Synopsis	URL and file name for packet capture transfer
Context	configure mirror mirror-dest <i>service-name</i> pcap <i>named-item</i> file-url <i>ts-url</i>
Tree	file-url
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *named-item-64*

Synopsis	Router name used for FTP transmission of the PCAP file
Context	configure mirror mirror-dest <i>service-name</i> pcap <i>named-item</i> router-instance <i>named-item-64</i>
Tree	router-instance
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-source

Synopsis	Enable the remote-source context
Context	configure mirror mirror-dest <i>service-name</i> remote-source
Tree	remote-source
Introduced	25.3.R2
Platforms	7705 SAR-1

far-end [**far-end-addr**] *ipv4-address*

Synopsis	Enter the far-end list instance
Context	configure mirror mirror-dest <i>service-name</i> remote-source far-end <i>ipv4-address</i>
Tree	far-end
Introduced	25.3.R2
Platforms	7705 SAR-1

[far-end-addr] ipv4-address

Synopsis	Far end IP address
Context	configure mirror mirror-dest <i>service-name</i> remote-source far-end <i>ipv4-address</i>
Tree	far-end
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

icb boolean

Synopsis	Remote source as an inter-chassis backup
Context	configure mirror mirror-dest <i>service-name</i> remote-source far-end <i>ipv4-address</i> icb <i>boolean</i>
Tree	icb
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ing-vc-label number

Synopsis	Ingress virtual circuit label
Context	configure mirror mirror-dest <i>service-name</i> remote-source far-end <i>ipv4-address</i> ing-vc-label <i>number</i>
Tree	ing-vc-label
Range	1 to 1048575
Notes	The following elements are part of a choice: ing-vc-label or label-signaling .
Introduced	25.3.R2
Platforms	7705 SAR-1

label-signaling keyword

Synopsis	Protocol to obtain the ingress labels
Context	configure mirror mirror-dest <i>service-name</i> remote-source far-end <i>ipv4-address</i> label-signaling <i>keyword</i>
Tree	label-signaling

Options	tldp
Default	tldp
Notes	The following elements are part of a choice: ing-vc-label or label-signaling .
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-id *number*

Synopsis	Virtual circuit ID associated with the remote source
Context	configure mirror mirror-dest <i>service-name</i> remote-source far-end <i>ipv4-address</i> vc-id <i>number</i>
Tree	vc-id
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

spoke-sdp [**sdp-bind-id**] *sdp-bind-id*

Synopsis	Enter the spoke-sdp list instance
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
Introduced	25.3.R2
Platforms	7705 SAR-1

[**sdp-bind-id**] *sdp-bind-id*

Synopsis	SDP ID number
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
String length	3 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the service SDP binding
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

control-word *boolean*

Synopsis	Enable the PW control word on spoke SDPs
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> control-word <i>boolean</i>
Tree	control-word
Description	<p>When configured to true, this command enables the PW control word on spoke SDPs that are part of a mirror destination. The control word must be enabled to allow MPLS-TP OAM on spoke SDP and is only valid for spoke SDPs that are part of a mirror service of type ether.</p> <p>When configured to false, this command disables the PW control word.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-label *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS VC label that sends packets to the far end device
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> egress vc-label <i>number</i>
Tree	vc-label
Range	16 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

endpoint

Synopsis	Enter the endpoint context
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> endpoint
Tree	endpoint
Introduced	25.3.R2
Platforms	7705 SAR-1

icb *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind the SDP as the Inter-Chassis Backup (ICB) type
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> endpoint icb <i>boolean</i>
Tree	icb
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	SAP-associated endpoint name
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> endpoint <i>name</i> <i>reference</i>
Tree	name
Reference	configure mirror mirror-dest <i>service-name</i> endpoint <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS VC label that sends packets to the far end device
Context	configure mirror mirror-dest <i>service-name</i> remote-source spoke-sdp <i>sdp-bind-id</i> ingress vc-label <i>number</i>
Tree	vc-label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [**sap-id**] *sap*

Synopsis	Enter the sap list instance
Context	configure mirror mirror-dest <i>service-name</i> sap <i>sap</i>

Tree	sap
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[sap-id] sap

Synopsis	SAP ID
Context	configure mirror mirror-dest <i>service-name</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure mirror mirror-dest <i>service-name</i> sap <i>sap</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mirror

Synopsis	Enter the ip-mirror context
Context	configure mirror mirror-dest <i>service-name</i> sap <i>sap</i> egress ip-mirror
Tree	ip-mirror
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Enter the mac context
----------	------------------------------

Context	configure mirror mirror-dest <i>service-name</i> sap sap egress ip-mirror mac
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR-1

destination *mac-address*

Synopsis	Destination MAC address
Context	configure mirror mirror-dest <i>service-name</i> sap sap egress ip-mirror mac destination <i>mac-address</i>
Tree	destination
Introduced	25.3.R2
Platforms	7705 SAR-1

source *mac-unicast-address*

Synopsis	Source MAC address
Context	configure mirror mirror-dest <i>service-name</i> sap sap egress ip-mirror mac source <i>mac-unicast-address</i>
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure mirror mirror-dest <i>service-name</i> sap sap egress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-egress

Synopsis	Enter the sap-egress context
Context	configure mirror mirror-dest <i>service-name</i> sap sap egress qos sap-egress
Tree	sap-egress

Introduced 25.3.R2
Platforms 7705 SAR-1

policy-name *reference*

Synopsis Policy ID to associate with SAP for mirrored service
Context **configure** [mirror mirror-dest service-name sap sap egress qos sap-egress policy-name reference](#)
Tree [policy-name](#)
Reference **configure** [qos sap-egress qos-policy-name](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

port-redirect-group

Synopsis Enter the **port-redirect-group** context
Context **configure** [mirror mirror-dest service-name sap sap egress qos sap-egress port-redirect-group](#)
Tree [port-redirect-group](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

group-name *reference*

Synopsis Name of the queue group redirect list policy
Context **configure** [mirror mirror-dest service-name sap sap egress qos sap-egress port-redirect-group group-name reference](#)
Tree [group-name](#)
Reference **configure** [qos queue-group-templates egress queue-group named-item](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

instance *number*

Synopsis Port queue group instance

Context	configure mirror mirror-dest <i>service-name</i> sap sap egress qos sap-egress port-redirect-group instance <i>number</i>
Tree	instance
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

endpoint *reference*

Synopsis	Service endpoint name
Context	configure mirror mirror-dest <i>service-name</i> sap sap endpoint <i>reference</i>
Tree	endpoint
Reference	configure mirror mirror-dest <i>service-name</i> endpoint <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure mirror mirror-dest <i>service-name</i> service-id <i>number</i>
Tree	service-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

slice-size *number*

Synopsis	Maximum size of the transmitted mirrored frame
Context	configure mirror mirror-dest <i>service-name</i> slice-size <i>number</i>
Tree	slice-size
Range	0 128 to 9216
Default	0

Introduced 25.3.R2
Platforms 7705 SAR-1

spoke-sdp [**sdp-bind-id**] *sdp-bind-id*

Synopsis Enter the **spoke-sdp** list instance
Context **configure** **mirror** **mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Tree **spoke-sdp**
Introduced 25.3.R2
Platforms 7705 SAR-1

[sdp-bind-id] *sdp-bind-id*

Synopsis SDP ID number
Context **configure** **mirror** **mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Tree **spoke-sdp**
String length 3 to 16
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the service SDP binding
Context **configure** **mirror** **mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **admin-state** *keyword*
Tree **admin-state**
Options enable, disable
Default enable
Introduced 25.3.R2
Platforms 7705 SAR-1

egress

Synopsis Enter the **egress** context
Context **configure** **mirror** **mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **egress**

Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-label *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS VC label that sends packets to the far end device
Context	configure mirror mirror-dest <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> egress vc-label <i>number</i>
Tree	vc-label
Range	16 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

endpoint

Synopsis	Enter the endpoint context
Context	configure mirror mirror-dest <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> endpoint
Tree	endpoint
Introduced	25.3.R2
Platforms	7705 SAR-1

icb *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind the SDP as the Inter-Chassis Backup (ICB) type
Context	configure mirror mirror-dest <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> endpoint icb <i>boolean</i>
Tree	icb
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

name *reference*

Synopsis Endpoint name associated with the SAP

Context **configure** **mirror** **mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint** *name reference*

Tree **name**

Reference **configure** **mirror** **mirror-dest** *service-name* **endpoint** *named-item*

Introduced 25.3.R2

Synopsis	IPv6 filter entry ID
Context	configure mirror mirror-source <i>service-name</i> ipv6-filter <i>reference</i> entry <i>number</i>
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR-1

port [port-id] *mirror-source-port-lag-key*

Synopsis Enter the **port** list instance
Context **configure** **mirror** **mirror-source** *service-name* **port** *mirror-source-port-lag-key*
Tree **port**
Introduced 25.3.R2
Platforms 7705 SAR-1

[port-id] *mirror-source-port-lag-key*

Synopsis Port ID
Context **configure** **mirror** **mirror-source** *service-name* **port** *mirror-source-port-lag-key*
Tree **port**
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

egress *boolean*

Synopsis Mirror egress packets
Context **configure** **mirror** **mirror-source** *service-name* **port** *mirror-source-port-lag-key* **egress** *boolean*
Tree **egress**
Description When configured to **true**, egressing packets are mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

ingress *boolean*

Synopsis Mirror ingress packets

Context	configure mirror mirror-source <i>service-name</i> port <i>mirror-source-port-lag-key</i> ingress <i>boolean</i>
Tree	ingress
Description	When configured to true , ingressing packets are mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [**sap-id**] *sap*

Synopsis	Enter the sap list instance
Context	configure mirror mirror-source <i>service-name</i> sap <i>sap</i>
Tree	sap
Introduced	25.3.R2
Platforms	7705 SAR-1

[sap-id] *sap*

Synopsis	SAP ID
Context	configure mirror mirror-source <i>service-name</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

egress *boolean*

Synopsis	Mirror egress packets
Context	configure mirror mirror-source <i>service-name</i> sap <i>sap</i> egress <i>boolean</i>
Tree	egress
Description	When configured to true , egressing packets are mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

ingress *boolean*

Synopsis	Mirror ingress packets
Context	configure mirror mirror-source <i>service-name</i> sap <i>sap</i> ingress <i>boolean</i>
Tree	ingress
Description	When configured to true , ingressing packets are mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

4.17.1 oam-pm command descriptions

oam-pm

Synopsis	Enter the oam-pm context
Context	configure oam-pm
Tree	oam-pm
Description	Commands in this context configure proactive and on-demand tests used to gather the performance and statistical information and define storage parameters (including binning structures).
Introduced	25.3.R2
Platforms	7705 SAR-1

bin-group [**bin-group-id**] *number*

Synopsis	Enter the bin-group list instance
Context	configure oam-pm bin-group <i>number</i>
Tree	bin-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[**bin-group-id**] *number*

Synopsis	Bin group ID
Context	configure oam-pm bin-group <i>number</i>
Tree	bin-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the bin group
Context	configure oam-pm bin-group <i>number</i> admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

bin-type [[bin-metric](#)] *keyword*

Synopsis	Enter the bin-type list instance
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i>
Tree	bin-type
Introduced	25.3.R2
Platforms	7705 SAR-1

[bin-metric] *keyword*

Synopsis	Delay metric bin structure
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i>
Tree	bin-type
Options	fd – Frame Delay fdr – Frame Delay Range ifdv – Inter-Frame Delay Variation
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

bin [[bin-number](#)] *number*

Synopsis	Enter the bin list instance
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> bin <i>number</i>
Tree	bin
Introduced	25.3.R2
Platforms	7705 SAR-1

[bin-number] *number*

Synopsis	Bin number
----------	------------

Context	configure <i>oam-pm bin-group number bin-type keyword bin number</i>
Tree	<i>bin</i>
Range	0 to 9
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

lower-bound *number*

Synopsis	Lower bound for the bin
Context	configure <i>oam-pm bin-group number bin-type keyword bin number lower-bound number</i>
Tree	<i>lower-bound</i>
Range	0 1 to 4294967295
Units	microseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-event [*direction*] *keyword*

Synopsis	Enter the delay-event list instance
Context	configure <i>oam-pm bin-group number bin-type keyword delay-event keyword</i>
Tree	<i>delay-event</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	configure <i>oam-pm bin-group number bin-type keyword delay-event keyword</i>
Tree	<i>delay-event</i>
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *number*

Synopsis	OAM-PM clear threshold for an excessive delay
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> delay-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Range	0 to 863999
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-lowest-bin *number*

Synopsis	Lowest bin excluded from the TCA count
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> delay-event <i>keyword</i> exclude-lowest-bin <i>number</i>
Tree	exclude-lowest-bin
Range	1 to 9
Introduced	25.3.R2
Platforms	7705 SAR-1

lowest-bin *number*

Synopsis	Lowest delay bin used when applying a delay threshold
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> delay-event <i>keyword</i> lowest-bin <i>number</i>
Tree	lowest-bin
Range	0 to 9
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *number*

Synopsis	Raise threshold for excessive delay
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> delay-event <i>keyword</i> raise-threshold <i>number</i>

Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-from-avg [[direction](#)] *keyword*

Synopsis	Enter the exclude-from-avg list instance
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> exclude-from-avg <i>keyword</i>
Tree	exclude-from-avg
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> exclude-from-avg <i>keyword</i>
Tree	exclude-from-avg
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

bins *string*

Synopsis	Bin numbers excluded from the average calculation
Context	configure oam-pm bin-group <i>number</i> bin-type <i>keyword</i> exclude-from-avg <i>keyword</i> bins <i>string</i>
Tree	bins
String length	1 to 39
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure oam-pm bin-group <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

session [[session-name](#)] *named-item*

Synopsis	Enter the session list instance
Context	configure oam-pm session <i>named-item</i>
Tree	session
Description	Commands in this context create the individual session containers that house the test specific configuration parameters.
Introduced	25.3.R2
Platforms	7705 SAR-1

[session-name] *named-item*

Synopsis	OAM-PM session name
Context	configure oam-pm session <i>named-item</i>
Tree	session
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

bin-group *reference*

Synopsis	Bin group for the session
Context	configure oam-pm session <i>named-item</i> bin-group <i>reference</i>
Tree	bin-group
Reference	configure oam-pm bin-group <i>number</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Synopsis Text description
Context **configure** *oam-pm session named-item description description*
Tree *description*
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

ethernet

Synopsis Enable the **ethernet** context
Context **configure** *oam-pm session named-item ethernet*
Tree *ethernet*
Description Commands in this context configure the Ethernet specific source and destination information, the priority, and the Ethernet tests tools on the launch point.
Notes The following elements are part of a mandatory choice: **ethernet**, **ip**, or **mpls**.
Introduced 25.3.R2
Platforms 7705 SAR-1

dest-mac *mac-unicast-address*

Synopsis Destination MAC address for the session
Context **configure** *oam-pm session named-item ethernet dest-mac mac-unicast-address*
Tree *dest-mac*
Introduced 25.3.R2
Platforms 7705 SAR-1

priority *number*

Synopsis Priority and forwarding class for the session
Context **configure** *oam-pm session named-item ethernet priority number*

Tree	priority
Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-mep *number*

Synopsis	Remote MEP for the session
Context	configure oam-pm session <i>named-item</i> ethernet remote-mep <i>number</i>
Tree	remote-mep
Range	1 to 8191
Introduced	25.3.R2
Platforms	7705 SAR-1

slm

Synopsis	Enable the slm context
Context	configure oam-pm session <i>named-item</i> ethernet slm
Tree	slm
Description	Commands in this context configure the synthetic loss measurement (SLM) test and create the container used to configure the individual test parameters.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the test
Context	configure oam-pm session <i>named-item</i> ethernet slm admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

data-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Data TLV size in the frames sent for the test
Context	configure <i>oam-pm session named-item ethernet slm data-tlv-size number</i>
Tree	<i>data-tlv-size</i>
Description	<p>This command configures a Data TLV to PDU and increases the frame on the wire by the specified amount.</p> <p>Note: This command only configures the size of the padding added to the PDU and does not configure the total size of the frame on the wire.</p>
Range	0 3 to 2000
Units	octets
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	configure <i>oam-pm session named-item ethernet slm flr-threshold number</i>
Tree	<i>flr-threshold</i>
Description	<p>This command configures the Frame Loss Ratio (FLR) threshold used to determine whether the Delta-T is high loss. An individual Delta-T with a frame loss threshold equal to the configured threshold is marked high loss. An individual Delta-T with a frame loss threshold lower than the configured threshold is not marked as high loss.</p>
Range	0 to 100
Units	percent
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

hli-force-count *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Increment HLI and CHLI counters despite availability
Context	configure oam-pm session <i>named-item</i> ethernet slm hli-force-count <i>boolean</i>
Tree	hli-force-count
Description	When configured to true , the router uses High Loss Interval (HLI) and Consecutive High Loss Interval (CHLI) counters to increment regardless of availability. Without this command, HLI and CHLI counters can only increment during times of availability, which includes undetermined availability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	configure oam-pm session <i>named-item</i> ethernet slm interval <i>number</i>
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 100 200 300 400 500 600 700 800 900 1000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

loss-events

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the loss-events context
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events
Tree	loss-events
Description	Commands in this context define the loss events and thresholds that are to be tracked.
Introduced	25.3.R2
Platforms	7705 SAR-1

avg-flr-event [[direction](#)] *keyword*

Synopsis	Enter the avg-flr-event list instance
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events avg-flr-event <i>keyword</i>
Tree	avg-flr-event
Description	Commands in this context configure the frame loss ratio threshold to be applied and checked at the end of the measurement interval for the specified direction. This is a percentage based on the average frame loss ratio over the entire measurement interval.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events avg-flr-event <i>keyword</i>
Tree	avg-flr-event
Options	forward, backward
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *decimal-number*

Synopsis	Clear threshold for the average FLR
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events avg-flr-event <i>keyword</i> clear-threshold <i>decimal-number</i>
Tree	clear-threshold
Description	<p>This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when to generate the clear event.</p> <p>If this command is not specified, the traffic crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and without regard to any previous window. Each unique event can only be raised once within the measurement interval.</p> <p>If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to the following measurement intervals. If a threshold crossing event is raised another is not raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.</p>
Range	0.000 to 99.999
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *decimal-number*

Synopsis	Rising threshold for the average FLR
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events avg-flr-event <i>keyword</i> raise-threshold <i>decimal-number</i>
Tree	raise-threshold
Description	This command configures the rising percentage that determines when the event is to be generated.
Range	0.000 to 100.000
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

chli-event [[direction](#)] *keyword*

Synopsis	Enter the chli-event list instance
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events chli-event <i>keyword</i>
Tree	chli-event
Description	Commands in this context configure the CHLI threshold to be monitored and the associated thresholds using the counter of the specified direction.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events chli-event <i>keyword</i>
Tree	chli-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *number*

Synopsis	Clear threshold
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events chli-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Description	<p>This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated.</p> <p>If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval.</p> <p>If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.</p>

Range	0 to 863999
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *number*

Synopsis	Rising threshold that determines when to generate event
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events chli-event <i>keyword</i> raise-threshold <i>number</i>
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

hli-event [[direction](#)] *keyword*

Synopsis	Enter the hli-event list instance
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events hli-event <i>keyword</i>
Tree	hli-event
Description	Commands in this context configure the HLI threshold to be monitored and the associated thresholds using the counter of the specified direction.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events hli-event <i>keyword</i>
Tree	hli-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *number*

Synopsis	Clear threshold
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events hli-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Description	<p>This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated.</p> <p>If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval.</p> <p>If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.</p>
Range	0 to 863999
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *number*

Synopsis	Rising threshold that determines when to generate event
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events hli-event <i>keyword</i> raise-threshold <i>number</i>
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

unavailability-event [*direction*] *keyword*

Synopsis	Enter the unavailability-event list instance
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events unavailability-event <i>keyword</i>
Tree	unavailability-event

Description	Commands in this context configure the threshold to be applied to the overall count of the unavailability indicators, not transitions, per configured direction.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events unavailability-event <i>keyword</i>
Tree	unavailability-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *number*

Synopsis	Clear threshold
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events unavailability-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Description	<p>This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated.</p> <p>If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval.</p> <p>If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.</p>
Range	0 to 863999
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *number*

Synopsis	Rising threshold that determines when to generate event
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events unavailability-event <i>keyword</i> raise-threshold <i>number</i>
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

undet-availability-event [[direction](#)] *keyword*

Synopsis	Enter the undet-availability-event list instance
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-availability-event <i>keyword</i>
Tree	undet-availability-event
Description	Commands in this context configure the threshold to be applied to the overall count of the undetermined availability indicators, not transitions, per configured direction.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-availability-event <i>keyword</i>
Tree	undet-availability-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *number*

Synopsis	Clear threshold
----------	-----------------

Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-availability-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Description	<p>This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated.</p> <p>If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval.</p> <p>If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.</p>
Range	0 to 863999
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *number*

Synopsis	Rising threshold that determines when to generate event
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-availability-event <i>keyword</i> raise-threshold <i>number</i>
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

undet-unavailability-event [*direction*] *keyword*

Synopsis	Enter the undet-unavailability-event list instance
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-unavailability-event <i>keyword</i>
Tree	undet-unavailability-event
Description	Commands in this context configure the threshold to be applied to the overall count of the undetermined unavailability indicators, not transitions, per configured direction.
Introduced	25.3.R2

Platforms 7705 SAR-1

[**direction**] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-unavailability-event <i>keyword</i>
Tree	undet-unavailability-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-threshold *number*

Synopsis	Clear threshold
Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-unavailability-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Description	<p>This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated.</p> <p>If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval.</p> <p>If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.</p>
Range	0 to 863999
Introduced	25.3.R2
Platforms	7705 SAR-1

raise-threshold *number*

Synopsis	Rising threshold that determines when to generate event
----------	---

Context	configure oam-pm session <i>named-item</i> ethernet slm loss-events undet-unavailability-event <i>keyword</i> raise-threshold <i>number</i>
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

test-duration *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Duration of an on-demand test
Context	configure oam-pm session <i>named-item</i> ethernet slm test-duration <i>number</i>
Tree	test-duration
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

test-id (*number* | *keyword*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Test ID
Context	configure oam-pm session <i>named-item</i> ethernet slm test-id (<i>number</i> <i>keyword</i>)
Tree	test-id
Range	0 to 2147483647
Options	auto – Automatically assigns a test-id
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timing

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the timing context
Context	configure oam-pm session <i>named-item</i> ethernet slm timing
Tree	timing
Description	Commands in this context define various availability parameters and the probe spacing (interval) for the SLM frames.
Introduced	25.3.R2
Platforms	7705 SAR-1

chli-threshold *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CHLI threshold
Context	configure oam-pm session <i>named-item</i> ethernet slm timing chli-threshold <i>number</i>
Tree	chli-threshold
Description	This command configures the number of Consecutive High Loss Intervals (CHLI) that when equal to or exceeded increments the CHLI counter. A CHLI counter is an indication that the sliding window is available but has crossed a threshold consecutive of unavailable Delta-T intervals. A CHLI can only be incremented once during a sliding window and, by default, it is only incremented during times of availability.
Range	1 to 9
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

consec-delta-t *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Consecutive Delta-t intervals
Context	configure oam-pm session <i>named-item</i> ethernet slm timing consec-delta-t <i>number</i>
Tree	consec-delta-t
Description	This command configures the number of consecutive Delta-T small measurement intervals that make up the sliding window over which availability and unavailability is determined. Transitions from one state to another occurs when the this command is in a new state.
Range	2 to 10
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

frames-per-delta-t *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Frames sent in one Delta-T
Context	configure oam-pm session <i>named-item</i> ethernet slm timing frames-per-delta-t <i>number</i>
Tree	frames-per-delta-t
Description	This command configures the number of SLM frames sent, defining the size of the Delta-T (small measurement window). Each Delta-T is marked as high loss or not high loss based on the FLR threshold. The size of the Delta-T measurement is the product of the number of frames and the interval.
Range	1 to 50
Units	frames
Introduced	25.3.R2
Platforms	7705 SAR-1

source

Synopsis	Enable the source context
Context	configure oam-pm session <i>named-item</i> ethernet source
Tree	source
Description	Commands in this context define the source MEP launch point command options that are used by the individual tests within the session. If an MEP matching the configuration does not exist, the session is allowed to become active; however, the frames sent

and received and seen under the **show oam-pm statistics session***session-name* command are zero.

Introduced 25.3.R2
Platforms 7705 SAR-1

ma-admin-name (*named-item-64* | *admin-name*)

Synopsis Source Ethernet MA name
Context **configure** **oam-pm session** *named-item* **ethernet source** **ma-admin-name** (*named-item-64* | *admin-name*)
Tree **ma-admin-name**
String length 1 to 64
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

md-admin-name (*named-item-64* | *admin-name*)

Synopsis Source Ethernet MD name
Context **configure** **oam-pm session** *named-item* **ethernet source** **md-admin-name** (*named-item-64* | *admin-name*)
Tree **md-admin-name**
String length 1 to 64
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

mep number

Synopsis Source Ethernet MEP ID
Context **configure** **oam-pm session** *named-item* **ethernet source** **mep number**
Tree **mep**
Range 1 to 8191
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

ip

Synopsis	Enable the ip context
Context	configure oam-pm session <i>named-item</i> ip
Tree	ip
Notes	The following elements are part of a mandatory choice: ethernet , ip , or mpls .
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-egress-remark-dscp *boolean*

Synopsis	Allow DSCP modification by the egress QoS policy
Context	configure oam-pm session <i>named-item</i> ip allow-egress-remark-dscp <i>boolean</i>
Tree	allow-egress-remark-dscp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination IP address for the session
Context	configure oam-pm session <i>named-item</i> ip destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	destination
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-udp-port *number*

Synopsis	Destination UDP port for the session
Context	configure oam-pm session <i>named-item</i> ip destination-udp-port <i>number</i>
Tree	destination-udp-port
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

do-not-fragment *boolean*

Synopsis	Do not allow packet fragmentation in the IPv4 header
Context	configure oam-pm session <i>named-item</i> ip do-not-fragment <i>boolean</i>
Tree	do-not-fragment
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp (*keyword* | *keyword*)

Synopsis	DSCP value configured to the DSCP name
Context	configure oam-pm session <i>named-item</i> ip dscp (<i>keyword</i> <i>keyword</i>)
Tree	dscp
Description	<p>This command allows for the explicit setting of the DSCP rather than deriving the DSCP value from the egress network QoS policy 1 using the fc and profile values.</p> <p>Although disconnected from the fc and profile settings unless required, the three parameters should be aligned to ensure proper treatment within the node and along the path.</p>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Options	resolve
Default	resolve
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *keyword*

Synopsis	Forwarding class for the session
Context	configure oam-pm session <i>named-item</i> ip fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	25.3.R2

Platforms 7705 SAR-1

forwarding

Synopsis Enable the **forwarding** context

Context **configure** [oam-pm session named-item ip forwarding](#)

Tree [forwarding](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

bypass-routing

Synopsis Bypass the routing table when sending test packets

Context **configure** [oam-pm session named-item ip forwarding bypass-routing](#)

Tree [bypass-routing](#)

Notes The following elements are part of a mandatory choice: **bypass-routing**, **interface**, or **next-hop**.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface *interface-name*

Synopsis Interface name

Context **configure** [oam-pm session named-item ip forwarding interface interface-name](#)

Tree [interface](#)

String length 1 to 32

Notes The following elements are part of a mandatory choice: **bypass-routing**, **interface**, or **next-hop**.

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address for forwarding

Context **configure** [oam-pm session named-item ip forwarding next-hop \(ipv4-address-no-zone | ipv6-address-no-zone\)](#)

Tree	next-hop
Notes	The following elements are part of a mandatory choice: bypass-routing , interface , or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern (*keyword* | *number*)

Synopsis	Pattern used to fill the packet padding field
Context	configure oam-pm session <i>named-item</i> ip pattern (<i>keyword</i> <i>number</i>)
Tree	pattern
Range	0 to 65535
Options	sequential
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Profile type for the session
Context	configure oam-pm session <i>named-item</i> ip profile <i>keyword</i>
Tree	profile
Options	in, out
Default	out
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router instance for the session
Context	configure oam-pm session <i>named-item</i> ip router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR-1

source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for the session
Context	configure oam-pm session <i>named-item</i> ip source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR-1

source-udp-port *number*

Synopsis	Source UDP port for the session
Context	configure oam-pm session <i>named-item</i> ip source-udp-port <i>number</i>
Tree	source-udp-port
Range	64374 to 64383
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl *number*

Synopsis	TTL value for the session
Context	configure oam-pm session <i>named-item</i> ip ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel

Synopsis	Enter the tunnel context
Context	configure oam-pm session <i>named-item</i> ip tunnel
Tree	tunnel
Description	Commands in this context configure packet tunneling options for the session. This command and the oam-pm session ip forwarding command are mutually exclusive.
Introduced	25.3.R2

Platforms 7705 SAR-1

mpls

Synopsis Enable the **mpls** context

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls](#)

Tree [mpls](#)

Description Commands in this context configure the MPLS packet tunneling options for the session. Configure the **oam-pm session ip router-instance** to Base to configure commands in the tunnel MPLS context. When entering a context under MPLS, the system removes any previous configuration of any sibling context. You can only configure one of the contexts for each OAM-PM session.

Introduced 25.3.R2

Platforms 7705 SAR-1

rsvp-te

Synopsis Enable the **rsvp-te** context

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls rsvp-te](#)

Tree [rsvp-te](#)

Description Commands in this context allow for the specification of RSVP-TE specific tunnel information used to transport the test packets. Entering this context removes all other tunnel-type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.

Notes The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 25.3.R2

Platforms 7705 SAR-1

lsp *named-item-64*

Synopsis Name of LSP that carries the test packets

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls rsvp-te lsp](#) *named-item-64*

Tree [lsp](#)

String length 1 to 64

Introduced 25.3.R2

Platforms 7705 SAR-1

rsvp-te-auto

Synopsis	Enable the rsvp-te-auto context
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls rsvp-te-auto
Tree	rsvp-te-auto
Description	Commands in this context configure the RSVP-TE-Auto feature and rsvp-te-auto (RSVP TE with dynamically-created LSPs) packet tunneling options for the session. If you enter a context within the MPLS context, the system removes any previous configuration of any sibling context. You can only configure one of the contexts for each OAM-PM session.
Notes	The following elements are part of a choice: rsvp-te , rsvp-te-auto , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

from *ipv4-unicast-address*

Synopsis	IPv4 address used to identify the LSP to be tested
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls rsvp-te-auto from <i>ipv4-unicast-address</i>
Tree	from
Description	This command configures the headend of the RSV LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: from , to , and lsp-template . When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-template *named-item*

Synopsis	LSP template used to identify the LSP to be tested
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls rsvp-te-auto lsp-template <i>named-item</i>
Tree	lsp-template
Description	This command configures the name of the LSP template used to identify the unique LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: from , to , and lsp-template . When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.
String length	1 to 32

Introduced 25.3.R2
 Platforms 7705 SAR-1

to *ipv4-unicast-address*

Synopsis IPv4 unicast address to identify the LSP to be tested

Context **configure** *oam-pm session named-item* *ip tunnel mpls rsvp-te-auto to ipv4-unicast-address*

Tree *to*

Description This command configures the termination point of the RSVP LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.

Introduced 25.3.R2
 Platforms 7705 SAR-1

sr-isis

Synopsis Enable the **sr-isis** context

Context **configure** *oam-pm session named-item* *ip tunnel mpls sr-isis*

Tree *sr-isis*

Description Commands in this context allow for the specification of SR-ISIS specific tunnel information used to transport the test packets. Entering this context removes all the other tunnel type commands configured in the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.

Notes The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 25.3.R2
 Platforms 7705 SAR-1

flex-algo *number*

Synopsis Flex-algorithm to tunnel IP packets for session tests

Context **configure** *oam-pm session named-item* *ip tunnel mpls sr-isis flex-algo number*

Tree *flex-algo*

Range 128 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

igp-instance *number*

Synopsis	IGP instance used to tunnel IP packets
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls sr-isis igp-instance <i>number</i>
Tree	igp-instance
Description	This command configures the IGP instance to tunnel IP packets for the session test.
Range	0 to 127
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix to tunnel IP packets for the session tests
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls sr-isis prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Description	This command configures the IP prefix used with the IGP instance to tunnel IP packets for the session tests.
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf

Synopsis	Enable the sr-ospf context
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls sr-ospf
Tree	sr-ospf
Description	Commands in this context allow for the specification of SR-OSPF specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the configure oam-pm session ip tunnel mpls context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: rsvp-te , rsvp-te-auto , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2

Platforms 7705 SAR-1

flex-algo *number*

Synopsis Flex-algorithm to tunnel IP packets for session tests

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls sr-ospf flex-algo](#) *number*

Tree [flex-algo](#)

Range 128 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

igp-instance *number*

Synopsis IGP instance used to tunnel IP packets

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls sr-ospf igp-instance](#) *number*

Tree [igp-instance](#)

Range 0 to 31

Default 0

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix *ipv4-unicast-prefix*

Synopsis IP prefix to tunnel IP packets for the session tests

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls sr-ospf prefix](#) *ipv4-unicast-prefix*

Tree [prefix](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

sr-policy

Synopsis Enable the **sr-policy** context

Context **configure** [oam-pm session](#) *named-item* [ip tunnel mpls sr-policy](#)

Tree [sr-policy](#)

Description	Commands in this context identify the SR policy used to tunnel IP packets for the session tests.
Notes	The following elements are part of a choice: rsvp-te , rsvp-te-auto , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

color *number*

Synopsis	Color for associating the SR policy with an objective
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls sr-policy color <i>number</i>
Tree	color
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the session
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls sr-policy endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Description	This command configures the unicast IPv4 or globally routable IPv6 address endpoint of the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

segment-list *number*

Synopsis	Segment Routing segment list for the session
Context	configure oam-pm session <i>named-item</i> ip tunnel mpls sr-policy segment-list <i>number</i>
Tree	segment-list
Description	This command configures the identification of the segment list for the specific policy.
Range	1 to 32
Introduced	25.3.R2

Platforms 7705 SAR-1

sr-te

Synopsis Enable the **sr-te** context

Context **configure** *oam-pm session named-item* **ip tunnel mpls sr-te**

Tree **sr-te**

Description Commands in this context allow for the specification of SR-TE specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.

Notes The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 25.3.R2

Platforms 7705 SAR-1

lsp *named-item-64*

Synopsis Name of LSP that carries the test packets

Context **configure** *oam-pm session named-item* **ip tunnel mpls sr-te** **lsp *named-item-64***

Tree **lsp**

String length 1 to 64

Introduced 25.3.R2

Platforms 7705 SAR-1

twamp-light

Synopsis Enable the **twamp-light** context

Context **configure** *oam-pm session named-item* **ip twamp-light**

Tree **twamp-light**

Description Commands in this context configure the TWAMP-Light (Two Way Active Measurement Protocol, Light) or STAMP (Simple Two Way Active Measurement Protocol) test for the session.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the test
Context	configure oam-pm session <i>named-item</i> ip twamp-light admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-ipv6-udp-checksum-zero *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	configure oam-pm session <i>named-item</i> ip twamp-light allow-ipv6-udp-checksum-zero <i>boolean</i>
Tree	allow-ipv6-udp-checksum-zero
Description	<p>When configured to true, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x0000 arriving packets are discarded.</p> <p>When configured to false, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
----------	---

Context	configure oam-pm session <i>named-item</i> ip twamp-light interval <i>number</i>
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 100 200 300 400 500 600 700 800 900 1000 10000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

loss

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the loss context
Context	configure oam-pm session <i>named-item</i> ip twamp-light loss
Tree	loss
Introduced	25.3.R2
Platforms	7705 SAR-1

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	configure oam-pm session <i>named-item</i> ip twamp-light loss flr-threshold <i>number</i>
Tree	flr-threshold
Description	This command configures the Frame Loss Ratio (FLR) threshold used to determine whether the Delta-T is high loss. An individual Delta-T with a frame loss threshold equal to the configured threshold is marked high loss. An individual Delta-T with a frame loss threshold lower than the configured threshold is not marked as high loss.
Range	0 to 100
Units	percent
Default	50
Introduced	25.3.R2

Platforms 7705 SAR-1

hli-force-count *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Increment HLI and CHLI counters despite availability
Context	configure oam-pm session named-item ip twamp-light loss hli-force-count boolean
Tree	hli-force-count
Description	When configured to true , the router uses High Loss Interval (HLI) and Consecutive High Loss Interval (CHLI) counters to increment regardless of availability. Without this command, HLI and CHLI counters can only increment during times of availability, which includes undetermined availability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

timing

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the timing context
Context	configure oam-pm session named-item ip twamp-light loss timing
Tree	timing
Introduced	25.3.R2
Platforms	7705 SAR-1

chli-threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CHLI threshold

clear-threshold *decimal-number*

Synopsis	Clear threshold for the average FLR
Context	configure oam-pm session named-item ip twamp-light loss-events avg-flr-event keyword clear-threshold decimal-number

Tree [clear-threshold](#)

Description This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when to generate the clear event.

If this command is not specified, the traffic crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and without regard to any previous window. Each unique event can only be raised once within the measurement interval.

If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to the following measurement intervals. If a threshold crossing event is raised another is not raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.

Range 0.000 to 99.999

Units percent

Introduced 25.3.R2

Platforms 7705 SAR-1

raise-threshold *decimal-number*

Synopsis Rising threshold for the average FLR

Context **configure** [oam-pm session](#) *named-item* [ip twamp-light loss-events avg-flr-event](#)
keyword [raise-threshold](#) *decimal-number*

Tree [raise-threshold](#)

Description This command configures the rising percentage that determines when the event is to be generated.

Range 0.000 to 100.000

Units percent

Notes This element is mandatory.

Introduced 25.3.R2

4.18.1 policy-options command descriptions

policy-options

Synopsis	Enter the policy-options context
Context	configure policy-options
Tree	policy-options
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path [[name](#)] *named-item*

Synopsis	Enter the as-path list instance
Context	configure policy-options as-path <i>named-item</i>
Tree	as-path
Introduced	25.3.R2
Platforms	7705 SAR-1

[**name**] *named-item*

Synopsis	AS path name
Context	configure policy-options as-path <i>named-item</i>
Tree	as-path
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	configure policy-options as-path <i>named-item</i> expression <i>policy-as-path-regexp</i>
Tree	expression
Description	This command configures a route policy AS path regular expression statement to use in route policy entries.

An AS path in a BGP route matches an AS path regular expression, if the path matches the pattern of the regular expression. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path-group [[name](#)] *named-item*

Synopsis	Enter the as-path-group list instance
Context	configure policy-options as-path-group <i>named-item</i>
Tree	as-path-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	AS path group name
Context	configure policy-options as-path-group <i>named-item</i>
Tree	as-path-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [*entry*] *number*

Synopsis	Enter the entry list instance
Context	configure <i>policy-options as-path-group named-item entry number</i>
Tree	<i>entry</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry] *number*

Synopsis	AS path entry ID
Context	configure <i>policy-options as-path-group named-item entry number</i>
Tree	<i>entry</i>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	configure <i>policy-options as-path-group named-item entry number expression policy-as-path-regexp</i>
Tree	<i>expression</i>
Description	<p>This command configures an AS path group regular expression.</p> <p>An AS path in a BGP route matches an AS path group, if the pattern of the path matches the concatenation of all regular expressions in the group. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:</p> <ul style="list-style-type: none"> • . • * • ? • {n} • {m,n} • {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String length 1 to 255

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

community [[name](#)] *policy-community-name*

Synopsis Enter the **community** list instance

Context **configure** [policy-options](#) [community](#) *policy-community-name*

Tree [community](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[name] *policy-community-name*

Synopsis Community name

Context **configure** [policy-options](#) [community](#) *policy-community-name*

Tree [community](#)

Description This command configures a route policy community name.

String values must be composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

String length 1 to 64

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

expression

Synopsis Enable the **expression** context

Context **configure** [policy-options](#) [community](#) *policy-community-name* [expression](#)

Tree [expression](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

exact *boolean*

Synopsis Match exactly for the specified expression

Context **configure** *policy-options community policy-community-name expression exact boolean*

Tree *exact*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

expr *expression-community*

Synopsis Community expression value

Context **configure** *policy-options community policy-community-name expression expr expression-community*

Tree *expr*

String length 1 to 900

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

member [*member*] *member-community*

Synopsis Add a list entry for **member**

Context **configure** *policy-options community policy-community-name member member-community*

Tree *member*

Introduced 25.3.R2

Platforms 7705 SAR-1

[*member*] *member-community*

Synopsis Community member value

Context **configure** *policy-options community policy-community-name member member-community*

Tree	member
Description	<p>This command configures a BGP community value.</p> <p>Each member of a community list is a standard, extended, or large community value or a regular expression that potentially matches many community values. A regular expression incorporates terms and operators that use the terms. An individual numerical digit is an elementary term in the community regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:</p> <ul style="list-style-type: none"> • . • * • ? • {n} • {m,n} • {m, } <p>To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.</p>
String length	1 to 72
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

damping [[name](#)] *named-item*

Synopsis	Enter the damping list instance
Context	configure policy-options damping <i>named-item</i>
Tree	damping
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Damping profile name
Context	configure policy-options damping <i>named-item</i>
Tree	damping
String length	1 to 32
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

half-life *number*

Synopsis	Time after the FOM value is halved
Context	configure policy-options damping <i>named-item</i> half-life <i>number</i>
Tree	half-life
Range	1 to 45
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

max-suppress *number*

Synopsis	Maximum time for a route to remain suppressed
Context	configure policy-options damping <i>named-item</i> max-suppress <i>number</i>
Tree	max-suppress
Range	1 to 720
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

reuse *number*

Synopsis	Value below which a suppressed route can be used again
Context	configure policy-options damping <i>named-item</i> reuse <i>number</i>
Tree	reuse
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress *number*

Synopsis	Value above which a route is suppressed
----------	---

Context	configure policy-options damping <i>named-item</i> suppress <i>number</i>
Tree	suppress
Range	1 to 20000
Introduced	25.3.R2
Platforms	7705 SAR-1

global-variables

Synopsis	Enter the global-variables context
Context	configure policy-options global-variables
Tree	global-variables
Introduced	25.3.R2
Platforms	7705 SAR-1

name [[variable-name](#)] *policy-var-name*

Synopsis	Enter the name list instance
Context	configure policy-options global-variables name <i>policy-var-name</i>
Tree	name
Max. instances	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

[[variable-name](#)] *policy-var-name*

Synopsis	Global variable name used to reference policy functions
Context	configure policy-options global-variables name <i>policy-var-name</i>
Tree	name
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the policy variable
Context	configure policy-options global-variables name <i>policy-var-name</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

decimal *decimal-number*

Synopsis	Attribute decimal to which variable name is resolved
Context	configure policy-options global-variables name <i>policy-var-name</i> decimal <i>decimal-number</i>
Tree	decimal
Range	0.000 to 4294967295.000
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Numerical value of the policy variable
Context	configure policy-options global-variables name <i>policy-var-name</i> number <i>number</i>
Tree	number
Range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

value *named-item*

Synopsis	Policy variable value
Context	configure policy-options global-variables name policy-var-name value <i>named-item</i>
Tree	value
String length	1 to 32
Notes	The following elements are part of a mandatory choice: address , decimal , number , prefix , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-statement [[name](#)] *named-item-64*

Synopsis	Enter the policy-statement list instance
Context	configure policy-options policy-statement <i>named-item-64</i>
Tree	policy-statement
Max. instances	65535
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item-64*

Synopsis	Route policy statement name
Context	configure policy-options policy-statement <i>named-item-64</i>
Tree	policy-statement
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action

Synopsis	Enable the default-action context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action

Tree	default-action
Introduced	25.3.R2
Platforms	7705 SAR-1

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	configure policy-options policy-statement <i>named-item-64</i> default-action action-type <i>keyword</i>
Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

add-paths-send-limit (*number* | *keyword*)

Synopsis	BGP Add-Paths send limit applied for routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action add-paths-send-limit (<i>number</i> <i>keyword</i>)
Tree	add-paths-send-limit
Range	1 to 16
Options	multipaths
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-tag-policy (*param-midstring-64* | *string*)

Synopsis	Administrative tag policy name
Context	configure policy-options policy-statement <i>named-item-64</i> default-action admin-tag-policy (<i>param-midstring-64</i> <i>string</i>)
Tree	admin-tag-policy
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-label *keyword*

Synopsis	Label allocation for matched BGP routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action advertise-label <i>keyword</i>
Tree	advertise-label
Description	This command configures the label allocation method for advertised routes. The effect of this command depends on the context where the associated policy is applied.
Options	per-prefix, pop, pop-and-forward
Introduced	25.3.R2
Platforms	7705 SAR-1

aigp-metric

Synopsis	Enter the aigp-metric context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action aigp-metric
Tree	aigp-metric
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*number* | *string*)

Synopsis	AIGP metric to add
Context	configure policy-options policy-statement <i>named-item-64</i> default-action aigp-metric add (<i>number</i> <i>string</i>)
Tree	add
String length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*keyword* | *number* | *string*)

Synopsis	AIGP metric
----------	-------------

Context	configure policy-options policy-statement <i>named-item-64</i> default-action aigp-metric set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp
Notes	The following elements are part of a choice: add or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path

Synopsis	Enter the as-path context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action as-path
Tree	as-path
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*param-midstring* | *string*)

Synopsis	AS path to add
Context	configure policy-options policy-statement <i>named-item-64</i> default-action as-path add (<i>param-midstring</i> <i>string</i>)
Tree	add
String length	1 to 32
Notes	The following elements are part of a choice: add or replace .
Introduced	25.3.R2
Platforms	7705 SAR-1

replace (*param-midstring* | *string*)

Synopsis	AS path to replace
Context	configure policy-options policy-statement <i>named-item-64</i> default-action as-path replace (<i>param-midstring</i> <i>string</i>)
Tree	replace
String length	1 to 32

Notes	The following elements are part of a choice: add or replace .
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path-prepend

Synopsis	Enter the as-path-prepend context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action as-path-prepend
Tree	as-path-prepend
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path (*number* | *string* | *keyword*)

Synopsis	AS number to prepend to the AS path attribute
Context	configure policy-options policy-statement <i>named-item-64</i> default-action as-path-prepend as-path (<i>number</i> <i>string</i> <i>keyword</i>)
Tree	as-path
String length	1 to 32
Range	1 to 4294967295
Options	most-recent
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat (*number* | *string*)

Synopsis	Number of times to prepend the specified AS number
Context	configure policy-options policy-statement <i>named-item-64</i> default-action as-path-prepend repeat (<i>number</i> <i>string</i>)
Tree	repeat
String length	1 to 32
Range	1 to 50
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-high-priority <i>boolean</i>
Tree	bgp-high-priority
Description	<p>When configured to true, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates.</p> <p>This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types:</p> <ul style="list-style-type: none">• IPv4• label-IPv4• IPv6• label-IPv6 <p>This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.</p> <p>When configured to false, no routes are tagged for faster route table updates.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-leak <i>boolean</i>
Tree	bgp-leak
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-med

Synopsis	Enter the bgp-med context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-med
Tree	bgp-med

Introduced	25.3.R2
Platforms	7705 SAR-1

adjust *string*

Synopsis	BGP-MED adjustment
Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-med adjust <i>string</i>
Tree	adjust
String length	1 to 64
Notes	The following elements are part of a choice: adjust or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*keyword* | *number* | *string*)

Synopsis	BGP-MED assignment
Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-med set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
Notes	The following elements are part of a choice: adjust or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	25.3.R2

Platforms 7705 SAR-1

prefer-aigp *boolean*

Synopsis Use AIGP attribute as tunnel metric when present

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [default-action](#) [bgp-tunnel-metric](#) **prefer-aigp** *boolean*

Tree [prefer-aigp](#)

Description When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf.

When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

prefer-med *boolean*

Synopsis Use MED attribute as tunnel metric when present

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [default-action](#) [bgp-tunnel-metric](#) **prefer-med** *boolean*

Tree [prefer-med](#)

Description When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it.

When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

value (*string* | *number*)

Synopsis BGP tunnel table metric value

Context	configure policy-options policy-statement <i>named-item-64</i> default-action bgp-tunnel-metric <i>value</i> (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command configures a BGP tunnel metric is assigned to routes that do not match any entry.</p> <p>If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either:</p> <ul style="list-style-type: none"> the prefer-aigp option is set to false the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

community

Synopsis	Enter the community context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action community
Tree	community
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*param-midstring-64* | *string*)

Synopsis	List of community names to add
Context	configure policy-options policy-statement <i>named-item-64</i> default-action community add (<i>param-midstring-64</i> <i>string</i>)
Tree	add
String length	1 to 64
Max. instances	28
Notes	<p>The following elements are part of a choice: (add and remove) or replace.</p> <p>This element is ordered by the user.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

remove (*param-midstring-64* | *string*)

Synopsis	List of community names to remove
Context	configure policy-options policy-statement <i>named-item-64</i> default-action community remove (<i>param-midstring-64</i> <i>string</i>)
Tree	remove
String length	1 to 64
Max. instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

replace (*param-midstring-64* | *string*)

Synopsis	List of community names to replace
Context	configure policy-options policy-statement <i>named-item-64</i> default-action community replace (<i>param-midstring-64</i> <i>string</i>)
Tree	replace
String length	1 to 64
Max. instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

create-mpls-tunnel *boolean*

Synopsis	Create an MPLS tunnel
Context	configure policy-options policy-statement <i>named-item-64</i> default-action create-mpls-tunnel <i>boolean</i>
Tree	create-mpls-tunnel
Description	When configured to true , the router creates an MPLS tunnel. This command is supported for only the following address families: <ul style="list-style-type: none"> • evpn

	<ul style="list-style-type: none"> • ipv4 • ipv6 • label-ipv4 • label-ipv6 • vpn-ipv4 • vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

create-udp-tunnel *boolean*

Synopsis	Create an MPLS-over-UDP tunnel
Context	configure policy-options policy-statement <i>named-item-64</i> default-action create-udp-tunnel <i>boolean</i>
Tree	create-udp-tunnel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

damping (*keyword* | *param-midstring* | *string*)

Synopsis	Damping profile used for routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action damping (<i>keyword</i> <i>param-midstring</i> <i>string</i>)
Tree	damping
String length	1 to 32
Options	none
Introduced	25.3.R2
Platforms	7705 SAR-1

flex-algo (*string* | *number*)

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	configure policy-options policy-statement <i>named-item-64</i> default-action flex-algo (<i>string</i> <i>number</i>)

Tree	flex-algo
Description	<p>This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry.</p> <p>Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU.</p> <p>This command is not supported for multicast address families.</p>
String length	1 to 32
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

install-backup-path *boolean*

Synopsis	Install a preprogrammed backup path for the prefix
Context	configure policy-options policy-statement <i>named-item-64</i> default-action install-backup-path <i>boolean</i>
Tree	install-backup-path
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference (*number* | *string*)

Synopsis	BGP local preference for routes not matching any entry
Context	configure policy-options policy-statement <i>named-item-64</i> default-action local-preference (<i>number</i> <i>string</i>)
Tree	local-preference
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

metric

Synopsis	Enter the metric context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action metric

Tree	metric
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*number* | *string*)

Synopsis	Metric to add
Context	configure policy-options policy-statement <i>named-item-64</i> default-action metric add (<i>number</i> <i>string</i>)
Tree	add
String length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*number* | *string*)

Synopsis	Metric to assign
Context	configure policy-options policy-statement <i>named-item-64</i> default-action metric set (<i>number</i> <i>string</i>)
Tree	set
String length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	25.3.R2
Platforms	7705 SAR-1

subtract (*number* | *string*)

Synopsis	Metric to subtract
Context	configure policy-options policy-statement <i>named-item-64</i> default-action metric subtract (<i>number</i> <i>string</i>)
Tree	subtract
String length	1 to 32
Range	0 to 4294967295

Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*keyword* | *ipv4-address-no-zone* | *ipv6-address-no-zone* | *string*)

Synopsis	Next-hop IP address applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action next-hop (<i>keyword</i> <i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>string</i>)
Tree	next-hop
String length	1 to 32
Options	peer-address, self
Introduced	25.3.R2
Platforms	7705 SAR-1

origin (*keyword* | *string*)

Synopsis	BGP origin for routes that are exported into BGP
Context	configure policy-options policy-statement <i>named-item-64</i> default-action origin (<i>keyword</i> <i>string</i>)
Tree	origin
String length	1 to 32
Options	igp, egp, incomplete
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation-state (*keyword* | *string*)

Synopsis	Origin validation state for routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action origin-validation-state (<i>keyword</i> <i>string</i>)
Tree	origin-validation-state
String length	1 to 32
Options	valid, not-found, invalid
Introduced	25.3.R2
Platforms	7705 SAR-1

preference (*number* | *string*)

Synopsis	Route preference applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action preference (<i>number</i> <i>string</i>)
Tree	preference
String length	1 to 32
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

resolve-static *boolean*

Synopsis	Resolve next hop of a static route for the BGP next hop
Context	configure policy-options policy-statement <i>named-item-64</i> default-action resolve-static <i>boolean</i>
Tree	resolve-static
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-table-install *boolean*

Synopsis	Allow BGP route installation in the route table
Context	configure policy-options policy-statement <i>named-item-64</i> default-action route-table-install <i>boolean</i>
Tree	route-table-install
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-label-index

Synopsis	Enter the sr-label-index context
Context	configure policy-options policy-statement <i>named-item-64</i> default-action sr-label-index
Tree	sr-label-index

Description	<p>Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes.</p> <p>The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts.</p> <p>This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB.</p> <p>When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	configure policy-options policy-statement <i>named-item-64</i> default-action sr-label-index prefer-igp <i>boolean</i>
Tree	prefer-igp
Description	<p>When configured to true, BGP obtains the SID index from the IGP route (if a SID index is present) and the configure router bgp segment-routing prefix-sid-range global command is set to true.</p> <p>This command applies only to route table import policies.</p> <p>When configured to false, or the SID index is not present in the IGP route, or the configure router bgp segment-routing prefix-sid-range global command is not set to true, BGP obtains the label index value from the value command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*string* | *number*)

Synopsis	BGP SR label index associated with routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action sr-label-index value (<i>string</i> <i>number</i>)
Tree	value
Description	This command specifies the BGP SR label index value to be associated with a route or routes.

If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation.

If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.

String length	1 to 32
Range	0 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-maintenance-policy (*param-midstring* | *string*)

Synopsis	SR maintenance policy as an action
Context	configure policy-options policy-statement <i>named-item-64</i> default-action sr-maintenance-policy (<i>param-midstring</i> <i>string</i>)
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

sticky-ecmp *boolean*

Synopsis	Specify the sticky ECMP flag for BGP ECMP routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action sticky-ecmp <i>boolean</i>
Tree	sticky-ecmp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tag (*number* | *string*)

Synopsis	OSPF RIP or IS-IS tag applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action tag (<i>number</i> <i>string</i>)

Tree	tag
String length	1 to 32
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

type (*number* | *string*)

Synopsis	OSPF metric type applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> default-action type (<i>number</i> <i>string</i>)
Tree	type
String length	1 to 32
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure policy-options policy-statement <i>named-item-64</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID for a route policy entry
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i>
Tree	entry
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action

Synopsis	Enable the action context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action
Tree	action
Introduced	25.3.R2
Platforms	7705 SAR-1

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action action-type <i>keyword</i>
Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

add-paths-send-limit (*number* | *keyword*)

Synopsis	BGP Add-Paths send limit applied for routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action add-paths-send-limit (<i>number</i> <i>keyword</i>)
Tree	add-paths-send-limit

Range	1 to 16
Options	multipaths
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-tag-policy (*param-midstring-64* | *string*)

Synopsis	Administrative tag policy name
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action admin-tag-policy (<i>param-midstring-64</i> <i>string</i>)
Tree	admin-tag-policy
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-label *keyword*

Synopsis	Label allocation for matched BGP routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action advertise-label <i>keyword</i>
Tree	advertise-label
Description	This command configures the label allocation method for advertised routes. The effect of this command depends on the context where the associated policy is applied.
Options	per-prefix, pop, pop-and-forward
Introduced	25.3.R2
Platforms	7705 SAR-1

aigp-metric

Synopsis	Enter the aigp-metric context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action aigp-metric
Tree	aigp-metric
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*number* | *string*)

Synopsis	AIGP metric to add
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action aigp-metric add (<i>number</i> <i>string</i>)
Tree	add
String length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*keyword* | *number* | *string*)

Synopsis	AIGP metric
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action aigp-metric set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp
Notes	The following elements are part of a choice: add or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path

Synopsis	Enter the as-path context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action as-path
Tree	as-path
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*param-midstring* | *string*)

Synopsis	AS path to add
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action as-path add (<i>param-midstring</i> <i>string</i>)
Tree	add
String length	1 to 32
Notes	The following elements are part of a choice: add or replace .
Introduced	25.3.R2
Platforms	7705 SAR-1

replace (*param-midstring* | *string*)

Synopsis	AS path to replace
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action as-path replace (<i>param-midstring</i> <i>string</i>)
Tree	replace
String length	1 to 32
Notes	The following elements are part of a choice: add or replace .
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path-prepend

Synopsis	Enter the as-path-prepend context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action as-path-prepend
Tree	as-path-prepend
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path (*number* | *string* | *keyword*)

Synopsis	AS number to prepend to the AS path attribute
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action as-path-prepend as-path (<i>number</i> <i>string</i> <i>keyword</i>)

Tree	as-path
String length	1 to 32
Range	1 to 4294967295
Options	most-recent
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat (*number* | *string*)

Synopsis	Number of times to prepend the specified AS number
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action as-path-prepend repeat (<i>number</i> <i>string</i>)
Tree	repeat
String length	1 to 32
Range	1 to 50
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-high-priority <i>boolean</i>
Tree	bgp-high-priority
Description	<p>When configured to true, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates.</p> <p>This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types:</p> <ul style="list-style-type: none"> • IPv4 • label-IPv4 • IPv6 • label-IPv6 <p>This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.</p> <p>When configured to false, no routes are tagged for faster route table updates.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-leak <i>boolean</i>
Tree	bgp-leak
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-med

Synopsis	Enter the bgp-med context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-med
Tree	bgp-med
Introduced	25.3.R2
Platforms	7705 SAR-1

adjust *string*

Synopsis	BGP-MED adjustment
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-med adjust <i>string</i>
Tree	adjust
String length	1 to 64
Notes	The following elements are part of a choice: adjust or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*keyword* | *number* | *string*)

Synopsis	BGP-MED assignment
----------	--------------------

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-med set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
Notes	The following elements are part of a choice: adjust or set .
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-tunnel-metric bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-tunnel-metric prefer-aigp <i>boolean</i>
Tree	prefer-aigp
Description	<p>When configured to true, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf.</p> <p>When configured to false, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-tunnel-metric prefer-med <i>boolean</i>
Tree	prefer-med
Description	<p>When configured to true, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it.</p> <p>When configured to false, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*string* | *number*)

Synopsis	BGP tunnel table metric value
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action bgp-tunnel-metric value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command configures a BGP tunnel metric is assigned to routes that do not match any entry.</p> <p>If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either:</p> <ul style="list-style-type: none">• the prefer-aigp option is set to false• the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

community

Synopsis	Enter the community context

Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

remove (*param-midstring-64* | *string*)

Synopsis	List of community names to remove
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action community remove (<i>param-midstring-64</i> <i>string</i>)
Tree	remove
String length	1 to 64
Max. instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

replace (*param-midstring-64* | *string*)

Synopsis	List of community names to replace
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action community replace (<i>param-midstring-64</i> <i>string</i>)
Tree	replace
String length	1 to 64
Max. instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

create-mpls-tunnel *boolean*

Synopsis	Create an MPLS tunnel
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action create-mpls-tunnel <i>boolean</i>
Tree	create-mpls-tunnel
Description	When configured to true , the router creates an MPLS tunnel. This command is supported for only the following address families: <ul style="list-style-type: none">• evpn• ipv4• ipv6• label-ipv4• label-ipv6• vpn-ipv4• vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

create-udp-tunnel *boolean*

Synopsis	Create an MPLS-over-UDP tunnel
----------	--------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action create-udp-tunnel <i>boolean</i>
Tree	create-udp-tunnel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

damping (*keyword* | *param-midstring* | *string*)

Synopsis	Damping profile used for routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action damping (<i>keyword</i> <i>param-midstring</i> <i>string</i>)
Tree	damping
String length	1 to 32
Options	none
Introduced	25.3.R2
Platforms	7705 SAR-1

flex-algo (*string* | *number*)

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action flex-algo (<i>string</i> <i>number</i>)
Tree	flex-algo
Description	<p>This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry.</p> <p>Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU.</p> <p>This command is not supported for multicast address families.</p>
String length	1 to 32
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

install-backup-path *boolean*

Synopsis	Install a preprogrammed backup path for the prefix
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action install-backup-path <i>boolean</i>
Tree	install-backup-path
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference (*number* | *string*)

Synopsis	BGP local preference for routes not matching any entry
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action local-preference (<i>number</i> <i>string</i>)
Tree	local-preference
String length	1 to 32
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

metric

Synopsis	Enter the metric context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action metric
Tree	metric
Introduced	25.3.R2
Platforms	7705 SAR-1

add (*number* | *string*)

Synopsis	Metric to add
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action metric add (<i>number</i> <i>string</i>)
Tree	add
String length	1 to 32

Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	25.3.R2
Platforms	7705 SAR-1

set (*number* | *string*)

Synopsis	Metric to assign
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action metric set (<i>number</i> <i>string</i>)
Tree	set
String length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	25.3.R2
Platforms	7705 SAR-1

subtract (*number* | *string*)

Synopsis	Metric to subtract
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action metric subtract (<i>number</i> <i>string</i>)
Tree	subtract
String length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*keyword* | *ipv4-address-no-zone* | *ipv6-address-no-zone* | *string*)

Synopsis	Next-hop IP address applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action next-hop (<i>keyword</i> <i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>string</i>)
Tree	next-hop
String length	1 to 32

Options	peer-address, self
Introduced	25.3.R2
Platforms	7705 SAR-1

origin (*keyword | string*)

Synopsis	BGP origin for routes that are exported into BGP
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action origin (<i>keyword string</i>)
Tree	origin
String length	1 to 32
Options	igp, egp, incomplete
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation-state (*keyword | string*)

Synopsis	Origin validation state for routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action origin-validation-state (<i>keyword string</i>)
Tree	origin-validation-state
String length	1 to 32
Options	valid, not-found, invalid
Introduced	25.3.R2
Platforms	7705 SAR-1

preference (*number | string*)

Synopsis	Route preference applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action preference (<i>number string</i>)
Tree	preference
String length	1 to 32
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

resolve-static *boolean*

Synopsis	Resolve next hop of a static route for the BGP next hop
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action resolve-static <i>boolean</i>
Tree	resolve-static
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-table-install *boolean*

Synopsis	Allow BGP route installation in the route table
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action route-table-install <i>boolean</i>
Tree	route-table-install
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-label-index

Synopsis	Enter the sr-label-index context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action sr-label-index
Tree	sr-label-index
Description	<p>Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes.</p> <p>The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts.</p> <p>This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB.</p> <p>When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action sr-label-index prefer-igp <i>boolean</i>
Tree	prefer-igp
Description	<p>When configured to true, BGP obtains the SID index from the IGP route (if a SID index is present) and the configure router bgp segment-routing prefix-sid-range global command is set to true.</p> <p>This command applies only to route table import policies.</p> <p>When configured to false, or the SID index is not present in the IGP route, or the configure router bgp segment-routing prefix-sid-range global command is not set to true, BGP obtains the label index value from the value command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*string* | *number*)

Synopsis	BGP SR label index associated with routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action sr-label-index value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command specifies the BGP SR label index value to be associated with a route or routes.</p> <p>If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation.</p> <p>If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.</p>
String length	1 to 32
Range	0 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-maintenance-policy (*param-midstring* | *string*)

Synopsis	SR maintenance policy as an action
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action sr-maintenance-policy (<i>param-midstring</i> <i>string</i>)
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

sticky-ecmp *boolean*

Synopsis	Specify the sticky ECMP flag for BGP ECMP routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action sticky-ecmp <i>boolean</i>
Tree	sticky-ecmp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tag (*number* | *string*)

Synopsis	OSPF RIP or IS-IS tag applied to routes
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action tag (<i>number</i> <i>string</i>)
Tree	tag
String length	1 to 32
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

type (*number* | *string*)

Synopsis	OSPF metric type applied to routes
----------	------------------------------------

Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> action <i>type</i> (<i>number</i> <i>string</i>)
Tree	type
String length	1 to 32
Range	1 to 2
Introduced	25.3.R2
Platforms	7705 SAR-1

conditional-expression

Synopsis	Enable the conditional-expression context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> conditional-expression
Tree	conditional-expression
Introduced	25.3.R2
Platforms	7705 SAR-1

route-exists *string*

Synopsis	Conditional expression to test route existence
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> conditional-expression route-exists <i>string</i>
Tree	route-exists
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

from

Synopsis	Enable the from context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from
Tree	from
Description	Commands in this context configure policy match criteria based on the route's source or the protocol from which it is received. If conditions are not specified, all route sources are considered to match.
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregate-contributor *boolean*

Synopsis	Enable aggregate route match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from aggregate-contributor <i>boolean</i>
Tree	aggregate-contributor
Description	<p>When configured to true, matches all routes (BGP and non-BGP) that have contributed to an active aggregate route. If the prefix tree above a particular route includes no active aggregate routes or the most specific active aggregate route in the prefix tree above this route has a policy that rejects the route, then it is not considered as an aggregate-contributor.</p> <p>This match condition is only supported when used in a BGP export policy. If it is used in an entry of a BGP import policy, vrf-export policy or vrf-import policy, no routes are matched by that entry.</p> <p>When configured to false, no routes (BGP and non-BGP) that have contributed to an active aggregate route are matched.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

area *ipv4-address*

Synopsis	OSPF area as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from area <i>ipv4-address</i>
Tree	area
Introduced	25.3.R2

Platforms 7705 SAR-1

as-path

Synopsis Enter the **as-path** context

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from as-path](#)

Tree [as-path](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

group (*param-midstring* | *string*)

Synopsis AS path group as a match criterion

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from as-path](#) [group](#) (*param-midstring* | *string*)

Tree [group](#)

String length 1 to 32

Notes The following elements are part of a choice: **group** or **name**.

Introduced 25.3.R2

Platforms 7705 SAR-1

length

Synopsis Enter the **length** context

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from as-path](#) [length](#)

Tree [length](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

qualifier *keyword*

Synopsis Higher or lower values to be accepted as match criteria

Context **configure** [policy-options](#) [policy-statement](#) *named-item-64* [entry](#) *number* [from as-path](#) [length](#) [qualifier](#) *keyword*

Tree [qualifier](#)

Options	equal, or-higher, or-lower
Default	equal
Introduced	25.3.R2
Platforms	7705 SAR-1

unique *boolean*

Synopsis	Use unique AS numbers as matching criteria
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number from as-path</i> length unique <i>boolean</i>
Tree	unique
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value (*number* | *string*)

Synopsis	AS numbers in the AS path that match on the BGP route
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number from as-path</i> length value (<i>number</i> <i>string</i>)
Tree	value
String length	1 to 32
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

name (*param-midstring* | *string*)

Synopsis	AS path name to match
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number from as-path</i> name (<i>param-midstring</i> <i>string</i>)
Tree	name
Description	This command specifies an AS path regular expression name for the route policy entry. Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".
String length	1 to 32

Notes	The following elements are part of a choice: group or name .
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster-id

Synopsis	Enter the cluster-id context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from cluster-id
Tree	cluster-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-prefix-with-host-bits*

Synopsis	Cluster list attribute IP addresses for route matching
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from cluster-id ip-address <i>ipv4-prefix-with-host-bits</i>
Tree	ip-address
Max. instances	5
Notes	The following elements are part of a choice: ip-address or none-cluster-list . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

none-cluster-list *boolean*

Synopsis	Specify matching BGP routes without a cluster ID
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from cluster-id none-cluster-list <i>boolean</i>
Tree	none-cluster-list
Default	false
Notes	The following elements are part of a choice: ip-address or none-cluster-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

color *number*

Synopsis	Color ID as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from color <i>number</i>
Tree	color
Description	This command configures an SR Policy color ID as a route policy match criterion. This match criterion is only used in import policies.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

community

Synopsis	Enter the community context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from community
Tree	community
Introduced	25.3.R2
Platforms	7705 SAR-1

count

Synopsis	Enter the count context
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from community count
Tree	count
Introduced	25.3.R2
Platforms	7705 SAR-1

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from community count qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower

Default	equal
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Community count to match the community count criteria
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from community count type <i>keyword</i>
Tree	type
Options	standard, extended, large
Introduced	25.3.R2
Platforms	7705 SAR-1

value (number | string)

Synopsis	Number of BGP communities to match the BGP route
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from community count value (<i>number</i> <i>string</i>)
Tree	value
String length	1 to 32
Range	0 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

expression string

Synopsis	Community expression statement as a match criterion
Context	configure policy-options policy-statement <i>named-item-64</i> entry <i>number</i> from community expression <i>string</i>
Tree	expression
