Introduced 25.3.R2
Platforms 7705 SAR-1

[te-class-number] number

Synopsis	TE class number
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i>
Tree	te-class
Range	0 to 7
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

class-type number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Class type (CT) associated with the TE class
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i> class-type <i>number</i>
Tree	class-type
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

priority number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TE class priority
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i> priority <i>number</i>
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

entropy-label-capability *boolean*

Synopsis Allow receiving and processing of the entropy label and ELI on incoming packets of RSVP LSPs

Context **configure** [router](#) *named-item-64* [rsvp](#) [entropy-label-capability](#) *boolean*

Tree [entropy-label-capability](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

graceful-restart

Synopsis Enter the **graceful-restart** context

Context **configure** [router](#) *named-item-64* [rsvp](#) [graceful-restart](#)

Tree [graceful-restart](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

max-recovery *number*

Synopsis Maximum time to wait before a graceful helper recovers the session

Context **configure** [router](#) *named-item-64* [rsvp](#) [graceful-restart](#) [max-recovery](#) *number*

Tree [max-recovery](#)

Range 1 to 1800

Units seconds

Default 300

Introduced 25.3.R2

Platforms 7705 SAR-1

max-restart *number*

Synopsis Maximum time that a graceful helper waits for session restart after the neighbor is considered down

Context **configure** [router](#) *named-item-64* [rsvp](#) [graceful-restart](#) [max-restart](#) *number*

Tree	max-restart
Range	1 to 300
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-shutdown *boolean*

Synopsis	Initiate a graceful shutdown of all RSVP interfaces on the node
Context	configure router <i>named-item-64</i> rsvp graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

implicit-null-label *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal the implicit null option for all RSVP LSPs
Context	configure router <i>named-item-64</i> rsvp implicit-null-label <i>boolean</i>
Tree	implicit-null-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

include-node-id-in-rro *boolean*

Synopsis	Include the node-id sub-object in the RRO (Record Route Object) on the RSVP instance
Context	configure router <i>named-item-64</i> rsvp include-node-id-in-rro <i>boolean</i>
Tree	include-node-id-in-rro
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

interface [\[interface-name\]](#) *reference*

Synopsis Enter the **interface** list instance

Context **configure** [router](#) *named-item-64* [rsvp](#) [interface](#) *reference*

Tree [interface](#)

Description Commands in this context configure the attributes of the RSVP protocol support on an IP interface. RSVP commands are not executed on an IP interface if RSVP is not enabled.

The RSVP interface must be administratively disabled before it can be deleted.

A corresponding MPLS interface must also be configured. The RSVP interface cannot be deleted without also deleting the MPLS interface.

Introduced 25.3.R2

Platforms 7705 SAR-1

[interface-name] *reference*

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication or hash key string
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command configures the authentication key for use between RSVP neighbors to authenticate RSVP messages. Authentication uses the MD5 message-based digest.</p> <p>When enabled on an RSVP interface, authentication of RSVP messages operates in both directions of the interface. A router maintains a security association using one authentication key for each interface to an RSVP neighbor.</p> <p>An RSVP neighbor transmits an authenticating digest of the RSVP message that is computed using the shared authentication key and a keyed-hash algorithm. The message digest is included in an INTEGRITY object, which also contains a flags field, a key identifier field, and a sequence number field. An RSVP neighbor uses the key together with the authentication algorithm to process received RSVP messages. The RSVP MD5 authentication complies to the procedures for RSVP message generation in RFC 2747, <i>RSVP Cryptographic Authentication</i>.</p> <p>The MD5 implementation does not support the authentication challenge procedures in RFC 2747.</p>
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

class-type-bw

Synopsis	Enable the class-type-bw context
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> class-type-bw
Tree	class-type-bw
Introduced	25.3.R2
Platforms	7705 SAR-1

ct0 number

Synopsis	Percentage of link bandwidth for class type (CT) 0
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> class-type-bw ct0 <i>number</i>
Tree	ct0
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

ct1 number

Synopsis	Percentage of link bandwidth for class type (CT) 1
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> class-type-bw ct1 <i>number</i>
Tree	ct1
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

ct2 number

Synopsis	Percentage of link bandwidth for class type (CT) 2
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> class-type-bw ct2 <i>number</i>
Tree	ct2

Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

Platforms	7705 SAR-1

keep-multiplier *number*

Synopsis	Value for the keep-multiplier to declare a reservation or neighbor as down
Context	configure router <i>named-item-64</i> rsvp keep-multiplier <i>number</i>
Tree	keep-multiplier
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

msg-pacing

Synopsis	Enable the msg-pacing context
Context	configure router <i>named-item-64</i> rsvp msg-pacing

Tree	msg-pacing
Introduced	25.3.R2
Platforms	7705 SAR-1

max-burst *number*

Synopsis	Maximum RSVP messages that are sent over a specified period when message pacing is enabled
Context	configure router <i>named-item-64</i> rsvp msg-pacing max-burst <i>number</i>
Tree	max-burst
Range	100 to 1000
Default	650
Introduced	25.3.R2
Platforms	7705 SAR-1

period *number*

Synopsis	Time for RSVP message pacing
Context	configure router <i>named-item-64</i> rsvp msg-pacing period <i>number</i>
Tree	period
Range	100 to 1000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

p2p-merge-point-abort-timer *number*

Synopsis	Merge pointer timer for P2P paths
Context	configure router <i>named-item-64</i> rsvp p2p-merge-point-abort-timer <i>number</i>
Tree	p2p-merge-point-abort-timer
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

preemption-timer *number*

Synopsis	Preemption timer for the MPLS instance
Context	configure router <i>named-item-64</i> rsvp preemption-timer <i>number</i>
Tree	preemption-timer
Range	0 to 1800
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

rapid-retransmit-time *number*

Synopsis	Rapid retransmission interval to reliably deliver RSVP messages
Context	configure router <i>named-item-64</i> rsvp rapid-retransmit-time <i>number</i>
Tree	rapid-retransmit-time
Range	1 to 100
Units	deciseconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

rapid-retry-limit *number*

Synopsis	Rapid retry limit to reliably deliver RSVP messages
Context	configure router <i>named-item-64</i> rsvp rapid-retry-limit <i>number</i>
Tree	rapid-retry-limit
Range	1 to 6
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

refresh-reduction-over-bypass *boolean*

Synopsis	Enable refresh reduction capabilities over tunnels
----------	--

Context	configure router <i>named-item-64</i> rsvp refresh-reduction-over-bypass <i>boolean</i>
Tree	refresh-reduction-over-bypass
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

refresh-time *number*

Synopsis	Interval between refresh messages
Context	configure router <i>named-item-64</i> rsvp refresh-time <i>number</i>
Tree	refresh-time
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

te-down-threshold *number*

Synopsis	Value for the te-down-threshold
Context	configure router <i>named-item-64</i> rsvp te-down-threshold <i>number</i>
Tree	te-down-threshold
Range	0 to 100

Introduced 25.3.R2

Platforms 7705 SAR-1

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>named-item-64</i> segment-routing
Tree	segment-routing
Description	Commands in this context configure protocol-independent options for segment routing.
Introduced	25.3.R2
Platforms	7705 SAR-1

maintenance-policy [[policy-name](#)] *named-item*

Synopsis	Enter the maintenance-policy list instance
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i>
Tree	maintenance-policy
Description	Commands in this context configure a named maintenance policy that can be applied to SR policy candidate paths that are either statically configured or imported via BGP.
Introduced	25.3.R2
Platforms	7705 SAR-1

[[policy-name](#)] *named-item*

Synopsis	Maintenance policy name
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i>
Tree	maintenance-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the maintenance policy
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state

Description	<p>This command sets the administrative state of the maintenance policy.</p> <p>A maintenance policy must be administratively disabled to change any of the parameters.</p> <p>When a maintenance template is administratively disabled, all applicable candidate paths are removed from the data path.</p>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable seamless BFD for segment lists of candidate path
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables seamless BFD on every segment list of an SR policy candidate path to which the maintenance policy is applied. The BFD template configures the parameters for the BFD session.</p> <p>When configured to false, seamless BFD is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-template *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BFD template to be used by seamless BFD
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> bfd-template <i>reference</i>
Tree	bfd-template

Description	This command references a named BFD template to be used by seamless BFD. A BFD template must exist on the system before being referenced from a maintenance policy. The template specifies parameters that are used by the BFD session, such as the minimum transmit and receive control packet timer intervals.
Reference	configure bfd bfd-template <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-down-timer *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold down timer for SR policy candidate paths
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> hold-down-timer <i>number</i>
Tree	hold-down-timer
Description	<p>This command configures the hold down timer for the maintenance policy. The purpose of the timer is to prevent bouncing of the SR policy path state if S-BFD sessions associated with the segment lists flap, causing the threshold to be repeatedly crossed in a short period of time.</p> <p>The timer is started when the number of up S-BFD sessions drops below the threshold. The SR policy path is not considered to be up again until the hold down timer has expired and the number of up S-BFD sessions reaches or exceeds the threshold and the internal hold timer is not running.</p> <p>If the revert timer is also configured, the revert timer is not started until after the number of up S-BFD sessions equals or exceeds the threshold and the hold down timer for the primary candidate path has expired.</p>
Range	0 to 5000
Units	deciseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protection mode for SR policy candidate paths
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> mode <i>keyword</i>
Tree	mode
Description	This command specifies the data path programming and protection mechanism for SR policy candidate paths to which the maintenance policy is applied.
Options	none, ecmp-protected, linear
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

return-path-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> return-path-label <i>number</i>
Tree	return-path-label
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

revert-timer *number*

Synopsis	Revert timer for SR policy candidate paths
Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing maintenance-policy</i> <i>named-item</i> <i>revert-timer</i> <i>number</i>
Tree	<i>revert-timer</i>
Description	<p>This command configures the revert timer for SR Policy candidate paths.</p> <p>The revert timer is started when the primary path recovers (the number of S-BFD sessions that are up equals or exceeds the threshold value and the hold down timer has expired). When the timer expires, the system reverts to the primary path.</p>
Range	0 to 4320
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum number of up S-BFD sessions for up path status
Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing maintenance-policy</i> <i>named-item</i> <i>threshold</i> <i>number</i>
Tree	<i>threshold</i>
Description	<p>This command configures the minimum number of S-BFD sessions that must be up for the SR policy candidate path to be considered up. If the number of up sessions is below this threshold value, the policy candidate path is marked as BFD degraded by the system.</p> <p>This command is only valid in the ecmp-protected mode.</p>
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-mpls

Synopsis	Enter the sr-mpls context
----------	----------------------------------

Context	configure router <i>named-item-64</i> segment-routing sr-mpls
Tree	sr-mpls
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-sids [[interface-name](#)] *reference*

Synopsis	Enter the prefix-sids list instance
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i>
Tree	prefix-sids
Description	Commands in this context configure the prefix SIDs for an interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *reference*

Synopsis	Loopback interface name that owns prefix to advertise
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i>
Tree	prefix-sids
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

flex-algo [[flex-algo-id](#)] *number*

Synopsis	Enter the flex-algo list instance
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo <i>number</i>
Tree	flex-algo
Max. instances	7
Introduced	25.7.R1
Platforms	7705 SAR-1

[flex-algo-id] number

Synopsis	Flexible algorithm ID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo number
Tree	flex-algo
Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7705 SAR-1

ipv4-sid

Synopsis	Enable the ipv4-sid context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo number ipv4-sid
Tree	ipv4-sid
Description	Commands in this context configure IPv4 SIDs associated with the flexible algorithm instances on the shared loopback interfaces used with IS-IS or OSPF.
Introduced	25.7.R1
Platforms	7705 SAR-1

index number

Synopsis	Node SID index for the interface
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo number ipv4-sid index <i>number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.7.R1
Platforms	7705 SAR-1

label number

Synopsis	Label value for the node SID
----------	------------------------------

Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv4-sid label number</i>
Tree	label
Range	32 to 1048575
Notes	The following elements are part of a choice: index or label .
Introduced	25.7.R1
Platforms	7705 SAR-1

ipv6-sid

Synopsis	Enable the ipv6-sid context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv6-sid</i>
Tree	ipv6-sid
Description	Commands in this context configure IPv6 SIDs associated with the flexible algorithm instances on the shared loopback interfaces used with IS-IS or OSPF.
Introduced	25.7.R1
Platforms	7705 SAR-1

index number

Synopsis	Node SID index for the interface
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv6-sid index number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.7.R1
Platforms	7705 SAR-1

label number

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv6-sid label number</i>
Tree	label

Range	32 to 1048575
Notes	The following elements are part of a choice: index or label .
Introduced	25.7.R1
Platforms	7705 SAR-1

ipv4-sid

Synopsis	Enable the ipv4-sid context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv4-sid
Tree	ipv4-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

index *number*

Synopsis	Node SID index for the interface
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv4-sid index <i>number</i>
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv4-sid label <i>number</i>
Tree	label
Range	32 to 1048575
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-sid

Synopsis	Enable the ipv6-sid context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv6-sid
Tree	ipv6-sid
Introduced	25.3.R2
Platforms	7705 SAR-1

index number

Synopsis	Node SID index for the interface
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv6-sid index number
Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

label number

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv6-sid label number
Tree	label
Range	32 to 1048575
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR-1

node-sid boolean

Synopsis	Assign a node SID to the prefix referencing the router
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> node-sid boolean
Tree	node-sid

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policies

Synopsis	Enter the sr-policies context
Context	configure router <i>named-item-64</i> segment-routing sr-policies
Tree	sr-policies
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of segment routing policies
Context	configure router <i>named-item-64</i> segment-routing sr-policies admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

reserved-label-block *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved local block for segment routing policies
Context	configure router <i>named-item-64</i> segment-routing sr-policies reserved-label-block <i>reference</i>
Tree	reserved-label-block
Reference	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

static-policy [name] *named-item-64*

Synopsis	Enter the static-policy list instance
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i>
Tree	static-policy
Max. instances	32768
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item-64*

Synopsis	Name for the segment routing static policy
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i>
Tree	static-policy
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of segment routing static policy
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

binding-sid *number*

Synopsis	Segment ID that opaquely represents an SR policy to upstream routers
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>named-item-64</i> <i>binding-sid</i> <i>number</i>
Tree	<i>binding-sid</i>
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

color *number*

segment [**segment-index**] *number*

Synopsis	Enter the segment list instance
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i> segment <i>number</i>
Tree	segment
Description	<p>Commands in this context configure a segment inside a segment-list of a statically-defined segment routing policy candidate path.</p> <p>A segment list of a statically-defined SR policy candidate path of type sr-mpls can only accept a segment of type mpls-label.</p> <p>A segment list of a statically-defined SR policy candidate path of type srv6 can only accept a segment of type srv6-sid. However, you can mix SRv6 segments derived from both classic SRv6 and micro-segment SRv6 locators.</p>
Max. instances	24
Introduced	25.3.R2
Platforms	7705 SAR-1

[segment-index] *number*

Synopsis	Index for identifying a segment in a segment list
----------	---

Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i> segment <i>number</i>
Tree	segment
Description	This command configures the index for identifying a segment in a segment list. Each segment list can have up to 11 segments for SR-MPLS policies, and 24 segments for an SRv6 segment list which only includes micro-segments. For an SRv6 segment list that mixes regular and micro-segments, up to 7 regular segments can be configured.
Range	1 to 24
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls-label *number*

Synopsis	Value for the MPLS label
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i> segment <i>number</i> mpls-label <i>number</i>
Tree	mpls-label
Range	0 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Weight of the segment list
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i> weight <i>number</i>
Tree	weight
Description	This command associates an optional weight value with a segment list of a statically defined segment routing policy to achieve weighted ECMP behavior. When any segment list in the active policy has a weight greater than 1, traffic matching the policy is load-balanced across the segment lists according to their relative weight values.
Max. range	0 to 4294967295

Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

sfm-overload

Synopsis	Enable the sfm-overload context
Context	configure router <i>named-item-64</i> sfm-overload
Tree	sfm-overload
Introduced	25.3.R2
Platforms	7705 SAR-1

holdoff-time *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	configure router <i>named-item-64</i> sfm-overload holdoff-time <i>number</i>
Tree	holdoff-time
Range	1 to 600
Units	seconds
Introduced	25.3.R2

static-routes

Synopsis	Enter the static-routes context
Context	configure router <i>named-item-64</i> static-routes
Tree	static-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-down

Synopsis	Enable the hold-down context
Context	configure router <i>named-item-64</i> static-routes hold-down
Tree	hold-down
Description	<p>Commands in this context enable the hold-down time feature globally for static routes in the system.</p> <p>The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap.</p> <p>The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

initial number

Synopsis	Value for the initial hold-down time
Context	configure router <i>named-item-64</i> static-routes hold-down initial <i>number</i>
Tree	initial

Description	<p>This command specifies the initial value of the hold-down time globally for static routes in the system.</p> <p>When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.</p>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-value *number*

Synopsis	Maximum value of the hold-down time
Context	configure router <i>named-item-64</i> static-routes hold-down max-value <i>number</i>
Tree	max-value
Description	This command specifies the maximum value of the hold-down time globally for static routes in the system.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Multiplier of the previous hold-down time
Context	configure router <i>named-item-64</i> static-routes hold-down multiplier <i>number</i>
Tree	multiplier
Description	This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.
Range	1 to 10
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

route [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*) *route-type* *keyword*

Synopsis	Enter the route list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>static-routes</i> <i>route</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>route-type</i> <i>keyword</i>

metric *number*

Synopsis	Static route metric
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole metric <i>number</i>
Tree	metric
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Priority of this static route over the routes from different sources
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole preference <i>number</i>
Tree	preference
Range	1 to 255
Default	5

Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list

Synopsis	Enter the prefix-list context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole prefix-list
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR-1

flag keyword

Synopsis	Static route match condition from prefix list
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole prefix-list flag <i>keyword</i>
Tree	flag
Options	any, all, none
Default	any
Introduced	25.3.R2
Platforms	7705 SAR-1

name reference

Synopsis	Prefix list name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole prefix-list name <i>reference</i>
Tree	name
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tag number

Synopsis	Static route tag
----------	------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword blackhole tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword community <i>community</i>
Tree	community
String length	1 to 72
Max. instances	12
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

indirect [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the indirect list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address used to reach the destination
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect

Description	This command specifies the next-hop IP address used to reach the destination. The specified IP address can be either on the network side or the access side and is typically at least one hop away from the node.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) community <i>community</i>
Tree	community
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR-1

cpe-check [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address</p>

for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	cpe-check
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) log <i>boolean</i>
Tree	log
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) padding-size <i>number</i>

Synopsis	Static route tag
----------	------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

leak-destination

Synopsis	Enter the leak-destination context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> leak-destination
Tree	leak-destination
Description	<p>Commands in this context configure a list of VPRNs that receive a leaked copy of the static route. When a VPRN service is added to this list, the static route is leaked into that VPRN if the following conditions are met:</p> <ul style="list-style-type: none"> • all the configured next hops of the static route are direct next hops • the static route is an active route, or it is capable of immediately becoming an active route when a more-preferred route for the same prefix is removed <p>Static routes leaked using this method appear as "VPN Leak" protocol routes in the route table of the VPRN.</p> <p>When a packet received by a VPRN matches a "VPN Leak" route leaked using this method, the packet is forwarded according to the configuration of the static route in the GRT, even if the static route is currently non-best in the GRT.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance [**service-name**] *reference*

Synopsis	Add a list entry for router-instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> leak-destination router-instance <i>reference</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

[service-name] reference

Synopsis	VPRN service name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> leak-destination router-instance <i>reference</i>
Tree	router-instance
Reference	configure service vprn <i>service-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop [ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the next-hop list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the directly-connected next hop
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Description	This command specifies the IP address of the directly-connected next hop. The IP address can either be on the network side or the access side on the node. The address must be associated with a network directly connected to a network configured on the node.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the static route operation
----------	--

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) community <i>community</i>
Tree	community
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR-1

cpe-check [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check

Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[**address**] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	cpe-check
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) drop-count <i>number</i>
Tree	drop-count

Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-mpls-local *keyword*

Synopsis	TTL propagation for local CPM generated IP packets
Context	configure router <i>named-item-64</i> ttl-propagate sr-mpls-local <i>keyword</i>
Tree	sr-mpls-local
Description	This command configures TTL or hop-limit propagation for all segment routing MPLS tunnels carrying IPv4 or IPv6 packets. This applies to IPv4 and IPv6 packets of IGP, BGP unlabelled (except 6PE), and static routes in the base router whose next hop is resolved to a Segment Routing MPLS (SR-MPLS) tunnel of any of the following types: SR-ISIS, SR-OSPF, SR-OSPF3, SR-TE LSP, and SR policy.

This command enables or disables propagation of the TTL or hop-limit field value of CPM originated IP packet to all labels in the segment routing transport label stack. Use the **sr-mpls-transit** command to configure TTL or hop-limit propagation for transit IP packets.

Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	all
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-mpls-transit *keyword*

Synopsis	TTL propagation for in-transit user IP packets
Context	configure router <i>named-item-64</i> ttl-propagate sr-mpls-transit <i>keyword</i>
Tree	sr-mpls-transit
Description	<p>This command configures TTL or hop-limit propagation for all segment routing MPLS tunnels carrying IPv4 or IPv6 packets. This applies to IPv4 and IPv6 packets of IGP, BGP unlabelled (except 6PE), and static routes in the base router whose next hop is resolved to a Segment Routing MPLS (SR-MPLS) tunnel of any of the following types: SR-ISIS, SR-OSPF, SR-OSPF3, SR-TE LSP, and SR policy.</p> <p>This command enables or disables propagation of the TTL or hop-limit field value for transit IP packets to all labels in the segment routing transport label stack. Transit IP packets are packets of base router prefixes received on an access interface or a network interface (with or without tunnel encapsulation) and whose FIB lookup results in forwarding them over an SR-MPLS tunnel. Use the sr-mpls-local command to configure TTL or hop-limit propagation for CPM originated IP packets.</p>
Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	all
Introduced	25.3.R2
Platforms	7705 SAR-1

vprn-local *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN local packets
Context	configure router <i>named-item-64</i> ttl-propagate vprn-local <i>keyword</i>
Tree	vprn-local
Options	none, all, vc-only
Default	vc-only

Introduced 25.3.R2

type *keyword*

Synopsis	Processing behavior type for the reflector
Context	configure router <i>named-item-64</i> twamp-light reflector type <i>keyword</i>
Tree	type
Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is twamp-light the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is stamp, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to stamp. When the reflector is operating in stamp mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp, twamp-light
Default	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR-1

udp-port *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

4.24.1 routing-options command descriptions

routing-options

Synopsis	Enter the routing-options context
Context	configure routing-options
Tree	routing-options
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-tags

Synopsis	Enter the admin-tags context
Context	configure routing-options admin-tags
Tree	admin-tags
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-tag [[tag](#)] *string*

Synopsis	Add a list entry for admin-tag
Context	configure routing-options admin-tags admin-tag <i>string</i>
Tree	admin-tag
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[[tag](#)] *string*

Synopsis	Administrative tag value
Context	configure routing-options admin-tags admin-tag <i>string</i>
Tree	admin-tag
String length	1 to 32
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR-1

route-admin-tag-policy [\[policy-name\]](#) *string*

Synopsis Enter the **route-admin-tag-policy** list instance
Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string*
Tree [route-admin-tag-policy](#)
Max. instances 2048
Introduced 25.3.R2
Platforms 7705 SAR-1

[policy-name] *string*

Synopsis Name of the route admin tag policy
Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string*
Tree [route-admin-tag-policy](#)
String length 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

exclude [\[tag\]](#) *reference*

Synopsis Add a list entry for **exclude**
Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string* **exclude** *reference*
Tree [exclude](#)
Max. instances 8
Introduced 25.3.R2
Platforms 7705 SAR-1

[tag] *reference*

Synopsis Administrative tag value

Context	configure routing-options admin-tags route-admin-tag-policy <i>string</i> exclude <i>reference</i>
Tree	exclude
Reference	configure routing-options admin-tags admin-tag <i>string</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

include [[tag](#)] *reference*

Synopsis	Add a list entry for include
Context	configure routing-options admin-tags route-admin-tag-policy <i>string</i> include <i>reference</i>
Tree	include
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[tag] *reference*

Synopsis	Administrative tag value
Context	configure routing-options admin-tags route-admin-tag-policy <i>string</i> include <i>reference</i>
Tree	include
Reference	configure routing-options admin-tags admin-tag <i>string</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

flexible-algorithm-definitions

Synopsis	Enter the flexible-algorithm-definitions context
Context	configure routing-options flexible-algorithm-definitions
Tree	flexible-algorithm-definitions
Description	Commands in this context enable locally-configured algorithm definitions and configure administrative groups.
Introduced	25.3.R2

Platforms 7705 SAR-1

flex-algo [[flex-algo-name](#)] *named-item*

Synopsis Enter the **flex-algo** list instance

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *named-item*

Tree [flex-algo](#)

Description Commands in this context configure the definition context for a Flexible Algorithm Definition (FAD).

Max. instances 256

Introduced 25.3.R2

Platforms 7705 SAR-1

[flex-algo-name] *named-item*

Synopsis Flexible Algorithm Definition (FAD) name

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *named-item*

Tree [flex-algo](#)

Description This command specifies the name of the flexible algorithm definition that is used as a reference anchor for the configuration.

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the FAD

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *named-item* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the exclude context
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> exclude
Tree	exclude
Description	<p>Commands in this context define administrative groups that are used to exclude links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The exclude rule that is part of the FAD specifies that links with the named administrative groups set are to be excluded from the topology graph.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group [[group-name](#)] *reference*

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> exclude admin-group <i>reference</i>
Tree	admin-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] reference

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> exclude admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

flags-tlv boolean

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise the FAD Flags TLV
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> flags-tlv <i>boolean</i>
Tree	flags-tlv
Description	<p>When configured to true, the router advertises the FAD Flags TLV within the FAD. The M-flag within the TLV is set to 1, specifying the use of a Flex-Algorithm specific prefix metric. A router receiving the TLV modifies the constrained SPF (cSPF) based on the M-flag status.</p> <p>When configured to false, the FAD Flags TLV is not included with the FAD advertisement.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

include-all

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the include-all context
----------	--------------------------------------

Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-all
Tree	include-all
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that all named administrative groups must be present in a link to be included in the topology graph.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group [\[group-name\]](#) *reference*

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-all admin-group <i>reference</i>
Tree	admin-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-all admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

include-any

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the include-any context
----------	--------------------------------------

Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-any
Tree	include-any
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that any link with the named administrative groups is included in the topology graph.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group [\[group-name\]](#) *reference*

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-any admin-group <i>reference</i>
Tree	admin-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-any admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD metric type
----------	-----------------

Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> metric-type <i>keyword</i>
Tree	metric-type
Options	igp, delay, te-metric
Default	igp
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD priority
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> priority <i>number</i>
Tree	priority
Description	This command configures the priority of the FAD. The priority is used as a tie-breaker when the router has received multiple FADs for the same flexible algorithm.
Range	0 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

if-attribute

Synopsis	Enter the if-attribute context
Context	configure routing-options if-attribute
Tree	if-attribute
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group [[group-name](#)] *named-item*

Synopsis	Enter the admin-group list instance
Context	configure routing-options if-attribute admin-group <i>named-item</i>

Tree	admin-group
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *named-item*

Synopsis	Interface group name
Context	configure routing-options if-attribute admin-group <i>named-item</i>
Tree	admin-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the group
Context	configure routing-options if-attribute admin-group <i>named-item</i> value <i>number</i>
Tree	value
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

srlg-group [[name](#)] *named-item*

Synopsis	Enter the srlg-group list instance
Context	configure routing-options if-attribute srlg-group <i>named-item</i>
Tree	srlg-group

Max. instances	1024
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	SRLG name
Context	configure routing-options if-attribute srlg-group <i>named-item</i>
Tree	srlg-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

penalty-weight *number*

Synopsis	Integer value of the penalty weight assigned to SRLG
Context	configure routing-options if-attribute srlg-group <i>named-item</i> penalty-weight <i>number</i>
Tree	penalty-weight
Description	This command specifies the penalty weight associated with a SRLG. The higher the penalty weight, the less desirable it is to use the link with a given SRLG.
Range	0 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

**WARNING:** Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the SRLG
Context	configure routing-options if-attribute srlg-group <i>named-item</i> value <i>number</i>
Tree	value

Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-next-hop-policy

Synopsis	Enter the route-next-hop-policy context
Context	configure routing-options route-next-hop-policy
Tree	route-next-hop-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

template [[template-name](#)] *named-item*

Synopsis	Enter the template list instance
Context	configure routing-options route-next-hop-policy template <i>named-item</i>
Tree	template
Introduced	25.3.R2
Platforms	7705 SAR-1

[template-name] *named-item*

Synopsis	Template name
Context	configure routing-options route-next-hop-policy template <i>named-item</i>
Tree	template
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
----------	------------------

Context	configure routing-options route-next-hop-policy template <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude-group [\[group-name\]](#) *reference*

Synopsis	Add a list entry for exclude-group
Context	configure routing-options route-next-hop-policy template <i>named-item</i> exclude-group <i>reference</i>
Tree	exclude-group
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options route-next-hop-policy template <i>named-item</i> exclude-group <i>reference</i>
Tree	exclude-group
Description	This command specifies the name of the administrative group. If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

include-group [\[group-name\]](#) *reference*

Synopsis	Enter the include-group list instance
----------	--

Context	configure routing-options route-next-hop-policy template <i>named-item</i> include-group <i>reference</i>
Tree	include-group
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options route-next-hop-policy template <i>named-item</i> include-group <i>reference</i>
Tree	include-group
Description	<p>This command specifies the name of the administrative group.</p> <p>If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.</p>
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Preference number for the admin group
Context	configure routing-options route-next-hop-policy template <i>named-item</i> include-group <i>reference</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

nh-type *keyword*

Synopsis	Preferred next hop
----------	--------------------

Context	configure routing-options route-next-hop-policy template <i>named-item</i> nh-type <i>keyword</i>
Tree	nh-type
Options	ip, tunnel
Default	ip
Introduced	25.3.R2
Platforms	7705 SAR-1

protection-type *keyword*

Synopsis	Protection type used
Context	configure routing-options route-next-hop-policy template <i>named-item</i> protection-type <i>keyword</i>
Tree	protection-type
Options	link, node
Default	node
Introduced	25.3.R2
Platforms	7705 SAR-1

srlg *boolean*

Synopsis	Select next hops from the SRLG
Context	configure routing-options route-next-hop-policy template <i>named-item</i> srlg <i>boolean</i>
Tree	srlg
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

4.25.1 saa command descriptions

saa

Synopsis	Enter the saa context
Context	configure saa
Tree	saa
Description	Commands in this context configure the Service Assurance Agent (SAA) tests.
Introduced	25.3.R2
Platforms	7705 SAR-1

owner [**owner-name**] *named-item* **test** *named-item*

Synopsis	Enter the owner list instance
Context	configure saa owner <i>named-item</i> test <i>named-item</i>
Tree	owner
Introduced	25.3.R2
Platforms	7705 SAR-1

[**owner-name**] *named-item*

Synopsis	Optional owner name of the SAA operation
Context	configure saa owner <i>named-item</i> test <i>named-item</i>
Tree	owner
Description	This command configures the owner associated with the SAA operation.
String length	1 to 32
MD-CLI default	TiMOS CLI
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

test *named-item*

Synopsis	SAA test name
----------	---------------

Context	configure <i>saa owner</i> <i>named-item test</i> <i>named-item</i>
Tree	<i>owner</i>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy associated with the SAA test
Context	configure <i>saa owner</i> <i>named-item test</i> <i>named-item</i> <i>accounting-policy reference</i>
Tree	<i>accounting-policy</i>
Reference	configure <i>log accounting-policy number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SAA test
Context	configure <i>saa owner</i> <i>named-item test</i> <i>named-item</i> <i>admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

continuous *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Execute the SAA tests as continuous
Context	configure <i>saa owner named-item test named-item continuous</i> <i>boolean</i>
Tree	<i>continuous</i>
Description	<p>When configured to true, the SAA test execution is continuous, that is, it cannot be started or stopped with the oam saa test start or stop commands.</p> <p>The SAA test types supported by this command include the following:</p> <ul style="list-style-type: none"> • cpe-ping • dns • eth-cfm-loopback • eth-cfm-two-way-delay • eth-cfm-two-way-slm • icmp-ping (not applicable to rapid type) • lsp-ping • mac-ping • sdp-ping • vccv-ping • vpn-ping
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>saa owner named-item test named-item description</i> <i>description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

jitter-event [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the jitter-event list instance
Context	configure <i>saa owner named-item test named-item jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>

Description	Commands in this context configure the jitter event thresholds used to evaluate the jitter event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure saa owner <i>named-item</i> test <i>named-item</i> jitter-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	jitter-event
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold-type *keyword*

Synopsis	Threshold type
Context	configure saa owner <i>named-item</i> test <i>named-item</i> jitter-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	jitter-event
Options	rising, falling
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold jitter value
Context	configure saa owner <i>named-item</i> test <i>named-item</i> jitter-event <i>keyword</i> threshold-type <i>keyword</i> threshold <i>number</i>
Tree	threshold
Description	This command specifies the threshold jitter value. The system generates an SAA threshold event when the jitter value of the test run crosses the threshold value.

Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

latency-event *[direction] keyword threshold-type keyword*

Synopsis	Enter the latency-event list instance
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Description	Commands in this context configure the latency event thresholds used to evaluate the latency event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold-type *keyword*

Synopsis	Threshold type
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Options	rising, falling

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold latency value
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> latency-event <i>keyword</i> threshold-type <i>keyword</i> threshold <i>number</i>
Tree	threshold
Description	This command specifies the threshold latency value. The system generates an SAA threshold event when the latency value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

loss-event [*direction*] *keyword* **threshold-type** *keyword*

Synopsis	Enter the loss-event list instance
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> loss-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	loss-event
Description	Commands in this context configure the loss event thresholds used to evaluate the loss event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	25.3.R2
Platforms	7705 SAR-1

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> loss-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	loss-event

Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold-type *keyword*

Synopsis	Threshold type
Context	configure saa owner <i>named-item</i> test <i>named-item</i> loss-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	loss-event
Options	rising, falling
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold loss event value
Context	configure saa owner <i>named-item</i> test <i>named-item</i> loss-event <i>keyword</i> threshold-type <i>keyword</i> threshold <i>number</i>
Tree	threshold
Description	This command specifies the threshold loss value. The system generates an SAA threshold event when the loss value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	packets
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-history *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	History probe behavior
Context	configure <i>saa owner named-item test named-item probe-history keyword</i>
Tree	<i>probe-history</i>
Options	keep, drop, auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

type

Synopsis	Enter the type context
Context	configure <i>saa owner named-item test named-item type</i>
Tree	<i>type</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-cfm-loopback

Synopsis	Enable the eth-cfm-loopback context
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback</i>
Tree	<i>eth-cfm-loopback</i>
Description	Commands in this context configure an Ethernet CFM loopback test in SAA.
Notes	The following elements are part of a choice: dns , eth-cfm-loopback , icmp-ping , lsp-ping , sdp-ping , or vccv-ping .
Introduced	25.10.R1
Platforms	7705 SAR-1

count *number*

Synopsis	Number of packets to send
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback count number</i>
Tree	<i>count</i>
Range	1 to 100
Units	packets
Default	1

Introduced	25.10.R1
Platforms	7705 SAR-1

destination (*mac-unicast-address-no-zero | number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback destination (mac-unicast-address-no-zero number)</i>
Tree	<i>destination</i>
Description	This command specifies the Layer 2 unicast MAC address of the destination MEP or, alternatively, the remote MEP ID. When the remote MEP ID option is used instead of the MAC address, the domain and association information of the source MEP for the test is used to check for a locally stored unicast MAC address for the peer. The local MEP must be administratively enabled.
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

interval *number*

Synopsis	Interval between packets sent
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback interval number</i>
Tree	<i>interval</i>
Range	1 to 10
Units	seconds
Default	5
Introduced	25.10.R1
Platforms	7705 SAR-1

ma-admin-name (*named-item-64 | admin-name*)

Synopsis	Source Ethernet Maintenance Association (MA) name
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback ma-admin-name (named-item-64 admin-name)</i>
Tree	<i>ma-admin-name</i>

String length	1 to 64
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

md-admin-name (*named-item-64* | *admin-name*)

Synopsis	Source Ethernet Maintenance Domain (MD) name
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> md-admin-name (<i>named-item-64</i> <i>admin-name</i>)
Tree	<i>md-admin-name</i>
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

mep *number*

Synopsis	Source Ethernet MEP ID
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> mep <i>number</i>
Tree	<i>mep</i>
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> qos
Tree	<i>qos</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

fc keyword

Synopsis	FC for the sent echo request packets
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback qos fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	nc
Introduced	25.10.R1
Platforms	7705 SAR-1

profile keyword

Synopsis	QoS profile for the sent echo request packets
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback qos profile <i>keyword</i>
Tree	profile
Options	in – In profile out – Out of profile
Default	in
Introduced	25.10.R1
Platforms	7705 SAR-1

size number

Synopsis	Size of the value field in the sent frames
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback size <i>number</i>
Tree	size
Range	0 to 1500
Units	bytes
Default	0

Introduced	25.10.R1
Platforms	7705 SAR-1

timeout *number*

Synopsis	Maximum time to wait for a reply packet
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback timeout number</i>
Tree	<i>timeout</i>
Description	This command configures the maximum time the router waits for a reply packet after sending the last probe for the test. When the timeout expires, the test is marked complete and no more packets are processed.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.10.R1
Platforms	7705 SAR-1

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	When configured to true , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false

Introduced	25.10.R1
Platforms	7705 SAR-1

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	<p>This command configures the number of consecutive ping probe failures required to generate a trap.</p> <p>This command has no effect if the probe-fail command is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.10.R1
Platforms	7705 SAR-1

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation test-complete boolean</i>
Tree	<i>test-complete</i>
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation test-fail boolean</i>
Tree	<i>test-fail</i>
Description	<p>When configured to true, the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.</p>

Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation test-fail-threshold number</i>
Tree	<i>test-fail-threshold</i>
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when test-fail is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	25.10.R1
Platforms	7705 SAR-1

icmp-ping

Synopsis	Enable the icmp-ping context
Context	configure <i>saa owner named-item test named-item type icmp-ping</i>
Tree	<i>icmp-ping</i>
Description	Commands in this context configure an ICMP ping test.
Notes	The following elements are part of a choice: dns , eth-cfm-loopback , icmp-ping , lsp-ping , sdg-ping , or vccv-ping .
Introduced	25.3.R2
Platforms	7705 SAR-1

bypass-routing *boolean*

Synopsis	Bypass routing table for directly connected interfaces
Context	configure <i>saa owner named-item test named-item type icmp-ping bypass-routing boolean</i>
Tree	<i>bypass-routing</i>

Default	false
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

count *number*

Synopsis	ICMP Echo Request packets to send in a sample window
Context	configure <i>saa owner named-item test named-item type icmp-ping count number</i>
Tree	<i>count</i>
Range	1 to 100000
Units	packets
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-address (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name to send ping request
Context	configure <i>saa owner named-item test named-item type icmp-ping destination-address (ipv4-address-no-zone ipv6-address-no-zone string-not-all-spaces)</i>
Tree	<i>destination-address</i>
String length	1 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

do-not-fragment *boolean*

Synopsis	Do not fragment echo request packets (valid for IPv4)
Context	configure <i>saa owner named-item test named-item type icmp-ping do-not-fragment boolean</i>
Tree	<i>do-not-fragment</i>

Description	This command sets the Do Not Fragment (DF) bit in the IPv4 header. This prevents packet fragmentation along the path when there is an MTU mismatch.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

Synopsis	Interface name
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type icmp-ping interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

interval (*number* | *decimal-number*)

Synopsis	Minimum time to expire before message request is sent
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type icmp-ping interval (<i>number</i> <i>decimal-number</i>)
Tree	interval
Range	1 to 10000
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address to reach destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type icmp-ping next-hop-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop-address

Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern (*keyword* | *number*)

Synopsis	Pattern to fill the data portion in a ping packet
Context	configure <i>saa owner named-item test named-item type icmp-ping pattern</i> (<i>keyword</i> <i>number</i>)
Tree	<i>pattern</i>
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure <i>saa owner named-item test named-item type icmp-ping qos</i>
Tree	<i>qos</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *keyword*

Synopsis	Forwarding class
Context	configure <i>saa owner named-item test named-item type icmp-ping qos fc keyword</i>
Tree	<i>fc</i>
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)

Default	nc
Introduced	25.3.R2
Platforms	7705 SAR-1

tos *number*

Synopsis	Type of service
Context	configure <i>saa owner named-item test named-item type icmp-ping qos tos number</i>
Tree	<i>tos</i>
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or VPRN service name
Context	configure <i>saa owner named-item test named-item type icmp-ping router-instance string</i>
Tree	<i>router-instance</i>
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR-1

size *number*

Synopsis	Packet padding size
Context	configure <i>saa owner named-item test named-item type icmp-ping size number</i>
Tree	<i>size</i>
Description	This command configures the number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packets.
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	configure <i>saa owner named-item test named-item type icmp-ping source-address</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>source-address</i>
Description	This command configures the source IP address to be loaded into the IP header of the ICMP Echo Request packet. If unconfigured, the router uses a system-selected local address.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time router waits for a reply after sending last probe
Context	configure <i>saa owner named-item test named-item type icmp-ping timeout number</i>
Tree	<i>timeout</i>
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation probe-fail boolean</i>

Tree	probe-fail
Description	When configured to true , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type icmp-ping trap-generation probe-fail-threshold <i>number</i>
Tree	probe-fail-threshold
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the probe-fail command is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type icmp-ping trap-generation test-complete <i>boolean</i>
Tree	test-complete
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
----------	--

Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation test-fail boolean</i>
Tree	<i>test-fail</i>
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation test-fail-threshold number</i>
Tree	<i>test-fail-threshold</i>
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when test-fail is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

tll *number*

Synopsis	Time to live in the IP header
Context	configure <i>saa owner named-item test named-item type icmp-ping tll number</i>
Tree	<i>tll</i>
Range	1 to 128
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-ping

Synopsis	Enable the lsp-ping context
Context	configure <i>saa owner</i> <i>named-item test named-item</i> <i>type lsp-ping</i>
Tree	<i>lsp-ping</i>
Description	Commands in this context configure the command options to perform in-band LSP connectivity tests. LSP ping uses the protocol and data structures defined in RFC 8029, <i>Detecting Multiprotocol Label Switched (MPLS) Data-Plane Failures</i> .
Notes	The following elements are part of a choice: dns , eth-cfm-loopback , icmp-ping , lsp-ping , sdp-ping , or vccv-ping .
Introduced	25.3.R2
Platforms	7705 SAR-1

interval number

Synopsis	Minimum time before the next lsp-ping request is sent
Context	configure <i>saa owner</i> <i>named-item test named-item</i> <i>type lsp-ping interval number</i>
Tree	<i>interval</i>
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure <i>saa owner</i> <i>named-item test named-item</i> <i>type lsp-ping qos</i>
Tree	<i>qos</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Forwarding class
----------	------------------

Context	configure <i>saa owner</i> <i>named-item</i> <i>test</i> <i>named-item</i> <i>type</i> <i>lsp-ping qos fc</i> <i>keyword</i>
Tree	<i>fc</i>
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	be
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	Profile
Context	configure <i>saa owner</i> <i>named-item</i> <i>test</i> <i>named-item</i> <i>type</i> <i>lsp-ping qos profile</i> <i>keyword</i>
Tree	<i>profile</i>
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR-1

send-count *number*

Synopsis	Number of request packets to send in a sample window
Context	configure <i>saa owner</i> <i>named-item</i> <i>test</i> <i>named-item</i> <i>type</i> <i>lsp-ping send-count</i> <i>number</i>
Tree	<i>send-count</i>
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

size number

Synopsis	Packet pad size
Context	configure saa owner named-item test named-item type lsp-ping size number
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	configure saa owner named-item test named-item type lsp-ping source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

sub-type

Synopsis	Enter the sub-type context
Context	configure saa owner named-item test named-item type lsp-ping sub-type
Tree	sub-type
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-label

Synopsis	Enable the bgp-label context
Context	configure saa owner named-item test named-item type lsp-ping sub-type bgp-label
Tree	bgp-label
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2

Platforms 7705 SAR-1

path-destination

Synopsis Enter the **path-destination** context

Context **configure** *saa owner* *named-item* **test** *named-item* *type* *lsp-ping* *sub-type* *bgp-label* **path-destination**

Tree **path-destination**

Introduced 25.3.R2

Platforms 7705 SAR-1

interface *interface-name*

Synopsis Egress router interface used with the path destination

Context **configure** *saa owner* *named-item* **test** *named-item* *type* *lsp-ping* *sub-type* *bgp-label* **path-destination** **interface** *interface-name*

Tree **interface**

String length 1 to 32

Notes The following elements are part of a choice: **interface** or **next-hop**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the path destination

Context **configure** *saa owner* *named-item* **test** *named-item* *type* *lsp-ping* *sub-type* *bgp-label* **path-destination** **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **ip-address**

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination

Context **configure** *saa owner* *named-item* **test** *named-item* *type* *lsp-ping* *sub-type* *bgp-label* **path-destination** **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure saa owner named-item test named-item type lsp-ping sub-type bgp-label prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp

Synopsis	Enable the ldp context
Context	configure saa owner named-item test named-item type lsp-ping sub-type ldp
Tree	ldp
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner named-item test named-item type lsp-ping sub-type ldp path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping sub-type</i> <i>ldp path-destination</i> interface <i>interface-name</i>
Tree	<i>interface</i>
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping sub-type</i> <i>ldp path-destination</i> ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>ip-address</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping sub-type</i> <i>ldp path-destination</i> next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>next-hop</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping sub-type</i> <i>ldp prefix</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	<i>prefix</i>

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp-te

Synopsis	Enable the rsvp-te context
Context	configure saa owner named-item test named-item type lsp-ping sub-type rsvp-te
Tree	rsvp-te
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-name *named-item-64*

Synopsis	Name of the LSP to be tested
Context	configure saa owner named-item test named-item type lsp-ping sub-type rsvp-te lsp-name named-item-64
Tree	lsp-name
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

path *named-item-64*

Synopsis	Name of the MPLS path to be tested
Context	configure saa owner named-item test named-item type lsp-ping sub-type rsvp-te path named-item-64
Tree	path
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis

Synopsis	Enable the sr-isis context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis
Tree	sr-isis
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-instance *number*

Synopsis	IGP instance for the SR IS-IS test
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis igp-instance <i>number</i>
Tree	igp-instance
Range	0 to 127
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination interface <i>interface-name</i>
Tree	interface

String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf

Synopsis	Enable the sr-ospf context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-ospf</i>
Tree	<i>sr-ospf</i>
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-instance *number*

Synopsis	IGP instance for the SR OSPF test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-ospf igp-instance</i> <i>number</i>
Tree	<i>igp-instance</i>
Range	0 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-ospf path-destination</i>
Tree	<i>path-destination</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-ospf path-destination interface</i> <i>interface-name</i>
Tree	<i>interface</i>

String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy

Synopsis	Enable the sr-policy context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy</i>
Tree	<i>sr-policy</i>
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

color number

Synopsis	Segment Routing color for the test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy color number</i>
Tree	<i>color</i>
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy endpoint</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>endpoint</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy path-destination</i>

Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-policy path-destination interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-policy path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-policy path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

segment-list *number*

Synopsis	Segment Routing segment list for the test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>sr-policy</i> <i>segment-list</i> <i>number</i>
Tree	<i>segment-list</i>
Range	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te

Synopsis	Enable the sr-te context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>sr-te</i>
Tree	<i>sr-te</i>
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-name *named-item-64*

Synopsis	Name of the LSP to be tested
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>sr-te</i> <i>lsp-name</i> <i>named-item-64</i>
Tree	<i>lsp-name</i>
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

path *named-item-64*

Synopsis	Name of the MPLS path to be tested
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>sr-te</i> <i>path</i> <i>named-item-64</i>

Tree	path
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-te path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-te path-destination interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-te path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-te path-destination next-hop</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>next-hop</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time router waits for a reply to an echo request
Context	configure <i>saa owner named-item test named-item type lsp-ping timeout number</i>
Tree	<i>timeout</i>
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>

Description	When configured to true , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the probe-fail command is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation test-complete boolean</i>
Tree	<i>test-complete</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation test-fail boolean</i>

Tree	test-fail
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping trap-generation test-fail-threshold <i>number</i>
Tree	test-fail-threshold
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when test-fail is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl *number*

Synopsis	TTL value for the echo request MPLS label
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-ping

Synopsis	Enable the sdp-ping context
----------	------------------------------------

Context	configure <i>saa owner named-item test named-item type sdp-ping</i>
Tree	<i>sdp-ping</i>
Description	Commands in this context configure tests on SDPs for unidirectional or round-trip connectivity, as well as for performing SDP MTU path tests.
Notes	The following elements are part of a choice: dns , eth-cfm-loopback , icmp-ping , lsp-ping , sdp-ping , or vccv-ping .
Introduced	25.3.R2
Platforms	7705 SAR-1

count *number*

Synopsis	Number of SDP echo request packets to send
Context	configure <i>saa owner named-item test named-item type sdp-ping count number</i>
Tree	<i>count</i>
Description	This command specifies the number of echo request packets to send. Each request must either time out or receive a reply before the next message request is sent. The interval value must expire before the next message request is sent.
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Interval between SDP echo request packets sent
Context	configure <i>saa owner named-item test named-item type sdp-ping interval number</i>
Tree	<i>interval</i>
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

originating-sdp-identifier *number*

Synopsis	SDP ID used to send packets
Context	configure <i>saa owner named-item test named-item type sdp-ping originating-sdp-identifier number</i>
Tree	<i>originating-sdp-identifier</i>
Description	<p>This command specifies the SDP ID that is used by SDP ping.</p> <p>The far-end address of the specified SDP ID is the expected responder ID within each reply received. The SDP ID defines the SDP tunnel encapsulation used to reach the far end. This can be IP/GRE or MPLS. If this ID is invalid, administratively down, or otherwise unavailable, the SDP echo request message is not sent, and an error message is displayed. After the interval timer expires, the SDP ping attempts to send the next request, if required.</p>
Range	1 to 32767
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure <i>saa owner named-item test named-item type sdp-ping qos</i>
Tree	<i>qos</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

fc *keyword*

Synopsis	FC for the transmitted SDP echo request packets
Context	configure <i>saa owner named-item test named-item type sdp-ping qos fc keyword</i>
Tree	<i>fc</i>
Options	<p>be – Best effort</p> <p>l2 – Low 2 (best effort)</p> <p>af – Assured forwarding (assured)</p> <p>l1 – Low 1 (assured)</p> <p>h2 – High 2 (high priority)</p> <p>ef – Expedited forwarding (high priority)</p> <p>h1 – High 1 (high priority)</p> <p>nc – Network control (high priority)</p>

Default	be
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *keyword*

Synopsis	QoS profile for transmitted SDP echo request packets
Context	configure <i>saa owner named-item test named-item type sdp-ping qos profile keyword</i>
Tree	<i>profile</i>
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR-1

responder-sdp-identifier *number*

Synopsis	SDP ID used by the far-end to reply to the request
Context	configure <i>saa owner named-item test named-item type sdp-ping responder-sdp-identifier number</i>
Tree	<i>responder-sdp-identifier</i>
Description	<p>This command configures the return SDP ID to be used by the far-end router for the message reply for round-trip SDP connectivity testing.</p> <p>If this ID does not exist on the far-end router, or terminates on a different router from the originating router, or another issue prevents the far-end router from using this ID, the SDP echo reply is sent using generic IP or GRE OAM encapsulation. The received FC (as mapped on the ingress network interface for the far end) defines the FC encapsulation for the reply message.</p>
Range	1 to 32767
Introduced	25.3.R2
Platforms	7705 SAR-1

size *number*

Synopsis	Size of the SDP echo request packets
Context	configure <i>saa owner named-item test named-item type sdp-ping size number</i>
Tree	<i>size</i>

Description	This command configures the size of the SDP echo request packets, which includes the SDP header and payload. The size does not include the SDP encapsulation, VC label (if applied), or any DLC headers or trailers.
Range	72 to 9786
Units	bytes
Default	72
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Maximum time to wait for SDP echo reply packets
Context	configure <i>saa owner named-item test named-item type sdp-ping timeout number</i>
Tree	<i>timeout</i>
Description	This command configures the time the router waits for a message reply after sending the last probe for a specific test. When the timeout expires, the test is marked complete and no more packets are processed.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation probe-fail boolean</i>

Tree	probe-fail
Description	When configured to true , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type sdp-ping trap-generation probe-fail-threshold <i>number</i>
Tree	probe-fail-threshold
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the probe-fail command is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type sdp-ping trap-generation test-complete <i>boolean</i>
Tree	test-complete
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
----------	--

Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation test-fail</i> <i>boolean</i>
Tree	<i>test-fail</i>
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation test-fail-threshold</i> <i>number</i>
Tree	<i>test-fail-threshold</i>
Description	<p>This command configures the number of consecutive test failures required to generate a trap.</p> <p>This command has no effect when test-fail is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

4.26.1 service command descriptions

service

Synopsis	Enter the service context
Context	configure service
Tree	service
Introduced	25.3.R2
Platforms	7705 SAR-1

customer [[customer-name](#)] *customer-name*

Synopsis	Enter the customer list instance
Context	configure service customer <i>customer-name</i>
Tree	customer
Introduced	25.3.R2
Platforms	7705 SAR-1

[**customer-name**] *customer-name*

Synopsis	Customer name for a service
Context	configure service customer <i>customer-name</i>
Tree	customer
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

contact *description*

Synopsis	Service customer contact information
Context	configure service customer <i>customer-name</i> contact <i>description</i>
Tree	contact
String length	1 to 80
Introduced	25.3.R2

Platforms 7705 SAR-1

customer-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Customer ID
Context	configure service customer <i>customer-name</i> customer-id <i>number</i>
Tree	customer-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service customer <i>customer-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

multi-service-site [[multi-service-site-name](#)] *named-item*

Synopsis	Enter the multi-service-site list instance
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i>
Tree	multi-service-site
Introduced	25.3.R2
Platforms	7705 SAR-1

[multi-service-site-name] *named-item*

Synopsis	Customer site name
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i>

Tree	multi-service-site
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

assignment

Synopsis	Enter the assignment context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> assignment
Tree	assignment
Introduced	25.3.R2
Platforms	7705 SAR-1

card *number*

Synopsis	Multi-service-site assignment to the card slot
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> assignment card <i>number</i>
Tree	card
Range	1 to 20
Notes	The following elements are part of a choice: card , fpe , or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

port *port-named*

Synopsis	Multi-service-site assignment to the port
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> assignment port <i>port-named</i>
Tree	port
Notes	The following elements are part of a choice: card , fpe , or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

agg-rate

Synopsis	Enter the agg-rate context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress agg-rate
Tree	agg-rate
Introduced	25.3.R2
Platforms	7705 SAR-1

limit-unused-bandwidth *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress agg-rate limit-unused-bandwidth <i>boolean</i>
Tree	limit-unused-bandwidth
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-frame-based-accounting *boolean*

Synopsis	Enable frame based accounting for policers and queues
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress agg-rate queue-frame-based-accounting <i>boolean</i>
Tree	queue-frame-based-accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rate *number*

Synopsis	Rate limit
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress agg-rate rate <i>number</i>
Tree	rate
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

policer-control-policy *reference*

Synopsis	Policer control policy
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress policer-control-policy <i>reference</i>
Tree	policer-control-policy
Reference	configure qos policer-control-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy

Tree	scheduler-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enter the overrides context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides
Tree	overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p>

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i> parent
Tree	parent
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i> parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i> rate
Tree	rate
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR for the scheduler
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR for the scheduler
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy overrides scheduler <i>named-item</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Scheduler policy name
----------	-----------------------

Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> egress scheduler-policy <i>policy-name</i> <i>reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

policer-control-policy *reference*

Synopsis	Policer control policy
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress policer-control-policy <i>reference</i>
Tree	policer-control-policy
Reference	configure qos policer-control-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy
Tree	scheduler-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enter the overrides context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy overrides
Tree	overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy overrides scheduler <i>named-item</i> parent
Tree	parent
Introduced	25.3.R2

Platforms 7705 SAR-1

cir-weight *number*

Synopsis Weight used at the within-CIR port priority level

Context **configure** [service](#) [customer](#) *customer-name* [multi-service-site](#) *named-item* [ingress](#) [scheduler-policy overrides scheduler](#) *named-item* [parent](#) **cir-weight** *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 25.3.R2

Platforms 7705 SAR-1

weight *number*

Synopsis Relative weight of the scheduler to feed the queue

Context **configure** [service](#) [customer](#) *customer-name* [multi-service-site](#) *named-item* [ingress](#) [scheduler-policy overrides scheduler](#) *named-item* [parent](#) **weight** *number*

Tree [weight](#)

Range 0 to 100

Introduced 25.3.R2

Platforms 7705 SAR-1

rate

Synopsis Enter the **rate** context

Context **configure** [service](#) [customer](#) *customer-name* [multi-service-site](#) *named-item* [ingress](#) [scheduler-policy overrides scheduler](#) *named-item* **rate**

Tree [rate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

cir (*number* | *keyword*)

Synopsis CIR for the scheduler

Context **configure** [service](#) [customer](#) *customer-name* [multi-service-site](#) *named-item* [ingress](#) [scheduler-policy overrides scheduler](#) *named-item* [rate](#) **cir** (*number* | *keyword*)

Tree [cir](#)

Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR for the scheduler
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy overrides scheduler <i>named-item</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Scheduler policy name
Context	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i> ingress scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

phone *description*

Synopsis	Service customer telephone number information
Context	configure service customer <i>customer-name</i> phone <i>description</i>
Tree	phone
String length	1 to 80
Introduced	25.3.R2

Platforms 7705 SAR-1

epipe [[service-name](#)] *service-name*

Synopsis Enter the **epipe** list instance

Context **configure** [service](#) [epipe](#) *service-name*

Tree [epipe](#)

Description Commands in this context configure an Epipe service instance.

Introduced 25.3.R2

Platforms 7705 SAR-1

[service-name] *service-name*

Synopsis Administrative service name

Context **configure** [service](#) [epipe](#) *service-name*

Tree [epipe](#)

String length 1 to 64

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the service

Context **configure** [service](#) [epipe](#) *service-name* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

bgp [[bgp-instance](#)] *number*

Synopsis Enter the **bgp** list instance

Context **configure** [service](#) [epipe](#) *service-name* [bgp](#) *number*

Tree	bgp
Description	Commands in this context configure the BGP related options that BGP uses for multihoming and BGP VPWS.
Introduced	25.3.R2
Platforms	7705 SAR-1

[bgp-instance] *number*

Synopsis	BGP instance
Context	configure service epipe <i>service-name</i> bgp <i>number</i>
Tree	bgp
Range	1 to 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-service-mtu *number*

Synopsis	Advertised service MTU value
Context	configure service epipe <i>service-name</i> bgp <i>number</i> adv-service-mtu <i>number</i>
Tree	adv-service-mtu
Description	This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR-1

pw-template-binding [[pw-template-name](#)] *reference*

Synopsis	Enter the pw-template-binding list instance
Context	configure service epipe <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i>
Tree	pw-template-binding
Max. instances	100

Introduced 25.3.R2
Platforms 7705 SAR-1

[pw-template-name] *reference*

Synopsis Policy name
Context **configure** [service epipe](#) *service-name* [bgp](#) *number* [pw-template-binding](#) *reference*
Tree [pw-template-binding](#)
Reference **configure** [service pw-template](#) *pw-template-name*
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

endpoint *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Endpoint name associated with the BGP PW template
Context **configure** [service epipe](#) *service-name* [bgp](#) *number* [pw-template-binding](#) *reference* [endpoint](#) *reference*
Tree [endpoint](#)
Description This command specifies the endpoint name associated with the BGP PW template. When an endpoint is associated to the PW template binding of a BGP VPWS service, EVPN MPLS can also be configured and associated to the same endpoint in the same Epipe service.
Reference **configure** [service epipe](#) *service-name* [endpoint](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

import-rt *route-target*

Synopsis Import route-target communities
Context **configure** [service epipe](#) *service-name* [bgp](#) *number* [pw-template-binding](#) *reference* [import-rt](#) *route-target*
Tree [import-rt](#)

String length	10 to 28
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

Synopsis	RD component for NLRI for L2VPN and EVPN families
Context	configure <i>service epipe</i> <i>service-name bgp</i> <i>number route-distinguisher</i> (<i>keyword</i> <i>vpn-route-distinguisher</i>)
Tree	<i>route-distinguisher</i>
Options	auto-rd
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target

Synopsis	Enter the route-target context
Context	configure <i>service epipe</i> <i>service-name bgp</i> <i>number route-target</i>
Tree	<i>route-target</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

export *route-target*

Synopsis	Extended community name for default import policy
Context	configure <i>service epipe</i> <i>service-name bgp</i> <i>number route-target export route-target</i>
Tree	<i>export</i>
String length	10 to 28
Introduced	25.3.R2
Platforms	7705 SAR-1

import *route-target*

Synopsis	Extended community name for default import policy
----------	---

Context	configure service epipe <i>service-name</i> bgp <i>number</i> route-target import route-target
Tree	import
String length	10 to 28
Introduced	25.3.R2
Platforms	7705 SAR-1

vsi-export *reference*

Synopsis	VSI export policies
Context	configure service epipe <i>service-name</i> bgp <i>number</i> vsi-export <i>reference</i>
Tree	vsi-export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

vsi-import *reference*

Synopsis	VSI import policies
Context	configure service epipe <i>service-name</i> bgp <i>number</i> vsi-import <i>reference</i>
Tree	vsi-import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-evpn

Synopsis	Enable the bgp-evpn context
Context	configure service epipe <i>service-name</i> bgp-evpn
Tree	bgp-evpn

Description	Commands in this context configure the BGP-EVPN options.
Introduced	25.3.R2
Platforms	7705 SAR-1

evi number

Synopsis	EVPN ID
Context	configure service epipe <i>service-name</i> bgp-evpn evi <i>number</i>
Tree	evi
Description	<p>This command configures an EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.</p> <p>The following options are supported:</p> <p>If this EVPN identifier is not specified, the value is zero and no route distinguisher or route target is automatically derived from it. If the specified EVPN identifier is lower than 65535 and no other route distinguisher or route target is configured in the service, the following applies:</p> <ul style="list-style-type: none"> the route distinguisher is derived from <system_ip>:evi the route target is derived from <autonomous-system>:evi <p>If the specified EVPN identifier is higher than 65535 and no other route distinguisher or route target is configured in the service, the following applies.</p> <ul style="list-style-type: none"> The route distinguisher cannot be automatically derived. An error is generated if enabling EVPN is attempted without a route distinguisher. A manual or an auto-rd route distinguisher must be configured. The route target can only be automatically derived if the evi-three-byte-auto-rt command is configured. If configured, the route target is automatically derived in accordance with the rules described in RFC8365.
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

local-attachment-circuit [name] named-item

Synopsis	Enter the local-attachment-circuit list instance
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i>
Tree	local-attachment-circuit
Max. instances	2

Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *named-item*

Synopsis Attachment circuit name
Context **configure** *service* *epipe* *service-name* *bgp-evpn* *local-attachment-circuit* *named-item*
Tree *local-attachment-circuit*
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

bgp *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis BGP instance ID
Context **configure** *service* *epipe* *service-name* *bgp-evpn* *local-attachment-circuit* *named-item* *bgp* *number*
Tree *bgp*
Range 1 to 2
Default 1
Introduced 25.3.R2
Platforms 7705 SAR-1

endpoint *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Endpoint name
Context **configure** *service* *epipe* *service-name* *bgp-evpn* *local-attachment-circuit* *named-item* *endpoint* *reference*

Tree	endpoint
Reference	configure service epipe <i>service-name</i> endpoint <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-tag *number*

Synopsis	Ethernet tag of the attachment circuit
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i> eth-tag <i>number</i>
Tree	eth-tag
Description	<p>This command configures the Ethernet tag value of the attachment circuit.</p> <p>When configured in the local attachment circuit context, the tag value is used in the advertised AD per-EVI route sent for the attachment circuit.</p> <p>When configured in the remote attachment circuit context, the value is compared with the Ethernet tag value of the imported D per-EVI routes for the service. When there is a match, the system creates an EVPN destination for the Epipe.</p>
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls [[bgp-instance](#)] *number*

Synopsis	Enter the mpls list instance
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Description	Commands in this context configure the BGP-EVPN MPLS options.
Introduced	25.3.R2
Platforms	7705 SAR-1

[bgp-instance] *number*

Synopsis	BGP instance
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Range	1 to 2

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure automatic binding of a VPRN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

ecmp *number*

Synopsis	Maximum ECMP routes information
Context	configure service epipe service-name bgp-evpn mpls number auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-strict-tunnel-tagging *boolean*

Synopsis	Enable/disable enforcement of strict tunnel tagging
Context	configure service epipe service-name bgp-evpn mpls number auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i>
Tree	enforce-strict-tunnel-tagging
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure service epipe service-name bgp-evpn mpls number auto-bind-tunnel enforce-untagged-route <i>keyword</i>
Tree	enforce-untagged-route
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p>

The **untagged-tunnel** option can be used in combination with the **enforce-strict-tunnel-tagging** command configured to **true**, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.

When unconfigured, untagged routes can bind to tagged or untagged LSPs.

Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution keyword

Synopsis	Resolution method for tunnel selection
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure <i>service epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter ldp boolean</i>
Tree	<i>ldp</i>
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure <i>service epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter rsvp boolean</i>
Tree	<i>rsvp</i>
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
----------	--

Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP-EVPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and • a color value that matches the highest numbered color for the extended community attached to the service route
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te boolean

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure <i>service epipe</i> <i>service-name bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-te boolean</i>
Tree	<i>sr-te</i>
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp boolean

Synopsis	Allow weighted load balancing
Context	configure <i>service epipe</i> <i>service-name bgp-evpn mpls number</i> <i>auto-bind-tunnel weighted-ecmp boolean</i>
Tree	<i>weighted-ecmp</i>
Description	<p>When configured to true, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.</p> <p>When configured to false, this command disables weighted ECMP for next-hop tunnel selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

control-word boolean**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable support for control word
Context	configure <i>service epipe</i> <i>service-name bgp-evpn mpls number</i> <i>control-word boolean</i>

Tree	control-word
Description	When configured to true , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-route-tag *one-byte-value*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> default-route-tag <i>one-byte-value</i>
Tree	default-route-tag
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

domain-id *domain-id*

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> domain-id <i>domain-id</i>
Tree	domain-id
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p>

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

The command is also supported in Epipe services with two instances. As in the case of multi-instance VPRN services, the configured domain ID in an Epipe instance is prepended to the AD per EVI route redistributed to the other instance.

Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> dynamic-egress-label-limit <i>boolean</i>
Tree	dynamic-egress-label-limit
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label *boolean*

Synopsis	Enable use of entropy-labels
----------	------------------------------

Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> entropy-label <i>boolean</i>
Tree	entropy-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evi-three-byte-auto-rt *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> evi-three-byte-auto-rt <i>boolean</i>
Tree	evi-three-byte-auto-rt
Description	<p>When configured to true, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). Where:</p> <ul style="list-style-type: none"> • Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken • A=0 (for auto-derivation) • Type=4 (EVI-based route-target) • D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance • Service ID=3-octet EVI <p>When configured to false, route target derivation is not allowed.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

force-vc-forwarding *keyword*

Synopsis	VC forwarding action
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding

Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

mh-mode *keyword*

Synopsis	Multihoming mode
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> mh-mode <i>keyword</i>
Tree	mh-mode
Description	This command configures each BGP-EVPN instance in a multi-instance Epipe service to behave as network or access. You can only configure one network instance for the service. If the service has a provider tunnel enabled, it requires a network instance.
Options	access, network
Default	network
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

route-next-hop

Synopsis	Enter the route-next-hop context
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> route-next-hop
Tree	route-next-hop
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route

Synopsis	Ignore the L2 VPN MTU mismatch with local service MTU
Context	configure service epipe <i>service-name</i> ignore-l2vpn-mtu-mismatch <i>boolean</i>
Tree	ignore-l2vpn-mtu-mismatch
Description	<p>When configured to true, the router does not check the value of the Layer 2 MTU in the Layer2 Info Extended Community received in a BGP update message against the local service MTU or locally signaled MTU. It may, therefore, bring up the BGP VPWS service regardless of any MTU mismatch.</p> <p>When configured to false, an MTU mismatch prevents the system from bringing up a BGP-VPWS service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing

Synopsis	Enter the load-balancing context
Context	configure service epipe <i>service-name</i> load-balancing
Tree	load-balancing
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Oper-group name
Context	configure service epipe <i>service-name</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [[sap-id](#)] *sap*

Synopsis	Enter the sap list instance
Context	configure service epipe <i>service-name</i> sap <i>sap</i>

Tree	sap
Max. instances	255
Introduced	25.3.R2
Platforms	7705 SAR-1

[sap-id] sap

Synopsis	SAP ID
Context	configure service epipe <i>service-name</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service epipe <i>service-name</i> sap <i>sap</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service epipe <i>service-name</i> sap <i>sap</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bandwidth *number*

Synopsis	SAP bandwidth
Context	configure service epipe <i>service-name</i> sap <i>sap</i> bandwidth <i>number</i>
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service epipe <i>service-name</i> sap <i>sap</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *long-description*

Synopsis	Text description
Context	configure service epipe <i>service-name</i> sap <i>sap</i> description <i>long-description</i>
Tree	description
String length	1 to 160
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	configure service epipe <i>service-name</i> sap <i>sap</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection <i>policy</i> <i>named-item</i>
Introduced	25.3.R2

Platforms 7705 SAR-1

egress

Synopsis Enter the **egress** context

Context **configure** *service epipe* *service-name sap sap* **egress**

Tree *egress*

Introduced 25.3.R2

Platforms 7705 SAR-1

agg-rate

Synopsis Enter the **agg-rate** context

Context **configure** *service epipe* *service-name sap sap* **egress** **agg-rate**

Tree *agg-rate*

Notes The following elements are part of a choice: **agg-rate** or **percent-agg-rate**.

Introduced 25.3.R2

Platforms 7705 SAR-1

queue-frame-based-accounting *boolean*

Synopsis Enable frame based accounting on policers and queues

Context **configure** *service epipe* *service-name sap sap* **egress** **agg-rate** **queue-frame-based-accounting** *boolean*

Tree *queue-frame-based-accounting*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

rate *number*

Synopsis Enforced aggregate rate for all queues

Context **configure** *service epipe* *service-name sap sap* **egress** **agg-rate** **rate** *number*

Tree *rate*

Range 1 to 6400000000

Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos
Tree	qos

Introduced	25.3.R2
Platforms	7705 SAR-1

policer-control-policy

Synopsis	Enter the policer-control-policy context
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy
Tree	policer-control-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enable the overrides context
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy overrides
Tree	overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

root

Synopsis	Enter the root context
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy overrides root
Tree	root
Introduced	25.3.R2
Platforms	7705 SAR-1

max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>)
Tree	max-rate
Range	1 to 6400000000

Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-mbs-thresholds

Synopsis	Enter the priority-mbs-thresholds context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos policer-control-policy overrides root priority-mbs-thresholds
Tree	priority-mbs-thresholds
Introduced	25.3.R2
Platforms	7705 SAR-1

min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>)
Tree	min-thresh-separation
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

priority [[priority-level](#)] *number*

Synopsis	Enter the priority list instance
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

[priority-level] *number*

Synopsis	Priority level
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs-contribution (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>)
Tree	mbs-contribution
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Policer control policy name
Context	configure service epipe <i>service-name</i> sap sap egress qos policer-control-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos policer-control-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

qinq-mark-top-only *boolean*

Synopsis	Mark top Q-tags
Context	configure service epipe <i>service-name</i> sap sap egress qos qinq-mark-top-only <i>boolean</i>
Tree	qinq-mark-top-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress
Tree	sap-egress
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enter the overrides context
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides
Tree	overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

policer [[policer-id](#)] *reference*

Synopsis	Enter the policer list instance
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer <i>reference</i>
Tree	policer
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-id] reference

Synopsis	Policer unique ID
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer reference
Tree	policer
Reference	configure qos sap-egress <i>qos-policy-name</i> policer <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (number | keyword)

Synopsis	CBS
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer reference cbs (<i>number keyword</i>)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (number | keyword)

Synopsis	MBS
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer reference mbs (<i>number keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure service epipe service-name sap sap egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service epipe service-name sap sap egress qos sap-egress overrides policer reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service epipe service-name sap sap egress qos sap-egress overrides policer reference percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service epipe service-name sap sap egress qos sap-egress overrides policer reference percent-rate pir <i>decimal-number</i>
Tree	pir

Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer <i>reference</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer <i>reference</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides policer <i>reference</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2

Platforms 7705 SAR-1

stat-mode *keyword*

Synopsis Mode of statistics collected by the policer

Context **configure** [service epipe](#) *service-name* [sap sap egress qos sap-egress overrides policer reference](#) [stat-mode](#) *keyword*

Tree [stat-mode](#)

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile

Introduced 25.3.R2

Platforms 7705 SAR-1

queue [[queue-id](#)] *reference*

Synopsis Enter the **queue** list instance

Context **configure** [service epipe](#) *service-name* [sap sap egress qos sap-egress overrides queue reference](#)

Tree [queue](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[queue-id] *reference*

Synopsis Policer unique ID

Context **configure** [service epipe](#) *service-name* [sap sap egress qos sap-egress overrides queue reference](#)

Tree [queue](#)

Reference **configure** [qos sap-egress](#) *qos-policy-name* [queue](#) *number*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

adaptation-rule

Synopsis Enter the **adaptation-rule** context

Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> adaptation-rule
Tree	adaptation-rule
Introduced	25.3.R2
Platforms	7705 SAR-1

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> avg-frame-overhead decimal-number
Tree	avg-frame-overhead
Description	<p>This command configures overrides for the average frame overhead. The overrides supersede the average frame overhead configuration under the queue.</p> <p>For a full description of this command, see the configure qos network-queue queue avg-frame-overhead and configure qos sap-egress queue avg-frame-overhead contexts.</p>

Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

burst-limit (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference drop-tail
Tree	drop-tail
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue reference drop-tail low
Tree	low
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
----------	---------------------------------

Context	configure service epipe <i>service-name</i> sap sap egress qos sap-egress overrides queue reference parent

scheduler [*scheduler-name*] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure <i>service epipe</i> <i>service-name sap sap egress qos scheduler-policy overrides scheduler</i> <i>named-item</i>
Tree	<i>scheduler</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure <i>service epipe</i> <i>service-name sap sap egress qos scheduler-policy overrides scheduler</i> <i>named-item</i>
Tree	<i>scheduler</i>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure <i>service epipe</i> <i>service-name sap sap egress qos scheduler-policy overrides scheduler</i> <i>named-item parent</i>
Tree	<i>parent</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

cir-weight *number*

Synopsis Weight used at the within-CIR port priority level
Context **configure** **service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *named-item* **parent cir-weight** *number*
Tree **cir-weight**
Range 0 to 100
Introduced 25.3.R2
Platforms 7705 SAR-1

weight *number*

Synopsis Relative weight of the scheduler to feed the queue
Context **configure** **service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *named-item* **parent weight** *number*
Tree **weight**
Range 0 to 100
Introduced 25.3.R2

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ais

Synopsis	Enable the ais context
----------	-------------------------------

Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais
Tree	ais
Introduced	25.3.R2
Platforms	7705 SAR-1

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level number
Tree	client-meg-level
Range	1 to 7
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support boolean
Tree	interface-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Transmission interval for AIS messages
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number
Tree	interval
Range	1 60
Units	seconds
Default	1

Introduced 25.3.R2
 Platforms 7705 SAR-1

low-priority-defect *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** *service* *epipe* *service-name* *sap* *sap* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* *ais* **low-priority-defect** *keyword*

Tree [low-priority-defect](#)

Options all-def, mac-rem-err-xcon

Default all-def

Introduced 25.3.R2

Platforms 7705 SAR-1

priority *number*

Synopsis Priority of the AIS messages generated by the node

Context **configure** *service* *epipe* *service-name* *sap* *sap* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* *ais* **priority** *number*

Tree [priority](#)

Range 0 to 7

Default 7

Introduced 25.3.R2

Platforms 7705 SAR-1

alarm-notification

Synopsis Enter the **alarm-notification** context

Context **configure** *service* *epipe* *service-name* *sap* *sap* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* **alarm-notification**

Tree [alarm-notification](#)

Description Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.

Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.

Introduced 25.3.R2

Platforms 7705 SAR-1

fng-alarm-time *number*

Synopsis Time that must expire before an FNG alarm is raised

Context **configure** [service epipe](#) [service-name sap](#) [sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number](#)

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 25.3.R2

Platforms 7705 SAR-1

fng-reset-time *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** [service epipe](#) [service-name sap](#) [sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number](#)

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 25.3.R2

Platforms 7705 SAR-1

ccm *boolean*

Synopsis Generate CCM messages

Context **configure** [service epipe](#) [service-name sap](#) [sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean](#)

Tree [ccm](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-test

Synopsis	Enable the eth-test context
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR-1

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
----------	--

Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR-1

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern

Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR-1

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm
Introduced	25.3.R2
Platforms	7705 SAR-1

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP.

When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.

Introduced 25.3.R2
Platforms 7705 SAR-1

ignore-oper-down *boolean*

Synopsis Ignore operational down state of the SAP on SAP failure

Context **configure** *service epipe service-name sap sap* **ignore-oper-down** *boolean*

Tree [ignore-oper-down](#)

Description When configured to **true**, the Epipe service does not transition to the operational down state when the SAP fails. This command can only be set to **true** for a single SAP in an Epipe. The command can be used in Epipes with or without EVPN enabled.

When configured to **false**, the Epipe service transitions to the operational down state when SAP fails.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

ingress

Synopsis Enter the **ingress** context

Context **configure** *service epipe service-name sap sap* **ingress**

Tree [ingress](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

filter

Synopsis Enter the **filter** context

Context **configure** *service epipe service-name sap sap* **ingress** **filter**

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service epipe <i>service-name</i> sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure service epipe <i>service-name</i> sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i> parent

Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

service-mtu *number*

Synopsis	MTU size
Context	configure service epipe <i>service-name</i> service-mtu <i>number</i>
Tree	service-mtu
Description	<p>This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.</p> <p>The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.</p> <p>When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative</p>

state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	25.3.R2
Platforms	7705 SAR-1

spoke-sdp *[sdp-bind-id] sdp-bind-id*

Platforms	7705 SAR-1

hash-label

Synopsis	Enable the hash-label context
----------	--------------------------------------

Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash label" section of the <i>7705 SAR Gen 2 MPLS Guide</i> .
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes. The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter
Tree	filter
Introduced	25.3.R2

Platforms 7705 SAR-1

ip reference

Synopsis IPv4 filter policy name

Context **configure** *service epipe* *service-name spoke-sdp* *sdp-bind-id ingress* **filter ip** *reference*

Tree *ip*

Reference **configure** *filter ip-filter* *filter-name*

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 reference

Synopsis IPv6 filter policy name

Context **configure** *service epipe* *service-name spoke-sdp* *sdp-bind-id ingress* **filter ipv6** *reference*

Tree *ipv6*

Reference **configure** *filter ipv6-filter* *filter-name*

Introduced 25.3.R2

Platforms 7705 SAR-1

qos

Synopsis Enter the **qos** context

Context **configure** *service epipe* *service-name spoke-sdp* *sdp-bind-id ingress* **qos**

Tree *qos*

Introduced 25.3.R2

Platforms 7705 SAR-1

network

Synopsis Enter the **network** context

Context **configure** *service epipe* *service-name spoke-sdp* *sdp-bind-id ingress* **qos network**

Tree *network*

Introduced 25.3.R2

Platforms 7705 SAR-1

fp-redirect-group

Synopsis Enter the **fp-redirect-group** context

Context **configure** [service epipe](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network fp-redirect-group](#)

Tree [fp-redirect-group](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

group-name *reference*

Synopsis Name of the forwarding plane queue group template

Context **configure** [service epipe](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network fp-redirect-group group-name](#) *reference*

Tree [group-name](#)

Reference **configure** [qos queue-group-templates](#) [ingress queue-group](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-1

instance *number*

Synopsis Instance of FP ingress queue group for the SDP binding

Context **configure** [service epipe](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network fp-redirect-group instance](#) *number*

Tree [instance](#)

Range 1 to 65535

Introduced 25.3.R2

Platforms 7705 SAR-1

policy-name *reference*

Synopsis Network policy ID

Context **configure** [service epipe](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network policy-name](#) *reference*

Tree	policy-name
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress vc-label <i>number</i>
Tree	vc-label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

Synopsis	Operational group that affects state of the SDP bind
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .

Introduced	25.3.R2
Platforms	7705 SAR-1

pw-status

Synopsis	Enter the pw-status context
Context	configure service epipe service-name spoke-sdp sdp-bind-id pw-status
Tree	pw-status
Introduced	25.3.R2
Platforms	7705 SAR-1

block-on-peer-fault *boolean*

Synopsis	Block transmit direction of PW based on status code
Context	configure service epipe service-name spoke-sdp sdp-bind-id pw-status block-on-peer-fault <i>boolean</i>
Tree	block-on-peer-fault
Default	false
Notes	The following elements are part of a choice: block-on-peer-fault or standby-signaling-slave .
Introduced	25.3.R2
Platforms	7705 SAR-1

signaling *boolean*

Synopsis	Allow SDP binding to support pseudowire status signaling
Context	configure service epipe service-name spoke-sdp sdp-bind-id pw-status signaling <i>boolean</i>
Tree	signaling
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-signaling-slave *boolean*

Synopsis	Block spoke transmission based on PW standby status
----------	---

Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> pw-status standby-signaling-slave <i>boolean</i>
Tree	standby-signaling-slave
Default	false
Notes	The following elements are part of a choice: block-on-peer-fault or standby-signaling-slave .
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-type *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Virtual circuit type associated with the SDP binding
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> vc-type <i>keyword</i>
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	25.3.R2
Platforms	7705 SAR-1

test *boolean*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate as a test service
Context	configure service epipe <i>service-name</i> test <i>boolean</i>
Tree	test
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-switching *boolean*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	configure service epipe <i>service-name</i> vc-switching <i>boolean</i>
Tree	vc-switching
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-id *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	configure service epipe <i>service-name</i> vpn-id <i>number</i>
Tree	vpn-id
Range	1 to 2147483647
Introduced	25.3.R2

Platforms 7705 SAR-1

ies *[service-name] service-name*

Synopsis Enter the **ies** list instance

Context **configure** *service ies service-name*

Tree *ies*

Introduced 25.3.R2

Platforms 7705 SAR-1

[service-name] *service-name*

Synopsis Administrative service name

Context **configure** *service ies service-name*

Tree *ies*

String length 1 to 64

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the service

Context **configure** *service ies service-name admin-state keyword*

Tree *admin-state*

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

customer *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	configure service ies <i>service-name</i> customer <i>reference</i>
Tree	customer
Reference	configure service customer <i>customer-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [**interface-name**] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i>
Tree	interface
Description	Commands in this context create a logical IP routing interface. When created, attributes such as an IP address and SAP ID can be associated with the IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the interface

Context **configure** *service ies service-name interface interface-name admin-state keyword*

Tree *admin-state*

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

autoconfigure

Synopsis Enter the **autoconfigure** context

Context **configure** *service ies service-name interface interface-name autoconfigure*

Tree *autoconfigure*

Description Commands in this context configure the autoconfigure functionality for the interface.

Introduced 25.7.R1

Platforms 7705 SAR-1

ipv4

Synopsis Enter the **ipv4** context

Context **configure** *service ies service-name interface interface-name autoconfigure ipv4*

Tree *ipv4*

Description Commands in this context configure IPv4 autoconfigure settings.

Introduced 25.7.R1

Platforms 7705 SAR-1

dhcp-client

Synopsis Enable the **dhcp-client** context

Context **configure** *service ies service-name interface interface-name autoconfigure ipv4 dhcp-client*

Tree	dhcp-client
Description	Commands in this context configure the node as an IPv4 DHCP client. When the node operates as a DHCP client, it learns the IP address of the interface via dynamic IP address assignment.
Introduced	25.7.R1
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCP client
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.7.R1
Platforms	7705 SAR-1

class-id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the class-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id
Tree	class-id
Description	Commands in this context configure the vendor class ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR-1

ascii-string *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as an ASCII string
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.7.R1
Platforms	7705 SAR-1

hex-string *hex-string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as a hexadecimal string
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.7.R1
Platforms	7705 SAR-1

client-id

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the client-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id
Tree	client-id
Description	Commands in this context configure the client ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR-1

ascii-string *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as an ASCII string
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

hex-string *hex-string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as a hexadecimal string
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

interface

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interface name as the client ID
----------	---------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client <i>client-id</i> interface
Tree	interface
Description	This command configures the node to use the interface name as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

mac

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address as the client ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client <i>client-id</i> mac
Tree	mac
Description	This command configures the node to use the MAC address as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

lease-time (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lease time the DHCP client requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client lease-time (<i>number</i> <i>keyword</i>)
Tree	lease-time
Description	This command configures the lease time that the DHCP client requests to the DHCP server. The DHCP server can override the configured value.
Range	10 to 315446399
Units	seconds

Options	infinite – Request an infinite lease with no expiry
Default	86400
Introduced	25.7.R1
Platforms	7705 SAR-1

request-options

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the request-options context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options
Tree	request-options
Description	Commands in this context configure the DHCP options to include in the parameter request list as part of the DHCPREQUEST message to the server.
Introduced	25.7.R1
Platforms	7705 SAR-1

dns-server *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the DNS server option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options dns-server <i>boolean</i>
Tree	dns-server
Description	When configured to true , the node includes the DNS server option (Option 54) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-1

router *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the router option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options router <i>boolean</i>
Tree	router
Description	When configured to true , the node includes the router option (Option 3) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-1

static-route *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the static route option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options static-route <i>boolean</i>
Tree	static-route
Description	When configured to true , the node includes the static route option (Option 121) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-1

description *very-long-description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> description <i>very-long-description</i>
Tree	description

String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	configure <i>service ies service-name interface interface-name dynamic-tunnel-redundant-nexthop ipv4-unicast-address</i>
Tree	<i>dynamic-tunnel-redundant-nexthop</i>
Description	<p>This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for dynamic IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work.</p> <p>The next-hop address is resolved in the routing table of a corresponding service.</p>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure <i>service ies service-name interface interface-name hold-time</i>
Tree	<i>hold-time</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure <i>service ies service-name interface interface-name hold-time ipv4</i>
Tree	<i>ipv4</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

down

Synopsis	Enter the down context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR-1

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

up

Synopsis	Enter the up context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

down

Synopsis	Enter the down context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down
Tree	down

Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR-1

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure <i>service ies service-name interface interface-name hold-time ipv6 down init-only boolean</i>
Tree	<i>init-only</i>
Description	When configured to true , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure <i>service ies service-name interface interface-name hold-time ipv6 down seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

up

Synopsis	Enter the up context
Context	configure <i>service ies service-name interface interface-name hold-time ipv6 up</i>
Tree	<i>up</i>

Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

if-attribute

Synopsis	Enter the if-attribute context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute
Tree	if-attribute
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-group *reference*

Synopsis	Administrative group name for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute admin-group <i>reference</i>
Tree	admin-group
Description	<p>This command specifies the administrative group membership to an interface.</p> <p>The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.</p>
Reference	configure routing-options if-attribute admin-group <i>named-item</i>

Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

srlg-group *[name] reference*

Synopsis	Add a list entry for srlg-group
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] reference

Synopsis	SRLG name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Reference	configure routing-options if-attribute srlg-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
----------	------------------------------------

Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ip-mtu</i> <i>number</i>
Tree	<i>ip-mtu</i>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-tunnel-interface *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable IP tunnel interface
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ip-tunnel-interface</i> <i>boolean</i>
Tree	<i>ip-tunnel-interface</i>
Description	When configured to true , the system enables a GRE virtual IP interface.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec

Synopsis	Enable the ipsec context
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i>
Tree	<i>ipsec</i>
Description	Commands in this context configure an IPsec secured interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>admin-state</i> <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-exception *reference*

Synopsis	IP exception filter
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ip-exception <i>reference</i>
Tree	ip-exception
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	configure filter ip-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-tunnel [[name](#)] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec tunnel name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-designate *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-designate <i>boolean</i>
Tree	bfd-designate

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness service-name <i>service-name</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-df-bit *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

encapsulated-ip-mtu *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-generation

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-1

frag-required

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure service ies service-name interface interface-name ipsec ipsec-tunnel named-item icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service ies service-name interface interface-name ipsec ipsec-tunnel named-item icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service ies service-name interface interface-name ipsec ipsec-tunnel named-item icmp-generation frag-required interval <i>number</i>

Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.

Introduced25.3.R2

Platforms7705 SAR-1

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis

Enter the **packet-too-big** context

Context

configure [service ies](#) *service-name* [interface](#) *interface-name* [ipsec ipsec-tunnel](#) *named-item icmp6-generation packet-too-big*

Tree

[packet-too-big](#)

Description

Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.

The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.

The private MTU for the tunnel is configured via the **configure router interface ipsec ipsec-tunnel ip-mtu** command for the interface.

Introduced

25.3.R2

Platforms

7705 SAR-1

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis

Administrative state of Packet Too Big message sends

Context

configure [service ies](#) *service-name* [interface](#) *interface-name* [ipsec ipsec-tunnel](#) *named-item icmp6-generation packet-too-big* [admin-state](#) *keyword*

Tree

[admin-state](#)

Options

enable, disable

Default

enable

Introduced

25.3.R2

Platforms

7705 SAR-1

interval *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big interval</i> <i>number</i>
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big message-count</i> <i>number</i>
Tree	message-count
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

key-exchange

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-exchange context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange
Tree	key-exchange
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the dynamic context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic

Tree	dynamic
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-establish *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish <i>boolean</i>
Tree	auto-establish
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cert

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cert context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
----------	--------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the status-verify context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

id

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none">• Psk: local tunnel IP address• Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *fully-qualified-domain-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ike-policy <i>reference</i>
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ppk context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

list *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK list instance name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>
Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

manual

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the manual context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual
Tree	manual
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-1

keys [**security-association**] *number* **direction** *keyword*

Synopsis	Enter the keys list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Description	Commands in this context configure the security association list for the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

[**security-association**] *number*

Synopsis	SA entry ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Range	1 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Direction of the IPsec tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *hex-string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> authentication-key <i>hex-string</i>
Tree	authentication-key
String length	1 to 130
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-key *hex-string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> encryption-key <i>hex-string</i>
Tree	encryption-key
String length	1 to 66
Introduced	25.3.R2

Platforms7705 SAR-1

ipsec-transform *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

spi *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i>
Tree	spi
Description	<p>This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.</p> <p>The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p>
Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-gateway-address-override (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> local-gateway-address-override (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

esp *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>

Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

pmtu-discovery-aging number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

private-sap *number*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-sap <i>number</i>
Tree	private-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

private-service *service-name*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-service <i>service-name</i>
Tree	private-service
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

private-tcp-mss-adjust *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v4 *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v6 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> remote-gateway-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	remote-gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-1

replay-window number

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	25.3.R2
Platforms	7705 SAR-1

security-policy

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy

Tree	security-policy
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy id <i>number</i>
Tree	id
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-match *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipv6-exception <i>reference</i>
Tree	ipv6-exception
Description	This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.
Reference	configure filter ipv6-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

public-sap *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec public-sap <i>number</i>
Tree	public-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-group *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Reference	configure isa tunnel-group <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

addresses

Synopsis	Enter the addresses context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses
Tree	addresses
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Enter the address list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses address <i>ipv4-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-unicast-address*

Synopsis	IPv4 address for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses address <i>ipv4-unicast-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses address <i>ipv4-unicast-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 allow-directed-broadcasts <i>boolean</i>
Tree	allow-directed-broadcasts
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd
Tree	bfd

Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service ies <i>service-name</i> interface interface-name ipv4 bfd admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service ies <i>service-name</i> interface interface-name ipv4 bfd echo-receive number
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service ies <i>service-name</i> interface interface-name ipv4 bfd multiplier number
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2

Platforms 7705 SAR-1

receive number

Synopsis BFD receive interval over this interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 bfd receive number](#)

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 25.3.R2

Platforms 7705 SAR-1

transmit-interval number

Synopsis BFD transmit interval over this interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 bfd transmit-interval number](#)

Tree [transmit-interval](#)

Description This command configures the transmit intervals.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 25.3.R2

Platforms 7705 SAR-1

dhcp

Synopsis Enter the **dhcp** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp](#)

Tree [dhcp](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp gi-address <i>ipv4-unicast-address</i>
Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	25.3.R2
Platforms	7705 SAR-1

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	0 to 511999
Introduced	25.3.R2
Platforms	7705 SAR-1

option-82

Synopsis	Enter the option-82 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 action <i>keyword</i>
Tree	action
Options	replace, drop, keep
Default	keep

Introduced	25.3.R2
Platforms	7705 SAR-1

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the circuit ID
----------	-------------------------------

Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>dhcp</i> <i>option-82</i> <i>circuit-id</i> <i>none</i>
Tree	<i>none</i>
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id

Synopsis	Use the SAP ID
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>dhcp</i> <i>option-82</i> <i>circuit-id</i> <i>sap-id</i>
Tree	<i>sap-id</i>
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>dhcp</i> <i>option-82</i> <i>circuit-id</i> <i>vlan-ascii-tuple</i>
Tree	<i>vlan-ascii-tuple</i>
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-id

Synopsis	Enter the remote-id context
----------	------------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 32
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Use the MAC address for the remote ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the remote ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id none
Tree	none
Notes	The following elements are part of a choice: ascii-string , mac , or none .

Introduced 25.3.R2
Platforms 7705 SAR-1

vendor-specific-option

Synopsis Enter the **vendor-specific-option** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp option-82](#) [vendor-specific-option](#)

Tree [vendor-specific-option](#)

Description Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.

Introduced 25.3.R2
Platforms 7705 SAR-1

client-mac-address *boolean*

Synopsis Send the MAC address in the VSO

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp option-82](#) [vendor-specific-option](#) [client-mac-address](#) *boolean*

Tree [client-mac-address](#)

Default false

Introduced 25.3.R2
Platforms 7705 SAR-1

pool-name *boolean*

Synopsis Send the pool name in the VSO

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp option-82](#) [vendor-specific-option](#) [pool-name](#) *boolean*

Tree [pool-name](#)

Default false

Introduced 25.3.R2
Platforms 7705 SAR-1

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as the DHCP server address for the SAP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server emulated-server <i>ipv4-unicast-address</i>
Tree	emulated-server
Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
Introduced	25.3.R2
Platforms	7705 SAR-1

lease-time

Synopsis	Enter the lease-time context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time
Tree	lease-time
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	DHCP lease time
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time value <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

relay-plain-bootp *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-plain-bootp <i>boolean</i>
Tree	relay-plain-bootp

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

relay-proxy

Synopsis	Enable the relay-proxy context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	25.3.R2
Platforms	7705 SAR-1

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i>
Tree	release-update-src-ip
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

siaddr-override *ipv4-unicast-address*

Synopsis	DHCP server IP address for address hiding function
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy siaddr-override <i>ipv4-unicast-address</i>
Tree	siaddr-override
Introduced	25.3.R2
Platforms	7705 SAR-1

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp server <i>ipv4-unicast-address</i>

Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp src-ip-addr keyword
Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

trusted *boolean*

Synopsis	Relay untrusted packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp trusted boolean
Tree	trusted
Description	<p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

use-arp *boolean*

Synopsis Use ARP to determine the destination hardware address

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp use-arp](#) *boolean*

Tree [use-arp](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

icmp

Synopsis Enter the **icmp** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 icmp](#)

Tree [icmp](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

mask-reply *boolean*

Synopsis Allow responses to ICMP mask requests on the interface

ip-helper-address *ipv4-unicast-address*

Synopsis	Gateway address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 ip-helper-address <i>ipv4-unicast-address</i>
Tree	ip-helper-address
Introduced	25.3.R2
Platforms	7705 SAR-1

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 local-dhcp-server <i>reference</i>
Tree	local-dhcp-server
Reference	configure router <i>named-item-64</i> dhcp-server dhcpv4 <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

nat

Synopsis	Enable the nat context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 nat
Tree	nat
Description	<p>Commands in this context enable NAT and configure CPM NAT policies for the IPv4 interface.</p> <p>These commands must be used in conjunction with NAT pools where the pool application is configured with the configure router nat outside pool applications use-interface-ip command.</p>
Introduced	25.7.R1
Platforms	7705 SAR-1

cpm-nat-policy *reference*

Synopsis	CPM NAT policy association with public IPv4 interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 nat cpm-nat-policy <i>reference</i>
Tree	cpm-nat-policy
Description	<p>This command associates a CPM NAT policy to the interface. The NAT policy applies to traffic that either originates from, or is destined to, the local node itself (CPM traffic). Specifically, it is used when the traffic is routed through a public NAT IPv4 interface in the outside routing context.</p> <p>A CPM NAT policy should be used when the local node communicates with public networks over NAT, and the source or destination is a local interface within the outside routing context. This can include the public IPv4 interface or any other interface assigned to that routing context.</p>
Reference	configure service nat cpm-nat-policy <i>external-named-item</i>

Introduced 25.7.R1
Platforms 7705 SAR-1

cpm-spf-nat-policy *reference*

Synopsis CPM NAT policy for static port forwards

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 nat cpm-spf-nat-policy reference](#)

Tree [cpm-spf-nat-policy](#)

Description This command associates a CPM NAT policy to the interface for static port forwards. The configurations for traffic using static port forwards to a local IP address in the outside routing context are separate from those used for other CPM traffic going through NAT. This command allows the router to apply different NAT behavior for port-forwarded traffic than for general traffic originating from the local node.

Reference **configure** [service nat cpm-nat-policy](#) *external-named-item*

Introduced 25.7.R1

Platforms 7705 SAR-1

neighbor-discovery

Synopsis Enter the **neighbor-discovery** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 neighbor-discovery](#)

Tree [host-route](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

populate [*route-type*] *keyword*

Synopsis	Enter the populate list instance
Context	configure <i>service ies service-name interface interface-name ipv4 neighbor-discovery host-route populate keyword</i>
Tree	<i>populate</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[route-type] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure <i>service ies service-name interface interface-name ipv4 neighbor-discovery host-route populate keyword</i>
Tree	<i>populate</i>
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-tag *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure <i>service ies service-name interface interface-name ipv4 neighbor-discovery host-route populate keyword route-tag number</i>
Tree	<i>route-tag</i>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i>
Tree	learn-unsolicited
Description	<p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none">• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

limit

Synopsis	Enter the limit context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

max-entries *number*

Synopsis Maximum number of entries learned on an IP interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 neighbor-discovery](#)

Range 1 to 100

Units percent

Default 90

Introduced 25.3.R2

Platforms 7705 SAR-1

local-proxy-arp *boolean*

Synopsis Enable local proxy ARP on interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 neighbor-discovery](#)
[local-proxy-arp](#) *boolean*

Tree [local-proxy-arp](#)

Description When configured to **true**, the router enables local proxy ARP on the interface.
When configured to **false**, the router does not respond to ARP requests for addresses on the same subnet.

Introduced 25.3.R2

Platforms 7705 SAR-1

populate *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery populate <i>boolean</i>
Tree	populate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i>
Tree	proactive-refresh
Description	<p>When configured to true, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).</p> <p>When configured to false, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i>
Tree	proxy-arp-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.

Introduced	25.3.R2

[ipv4-address] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor-unnumbered

Synopsis	Enable the static-neighbor-unnumbered context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR-1

primary

Synopsis	Enable the primary context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Unicast RPF check mode
----------	------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR-1

vrrp [**virtual-router-id**] *number*

Synopsis	Enter the vrrp list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Introduced	25.3.R2
Platforms	7705 SAR-1

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other

access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.

When **disabled**, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Password for simple text authentication
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String length	1 to 38
Introduced	25.3.R2
Platforms	7705 SAR-1

backup *ipv4-unicast-address*

Synopsis	Virtual router IP addresses for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> backup ipv4-unicast-address
Tree	backup
Description	This command associates virtual router IP addresses with those of the parental IP interface.

This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.

Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified *unicast-ipv4-address* must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

mac mac-unicast-address

Synopsis	Virtual MAC address to use in ARP responses
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

master-int-inherit boolean

Synopsis	Allow master instance to dictate the master down timer
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number master-int-inherit <i>boolean</i>
Tree	master-int-inherit
Description	When configured to true , the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 25.3.R2
Platforms 7705 SAR-1

message-interval *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** **service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **message-interval** *number*

Tree **message-interval**

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range 1 to 2559

Units deciseconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

monitor-oper-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group

Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

owner *boolean*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Designate the virtual router instance as owner
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> passive <i>boolean</i>
Tree	passive
Description	When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance

does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	VRRP priority control policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p>

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference	configure vrrp policy number
Introduced	25.3.R2
Platforms	7705 SAR-1

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service ies service-name interface interface-name ipv4 vrrp number preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority number

Synopsis	Base priority for the VRRP
Context	configure service ies service-name interface interface-name ipv4 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2

Platforms 7705 SAR-1

ssh-reply *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number ssh-reply <i>boolean</i>
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number telnet-reply <i>boolean</i>
Tree	telnet-reply

Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>ipv4 vrrp number</i> <i>traceroute-reply boolean</i>
Tree	<i>traceroute-reply</i>
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enable the ipv6 context
Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>ipv6</i>
Tree	<i>ipv6</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

address [*ipv6-address*] *ipv6-address*

Synopsis	Enter the address list instance
Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>ipv6 address</i> <i>ipv6-address</i>

Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-address*

Synopsis	IPv6 address assigned to the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	When configured to true , the router enables Duplicate Address Detection (DAD). When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

eui-64 *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> eui-64 <i>boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> primary-preference <i>number</i>
Tree	primary-preference
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295

Introduced 25.3.R2
Platforms 7705 SAR-1

bfd

Synopsis Enter the **bfd** context
Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 bfd](#)

echo-receive *number*

Synopsis Minimum echo interval over this interface
Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 bfd echo-receive](#) *number*
Tree [echo-receive](#)
Range 100 to 100000
Units milliseconds
Introduced 25.3.R2
Platforms 7705 SAR-1

multiplier *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context	configure service ies service-name interface interface-name ipv6 bfd multiplier number
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

receive number

Synopsis	BFD receive interval over this interface
Context	configure service ies service-name interface interface-name ipv6 bfd receive number
Tree	receive
Description	This command specifies the receive interval for the BFD session.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-interval number

Synopsis	BFD transmit interval over this interface
Context	configure service ies service-name interface interface-name ipv6 bfd transmit-interval number
Tree	transmit-interval
Description	This command configures the transmit intervals.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

Context**configure** **service** **ies** *service-name* **interface** *interface-name* **ipv6** **neighbor-discovery**
host-route **populate** *keyword* **route-tag** *number*

Tree**route-tag**

DescriptionThis command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.

Range1 to 255

Introduced25.3.R2

Platforms7705 SAR-1

learn-unsolicited *keyword*

SynopsisType of entries learned from unsolicited NA messages

Context**configure** **service** **ies** *service-name* **interface** *interface-name* **ipv6** **neighbor-discovery**
learn-unsolicited *keyword*

Tree**learn-unsolicited**

DescriptionThis command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.

When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.

Optionsglobal, link-local, both

Introduced25.3.R2

Platforms7705 SAR-1

limit

SynopsisEnter the **limit** context

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Description	<p>When configured to true, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.</p> <p>When configured to false, the router does not send the warning message.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Description	<p>This command configures the maximum number of entries that can be learned on an IP interface.</p> <p>When unconfigured, no maximum limit is imposed.</p>
Range	0 to 102400
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i>
Tree	local-proxy-nd
Description	<p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface

Context	configure <i>service ies service-name interface interface-name ipv6 vrrp number</i>
Tree	<i>vrrp</i>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure <i>service ies service-name interface interface-name ipv6 vrrp number admin-state keyword</i>
Tree	<i>admin-state</i>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

backup ipv6-address

Synopsis	Virtual router IP addresses for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> backup ipv6-address
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7705 SAR Gen 2 Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enable the bfd-liveness context

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number bfd-liveness interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number bfd-liveness service-name <i>service-name</i>
Tree	service-name
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

init-delay *number*

Synopsis	VRRP initialization delay timer
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>vrrp</i> <i>number</i> <i>init-delay</i> <i>number</i>
Tree	<i>init-delay</i>
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>vrrp</i> <i>number</i> <i>mac</i> <i>mac-unicast-address</i>
Tree	<i>mac</i>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> master-int-inherit <i>boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.
Range	10 to 4095
Units	centiseconds
Default	100
Introduced	25.3.R2

Platforms 7705 SAR-1

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service ies service-name interface interface-name ipv6 vrrp number monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service ies service-name interface interface-name ipv6 vrrp number ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

owner *boolean*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Designate the virtual router instance as owner
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Suppress the processing of VRRP advertisement messages

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number passive <i>boolean</i>
Tree	passive
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	VRRP priority control policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number policy <i>reference</i>
Tree	policy

Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure <i>vrrp policy number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure <i>service ies service-name interface interface-name ipv6 vrrp number preempt boolean</i>
Tree	<i>preempt</i>
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Base priority for the VRRP
Context	configure <i>service ies service-name interface interface-name ipv6 vrrp number priority number</i>
Tree	<i>priority</i>
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 vrrp number</i> <i>standby-forwarding boolean</i>
Tree	<i>standby-forwarding</i>
Description	When configured to true , the standby router forwards all traffic. When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 vrrp number</i> <i>telnet-reply boolean</i>
Tree	<i>telnet-reply</i>
Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing

Synopsis	Enter the load-balancing context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> load-balancing
Tree	load-balancing
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	25.3.R2

Platforms 7705 SAR-1

loopback *boolean*

Synopsis Use interface as a loopback interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **loopback** *boolean*

Tree [loopback](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

mac *mac-unicast-address*

Synopsis MAC address for the interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **mac** *mac-unicast-address*

Tree [mac](#)

Description This command assigns a specific MAC address to an IP interface.

Introduced 25.3.R2

Platforms 7705 SAR-1

mac-accounting *boolean*

Synopsis Enable MAC accounting functionality

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **mac-accounting** *boolean*

Tree [mac-accounting](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

monitor-oper-group *reference*

Synopsis Operational group to monitor

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **monitor-oper-group** *reference*

Tree [monitor-oper-group](#)

Reference **configure** [service oper-group](#) *named-item*

Introduced 25.3.R2
 Platforms 7705 SAR-1

multi-chassis-shunting-profile *reference*

Synopsis Multi-chassis shunting profile name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [multi-chassis-shunting-profile](#) *reference*

Tree [multi-chassis-shunting-profile](#)

Description This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces.

Reference **configure** [router](#) *named-item-64* [ipsec](#) [multi-chassis-shunting-profile](#) *named-item*

Notes The following elements are part of a choice: **multi-chassis-shunting-profile** or (**dynamic-tunnel-redundant-nexthop** and **static-tunnel-redundant-nexthop**).

Introduced 25.3.R2
 Platforms 7705 SAR-1

multicast-network-domain *reference*

Synopsis Network domain name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [multicast-network-domain](#) *reference*

Tree [multicast-network-domain](#)

Reference **configure** [router](#) *named-item-64* [network-domains](#) [network-domain](#) *named-item*

Introduced 25.3.R2
 Platforms 7705 SAR-1

sap [[sap-id](#)] *sap*

Synopsis Enter the **sap** list instance

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [sap](#) *sap*

Tree [sap](#)

Max. instances 1

Introduced 25.3.R2
 Platforms 7705 SAR-1

[sap-id] sap

Synopsis	SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bandwidth *number*

Synopsis	SAP bandwidth
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> bandwidth <i>number</i>

Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *long-description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> description <i>long-description</i>
Tree	description
String length	1 to 160
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

agg-rate

Synopsis	Enter the agg-rate context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress agg-rate
Tree	agg-rate
Notes	The following elements are part of a choice: agg-rate or percent-agg-rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

queue-frame-based-accounting *boolean*

Synopsis	Enable frame based accounting on policers and queues
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress agg-rate queue-frame-based-accounting <i>boolean</i>
Tree	queue-frame-based-accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rate *number*

Synopsis	Enforced aggregate rate for all queues
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress agg-rate rate <i>number</i>
Tree	rate
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2

Platforms7705 SAR-1

filter

SynopsisEnter the **filter** context

Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides policer <i>reference</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides policer <i>reference</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides policer <i>reference</i> stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	25.3.R2
Platforms	7705 SAR-1

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides queue <i>reference</i>
Tree	queue
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-id] *reference*

Synopsis	Policer unique ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides queue <i>reference</i>
Tree	queue
Reference	configure qos sap-egress <i>qos-policy-name</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule

Tree	adaptation-rule
Introduced	25.3.R2
Platforms	7705 SAR-1

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos sap-egress overrides queue <i>reference</i> avg-frame-overhead <i>decimal-number</i>
Tree	avg-frame-overhead
Description	<p>This command configures overrides for the average frame overhead. The overrides supersede the average frame overhead configuration under the queue.</p> <p>For a full description of this command, see the configure qos network-queue queue avg-frame-overhead and configure qos sap-egress queue avg-frame-overhead contexts.</p>
Range	0.00 to 100.00
Introduced	25.3.R2

Platforms 7705 SAR-1

burst-limit (*number* | *keyword*)

Synopsis Explicit shaping burst size for the queue

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [egress qos sap-egress overrides queue](#) *reference* [burst-limit](#) (*number* | *keyword*)

[scheduler-name] *named-item*

Synopsis Scheduler name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ingress qos](#) [scheduler-policy overrides scheduler](#) *named-item*

Tree [scheduler](#)

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on),

the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length	1 to 32

Synopsis	Backup remote IP address that is applied to this tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> backup-remote-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	backup-remote-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-df-bit *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit

Description	When configured to true , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum. When configured to false , clearing of the DF bit is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

delivery-service *service-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> delivery-service <i>service-name</i>
Tree	delivery-service
Description	This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel. The GRE tunnel does not come up until a valid delivery service is configured.

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server
Tree	server
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv4 server addresses
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server address <i>ipv4-unicast-address</i>
Tree	address
Description	This command specifies DHCPv4 server addresses for the DHCPv4-based address assignment. If multiple server addresses are specified, the first advertised DHCPv4 address received is chosen.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-vprn-loose***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance used to reach the DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcpv6

Synopsis	Enable the dhcpv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6
Tree	dhcpv6
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

link-address *ipv6-unicast-address*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Link address of the relayed DHCPv6 packets
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv6 link-address ipv6-unicast-address</i>
Tree	link-address
Introduced	25.3.R2
Platforms	7705 SAR-1

send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv6 release message when IPsec tunnel removed
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv6 send-release boolean</i>
Tree	send-release
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the server context
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv6 server</i>
Tree	server
Introduced	25.3.R2

Platforms 7705 SAR-1

address *ipv6-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv6 server addresses
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 server address <i>ipv6-unicast-address</i>
Tree	address
Description	This command specifies DHCPv6 server addresses for the DHCPv6-based address assignment. If multiple server addresses are specified, the first advertised DHCPv6 address received is chosen.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-vprn-loose*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance to reach the DHCPv6 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 server router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-policy *reference*

Synopsis	IKE policy ID
----------	---------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> ike-policy <i>reference</i>
Tree	ike-policy
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

local

Synopsis	Enter the local context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local
Tree	local
Introduced	25.3.R2
Platforms	7705 SAR-1

address-assignment

Synopsis	Enable the address-assignment context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment
Tree	address-assignment
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of local address assignments
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv4 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp-server *named-item*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv4 server name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 dhcp-server <i>named-item</i>
Tree	dhcp-server
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool *named-item*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the pool defined in the specified DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 pool <i>named-item</i>
Tree	pool

String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-vprn-loose*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID for the local DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary-pool *named-item*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 secondary-pool <i>named-item</i>
Tree	secondary-pool
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp-server *named-item*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 dhcp-server <i>named-item</i>
Tree	dhcp-server
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool *named-item*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 pool <i>named-item</i>
Tree	pool

String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-vprn-loose*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Enter the id context
----------	-----------------------------

Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-gateway</i> <i>named-item</i> <i>local id</i>
Tree	<i>id</i>
Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-gateway</i> <i>named-item</i> <i>local id</i> <i>auto</i>
Tree	<i>auto</i>
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *fully-qualified-domain-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	configure <i>service ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-gateway</i> <i>named-item</i> <i>local id</i> <i>fqdn</i> <i>fully-qualified-domain-name</i>
Tree	<i>fqdn</i>
String length	1 to 255
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Introduced	25.3.R2
Platforms	7705 SAR-1

esp number

Synopsis	Maximum number of recent records
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

Synopsis	Maximum number of historical IKE keys recorded
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

mixed-tunnel-mode

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the mixed-tunnel-mode context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> mixed-tunnel-mode
Tree	mixed-tunnel-mode
Description	Commands in this context configure the IPsec gateway to support both remote access and dynamic LAN-to-LAN tunnels. When unconfigured, support of both tunnel types is disabled.
Introduced	25.7.R1
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for the IPsec gateway
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure ipsec radius accounting-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius authentication-policy <i>reference</i>
Tree	authentication-policy
Reference	configure ipsec radius authentication-policy <i>named-item</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

ts-list *reference*

Synopsis TS list used for IKEv2 TS negotiation
Context **configure** [service ies](#) *service-name* [interface interface-name](#) [sap sap ipsec-gateway](#) *named-item* [ts-list](#) *reference*
Tree [ts-list](#)
Reference **configure** [ipsec ts-list](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

lag

Synopsis Enter the **lag** context
Context **configure** [service ies](#) *service-name* [interface interface-name](#) [sap sap lag](#)
Tree [lag](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

multi-service-site *reference*

Synopsis Multi service site name
Context **configure** [service ies](#) *service-name* [interface interface-name](#) [sap sap multi-service-site](#) *reference*
Tree [multi-service-site](#)
Reference **configure** [service customer](#) *customer-name* [multi-service-site](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

spoke-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis Enter the **spoke-sdp** list instance
Context **configure** [service ies](#) *service-name* [interface interface-name](#) [spoke-sdp](#) *sdp-bind-id*
Tree [spoke-sdp](#)

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[sdp-bind-id] *sdp-bind-id*

Synopsis	SDP binding ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
String length	3 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Policy to collect accounting statistics
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> egress filter
Tree	filter
Introduced	25.3.R2

Platforms 7705 SAR-1

ip reference

Synopsis IPv4 filter policy name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [spoke-sdp](#) *sdp-bind-id*
[egress filter ip reference](#)

Tree [ip](#)

Reference **configure** [filter ip-filter](#) *filter-name*

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 reference

Synopsis IPv6 filter policy name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [spoke-sdp](#) *sdp-bind-id*
[egress filter ipv6 reference](#)

Tree [ipv6](#)

Reference **configure** [filter ipv6-filter](#) *filter-name*

Introduced 25.3.R2

qos

Synopsis Enter the **qos** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [spoke-sdp](#) *sdp-bind-id*
[egress qos](#)

Tree [qos](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

network

Synopsis Enter the **network** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [spoke-sdp](#) *sdp-bind-id*
[egress qos network](#)

Tree	network
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Network policy ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> egress qos network policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> egress qos network port-redirect-group
Tree	port-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

group-name *reference*

Synopsis	Name of the egress port queue group
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> egress qos network port-redirect-group group-name <i>reference</i>
Tree	group-name
Reference	configure qos queue-group-templates <i>egress queue-group</i> <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

instance *number*

Synopsis	Queue-group instance ID
----------	-------------------------

Context	configure <i>service ies service-name interface interface-name spoke-sdp sdp-bind-id egress qos network port-redirect-group instance number</i>
Tree	<i>instance</i>
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	configure <i>service ies service-name interface interface-name spoke-sdp sdp-bind-id egress vc-label number</i>
Tree	<i>vc-label</i>
Range	16 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	configure <i>service ies service-name interface interface-name spoke-sdp sdp-bind-id entropy-label</i>
Tree	<i>entropy-label</i>
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-label

Synopsis	Enable the hash-label context
Context	configure <i>service ies service-name interface interface-name spoke-sdp sdp-bind-id hash-label</i>
Tree	<i>hash-label</i>

Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash labels" section of the <i>7705 SAR Gen 2 MPLS Guide</i> .
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service ies service-name interface interface-name spoke-sdp sdp-bind-id hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes. The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service ies service-name interface interface-name spoke-sdp sdp-bind-id ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service ies service-name interface interface-name spoke-sdp sdp-bind-id ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter ip reference
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

static-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Address for the static ISA tunnel redundant next-hop
----------	--

Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>static-tunnel-redundant-nexthop ipv4-unicast-address</i>
Tree	<i>static-tunnel-redundant-nexthop</i>
Description	This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for a static IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work. The next-hop address is resolved in the routing table of the corresponding service.
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop) .
Introduced	25.3.R2
Platforms	7705 SAR-1

arp

Synopsis	Enter the arp context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp
Tree	arp
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise [[route-type](#)] *keyword*

Synopsis	Enter the advertise list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i>
Tree	advertise
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The learn-dynamic command must be set to false when using this functionality.
Introduced	25.3.R2
Platforms	7705 SAR-1

[[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i>
Tree	advertise
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

flood-garp-and-unknown-req *boolean*

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp flood-garp-and-unknown-req <i>boolean</i>
Tree	flood-garp-and-unknown-req
Description	When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to false , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp learn-dynamic <i>boolean</i>

Tree	learn-dynamic
Description	When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to false , learning is disabled and table entries are not created for these messages.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

nd

Synopsis	Enter the nd context

dynamic-ports *number*

Synopsis	Maximum number of dynamic ports per subscriber
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits dynamic-ports <i>number</i>
Tree	dynamic-ports
Description	This command limits the number of ports per protocol on an outside IP address for a subscriber regardless of the pool pairing mode. This command applies to LSN44 pools with flexible port allocation.
Range	1 to 65536
Default	65536
Introduced	25.7.R1
Platforms	7705 SAR-1

forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits forwarding <i>number</i>
Tree	forwarding
Range	1 to 65535
Introduced	25.7.R1
Platforms	7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.7.R1
Platforms	7705 SAR-1

high *number*

Synopsis	High watermark percentage
----------	---------------------------

Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-1

low *number*

Synopsis	Low watermark percentage
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits watermarks low <i>number</i>
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-1

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	25.7.R1
Platforms	7705 SAR-1

max number

Synopsis	Maximum number of sessions per subscriber
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits max <i>number</i>
Tree	max
Range	1 to 65535
Default	100
Introduced	25.7.R1
Platforms	7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.7.R1
Platforms	7705 SAR-1

high number

Synopsis	High watermark percentage
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-1

low number

Synopsis	Low watermark percentage
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> tcp
Tree	tcp
Description	Commands in this context configure the Transmission Control Protocol (TCP) attributes of the policy.
Introduced	25.7.R1
Platforms	7705 SAR-1

mss-adjust number

Synopsis	TCP MSS adjustment value
Context	configure service nat cpm-nat-policy <i>external-named-item</i> tcp mss-adjust <i>number</i>
Tree	mss-adjust
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	25.7.R1
Platforms	7705 SAR-1

timeouts

Synopsis	Enter the timeouts context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts
Tree	timeouts
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	25.7.R1
Platforms	7705 SAR-1

icmp-query *number*

Synopsis	Timeout applied to an ICMP Query session
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts icmp-query <i>number</i>
Tree	icmp-query
Range	60 to 240
Units	seconds
Default	60
Introduced	25.7.R1
Platforms	7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp
Tree	tcp
Description	Commands in this context configure TCP timeout attributes.
Introduced	25.7.R1
Platforms	7705 SAR-1

established *number*

Synopsis	Idle timeout for TCP session in established state
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp established <i>number</i>
Tree	established

Range	60 to 86400
Units	seconds
Default	7440
Introduced	25.7.R1
Platforms	7705 SAR-1

syn *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp syn <i>number</i>
Tree	syn
Range	6 to 86400
Units	seconds
Default	15
Introduced	25.7.R1
Platforms	7705 SAR-1

time-wait *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp time-wait <i>number</i>
Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	25.7.R1
Platforms	7705 SAR-1

transitory *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp transitory <i>number</i>
Tree	transitory
Range	60 to 86400

Units	seconds
Default	240
Introduced	25.7.R1
Platforms	7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp
Tree	udp
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	25.7.R1
Platforms	7705 SAR-1

dns *number*

Synopsis	Timeout applied to UDP session with destination port 53
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp dns <i>number</i>
Tree	dns
Range	15 to 86400
Units	seconds
Default	15
Introduced	25.7.R1
Platforms	7705 SAR-1

initial *number*

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp initial <i>number</i>
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	25.7.R1

Platforms 7705 SAR-1

normal *number*

Synopsis UDP mapping timeout

Context **configure** *service nat cpm-nat-policy external-named-item timeouts udp normal* *number*

Tree *normal*

Range 60 to 86400

Units seconds

Default 300

Introduced 25.7.R1

Platforms 7705 SAR-1

udp

Synopsis Enter the **udp** context

Context **configure** *service nat cpm-nat-policy external-named-item udp*

Tree *udp*

Introduced 25.7.R1

Platforms 7705 SAR-1

inbound-refresh *boolean*

Synopsis Extend UDP session timeout on inbound traffic

Context **configure** *service nat cpm-nat-policy external-named-item udp inbound-refresh* *boolean*

Tree *inbound-refresh*

Description When configured to **true**, the router extends the UDP session timeout on inbound traffic.
When configured to **false**, the router does not extend the UDP session timeout.

Default false

Introduced 25.7.R1

Platforms 7705 SAR-1

nat-policy [*name*] *external-named-item*

Synopsis Enter the **nat-policy** list instance

Context	configure service nat nat-policy <i>external-named-item</i>
Tree	nat-policy
Max. instances	4096
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *external-named-item*

Synopsis	NAT policy name
Context	configure service nat nat-policy <i>external-named-item</i>
Tree	nat-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

alg

Synopsis	Enter the alg context
Context	configure service nat nat-policy <i>external-named-item</i> alg
Tree	alg
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	25.3.R2
Platforms	7705 SAR-1

ftp *boolean*

Synopsis	Use FTP ALG for the policy
Context	configure service nat nat-policy <i>external-named-item</i> alg ftp <i>boolean</i>
Tree	ftp
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

pptp boolean

Synopsis	Use PPTP ALG for the policy
Context	configure service nat nat-policy <i>external-named-item</i> alg pptp <i>boolean</i>
Tree	pptp
Description	<p>When configured to true, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to false, PPTP ALG is not used.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rtsp boolean

Synopsis	Use RTSP ALG for the policy
Context	configure service nat nat-policy <i>external-named-item</i> alg rtsp <i>boolean</i>
Tree	rtsp
Description	<p>When configured to true, Real-Time Streaming Protocol (RTSP) ALG is used for the policy.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sip boolean

Synopsis	Use SIP ALG for the policy
Context	configure service nat nat-policy <i>external-named-item</i> alg sip <i>boolean</i>
Tree	sip
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

block-limit *number*

Synopsis	Maximum number of port blocks per subscriber
Context	configure service nat nat-policy <i>external-named-item</i> block-limit <i>number</i>
Tree	block-limit
Range	1 to 40
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service nat nat-policy <i>external-named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

filtering *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	configure service nat nat-policy <i>external-named-item</i> filtering <i>keyword</i>
Tree	filtering
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Enter the pool context
Context	configure service nat nat-policy <i>external-named-item</i> pool
Tree	pool
Notes	The following elements are part of a choice: dnat-only , l2-outside , or pool .

Introduced	25.3.R2
Platforms	7705 SAR-1

name *named-item*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT pool name
Context	configure service nat nat-policy <i>external-named-item</i> pool name <i>named-item</i>
Tree	name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router or VPRN service name
Context	configure service nat nat-policy <i>external-named-item</i> pool router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

port-limits

Synopsis	Enter the port-limits context
Context	configure service nat nat-policy <i>external-named-item</i> port-limits
Tree	port-limits
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-ports *number*

Synopsis	Maximum number of dynamic ports per subscriber
Context	configure service nat nat-policy <i>external-named-item</i> port-limits dynamic-ports <i>number</i>
Tree	dynamic-ports
Description	This command limits the number of ports per protocol on an outside IP address for a subscriber regardless of the pool pairing mode. This command applies to LSN44 pools with flexible port allocation.
Range	1 to 65536
Default	65536
Introduced	25.7.R1
Platforms	7705 SAR-1

forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	configure service nat nat-policy <i>external-named-item</i> port-limits forwarding <i>number</i>
Tree	forwarding
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat nat-policy <i>external-named-item</i> port-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.3.R2
Platforms	7705 SAR-1

high *number*

Synopsis	High watermark percentage
Context	configure service nat nat-policy <i>external-named-item</i> port-limits watermarks high <i>number</i>

Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

low number

Synopsis	Low watermark percentage
Context	configure service nat nat-policy <i>external-named-item</i> port-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat nat-policy <i>external-named-item</i> session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	25.3.R2
Platforms	7705 SAR-1

max number

Synopsis	Maximum number of sessions per subscriber
----------	---

Context	configure service nat nat-policy <i>external-named-item</i> session-limits max <i>number</i>
Tree	max
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat nat-policy <i>external-named-item</i> session-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.3.R2
Platforms	7705 SAR-1

high *number*

Synopsis	High watermark percentage
Context	configure service nat nat-policy <i>external-named-item</i> session-limits watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

low *number*

Synopsis	Low watermark percentage
Context	configure service nat nat-policy <i>external-named-item</i> session-limits watermarks low <i>number</i>
Tree	low

Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure service nat nat-policy external-named-item tcp
Tree	tcp
Description	Commands in this context configure the Transmission Control Protocol (TCP) attributes of the policy.
Introduced	25.3.R2
Platforms	7705 SAR-1

mss-adjust *number*

Synopsis	TCP MSS adjustment value
Context	configure service nat nat-policy external-named-item tcp mss-adjust number
Tree	mss-adjust
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	25.3.R2
Platforms	7705 SAR-1

timeouts

Synopsis	Enter the timeouts context
Context	configure service nat nat-policy external-named-item timeouts
Tree	timeouts
Description	Commands in this context configure the attributes of session idle timeouts for the policy.

Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-query *number*

Synopsis	Timeout applied to an ICMP Query session
Context	configure service nat nat-policy <i>external-named-item</i> timeouts icmp-query <i>number</i>
Tree	icmp-query
Range	60 to 240
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure service nat nat-policy <i>external-named-item</i> timeouts tcp
Tree	tcp
Description	Commands in this context configure TCP timeout attributes.
Introduced	25.3.R2
Platforms	7705 SAR-1

established *number*

Synopsis	Idle timeout for TCP session in established state
Context	configure service nat nat-policy <i>external-named-item</i> timeouts tcp established <i>number</i>
Tree	established
Range	60 to 86400
Units	seconds
Default	7440
Introduced	25.3.R2
Platforms	7705 SAR-1

syn number

Synopsis	TCP session timeout when synchronizing initial sequence
Context	configure service nat nat-policy external-named-item timeouts tcp syn number
Tree	syn
Range	6 to 86400
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

time-wait number

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat nat-policy external-named-item timeouts tcp time-wait number
Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

transitory number

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat nat-policy external-named-item timeouts tcp transitory number
Tree	transitory
Range	60 to 86400
Units	seconds
Default	240
Introduced	25.3.R2
Platforms	7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat nat-policy external-named-item timeouts udp
Tree	udp
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	25.3.R2
Platforms	7705 SAR-1

dns *number*

Synopsis	Timeout applied to UDP session with destination port 53
Context	configure service nat nat-policy external-named-item timeouts udp dns number
Tree	dns
Range	15 to 86400
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

initial *number*

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat nat-policy external-named-item timeouts udp initial number
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

normal *number*

Synopsis	UDP mapping timeout
----------	---------------------

Context	configure service nat nat-policy external-named-item timeouts udp normal <i>number</i>
Tree	normal
Range	60 to 86400
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat nat-policy external-named-item udp
Tree	udp
Introduced	25.3.R2
Platforms	7705 SAR-1

inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	configure service nat nat-policy external-named-item udp inbound-refresh <i>boolean</i>
Tree	inbound-refresh
Description	When configured to true , the router extends the UDP session timeout on inbound traffic. When configured to false , the router does not extend the UDP session timeout.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group [[name](#)] *named-item*

Synopsis	Enter the oper-group list instance
Context	configure service oper-group named-item
Tree	oper-group
Max. instances	32768
Introduced	25.3.R2

Platforms 7705 SAR-1

[name] *named-item*

Synopsis Operational group name

Context **configure** *service oper-group named-item*

Tree *oper-group*

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

bfd-liveness

Synopsis Enable the **bfd-liveness** context

Context **configure** *service oper-group named-item bfd-liveness*

Tree *bfd-liveness*

Introduced 25.3.R2

Platforms 7705 SAR-1

dest-ip *ipv4-unicast-address*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Destination address for BFD

Context **configure** *service oper-group named-item bfd-liveness dest-ip ipv4-unicast-address*

Tree *dest-ip*

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-name *interface-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Source interface name
Context	configure service oper-group <i>named-item</i> bfd-liveness interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context used for route lookup
Context	configure service oper-group <i>named-item</i> bfd-liveness router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure service oper-group <i>named-item</i> hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

down number

Synopsis	Oper group hold down time
Context	configure service oper-group <i>named-item</i> hold-time down <i>number</i>
Tree	down
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

up number

Synopsis	Oper group hold up time
Context	configure service oper-group <i>named-item</i> hold-time up <i>number</i>
Tree	up
Range	0 to 3600
Units	seconds
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-arp-nd

Synopsis	Enter the proxy-arp-nd context
Context	configure service proxy-arp-nd
Tree	proxy-arp-nd
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-list

Synopsis	Enter the mac-list context
Context	configure service proxy-arp-nd mac-list
Tree	mac-list
Introduced	25.3.R2

Platforms 7705 SAR-1

list [[list-name](#)] *named-item*

Synopsis Enter the **list** list instance

Context **configure** [service proxy-arp-nd mac-list list](#) *named-item*

Tree [list](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[list-name] *named-item*

Synopsis Specify name for mac list

Context **configure** [service proxy-arp-nd mac-list list](#) *named-item*

Tree [list](#)

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

mac [[address](#)] *mac-unicast-address-no-zero*

Synopsis Add a list entry for **mac**

Context **configure** [service proxy-arp-nd mac-list list](#) *named-item* [mac](#) *mac-unicast-address-no-zero*

Tree [mac](#)

Max.
instances 10

Introduced 25.3.R2

Platforms 7705 SAR-1

[address] *mac-unicast-address-no-zero*

Synopsis MAC address to be added to the list

Context **configure** [service proxy-arp-nd mac-list list](#) *named-item* [mac](#) *mac-unicast-address-no-zero*

Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

pw-template [\[pw-template-name\]](#) *pw-template-name*

Synopsis	Enter the pw-template list instance
Context	configure service pw-template <i>pw-template-name</i>
Tree	pw-template
Max. instances	2048
Introduced	25.3.R2
Platforms	7705 SAR-1

[pw-template-name] *pw-template-name*

Synopsis	SDP template name
Context	configure service pw-template <i>pw-template-name</i>
Tree	pw-template
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *number*

Synopsis	Accounting policy
Context	configure service pw-template <i>pw-template-name</i> accounting-policy <i>number</i>
Tree	accounting-policy
Range	1 to 99
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-fragmentation *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	configure service pw-template <i>pw-template-name</i> allow-fragmentation <i>boolean</i>
Tree	allow-fragmentation
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-gre-sdp *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use a GRE tunnel to automatically create an SDP
Context	configure service pw-template <i>pw-template-name</i> auto-gre-sdp <i>boolean</i>
Tree	auto-gre-sdp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

block-on-peer-fault *boolean*

Synopsis	Enable block traffic on peer fault
Context	configure service pw-template <i>pw-template-name</i> block-on-peer-fault <i>boolean</i>
Tree	block-on-peer-fault
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure service pw-template <i>pw-template-name</i> collect-stats <i>boolean</i>
Tree	collect-stats

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

control-word *boolean*

Synopsis	Enable/Disable the use of ControlWord
Context	configure <i>service pw-template pw-template-name control-word boolean</i>
Tree	<i>control-word</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure <i>service pw-template pw-template-name egress</i>
Tree	<i>egress</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure <i>service pw-template pw-template-name egress filter</i>
Tree	<i>filter</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ip *named-item-64*

Synopsis	IPv4 filter policy name
Context	configure <i>service pw-template pw-template-name egress filter ip named-item-64</i>
Tree	<i>ip</i>
String length	1 to 64

Introduced 25.3.R2
Platforms 7705 SAR-1

ipv6 *named-item-64*

Synopsis IPv6 filter policy name
Context **configure** [service pw-template](#) *pw-template-name* [egress filter ipv6](#) *named-item-64*
Tree [ipv6](#)
String length 1 to 64
Introduced 25.3.R2
Platforms 7705 SAR-1

mac *named-item-64*

Synopsis MAC filter policy name
Context **configure** [service pw-template](#) *pw-template-name* [egress filter mac](#) *named-item-64*
Tree [mac](#)
String length 1 to 64
Introduced 25.3.R2
Platforms 7705 SAR-1

mfib-allowed-mda-destinations

Synopsis Enter the **mfib-allowed-mda-destinations** context
Context **configure** [service pw-template](#) *pw-template-name* [egress mfib-allowed-mda-destinations](#)
Tree [mfib-allowed-mda-destinations](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

mda [[mda-id](#)] *slot-mda*

Synopsis Add a list entry for **mda**
Context **configure** [service pw-template](#) *pw-template-name* [egress mfib-allowed-mda-destinations mda](#) *slot-mda*
Tree [mda](#)

Introduced	25.3.R2
Platforms	7705 SAR-1

[mda-id] slot-mda

Synopsis	MFIB allowed MDA destination
Context	configure service pw-template pw-template-name egress mfib-allowed-mda-destinations mda slot-mda
Tree	mda
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service pw-template pw-template-name egress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

network

Synopsis	Enter the network context
Context	configure service pw-template pw-template-name egress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name named-item-64

Synopsis	Network policy ID
Context	configure service pw-template pw-template-name egress qos network policy-name named-item-64
Tree	policy-name
String length	1 to 64

Introduced 25.3.R2
Platforms 7705 SAR-1

port-redirect-group

Synopsis Enter the **port-redirect-group** context
Context **configure** [service pw-template pw-template-name](#) [egress qos network port-redirect-group](#)
Tree [port-redirect-group](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

group-name *named-item*

Synopsis Name of the egress port queue group template
Context **configure** [service pw-template pw-template-name](#) [egress qos network port-redirect-group group-name](#) *named-item*
Tree [group-name](#)
String length 1 to 32
Introduced 25.3.R2
Platforms 7705 SAR-1

instance *number*

Synopsis Instance for FP ingress queue group
Context **configure** [service pw-template pw-template-name](#) [egress qos network port-redirect-group instance](#) *number*
Tree [instance](#)
Range 1 to 65535
Introduced 25.3.R2
Platforms 7705 SAR-1

encryption-keygroup

Synopsis Enter the **encryption-keygroup** context
Context **configure** [service pw-template pw-template-name](#) [encryption-keygroup](#)

Tree	encryption-keygroup
Introduced	25.3.R2
Platforms	7705 SAR-1

inbound *number*

Synopsis	Keygroup identifier in the inbound direction
Context	configure service pw-template <i>pw-template-name</i> encryption-keygroup inbound <i>number</i>
Tree	inbound
Range	1 to 127
Introduced	25.3.R2
Platforms	7705 SAR-1

outbound *number*

Synopsis	Keygroup identifier in the outbound direction
Context	configure service pw-template <i>pw-template-name</i> encryption-keygroup outbound <i>number</i>
Tree	outbound
Range	1 to 127
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label

Synopsis	Enable the use of an entropy label
Context	configure service pw-template <i>pw-template-name</i> entropy-label
Tree	entropy-label
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

fdb

Synopsis	Enter the fdb context
----------	------------------------------

Context	configure service pw-template <i>pw-template-name</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	configure service pw-template <i>pw-template-name</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect-exclude-list *named-item*

Synopsis	Name of the MAC protect exclusion list
Context	configure service pw-template <i>pw-template-name</i> fdb auto-learn-mac-protect-exclude-list <i>named-item</i>
Tree	auto-learn-mac-protect-exclude-list
Description	<p>This command configures the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

discard-unknown-source *boolean*

Synopsis	Discard frames with unknown source
Context	configure service pw-template <i>pw-template-name</i> fdb discard-unknown-source <i>boolean</i>
Tree	discard-unknown-source
Default	false

Introduced 25.3.R2
Platforms 7705 SAR-1

limit-mac-move *keyword*

Synopsis MAC move limit
Context **configure** [service pw-template pw-template-name fdb limit-mac-move keyword](#)
Tree [limit-mac-move](#)
Options blockable, non-blockable
Default blockable
Introduced 25.3.R2
Platforms 7705 SAR-1

mac-learning

Synopsis Enter the **mac-learning** context
Context **configure** [service pw-template pw-template-name fdb mac-learning](#)
Tree [mac-learning](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

aging *boolean*

Synopsis Enable aging of MAC addresses
Context **configure** [service pw-template pw-template-name fdb mac-learning aging boolean](#)
Tree [aging](#)
Default true
Introduced 25.3.R2
Platforms 7705 SAR-1

learning *boolean*

Synopsis Enable learning of new MAC addresses
Context **configure** [service pw-template pw-template-name fdb mac-learning learning boolean](#)
Tree [learning](#)

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-pinning *boolean*

Synopsis	Enable MAC address pinning on this spoke SDP
Context	configure service pw-template <i>pw-template-name</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service pw-template <i>pw-template-name</i> fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this PW template.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service pw-template fdb discard-unknown-source command is set to true for this PW template, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the PW template uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR-1

protected-src-mac-violation-action *keyword*

Synopsis	Action for protected source MAC restriction
Context	configure service pw-template <i>pw-template-name</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR-1

force-vc-forwarding *keyword*

Synopsis	VC forwarding action
Context	configure service pw-template <i>pw-template-name</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-label

Synopsis	Enable the hash-label context
Context	configure service pw-template <i>pw-template-name</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash labels" section of the <i>7705 SAR Gen 2 MPLS Guide</i> .
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service pw-template <i>pw-template-name</i> hash-label signal-capability

Tree	signal-capability
Description	<p>When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.</p> <p>The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration. The node must withdraw the label it sent to its peer and send a new label mapping message with the new value of the F-bit in the flow label interface option sub-TLV of the pseudowire ID FEC element.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service pw-template pw-template-name igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service pw-template pw-template-name igmp-snooping fast-leave boolean
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *named-item*

Synopsis	Import policy that filters IGMP packets
Context	configure service pw-template pw-template-name igmp-snooping import-policy named-item
Tree	import-policy
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum multicast groups
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR-1

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
----------	--

Context	configure service pw-template <i>pw-template-name</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	IGMP version
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3

Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service pw-template pw-template-name ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service pw-template pw-template-name ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip *named-item-64*

Synopsis	IPv4 filter policy name
Context	configure service pw-template pw-template-name ingress filter ip <i>named-item-64</i>
Tree	ip
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *named-item-64*

Synopsis	IPv6 filter policy name
Context	configure service pw-template pw-template-name ingress filter ipv6 <i>named-item-64</i>
Tree	ipv6
String length	1 to 64
Introduced	25.3.R2

Platforms 7705 SAR-1

mac *named-item-64*

Synopsis MAC filter policy name

Context **configure** [service pw-template](#) *pw-template-name* [ingress filter mac](#) *named-item-64*

Tree [mac](#)

String length 1 to 64

Introduced 25.3.R2

Introduced 25.3.R2

Platforms 7705 SAR-1

cdp boolean

Synopsis Enable Cisco discovery protocol

Context **configure** [service pw-template pw-template-name l2pt termination protocols cdp boolean](#)

Tree [cdp](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

dtp boolean

Synopsis Enable dynamic trunking protocol

Context **configure** [service pw-template pw-template-name l2pt termination protocols dtp boolean](#)

Tree [dtp](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

pagp *boolean*

Synopsis Enable port aggregation protocol

Context **configure** [service pw-template pw-template-name](#) [l2pt termination protocols pagp](#)
boolean

Tree [pagp](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

stp *boolean*

Synopsis Enable all spanning tree protocols

Context **configure** [service pw-template pw-template-name](#) [l2pt termination protocols stp](#)
boolean

Tree [stp](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

udld *boolean*

Synopsis Enable unidirectional link detection

Context **configure** [service pw-template pw-template-name](#) [l2pt termination protocols udld](#)
boolean

Tree [udld](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

vtp *boolean*

Synopsis Enable virtual trunk protocol

Context **configure** [service pw-template pw-template-name](#) [l2pt termination protocols vtp](#)
boolean

Tree	vtp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu *number*

Synopsis	MTU the SDP can transmit
Context	configure service pw-template <i>pw-template-name</i> path-mtu <i>number</i>
Tree	path-mtu
Description	<p>This command configures the path MTU that the SDP can transmit.</p> <p>When an SDP created using the PW template is in use by a service, the path MTU cannot be modified.</p> <p>When not configured, the path MTU is derived from the network interface IP MTU.</p>
Range	576 to 9782
Introduced	25.3.R2
Platforms	7705 SAR-1

provisioned-sdp *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Provisioned SDP type
Context	configure service pw-template <i>pw-template-name</i> provisioned-sdp <i>keyword</i>
Tree	provisioned-sdp
Options	use, prefer
Introduced	25.3.R2
Platforms	7705 SAR-1

pw-template-id *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PW template ID
Context	configure service pw-template <i>pw-template-name</i> pw-template-id <i>number</i>
Tree	pw-template-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-exclude [\[group-name\]](#) *reference*

Synopsis	Add a list entry for sdp-exclude
Context	configure service pw-template <i>pw-template-name</i> sdp-exclude <i>reference</i>
Tree	sdp-exclude
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *reference*

Synopsis	SDP group name
Context	configure service pw-template <i>pw-template-name</i> sdp-exclude <i>reference</i>
Tree	sdp-exclude
Reference	configure service sdp-group group-name <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-include [\[group-name\]](#) *reference*

Synopsis	Add a list entry for sdp-include
Context	configure service pw-template <i>pw-template-name</i> sdp-include <i>reference</i>
Tree	sdp-include
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *reference*

Synopsis	SDP group name
Context	configure service pw-template <i>pw-template-name</i> sdp-include <i>reference</i>
Tree	sdp-include

stp

Synopsis Enter the **stp** context

Context **configure** **service** **pw-template** *pw-template-name* **stp**

Tree **stp**

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of STP

Context **configure** **service** **pw-template** *pw-template-name* **stp** **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Introduced 25.3.R2

Platforms 7705 SAR-1

auto-edge *boolean*

Synopsis Enable automatic detection of edge port characteristics

Context **configure** **service** **pw-template** *pw-template-name* **stp** **auto-edge** *boolean*

Tree **auto-edge**

Description When configured to **true**, the router automatically detects the edge port characteristics of the SAP or spoke SDP. The STP concludes there is no bridge behind the spoke SDP,

the OPER_EDGE variable is dynamically set to **true**. If a BPDU is received, the OPER_EDGE variable is dynamically set to **false**.

When configured to **false**, the router disables automatic detection.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	configure service pw-template pw-template-name stp edge-port boolean
Tree	edge-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service pw-template pw-template-name stp link-type keyword
Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	25.3.R2
Platforms	7705 SAR-1

path-cost *number*

Synopsis	Configure path-cost
Context	configure service pw-template pw-template-name stp path-cost number
Tree	path-cost
Range	1 to 200000000
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Configure STP priority
Context	configure service pw-template <i>pw-template-name</i> stp priority <i>number</i>
Tree	priority
Range	0 to 255
Default	128
Introduced	25.3.R2
Platforms	7705 SAR-1

root-guard *boolean*

Synopsis	Enable/disable STP root-guard
Context	configure service pw-template <i>pw-template-name</i> stp root-guard <i>boolean</i>
Tree	root-guard
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-type *keyword*

Synopsis	Virtual circuit type associated with the SDP bind
Context	configure service pw-template <i>pw-template-name</i> vc-type <i>keyword</i>
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-vc-tag *number*

Synopsis	VLAN VC tag
Context	configure service pw-template <i>pw-template-name</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094

Introduced	25.3.R2
Platforms	7705 SAR-1

sdp [[sdp-id](#)] *number*

Synopsis	Enter the sdp list instance
Context	configure service sdp <i>number</i>
Tree	sdp
Introduced	25.3.R2
Platforms	7705 SAR-1

[sdp-id] *number*

Synopsis	Service Destination Point (SDP) ID
Context	configure service sdp <i>number</i>
Tree	sdp
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Accounting policy associated with an SDP
Context	configure service sdp <i>number</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Description	This command associates an accounting policy with an SDP. When unconfigured, there is no accounting policy applied to the SDP.
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SDP
----------	---------------------------------

Context	configure service sdp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-mtu-override *boolean*

Synopsis	Override the advertised VC-type MTU using the SDP ID
Context	configure service sdp <i>number</i> adv-mtu-override <i>boolean</i>
Tree	adv-mtu-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-fragmentation *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	configure service sdp <i>number</i> allow-fragmentation <i>boolean</i>
Tree	allow-fragmentation
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-tunnel *boolean*

Synopsis	Allow use of BGP route tunnels to reach far-end nodes
Context	configure service sdp <i>number</i> bgp-tunnel <i>boolean</i>
Tree	bgp-tunnel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

booking-factor *number*

Synopsis	Percentage of SDP max available bandwidth for VLL CAC
Context	configure <i>service sdp number booking-factor number</i>
Tree	<i>booking-factor</i>
Range	0 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Collect accounting statistics for this SDP
Context	configure <i>service sdp number collect-stats boolean</i>
Tree	<i>collect-stats</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

delivery-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Delivery type used by the SDP
Context	configure <i>service sdp number delivery-type keyword</i>
Tree	<i>delivery-type</i>
Options	gre, mpls, l2tpv3, gre-eth-bridged
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>service sdp number description description</i>

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

far-end

Synopsis	Enter the far-end context
Context	configure service sdp number far-end
Tree	far-end
Description	Commands in this context configure the system IP address of the far-end destination router for the SDP that is the termination point for a service.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the far-end destination router
Context	configure service sdp number far-end ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	ip-address
Description	This command configures the system IPv4 or IPv6 address of the far-end destination router for the SDP that is the termination point for a service.
Introduced	25.3.R2
Platforms	7705 SAR-1

keep-alive

Synopsis	Enter the keep-alive context
Context	configure service sdp number keep-alive
Tree	keep-alive
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of keepalive mechanism for the SDP

Context **configure** *service sdp number keep-alive admin-state keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

hello-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Time period between SDP keepalive messages

Context **configure** *service sdp number keep-alive hello-time number*

Tree [hello-time](#)

Range 1 to 3600

Units seconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

hold-down-time *number*

Synopsis Minimum time the SDP remains in the down state

Context **configure** *service sdp number keep-alive hold-down-time number*

Tree [hold-down-time](#)

Range 0 to 3600

Units seconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

maximum-drop-count *number*

Synopsis Maximum failed request attempts when SDP is down

Context **configure** [service sdp](#) *number* [keep-alive](#) [maximum-drop-count](#) *number*

Tree [maximum-drop-count](#)

Range 1 to 5

Default 3

Introduced 25.3.R2

message-length *number*

Synopsis Length of the keepalive request messages transmitted

Context **configure** [service sdp](#) *number* [keep-alive](#) [message-length](#) *number*

Tree [message-length](#)

Range 40 to 9198

Introduced 25.3.R2

Platforms 7705 SAR-1

timeout *number*

Synopsis Time SDP waits before tearing down the session

Context **configure** [service sdp](#) *number* [keep-alive](#) [timeout](#) *number*

Tree [timeout](#)

Range 1 to 10

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR-1

ldp *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable LDP-signaled LSPs
Context	configure <i>service sdp number ldp boolean</i>
Tree	<i>ldp</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local end address of the tunnel defined by the SDP
Context	configure <i>service sdp number local-end (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	<i>local-end</i>
Description	<div>This command configures the local-end address of the following SDP encapsulation types:<ul style="list-style-type: none">IPv6 address of the termination point of an SDP of encapsulation type l2tpv3 (L2TP v3 tunnel)IPv4/IPv6 source address of an SDP of encapsulation type gre-eth-bridged (L2oGRE SDP)IPv4/IPv6 source address of an SDP of encapsulation type gre (GRE SDP)</div>
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp [*lsp-name*] *named-item-64*

Synopsis	Add a list entry for lsp
Context	configure <i>service sdp number lsp named-item-64</i>
Tree	<i>lsp</i>

Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[lsp-name] *named-item-64*

Synopsis	LSP name to associate with the SDP
Context	configure <i>service sdp number lsp named-item-64</i>
Tree	<i>lsp</i>
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	Metric used in tunnel table manager for decision making
Context	configure <i>service sdp number metric number</i>
Tree	<i>metric</i>
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

mixed-lsp-mode

Synopsis	Enable the mixed-lsp-mode context
Context	configure <i>service sdp number mixed-lsp-mode</i>
Tree	<i>mixed-lsp-mode</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

revert-time (*number* | *keyword*)

Synopsis	Delay before SDP can revert to higher priority LSP type
----------	---

Context	configure service sdp number mixed-lsp-mode revert-time (<i>number</i> <i>keyword</i>)
Tree	revert-time
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	25.3.R2
Platforms	7705 SAR-1

network-domain *reference*

Synopsis	Network domain name associated with the SDP
Context	configure service sdp number network-domain <i>reference</i>
Tree	network-domain
Reference	configure router named-item-64 network-domains network-domain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu *number*

Synopsis	Maximum Transmission Unit (MTU) the SDP can transmit
Context	configure service sdp number path-mtu <i>number</i>
Tree	path-mtu
Range	576 to 9782
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

sdp-group [[group-name](#)] *reference*

Synopsis	Add a list entry for sdp-group
Context	configure service sdp number sdp-group <i>reference</i>
Tree	sdp-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] reference

Synopsis	SDP administrative group name
Context	configure service sdp <i>number sdp-group reference</i>
Tree	sdp-group
Reference	configure service sdp-group <i>group-name named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

signaling keyword**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signaling protocol used to obtain pseudowire labels
Context	configure service sdp <i>number signaling keyword</i>
Tree	signaling
Description	<p>This command specifies the signaling protocol used to obtain the ingress and egress pseudowire labels in frames transmitted and received on the SDP. The signaling value can only be changed while the administrative status of the SDP is down. Additionally, the signaling can only be changed on an SDP if the SDP is not in use by BGP-AD or BGP-VPLS. BGP signaling can only be enabled if the SDP does not already have pseudowires signaled over it. Also, BGP signaling is not supported with mixed mode LSP SDPs.</p> <p>Note: If the tl dp option is selected as the mechanism for exchanging service labels over an MPLS or GRE SDP and the T-LDP session is automatically established, an explicit T-LDP session that is subsequently configured takes precedence over the automatic T-LDP session. However, if the explicit, manually-configured session is then removed, the system does not revert to the automatic session and the automatic session is also deleted. To address this, recreate the T-LDP session by using the admin-state command to administratively disable and then enable the SDP.</p>
Options	off, tldp, bgp
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis boolean

Synopsis	Enable Segment Routing for IS-IS
Context	configure service sdp number sr-isis <i>boolean</i>
Tree	sr-isis
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf boolean

Synopsis	Enable an MPLS SDP of LSP type OSPF Segment Routing
Context	configure service sdp number sr-ospf <i>boolean</i>
Tree	sr-ospf
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-far-end (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System address of the far-end router for the SDP
Context	configure service sdp number tunnel-far-end (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	tunnel-far-end
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-vc-etype etype-value

Synopsis	VLAN VC Ethertype
Context	configure service sdp number vlan-vc-etype <i>etype-value</i>
Tree	vlan-vc-etype

String length	5 to 6
Default	0x8100
Introduced	25.3.R2

ad-per-es-route

Synopsis	Enter the ad-per-es-route context
Context	configure service system bgp evpn ad-per-es-route
Tree	ad-per-es-route
Introduced	25.3.R2
Platforms	7705 SAR-1

extended-evi-range *boolean*

Synopsis	Reserve extended RD comm-values for AD per-ES routes
Context	configure service system bgp evpn ad-per-es-route extended-evi-range <i>boolean</i>
Tree	extended-evi-range
Description	<p>When configured to true, the system reserves the Route Distinguisher (RD) comm-values 1 to 65535 out of the type 1 RD that is used for AD per-ES routes. If ad-per-es-route route-target-type is also configured to evi-route-target-set, the system can pack the maximum number of EVI route targets in the AD per-ES routes</p> <p>When configured to false, this command only reserves comm-values 1 to 512.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-distinguisher-ip-address *ipv4-address*

Synopsis	IP address for route distinguisher for EVPN AD-ES routes
Context	configure service system bgp evpn ad-per-es-route route-distinguisher-ip-address <i>ipv4-address</i>

Tree	route-distinguisher-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

route-target-type *keyword*

Synopsis	Method for the AD per-ES routes advertisement
Context	configure service system bgp evpn ad-per-es-route route-target-type <i>keyword</i>
Tree	route-target-type
Options	evi-route-target, evi-route-target-set
Default	evi-route-target
Introduced	25.3.R2
Platforms	7705 SAR-1

ad-per-evi-routes

Synopsis	Enter the ad-per-evi-routes context
Context	configure service system bgp evpn ad-per-evi-routes
Tree	ad-per-evi-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

attribute-propagation *boolean*

Synopsis	Enable propagation of BGP path attributes
Context	configure service system bgp evpn ad-per-evi-routes attribute-propagation <i>boolean</i>
Tree	attribute-propagation
Description	<p>When configured to true, the router propagates the attributes in multi-instance Epipe services.</p> <p>When configured to false, the router disables the propagation of the attributes, including D-PATH, even if the domain-id is configured in the service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-path-selection *boolean*

Synopsis	Enable BGP path selection
Context	configure service system bgp evpn ad-per-evi-routes bgp-path-selection <i>boolean</i>
Tree	bgp-path-selection
Description	<p>When configured to true, the router compares the received EVPN VPWS AD per-EVI routes based on the BGP path attributes.</p> <p>The attribute-propagation command must be configured to true.</p> <p>When configured to false, the router does not compare the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

d-path-ignore *boolean*

Synopsis	Ignore D-PATH for BGP path selection
Context	configure service system bgp evpn ad-per-evi-routes d-path-ignore <i>boolean</i>
Tree	d-path-ignore
Description	<p>When configured to true, the router ignores the Domain PATH attribute (D-PATH) when BGP computes the best path selection for received routes.</p> <p>When configured to false, the router considers the D-PATH length and value as a tiebreaker in determining the best-path selection. In accordance with <i>draft-sr-bess-evpn-dpath</i>, the router compares the D-PATH attribute received in AD per-EVI routes with the same key (same or different RD) as follows:</p> <ul style="list-style-type: none">• Routes with the shortest D-PATH are preferred; therefore, routes not tied for the shortest D-PATH are removed. Routes without D-PATH are considered zero-length D-PATH.• Routes with the numerically lowest left-most Domain-ID are preferred; therefore, routes not tied for the numerically lowest left-most Domain-ID are removed from consideration.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-routes

Synopsis	Enter the ip-prefix-routes context
Context	configure service system bgp evpn ip-prefix-routes

Tree	ip-prefix-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-ful

Synopsis	Enter the interface-ful context
Context	configure service system bgp evpn ip-prefix-routes interface-ful
Tree	interface-ful
Description	Commands in this context configure IP prefix routes for Interface-ful (IFF) configurations.
Introduced	25.3.R2
Platforms	7705 SAR-1

attribute-uniform-propagation *boolean*

Synopsis	Enable attribute uniform propagation
Context	configure service system bgp evpn ip-prefix-routes interface-ful attribute-uniform-propagation <i>boolean</i>
Tree	attribute-uniform-propagation
Description	<p>When configured to true, the system enables the uniform propagation of BGP attributes for EVPN-IFF routes.</p> <p>When configured to false, the system re-originates the BGP path attributes when propagating EVPN-IFF routes into other inter-subnet forwarding families.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-path-selection *boolean*

Synopsis	Enable BGP path selection
Context	configure service system bgp evpn ip-prefix-routes interface-ful bgp-path-selection <i>boolean</i>
Tree	bgp-path-selection
Description	<p>When configured to true, the system enables BGP path selection for EVPN-IFF routes. The EVPN-IFF routes are ordered and selected in a similar manner as IP-VPN or EVPN-IFL routes, that is, based on the regular BGP path selection process.</p>

When configured to **false**, the system orders EVPN-IFF routes based on their {R-VPLS Ifindex, RD, Ethernet Tag}. For example, if two EVPN-IFF routes with different Route Distinguishers (RDs) are received for the same prefix on the same R-VPLS, the route with the lowest RD is selected.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

d-path-length-ignore *boolean*

Synopsis	Ignore the D-PATH length when using BGP path selection
Context	configure service system bgp evpn ip-prefix-routes interface-ful d-path-length-ignore <i>boolean</i>
Tree	d-path-length-ignore
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-leave-sync-propagation *number*

Synopsis	Multicast leave group synchronization delay
Context	configure service system bgp evpn multicast-leave-sync-propagation <i>number</i>
Tree	multicast-leave-sync-propagation
Description	<p>This command configures the additional amount of time that the system waits before removing a multicast state that was synchronized in an Ethernet Segment via Multicast Join or Leave Synch routes. This value represents a delta corresponding to the time it takes for a BGP advertisement to propagate to ES peers.</p> <p>The node triggering the route computes the maximum response time as the product of the locally configured values, Last Member Query Count and Last Member Query Interval, and adds the delta value to the maximum response time. The query count value is configured in the configure services vrpn igmp robust-count command. The query interval value is taken from the configure service vpls sap igmp-snooping query-last-member-interval or the configure service vpls spoke-sdp igmp-snooping query-last-member-interval configuration, depending on the Ethernet Segment.</p> <p>Increasing the maximum response time by this value can help minimize the churn of removing and recreating the state on the node.</p> <p>This value should be configured consistently in all ES peers.</p>
Range	0 to 300
Units	seconds

Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-auto-rd-range

Synopsis	Enter the bgp-auto-rd-range context

adv-service-mtu *number*

Synopsis Advertised service MTU value

Context **configure** [service vpls](#) *service-name* [bgp](#) *number* **adv-service-mtu** *number*

Tree [adv-service-mtu](#)

Description This command configures the MTU signaled value used in the BGP for BGP-VPLS service and in the LDP for BGP-AD service. The router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.

Range 0 to 9782

Introduced 25.3.R2

Platforms 7705 SAR-1

Introduced	25.3.R2
Platforms	7705 SAR-1

mac-duplication

Synopsis	Enter the mac-duplication context
Context	configure service vpls service-name bgp-evpn mac-duplication
Tree	mac-duplication
Description	Commands in this context configure the BGP EVPN MAC duplication command options.
Introduced	25.3.R2
Platforms	7705 SAR-1

blackhole *boolean*

Synopsis	Use duplicated MAC as a black-hole MAC
Context	configure service vpls service-name bgp-evpn mac-duplication blackhole <i>boolean</i>
Tree	blackhole
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

detect

Synopsis	Enter the detect context
Context	configure service vpls service-name bgp-evpn mac-duplication detect
Tree	detect
Description	Commands in this context monitor the number of moves of a MAC address for a period of time (window).
Introduced	25.3.R2
Platforms	7705 SAR-1

num-moves *number*

Synopsis	BGP EVPN MAC duplication detection number of moves
Context	configure service vpls service-name bgp-evpn mac-duplication detect num-moves <i>number</i>

Tree	num-moves
Range	3 to 10
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

trusted-mac-move-factor *number*

Synopsis	Trusted MAC move factor
Context	configure service vpls <i>service-name</i> bgp-evpn mac-duplication detect trusted-mac-move-factor <i>number</i>
Tree	trusted-mac-move-factor
Description	<p>This command configures the factor by which the number of moves is multiplied when detecting a MAC duplication event for trusted MACs. For example, if the number of moves is 5 and the trusted MAC move factor is 3, 5 moves, within the window, is enough to declare a non-trusted MAC as duplicate. However, 15 moves are needed to declare a trusted MAC as duplicate.</p> <p>By default the factor for a trusted MAC is the same as for a non-trusted MAC. This provides a backwards compatible solution upon upgrade of the node.</p>
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

window *number*

Synopsis	BGP EVPN MAC duplication detection window
Context	configure service vpls <i>service-name</i> bgp-evpn mac-duplication detect window <i>number</i>
Tree	window
Range	1 to 15
Units	minutes

Introduced	25.3.R2
Platforms	7705 SAR-1

retry (*number* | *keyword*)

Synopsis	BGP EVPN MAC duplication retry time
Context	configure <i>service vpls service-name</i> bgp-evpn mac-duplication retry (<i>number</i> <i>keyword</i>)
Tree	retry
Range	2 to 60
Units	minutes
Options	never
Default	9
Introduced	25.3.R2
Platforms	7705 SAR-1

trusted-mac-time *number*

Synopsis	Trusted MAC time
Context	configure <i>service vpls service-name</i> bgp-evpn mac-duplication trusted-mac-time <i>number</i>
Tree	trusted-mac-time
Description	This command configures how long a MAC address needs to stay in the FDB as type learned without being flushed or changed in its type so the MAC is declared as trusted for the MAC duplication procedures. If the MAC changes from SAP to SAP within the same VPLS service and node, the MAC does not reset its trusted MAC timer.
Range	1 to 15
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls [*bgp-instance*] *number*

Synopsis	Enter the mpls list instance
Context	configure <i>service vpls service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Description	Commands in this context configure the BGP-EVPN MPLS options.
Introduced	25.3.R2

Platforms 7705 SAR-1

[bgp-instance] number

Synopsis BGP instance

Context **configure** [service vpls](#) *service-name* [bgp-evpn mpls](#) *number*

Tree [mpls](#)

Range 1 to 2

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state keyword

Synopsis Administrative state of BGP EVPN MPLS

Context **configure** [service vpls](#) *service-name* [bgp-evpn mpls](#) *number* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

auto-bind-tunnel

Synopsis Enter the **auto-bind-tunnel** context

Context **configure** [service vpls](#) *service-name* [bgp-evpn mpls](#) *number* **auto-bind-tunnel**

Tree [auto-bind-tunnel](#)

Description Commands in this context configure automatic binding of a VPRN service using tunnels to MP-BGP peers.

Introduced 25.3.R2

Platforms 7705 SAR-1

allow-flex-algo-fallback boolean

Synopsis Enable flexible algorithm fallback

Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>allow-flex-algo-fallback</i> <i>boolean</i>
Tree	<i>allow-flex-algo-fallback</i>
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ecmp *number*

Synopsis	Maximum ECMP routes information
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>ecmp</i> <i>number</i>
Tree	<i>ecmp</i>
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-strict-tunnel-tagging *boolean*

Synopsis	Enable/disable enforcement of strict tunnel tagging
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>enforce-strict-tunnel-tagging</i> <i>boolean</i>
Tree	<i>enforce-strict-tunnel-tagging</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
----------	---------------------------------

Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>enforce-untagged-route</i> <i>keyword</i>
Tree	<i>enforce-untagged-route</i>
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p> <p>The untagged-tunnel option can be used in combination with the enforce-strict-tunnel-tagging command configured to true, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.</p> <p>When unconfigured, untagged routes can bind to tagged or untagged LSPs.</p>
Options	<i>none</i> – Untagged routes can bind to tagged or untagged LSPs <i>untagged-tunnel</i> – Untagged routes only bind to LSPs without an admin tag
Default	<i>none</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution *keyword*

Synopsis	Resolution method for tunnel selection
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution</i> <i>keyword</i>
Tree	<i>resolution</i>
Options	<i>none</i> , <i>filter</i> , <i>any</i>
Default	<i>none</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter</i>
Tree	<i>resolution-filter</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	<p>When configured to true, BGP searches the BGP LSP for the address of the BGP next hop.</p> <p>When configured to false, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter ldp <i>boolean</i>
Tree	ldp
Description	<p>When configured to true, BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.</p> <p>When configured to false, LDP tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.

	When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vpls service-name bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-isis boolean
Tree	sr-isis
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vpls service-name bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf boolean
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.

- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID.

When configured to **false**, OSPF tunneling is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-ospf3 boolean</i>
Tree	<i>sr-ospf3</i>
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop. When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-policy boolean</i>
Tree	<i>sr-policy</i>
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP-EVPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and

- a color value that matches the highest numbered color for the extended community attached to the service route

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te boolean

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp boolean

Synopsis	Allow weighted load balancing
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.</p> <p>When configured to false, this command disables weighted ECMP for next-hop tunnel selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

control-word *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable control word support
Context	configure <i>service vpls service-name bgp-evpn mpls number control-word boolean</i>
Tree	<i>control-word</i>
Description	When configured to true , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-route-tag *one-byte-value***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure <i>service vpls service-name bgp-evpn mpls number default-route-tag one-byte-value</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure <i>service vpls service-name bgp-evpn mpls number dynamic-egress-label-limit boolean</i>

Tree	dynamic-egress-label-limit
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label *boolean*

Synopsis	Allow use of entropy labels for spoke SDPs
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> entropy-label <i>boolean</i>
Tree	entropy-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evi-three-byte-auto-rt *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> evi-three-byte-auto-rt <i>boolean</i>
Tree	evi-three-byte-auto-rt
Description	<p>When configured to true, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).</p> <p>Where:</p> <ul style="list-style-type: none"> Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken

- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR-1

protected-src-mac-violation-action *keyword*

Synopsis	Relearn request for a protected MAC is received action
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	discard
Introduced	25.3.R2

Tree *advertise*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

domain-id *domain-id*

Synopsis Domain ID of received BGP route before readvertisement

Context **configure** *service vpls service-name* *bgp-evpn routes ip-prefix domain-id* *domain-id*

Tree *domain-id*

Description This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in *draft-ietf-bess-evpn-ipvpn-interworking*. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced 25.3.R2

Platforms 7705 SAR-1

include-direct-interface-host *boolean*

Synopsis	Advertise the interface host address in EVPN

arp-nd-extended-community *boolean*

Synopsis	Enable ARP/ND extended community
Context	configure service vpls service-name bgp-evpn routes mac-ip arp-nd-extended-community <i>boolean</i>
Tree	arp-nd-extended-community
Description	<p>When configured to true, the system advertises the RFC9047 ARP/ND extended community along with the MAC/IP routes advertised for local static and dynamic proxy ARP or ND entries. The system also processes the ARP/ND extended community and selects the ARP or ND entries based on the immutable flag.</p> <p>When configured to false, the system does not advertise the RFC9047 ARP/ND extended community.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

arp-nd-only-with-fdb-advertisement *boolean*

Synopsis	Advertise ARP/ND entries if local MAC is in the FDB
Context	configure service vpls service-name bgp-evpn routes mac-ip arp-nd-only-with-fdb-advertisement <i>boolean</i>
Tree	arp-nd-only-with-fdb-advertisement
Description	<p>When configured to true, the router advertises local ARP/ND entries of VPRN interfaces using this VPLS in this BGP-EVPN service when the corresponding local MAC is programmed in the FDB.</p> <p>When configured to false, the router does not advertise local ARP/ND entries.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cfm-mac *boolean*

Synopsis	Enable advertisement and withdrawal of MAC address
Context	configure service vpls service-name bgp-evpn routes mac-ip cfm-mac <i>boolean</i>

Tree	cfm-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

unknown-mac *boolean*

Synopsis	Enable advertisement of unknown MAC route in BGP
Context	configure service vpls <i>service-name</i> bgp-evpn routes mac-ip unknown-mac <i>boolean</i>
Tree	unknown-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sel-mcast

Synopsis	Enter the sel-mcast context
Context	configure service vpls <i>service-name</i> bgp-evpn routes sel-mcast
Tree	sel-mcast
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise *boolean*

Synopsis	Advertise Selective Multicast Ethernet Tag routes
Context	configure service vpls <i>service-name</i> bgp-evpn routes sel-mcast advertise <i>boolean</i>
Tree	advertise
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-aware-bundle-eth-tag *number*

Synopsis	Ethernet tag associated with VPLS service
Context	configure service vpls <i>service-name</i> bgp-evpn routes vlan-aware-bundle-eth-tag <i>number</i>

Tree	vlan-aware-bundle-eth-tag
Description	<p>This command configures the Ethernet Tag ID in the EVPN routes for control-plane interoperability mode with VLAN-aware bundle services. The configuration of a non-default value requires the previous configuration of a VLAN-aware bundle name on the service.</p> <p>When set to a non-zero value, the EVPN routes advertised for the VPLS service are advertised with this value into the Ethernet Tag ID field of the routes.</p> <p>On reception of EVPN routes with non-zero Ethernet Tag ID, BGP imports the routes based on the import route target as usual. However, the system checks the received Ethernet Tag ID field and only processes those routes whose Ethernet Tag ID matches the local VLAN-aware bundle Ethernet Tag ID.</p>
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-aware-bundle *named-item*

Synopsis	VLAN aware bundle name
Context	configure service vpls <i>service-name</i> bgp-evpn vlan-aware-bundle <i>named-item</i>
Tree	vlan-aware-bundle
Description	<p>This command configures the name that identifies a group of bundled VPLS services (broadcast domains). This name allows the user to execute show commands that are relevant to all the broadcast domains in a VLAN-aware bundle service group.</p>
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-mh-site [[site-name](#)] *named-item*

Synopsis	Enter the bgp-mh-site list instance
Context	configure service vpls <i>service-name</i> bgp-mh-site <i>named-item</i>
Tree	bgp-mh-site
Introduced	25.3.R2
Platforms	7705 SAR-1

[site-name] *named-item*

Synopsis	Name for the specific site
----------	----------------------------

Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i>
Tree	<i>bgp-mh-site</i>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

activation-timer *number*

Synopsis	Time that the local sites are in standby status, waiting for BGP updates
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> <i>activation-timer</i> <i>number</i>
Tree	<i>activation-timer</i>
Range	0 to 100
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the VPLS BGP multi-homing site
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

boot-timer *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> <i>boot-timer</i> <i>number</i>
Tree	<i>boot-timer</i>
Range	0 to 600
Units	seconds
Introduced	25.3.R2

Platforms 7705 SAR-1

failed-threshold (*number* | *keyword*)

Synopsis	Threshold for the site to be declared down
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> failed-threshold (<i>number</i> <i>keyword</i>)
Tree	<i>failed-threshold</i>
Range	1 to 1000
Options	all
Default	all
Introduced	25.3.R2
Platforms	7705 SAR-1

id *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Site ID
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> id <i>number</i>

Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

mesh-sdp-binds

Synopsis	Specify if a mesh-sdp-binding is associated with this site
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> mesh-sdp-binds
Tree	<i>mesh-sdp-binds</i>
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR-1

min-down-timer *number*

Synopsis	Minimum downtime for BGP multi-homing site after transition from up to down
Context	configure service vpls <i>service-name</i> bgp-mh-site <i>named-item</i> min-down-timer <i>number</i>
Tree	min-down-timer
Range	0 to 100
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure service vpls <i>service-name</i> bgp-mh-site <i>named-item</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

sap *sap***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to be associated with this site
Context	configure service vpls <i>service-name</i> bgp-mh-site <i>named-item</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR-1

shg-name *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SHG name to be associated with the site
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> shg-name <i>named-item</i>
Tree	<i>shg-name</i>
String length	1 to 32
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR-1

spoke-sdp *sdp-bind-id*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SDP associated with the site
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> spoke-sdp <i>sdp-bind-id</i>
Tree	<i>spoke-sdp</i>
String length	3 to 16
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-vpls

Synopsis	Enable the bgp-vpls context
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-vpls</i>
Tree	<i>bgp-vpls</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP-VPLS instance
Context	configure service vpls <i>service-name</i> bgp-vpls admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-ve-id *number*

Synopsis	Maximum vpls-edge id for BGP-VPLS
Context	configure service vpls <i>service-name</i> bgp-vpls maximum-ve-id <i>number</i>
Tree	maximum-ve-id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

ve

Synopsis	Enter the ve context
Context	configure service vpls <i>service-name</i> bgp-vpls ve
Tree	ve
Introduced	25.3.R2
Platforms	7705 SAR-1

id *number*

Synopsis	VPLS edge ID
Context	configure service vpls <i>service-name</i> bgp-vpls ve id <i>number</i>
Tree	id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

name *named-item*

Synopsis	VPLS Edge instance name
Context	configure service vpls <i>service-name</i> bgp-vpls ve name <i>named-item</i>
Tree	name

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect *boolean*

Synopsis	Populate automatically MAC protect list with MAC addresses learned on SDP with this endpoint
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-pinning *boolean*

Synopsis	Activate MAC address pinning on this endpoint
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this endpoint.

When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared. Packets with unknown source MAC addresses are still forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.

However, if the **configure service vpls fdb discard-unknown** command is set to **true**, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.

When unconfigured, the endpoint uses the global MAC learning limitations.

Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR-1

protected-src-mac-violation-action *keyword*

Synopsis	Action when a relearn request for a protected MAC is received on the SDP
Context	configure service vpls service-name endpoint named-item fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-standby-signaling *boolean*

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	configure service vpls service-name endpoint named-item ignore-standby-signaling <i>boolean</i>
Tree	ignore-standby-signaling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-endpoint [[mc-ep-id](#)] *number*

Synopsis	Enter the mc-endpoint list instance
Context	configure service vpls service-name endpoint named-item mc-endpoint <i>number</i>
Tree	mc-endpoint

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[mc-ep-id] *number*

Synopsis	MC-EP ID
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> mc-endpoint <i>number</i>
Tree	mc-endpoint
Description	This command configures the identifier associated with the MC-EP. The ID must be the same on both MC-EP peers.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-ep-peer

Synopsis	Enter the mc-ep-peer context
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> mc-endpoint <i>number</i> mc-ep-peer
Tree	mc-ep-peer
Introduced	25.3.R2
Platforms	7705 SAR-1

name *named-item*

Synopsis	Name of the MC-EP peer
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> mc-endpoint <i>number</i> mc-ep-peer name <i>named-item</i>
Tree	name
String length	1 to 32
Notes	The following elements are part of a choice: name or peer-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-address *reference*

Synopsis	IP address of the MC-EP peer

Tree	peer-address
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	The following elements are part of a choice: name or peer-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

revert-time (*number* | *keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> revert-time (<i>number</i> <i>keyword</i>)
Tree	revert-time
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress-standby-signaling *boolean*

Synopsis	Do not send pseudowire standby bit to TLDP peer when specified spoke SDP is selected as standby
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> suppress-standby-signaling <i>boolean</i>
Tree	suppress-standby-signaling
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR-1

discard-unknown *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	configure service vpls <i>service-name</i> fdb discard-unknown <i>boolean</i>
Tree	discard-unknown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service vpls <i>service-name</i> fdb mac-learning
Tree	mac-learning
Introduced	25.3.R2
Platforms	7705 SAR-1

aging *boolean*

Synopsis	Enable aging of MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning aging <i>boolean</i>
Tree	aging
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning learning <i>boolean</i>
Tree	learning
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

local-age-time *number*

Synopsis	Aging time for locally learned MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning local-age-time <i>number</i>
Tree	local-age-time
Description	<p>This command configures the aging time for locally learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Destination Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.</p> <p>As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time).</p>
Range	60 to 86400
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-age-time *number*

Synopsis	Aging time for remotely learned MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning remote-age-time <i>number</i>
Tree	remote-age-time
Description	<p>This command configures the aging time for remotely learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Destination Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service</p>

instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.

As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time). To reduce the amount of signaling required between switches, configure this time larger than the **local-age-time** command.

Range	60 to 86400
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-move

Synopsis	Enter the mac-move context
Context	configure service vpls <i>service-name</i> fdb mac-move
Tree	mac-move
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of MAC move
Context	configure service vpls <i>service-name</i> fdb mac-move admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-down-time *number*

Synopsis	Wait time before re-enabling disabled SAP
Context	configure service vpls <i>service-name</i> fdb mac-move hold-down-time <i>number</i>
Tree	hold-down-time
Range	0 to 600
Units	seconds

Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

move-frequency *number*

Synopsis	Maximum rate MACs can be re-learned in the VPLS service
Context	configure service vpls <i>service-name</i> fdb mac-move move-frequency <i>number</i>
Tree	move-frequency
Range	1 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

primary-cumulative-factor *number*

Synopsis	Factor for MAC-relearn periods for MAC-relearn rate
Context	configure service vpls <i>service-name</i> fdb mac-move primary-cumulative-factor <i>number</i>
Tree	primary-cumulative-factor
Range	3 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-count (*number* | *keyword*)

Synopsis	Number of retries for re-enabling the SAP or SDP
Context	configure service vpls <i>service-name</i> fdb mac-move retry-count (<i>number</i> <i>keyword</i>)
Tree	retry-count
Range	1 to 255
Options	unlimited
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

sap [[sap-id](#)] *reference*

Synopsis	Enter the sap list instance
Context	configure service vpls <i>service-name</i> fdb mac-move sap <i>reference</i>

sap *reference*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	SAP associated with this MAC

Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero sap reference</i>
Tree	sap
Reference	configure service vpls <i>service-name</i> sap sap
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR-1

spoke-sdp *reference*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Spoke SDP bind associated with this MAC
Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero spoke-sdp reference</i>
Tree	spoke-sdp
Reference	configure service vpls <i>service-name</i> spoke-sdp sdp-bind-id
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR-1

table

Synopsis	Enter the table context
Context	configure service vpls <i>service-name</i> fdb table
Tree	table
Introduced	25.3.R2
Platforms	7705 SAR-1

high-wmark *number*

Synopsis	High watermark for the FDB table
Context	configure service vpls <i>service-name</i> fdb table high-wmark <i>number</i>

Tree	high-wmark
Range	0 to 100
Default	95
Introduced	25.3.R2
Platforms	7705 SAR-1

low-wmark *number*

Synopsis	Low watermark for the FDB table
Context	configure service vpls <i>service-name</i> fdb table low-wmark <i>number</i>
Tree	low-wmark
Range	0 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

size *number*

Synopsis	Maximum MAC entries in the FDB
Context	configure service vpls <i>service-name</i> fdb table size <i>number</i>
Tree	size
Range	1 to 511999
Default	250
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls <i>service-name</i> igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of snooping
Context	configure service vpls <i>service-name</i> igmp-snooping admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	1 to 65535
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR-1

query-source-address (*keyword* | *ipv4-address*)

Synopsis	Source address for IGMP queries
Context	configure service vpls <i>service-name</i> igmp-snooping query-source-address (<i>keyword</i> <i>ipv4-address</i>)
Tree	query-source-address
Options	system
Default	system
Introduced	25.3.R2
Platforms	7705 SAR-1

report-source-address *ipv4-address*

Synopsis	Source IP address used when generating IGMP reports
----------	---

Context	configure service vpls service-name igmp-snooping report-source-address <i>ipv4-address</i>
Tree	report-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls service-name igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	1 to 255
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-l2vpn-mtu-mismatch *boolean*

Synopsis	Ignore the L2 VPN MTU mismatch with local service MTU
Context	configure service vpls service-name ignore-l2vpn-mtu-mismatch <i>boolean</i>
Tree	ignore-l2vpn-mtu-mismatch
Description	<p>When configured to true, the router ignores the value of the Layer 2 MTU in the Layer 2 Info Extended Community received in a BGP update message or the value of the MTU interface parameter received in an LDP label mapping message against the local service MTU or locally signaled MTU. It may, therefore, bring up the VPLS service regardless of any MTU mismatch.</p> <p>When configured to false, an MTU mismatch prevents the system from bringing up a VPLS service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

isis-policy

Synopsis	Enter the isis-policy context
Context	configure service vpls service-name isid-policy
Tree	isid-policy

Introduced 25.3.R2
Platforms 7705 SAR-1

entry [*range-entry-id*] *number*

Synopsis Enter the **entry** list instance
Context **configure** *service vpls service-name isid-policy entry number*
Tree *entry*
Introduced 25.3.R2
Platforms 7705 SAR-1

[range-entry-id] *number*

Synopsis ISID policy entry ID
Context **configure** *service vpls service-name isid-policy entry number*
Tree *entry*
Range 1 to 8191
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

advertise-local *boolean*

Synopsis Advertise locally-defined I-VPLS ISIDs or static ISIDs
Context **configure** *service vpls service-name isid-policy entry number advertise-local boolean*
Tree *advertise-local*
Default true
Introduced 25.3.R2
Platforms 7705 SAR-1

range

Synopsis Enter the **range** context
Context **configure** *service vpls service-name isid-policy entry number range*
Tree *range*

Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the ISID range
Context	configure <i>service vpls service-name isid-policy entry number range end number</i>
Tree	<i>end</i>
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

Synopsis	Lower bound of the ISID range
Context	configure <i>service vpls service-name isid-policy entry number range start number</i>
Tree	<i>start</i>
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

use-def-mcast boolean

Synopsis	Use default multicast tree to propagate ISIS range
Context	configure <i>service vpls service-name isid-policy entry number use-def-mcast boolean</i>
Tree	<i>use-def-mcast</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

m-vpls boolean

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Specify whether this is a management VPLS
Context	configure service vpls <i>service-name</i> m-vpls <i>boolean</i>
Tree	m-vpls
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-flush

Synopsis	Enter the mac-flush context
Context	configure service vpls <i>service-name</i> mac-flush
Tree	mac-flush
Introduced	25.3.R2
Platforms	7705 SAR-1

tldp

Synopsis	Enter the tldp context
Context	configure service vpls <i>service-name</i> mac-flush tldp
Tree	tldp
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate *boolean*

Synopsis	Propagate MAC flush messages received from the T-LDP
Context	configure service vpls <i>service-name</i> mac-flush tldp propagate <i>boolean</i>
Tree	propagate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send-on-failure *boolean*

Synopsis	Send MAC withdraw message on SAP/Spoke-SDP failure
----------	--

Context	configure service vpls <i>service-name</i> mac-flush tldp send-on-failure <i>boolean</i>
Tree	send-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-protect

Synopsis	Enter the mac-protect context
Context	configure service vpls <i>service-name</i> mac-protect
Tree	mac-protect
Introduced	25.3.R2
Platforms	7705 SAR-1

mac [**mac-address**] *mac-address*

Synopsis	Add a list entry for mac
Context	configure service vpls <i>service-name</i> mac-protect mac <i>mac-address</i>
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR-1

[**mac-address**] *mac-address*

Synopsis	Protected MAC address
Context	configure service vpls <i>service-name</i> mac-protect mac <i>mac-address</i>
Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-ipv6-snooping-scope *keyword*

Synopsis	IPv6 multicast snooping scope
Context	configure service vpls <i>service-name</i> mcast-ipv6-snooping-scope <i>keyword</i>

Tree	mcast-ipv6-snooping-scope
Options	sg-based, mac-based
Default	mac-based
Introduced	25.3.R2
Platforms	7705 SAR-1

mcr-default-gtw

Synopsis	Enter the mcr-default-gtw context
Context	configure service vpls <i>service-name</i> mcr-default-gtw
Tree	mcr-default-gtw
Introduced	25.3.R2
Platforms	7705 SAR-1

ip *ipv4-unicast-address*

Synopsis	Multi-chassis ring default gateway IP address
Context	configure service vpls <i>service-name</i> mcr-default-gtw ip <i>ipv4-unicast-address</i>
Tree	ip
Introduced	25.3.R2
Platforms	7705 SAR-1

mac *mac-address*

Synopsis	Multi-chassis ring default gateway MAC address
Context	configure service vpls <i>service-name</i> mcr-default-gtw mac <i>mac-address</i>
Tree	mac
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	7705 SAR-1

mesh-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the mesh-sdp list instance
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i>

Tree	mesh-sdp
Introduced	25.3.R2
Platforms	7705 SAR-1

[sdp-bind-id] *sdp-bind-id*

Synopsis	SDP binding ID
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i>
Tree	mesh-sdp
String length	3 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	Policy to collect accounting statistics
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-service-mtu *number*

Synopsis	Advertise service MTU value
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id</i> adv-service-mtu <i>number</i>
Tree	<i>adv-service-mtu</i>
Description	<p>This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP. The router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.</p> <p>This command cannot be configured on a spoke-SDP that is bound to an SDP with the adv-mtu-override command.</p>
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR-1

collect-stats *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id</i> collect-stats <i>boolean</i>
Tree	<i>collect-stats</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

control-word *boolean*

Synopsis	Use the control word as preferred
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id</i> control-word <i>boolean</i>
Tree	<i>control-word</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
----------	------------------

Context	configure <i>service vpls</i> <i>service-name mesh-sdp</i> <i>sdp-bind-id description</i> <i>description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp

Synopsis	Enter the dhcp context
Context	configure <i>service vpls</i> <i>service-name mesh-sdp</i> <i>sdp-bind-id dhcp</i>
Tree	<i>dhcp</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>service vpls</i> <i>service-name mesh-sdp</i> <i>sdp-bind-id dhcp description</i> <i>description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

snoop *boolean*

Synopsis	Allow DHCP snooping of DHCP messages on the SAP or SDP
Context	configure <i>service vpls</i> <i>service-name mesh-sdp</i> <i>sdp-bind-id dhcp snoop</i> <i>boolean</i>
Tree	<i>snoop</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
----------	---------------------------------

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

mfib-allowed-mda-destinations

Synopsis	Enter the mfib-allowed-mda-destinations context
----------	--

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress mfib-allowed-mda-destinations
Tree	mfib-allowed-mda-destinations
Introduced	25.3.R2
Platforms	7705 SAR-1

mda [[mda-id](#)] *slot-mda*

Synopsis	Add a list entry for mda
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress mfib-allowed-mda-destinations mda <i>slot-mda</i>
Tree	mda
Introduced	25.3.R2
Platforms	7705 SAR-1

[mda-id] *slot-mda*

Synopsis	MFIB allowed MDA destination
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress mfib-allowed-mda-destinations mda <i>slot-mda</i>
Tree	mda
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

network

Synopsis	Enter the network context
----------	----------------------------------

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Network policy ID
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress qos network policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress qos network port-redirect-group
Tree	port-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

group-name *reference*

Synopsis	Name of the egress port queue group
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> egress qos network port-redirect-group group-name <i>reference</i>
Tree	group-name
Reference	configure qos queue-group-templates egress queue-group <i>named-item</i>
Introduced	25.3.R2

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR-1

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR-1

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference <i>ma-admin-name</i> reference <i>mep-id</i> <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm
Introduced	25.3.R2
Platforms	7705 SAR-1

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference <i>ma-admin-name</i> reference <i>mep-id</i> <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference <i>ma-admin-name</i> reference <i>mep-id</i> <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	25.3.R2
Platforms	7705 SAR-1

fdb

Synopsis	Enter the fdb context
----------	------------------------------

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect *boolean*

Synopsis	Enable automatic population of the MAC protect list
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	configure service mac-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-pinning *boolean*

Synopsis	MAC address pinning in active status
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

protected-src-mac-violation-action *keyword*

Synopsis	Action to take whenever a relearn request for a protected MAC is received
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR-1

force-vc-forwarding *keyword*

Synopsis	VC forwarding action
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-label

Synopsis	Enable the hash-label context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash label" section of the <i>7705 SAR Gen 2 MPLS Guide</i> .
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> hash-label signal-capability
Tree	signal-capability
Description	<p>When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.</p> <p>The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping import-policy <i>reference</i>
Tree	import-policy

Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-group-sources *number*

Synopsis	Maximum group source combinations
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-sources *number*

Synopsis	Maximum sources that are allowed per group
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR-1

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR-1

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

send-queries *boolean*

Synopsis	Generate IGMP general queries
----------	-------------------------------

Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

group [group-address] ipv4-multicast-address

Synopsis	Enter the group list instance
Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-address] ipv4-multicast-address

Synopsis	Group address of static IGMP multicast channel
Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	IGMP protocol version
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping version <i>keyword</i>
Tree	version

Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress filter ipv6 <i>reference</i>
Tree	ipv6

Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

network

Synopsis	Enter the network context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR-1

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group
Tree	fp-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group <i>group-name</i> <i>reference</i>
Tree	group-name
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

instance *number*

Synopsis	Instance of FP ingress queue group for the SDP binding
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group instance <i>number</i>
Tree	instance
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Network policy ID
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress vc-label <i>number</i>
Tree	vc-label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping
Tree	mld-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options <i>policy-statement</i> <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2

Platforms 7705 SAR-1

mrouter-port *boolean*

Synopsis Operate port as a multicast router port

Context **configure** [service vpls service-name mesh-sdp sdp-bind-id mld-snooping mrouter-port](#)
boolean

Tree [mrouter-port](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** [service vpls service-name mesh-sdp sdp-bind-id mld-snooping query-interval](#)
number

Tree [query-interval](#)

Range 2 to 1024

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** [service vpls service-name mesh-sdp sdp-bind-id mld-snooping query-last-member-interval](#) *number*

Tree [query-last-member-interval](#)

Range 1 to 50

Units deciseconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

send-queries *boolean*

Synopsis	Generate IGMP general queries
----------	-------------------------------

Context	configure service vpls service-name mesh-sdp sdp-bind-id mld-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vpls service-name mesh-sdp sdp-bind-id mld-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

group [group-address] ipv6-multicast-address

Synopsis	Enter the group list instance
Context	configure service vpls service-name mesh-sdp sdp-bind-id mld-snooping static group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-address] ipv6-multicast-address

Synopsis	Group address of multicast channel
Context	configure service vpls service-name mesh-sdp sdp-bind-id mld-snooping static group <i>ipv6-multicast-address</i>
Tree	group
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping <i>static group</i> <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping <i>static group</i> <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping <i>static group</i> <i>ipv6-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping <i>version</i> <i>keyword</i>
Tree	version

Options	1, 2
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> vc-type <i>keyword</i>
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	25.3.R2
Platforms	7705 SAR-1

mfib

Synopsis	Enter the mfib context
Context	configure service vpls <i>service-name</i> mfib
Tree	mfib
Introduced	25.3.R2
Platforms	7705 SAR-1

table

Synopsis	Enter the table context
Context	configure service vpls <i>service-name</i> mfib table
Tree	table
Introduced	25.3.R2
Platforms	7705 SAR-1

high-wmark *number*

Synopsis	High watermark for the MFIB table
Context	configure service vpls <i>service-name</i> mfib table high-wmark <i>number</i>
Tree	high-wmark
Range	0 to 100
Default	95
Introduced	25.3.R2
Platforms	7705 SAR-1

low-wmark *number*

Synopsis	Low watermark for the MFIB table
Context	configure service vpls <i>service-name</i> mfib table low-wmark <i>number</i>
Tree	low-wmark
Range	0 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

size *number*

Synopsis	Maximum SG entries in the MFIB
Context	configure service vpls <i>service-name</i> mfib table size <i>number</i>
Tree	size
Range	1 to 40959
Introduced	25.3.R2

Platforms 7705 SAR-1

mld-snooping

Synopsis Enter the **mld-snooping** context

Context **configure** [service vpls service-name mld-snooping](#)

Tree [mld-snooping](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of snooping

Context **configure** [service vpls service-name mld-snooping admin-state keyword](#)

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** [service vpls service-name mld-snooping query-interval number](#)

Tree [query-interval](#)

Range 1 to 65535

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR-1

query-source-address (*keyword* | *ipv6-address*)

Synopsis Source IP address used in MLD queries

Context **configure** [service vpls service-name mld-snooping query-source-address \(keyword | ipv6-address\)](#)

Tree	query-source-address
Options	system
Default	system
Introduced	25.3.R2
Platforms	7705 SAR-1

report-source-address *ipv6-address*

Synopsis	Source IP address used when generating MLD reports
Context	configure service vpls <i>service-name</i> mld-snooping report-source-address <i>ipv6-address</i>
Tree	report-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	1 to 255
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-arp

Synopsis	Enable the proxy-arp context
Context	configure service vpls <i>service-name</i> proxy-arp
Tree	proxy-arp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the proxy
----------	-----------------------------------

Context	configure service vpls service-name proxy-arp admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

age-time (*number* | *keyword*)

Synopsis	Aging timer for proxy entries, where entries are flushed upon timer expiry
Context	configure service vpls service-name proxy-arp age-time (<i>number</i> <i>keyword</i>)
Tree	age-time
Range	60 to 86400
Units	seconds
Options	never
Default	never
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-detect

Synopsis	Enter the duplicate-detect context
Context	configure service vpls service-name proxy-arp duplicate-detect
Tree	duplicate-detect

Platforms	7705 SAR-1

received-gratuitous-arp *boolean*

Synopsis	Allow GARP requests or replies to flood the service
Context	configure service vpls <i>service-name</i> proxy-arp flood received-gratuitous-arp <i>boolean</i>
Tree	received-gratuitous-arp
Description	<p>When configured to true, the system floods GARP requests and replies received on a SAP (or SDP-bind) to the service flood-list (which includes EVPN destinations and other SAPs and SDP-binds).</p> <p>The GARPs impacted by this command are identified by the sender IP address being equal to the target IP address and the MAC DA that is broadcast.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

received-unknown-arp-req *boolean*

Synopsis	Allow unknown ARP requests to flood the service
Context	configure service vpls <i>service-name</i> proxy-arp flood received-unknown-arp-req <i>boolean</i>
Tree	received-unknown-arp-req
Description	<p>When configured to true, the unknown ARP requests received on a SAP (or SDP-bind) are flooded to the service flood-list (which includes EVPN destinations and other SAPs and SDP-binds).</p> <p>By default if there is no active proxy ARP entry for the requested IP address, the system floods ARP requests, including EVPN (with source squelching).</p>

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

process-arp-probes *boolean*

Synopsis	Enable replies to DAD ARP probes
Context	configure service vpls service-name proxy-arp process-arp-probes <i>boolean</i>
Tree	process-arp-probes
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

restrict-non-configured-ip-address

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the restrict-non-configured-ip-address context
Context	configure service vpls service-name proxy-arp restrict-non-configured-ip-address
Tree	restrict-non-configured-ip-address
Description	Commands in this context configure whether all the configured dynamic IP address entries are considered the only authorized entries in the proxy ARP or ND table. ARP or ND packets coming from a unauthorized sender IP are dropped. Therefore, unauthorized IP addresses are not learned in the proxy ARP or ND table, and ARP requests or neighbor solicitations (NS) coming from a unauthorized sender IP are not replied (unless the sponge-mac command option is configured).
Introduced	25.3.R2
Platforms	7705 SAR-1

sponge-mac *mac-unicast-address-no-zero*

Synopsis	Sponge MAC used to reply to unauthorized requests
Context	configure service vpls service-name proxy-arp restrict-non-configured-ip-address sponge-mac mac-unicast-address-no-zero
Tree	sponge-mac

Description	<p>This command configures the system to ignore ARP requests or neighbor solicitations from an unauthorized IP address. These requests are not learned in the proxy ARP or ND table (when the restrict-non-configured-ip-address command is configured), and the system replies with the configured sponge MAC address. Any IP address that is not configured as proxy ARP, ND dynamic ARP, or neighbor IP address is considered unauthorized and there is no reply.</p> <p>The configured sponge MAC address is not installed in the FDB or advertised in EVPN. If needed, the sponge MAC address can be configured as a static MAC in the same service in the node or a remote node.</p> <p>This command supersedes the operation of the restrict-non-configured-ip-address command for replies to ARP requests or neighbor solicitation:</p> <ul style="list-style-type: none"> • If only restrict-non-configured-ip-address is configured, all ARP or ND packets from unauthorized IPs are dropped. • If restrict-non-configured-ip-address sponge-mac is configured, ARP or ND packets from unauthorized IPs are dropped except for ARP requests or neighbor solicitation messages, to which the system replies with the configured sponge MAC address.
Introduced	25.3.R2
Platforms	7705 SAR-1

send-refresh (*number* | *keyword*)

Synopsis	Time at which to send a refresh message

advertise-neighbor-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertisement type of static or dynamic entries in EVPN
Context	configure <i>service vpls service-name proxy-nd evpn advertise-neighbor-type keyword</i>
Tree	<i>advertise-neighbor-type</i>
Description	<p>This command enables the advertisement of static or dynamic entries that are learned as host, router, or host and router (only one option is possible in a specified service). It also determines the R flag (host or router) when sending Neighbor Advertisement (NA) messages for existing EVPN entries in the proxy-ND table.</p> <p>The router-host command option is only possible when the ARP/ND extended community is advertised along with the MAC/IP routes. It determines that both host and router (dynamic and static) entries are advertised in MAC/IP routes, with an indication whether the entry is host or router in the R flag. These EVPN entries are installed as host or router entries depending on the R flag of the route, and NA messages for them are sent with the proper host or router indication.</p>
Options	router, host, router-host
Default	router

Introduced	25.3.R2
Platforms	7705 SAR-1

Synopsis	Enable the routed-vpls context
Context	configure service vpls <i>service-name</i> routed-vpls
Tree	routed-vpls
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-mpls-ecmp *boolean*

Synopsis	Enable ECMP behavior on R-VPLS services
Context	configure service vpls <i>service-name</i> routed-vpls evpn-mpls-ecmp <i>boolean</i>
Tree	evpn-mpls-ecmp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast

Synopsis	Enter the multicast context
----------	------------------------------------

Context	configure service vpls <i>service-name</i> routed-vpls multicast
Tree	multicast
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vpls <i>service-name</i> routed-vpls multicast ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vpls <i>service-name</i> routed-vpls multicast ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>service-name</i> routed-vpls multicast ipv6 mld-snooping
Tree	mld-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

mrouter-port *boolean*

Synopsis	Operate VPLS L3 interface as a multicast router port
Context	configure service vpls <i>service-name</i> routed-vpls multicast ipv6 mld-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false

Introduced 25.3.R2
Platforms 7705 SAR-1

sap [*sap-id*] *sap*

Synopsis Enter the **sap** list instance
Context **configure** *service vpls service-name sap sap*
Tree *sap*
Introduced 25.3.R2
Platforms 7705 SAR-1

[sap-id] *sap*

Synopsis SAP identifier
Context **configure** *service vpls service-name sap sap*
Tree *sap*
String length 1 to 45
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

accounting-policy *reference*

Synopsis Accounting policy
Context **configure** *service vpls service-name sap sap accounting-policy reference*
Tree *accounting-policy*
Reference **configure** *log accounting-policy number*
Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the SAP
Context **configure** *service vpls service-name sap sap admin-state keyword*
Tree *admin-state*

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

arp-reply-agent *keyword*

Synopsis	Enable arp-reply-agent function
Context	configure service vpls <i>service-name</i> sap <i>sap</i> arp-reply-agent <i>keyword</i>
Tree	arp-reply-agent
Options	true, with-subscr-ident
Introduced	25.3.R2
Platforms	7705 SAR-1

bandwidth *number*

Synopsis	SAP bandwidth
Context	configure service vpls <i>service-name</i> sap <i>sap</i> bandwidth <i>number</i>
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-vpls-mh-veid *number*

Synopsis	BGP-VPLS multi-homing VE-ID
Context	configure service vpls <i>service-name</i> sap <i>sap</i> bgp-vpls-mh-veid <i>number</i>
Tree	bgp-vpls-mh-veid
Description	<p>This command specifies a VE ID that is configured on SAPs that are part of an EVPN single-active Ethernet Segment. The configuration of this command allows the advertisement of L2VPN routes that indicate the state of multi-homed SAPs to the remote BGP-VPLS PEs, which can trigger a MAC flush operation on the service to avoid traffic from being blackholed when a failure occurs in the active PE.</p> <p>When unconfigured from the SAP, L2VPN routes are withdrawn, which causes MAC flush processing on the remote BGP-VPLS.</p>
Range	1 to 65535

Introduced 25.3.R2
Platforms 7705 SAR-1

bpdu-translation *keyword*

Synopsis Bpdu translation on this SAP
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* **bpdu-translation** *keyword*
Tree [bpdu-translation](#)
Options auto, pvst, stp, pvst-rw, auto-rw
Introduced 25.3.R2
Platforms 7705 SAR-1

collect-stats *boolean*

Synopsis Collect accounting statistics
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* **collect-stats** *boolean*
Tree [collect-stats](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

description *long-description*

Synopsis Text description
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* **description** *long-description*
Tree [description](#)
String length 1 to 160
Introduced 25.3.R2

lease-populate

Synopsis Enter the **lease-populate** context
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [dhcp](#) [lease-populate](#)
Tree [lease-populate](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

max-leases *number*

Synopsis Maximum number of DHCPv4 leases
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [dhcp](#) [lease-populate](#) [max-leases](#) *number*
Tree [max-leases](#)
Range 0 to 131071

Introduced	25.3.R2
Platforms	7705 SAR-1

option-82

Synopsis	Enter the option-82 context
Context	configure service vpls service-name sap sap dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	25.3.R2
Platforms	7705 SAR-1

action keyword

Synopsis	Action to take with received DHCP Option 82
Context	configure service vpls service-name sap sap dhcp option-82 action keyword
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	25.3.R2
Platforms	7705 SAR-1

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service vpls service-name sap sap dhcp option-82 circuit-id
Tree	circuit-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service vpls service-name sap sap dhcp option-82 circuit-id ascii-tuple

Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex-string *hex-string*

Synopsis	User-defined hexadecimal value of the option
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 circuit-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 66
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the circuit ID
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.

	When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-id

Synopsis	Enter the remote-id context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 remote-id ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 32
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex-string *hex-string*

Synopsis	Option as a hexadecimal string
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 remote-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 66
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .

Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Use the MAC address for the remote ID
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 <i>remote-id</i> mac
Tree	mac
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the remote ID
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 <i>remote-id</i> none
Tree	none
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i>

Tree	client-mac-address
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service vpls <i>service-name</i> sap sap dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service vpls <i>service-name</i> sap sap dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	configure service vpls <i>service-name</i> sap sap dhcp option-82 vendor-specific-option string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp proxy-server
Tree	proxy-server
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as DHCP server address in SAP context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp proxy-server emulated-server <i>ipv4-unicast-address</i>
Tree	emulated-server
Introduced	25.3.R2
Platforms	7705 SAR-1

lease-time

Synopsis	Enter the lease-time context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp proxy-server lease-time
Tree	lease-time
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	DHCP lease time
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp proxy-server lease-time value <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

snoop *boolean*

Synopsis	Enable DHCP snooping on the SAP
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp snoop <i>boolean</i>
Tree	snoop
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

dhcp6

Synopsis Enter the **dhcp6** context

ldra

Synopsis Enable the **ldra** context

Context **configure** [service vpls](#) *service-name* [sap](#) *sap* **dhcp6** **ldra**

Tree [ldra](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-type *keyword*

Synopsis LDRA interface type

Context **configure** [service vpls](#) *service-name* [sap](#) *sap* **dhcp6** **ldra** [interface-type](#) *keyword*

Tree [interface-type](#)

Description This command specifies the LDRA interface type.

client-facing - configure the SAP as an untrusted client-facing interface. Only DHCPv6 client messages are accepted and encapsulated in a Relay-Forward message. It is mandatory to configure an interface ID for client-facing SAPs. Relay-Forward, Relay-

Reply, and DHCPv6 server messages are silently dropped when received on a client-facing SAP.

network-facing - configure the SAP as a network-facing interface. Only Relay-Reply messages are accepted: the server message is extracted from the Relay-Reply message and forwarded in the VPLS. All other DHCPv6 message types are silently dropped when received on a network-facing SAP.

Options	client-facing, network-facing
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

options

Synopsis	Enter the options context
Context	configure service vpls service-name sap sap dhcp6 ldra options
Tree	options
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-id

Synopsis	Enable the interface-id context
Context	configure service vpls service-name sap sap dhcp6 ldra options interface-id
Tree	interface-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-tuple

Synopsis	Use an ASCII-encoded concatenated tuple
Context	configure service vpls service-name sap sap dhcp6 ldra options interface-id ascii-tuple
Tree	ascii-tuple
Description	This command specifies the use of the ASCII-encoded concatenated tuple, which consists of the system name, service ID, and SAP ID separated by " ".
Notes	The following elements are part of a mandatory choice: ascii-tuple or vlan-ascii-tuple .
Introduced	25.3.R2

Platforms 7705 SAR-1

vlan-ascii-tuple

Synopsis	Use an enhanced ASCII-encoded concatenated tuple
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp6 ldra options interface-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	This command specifies the use of the ASCII-encoded concatenated tuple enhanced with VLAN ID and dot1p bits, consisting of the system name, service ID, SAP ID, dot1p inner VLAN, and inner VLAN ID separated by " ".
Notes	The following elements are part of a mandatory choice: ascii-tuple or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-id

Synopsis	Enter the remote-id context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp6 ldra options remote-id
Tree	remote-id
Description	Commands in this context configure the Relay-Agent remote ID contents inserted by the LDRA.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Use the DHCPv6 client source MAC address
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp6 ldra options remote-id mac
Tree	mac
Description	This command sets the enterprise number field of the Relay Agent remote ID to 6527 and configures the DHCPv6 client source MAC address as six hexadecimal numbers.
Notes	The following elements are part of a choice: mac or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string*

Synopsis	User-defined ASCII string
Context	configure service vpls <i>service-name</i> sap sap dhcp6 ldra options remote-id string <i>string</i>
Tree	string
Description	This command sets the enterprise number field of the Relay-Agent remote ID to 6527 and configures the ASCII-encoded string.
String length	1 to 32
Notes	The following elements are part of a choice: mac or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .

Introduced	25.3.R2
Platforms	7705 SAR-1

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer reference percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer reference percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR rate
----------	----------

Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer <i>reference rate cir (number keyword)</i>
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number | keyword*)

Synopsis	PIR rate
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer <i>reference rate pir (number keyword)</i>
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer <i>reference stat-mode keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	25.3.R2
Platforms	7705 SAR-1

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
----------	--------------------------------------

Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference
Tree	queue
Introduced	25.3.R2
Platforms	7705 SAR-1

[queue-id] reference

Synopsis	Policer unique ID
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference
Tree	queue
Reference	configure qos sap-egress qos-policy-name queue number
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference adaptation-rule
Tree	adaptation-rule
Introduced	25.3.R2
Platforms	7705 SAR-1

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number
Tree	avg-frame-overhead
Description	<p>This command configures overrides for the average frame overhead. The overrides supersede the average frame overhead configuration under the queue.</p> <p>For a full description of this command, see the configure qos network-queue queue avg-frame-overhead and configure qos sap-egress queue avg-frame-overhead contexts.</p>
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

burst-limit (number | keyword)

Synopsis	Explicit shaping burst size for the queue
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference burst-limit (number keyword)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference drop-tail
Tree	drop-tail
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference drop-tail low
Tree	low
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs

Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> parent
Tree	parent
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue <i>reference</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos sap-egress overrides queue reference percent-rate pir <i>decimal-number</i>
Tree	pir

Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference rate cir (number keyword)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference rate pir (number keyword)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2

Platforms 7705 SAR-1

policy-name *reference*

Synopsis Policy ID to associate with SAP for mirrored service

Context **configure** [service vpls service-name sap sap egress qos sap-egress policy-name reference](#)

Tree [policy-name](#)

Reference **configure** [qos sap-egress qos-policy-name](#)

Introduced 25.3.R2

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler

Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure <i>service vpls service-name sap sap egress qos scheduler-policy overrides scheduler named-item parent</i>
Tree	<i>parent</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure <i>service vpls service-name sap sap egress qos scheduler-policy overrides scheduler named-item parent cir-weight number</i>
Tree	<i>cir-weight</i>
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> rate
Tree	rate
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais low-priority-defect keyword
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais priority number
Tree	priority
Range	0 to 7
Default	7

Introduced 25.3.R2
 Platforms 7705 SAR-1

alarm-notification

Synopsis Enter the **alarm-notification** context

Context **configure** [service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification](#)

Tree [alarm-notification](#)

Description Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.

Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.

Introduced 25.3.R2
 Platforms 7705 SAR-1

fng-alarm-time *number*

Synopsis Time that must expire before an FNG alarm is raised

Context **configure** [service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number](#)

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 25.3.R2

Introduced 25.3.R2

Platforms 7705 SAR-1

eth-test

Synopsis Enable the **eth-test** context

Context	configure <i>service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	<i>eth-test</i>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR-1

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure <i>service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</i>
Tree	<i>bit-error-threshold</i>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-pattern

Synopsis	Enter the test-pattern context
Context	configure <i>service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</i>
Tree	<i>test-pattern</i>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR-1

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure <i>service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean</i>

Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern keyword

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR-1

fault-propagation keyword

Synopsis	Fault propagation for the MEP
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number fault-propagation keyword
Tree	fault-propagation

Platforms	7705 SAR-1

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb mac-learning
Tree	mac-learning
Introduced	25.3.R2
Platforms	7705 SAR-1

aging *boolean*

Synopsis	Enable aging of MAC addresses
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb mac-learning aging <i>boolean</i>
Tree	aging
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb mac-learning learning <i>boolean</i>
Tree	learning
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-pinning *boolean*

Synopsis	Enable MAC address pinning on this SAP
----------	--

Context	configure service vpls service-name sap sap fdb mac-pinning boolean
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service vpls service-name sap sap fdb maximum-mac-addresses number
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this SAP.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service pw-template fdb discard-unknown-source command is set to true for this SAP, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the SAP uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR-1

protected-src-mac-violation-action *keyword*

Synopsis	Action to take whenever a relearn request for a protected MAC is received
Context	configure service vpls service-name sap sap fdb protected-src-mac-violation-action keyword
Tree	protected-src-mac-violation-action
Options	sap-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR-1

i-vpls-mac-flush

Synopsis	Enter the i-vpls-mac-flush context
Context	configure service vpls <i>service-name</i> sap sap i-vpls-mac-flush
Tree	i-vpls-mac-flush
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-evpn

Synopsis	Enter the bgp-evpn context
Context	configure service vpls <i>service-name</i> sap sap i-vpls-mac-flush bgp-evpn
Tree	bgp-evpn
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls <i>service-name</i> sap sap igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> sap sap igmp-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-group-sources *number*

Synopsis	Maximum group source combinations
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-sources *number*

Synopsis	Maximum sources that are allowed per group
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000

Introduced 25.3.R2
Platforms 7705 SAR-1

mrouter-port *boolean*

Synopsis Operate port as a multicast router port
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [igmp-snooping](#) [mrouter-port](#) *boolean*
Tree [mrouter-port](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [igmp-snooping](#) [query-interval](#) *number*
Tree [query-interval](#)
Range 2 to 1024
Units seconds
Default 125
Introduced 25.3.R2
Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [igmp-snooping](#) [query-last-member-interval](#) *number*
Tree [query-last-member-interval](#)
Range 1 to 50
Units deciseconds
Default 10
Introduced 25.3.R2
Platforms 7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping send-queries <i>boolean</i>

Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

group [\[group-address\]](#) *ipv4-multicast-address*

Synopsis	Enter the group list instance
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-address] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	IGMP protocol version
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping version <i>keyword</i>
Tree	version
Options	1, 2, 3

Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service vpls <i>service-name</i> sap sap ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>service-name</i> sap sap ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vpls <i>service-name</i> sap sap ingress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vpls <i>service-name</i> sap sap ingress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

match-qinq-dot1p keyword

Synopsis	Ingress match QinQ Dot1p
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos match-qinq-dot1p <i>keyword</i>
Tree	match-qinq-dot1p
Options	top, bottom
Introduced	25.3.R2
Platforms	7705 SAR-1

policer-control-policy

Synopsis	Enter the policer-control-policy context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos policer-control-policy
Tree	policer-control-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enable the overrides context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos policer-control-policy overrides
Tree	overrides
Introduced	25.3.R2

Platforms 7705 SAR-1

root

Synopsis Enter the **root** context

Context **configure** [service vpls](#) *service-name* [sap sap](#) [ingress qos policer-control-policy](#) [overrides root](#)

Tree [root](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

max-rate (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit

Context **configure** [service vpls](#) *service-name* [sap sap](#) [ingress qos policer-control-policy](#) [overrides root max-rate](#) (*number* | *keyword*)

Tree [max-rate](#)

Range 1 to 6400000000

Options max

Introduced 25.3.R2

Platforms 7705 SAR-1

priority-mbs-thresholds

Synopsis Enter the **priority-mbs-thresholds** context

Context **configure** [service vpls](#) *service-name* [sap sap](#) [ingress qos policer-control-policy](#) [overrides root priority-mbs-thresholds](#)

Tree [priority-mbs-thresholds](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

min-thresh-separation (*number* | *keyword*)

Synopsis Minimum amount of separation buffer space

Context **configure** [service vpls](#) *service-name* [sap sap](#) [ingress qos policer-control-policy](#) [overrides root priority-mbs-thresholds min-thresh-separation](#) (*number* | *keyword*)

Tree [min-thresh-separation](#)

Range	0 to 16777216
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

priority [[priority-level](#)] *number*

Synopsis	Enter the priority list instance
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

[priority-level] *number*

Synopsis	Priority level
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs-contribution (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	configure service vpls <i>service-name</i> sap <i>sap</i> ingress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>)
Tree	mbs-contribution
Range	0 to 16777216
Units	bytes
Options	auto

Introduced 25.3.R2
Platforms 7705 SAR-1

policy-name *reference*

Synopsis Policer control policy name
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [ingress qos](#) [policer-control-policy](#) [policy-name](#) *reference*

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service vpls service-name sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service vpls service-name sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

parent

Synopsis Enter the **parent** context

Context **configure** *service vpls service-name sap sap ingress qos scheduler-policy overrides scheduler named-item parent*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure service vpls <i>service-name</i> service-id <i>number</i>
Tree	service-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

service-mtu *number*

Synopsis	MTU size
Context	configure service vpls <i>service-name</i> service-mtu <i>number</i>
Tree	service-mtu
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon-group [[shg-name](#)] *named-item*

Synopsis	Enter the split-horizon-group list instance

accounting-policy *reference*

Synopsis	Policy to collect accounting statistics
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> accounting-policy <i>reference</i>
Tree	accounting-policy

Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-service-mtu *number*

Synopsis	Advertise service MTU value
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> adv-service-mtu <i>number</i>
Tree	adv-service-mtu
Description	<p>This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP. The router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.</p> <p>This command cannot be configured on a spoke-SDP that is bound to an SDP with the adv-mtu-override command.</p>
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR-1

block-on-mesh-failure *boolean*

Synopsis	Enable blocking after all SDPs are operationally down
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> block-on-mesh-failure <i>boolean</i>
Tree	block-on-mesh-failure
Default	false

Introduced 25.3.R2
Platforms 7705 SAR-1

bpdu-translation *keyword*

Synopsis BPDU format
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [bpdu-translation](#) *keyword*
Tree [bpdu-translation](#)
Options auto, pvst, stp, pvst-rw, auto-rw
Introduced 25.3.R2
Platforms 7705 SAR-1

collect-stats *boolean*

Synopsis Allow agent to collect accounting statistics
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [collect-stats](#) *boolean*
Tree [collect-stats](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

control-word *boolean*

Synopsis Use the control word as preferred
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [control-word](#) *boolean*
Tree [control-word](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR-1

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern

Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR-1

crc-tlv boolean

Synopsis	Generate a CRC checksum
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv boolean
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pattern keyword

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern keyword
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR-1

fault-propagation keyword

Synopsis	Fault propagation for the MEP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation keyword
Tree	fault-propagation

Options	use-if-status-tlv, suspend-ccm
Introduced	25.3.R2
Platforms	7705 SAR-1

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> mac-address mac-unicast-address-no-zero
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	25.3.R2
Platforms	7705 SAR-1

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect *boolean*

Synopsis	Populate automatically MAC protect list with source MAC addresses learned on SDP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	configure service mac-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

discard-unknown-source *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb discard-unknown-source <i>boolean</i>
Tree	discard-unknown-source
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

limit-mac-move *keyword*

Synopsis	MAC move
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb limit-mac-move <i>keyword</i>
Tree	limit-mac-move
Options	blockable, non-blockable
Default	blockable
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb mac-learning
Tree	mac-learning
Introduced	25.3.R2
Platforms	7705 SAR-1

aging *boolean*

Synopsis	Enable aging of MAC addresses
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb mac-learning aging <i>boolean</i>
Tree	aging
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb mac-learning learning <i>boolean</i>
Tree	learning
Default	true

Introduced	25.3.R2
Platforms	7705 SAR-1

mac-pinning *boolean*

Synopsis	MAC address pinning in active status
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this spoke SDP.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service spoke-sdp fdb discard-unknown-source command is set to true for this spoke SDP, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the spoke SDP uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR-1

protected-src-mac-violation-action *keyword*

Synopsis	Action when a relearn request for a protected MAC is received on the SDP
----------	--

Context	configure service vpls service-name spoke-sdp sdp-bind-id fdb protected-src-mac-violation-action keyword
Tree	protected-src-mac-violation-action
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR-1

force-vc-forwarding keyword

Synopsis	VC forwarding action
Context	configure service vpls service-name spoke-sdp sdp-bind-id force-vc-forwarding keyword
Tree	force-vc-forwarding
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-label

Synopsis	Enable the hash-label context
Context	configure service vpls service-name spoke-sdp sdp-bind-id hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash label" section of the <i>7705 SAR Gen 2 MPLS Guide</i> .
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR-1

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service vpls service-name spoke-sdp sdp-bind-id hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.

The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.

Introduced 25.3.R2
Platforms 7705 SAR-1

igmp-snooping

Synopsis Enter the **igmp-snooping** context
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [igmp-snooping](#)
Tree [igmp-snooping](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

fast-leave *boolean*

Synopsis Allow IGMP fast leave processing
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [igmp-snooping](#) [fast-leave](#) *boolean*
Tree [fast-leave](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

import-policy *reference*

Synopsis Import policy that filters IGMP packets
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [igmp-snooping](#) [import-policy](#) *reference*
Tree [import-policy](#)
Reference **configure** [policy-options](#) [policy-statement](#) *named-item-64*
Introduced 25.3.R2
Platforms 7705 SAR-1

maximum-number-group-sources *number*

Synopsis Maximum group source combinations

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-sources *number*

Synopsis	Maximum sources that are allowed per group
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR-1

mrrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping mrrouter-port <i>boolean</i>
Tree	mrrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR-1

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static
Tree	static

Introduced 25.3.R2
Platforms 7705 SAR-1

group [group-address] *ipv4-multicast-address*

Synopsis Enter the **group** list instance
Context **configure** *service vpls service-name spoke-sdp sdp-bind-id igmp-snooping static group*
ipv4-multicast-address
Tree *group*
Introduced 25.3.R2
Platforms 7705 SAR-1

[group-address] *ipv4-multicast-address*

Synopsis Group address of static IGMP multicast channel
Context **configure** *service vpls service-name spoke-sdp sdp-bind-id igmp-snooping static group*
ipv4-multicast-address
Tree *group*
Description This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

source [source-address] *ipv4-unicast-address*

Synopsis Add a list entry for **source**
Context **configure** *service vpls service-name spoke-sdp sdp-bind-id igmp-snooping static group*
ipv4-multicast-address *source* *ipv4-unicast-address*
Tree *source*
Notes The following elements are part of a mandatory choice: **source** or **starg**.
Introduced 25.3.R2
Platforms 7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	IGMP protocol version
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-standby-signaling *boolean*

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ignore-standby-signaling <i>boolean</i>

Tree	ignore-standby-signaling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter ipv6 <i>reference</i>
Tree	ipv6

Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

network

Synopsis	Enter the network context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR-1

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group
Tree	fp-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR-1

group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group <i>group-name</i> <i>reference</i>
Tree	group-name
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

instance *number*

Synopsis Instance of FP ingress queue group for the SDP binding
Context **configure** *service vpls service-name spoke-sdp sdp-bind-id ingress qos network fp-redirect-group instance number*
Tree *instance*
Range 1 to 65535
Introduced 25.3.R2
Platforms 7705 SAR-1

policy-name *reference*

Synopsis Network policy ID
Context **configure** *service vpls service-name spoke-sdp sdp-bind-id ingress qos network policy-name reference*
Tree *policy-name*
Reference **configure** *qos network network-policy-name*
Introduced 25.3.R2
Platforms 7705 SAR-1

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end
Context **configure** *service vpls service-name spoke-sdp sdp-bind-id ingress vc-label number*
Tree *vc-label*
Range 1 to 1048575
Introduced 25.3.R2
Platforms 7705 SAR-1

l2pt

Synopsis	Enter the l2pt context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt
Tree	l2pt
Introduced	25.3.R2
Platforms	7705 SAR-1

termination

Synopsis	Enable the termination context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination
Tree	termination
Introduced	25.3.R2
Platforms	7705 SAR-1

protocols

Synopsis	Enter the protocols context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols
Tree	protocols
Introduced	25.3.R2
Platforms	7705 SAR-1

cdp *boolean*

Synopsis	Enable Cisco discovery protocol
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols cdp <i>boolean</i>
Tree	cdp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp boolean

Synopsis	Enable dynamic trunking protocol
Context	configure service vpls service-name spoke-sdp sdp-bind-id l2pt termination protocols ntp boolean
Tree	ntp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pagp boolean

Synopsis	Enable port aggregation protocol
Context	configure service vpls service-name spoke-sdp sdp-bind-id l2pt termination protocols pagp boolean
Tree	pagp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

stp boolean

Synopsis	Enable all spanning tree protocols
Context	configure service vpls service-name spoke-sdp sdp-bind-id l2pt termination protocols stp boolean
Tree	stp
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

udld boolean

Synopsis	Enable unidirectional link detection
Context	configure service vpls service-name spoke-sdp sdp-bind-id l2pt termination protocols udld boolean
Tree	udld

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vtp *boolean*

Synopsis	Enable virtual trunk protocol
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols vtp <i>boolean</i>
Tree	vtp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping
Tree	mld-snooping
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
----------	---

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR-1

mrrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping mrrouter-port <i>boolean</i>
Tree	mrrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125

Introduced	25.3.R2
Platforms	7705 SAR-1

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2

Platforms 7705 SAR-1

router-alert-check *boolean*

Synopsis Enable IP router alert check option

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [router-alert-check](#) *boolean*

Tree [router-alert-check](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

send-queries *boolean*

Synopsis Generate IGMP general queries

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [send-queries](#) *boolean*

Tree [send-queries](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

static

Synopsis Enter the **static** context

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [static](#)

Tree [static](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

group [[group-address](#)] *ipv6-multicast-address*

Synopsis Enter the **group** list instance

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [static](#) [group](#) *ipv6-multicast-address*

Tree [group](#)

Introduced 25.3.R2
Platforms 7705 SAR-1

[group-address] *ipv6-multicast-address*

Synopsis Group address of multicast channel
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) **static** [group](#) *ipv6-multicast-address*
Tree [group](#)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

source [[source-address](#)] *ipv6-unicast-address*

Synopsis Add a list entry for **source**
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) **static** [group](#) *ipv6-multicast-address* [source](#) *ipv6-unicast-address*
Tree [source](#)
Notes The following elements are part of a mandatory choice: **source** or **starg**.
Introduced 25.3.R2
Platforms 7705 SAR-1

[source-address] *ipv6-unicast-address*

Synopsis Source IP address
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) **static** [group](#) *ipv6-multicast-address* [source](#) *ipv6-unicast-address*
Tree [source](#)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

starg

Synopsis any source address (*,G)

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping static group ipv6-multicast-address starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping version <i>keyword</i>
Tree	version
Options	1, 2
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

Synopsis	Operational group that affects state of the SDP bind
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR-1

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>

Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR-1

pw-status

Synopsis	Enter the pw-status context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> pw-status
Tree	pw-status
Introduced	25.3.R2
Platforms	7705 SAR-1

signaling *boolean*

Synopsis	Enable the use of pseudowire status signaling
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> pw-status signaling <i>boolean</i>
Tree	signaling
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the split horizon group where the spoke SDP bind belongs to
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> split-horizon-group <i>reference</i>
Tree	split-horizon-group
Reference	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

stp

Synopsis	Enter the stp context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp
Tree	stp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-edge *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp auto-edge <i>boolean</i>
Tree	auto-edge
Description	<p>When configured to true, the router automatically detects the edge port characteristics of the SAP or spoke SDP. The STP concludes there is no bridge behind the spoke SDP, the OPER_EDGE variable is dynamically set to true. If a BPDU is received, the OPER_EDGE variable is dynamically set to false.</p> <p>When configured to false, the router disables automatic detection.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp edge-port <i>boolean</i>
Tree	edge-port

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp link-type <i>keyword</i>
Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	25.3.R2
Platforms	7705 SAR-1

path-cost *number*

Synopsis	Configure path-cost
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp path-cost <i>number</i>
Tree	path-cost
Range	1 to 200000000
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

port-num *number*

Synopsis	Virtual port number
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp port-num <i>number</i>
Tree	port-num
Range	1 to 2047
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Configure STP priority
Context	configure <i>service vpls</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> stp <i>priority</i> <i>number</i>
Tree	<i>priority</i>
Range	0 to 255
Default	128
Introduced	25.3.R2
Platforms	7705 SAR-1

root-guard *boolean*

Synopsis	Enable/disable STP root-guard
Context	configure <i>service vpls</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> stp <i>root-guard</i> <i>boolean</i>
Tree	<i>root-guard</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

vc-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	configure <i>service vpls</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> vc-type <i>keyword</i>
Tree	<i>vc-type</i>
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
----------	-----------------

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	25.3.R2
Platforms	7705 SAR-1

stp

Synopsis	Enter the stp context
Context	configure service vpls <i>service-name</i> stp
Tree	stp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls <i>service-name</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

forward-delay *number*

Synopsis	Configure forward-delay
Context	configure service vpls <i>service-name</i> stp forward-delay <i>number</i>
Tree	forward-delay
Range	4 to 30
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-time *number*

Synopsis	Configure hello-time
Context	configure service vpls <i>service-name</i> stp hello-time <i>number</i>
Tree	hello-time
Range	1 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-count *number*

Synopsis	Configure BPDU transmit hold count
Context	configure service vpls <i>service-name</i> stp hold-count <i>number</i>
Tree	hold-count
Range	1 to 20
Default	6
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-age *number*

Synopsis	Configure maximum STP information age
Context	configure service vpls <i>service-name</i> stp maximum-age <i>number</i>
Tree	maximum-age
Range	6 to 40
Default	20
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Configure protocol version
Context	configure service vpls <i>service-name</i> stp mode <i>keyword</i>
Tree	mode

Options	rstp, comp-dot1w, dot1w, mstp, pmstp
Default	rstp
Introduced	25.3.R2
Platforms	7705 SAR-1

mst-instance [[mst-inst-number](#)] *number*

Synopsis	Enter the mst-instance list instance
Context	configure service vpls <i>service-name</i> stp mst-instance <i>number</i>
Tree	mst-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

[mst-inst-number] *number*

Synopsis	Multiple Spanning Tree Instance number
Context	configure service vpls <i>service-name</i> stp mst-instance <i>number</i>
Tree	mst-instance
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mst-priority *number*

Synopsis	Priority of multiple spanning tree instance
Context	configure service vpls <i>service-name</i> stp mst-instance <i>number</i> mst-priority <i>number</i>
Tree	mst-priority
Range	0 4096 8192 12288 16384 20480 24576 28672 32768 36864 40960 45056 49152 53248 57344 61440
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-range [*range*] *string*

Synopsis	Add a list entry for vlan-range
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>stp mst-instance</i> <i>number</i> <i>vlan-range</i> <i>string</i>
Tree	<i>vlan-range</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[range] *string*

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>stp mst-instance</i> <i>number</i> <i>vlan-range</i> <i>string</i>
Tree	<i>vlan-range</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mst-maximum-hops *number*

Synopsis	Maximum number of hops in an MSTP region
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>stp mst-maximum-hops</i> <i>number</i>
Tree	<i>mst-maximum-hops</i>
Range	1 to 40
Default	20
Introduced	25.3.R2
Platforms	7705 SAR-1

mst-name *named-item*

Synopsis	MST region name
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>stp mst-name</i> <i>named-item</i>
Tree	<i>mst-name</i>
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

mst-revision *number*

Synopsis	MST configuration revision
Context	configure service vpls <i>service-name</i> stp mst-revision <i>number</i>
Tree	mst-revision
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	STP bridge priority
Context	configure service vpls <i>service-name</i> stp priority <i>number</i>
Tree	priority
Range	0 to 65535
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR-1

temp-flooding *number*

Synopsis	Temporary flooding
Context	configure service vpls <i>service-name</i> temp-flooding <i>number</i>
Tree	temp-flooding
Range	3 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
----------	--------------------------------

Context	configure <i>service vpls</i> <i>service-name vpn-id</i> <i>number</i>
Tree	<i>vpn-id</i>
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn [*service-name*] *service-name*

Synopsis	Enter the vpn list instance
Context	configure <i>service vpn</i> <i>service-name</i>
Tree	<i>vpn</i>
Description	Commands in this context create or edit a VPRN service instance.
Introduced	25.3.R2
Platforms	7705 SAR-1

[service-name] *service-name*

Synopsis	Administrative service name
Context	configure <i>service vpn</i> <i>service-name</i>
Tree	<i>vpn</i>
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

aaa

Synopsis	Enter the aaa context
Context	configure <i>service vpn</i> <i>service-name aaa</i>
Tree	<i>aaa</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-servers

Synopsis	Enter the remote-servers context
Context	configure service vpn <i>service-name</i> aaa remote-servers
Tree	remote-servers
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enable the radius context
Context	configure service vpn <i>service-name</i> aaa remote-servers radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

access-algorithm *keyword*

Synopsis	Algorithm used to access the set of RADIUS servers
Context	configure service vpn <i>service-name</i> aaa remote-servers radius access-algorithm <i>keyword</i>
Tree	access-algorithm
Options	direct, round-robin
Default	direct
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting *boolean*

Synopsis	Enable RADIUS command accounting
Context	configure service vpn <i>service-name</i> aaa remote-servers radius accounting <i>boolean</i>
Tree	accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-port *number*

Synopsis	Port number on RADIUS server for accounting requests
Context	configure service vprn <i>service-name</i> aaa remote-servers radius accounting-port <i>number</i>
Tree	accounting-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the authentication server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authorization *boolean*

Synopsis	Enable RADIUS authorization
Context	configure service vprn <i>service-name</i> aaa remote-servers radius authorization <i>boolean</i>
Tree	authorization
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interactive-authentication *boolean*

Synopsis	Enable RADIUS interactive authentication
Context	configure service vprn <i>service-name</i> aaa remote-servers radius interactive-authentication <i>boolean</i>
Tree	interactive-authentication

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	UDP port number on which to contact RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius port <i>number</i>
Tree	port
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR-1

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[[index](#)] *number*

Synopsis	RADIUS server ID
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

authenticator *keyword*

Synopsis	Authenticator hash algorithm for the RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i> authenticator <i>keyword</i>
Tree	authenticator
Description	This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.
Options	md5, sm3
Default	md5
Introduced	25.3.R2
Platforms	7705 SAR-1

secret *encrypted-leaf*

Synopsis	Secret key to access the RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference*

Synopsis	TLS client profile for the RADIUS server
Context	configure service vpn <i>service-name</i> aaa remote-servers radius server <i>number</i> tls-client-profile reference
Tree	tls-client-profile
Description	This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS.
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

server-retry *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	configure service vpn <i>service-name</i> aaa remote-servers radius server-retry <i>number</i>
Tree	server-retry
Range	1 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

server-timeout *number*

Synopsis	Time to wait for a response from the RADIUS server
Context	configure service vpn <i>service-name</i> aaa remote-servers radius server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

use-default-template *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
Context	configure service vpn <i>service-name</i> aaa remote-servers radius use-default-template <i>boolean</i>
Tree	use-default-template
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tacplus

Synopsis	Enable the tacplus context
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus
Tree	tacplus
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting

Synopsis	Enable the accounting context
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus accounting
Tree	accounting
Introduced	25.3.R2
Platforms	7705 SAR-1

record-type *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus accounting record-type <i>keyword</i>
Tree	record-type
Options	start-stop, stop-only
Default	stop-only
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the TACACS+ protocol
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authorization

Synopsis	Enable the authorization context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR-1

request-format

Synopsis	Enter the request-format context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus authorization request-format
Tree	request-format
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	25.3.R2
Platforms	7705 SAR-1

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus authorization request-format access-operation-cmd <i>keyword</i>
Tree	access-operation-cmd
Description	This command sends an operation argument in authorization requests.

In model-driven interfaces, this command configures the system to send the operation in the `cmd` argument, and the path in the `cmd-args` argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.

Options	delete
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i>
Tree	use-priv-lvl
Description	<p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for <code>cmd*</code> (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the <code>priv-lvl</code> returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for <code>cmd*</code>, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-unknown-mandatory-vsas *boolean*

Synopsis	Ignore unknown mandatory VSAs and fail authentication
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus ignore-unknown-mandatory-vsas <i>boolean</i>
Tree	ignore-unknown-mandatory-vsas
Description	<p>When configured to true, the system ignores unknown mandatory VSAs and authentication succeeds.</p> <p>When configured to false, the system ignores unknown mandatory VSAs received in a reply from the TACACS+ server. Authentication fails and the user is disconnected because the system cannot process a mandatory VSA that is unknown.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus interactive-authentication <i>boolean</i>
Tree	interactive-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

priv-lvl-map

Synopsis	Enter the priv-lvl-map context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map
Tree	priv-lvl-map
Introduced	25.3.R2
Platforms	7705 SAR-1

priv-lvl [[level](#)] *number*

Synopsis	Enter the priv-lvl list instance
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Introduced	25.3.R2
Platforms	7705 SAR-1

[level] *number*

Synopsis	Privilege level for the mapping
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl

Range	0 to 15
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

user-profile-name *reference*

Synopsis	User profile for the mapping
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map priv-lvl number user-profile-name <i>reference</i>
Tree	user-profile-name
Reference	configure system security aaa local-profiles profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	TACACS+ server ID
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	TCP port ID on which to contact TACACS+ server
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	49
Introduced	25.3.R2
Platforms	7705 SAR-1

secret *encrypted-leaf*

Synopsis	Secret key to access the TACACS+ server
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
String length	1 to 199
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-retry-timeout (*number | keyword*)

Synopsis	Time before retrying requests when health checks are disabled
----------	---

Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server-retry-timeout (<i>number</i> <i>keyword</i>)
Tree	server-retry-timeout
Description	This command configures the maximum timeout before retrying requests when health checks are disabled and all TACACS+ servers are operationally down. Set the value of this timer to a lower value or disable it to increase the interactive responsiveness of AAA requests after the servers become unreachable.
Range	1 to 300
Units	seconds
Options	none – Disable retry timeout and send requests immediately
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

server-timeout *number*

Synopsis	Time to wait for a response from the TACACS+ server
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

service-request

Synopsis	Enter the service-request context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus service-request
Tree	service-request
Description	Commands in this context enable Nokia services to be requested from the TACACS+ server.
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-grpc-rpc-authorization *boolean*

Synopsis	Request nokia-grpc-rpc-authorization service VSAs
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus service-request nokia-grpc-rpc-authorization <i>boolean</i>
Tree	nokia-grpc-rpc-authorization
Description	When configured to true , the nokia-grpc-rpc-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-netconf-base-op-authorization *boolean*

Synopsis	Request nokia-netconf-base-op-authorization service VSAs
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus service-request nokia-netconf-base-op-authorization <i>boolean</i>
Tree	nokia-netconf-base-op-authorization
Description	When configured to true , the nokia-netconf-base-op-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-user *boolean*

Synopsis	Request nokia-user service VSAs
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus service-request nokia-user <i>boolean</i>
Tree	nokia-user
Description	When configured to true , the nokia-user service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-user-profile *boolean*

Synopsis	Request nokia-user-profile service VSAs
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus service-request nokia-user-profile <i>boolean</i>
Tree	nokia-user-profile
Description	When configured to true , the nokia-user-profile service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

use-default-template *boolean*

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus use-default-template <i>boolean</i>
Tree	use-default-template
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the service
Context	configure service vpn <i>service-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregates

Synopsis	Enter the aggregates context
Context	configure service vpn <i>service-name</i> aggregates

Tree	aggregates
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the aggregate list instance
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregator

Synopsis	Enter the aggregator context
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator
Tree	aggregator
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Aggregator IP address
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator address <i>ipv4-unicast-address</i>
Tree	address

Introduced	25.3.R2
Platforms	7705 SAR-1

as-number *number*

Synopsis	Aggregator AS number
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

as-set *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i>
Tree	as-set
Description	When configured to true , the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes. When configured to false , the AS_PATH attribute contains no AS_SET and will be originated by the ESR.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

blackhole

Synopsis	Enable the blackhole context
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole
Tree	blackhole
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	25.3.R2
Platforms	7705 SAR-1

generate-icmp *boolean*

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole generate-icmp <i>boolean</i>
Tree	generate-icmp
Description	When configured to true , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to false , ICMP unreachable messages are not generated.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

community *community*

Synopsis	Community name that is added to the aggregate route
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) community <i>community</i>
Tree	community
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String length	1 to 72
Max. instances	12
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2

Platforms 7705 SAR-1

discard-component-communities *boolean*

Synopsis Advertise aggregate with aggregate route community set

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **discard-component-communities** *boolean*

Tree **discard-component-communities**

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Address of the indirect next hop

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **indirect**

Description This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.

Notes The following elements are part of a choice: **blackhole** or **indirect**.

Introduced 25.3.R2

Platforms 7705 SAR-1

local-preference *number*

Synopsis Local preference used when aggregate route is exported

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **local-preference** *number*

Tree **local-preference**

Description This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.

Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

policy reference

Synopsis	Policy name for the aggregated route
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) policy reference
Tree	policy
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

summary-only boolean

Synopsis	Advertise the aggregate route only
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) summary-only boolean
Tree	summary-only
Description	<p>When configured to true, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to false, the router advertises both the aggregate route and its contributing routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-group number

Synopsis	Tunnel group from which to associate the MC IPSec state
----------	---

Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tunnel-group <i>number</i>
Tree	tunnel-group
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-export-bgp-vpn *boolean*

Synopsis	Include BGP-VPN routes for export
Context	configure service vpn <i>service-name</i> allow-export-bgp-vpn <i>boolean</i>
Tree	allow-export-bgp-vpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

autonomous-system *number*

Synopsis	AS number advertised to peers for this router
Context	configure service vpn <i>service-name</i> autonomous-system <i>number</i>
Tree	autonomous-system
Description	<p>This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.</p> <p>If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp

Synopsis	Enable the bgp context
Context	configure service vpn <i>service-name</i> bgp
Tree	bgp

Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP instance
Context	configure service vprn <i>service-name</i> bgp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	configure service vprn <i>service-name</i> bgp advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows any inactive BGP route to be advertised, even though it is not the used route.</p> <p>When configured to false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-ipv6-next-hops

Synopsis	Enter the advertise-ipv6-next-hops context
Context	configure service vprn <i>service-name</i> bgp advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	configure service vprn <i>service-name</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	configure service vprn <i>service-name</i> bgp aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Description	<p>When configured to true, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.</p> <p>When configured to false, the AS number and router ID are added to the AGGREGATOR path attribute.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

asn-4-byte *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	configure service vprn <i>service-name</i> bgp asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

attribute-set

Synopsis	Enter the attribute-set context
Context	configure service vprn <i>service-name</i> bgp attribute-set

Tree	attribute-set
Description	<p>Commands in this context configure the handling of attribute set (ATTR_SET) attributes in BGP routes received from PE-CE peers of the VPRN.</p> <p>ATTR_SET is an optional transitive BGP path attribute standardized by RFC 6368 that is added to BGP L3 VPN routes to provide logical separation between the BGP domain of a customer and the BGP domain of a service provider.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

remove *boolean*

Synopsis	Remove ATTR_SET in received BGP routes from PE-CE peers
Context	configure service vprn <i>service-name</i> bgp attribute-set remove <i>boolean</i>
Tree	remove
Description	<p>When configured to true, BGP ignores and silently discards ATTR_SETs in BGP routes received from PE-CE peers of the VPRN. The discarded ATTR_SETs do not affect BGP best path selection in the VPRN, and they do not appear in the VPN-IP routes that result from the VRF export of the BGP routes. Nokia recommends configuring this command to true in most deployments.</p> <p>When configured to false, BGP ignores ATTR_SETs in BGP routes received from PE-CE peers of the VPRN, but does not discard them. This allows the ATTR_SETs to propagate between CE devices connected to the VPRN and to other PE devices when the BGP routes are exported as VPN-IP routes.</p> <p>Note: If the configuration of this command is changed, ROUTE_REFRESH messages are sent to all PE-CE peers of the VPRN.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for all peers
Context	configure service vprn <i>service-name</i> bgp authentication-key encrypted-leaf
Tree	authentication-key
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.
String length	1 to 370
Introduced	25.3.R2

Platforms 7705 SAR-1

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session

Context **configure** [service vprn](#) *service-name* [bgp authentication-keychain](#) *reference*

Tree [authentication-keychain](#)

Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.

Reference **configure** [system security keychains](#) [keychain](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-1

backup-path

Synopsis Enter the **backup-path** context

Context **configure** [service vprn](#) *service-name* [bgp backup-path](#)

Tree [backup-path](#)

Description Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.

By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4 *boolean*

Synopsis Enable support for unlabeled unicast IPv4 routes

Context **configure** [service vprn](#) *service-name* [bgp backup-path](#) [ipv4](#) *boolean*

Tree [ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp backup-path ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp backup-path label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Enable support for labeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp backup-path label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

best-path-selection

Synopsis	Enter the best-path-selection context
Context	configure service vprn <i>service-name</i> bgp best-path-selection
Tree	best-path-selection
Introduced	25.3.R2
Platforms	7705 SAR-1

always-compare-med

Synopsis	Enter the always-compare-med context
Context	configure service vprn <i>service-name</i> bgp best-path-selection always-compare-med
Tree	always-compare-med
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	25.3.R2
Platforms	7705 SAR-1

med-value *keyword*

Synopsis	Action for a missing MED attribute
Context	configure service vprn <i>service-name</i> bgp best-path-selection always-compare-med med-value <i>keyword</i>
Tree	med-value
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-as *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	configure service vprn <i>service-name</i> bgp best-path-selection always-compare-med strict-as <i>boolean</i>
Tree	strict-as
Description	<p>When configured to true, the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.</p> <p>When configured to false, the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

as-path-ignore

Synopsis	Enter the as-path-ignore context
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore
Tree	as-path-ignore
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore ipv4 boolean
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore ipv6 boolean
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Ignore AS path length for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore label-ipv4 boolean
Tree	label-ipv4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Ignore AS path length for labeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

compare-origin-validation-state *boolean*

Synopsis	Allow comparison of origin validation states
Context	configure service vprn <i>service-name</i> bgp best-path-selection compare-origin-validation-state <i>boolean</i>
Tree	compare-origin-validation-state
Description	<p>When configured to true, the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state.</p> <p>When configured to false, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

deterministic-med *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	configure service vprn <i>service-name</i> bgp best-path-selection deterministic-med <i>boolean</i>
Tree	deterministic-med
Description	When configured to true , BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to

select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.

When configured to **false**, paths are not grouped and the overall best-path selection can depend on the order of route arrival.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp-ibgp-equal

Synopsis	Enter the ebgp-ibgp-equal context
Context	configure service vprn service-name bgp best-path-selection ebgp-ibgp-equal
Tree	ebgp-ibgp-equal
Description	<p>Commands in this context allow BGP to ignore the difference between EBGp and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGp learned route over an IBGP learned route.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Consider EBGp and IBGP IPv4 routes equal
Context	configure service vprn service-name bgp best-path-selection ebgp-ibgp-equal ipv4 boolean
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 boolean

Synopsis	Consider EBGp and IBGP IPv6 routes equal
Context	configure service vprn service-name bgp best-path-selection ebgp-ibgp-equal ipv6 boolean

Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv4 routes equal
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv6 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv6 routes equal
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	configure service vprn <i>service-name</i> bgp best-path-selection ignore-nh-metric <i>boolean</i>
Tree	ignore-nh-metric
Description	<p>When configured to true, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to false, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the router context) or IP prefix learned from VPRN BGP peers (in the vprn context).</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-router-id

Synopsis	Enable the ignore-router-id context
Context	configure service vprn <i>service-name</i> bgp best-path-selection ignore-router-id
Tree	ignore-router-id
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-invalid-unusable *boolean*

Synopsis	Ignore routes with invalid origin validation state
Context	configure service vprn <i>service-name</i> bgp best-path-selection origin-invalid-unusable <i>boolean</i>
Tree	origin-invalid-unusable
Description	<p>When configured to true, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers.</p> <p>When configured to false, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix, according to the BGP decision process.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vprn <i>service-name</i> bgp bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Description	When configured to true , BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations. When configured to false , BFD is not enabled globally for all BGP sessions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure service vprn <i>service-name</i> bgp bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise

Synopsis	Enable the advertise context
Context	configure service vprn <i>service-name</i> bgp bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none">• The inherited or configured value for the bfd-liveness command that applies to the peer is true.• The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure service vprn <i>service-name</i> bgp bfd-strict-mode advertise holdtime <i>number</i>

Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure service vpn <i>service-name</i> bgp bfd-strict-mode next-hop-reachability <i>boolean</i>
Tree	next-hop-reachability
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6 • EVPN • IPv4 multicast

- IPv6 multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

client-reflect *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp client-reflect boolean</i>
Tree	<i>client-reflect</i>
Description	When configured to true , routes received from neighbors considered to be RR clients are reflected to other peers as expected. When configured to false , routes received from neighbors considered to be RR clients are not reflected to other clients.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster

Synopsis	Enter the cluster context
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp cluster</i>
Tree	<i>cluster</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp cluster cluster-id ipv4-address</i>
Tree	<i>cluster-id</i>
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	25.3.R2

Platforms 7705 SAR-1

connect-retry *number*

Synopsis BGP connect retry timer value

Context **configure** *service vprn service-name bgp connect-retry number*

Tree [connect-retry](#)

Description This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.

Range 1 to 65535

Default 120

Introduced 25.3.R2

Platforms 7705 SAR-1

convergence

Synopsis Enter the **convergence** context

Context **configure** *service vprn service-name bgp convergence*

Tree [convergence](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

family [[family-type](#)] *keyword*

Synopsis Enter the **family** list instance

Context **configure** *service vprn service-name bgp convergence family keyword*

Tree [family](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[family-type] *keyword*

Synopsis Address family for which convergence selection applies

Context **configure** *service vprn service-name bgp convergence family keyword*

Tree [family](#)

Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait-to-advertise *number*

Synopsis	Maximum wait time before advertising routes
Context	configure service vprn <i>service-name</i> bgp convergence family <i>keyword</i> max-wait-to-advertise <i>number</i>
Tree	max-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

min-wait-to-advertise *number*

Synopsis	Minimum wait time before advertising routes
Context	configure service vprn <i>service-name</i> bgp convergence min-wait-to-advertise <i>number</i>
Tree	min-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations
Tree	damp-peer-oscillations
Description	<p>Commands in this context support the DampPeerOscillations FSM behavior described in section 8.1 of RFC 4271, <i>A Border Gateway Protocol 4 (BGP-4)</i>.</p> <p>When unconfigured, the router does not perform peer oscillation damping and immediately transitions out of the idle state after every reset.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Description	<p>Commands in this context configure how long a BGP peer session remains in the idle state after some type of error causes the session to reset.</p> <p>In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur in a short time period after each session reset cause longer and longer hold times in the idle state.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations idle-hold-time initial-wait <i>number</i>
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2

Platforms 7705 SAR-1

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure <i>service vprn service-name bgp damp-peer-oscillations idle-hold-time max-wait number</i>
Tree	<i>max-wait</i>
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Time that doubles after each session failure
Context	configure <i>service vprn service-name bgp damp-peer-oscillations idle-hold-time second-wait number</i>
Tree	<i>second-wait</i>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>service vprn service-name bgp damping boolean</i>
Tree	<i>damping</i>
Description	<p>When configured to true, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none">• Half-life: 15 minutes

- Max-suppress: 60 minutes
- Suppress-threshold: 3000
- Reuse-threshold: 750

When configured to **false**, BGP route damping for learned routes is disabled.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure service vprn <i>service-name</i> bgp default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

Synopsis	Use ECMP over BGP VPN and BGP routes
Context	configure service vpn <i>service-name</i> bgp eibgp-loadbalance <i>boolean</i>
Tree	eibgp-loadbalance
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure service vpn <i>service-name</i> bgp enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	<p>When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When configured to false, received routes are not checked for compliance with the rule.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

error-handling

Synopsis	Enter the error-handling context
Context	configure service vpn <i>service-name</i> bgp error-handling
Tree	error-handling

Introduced	25.3.R2
Platforms	7705 SAR-1

legacy-mode *boolean*

Synopsis	Enable legacy-mode of BGP error handling
Context	configure service vprn <i>service-name</i> bgp error-handling legacy-mode <i>boolean</i>
Tree	legacy-mode
Description	<p>When configured to true, the BGP instance handles the BGP update error messages based on the configured update-fault-tolerance commands. If these commands are not explicitly configured, BGP error handling follows the legacy procedures described in RFC 4271, which can result in disruptive session resets.</p> <p>When configured to false, the BGP instance ignores the configured update-fault-tolerance commands and applies the new error handling procedures described in RFC 7606 on all sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure service vprn <i>service-name</i> bgp error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When configured to false, most errors trigger a session reset.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Enable the export context
Context	configure service vprn <i>service-name</i> bgp export
Tree	export

Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure <i>service vprn</i> <i>service-name</i> bgp extended-nh-encoding ipv4 <i>boolean</i>
Tree	<i>ipv4</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

family

Synopsis	Enter the family context
Context	configure service vprn <i>service-name</i> bgp family
Tree	family
Description	Commands in this context specify the BGP address families supported by the base router BGP sessions.
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-ipv6 *boolean*

Synopsis	Advertise support for the FlowSpec-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp family flow-ipv6 <i>boolean</i>
Tree	flow-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	configure service vprn <i>service-name</i> bgp family ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	configure service vprn <i>service-name</i> bgp family ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

label-ipv4 *boolean*

Synopsis Advertise support for the label-IPv4 address family

Context **configure** [service vprn](#) *service-name* [bgp family label-ipv4](#) *boolean*

Tree [label-ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

mcast-ipv4 *boolean*

Synopsis Advertise support for the MCAST-IPv4 address family

Context **configure** [service vprn](#) *service-name* [bgp family mcast-ipv4](#) *boolean*

Tree [mcast-ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

mcast-ipv6 *boolean*

Synopsis Advertise support for the MCAST-IPv6 address family

Context **configure** [service vprn](#) *service-name* [bgp family mcast-ipv6](#) *boolean*

Tree [mcast-ipv6](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

fast-external-failover *boolean*

Synopsis Drop external BGP session immediately when link fails

Context **configure** [service vprn](#) *service-name* [bgp fast-external-failover](#) *boolean*

Tree [fast-external-failover](#)

Description When configured to **true**, the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down.

When configured to **false**, the BGP session remains up until the hold time expires.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> bgp graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

gr-notification *boolean*

Synopsis	Perform Graceful Restart procedures
Context	configure service vprn <i>service-name</i> bgp graceful-restart gr-notification <i>boolean</i>
Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

long-lived

Synopsis	Enable the long-lived context
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived
Tree	long-lived
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

family [[family-type](#)] *keyword*

Synopsis	Enter the family list instance
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR-1

[family-type] *keyword*

Synopsis	Address family type for LLGR
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived family <i>keyword</i>
Tree	family
Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>

Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
----------	---

Context	configure service vprn service-name bgp graceful-restart long-lived without-no-export boolean
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

restart-time number

Synopsis	Restart time advertised by GR capability
Context	configure service vprn service-name bgp graceful-restart restart-time number
Tree	restart-time
Range	0 to 4095
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-routes-time number

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure service vprn service-name bgp graceful-restart stale-routes-time number
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR-1

group [*group-name*] *named-item-64*

Synopsis	Enter the group list instance
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *named-item-64*

Synopsis	BGP peer group name
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i>
Tree	group
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP group
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> advertise-inactive <i>boolean</i>
Tree	advertise-inactive

Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicapt IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertise unless the active non-BGP route is matched and accepted by an export policy applied to the session • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Introduced	25.3.R2
Platforms	7705 SAR-1

as-override *boolean*

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> as-override <i>boolean</i>
Tree	as-override
Description	<p>When configured to true, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When configured to false, no AS override is performed.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

asn-4-byte *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Description	<p>When this command inherits a value of true, the use of 4-byte ASNs is supported.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, this command disables the use of 4-byte ASNs.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for peers in the group
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> authentication-key encrypted-leaf
Tree	authentication-key
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.
String length	1 to 370
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> authentication-keychain reference
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
----------	--

Context	configure service vprn <i>service-name</i> bgp group named-item-64 bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise

Synopsis	Enable the advertise context
Context	configure service vprn <i>service-name</i> bgp group named-item-64 bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"> • The inherited or configured value for the bfd-liveness command that applies to the peer is true. • The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure service vprn <i>service-name</i> bgp group named-item-64 bfd-strict-mode advertise holdtime <i>number</i>
Tree	holdtime
Description	<p>This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.</p>
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2

Platforms 7705 SAR-1

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd-strict-mode next-hop-reachability <i>boolean</i>
Tree	next-hop-reachability
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6 • EVPN • IPv4 multicast • IPv6 multicast <p>When configured to false, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

capability-negotiation *boolean*

Synopsis	Enable capability negotiation
Context	configure <i>service vpn service-name bgp group named-item-64</i> capability-negotiation <i>boolean</i>
Tree	<i>capability-negotiation</i>
Description	<p>When configured to true, this command enables the exchange of capabilities.</p> <p>When configured to false and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

client-reflect *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	configure <i>service vpn service-name bgp group named-item-64</i> client-reflect <i>boolean</i>
Tree	<i>client-reflect</i>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When the command inherits a value of true, client reflection of routes is enabled.</p> <p>When configured to false, this command disables client reflection of routes.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster

Synopsis	Enter the cluster context
Context	configure <i>service vpn service-name bgp group named-item-64</i> cluster
Tree	<i>cluster</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
----------	----------------------------

Context	configure service vpn service-name bgp group named-item-64 cluster cluster-id ipv4-address
Tree	cluster-id
Introduced	25.3.R2

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure service vpn service-name bgp group named-item-64 connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vpn service-name bgp group named-item-64 damp-peer-oscillations
Tree	damp-peer-oscillations
Description	<p>Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.</p> <p>When unconfigured, command settings are inherited from the global-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure service vpn service-name bgp group named-item-64 damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.

Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damp-peer-oscillations idle-hold-time initial-wait <i>number</i>
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> second-wait <i>number</i>
Tree	<i>second-wait</i>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> damping <i>boolean</i>
Tree	<i>damping</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-neighbor

Synopsis	Enter the dynamic-neighbor context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor
Tree	dynamic-neighbor
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *reference*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>reference</i>
Tree	interface
Description	<p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p>

The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.

When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.

Introduced 25.3.R2
Platforms 7705 SAR-1

[interface-name] reference

Synopsis Name of the dynamic neighbor interface

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [dynamic-neighbor interface](#) *reference*

Tree [interface](#)

Reference **configure** [service vpn](#) *service-name* [interface](#) *interface-name*

Notes This element is part of a list key.

Introduced 25.3.R2

allowed-peer-as string

Synopsis Allowed peer AS value or range of acceptable values

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [dynamic-neighbor interface](#) *reference* [allowed-peer-as](#) *string*

Tree [allowed-peer-as](#)

Description This command specifies a singular allowed peer AS value or a range of acceptable values in the format *n1..n2*.

All values greater than or equal to *n1* and less than or equal to *n2* are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].

Max. instances 32

Notes This element is ordered by the user.

Introduced 25.3.R2

Platforms 7705 SAR-1

max-sessions *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>reference</i> max-sessions <i>number</i>
Tree	max-sessions
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	configure service vprn service-name bgp group named-item-64 dynamic-neighbor match prefix (ipv4-prefix ipv6-prefix) allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	<p>This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i>.</p> <p>All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].</p>

dynamic-neighbor-limit *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	configure service vprn service-name bgp group named-item-64 dynamic-neighbor-limit <i>number</i>
Tree	dynamic-neighbor-limit
Description	<p>This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.</p> <p>When unconfigured, the setting is inherited from the BGP global-level configuration.</p>
Range	1 to 8192
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp-default-reject-policy

Synopsis	Enable the ebgp-default-reject-policy context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy import <i>boolean</i>
Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Introduced	25.3.R2
Platforms	7705 SAR-1

error-handling

Synopsis	Enter the error-handling context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR-1

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-link-bandwidth

Synopsis	Enter the evpn-link-bandwidth context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> evpn-link-bandwidth
Tree	evpn-link-bandwidth
Introduced	25.3.R2
Platforms	7705 SAR-1

add-to-received-bgp *number*

Synopsis	Weight added to received PE-CE BGP routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> evpn-link-bandwidth add-to-received-bgp <i>number</i>
Tree	add-to-received-bgp

Description	<p>This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.</p> <p>For the load-balancing between EVPN-IFL and BGP PE-CE routes the configure service vprn bgp eibgp-loadbalance command must already be configured in the system.</p>
Range	1 to 128
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-ipv4 *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> family mcast-ipv4 <i>boolean</i>
Tree	mcast-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-ipv6 *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> fast-external-failover <i>boolean</i>
Tree	fast-external-failover
Description	<p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart gr-notification <i>boolean</i>

Tree	gr-notification
Description	When configured to true , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error. When configured to false , NOTIFICATION messages are not supported.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

long-lived

Synopsis	Enable the long-lived context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived
Tree	long-lived
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-stale-to-all-neighbors *boolean*

advertised-stale-time *number*

Synopsis LLGR stale routes time for family override
Context **configure** *service* *vpn* *service-name* *bgp group* *named-item-64* *graceful-restart* *long-lived* **family** *keyword* **advertised-stale-time** *number*
Tree *advertised-stale-time*
Description This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.
This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range 0 to 16777215
Default 86400
Introduced 25.3.R2

Platforms 7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
----------	--

Context	configure service vprn service-name bgp group named-item-64 graceful-restart long-lived helper-override-restart-time number
Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time number

Synopsis	Locally-configured stale routes override time
Context	configure service vprn service-name bgp group named-item-64 graceful-restart long-lived helper-override-stale-time number
Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

without-no-export boolean

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vprn service-name bgp group named-item-64 graceful-restart long-lived without-no-export boolean
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale</p>

routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> hold-time

Platforms	7705 SAR-1

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> initial-send-delay-zero <i>boolean</i>
Tree	initial-send-delay-zero
Description	<p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>service vprn service-name bgp group named-item-64 keepalive number</i>
Tree	<i>keepalive</i>
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	25.3.R2
Platforms	7705 SAR-1

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure <i>service vprn service-name bgp group named-item-64 label-preference number</i>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>interface-name</i>)
Tree	local-address
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

local-as

Synopsis	Enter the local-as context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> local-as
Tree	local-as
Introduced	25.3.R2

Platforms 7705 SAR-1

as-number *number*

Synopsis Local (or virtual) BGP AS number

Context **configure** [service vprn](#) *service-name* [bgp group named-item-64](#) [local-as as-number number](#)

Tree [as-number](#)

Range 1 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

prepend-global-as *boolean*

Synopsis Prepend global ASN when advertising routes to BGP peer

Context **configure** [service vprn](#) *service-name* [bgp group named-item-64](#) [local-as prepend-global-as boolean](#)

Tree [prepend-global-as](#)

Description When configured to **true**, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.
When configured to **false**, the global ASN is not included in the AS_PATH attribute.

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

private *boolean*

Synopsis Hide the local ASN in sent paths learned from peering

Context **configure** [service vprn](#) *service-name* [bgp group named-item-64](#) [local-as private boolean](#)

Tree [private](#)

Description When configured to **true**, the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.
When configured to **false**, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

local-preference *number*

Synopsis Default local preference if not in incoming routes

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* **local-preference** *number*

Tree [local-preference](#)

Range 0 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

loop-detect *keyword*

Synopsis Strategy for loop detection in the AS path

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* **loop-detect** *keyword*

Tree [loop-detect](#)

Options drop-peer, ignore-loop, off, discard-route

Introduced 25.3.R2

Tree [loop-detect-threshold](#)

Range 0 to 15

Introduced 25.3.R2

Platforms 7705 SAR-1

med-out (*number* | *keyword*)

Synopsis Default MED attribute value to advertise to peers

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* **med-out** (*number* | *keyword*)

Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR-1

min-route-advertisement *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

multipath-eligible *boolean*

Synopsis	Allow routes from group peers in multipath eligibility
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> multipath-eligible <i>boolean</i>
Tree	multipath-eligible
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-self *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	configure <i>service vprn service-name bgp group named-item-64</i> next-hop-self <i>boolean</i>
Tree	<i>next-hop-self</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation

Synopsis	Enter the origin-validation context
Context	configure <i>service vprn service-name bgp group named-item-64</i> origin-validation
Tree	<i>origin-validation</i>
Description	<p>Commands in this context configure the marking of every inbound IPv4, IPv6, and labeled IPv4 route from the BGP peer with one of the following origin validation states:</p> <ul style="list-style-type: none">• Valid (0)• Not-Found (1)• Invalid (2) <p>The configurations apply to all types of VPRN BGP peers, but generally should be applied only to EBGp peers and groups that contain only EBGp peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure <i>service vprn service-name bgp group named-item-64</i> origin-validation ipv4 <i>boolean</i>
Tree	<i>ipv4</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> origin-validation ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Enable passive mode for BGP communication
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery

Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-as *number*

Synopsis	Peer AS number
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> peer-as <i>number</i>
Tree	peer-as
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

preference *number*

Synopsis Route preference for routes learned from all peers

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [preference](#) *number*

Tree [preference](#)

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix-limit [[family](#)] *keyword*

Synopsis Enter the **prefix-limit** list instance

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [prefix-limit](#) *keyword*

Tree [prefix-limit](#)

Description Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.

Introduced 25.3.R2

Platforms 7705 SAR-1

[family] *keyword*

Synopsis Address family to which the limit applies

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [prefix-limit](#) *keyword*

Tree [prefix-limit](#)

Options ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

hold-excess *number*

Synopsis Percentage of maximum routes to install in route table

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [prefix-limit](#) *keyword* [hold-excess](#) *number*

Tree	hold-excess
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the post-import command is configured to true, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the idle-timeout and log-only commands.</p>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-timeout *number*

Synopsis	Time BGP peering remains idle before reconnecting
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> idle-timeout <i>number</i>
Tree	idle-timeout
Description	<p>This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.</p> <p>When unconfigured, the BGP peer stays down until the operator performs a reset. This command and log-only cannot be configured simultaneously.</p>
Range	1 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> log-only <i>boolean</i>
Tree	log-only
Description	<p>When configured to true, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and idle-timeout cannot be configured simultaneously.</p>

When configured to **false**, the router generates a log event and takes the BGP session down upon reaching the prefix limit.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> <i>keyword</i> <i>maximum</i> <i>number</i>
Tree	<i>maximum</i>
Description	<p>This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.</p> <p>When log-only is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.</p>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> <i>keyword</i> <i>post-import</i> <i>boolean</i>
Tree	<i>post-import</i>
Description	<p>When configured to true, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.</p> <p>When configured to false, the system limits the number of routes to all routes received from the peer.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

remove-private

Synopsis	Enable the remove-private context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private
Tree	remove-private
Introduced	25.3.R2
Platforms	7705 SAR-1

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private limited <i>boolean</i>
Tree	limited
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private replace <i>boolean</i>
Tree	replace
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

skip-peer-as *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send-communities

Synopsis	Enter the send-communities context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-communities
Tree	send-communities
Introduced	25.3.R2
Platforms	7705 SAR-1

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-communities extended <i>boolean</i>
Tree	extended
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to false, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> send-communities large <i>boolean</i>
Tree	large
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to false, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> send-communities standard <i>boolean</i>
Tree	standard
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to false, all standard communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

send-default

Synopsis	Enable the send-default context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policy name
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Generate and advertise an IPv4 default route (0/0)
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Generate and advertise an IPv6 default route (::/0)
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	When configured to true , this command enables the use of split-horizon.

This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.

Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the use of split-horizon is disabled.

Introduced 25.3.R2
Platforms 7705 SAR-1

static-group *boolean*

Synopsis Use group for static peers
Context **configure** *service vprn* *service-name* *bgp group named-item-64* **static-group** *boolean*
Tree *static-group*
Default true
Introduced 25.3.R2
Platforms 7705 SAR-1

tcp-mss (*number* | *keyword*)

Synopsis TCP maximum segment size override
Context **configure** *service vprn* *service-name* *bgp group named-item-64* **tcp-mss** (*number* | *keyword*)
Tree *tcp-mss*
Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).
The configured value controls two properties of the TCP connection as follows:
TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.
TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.
Range 384 to 9746
Options ip-stack
Introduced 25.3.R2

Platforms 7705 SAR-1

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure <i>service vpn service-name bgp group named-item-64</i> third-party-nexthop <i>boolean</i>
Tree	<i>third-party-nexthop</i>
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure <i>service vpn service-name bgp group named-item-64</i> ttl-security <i>number</i>
Tree	<i>ttl-security</i>
Description	This command configures the minimum TTL value that BGP accepst from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	BGP peer type
Context	configure <i>service vpn service-name bgp group named-item-64</i> type <i>keyword</i>
Tree	<i>type</i>

Options	no-type, internal, external
Default	no-type
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure service vprn <i>service-name</i> bgp hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure service vprn <i>service-name</i> bgp hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0 3 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	configure service vprn <i>service-name</i> bgp hold-time seconds <i>number</i>
Tree	seconds
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p>

- If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.
- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.

Range	0 3 to 65535
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp-multipath *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	configure service vprn <i>service-name</i> bgp ibgp-multipath <i>boolean</i>
Tree	ibgp-multipath
Description	When configured to true , this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops. When configured to false , this command disables IBGP multipath load balancing.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Enable the import context
Context	configure service vprn <i>service-name</i> bgp import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp initial-send-delay-zero</i> <i>boolean</i>
Tree	<i>initial-send-delay-zero</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp keepalive</i> <i>number</i>
Tree	<i>keepalive</i>
Range	0 to 21845
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp label-preference</i> <i>number</i>
Tree	<i>label-preference</i>
Range	1 to 255
Default	170

Introduced	25.3.R2
Platforms	7705 SAR-1

local-as

Synopsis	Enter the local-as context
Context	configure service vprn <i>service-name</i> bgp local-as
Tree	local-as
Introduced	25.3.R2
Platforms	7705 SAR-1

as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	configure service vprn <i>service-name</i> bgp local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

prepend-global-as *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	configure service vprn <i>service-name</i> bgp local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Description	<p>When configured to true, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.</p> <p>When configured to false, the global ASN is hidden in paths announced to the EBGp peer.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
----------	---

Context	configure service vpn <i>service-name</i> bgp local-as private <i>boolean</i>
Tree	private
Description	When configured to true , the local ASN is hidden in paths learned from the peering. When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure service vpn <i>service-name</i> bgp local-preference <i>number</i>
Tree	local-preference
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure service vpn <i>service-name</i> bgp loop-detect <i>keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Default	ignore-loop
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	configure service vpn <i>service-name</i> bgp loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR-1

min-route-advertisement *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp multihop <i>number</i>
Tree	multihop
Description	This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGp peer multiple hops away. This command applies only to EBGp.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

multipath

Synopsis	Enter the multipath context
Context	configure service vpn <i>service-name</i> bgp multipath
Tree	multipath
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp *number*

Synopsis	Maximum multipaths per prefix for EBGp learned routes
Context	configure service vpn <i>service-name</i> bgp multipath ebgp <i>number</i>
Tree	ebgp
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure service vpn <i>service-name</i> bgp multipath family <i>keyword</i>
Tree	family
Description	<p>Commands in this context set ECMP multipath parameters that apply only to the specified label unicast address family.</p> <p>When multipath is enabled, traffic to the destination is load-shared across a set of paths (BGP routes) that the BGP decision process considers equal to the best path. The distribution of traffic over the multiple paths may or may not be equal. The distribution is based on weights derived from the Link Bandwidth Extended Community.</p> <p>For more information about the criteria a non-best route must meet to qualify as a multipath, see “BGP route installation in the route table” in the <i>7705 SAR Gen 2 Unicast Routing Protocols User Guide</i>.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[*family-type*] *keyword*

Synopsis	Address family type for the multipath selection
----------	---

Context	configure <i>service vprn service-name</i> bgp multipath family <i>keyword</i>
Tree	family
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	configure <i>service vprn service-name</i> bgp multipath family <i>keyword</i> ebgp number
Tree	ebgp
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	configure <i>service vprn service-name</i> bgp multipath family <i>keyword</i> ibgp number
Tree	ibgp
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

max-paths number

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	configure <i>service vprn service-name</i> bgp multipath family <i>keyword</i> max-paths number

Tree	max-paths
Description	<p>This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the family command.</p> <p>Consider the following when configuring this command:</p> <ul style="list-style-type: none"> • If the best path is an EBGP-learned route and the ebgp command is configured, the limit configured in the ebgp command overrides the limit configured in this command. • If the best path is an IBGP-learned route and the ibgp command is configured, the limit configured in the ibgp command overrides the limit configured in this command. • If the best path is an EBGP-learned route and the ebgp command is not configured, and this command is configured to 1, multipaths are disabled. • If the best path is an IBGP-learned route and the ibgp command is not configured, and this command is configured to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure service vprn <i>service-name</i> bgp multipath family <i>keyword</i> restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	25.3.R2
Platforms	7705 SAR-1

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure service vprn <i>service-name</i> bgp multipath family <i>keyword</i> unequal-cost <i>boolean</i>
Tree	unequal-cost
Description	When configured to true , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

ibgp *number*

Synopsis Maximum multipaths per prefix for IBGP learned routes
Context **configure** *service vprn service-name bgp multipath ibgp number*
Tree *ibgp*
Range 1 to 64
Introduced 25.3.R2
Platforms 7705 SAR-1

max-paths *number*

Synopsis Maximum multipaths per prefix
Context **configure** *service vprn service-name bgp multipath max-paths number*
Tree *max-paths*
Range 1 to 64
Default 1
Introduced 25.3.R2
Platforms 7705 SAR-1

restrict *keyword*

Synopsis AS path restriction for the non-best path
Context **configure** *service vprn service-name bgp multipath restrict keyword*
Tree *restrict*
Options same-as-path-length, same-neighbor-as, exact-as-path
Default same-as-path-length
Introduced 25.3.R2
Platforms 7705 SAR-1

unequal-cost *boolean*

Synopsis Ignore differences in the next-hop cost for multipath
Context **configure** *service vprn service-name bgp multipath unequal-cost boolean*

Tree	unequal-cost
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [[ip-address](#)] (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis	Enter the neighbor list instance
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>)
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis	IP address of the BGP peer router
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>)
Tree	neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure <i>service vprn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-inactive <i>boolean</i>
Tree	<i>advertise-inactive</i>
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure <i>service vprn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops
Tree	<i>advertise-ipv6-next-hops</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	configure <i>service vprn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	<i>ipv4</i>
Default	false

Introduced 25.3.R2
Platforms 7705 SAR-1

aggregator-id-zero *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to zero

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [aggregator-id-zero](#) *boolean*

Tree [aggregator-id-zero](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

as-override *boolean*

Synopsis Replace the peer ASN with the local ASN in AS Path

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [as-override](#) *boolean*

Tree [as-override](#)

Description When configured to **true**, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When the command inherits a value of **false**, no AS override is performed.

Introduced 25.3.R2

Platforms 7705 SAR-1

asn-4-byte *boolean*

Synopsis Advertise the use of 4-byte ASNs

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [asn-4-byte](#) *boolean*

Tree [asn-4-byte](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
String length	1 to 370
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BFD is removed from the associated protocol adjacency.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise

Synopsis	Enable the advertise context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none">• The inherited or configured value for the bfd-liveness command that applies to the peer is true.• The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode advertise holdtime <i>number</i>
Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.

Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure <i>service vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode next-hop-reachability <i>boolean</i>
Tree	next-hop-reachability
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6 • EVPN • IPv4 multicast • IPv6 multicast <p>When configured to false, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.</p>

Introduced 25.3.R2
Platforms 7705 SAR-1

capability-negotiation *boolean*

Synopsis Enable capability negotiation
Context **configure** [service vpn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [capability-negotiation](#) *boolean*
Tree [capability-negotiation](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

client-reflect *boolean*

Synopsis Allow cluster RR to advertise routes to its clients
Context **configure** [service vpn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [client-reflect](#) *boolean*
Tree [client-reflect](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

cluster

Synopsis Enter the **cluster** context
Context **configure** [service vpn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [cluster](#)
Tree [cluster](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

cluster-id *ipv4-address*

Synopsis Route reflector cluster ID
Context **configure** [service vpn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [cluster](#) [cluster-id](#) *ipv4-address*
Tree [cluster-id](#)
Introduced 25.3.R2

Platforms 7705 SAR-1

connect-retry *number*

Synopsis BGP connect retry timer value

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [connect-retry](#) *number*

Tree [connect-retry](#)

Range 1 to 65535

Introduced 25.3.R2

Platforms 7705 SAR-1

damp-peer-oscillations

Synopsis Enable the **damp-peer-oscillations** context

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [damp-peer-oscillations](#)

Tree [damp-peer-oscillations](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

error-interval *number*

Synopsis Time after a reset that the session must be error-free

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [damp-peer-oscillations](#) [error-interval](#) *number*

Tree [error-interval](#)

Description This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.

Range 0 to 2048

Default 30

Introduced 25.3.R2

Platforms 7705 SAR-1

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time initial-wait <i>number</i>
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time second-wait <i>number</i>

Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damping <i>boolean</i>
Tree	damping
Introduced	25.3.R2
Platforms	7705 SAR-1

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp *number*

Synopsis	Default preference for EBGp
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference ibgp number
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

default-preference

Synopsis	Enter the default-preference context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-preference
Tree	default-preference
Introduced	25.3.R2
Platforms	7705 SAR-1

ebgp number

Synopsis	Default preference for EBGP
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-preference ebgp number
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ibgp number

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-preference ibgp number
Tree	ibgp
Range	0 to 255

Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	<p>When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, received routes are not checked for compliance with the rule.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

error-handling

Synopsis	Enter the error-handling context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR-1

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
----------	---

Context	configure <i>service vprn</i> <i>service-name bgp neighbor</i> (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) <i>error-handling update-fault-tolerance</i> <i>boolean</i>
Tree	<i>update-fault-tolerance</i>
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-link-bandwidth

Synopsis	Enter the evpn-link-bandwidth context
Context	configure <i>service vprn</i> <i>service-name bgp neighbor</i> (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) <i>evpn-link-bandwidth</i>
Tree	<i>evpn-link-bandwidth</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

add-to-received-bgp *number*

Synopsis	Weight added to received PE-CE BGP routes
Context	configure <i>service vprn</i> <i>service-name bgp neighbor</i> (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) <i>evpn-link-bandwidth add-to-received-bgp number</i>
Tree	<i>add-to-received-bgp</i>
Description	<p>This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.</p> <p>For the load-balancing between EVPN-IFL and BGP PE-CE routes the configure service vprn bgp eibgp-loadbalance command must already be configured in the system.</p>
Range	1 to 128
Introduced	25.3.R2
Platforms	7705 SAR-1

export

Synopsis	Enable the export context
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export
Tree	export
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Export policy name

Introduced	25.3.R2
Platforms	7705 SAR-1

mcast-ipv6 *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) fast-external-failover <i>boolean</i>
Tree	fast-external-failover
Description	<p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) gr-notification <i>boolean</i>
Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

long-lived

Synopsis	Enable the long-lived context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived
Tree	long-lived
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-stale-to-all-neighbors *boolean*

Tree	<i>family</i>
Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>bgp neighbor</i> (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) <i>graceful-restart</i> <i>long-lived</i> family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	<i>advertised-stale-time</i>
Description	<p>This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.</p>
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	7705 SAR-1

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i>

Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR-1

group *reference*

WARNING:

Tree	minimum-hold-time
Range	0 3 to 65536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Maximum hold time between successive messages
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-time seconds <i>number</i>
Tree	seconds
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none">• If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.

- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP group-level configuration.

Range	0 3 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

Tree	local-as
Introduced	25.3.R2
Platforms	7705 SAR-1

as-number *number*

Synopsis	Local (or virtual) BGP AS number
----------	----------------------------------

Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as as-number number
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as prepend-global-as boolean
Tree	prepend-global-as
Description	When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to false , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as private boolean
Tree	private
Description	When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

local-preference *number*

Synopsis	Default local preference if not in incoming routes
----------	--

Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-preference number
Tree	local-preference
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect keyword

Synopsis	Strategy for loop detection in the AS path
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) loop-detect keyword
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	25.3.R2
Platforms	7705 SAR-1

loop-detect-threshold number

Synopsis	Threshold for the global ASN in a received AS path
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) loop-detect-threshold number
Tree	loop-detect-threshold
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR-1

med-out (number | keyword)

Synopsis	Default MED attribute value to advertise to peers
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) med-out (number keyword)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2

Platforms 7705 SAR-1

min-route-advertisement *number*

Synopsis Minimum interval between successive prefix updates

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [min-route-advertisement](#) *number*

Tree [min-route-advertisement](#)

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

multihop *number*

Synopsis TTL in IP packet headers for EBGp peers multi-hops away

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [multihop](#) *number*

Tree [multihop](#)

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

multipath-eligible *boolean*

Synopsis Allow routes from this peer in multipath eligibility

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [multipath-eligible](#) *boolean*

Tree [multipath-eligible](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop-self *boolean*

Synopsis Advertise routes with local address as next-hop address

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [next-hop-self](#) *boolean*

Tree [next-hop-self](#)

Description	<p>When configured to true, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the configure router bgp rr-vpn-forwarding command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, protocol standard behavior is applied to determine whether to set next-hop-self in advertised routes.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

origin-validation

Synopsis	Enable the origin-validation context
Context	configure service vpn service-name bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation
Tree	origin-validation
Description	<p>Commands in this context configure the marking of every inbound IPv4, IPv6, and labeled IPv4 route from the BGP peer with one of the following origin validation states:</p> <ul style="list-style-type: none"> Valid (0) Not-Found (1) Invalid (2) <p>The configurations apply to all types of VPRN BGP peers, but generally should be applied only to EBGP peers and groups that contain only EBGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure service vpn service-name bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation ipv4 boolean
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Use passive mode for BGP communication
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) passive <i>boolean</i>
Tree	passive
Introduced	25.3.R2
Platforms	7705 SAR-1

path-mtu-discovery *boolean*

Synopsis	Enable path MTU discovery
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	When configured to true , Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced 25.3.R2
Platforms 7705 SAR-1

peer-as *number*

Synopsis Peer AS number

Context **configure** *service* *vprn* *service-name* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **peer-as** *number*

Tree **peer-as**

Description This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.

For EBGp peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.

For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.

Range 1 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR-1

peer-creation-type *keyword*

Synopsis Peer creation type

Context **configure** *service* *vprn* *service-name* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **peer-creation-type** *keyword*

Tree **peer-creation-type**

Options static, dynamic, dynamic-if-remote, dynamic-if-local

Default static

Introduced 25.3.R2

Platforms 7705 SAR-1

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-limit [*family*] *keyword*

Synopsis	Enter the prefix-limit list instance
----------	---

Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>
Tree	prefix-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

[family] keyword

Synopsis	Address family to which the limit applies
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>
Tree	prefix-limit
Options	ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-excess *number*

Synopsis	Percentage of maximum routes to install in route table
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> hold-excess <i>number</i>
Tree	hold-excess
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the post-import command is configured to true, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the idle-timeout and log-only commands.</p>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-timeout *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword idle-timeout <i>number</i>
Tree	idle-timeout
Description	This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer. When unconfigured, the command inherits the value from the group-level configuration.
Range	1 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword maximum <i>number</i>
Tree	maximum
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> post-import <i>boolean</i>
Tree	post-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

remove-private

Synopsis	Enable the remove-private context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private
Tree	remove-private
Introduced	25.3.R2
Platforms	7705 SAR-1

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private limited <i>boolean</i>
Tree	limited

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private replace <i>boolean</i>
Tree	replace
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

skip-peer-as *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

send-communities

Synopsis	Enter the send-communities context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities
Tree	send-communities
Introduced	25.3.R2
Platforms	7705 SAR-1

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
----------	---

Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) send-communities extended <i>boolean</i>
Tree	extended
Description	<p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to false, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) send-communities large <i>boolean</i>
Tree	large
Description	<p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to false, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) send-communities standard <i>boolean</i>
Tree	standard
Description	<p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to false, all standard communities are removed from all routes advertised to BGP peers.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

send-default

Synopsis	Enable the send-default context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policy name
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable IPv6 family type
----------	-------------------------

Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tcp-mss (<i>number</i> <i>keyword</i>)
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Options	ip-stack
Introduced	25.3.R2
Platforms	7705 SAR-1

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) third-party-nexthop <i>boolean</i>
Tree	third-party-nexthop
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ttl-security <i>number</i>
Tree	ttl-security
Description	<p>This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.</p> <p>When unconfigured, the command inherits the value of the group-level setting.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	BGP peer type
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) type <i>keyword</i>
Tree	type

Options	no-type, internal, external
Introduced	25.3.R2
Platforms	7705 SAR-1

next-hop-resolution

Synopsis	Enter the next-hop-resolution context
Context	configure service vprn <i>service-name</i> bgp next-hop-resolution
Tree	next-hop-resolution
Introduced	25.3.R2
Platforms	7705 SAR-1

policy reference

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	configure service vprn <i>service-name</i> bgp next-hop-resolution policy reference
Tree	policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	configure service vprn <i>service-name</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i>
Tree	use-bgp-routes
Description	<p>When configured to true, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to false, BGP next hops are not resolved.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

use-leaked-routes

Synopsis Enter the **use-leaked-routes** context

Context **configure** [service vprn](#) *service-name* [bgp next-hop-resolution use-leaked-routes](#)

Tree [use-leaked-routes](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

static *boolean*

Synopsis Use leaked static routes to resolve BGP next hop

Context **configure** [service vprn](#) *service-name* [bgp next-hop-resolution use-leaked-routes static](#) *boolean*

Tree [static](#)

Description When configured to **true**, the router allows any non-leaked unlabeled unicast IPv4 or IPv6 route in the BGP RIB to be resolved by a leaked static route with direct next hops. A BGP route resolved this way cannot resolve other routes (including BGP routes) and cannot be redistributed into non-BGP protocols, such as IGP.

When configured to **false**, the router prevents the use of leaked static routes to resolve BGP routes.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

path-mtu-discovery *boolean*

Synopsis Enable Path MTU Discovery

Context **configure** [service vprn](#) *service-name* [bgp path-mtu-discovery](#) *boolean*

Tree [path-mtu-discovery](#)

Description When configured to **true**, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.

When configured to **false**, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure service vpn <i>service-name</i> bgp peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

peer-tracking-policy *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	configure service vpn <i>service-name</i> bgp peer-tracking-policy <i>reference</i>
Tree	peer-tracking-policy
Description	<p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p> <p>Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.</p>
Reference	configure policy-options <i>policy-statement</i> <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure service vpn <i>service-name</i> bgp preference <i>number</i>

Tree	preference
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p>
Range	1 to 255
Default	170
Introduced	25.3.R2
Platforms	7705 SAR-1

rapid-update

Synopsis	Enter the rapid-update context
Context	configure service vprn <i>service-name</i> bgp rapid-update
Tree	rapid-update
Description	<p>Commands in this context specify the address families that are configured to support the rapid update functionality.</p> <p>The rapid update functionality overrides the remaining time on a peer's MRAI timer and immediately sends routes belonging to the specified address families (and all other pending updates) to the peers receiving these routes.</p>
Introduced	25.10.R1
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Include IPv4 address family routes
Context	configure service vprn <i>service-name</i> bgp rapid-update ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Include IPv6 address family routes
Context	configure service vprn <i>service-name</i> bgp rapid-update ipv6 <i>boolean</i>

Tree	ipv6
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

rapid-withdrawal *boolean*

Synopsis	Send BGP withdrawal UPDATE messages immediately
Context	configure service vprn <i>service-name</i> bgp rapid-withdrawal <i>boolean</i>
Tree	rapid-withdrawal
Description	<p>When configured to true, UPDATE messages containing withdrawn NLRI are sent immediately to a peer without waiting for the MRAI timer to expire. UPDATE messages containing reachable NLRI continue to wait for the MRAI timer to expire, or for a rapid update trigger.</p> <p>When configured to false, withdrawal processing continues with the normal behavior.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

remove-private

Synopsis	Enable the remove-private context
Context	configure service vprn <i>service-name</i> bgp remove-private
Tree	remove-private
Introduced	25.3.R2
Platforms	7705 SAR-1

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure service vprn <i>service-name</i> bgp remove-private limited <i>boolean</i>
Tree	limited
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure service vprn <i>service-name</i> bgp remove-private replace <i>boolean</i>
Tree	replace
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

skip-peer-as *boolean*

Synopsis	Keep private ASN if AS-PATH contains eBGP peer's ASN
Context	configure service vprn <i>service-name</i> bgp remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-management

Synopsis	Enter the rib-management context
Context	configure service vprn <i>service-name</i> bgp rib-management
Tree	rib-management
Introduced	25.3.R2
Platforms	7705 SAR-1

Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Leak import policy name
Context	configure service vpn <i>service-name</i> bgp rib-management ipv4 leak-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	This command specifies one or more leak import policies. Policy names are limited to 64 characters except for the first policy. Only one object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).
String length	1 to 255
Max. instances	15
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-table-import

Synopsis	Enter the route-table-import context
Context	configure service vpn <i>service-name</i> bgp rib-management ipv4 route-table-import
Tree	route-table-import
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
----------	---

Context	configure service vprn <i>service-name</i> bgp rib-management ipv4 route-table-import policy-name <i>reference</i>
Tree	policy-name
Description	<p>This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.</p> <p>When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.</p> <p>Aggregate routes are always imported into each RIB, independent of the specified policy.</p> <p>Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.</p> <p>When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2

route-table-import

Synopsis	Enter the route-table-import context
Context	configure service vprn <i>service-name</i> bgp rib-management ipv6 route-table-import
Tree	route-table-import
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	configure service vprn <i>service-name</i> bgp rib-management ipv6 route-table-import policy-name <i>reference</i>
Tree	policy-name
Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs. When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

label-ipv4

Synopsis	Export policy name
Context	configure service vprn <i>service-name</i> bgp send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure service vprn <i>service-name</i> bgp send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Enable IPv6 family type
Context	configure service vprn <i>service-name</i> bgp send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>service-name</i> bgp split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to false, the use of split-horizon is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size override
Context	configure service vprn <i>service-name</i> bgp tcp-mss <i>number</i>
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR-1

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure <i>service vprn service-name</i> <i>bgp third-party-nexthop boolean</i>
Tree	<i>third-party-nexthop</i>
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-evpn

Synopsis	Enter the bgp-evpn context
Context	configure <i>service vprn service-name</i> <i>bgp-evpn</i>
Tree	<i>bgp-evpn</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls [*bgp-instance*] *number*

Synopsis	Enter the mpls list instance
Context	configure <i>service vprn service-name</i> <i>bgp-evpn mpls number</i>
Tree	<i>mpls</i>
Introduced	25.3.R2

Platforms 7705 SAR-1

[bgp-instance] number

Synopsis	BGP instance ID
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Range	1
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of BGP-EVPN MPLS
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure the automatic binding options of a BGP-EVPN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-flex-algo-fallback boolean

Synopsis	Enable flexible algorithm fallback
----------	------------------------------------

Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ecmp *number*

Synopsis	Maximum ECMP routes allowed
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Description	This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level.
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-strict-tunnel-tagging *boolean*

Synopsis	Allow enforcement of strict tunnel tagging
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i>
Tree	enforce-strict-tunnel-tagging
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel enforce-untagged-route <i>keyword</i>
Tree	enforce-untagged-route
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p> <p>The untagged-tunnel option can be used in combination with the enforce-strict-tunnel-tagging command configured to true, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.</p> <p>When unconfigured, untagged routes can bind to tagged or untagged LSPs.</p>
Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution *keyword*

Synopsis	Resolution method for tunnel selection
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter

Tree	resolution-filter
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-EVPN routes within the automatic binding of the BGP-EVPN MPLS service to tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop. When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter ldp <i>boolean</i>
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
----------	--

Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	<p>When configured to true, BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to false, the RSVP LSP is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>

Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
----------	---

Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP-EVPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and • a color value that matches the highest numbered color for the extended community attached to the service route
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

default-route-tag *one-byte-value*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> default-route-tag <i>one-byte-value</i>
Tree	default-route-tag

Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

domain-id *domain-id*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> domain-id <i>domain-id</i>
Tree	domain-id
Description	<p>This command specifies the D-PATH domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure <i>service vprn service-name</i> <i>bgp-evpn mpls number</i> dynamic-egress-label-limit <i>boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

evi *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVPN instance ID
Context	configure <i>service vprn service-name</i> <i>bgp-evpn mpls number</i> evi <i>number</i>
Tree	<i>evi</i>
Description	This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment.
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-link-bandwidth

Synopsis	Enter the evpn-link-bandwidth context
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth
Tree	evpn-link-bandwidth
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise

Synopsis	Enable the advertise context
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth advertise
Tree	advertise
Introduced	25.3.R2
Platforms	7705 SAR-1

max-dynamic-weight *number*

Synopsis	Maximum dynamic weight of the route
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth advertise max-dynamic-weight <i>number</i>
Tree	max-dynamic-weight
Description	This command configures the maximum weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If weight dynamic is configured, the actual advertised weight is the minimum of the number of BGP PE-CE paths for the prefix and the configured maximum weight.
Range	1 to 128
Default	128
Introduced	25.3.R2
Platforms	7705 SAR-1

weight (*number* | *keyword*)

Synopsis	Weight of the route
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth advertise weight (<i>number</i> <i>keyword</i>)

Tree	weight
Description	<p>This command configures the weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service.</p> <p>If set to dynamic, the weight is dynamically set based on the number of BGP PE-CE paths for the IP-Prefix that is advertised in an EVPN IP-Prefix route.</p>
Range	1 to 128
Options	dynamic
Default	dynamic
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp *boolean*

Synopsis	Enable weighted ECMP
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, the router supports the processing of the EVPN link bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the VPRN route table.</p> <p>Flows to an IP Prefix received with a weight and a zero ESI value are sprayed according to the weight. If the EVPN IP-Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer).</p> <p>The command also enables the weighted ECMP functionality for BGP CEs that are configured with an evpn-link-bandwidth add-to-received-bgp weight.</p> <p>When configured to false, the router disables the processing of the EVPN link bandwidth extended community.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

gateway-ip

Synopsis	Enter the gateway-ip context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> gateway-ip
Tree	gateway-ip
Introduced	25.7.R1

Platforms 7705 SAR-1

advertise *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the advertisement of GW-IP in IP prefix routes
Context	configure service vprn service-name bgp-evpn mpls number gateway-ip advertise <i>boolean</i>
Tree	advertise
Description	<p>When configured to true, the router advertises an IP prefix route for prefix P with the next hop N in the GW-IP field when a BGP PE-CE route for P is received from N. If multiple CEs advertise the same prefix P from different next hops, and the configure router bgp add-paths evpn command is enabled on the Base router, the router generates multiple IP prefix routes. Each of these routes has a unique next hop encoded in the GW-IP field and a distinct path ID.</p> <p>When configured to false, IP prefix routes are advertised without a non-zero GW-IP value.</p>
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-1

resolve *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the resolution of GW-IP in IP prefix routes
Context	configure service vprn service-name bgp-evpn mpls number gateway-ip resolve <i>boolean</i>
Tree	resolve
Description	<p>When configured to true, the router resolves IP prefix routes with a non-zero GW-IP to either EVPN-IFL-HOST routes that match the GW-IP or to local R-VPLS interfaces if the GW-IP is associated with a local R-VPLS interface.</p> <p>When configured to false, IP prefix routes with a non-zero GW-IP remain unresolved.</p>
Default	false
Introduced	25.7.R1

Platforms 7705 SAR-1

route-distinguisher (*string* | *keyword*)

Synopsis	Route distinguisher
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> route-distinguisher (<i>string</i> <i>keyword</i>)
Tree	route-distinguisher
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to.
Options	auto-rd
Introduced	25.3.R2
Platforms	7705 SAR-1

send-tunnel-encap

Synopsis	Enter the send-tunnel-encap context
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> send-tunnel-encap
Tree	send-tunnel-encap
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS encapsulation
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> send-tunnel-encap mpls <i>boolean</i>
Tree	mpls
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

vrf-export

Synopsis	Enable the vrf-export context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-export
Tree	vrf-export
Description	<p>Commands in this context specify route policies that control how routes are exported from the local VRF to other VRFs on the same or remote PE routers (via MP-BGP). Aggregate routes are not advertised via MP-BGP protocols to other MP-BGP peers. Route policies are configured in the configure policy-options context.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

vrf-import

Synopsis	Enable the vrf-import context
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-import
Tree	vrf-import
Description	<p>Commands in this context specify route policies that control how VPN-IP and EVPN-IFL routes that are exported by other VRFs on the same or remote PEs, are imported into the local VRF.</p> <p>Route policies are configured in the configure policy-options context.</p> <p>Unless the preference value is changed by the policy, the preference value for BGP-VPN and EVPN-IFL routes specified in this context is set to 170 when imported from remote PE routers, or the value is retained from the protocol preference value of the exported route when imported from other VRFs on the same router.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.

Introduced	25.3.R2
Platforms	7705 SAR-1

vrf-target

Synopsis	Enter the vrf-target context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target
Tree	vrf-target
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

community route-target

Synopsis	Extended BGP community
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target community <i>route-target</i>
Tree	community
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR-1

export-community route-target

Synopsis	Communities sent to remote PE neighbors
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target export-community <i>route-target</i>

Tree	export-community
String length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR-1

import-community *route-target*

Synopsis	Communities accepted from remote PE neighbors
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target import-community <i>route-target</i>
Tree	import-community
String length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-ipvpn

Synopsis	Enter the bgp-ipvpn context
Context	configure service vpn <i>service-name</i> bgp-ipvpn
Tree	bgp-ipvpn
Introduced	25.3.R2
Platforms	7705 SAR-1

attribute-set

Synopsis	Enter the attribute-set context
Context	configure service vpn <i>service-name</i> bgp-ipvpn attribute-set
Tree	attribute-set
Description	<p>Commands in this context configure the handling of attribute set (ATTR_SET) attributes attached to VPN-IP routes imported into or exported from the VPRN.</p> <p>ATTR_SET is an optional transitive BGP path attribute standardized by RFC 6368 that is added to BGP L3 VPN routes to provide logical separation between the BGP domain of a customer and the BGP domain of a service provider.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

export *boolean*

Synopsis	Add ATTR_SET path attribute to exported VPN-IP routes
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn attribute-set</i> export <i>boolean</i>
Tree	<i>export</i>
Description	<p>When configured to true, the router adds an ATTR_SET path attribute to all VPN-IP routes that come from the VRF export of BGP routes advertised by PE-CE peers of the VPRN. This attribute contains an exact copy of all BGP path attributes (post-import policy) of the PE-CE BGP route, excluding the NEXT_HOP, MP_REACH, and MP_UNREACH attributes, as well as the AS4_PATH or AS4_AGGREGATOR attributes. The origin AS in the ATTR_SET encodes the ASN (or confederation ID, if configured) of the exporting VPRN service. Neither the VRF export policy nor a regular BGP export policy is allowed to modify the contents of the ATTR_SET.</p> <p>When configured to false, the router does not add an ATTR_SET path attribute to VPN-IP routes exported by the VPRN. Nokia recommends configuring this command to false, unless there is a requirement for the VPRN to deliver an independent domain L3 VPN service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import *keyword*

Synopsis	Reception behavior of ATTR_SET
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn attribute-set</i> import <i>keyword</i>
Tree	<i>import</i>
Description	<p>This command configures the reception behavior for ATTR_SETs in received VPN-IP routes.</p> <ul style="list-style-type: none">• accept — BGP accepts and processes ATTR_SETs in received unicast VPN-IP routes (MPLS or SRv6) when they are imported into the VPRN. The path attributes contained inside the ATTR_SET are used for best path selection within the VPRN, instead of the outer path attributes attached to the imported VPN-IP route. The path attributes inside the ATTR_SET determine the path attributes of BGP routes advertised to PE-CE peers of the VPRN. However, the ATTR_SET is removed at the time of advertisement. VPRN BGP routes with attributes derived from accept processing can only be advertised to EBGp peers and IBGP route reflector client peers. VPRN BGP routes cannot be advertised to BGP confederation peers. If the origin AS in the ATTR_SET attribute does not match the configured ASN, VPRN

BGP routes with attributes derived from **accept** processing are advertised to IBGP peers that are not covered by a cluster configuration.

- **drop** — BGP ignores and silently discards ATTR_SETs in received VPN-IP routes when they are imported into the VPRN. The path attributes contained inside the ATTR_SET are not used for best path selection within the VPRN. If a VPRN is not involved in an independent domain L3 VPN service, Nokia recommends configuring this command to use the **drop** option.
- **ignore** — BGP ignores ATTR_SETs in received VPN-IP routes when they are imported into the VPRN. The path attributes contained inside the ATTR_SET are not used for best path selection within the VPRN. With the **ignore** option, the ATTR_SET attribute is transmitted unchanged to the CE. Nokia recommends not to configure this command to use the **ignore** option in most deployments.

Options	ignore, accept, drop
Default	ignore
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls

Synopsis	Enter the mpls context
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls
Tree	mpls
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BGP-IPVPN MPLS
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
----------	---

Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure the automatic-binding options of a BGP-IPVPN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ecmp *number*

Synopsis	Maximum ECMP routes allowed
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Description	This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level.
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-strict-tunnel-tagging *boolean*

Synopsis	Allow enforcement of strict tunnel tagging
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp-ipvpn mpls auto-bind-tunnel enforce-strict-tunnel-tagging</i> <i>boolean</i>
Tree	<i>enforce-strict-tunnel-tagging</i>
Description	<p>When configured to true, the system must only consider LSPs marked with an administrative tag for next-hop resolution.</p> <p>When configured to false, tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp-ipvpn mpls auto-bind-tunnel enforce-untagged-route</i> <i>keyword</i>
Tree	<i>enforce-untagged-route</i>
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p> <p>The untagged-tunnel option can be used in combination with the enforce-strict-tunnel-tagging command configured to true, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.</p> <p>When unconfigured, untagged routes can bind to tagged or untagged LSPs.</p>
Options	<p>none – Untagged routes can bind to tagged or untagged LSPs</p> <p>untagged-tunnel – Untagged routes only bind to LSPs without an admin tag</p>
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution keyword

Synopsis	Resolution method for tunnel selection
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution keyword
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter
Tree	resolution-filter
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp boolean
Tree	bgp
Description	<p>When configured to true, BGP searches the BGP LSP for the address of the BGP next hop.</p> <p>When configured to false, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

gre boolean

Synopsis	Use GRE tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre boolean
Tree	gre
Description	When configured to true , this command enables setting the tunnel type for the auto bind tunnel.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp boolean
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rsvp boolean
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID.

	When configured to false , OSPF tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop. When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP IP-VPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and • a color value that matches the highest numbered color for the extended community attached to the service route
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

sr-te boolean

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

static-blackhole-first boolean

Synopsis	Check for static blackhole route to resolve next hop
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel static-blackhole-first <i>boolean</i>
Tree	static-blackhole-first
Description	<p>When configured to true, the router uses a modified next-hop resolution sequence for each imported VPN-IP route. The router first checks for a static route in the Base routing table that matches the BGP next-hop address. If at least one such static route exists, and the route that is the longest match of the BGP next-hop address is a blackhole static route, the router resolves the VPN-IP route and programs it into the VPRN IP FIB table with a next-hop action that discards all matching packets. If there is no matching static route, or the longest matching static route is not a blackhole, the router resolves the VPN-IP route in the Base routing table as normal, that is, according to the configured VPRN auto-bind filter options.</p> <p>When configured to false, the router resolves the VPN-IP route in the Base routing table according to the configured VPRN auto-bind filter options.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp *boolean*

Synopsis	Allow weighted load-balancing
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn mpls auto-bind-tunnel weighted-ecmp boolean</i>
Tree	<i>weighted-ecmp</i>
Description	<p>When configured to true, this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.</p> <p>When configured to false, this command disables weighted ECMP for next-hop tunnel selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

domain-id *domain-id*

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn mpls domain-id domain-id</i>
Tree	<i>domain-id</i>
Description	<p>This command specifies the D-PATH domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls dynamic-egress-label-limit <i>boolean</i>
Tree	dynamic-egress-label-limit
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-distinguisher (*string* | *keyword*)

Synopsis	Route distinguisher
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls route-distinguisher (<i>string</i> <i>keyword</i>)
Tree	route-distinguisher
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to.
Options	auto-rd
Introduced	25.3.R2
Platforms	7705 SAR-1

vrf-export

Synopsis	Enable the vrf-export context
----------	--------------------------------------

Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-export
Tree	vrf-export
Description	<p>Commands in this context specify route policies that control how routes are exported from the local VRF to other VRFs on the same or remote PE routers (via MP-BGP). Aggregate routes are not advertised via MP-BGP protocols to other MP-BGP peers. Route policies are configured in the configure policy-options context.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

vrf-import

Synopsis	Enable the vrf-import context
----------	--------------------------------------

Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-import
Tree	vrf-import
Description	<p>Commands in this context specify route policies that control how VPN-IP and EVPN-IFL routes that are exported by other VRFs on the same or remote PEs, are imported into the local VRF.</p> <p>Route policies are configured in the configure policy-options context.</p> <p>Unless the preference value is changed by the policy, the preference value for BGP-VPN and EVPN-IFL routes specified in this context is set to 170 when imported from remote PE routers, or the value is retained from the protocol preference value of the exported route when imported from other VRFs on the same router.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

vrf-target

Synopsis	Enter the vrf-target context
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-target
Tree	vrf-target
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

community *route-target*

Synopsis	Extended BGP community
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-target community <i>route-target</i>
Tree	community
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR-1

export-community *route-target*

Synopsis	Communities sent to remote PE neighbors
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-target export-community <i>route-target</i>
Tree	export-community
String length	10 to 28

Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR-1

import-community *route-target*

Synopsis	Communities accepted from remote PE neighbors
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls vrf-target import-community route-target
Tree	import-community
String length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-shared-queue

Synopsis	Enable the bgp-shared-queue context
Context	configure service vprn <i>service-name</i> bgp-shared-queue
Tree	bgp-shared-queue
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	Committed information rate for shared queue
Context	configure service vprn <i>service-name</i> bgp-shared-queue cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 100000000
Units	kilobps
Options	max
Default	4000
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	Peak information rate for shared queue
Context	configure service vpn <i>service-name</i> bgp-shared-queue pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 100000000
Units	kilobps
Options	max
Default	4000
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-vpn-backup

Synopsis	Enter the bgp-vpn-backup context
Context	configure service vpn <i>service-name</i> bgp-vpn-backup
Tree	bgp-vpn-backup
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *boolean*

Synopsis	Allow BGP-VPN to be used as backup for IPv4 prefixes
Context	configure service vpn <i>service-name</i> bgp-vpn-backup ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *boolean*

Synopsis	Allow BGP-VPN to be used as backup for IPv6 prefixes
Context	configure service vpn <i>service-name</i> bgp-vpn-backup ipv6 <i>boolean</i>
Tree	ipv6
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

carrier-carrier-vpn *boolean*

Synopsis	Allow VPRN service to support a Carrier Supporting Carrier model
Context	configure service vprn <i>service-name</i> carrier-carrier-vpn <i>boolean</i>
Tree	carrier-carrier-vpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

confederation

Synopsis	Enter the confederation context
Context	configure service vprn <i>service-name</i> confederation
Tree	confederation
Introduced	25.3.R2
Platforms	7705 SAR-1

confed-as-num *number*

Synopsis	Confederation number within an autonomous system
Context	configure service vprn <i>service-name</i> confederation confed-as-num <i>number</i>
Tree	confed-as-num
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

members [[as-number](#)] *number*

Synopsis	Add a list entry for members
Context	configure service vprn <i>service-name</i> confederation members <i>number</i>
Tree	members
Max. instances	256

Introduced 25.3.R2
Platforms 7705 SAR-1

Synopsis Confederation AS number
Context **configure** *service vprn service-name confederation members number*
Tree *members*
Range 1 to 4294967295
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

customer *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Service customer ID
Context **configure** *service vprn service-name customer reference*
Tree *customer*
Reference **configure** *service customer customer-name*
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR-1

d-path-length-ignore *boolean*

Synopsis Enable D-PATH length ignore
Context **configure** *service vprn service-name d-path-length-ignore boolean*
Tree *d-path-length-ignore*
Description When configured to **true**, the VPRN RTM ignores the D-PATH domain segment length for best path selection purposes (for routes in the VPRN). This allows the user to control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

	When configured to false , the router does not ignore the D-PATH domain segment length.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover
Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-client-lead-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover maximum-client-lead-time <i>number</i>
Tree	maximum-client-lead-time

Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover partner-down-delay <i>number</i>
Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [[address](#)] *reference*

Synopsis	Enter the peer list instance
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover peer <i>reference</i>

startup-wait-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item failover startup-wait-time</i> <i>number</i>
Tree	<i>startup-wait-time</i>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

max-lease-time *number*

Synopsis	Maximum lease time
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item max-lease-time</i> <i>number</i>
Tree	<i>max-lease-time</i>
Range	10 to 315446399
Units	seconds
Default	864000
Introduced	25.3.R2
Platforms	7705 SAR-1

min-lease-time *number*

Synopsis	Minimum lease time
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> min-lease-time <i>number</i>
Tree	min-lease-time
Range	10 to 315446399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-free

Synopsis	Enter the minimum-free context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> minimum-free
Tree	minimum-free
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	25.3.R2
Platforms	7705 SAR-1

absolute *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> minimum-free absolute <i>number</i>
Tree	absolute
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	25.3.R2
Platforms	7705 SAR-1

event-when-depleted *boolean*

Synopsis	Generate notification when addresses are depleted
Context	configure <i>service vpn</i> <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item minimum-free</i> event-when-depleted <i>boolean</i>
Tree	<i>event-when-depleted</i>
Description	<p>When configured to true, a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.</p> <p>When configured to false, no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

percent *number*

Synopsis	Minimum free addresses as a percentage
Context	configure <i>service vpn</i> <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item minimum-free</i> percent <i>number</i>
Tree	<i>percent</i>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	25.3.R2
Platforms	7705 SAR-1

nak-non-matching-subnet *boolean*

Synopsis	Send NAK if no match for request address pool range
Context	configure <i>service vpn</i> <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item nak-non-matching-subnet</i> <i>boolean</i>
Tree	<i>nak-non-matching-subnet</i>
Description	<p>When configured to true, a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.</p> <p>When configured to false or unconfigured, the system drops the DHCP packet.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

offer-time *number*

Synopsis	Time interval during which a DHCP offer remains valid
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> offer-time <i>number</i>
Tree	offer-time
Range	10 to 600
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

options

use-gi-address

Synopsis	Enable the use-gi-address context
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection use-gi-address
Tree	use-gi-address
Description	<p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

scope keyword

Synopsis	GI address-matching scope
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection use-gi-address scope <i>keyword</i>

ascii-string *string-not-all-spaces*

Synopsis DHCP option specified as an ASCII string

Context **configure** [service](#) [vpn](#) *service-name* [dhcp-server](#) [dhcpv6](#) *named-item* [defaults](#) [options](#) [option](#) (*number* | *keyword*) [ascii-string](#) *string-not-all-spaces*

Tree [ascii-string](#)

String length 1 to 127

Notes The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **duration**, **empty**, **hex-string**, or **ipv6-address**.

Introduced 25.3.R2

Platforms 7705 SAR-1

domain-string *string*

Synopsis	DHCP option specified as a domain name
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) domain-string <i>string</i>
Tree	domain-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

duration *number*

Synopsis	DHCP option specified as time
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) duration <i>number</i>
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

empty

Synopsis	Empty DHCP option
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) empty
Tree	empty
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) ipv6-address <i>ipv6-address</i>
Tree	ipv6-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults preferred-lifetime <i>number</i>
Tree	preferred-lifetime
Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address,</p>

the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

Range	300 to 315446399
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

rebind-time *number*

Synopsis	Rebind time for the lease
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults rebind-time <i>number</i>
Tree	rebind-time
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	7705 SAR-1

renew-time *number*

Synopsis	Renew time for the lease
----------	--------------------------

Context	configure <i>service vprn service-name dhcp-server dhcpv6 named-item defaults</i> renew-time <i>number</i>
Tree	renew-time
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR-1

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure <i>service vprn service-name dhcp-server dhcpv6 named-item defaults</i> valid-lifetime <i>number</i>
Tree	valid-lifetime
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399

Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> description
Tree	description
String length	1 to 80
Introduced	25.3.R2

failover

Synopsis	Enter the failover context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover
Tree	failover
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the failover mechanism
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover
Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-client-lead-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover maximum-client-lead-time <i>number</i>
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>service vprn service-name dhcp-server dhcpv6 named-item failover partner-down-delay number</i>
Tree	<i>partner-down-delay</i>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR-1

peer [*address*] *reference*

Synopsis	Enter the peer list instance
Context	configure <i>service vprn service-name dhcp-server dhcpv6 named-item failover peer reference</i>
Tree	<i>peer</i>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *reference*

Synopsis	IP address of the failover peer
Context	configure <i>service vprn service-name dhcp-server dhcpv6 named-item failover peer reference</i>

Tree	peer
Reference	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

sync-tag *named-item*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover peer <i>reference</i> sync-tag <i>named-item</i>
Tree	sync-tag
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

startup-wait-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120

Introduced 25.3.R2
Platforms 7705 SAR-1

ignore-rapid-commit *boolean*

Synopsis Ignore Rapid Commit option

Context **configure** *service* *vpn* *service-name* *dhcp-server dhcpv6* *named-item* **ignore-rapid-commit** *boolean*

Tree [ignore-rapid-commit](#)

Description When configured to **true**, the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-id-mapping *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Map hosts within interface-to-prefix combinations

Context **configure** *service* *vpn* *service-name* *dhcp-server dhcpv6* *named-item* **interface-id-mapping** *boolean*

Tree [interface-id-mapping](#)

Description When configured to **true**, this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

lease-hold

Synopsis Enter the **lease-hold** context

Context	configure service vpn <i>service-name dhcp-server dhcpv6 named-item lease-hold</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix ipv6-prefix preferred-lifetime <i>number</i>
Tree	preferred-lifetime
Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address,</p>

the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

Range	300 to 315446399
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length-threshold [[prefix-length](#)] *number*

rebind-time number

Synopsis	Rebind time for the lease
Context	configure service vpn service-name dhcp-server dhcpv6 named-item pool named-item prefix ipv6-prefix rebind-time number
Tree	rebind-time
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates</p>

a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	7705 SAR-1

renew-time *number*

Synopsis	Renew time for the lease
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix <i>ipv6-prefix</i> renew-time <i>number</i>
Tree	renew-time
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR-1

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix ipv6-prefix valid-lifetime <i>number</i>
Tree	valid-lifetime
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds

ecmp number

Synopsis	Maximum equal-cost routes for routing table instance
Context	configure <i>service vprn service-name</i> ecmp number
Tree	ecmp
Description	<p>This command configures ECMP and defines the number of routes for path sharing.</p> <p>ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p> <ol style="list-style-type: none">1. The system selects the lowest next hop router ID.2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.
Range	1 to 128
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

ecmp-unequal-cost boolean

Synopsis	Enable ECMP unequal cost capability
Context	configure <i>service vprn service-name</i> ecmp-unequal-cost boolean
Tree	ecmp-unequal-cost
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

entropy-label boolean

Synopsis	Use entropy label
Context	configure <i>service vprn service-name</i> entropy-label boolean
Tree	entropy-label
Description	<p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP</p>

or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the **configure router mpls** or **configure router mpls lsp** context.

This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, the use of entropy labels is disabled.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-inactive-bgp *boolean*

Synopsis	Export preferred BGP route even if inactive
Context	configure service vpn <i>service-name</i> export-inactive-bgp <i>boolean</i>
Tree	export-inactive-bgp
Description	When configured to true , the preferred BGP route learned by a VPRN is exported as the VPN-IP route even if it is inactive in the route table because a preferred BGP VPRN route from another PE is present. This overrides the default state in which the VPRN cannot export an inactive BGP route. For the BGP route to be exported, the VRF export policy must accept it. This command applies to both MPLS VPN and SRv6 VPN routes. In SRv6 VPN routes the advertised instruction is an End.DT, while in MPLS VPN routes the advertised label is a per-next-hop label. This “best-external” type of route advertisement is useful in active/standby multi-homing scenarios because it ensures that all PEs know about the backup path provided by the standby PE. When configured to false , the preferred BGP route is not exported if it is inactive.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-inactive-bgp-enhanced *boolean*

Synopsis	Export best BGP route when better non-BGP route present
Context	configure service vpn <i>service-name</i> export-inactive-bgp-enhanced <i>boolean</i>
Tree	export-inactive-bgp-enhanced

Description	<p>When configured to true, the router allows a BGP route that is inactive (because a better non-BGP route for the same prefix is present) to be exportable as a VPN-IP route.</p> <p>A BGP route learned from a VPRN BGP peer is exportable as a VPN-IP route, only if it is the best route for the prefix and is installed in the route table of the VPRN. If the export-inactive-bgp command is true in the VPRN configuration, this rule is relaxed, and the best inactive VPRN BGP route is exportable as a VPN-IP route, provided that the active installed route for the prefix is an imported VPN-IP route.</p> <p>The rule described in the preceding paragraph can be relaxed even further by configuring this command to true. When this command is true, the best inactive VPRN BGP route (best amongst all routes received from all CEs) is exportable as a VPN-IP route, regardless of the route type of the active installed route.</p> <p>The configuration of this command overrides the export-inactive-bgp command. If this command is true, the export-inactive-bgp command does not need to be true.</p> <p>When configured to false, the router disables allowing an inactive BGP route in the presence of a better non-BGP route to be exportable as a VPN-IP route.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

fib-priority keyword

Synopsis	FIB priority for VPRN BGP routes
Context	configure service vprn <i>service-name</i> fib-priority <i>keyword</i>
Tree	fib-priority
Description	<p>This command prioritizes the order in which BGP FIB entries across different routing instances are pushed to the IOM for updating. This allows BGP route updates for higher priority router instances to occur as quickly as possible by assigning a FIB priority to the associated router instances (base and VPRN instances).</p> <p>If routing updates are available for multiple router instances, the IOMs or IMM update the FIB with entries with high priority router instances before entries with standard priority router instances.</p>
Options	standard – Standard FIB priority for routing instances high – High FIB priority for routing instances
Default	standard
Introduced	25.3.R2
Platforms	7705 SAR-1

grt-leaking

Synopsis	Enter the grt-leaking context
----------	--------------------------------------

Context	configure service vprn service-name grt-leaking

Platforms	7705 SAR-1

allow-local-management *boolean*

Synopsis	Enable management traffic
Context	configure service vprn service-name grt-leaking allow-local-management boolean
Tree	allow-local-management
Description	<p>When configured to true, this command enables the support of specific management protocols over VPRN interfaces that terminate on Base routing context IPv4 and IPv6 interface addresses, including Base loopback and system addresses.</p> <p>This command does not control the support for management protocols terminating on VPRN interfaces directly.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

export-grt

Synopsis	Enter the export-grt context
Context	configure service vprn service-name grt-leaking export-grt
Tree	export-grt
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name (*policy-expr-string | string*)

Synopsis	Route policy name or policy logical expression
Context	configure service vprn service-name grt-leaking export-grt policy-name (policy-expr-string string)
Tree	policy-name
String length	1 to 255
Max. instances	5

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit *number*

Synopsis	Maximum number of routes exported from VRF to GRT
Context	configure service vprn <i>service-name</i> grt-leaking export-limit <i>number</i>
Tree	export-limit
Range	0 to 1000
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

export-v6-limit *number*

Synopsis	Maximum number of IPv6 routes exported from VPRN to GRT
Context	configure service vprn <i>service-name</i> grt-leaking export-v6-limit <i>number</i>
Tree	export-v6-limit
Range	0 to 1000
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

grt-lookup *boolean*

Synopsis	Enable global route table lookup
Context	configure service vprn <i>service-name</i> grt-leaking grt-lookup <i>boolean</i>
Tree	grt-lookup
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-grt

Synopsis	Enter the import-grt context
Context	configure service vprn <i>service-name</i> grt-leaking import-grt
Tree	import-grt
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name (*policy-expr-string* | *string*)

Synopsis	Route policy name or policy logical expression
Context	configure service vprn <i>service-name</i> grt-leaking import-grt policy-name (<i>policy-expr-string</i> <i>string</i>)
Tree	policy-name
String length	1 to 255
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-label *boolean*

Synopsis	Include hash label
Context	configure service vprn <i>service-name</i> hash-label <i>boolean</i>
Tree	hash-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

igmp

Synopsis	Enable the igmp context
Context	configure service vprn <i>service-name</i> igmp
Tree	igmp
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of IGMP

Context **configure** [service vprn](#) *service-name* [igmp admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

group-if-query-source-address *ipv4-unicast-address*

Synopsis Default query-source address for all group interfaces

Context **configure** [service vprn](#) *service-name* [igmp group-if-query-source-address](#) *ipv4-unicast-address*

Tree [group-if-query-source-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface [[ip-interface-name](#)] *interface-name*

Synopsis Enter the **interface** list instance

Context **configure** [service vprn](#) *service-name* [igmp interface](#) *interface-name*

Tree [interface](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[ip-interface-name] *interface-name*

Synopsis IP interface name

Context **configure** [service vprn](#) *service-name* [igmp interface](#) *interface-name*

Tree [interface](#)

String length 1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of IGMP
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources

Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Introduced	25.3.R2

Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** [service vprn](#) *service-name* [igmp interface](#) *interface-name* [query-last-member-interval](#) *number*

Tree [query-last-member-interval](#)

Range 1 to 1023

Introduced 25.3.R2

Platforms 7705 SAR-1

query-response-interval *number*

Synopsis Time to wait for a response to the host-query messages

Context **configure** [service vprn](#) *service-name* [igmp interface](#) *interface-name* [query-response-interval](#) *number*

Tree [query-response-interval](#)

Range 1 to 1023

Introduced 25.3.R2

Platforms 7705 SAR-1

redundant-mcast *boolean*

Synopsis Use interface as a redundant-pair member for multicast

Context **configure** [service vprn](#) *service-name* [igmp interface](#) *interface-name* [redundant-mcast](#) *boolean*

Tree [redundant-mcast](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

router-alert-check *boolean*

Synopsis Enable router alert checking for IGMP or MLD messages

Context **configure** [service vprn](#) *service-name* [igmp interface](#) *interface-name* [router-alert-check](#) *boolean*

Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [start](#) [ipv4-multicast-address](#) [end](#) [ipv4-multicast-address](#)

Synopsis	Enter the group-range list instance
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

start [ipv4-multicast-address](#)

Synopsis	Lower bound of the IP address group range
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end [ipv4-multicast-address](#)

Synopsis	Upper bound of the IP address group range
----------	---

Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

group [*group-address*] *ipv4-multicast-address*

Synopsis	Enter the group list instance
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> static group <i>ipv4-multicast-address</i>
Tree	<i>group</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-address] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> static group <i>ipv4-multicast-address</i>
Tree	<i>group</i>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [*source-address*] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	<i>source</i>
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>

Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group <i>ipv4-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [start](#) *ipv4-multicast-address* [end](#) *ipv4-multicast-address* [step](#) *ipv4-address*

Synopsis	Enter the group-range list instance
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

start *ipv4-multicast-address*

Synopsis	IP address for the start of the static group range
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *ipv4-multicast-address*

Synopsis	IP address for the end of the static group range
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

step *ipv4-address*

Synopsis	Step interval in the group-range address
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
MD-CLI default	0.0.0.1
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
----------	---

Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static <i>group-range</i> start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

starg

Synopsis	any source address (*,G)
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static <i>group-range</i> start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR-1

subnet-check *boolean*

Synopsis	Allow subnet checking
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> subnet-check <i>boolean</i>
Tree	subnet-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	IGMP protocol version
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2

Platforms 7705 SAR-1

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** **service** **vpn** *service-name* **igmp** **query-interval** *number*

Tree [query-interval](#)

Description This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.

Range 2 to 1024

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR-1

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** **service** **vpn** *service-name* **igmp** **query-last-member-interval** *number*

Tree [query-last-member-interval](#)

Description This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.

Range 1 to 1023

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR-1

query-response-interval *number*

Synopsis Time to wait for a response to the host-query messages

Context **configure** **service** **vpn** *service-name* **igmp** **query-response-interval** *number*

Tree [query-response-interval](#)

Range 1 to 1023

Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpn <i>service-name</i> igmp robust-count <i>number</i>
Tree	robust-count
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, this value can be increased.
Range	2 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vpn <i>service-name</i> igmp ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [start](#) *ipv4-multicast-address* [end](#) *ipv4-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure service vpn <i>service-name</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

start *ipv4-multicast-address*

Synopsis	Lower bound of the IP address group range
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *ipv4-multicast-address*

Synopsis	Upper bound of the IP address group range
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>

Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-nh-metric *boolean*

Synopsis	Ignore next hop metric
Context	configure service vpn <i>service-name</i> ignore-nh-metric <i>boolean</i>
Tree	ignore-nh-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the interface
----------	---------------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

autoconfigure

Synopsis	Enter the autoconfigure context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure
Tree	autoconfigure
Description	Commands in this context configure the autoconfigure functionality for the interface.
Introduced	25.7.R1
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4
Tree	ipv4
Description	Commands in this context configure IPv4 autoconfigure settings.
Introduced	25.7.R1
Platforms	7705 SAR-1

dhcp-client

Synopsis	Enable the dhcp-client context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client
Tree	dhcp-client
Description	Commands in this context configure the node as an IPv4 DHCP client. When the node operates as a DHCP client, it learns the IP address of the interface via dynamic IP address assignment.
Introduced	25.7.R1

Platforms7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCP client
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.7.R1
Platforms	7705 SAR-1

class-id

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the class-id context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id
Tree	class-id
Description	Commands in this context configure the vendor class ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR-1

ascii-string *string*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as an ASCII string
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127

Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.7.R1
Platforms	7705 SAR-1

hex-string *hex-string*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as a hexadecimal string
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.7.R1
Platforms	7705 SAR-1

client-id

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the client-id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id
Tree	client-id
Description	Commands in this context configure the client ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR-1

ascii-string *string*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as an ASCII string
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

hex-string *hex-string*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as a hexadecimal string
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

interface

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interface name as the client ID
----------	---------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id interface
Tree	interface
Description	This command configures the node to use the interface name as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

mac

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address as the client ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id mac
Tree	mac
Description	This command configures the node to use the MAC address as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR-1

lease-time (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lease time the DHCP client requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client lease-time (<i>number</i> <i>keyword</i>)
Tree	lease-time
Description	This command configures the lease time that the DHCP client requests to the DHCP server. The DHCP server can override the configured value.
Range	10 to 315446399
Units	seconds

Options	infinite – Request an infinite lease with no expiry
Default	86400
Introduced	25.7.R1
Platforms	7705 SAR-1

request-options

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the request-options context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options
Tree	request-options
Description	Commands in this context configure the DHCP options to include in the parameter request list as part of the DHCPREQUEST message to the server.
Introduced	25.7.R1
Platforms	7705 SAR-1

dns-server *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

dynamic-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	configure <i>service vpn</i> <i>service-name</i> interface <i>interface-name</i> dynamic-tunnel-redundant-nexthop <i>ipv4-unicast-address</i>
Tree	dynamic-tunnel-redundant-nexthop
Description	<p>This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for dynamic IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work.</p> <p>The next-hop address is resolved in the routing table of a corresponding service.</p>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure <i>service vpn</i> <i>service-name</i> interface <i>interface-name</i> hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure <i>service vpn</i> <i>service-name</i> interface <i>interface-name</i> hold-time ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

down

Synopsis	Enter the down context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR-1

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none">• Psk: local tunnel IP address• Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *fully-qualified-domain-name*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ike-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ike-policy <i>reference</i>
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2

Platforms7705 SAR-1

ipsec-transform *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

ppk

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ppk context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id reference

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

list reference

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK list instance name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>
Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key

String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

manual

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the manual context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual
Tree	manual
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-1

keys [**security-association**] *number direction keyword*

Synopsis	Enter the keys list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number direction keyword</i>
Tree	keys
Description	Commands in this context configure the security association list for the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

[**security-association**] *number*

Synopsis	SA entry ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number direction keyword</i>
Tree	keys
Range	1 to 16

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

direction *keyword*

Synopsis	Direction of the IPsec tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *hex-string*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> authentication-key <i>hex-string</i>
Tree	authentication-key
String length	1 to 130
Introduced	25.3.R2
Platforms	7705 SAR-1

encryption-key *hex-string*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
----------	---------------------------------------

Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>manual</i> <i>keys</i> <i>number</i> <i>direction</i> <i>keyword</i> <i>encryption-key</i> <i>hex-string</i>
Tree	<i>encryption-key</i>
String length	1 to 66
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transform *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>manual</i> <i>keys</i> <i>number</i> <i>direction</i> <i>keyword</i> <i>ipsec-transform</i> <i>reference</i>
Tree	<i>ipsec-transform</i>
Reference	configure <i>ipsec ipsec-transform</i> <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

spi *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>manual</i> <i>keys</i> <i>number</i> <i>direction</i> <i>keyword</i> <i>spi</i> <i>number</i>
Tree	<i>spi</i>
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.

	The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-gateway-address-override (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> local-gateway-address-override (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

esp number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

pmtu-discovery-aging number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging

Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

private-sap *number*

- 

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- 

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-sap <i>number</i>
Tree	private-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

private-service *service-name*

- 

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- 

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
----------	----------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-service <i>service-name</i>
Tree	private-service
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

private-tcp-mss-adjust *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v4 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4

Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v6 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto

Introduced25.3.R2

Platforms7705 SAR-1

remote-gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisRemote IPsec tunnel endpoint address

Context**configure** **service** **vpn** *service-name* **interface** *interface-name* **ipsec ipsec-tunnel**
named-item **remote-gateway-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

security-policy

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>security-policy</i>
Tree	<i>security-policy</i>
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

id *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>security-policy</i> <i>id</i> <i>number</i>
Tree	<i>id</i>
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-match *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>security-policy</i> <i>strict-match</i> <i>boolean</i>
Tree	<i>strict-match</i>

Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipv6-exception <i>reference</i>
Tree	ipv6-exception
Description	<p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface.</p> <p>When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p>
Reference	configure filter ipv6-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

public-sap *number*

WARNING:

Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *number*

Synopsis	BFD receive interval over this interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals.
Range	10 to 100000
Units	milliseconds
Default	100

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the circuit ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id

Synopsis	Use the SAP ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-id

Synopsis	Enter the remote-id context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 32
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

mac

Synopsis	Use the MAC address for the remote ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

none

Synopsis	Do not include the remote ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id none
Tree	none
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i>

Tree	client-mac-address
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	configure service vpn service-name interface interface-name ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i>
Tree	pool-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service vpn service-name interface interface-name ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service vpn service-name interface interface-name ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	25.3.R2
Platforms	7705 SAR-1

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as the DHCP server address for the SAP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server emulated-server <i>ipv4-unicast-address</i>
Tree	emulated-server
Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
Introduced	25.3.R2
Platforms	7705 SAR-1

lease-time

Synopsis	Enter the lease-time context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time
Tree	lease-time
Introduced	25.3.R2
Platforms	7705 SAR-1

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	DHCP lease time
----------	-----------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time <i>value</i> <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

relay-plain-bootp *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-plain-bootp <i>boolean</i>
Tree	relay-plain-bootp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

relay-proxy

Synopsis	Enable the relay-proxy context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	25.3.R2
Platforms	7705 SAR-1

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i>
Tree	release-update-src-ip
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

siaddr-override *ipv4-unicast-address*

Synopsis	DHCP server IP address for address hiding function
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy siaddr-override <i>ipv4-unicast-address</i>
Tree	siaddr-override
Introduced	25.3.R2
Platforms	7705 SAR-1

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp server <i>ipv4-unicast-address</i>
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp src-ip-addr <i>keyword</i>
Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

trusted *boolean*

Synopsis	Relay untrusted packets
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	<p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

use-arp *boolean*

Synopsis	Use ARP to determine the destination hardware address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp use-arp <i>boolean</i>
Tree	use-arp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR-1

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

param-problem

Synopsis	Enter the param-problem context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem number <i>number</i>

Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

redirects

Synopsis	Enter the redirects context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects
Tree	redirects
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of sending TTL expired messages

Context **configure** [service](#) [vpn](#) *service-name* [interface](#) *interface-name* [ipv4](#) [icmp](#) [ttl-expired](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-helper-address *ipv4-unicast-address*

Synopsis	Gateway address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 ip-helper-address <i>ipv4-unicast-address</i>
Tree	ip-helper-address
Introduced	25.3.R2
Platforms	7705 SAR-1

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 local-dhcp-server <i>reference</i>
Tree	local-dhcp-server
Reference	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

nat

Synopsis	Enable the nat context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 nat
Tree	nat
Description	Commands in this context enable NAT and configure CPM NAT policies for the IPv4 interface.

These commands must be used in conjunction with NAT pools where the pool application is configured with the **configure service vprn outside pool applications use-interface-ip** command.

Introduced 25.7.R1
Platforms 7705 SAR-1

cpm-nat-policy *reference*

Synopsis CPM NAT policy association with public IPv4 interface

Context **configure service vprn service-name interface interface-name ipv4 nat cpm-nat-policy reference**

Tree [cpm-nat-policy](#)

Description This command associates a CPM NAT policy to the interface. The NAT policy applies to traffic that either originates from, or is destined to, the local node itself (CPM traffic). Specifically, it is used when the traffic is routed through a public NAT IPv4 interface in the outside routing context.

A CPM NAT policy should be used when the local node communicates with public networks over NAT, and the source or destination is a local interface within the outside routing context. This can include the public IPv4 interface or any other interface assigned to that routing context.

Reference **configure service nat cpm-nat-policy external-named-item**

Introduced 25.7.R1

Platforms 7705 SAR-1

cpm-spf-nat-policy *reference*

Synopsis CPM NAT policy for static port forwards

Context **configure service vprn service-name interface interface-name ipv4 nat cpm-spf-nat-policy reference**

Tree [cpm-spf-nat-policy](#)

Description This command associates a CPM NAT policy to the interface for static port forwards. The configurations for traffic using static port forwards to a local IP address in the outside routing context are separate from those used for other CPM traffic going through NAT. This command allows the router to apply different NAT behavior for port-forwarded traffic than for general traffic originating from the local node.

Reference **configure service nat cpm-nat-policy external-named-item**

Introduced 25.7.R1

Platforms 7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

host-route

Synopsis	Enter the host-route context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route
Tree	host-route
Introduced	25.3.R2
Platforms	7705 SAR-1

populate [[route-type](#)] *keyword*

Synopsis	Enter the populate list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Introduced	25.3.R2
Platforms	7705 SAR-1

[[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-tag *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i>
Tree	learn-unsolicited
Description	<p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none">• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

limit

Synopsis	Enter the limit context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Range	0 to 524288
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold value that triggers a warning message
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100

Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	25.3.R2
Platforms	7705 SAR-1

populate *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery populate <i>boolean</i>
Tree	populate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i>
Tree	proactive-refresh
Description	When configured to true , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to false , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic

that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proxy-arp-policy reference
Tree	proxy-arp-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery remote-proxy-arp boolean
Tree	remote-proxy-arp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-timer *number*

Synopsis	ARP retry interval
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery retry-timer number
Tree	retry-timer
Range	1 to 300

Units	deciseconds
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor [[ipv4-address](#)] *ipv4-address*

Synopsis	Enter the static-neighbor list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor-unnumbered

Synopsis	Enable the static-neighbor-unnumbered context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR-1

primary

Synopsis	Enable the primary context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary address <i>ipv4-unicast-address</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary [[address](#)] *ipv4-unicast-address*

Synopsis	Enter the secondary list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *ipv4-unicast-address*

Synopsis	Secondary IPv4 address assigned to the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-inhibit *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address igp-inhibit <i>boolean</i>
Tree	igp-inhibit
Description	When configured to true , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 tcp-mss <i>number</i>
Tree	tcp-mss
Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR-1

unnumbered

Synopsis	Enter the unnumbered context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 unnumbered

Tree	unnumbered
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-unicast-address*

Synopsis	IP address for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 unnumbered ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or ip-int-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-int-name *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 unnumbered ip-int-name <i>interface-name</i>
Tree	ip-int-name
String length	1 to 32
Notes	The following elements are part of a choice: ip-address or ip-int-name .
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR-1

vrrp [**virtual-router-id**] *number*

Synopsis	Enter the vrrp list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Introduced	25.3.R2
Platforms	7705 SAR-1

[**virtual-router-id**] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Password for simple text authentication
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String length	1 to 38
Introduced	25.3.R2

Platforms 7705 SAR-1

backup *ipv4-unicast-address*

Synopsis	Virtual router IP addresses for the interface
Context	configure <i>service vprn service-name interface interface-name ipv4 vrrp number backup ipv4-unicast-address</i>
Tree	<i>backup</i>
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7705 SAR Gen 2 Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure <i>service vprn service-name interface interface-name ipv4 vrrp number bfd-liveness</i>
Tree	<i>bfd-liveness</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip *ipv4-address*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IP address to use for BFD session
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness dest-ip <i>ipv4-address</i>
Tree	dest-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-name *interface-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness service-name <i>service-name</i>

Tree	service-name
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

init-delay *number*

Synopsis	VRRP initialization delay timer
Context	configure service vprn service-name interface interface-name ipv4 vrrp number init-delay <i>number</i>
Tree	init-delay
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure service vprn service-name interface interface-name ipv4 vrrp number mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> interface <i>interface-name</i> <i>ipv4</i> <i>vrrp</i> <i>number</i> master-int-inherit <i>boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> interface <i>interface-name</i> <i>ipv4</i> <i>vrrp</i> <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none">• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master.• When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.• When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is

indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

owner *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure <i>service vprn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4 vrrp number</i> passive <i>boolean</i>
Tree	<i>passive</i>
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure <i>service vprn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4 vrrp number</i> ping-reply <i>boolean</i>
Tree	<i>ping-reply</i>
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy reference

Synopsis	VRRP priority control policy
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> policy reference
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority number

Synopsis	Base priority for the VRRP
----------	----------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number priority <i>number</i>
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

ssh-reply *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number ssh-reply <i>boolean</i>
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> telnet-reply <i>boolean</i>
Tree	telnet-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	<p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enable the ipv6 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ipv6-address](#)] *ipv6-address*

Synopsis	Enter the address list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[[ipv6-address](#)] *ipv6-address*

Synopsis	IPv6 address assigned to the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection

Description	When configured to true , the router enables Duplicate Address Detection (DAD). When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

eui-64 *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> eui-64 <i>boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> primary-preference <i>number</i>
Tree	primary-preference
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *number*

Synopsis	BFD receive interval over this interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6
Tree	dhcp6
Introduced	25.3.R2
Platforms	7705 SAR-1

relay

Synopsis	Enter the relay context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay
Tree	relay
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 dhcp6 relay description description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

lease-populate

Synopsis	Enter the lease-populate context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 dhcp6 relay lease-populate</i>
Tree	<i>lease-populate</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

max-nbr-of-leases *number*

Synopsis	Maximum lease state entries allowed for the interface
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 dhcp6 relay lease-populate max-nbr-of-leases number</i>
Tree	<i>max-nbr-of-leases</i>
Range	0 to 32767
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

route-populate

Synopsis	Enter the route-populate context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>dhcp6</i> <i>relay</i> <i>lease-populate</i> <i>route-populate</i>
Tree	<i>route-populate</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

na *boolean*

Synopsis	Create route based on IA_NA prefix option in relay-reply message
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>dhcp6</i> <i>relay</i> <i>lease-populate</i> <i>route-populate</i> <i>na</i> <i>boolean</i>
Tree	<i>na</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

pd

Synopsis	Enable the pd context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>dhcp6</i> <i>relay</i> <i>lease-populate</i> <i>route-populate</i> <i>pd</i>
Tree	<i>pd</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude *boolean*

Synopsis	Create back hole route based on prefix exclude option in relay-reply message
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>dhcp6</i> <i>relay</i> <i>lease-populate</i> <i>route-populate</i> <i>pd</i> <i>exclude</i> <i>boolean</i>
Tree	<i>exclude</i>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

ta boolean

Synopsis Create route based on IA_TA prefix option in relay-reply message

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay lease-populate route-populate](#) [ta](#) *boolean*

Tree [ta](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

option

Synopsis Enter the **option** context

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#)

Tree [option](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

interface-id

Synopsis Enter the **interface-id** context

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [interface-id](#)

Tree [interface-id](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ascii-tuple

Synopsis Use ASCII-encoded concatenated tuple

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [interface-id](#) [ascii-tuple](#)

Tree [ascii-tuple](#)

Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.

Introduced	25.3.R2
Platforms	7705 SAR-1

if-index

Synopsis	Use interface index in the DHCPv6 relay packet
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id if-index
Tree	if-index
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

sap-id

Synopsis	Use SAP ID in interface ID option in relay packet
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string-not-all-spaces*

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 80
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-id *boolean*

Synopsis	Send remote ID option in the DHCPv6 relay packet
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option remote-id <i>boolean</i>
Tree	remote-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

server *ipv6-address-with-zone*

Synopsis	DHCPv6 server to which the DHCPv6 requests are forwarded
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay server ipv6-address-with-zone
Tree	server
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address *ipv6-unicast-or-linklocal-address*

Synopsis	Source IPv6 address of the DHCPv6 relay messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay source-address ipv6-unicast-or-linklocal-address
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection per interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

forward-ipv4-packets *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 forward-ipv4-packets <i>boolean</i>
Tree	forward-ipv4-packets
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6

Synopsis	Enter the icmp6 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6
Tree	icmp6
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-too-big

Synopsis	Enter the packet-too-big context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big
Tree	packet-too-big
Description	Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
----------	--

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit Packet Too Big messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

param-problem

Synopsis	Enter the param-problem context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem
Tree	param-problem

Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Parameter Problem message sends
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number used to limit ICMPv6 Parameter Problem messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Parameter Problem messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

redirects

Synopsis	Enter the redirects context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 redirects
Tree	redirects
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Redirect message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number to limit ICMPv6 Redirect messages per time frame
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Redirect messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 redirects seconds <i>number</i>
Tree	seconds

Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

time-exceeded

Synopsis	Enter the time-exceeded context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded
Tree	time-exceeded
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Time Exceeded message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number to limit Time Exceeded messages per time frame
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Time Exceeded messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

unreachables

Synopsis	Enter the unreachables context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachables
Tree	unreachables
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of Unreachable message sends
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachables admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Number to limit Unreachable messages per time frame
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachables number <i>number</i>
Tree	number

Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit ICMPv6 Unreachable messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachables seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

link-local-address

Synopsis	Enter the link-local-address context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 link-local-address
Tree	link-local-address
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-address*

Synopsis	IPv6 link-local address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 link-local-address address <i>ipv6-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
----------	------------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 link-local-address duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	When configured to true , the router enables Duplicate Address Detection (DAD) on the interface. When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 local-dhcp-server <i>reference</i>
Tree	local-dhcp-server
Description	This command instantiates a local DHCP server. A local DHCP server can serve multiple interfaces but is limited to the routing context in which it was created.
Reference	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

host-route

Synopsis	Enter the host-route context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery host-route
Tree	host-route

Introduced 25.3.R2
Platforms 7705 SAR-1

populate *[route-type] keyword*

Synopsis Enter the **populate** list instance
Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *ipv6 neighbor-discovery*
host-route populate keyword
Tree *populate*
Introduced 25.3.R2
Platforms 7705 SAR-1

[route-type] keyword

Synopsis Type of ARP or ND entries that generate host routes
Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *ipv6 neighbor-discovery*
host-route populate keyword
Tree *populate*
Options static, dynamic, evpn
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

route-tag *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tag value used with the host route from an ARP/ND entry
Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *ipv6 neighbor-discovery*
host-route populate keyword route-tag number
Tree *route-tag*
Description This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range 1 to 255
Introduced 25.3.R2

Platforms 7705 SAR-1

learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery learn-unsolicited <i>keyword</i>
Tree	learn-unsolicited
Description	<p>This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.</p> <p>When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.</p>
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR-1

limit

Synopsis	Enter the limit context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Description	<p>When configured to true, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.</p> <p>When configured to false, the router does not send the warning message.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Description	This command configures the maximum number of entries that can be learned on an IP interface. When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR-1

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i>
Tree	local-proxy-nd
Description	When configured to true , the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.

When configured to **false**, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR-1

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i>
Tree	proxy-nd-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-time *number*

Synopsis	Neighbor reachability detection timer
----------	---------------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery reachable-time <i>number</i>
Tree	reachable-time
Range	30 to 3600
Introduced	25.3.R2
Platforms	7705 SAR-1

stale-time *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery stale-time <i>number</i>
Tree	stale-time
Range	60 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor [**ipv6-address**] *ipv6-address*

Synopsis	Enter the static-neighbor list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i>
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-address*

Synopsis	IPv6 address corresponding to the physical address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor ipv6-address mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 tcp-mss <i>number</i>
Tree	tcp-mss
Range	1220 to 9726
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

mode *keyword*

Synopsis Unicast RPF check mode

Context **configure** *service vprn service-name interface interface-name ipv6 urpf-check mode keyword*

Tree *mode*

Options strict – Check source address match in RT and interface
loose – Check source address match in RT only
strict-no-ecmp – Check source address match in ECMP route

Default strict

Introduced 25.3.R2

Platforms 7705 SAR-1

vrrp [*virtual-router-id*] *number*

Synopsis Enter the **vrrp** list instance

Context **configure** *service vprn service-name interface interface-name ipv6 vrrp number*

Tree *vrrp*

Max. instances 4

Introduced 25.3.R2

Platforms 7705 SAR-1

[virtual-router-id] *number*

Synopsis Virtual Router Identifier (VRID) for the IP interface

Context **configure** *service vprn service-name interface interface-name ipv6 vrrp number*

Tree *vrrp*

Range 1 to 255

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

backup *ipv6-address*

Synopsis	Virtual router IP addresses for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> backup <i>ipv6-address</i>
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses</p>

that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Introduced25.3.R2

Platforms7705 SAR-1

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
----------	---

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> master-int-inherit <i>boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
----------	--

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.
Range	10 to 4095
Units	centiseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master

router, the operational group is up and the operational group is down for all other VRRP states.

Reference **configure service oper-group** *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-1

ntp-reply *boolean*

Synopsis Allow processing of NTP requests

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp number ntp-reply** *boolean*

Tree **ntp-reply**

Description When configured to **true**, the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to **false**, the router does not process NTP requests.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

oper-group *reference*

Synopsis Operational group name associated with the VRRP

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp number oper-group** *reference*

Tree **oper-group**

Description This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.

Reference **configure service oper-group** *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-1

owner *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> passive <i>boolean</i>
Tree	passive
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy *reference*

Synopsis	VRRP priority control policy
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> preempt <i>boolean</i>
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Base priority for the VRRP
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> priority <i>number</i>
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> standby-forwarding <i>boolean</i>
Tree	standby-forwarding

Description	When configured to true , the standby router forwards all traffic. When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>ipv6 vrrp number</i> telnet-reply <i>boolean</i>
Tree	<i>telnet-reply</i>
Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>ipv6 vrrp number</i> traceroute-reply <i>boolean</i>
Tree	<i>traceroute-reply</i>
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

load-balancing

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler

Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>sap sap egress qos scheduler-policy overrides scheduler named-item</i> parent

Tree	pir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR-1

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue <i>reference</i> drop-tail
Tree	drop-tail
Introduced	25.3.R2
Platforms	7705 SAR-1

low

Synopsis	Enter the low context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue <i>reference</i> drop-tail low
Tree	low
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue <i>reference</i> drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue <i>reference</i> parent
Tree	parent
Introduced	25.3.R2
Platforms	7705 SAR-1

cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos sap-ingress overrides queue <i>reference</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

weight *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos sap-ingress overrides queue <i>reference</i> parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos sap-ingress overrides queue <i>reference</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos sap-ingress overrides queue <i>reference</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR-1

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos sap-ingress overrides queue reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR rate
----------	----------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos sap-ingress overrides queue <i>reference rate pir (number keyword)</i>
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Policy ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos sap-ingress policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos sap-ingress <i>qos-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos scheduler-policy
Tree	scheduler-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

overrides

Synopsis	Enter the overrides context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ingress qos scheduler-policy overrides
Tree	overrides
Introduced	25.3.R2
Platforms	7705 SAR-1

scheduler [*scheduler-name*] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>sap sap ingress qos scheduler-policy overrides scheduler named-item</i>
Tree	<i>scheduler</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>sap sap ingress qos scheduler-policy overrides scheduler named-item</i>
Tree	<i>scheduler</i>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

parent

Synopsis	Enter the parent context
Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>sap sap ingress qos scheduler-policy overrides scheduler named-item parent</i>
Tree	<i>parent</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

cir-weight *number*

Synopsis Weight used at the within-CIR port priority level

Context **configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** *sap* **ingress** **qos** **scheduler-policy overrides scheduler** *named-item* **parent** **cir-weight** *number*

Tree **cir-weight**

Range 0 to 100

Introduced 25.3.R2

Platforms 7705 SAR-1

weight *number*

Synopsis Relative weight of the scheduler to feed the queue

Context **configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** *sap* **ingress** **qos** **scheduler-policy overrides scheduler** *named-item* **parent** **weight** *number*

Tree **weight**

Range 0 to 100

Introduced 25.3.R2

Platforms 7705 SAR-1

rate

Synopsis Enter the **rate** context

Context **configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** *sap* **ingress** **qos** **scheduler-policy overrides scheduler** *named-item* **rate**

Tree **rate**

Introduced 25.3.R2

Platforms 7705 SAR-1

cir (*number* | *keyword*)

Synopsis CIR at which the queue it to operate

Context **configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** *sap* **ingress** **qos** **scheduler-policy overrides scheduler** *named-item* **rate** **cir** (*number* | *keyword*)

Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	25.3.R2
Platforms	7705 SAR-1

pir (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy overrides scheduler <i>named-item</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-name *reference*

Synopsis	Scheduler policy name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-tunnel [[tunnel-name](#)] *interface-name*

Synopsis	Enter the ip-tunnel list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i>
Tree	ip-tunnel

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[tunnel-name] *interface-name*

Synopsis	IP tunnel name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i>
Tree	ip-tunnel
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IP tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

backup-remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup remote IP address that is applied to this tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> backup-remote-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)

Tree	backup-remote-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-df-bit *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	<p>When configured to true, the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the <code>ip-mtu</code> command. This requires a modification of the header checksum.</p> <p>When configured to false, clearing of the DF bit is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

delivery-service *service-name*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> delivery-service <i>service-name</i>
Tree	delivery-service
Description	<p>This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel.</p> <p>The GRE tunnel does not come up until a valid delivery service is configured.</p>
String length	1 to 64
Introduced	25.3.R2

Platforms 7705 SAR-1

description *description*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Text description
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip [**dest-ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for dest-ip
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Introduced	25.3.R2
Platforms	7705 SAR-1

[dest-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote IP tunnel endpoint
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Description	This command configures the IP address of the remote IP tunnel endpoint. If the remote IP address is not within the subnet of the IP interface associated with the tunnel, the tunnel fails to come up.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp keyword**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Differentiated Services Code Point (DSCP) name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

encapsulated-ip-mtu number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet for the IP tunnel. If the packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

gre-header

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the gre-header context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> gre-header
Tree	gre-header
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the GRE header in the tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> gre-header admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

key

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> gre-header key
Tree	key
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the keys in the GRE header
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Receive key of the GRE header
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key receive <i>number</i>
Tree	receive
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

send *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send key of the GRE header
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key <i>send</i> <i>number</i>
Tree	send
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-generation

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation
Tree	icmp-generation
Introduced	25.3.R2
Platforms	7705 SAR-1

frag-required

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required
Tree	frag-required
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages sent
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP messages that can be sent during the period specified by the interval command.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation
Tree	icmp6-generation
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big

Tree	packet-too-big
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big number <i>number</i>
Tree	number
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	<p>This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.</p> <p>When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.</p>
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-transport-mode-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> ipsec-transport-mode-profile <i>reference</i>
Tree	ipsec-transport-mode-profile
Reference	configure ipsec ipsec-transport-mode-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-ip-address
Description	<p>This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).</p> <p>When this command specifies an IPv6 address, it must be a global unicast address.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

pmtu-discovery-aging *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the private side
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> propagate-pmtu-v4 <i>boolean</i>

Tree	propagate-pmtu-v4
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v6 *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Introduced	25.3.R2
Platforms	7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

reassemble (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> reassemble (<i>number</i> <i>keyword</i>)
Tree	reassemble
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of the tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> remote-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-ip-address
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-gateway [*name*] *named-item*

Synopsis	Enter the ipsec-gateway list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i>
Tree	ipsec-gateway

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	IPsec gateway name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i>
Tree	ipsec-gateway
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec gateway
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

cert

Synopsis	Enter the cert context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert
Tree	cert
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

Synopsis	Enter the status-verify context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result of Certificate Status Verification (CSV)
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default result when both the primary and secondary methods fail to provide an answer.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
----------	---

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert status-verify primary <i>keyword</i>
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary *keyword*

Synopsis	Secondary method of CSV to verify the revocation status
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert status-verify secondary <i>keyword</i>
Tree	secondary
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

client-db

Synopsis	Enable the client-db context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db
Tree	client-db

Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

fallback *boolean*

Synopsis	Fall back to the default authentication policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db fallback <i>boolean</i>
Tree	fallback
Description	<p>When configured to true, this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.</p> <p>When configured to false and the client database lookup fails to return a matched result, the system fails the tunnel setup.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	Client database name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db name <i>reference</i>
Tree	name
Reference	configure ipsec client-db <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-secure-service

Synopsis	Enable the default-secure-service context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-secure-service
Tree	default-secure-service

Introduced25.3.R2

Platforms7705 SAR-1

interface *interface-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisPrivate IPsec tunnel interface name

Context**configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** **sap** **ipsec-gateway**
named-item **default-secure-service** **interface** *interface-name*

Tree**interface**

String length1 to 32

Introduced25.3.R2

Platforms7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisDefault security service name

Context**configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** **sap** **ipsec-gateway**
named-item **default-secure-service** **service-name** *service-name*

Tree**service-name**

String length1 to 64

Introduced25.3.R2

Platforms7705 SAR-1

default-tunnel-template *reference*

SynopsisDefault tunnel policy template for the gateway

Context**configure** **service** **vpn** *service-name* **interface** *interface-name* **sap** **sap** **ipsec-gateway**
named-item **default-tunnel-template** *reference*

Tree**default-tunnel-template**

Reference**configure** **ipsec** **tunnel-template** *number*

Introduced 25.3.R2
Platforms 7705 SAR-1

dhcp-address-assignment

Synopsis Enter the **dhcp-address-assignment** context
Context **configure** [service](#) [vpn](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ipsec-gateway](#) *named-item* [dhcp-address-assignment](#)
Tree [dhcp-address-assignment](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

dhcpv4

Synopsis Enable the **dhcpv4** context
Context **configure** [service](#) [vpn](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ipsec-gateway](#) *named-item* [dhcp-address-assignment](#) [dhcpv4](#)
Tree [dhcpv4](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the IPsec DHCPv4 server
Context **configure** [service](#) [vpn](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ipsec-gateway](#) *named-item* [dhcp-address-assignment](#) [dhcpv4](#) [admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR-1

gi-address *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	configure service vpn <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv4</i> gi-address <i>ipv4-unicast-address</i>
Tree	gi-address
Introduced	25.3.R2
Platforms	7705 SAR-1

send-release *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	configure service vpn <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv4</i> send-release <i>boolean</i>
Tree	send-release
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

server

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the server context
Context	configure service vpn <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv4</i> server
Tree	server
Introduced	25.3.R2

Platforms7705 SAR-1

address *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv4 server addresses
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server address <i>ipv4-unicast-address</i>
Tree	address
Description	This command specifies DHCPv4 server addresses for the DHCPv4-based address assignment. If multiple server addresses are specified, the first advertised DHCPv4 address received is chosen.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-vpn-loose*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance used to reach the DHCPv4 server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server router-instance <i>router-instance-base-vpn-loose</i>
Tree	router-instance
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcpv6

Synopsis	Enable the dhcpv6 context
----------	----------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6
Tree	dhcpv6
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

link-address *ipv6-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Link address of the relayed DHCPv6 packets
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 link-address <i>ipv6-unicast-address</i>

Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp-server *named-item*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 dhcp-server <i>named-item</i>
Tree	dhcp-server

String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

pool *named-item*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 pool <i>named-item</i>
Tree	pool
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-vpn-loose*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 router-instance <i>router-instance-base-vpn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> local gateway-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-1

id

Synopsis	Enter the id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> local id
Tree	id
Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> local id auto
Tree	auto
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *fully-qualified-domain-name*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)

Tree	ipv6
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Introduced	25.3.R2
Platforms	7705 SAR-1

esp number

Synopsis	Maximum number of recent records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

Synopsis	Maximum number of historical IKE keys recorded
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

mixed-tunnel-mode

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the mixed-tunnel-mode context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> mixed-tunnel-mode
Tree	mixed-tunnel-mode
Description	Commands in this context configure the IPsec gateway to support both remote access and dynamic LAN-to-LAN tunnels. When unconfigured, support of both tunnel types is disabled.
Introduced	25.7.R1
Platforms	7705 SAR-1

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for the IPsec gateway
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> pre-shared-key encrypted-leaf
Tree	pre-shared-key
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-policy *reference*

Synopsis	RADIUS accounting policy

Tree	accounting-policy
Reference	configure ipsec radius accounting-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius authentication-policy <i>reference</i>
Tree	authentication-policy
Reference	configure ipsec radius authentication-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> ts-list <i>reference</i>
Tree	ts-list
Reference	configure ipsec ts-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipsec-tunnel [[name](#)] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel

Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *named-item*

Synopsis IPsec tunnel name
Context **configure** *service vprn service-name interface interface-name sap sap ipsec-tunnel named-item*
Tree *ipsec-tunnel*
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the IPsec tunnel
Context **configure** *service vprn service-name interface interface-name sap sap ipsec-tunnel named-item admin-state keyword*
Tree *admin-state*
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR-1

bfd

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **bfd** context
Context **configure** *service vprn service-name interface interface-name sap sap ipsec-tunnel named-item bfd*
Tree *bfd*
Introduced 25.3.R2
Platforms 7705 SAR-1

bfd-designate *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-designate <i>boolean</i>
Tree	bfd-designate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd <i>bfd-liveness</i> dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface *interface-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd <i>bfd-liveness</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd <i>bfd-liveness</i> service-name <i>service-name</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> description <i>description</i>

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

dest-ip [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for dest-ip
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Private IP address of the remote IP tunnel endpoint
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

encapsulated-ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If

	the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-1

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp6-generation

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-1

packet-too-big

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big
Tree	packet-too-big
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big interval <i>number</i>
Tree	interval

Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2

Platforms7705 SAR-1

key-exchange

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-exchange context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i>
Tree	<i>key-exchange</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the dynamic context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>dynamic</i>
Tree	<i>dynamic</i>
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-establish *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>dynamic</i> <i>auto-establish</i> <i>boolean</i>

Tree	auto-establish
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cert

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cert context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the status-verify context
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl , ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none"> • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-1

fqdn *fully-qualified-domain-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
----------	------------------------------------

Context	configure <i>service vprn service-name</i> <i>interface interface-name</i> <i>sap sap ipsec-tunnel named-item key-exchange dynamic id ipv6 (ipv4-address-no-zone ipv6-address-no-zone)</i>

spi *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>manual</i> <i>keys</i> <i>number</i> <i>direction</i> <i>keyword</i> <i>spi</i> <i>number</i>
Tree	<i>spi</i>
Description	<p>This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.</p> <p>The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p>
Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>max-history-key-records</i>

Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

esp number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-1

ike number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-1

pmtu-discovery-aging *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

private-tcp-mss-adjust *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v4 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-pmtu-v6 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

replay-window *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	25.3.R2
Platforms	7705 SAR-1

security-policy

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> security-policy
Tree	security-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

id reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec security policy ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> security-policy id <i>reference</i>
Tree	id
Reference	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-match *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p>

If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TS*i* and TS*r*, and the CHILD_SA is created.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel-endpoint

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the tunnel-endpoint context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> tunnel-endpoint
Tree	tunnel-endpoint
Introduced	25.3.R2
Platforms	7705 SAR-1

delivery-service *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

static-tunnel-redundant-nexthop ipv4-unicast-address

Synopsis	Address for the static ISA tunnel redundant next-hop
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> static-tunnel-redundant-nexthop <i>ipv4-unicast-address</i>
Tree	static-tunnel-redundant-nexthop
Description	This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for a static IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work. The next-hop address is resolved in the routing table of the corresponding service.
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop) .
Introduced	25.3.R2

Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-less-routing

Synopsis	Enable the interface-less-routing context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> interface-less-routing
Tree	interface-less-routing
Description	Commands in this context enable the entries for advertisement in EVPN MAC/IP advertisement routes that include: <ul style="list-style-type: none"> the label1 and route target of the R-VPLS EVPN service the label2 value and route target of the EVPN interface-less instance in the linked VPRN
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-evpn-instance *number*

Synopsis	EVPN interface-less VPRN instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> interface-less-routing bgp-evpn-instance <i>number</i>
Tree	bgp-evpn-instance
Description	This command configures the EVPN interface-less BGP instance from which the label and route target are taken when advertising the entry in an EVPN MAC/IP advertisement route.
Range	1
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

route-tag *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

flood-garp-and-unknown-req *boolean*

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp flood-garp-and-unknown-req <i>boolean</i>
Tree	flood-garp-and-unknown-req

Description	When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to false , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp learn-dynamic <i>boolean</i>
Tree	learn-dynamic
Description	When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to false , learning is disabled and table entries are not created for these messages.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

nd

Synopsis	Enter the nd context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd
Tree	nd
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise [[route-type](#)] *keyword*

Synopsis	Enter the advertise list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i>
Tree	advertise

Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The learn-dynamic command must be set to false when using this functionality.
Introduced	25.3.R2
Platforms	7705 SAR-1

[route-type] keyword

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service vprn service-name interface interface-name vpls named-item-64 evpn nd advertise keyword
Tree	advertise
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-less-routing

Synopsis	Enable the interface-less-routing context
Context	configure service vprn service-name interface interface-name vpls named-item-64 evpn nd advertise keyword interface-less-routing
Tree	interface-less-routing
Description	Commands in this context enable the entries for advertisement in EVPN MAC/IP advertisement routes that include: <ul style="list-style-type: none"> the label1 and route target of the R-VPLS EVPN service the label2 value and route target of the EVPN interface-less instance in the linked VPRN
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-evpn-instance number

Synopsis	EVPN interface-less VPRN instance
----------	-----------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i> interface-less-routing bgp-evpn-instance <i>number</i>
Tree	bgp-evpn-instance
Description	This command configures the EVPN interface-less BGP instance from which the label and route target are taken when advertising the entry in an EVPN MAC/IP advertisement route.
Range	1
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd learn-dynamic <i>boolean</i>
Tree	learn-dynamic
Description	When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to false , learning is disabled and table entries are not created for these messages.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

evpn-tunnel

Synopsis	Enable the evpn-tunnel context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel
Tree	evpn-tunnel
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-bfd *boolean*

Synopsis	Allow BFD on the EVPN tunnel
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel allow-bfd <i>boolean</i>
Tree	allow-bfd
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-gateway-address *keyword*

Synopsis	Type of IPv6 gateway address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel ipv6-gateway-address <i>keyword</i>
Tree	ipv6-gateway-address
Options	ip, mac
Default	ip
Introduced	25.3.R2
Platforms	7705 SAR-1

supplementary-broadcast-domain *boolean*

Synopsis	Use the EVPN tunnel as a Supplementary Broadcast Domain
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel supplementary-broadcast-domain <i>boolean</i>
Tree	supplementary-broadcast-domain
Description	<p>When configured to true, this command allows the EVPN tunnel to be used as a Supplementary Broadcast Domain (SBD). The SBD is used in EVPN OISM to advertise the SMET routes and to receive the multicast traffic on egress PEs that are not attached to the source R-VPLS service.</p> <p>When configured to false, this command disables EVPN tunnel use as an SBD.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

routed-override-filter

Synopsis	Enter the routed-override-filter context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> ingress routed-override-filter
Tree	routed-override-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

ip *reference*

Synopsis	IPv4 filter policy name
----------	-------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> ingress routed-override-filter ip <i>reference</i>
Tree	ip
Description	<p>This command specifies an IP filter that is applied to routed unicast ingress packets entering the VPLS service and destined to the R-VPLS interface MAC address.</p> <p>The filter overrides any existing ingress IP filter applied to SAPs or SDP bindings for packets associated with the routing IP interface. The override filter is optional and when it is not defined or it is removed, the IP routed packets use the existing ingress IP filter configured on the VPLS endpoint.</p>
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> ingress routed-override-filter ipv6 <i>reference</i>
Tree	ipv6
Description	<p>This command specifies an IPv6 filter that is applied to routed unicast ingress packets entering the VPLS service and destined to the R-VPLS interface MAC address.</p> <p>The filter overrides any existing ingress IP filter applied to SAPs or SDP bindings for packets associated with the routing IP interface. The override filter is optional and when it is not defined or it is removed, the IP routed packets use the existing ingress IP filter configured on the VPLS endpoint.</p>
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mirror-interface [[interface-name](#)] *interface-name*

Synopsis	Enter the ip-mirror-interface list instance
Context	configure service vprn <i>service-name</i> ip-mirror-interface <i>interface-name</i>
Tree	ip-mirror-interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
Context	configure service vprn <i>service-name</i> ip-mirror-interface <i>interface-name</i>
Tree	ip-mirror-interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service vprn <i>service-name</i> ip-mirror-interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *very-long-description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> ip-mirror-interface <i>interface-name</i> description <i>very-long-description</i>
Tree	description
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

spoke-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the spoke-sdp list instance
Context	configure service vprn <i>service-name</i> ip-mirror-interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i>

Tree	spoke-sdp
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[sdp-bind-id] *sdp-bind-id*

Synopsis	SDP binding ID
Context	configure service vpn <i>service-name</i> ip-mirror-interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
String length	3 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	configure service vpn <i>service-name</i> ip-mirror-interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> ip-mirror-interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2

Platforms 7705 SAR-1

Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] number

Synopsis	IPsec security policy entry ID
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i>
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-ip

Synopsis	Enter the local-ip context
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ip
Tree	local-ip
Description	Commands in this context configure the local (from the VPN) IPv4 prefix/mask for the policy entry.

The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.

Introduced 25.3.R2
Platforms 7705 SAR-1

address *ipv4-prefix*

Synopsis Destination IPv4 address of the aggregate route
Context **configure** [service vpn](#) *service-name* [ipsec security-policy](#) *number* [entry](#) *number* [local-ip](#) [address](#) *ipv4-prefix*
Tree [address](#)
Notes The following elements are part of a choice: **address** or **any**.
Introduced 25.3.R2
Platforms 7705 SAR-1

any *boolean*

Synopsis Use any IP address
Context **configure** [service vpn](#) *service-name* [ipsec security-policy](#) *number* [entry](#) *number* [local-ip](#) [any](#) *boolean*
Tree [any](#)
Default false
Notes The following elements are part of a choice: **address** or **any**.
Introduced 25.3.R2
Platforms 7705 SAR-1

local-ipv6

Synopsis Enter the **local-ipv6** context
Context **configure** [service vpn](#) *service-name* [ipsec security-policy](#) *number* [entry](#) *number* [local-ipv6](#)
Tree [local-ipv6](#)
Description Commands in this context configure the local (from the VPN) IPv6 prefix/mask for the policy entry.

The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.

Introduced 25.3.R2
Platforms 7705 SAR-1

address *ipv6-prefix*

Synopsis Destination IPv6 address of the aggregate route
Context **configure** [service vpn](#) *service-name* [ipsec security-policy](#) *number* [entry](#) *number* [local-ipv6](#) [address](#) *ipv6-prefix*
Tree [address](#)
Notes The following elements are part of a choice: **address** or **any**.
Introduced 25.3.R2
Platforms 7705 SAR-1

any *boolean*

Synopsis Use any IP address
Context **configure** [service vpn](#) *service-name* [ipsec security-policy](#) *number* [entry](#) *number* [local-ipv6](#) [any](#) *boolean*
Tree [any](#)
Default false
Notes The following elements are part of a choice: **address** or **any**.
Introduced 25.3.R2
Platforms 7705 SAR-1

remote-ip

Synopsis Enter the **remote-ip** context
Context **configure** [service vpn](#) *service-name* [ipsec security-policy](#) *number* [entry](#) *number* [remote-ip](#)
Tree [remote-ip](#)
Description Commands in this context configure the remote (from the tunnel) IP prefix/mask for the policy entry.

The system evaluates the remote IP as the source IP when traffic flows public to private and as the destination IP when traffic flows from private to public.

Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-prefix*

Synopsis	Destination IPv4 address of the aggregate route
Context	configure <i>service vpn service-name ipsec security-policy number entry number remote-ip address ipv4-prefix</i>
Tree	<i>address</i>
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-1

any *boolean*

Synopsis	Use any IP address
Context	configure <i>service vpn service-name ipsec security-policy number entry number remote-ip any boolean</i>
Tree	<i>any</i>
Default	false
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-ipv6

Synopsis	Enter the remote-ipv6 context
Context	configure <i>service vpn service-name ipsec security-policy number entry number remote-ipv6</i>
Tree	<i>remote-ipv6</i>
Description	<p>Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry.</p> <p>The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-prefix*

Synopsis	Destination IPv6 address of the aggregate route
Context	configure service vprn <i>service-name</i> ipsec security-policy number entry number remote-ipv6 address <i>ipv6-prefix</i>
Tree	address
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2

Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of router advertisement
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

current-hop-limit number

Synopsis	Hop limit advertised in RA messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> current-hop-limit <i>number</i>
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

dns-options

Synopsis	Enable the dns-options context
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options
Tree	dns-options
Introduced	25.3.R2
Platforms	7705 SAR-1

include-rdnss *boolean*

Synopsis	Include the RDNSS option in the RA
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options include-rdnss <i>boolean</i>
Tree	include-rdnss
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

rdnss-lifetime (*number* | *keyword*)

Synopsis	Maximum time over which the RDNSS address 25 is valid
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options rdnss-lifetime (<i>number</i> <i>keyword</i>)
Tree	rdnss-lifetime
Range	0 4 to 3600
Units	seconds
Options	infinite
Introduced	25.3.R2
Platforms	7705 SAR-1

server *ipv6-address*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options server <i>ipv6-address</i>

Tree	server
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

managed-configuration *boolean*

Synopsis	Set the managed address configuration flag
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> managed-configuration <i>boolean</i>
Tree	managed-configuration
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

max-advertisement-interval *number*

Synopsis	Maximum time between sending advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> max-advertisement-interval <i>number</i>
Tree	max-advertisement-interval
Range	4 to 1800
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

min-advertisement-interval *number*

Synopsis	Minimum interval between router advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> min-advertisement-interval <i>number</i>
Tree	min-advertisement-interval
Range	3 to 1350

Units	seconds
Default	200
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu number

Synopsis	MTU for sending packets to the router
Context	configure service vprn service-name ipv6 router-advertisement interface reference mtu number
Tree	mtu
Range	1280 to 9800
Introduced	25.3.R2
Platforms	7705 SAR-1

nd-router-preference keyword

Synopsis	Default router preference for Router Advertisements
Context	configure service vprn service-name ipv6 router-advertisement interface reference nd-router-preference keyword
Tree	nd-router-preference
Description	<p>This command configures the default router preference for Router Advertisements (RAs) and allows IPv6 hosts to discover and select a default gateway address by listening to RAs.</p> <p>This feature provides basic traffic engineering functionality for host devices. When this command is applied, the router advertises the respective router preference to the connected host to assist in its selection of the most appropriate default gateway on a link.</p> <p>This extension is backward compatible, both for routers (setting the router preference bits) and hosts (interpreting the router preference bits). These bits are ignored by hosts that do not implement the RFC 4191 functionality by configuring this command. Similarly, hosts that do not implement the RFC 4191 functionality interpret the values sent by devices that do not implement the RFC 4191 extension as a medium preference.</p>
Options	medium, high, low
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR-1

other-stateful-configuration *boolean*

Synopsis	Set the other configuration flag
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> other-stateful-configuration <i>boolean</i>
Tree	other-stateful-configuration
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[ipv6-prefix](#)] *ipv6-prefix*

Synopsis	Enter the prefix list instance
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>ipv6-prefix</i>
Tree	prefix
Max. instances	254
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-prefix*

Synopsis	IPv6 address prefix
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>ipv6-prefix</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

autonomous *boolean*

Synopsis	Set the autonomous flag value
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>ipv6-prefix</i> autonomous <i>boolean</i>
Tree	autonomous

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

on-link *boolean*

Synopsis	Use prefix for on-link determination
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference prefix ipv6-prefix on-link <i>boolean</i>
Tree	on-link
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

preferred-lifetime (*keyword* | *number*)

Synopsis	Remaining time that the prefix remains preferred
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference prefix ipv6-prefix preferred-lifetime (<i>keyword</i> <i>number</i>)
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	604800
Introduced	25.3.R2
Platforms	7705 SAR-1

valid-lifetime (*keyword* | *number*)

Synopsis	Remaining time in which the prefix is still valid
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference prefix ipv6-prefix valid-lifetime (<i>keyword</i> <i>number</i>)
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite

Default	2592000
Introduced	25.3.R2
Platforms	7705 SAR-1

reachable-time *number*

Synopsis	Time the router is reachable by other hosts or nodes
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> reachable-time <i>number</i>
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-time *number*

Synopsis	Time to advertise neighbor advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> retransmit-time <i>number</i>
Tree	retransmit-time
Range	0 to 1800000
Units	milliseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

router-lifetime *number*

Synopsis	Lifetime value in neighbor advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> router-lifetime <i>number</i>
Tree	router-lifetime
Range	0 4 to 9000
Units	seconds

Default	1800
Introduced	25.3.R2
Platforms	7705 SAR-1

use-virtual-mac *boolean*

Synopsis	Use VRRP virtual MAC address for advertisement message
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> use-virtual-mac <i>boolean</i>
Tree	use-virtual-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

isis [[isis-instance](#)] *number*

Synopsis	Enter the isis list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i>
Tree	isis
Introduced	25.3.R2
Platforms	7705 SAR-1

[[isis-instance](#)] *number*

Synopsis	Instance ID for the IS-IS instance
Context	configure service vprn <i>service-name</i> isis <i>number</i>
Tree	isis
Range	0 to 127
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IS-IS instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-passive-only *boolean*

Synopsis	Advertise prefixes that belong to passive interfaces
Context	configure service vprn <i>service-name</i> isis <i>number</i> advertise-passive-only <i>boolean</i>
Tree	advertise-passive-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability *keyword*

Synopsis	Router capabilities advertisement to neighbors
Context	configure service vprn <i>service-name</i> isis <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	area, as
Introduced	25.3.R2
Platforms	7705 SAR-1

all-l1isis *mac-address*

Synopsis	Destination MAC address for all L1 IS-IS routers
Context	configure service vprn <i>service-name</i> isis <i>number</i> all-l1isis <i>mac-address</i>
Tree	all-l1isis
Default	01:80:C2:00:00:14
Introduced	25.3.R2

Platforms 7705 SAR-1

all-l2isis *mac-address*

Synopsis Destination MAC address for all L2 IS-IS routers

Context **configure** [service vprn](#) *service-name isis number all-l2isis mac-address*

Tree [all-l2isis](#)

Default 01:80:C2:00:00:15

Introduced 25.3.R2

Platforms 7705 SAR-1

area-address *area-address*

Synopsis Area address portion of the NSAP address

Context **configure** [service vprn](#) *service-name isis number area-address area-address*

Tree [area-address](#)

String length 2 to 38

Max. instances 3

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-check *boolean*

Synopsis Perform authentication check to reject mismatch PDUs

Context **configure** [service vprn](#) *service-name isis number authentication-check boolean*

Tree [authentication-check](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis Authentication key to verify PDUs sent from neighbors

Context **configure** [service vprn](#) *service-name isis number authentication-key encrypted-leaf*

Tree [authentication-key](#)

String length	1 to 366
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	Keychain used to sign and authenticate
Context	configure service vprn <i>service-name</i> isis <i>number</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type
Context	configure service vprn <i>service-name</i> isis <i>number</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

csnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS packets of the CSNP type
Context	configure service vprn <i>service-name</i> isis <i>number</i> csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

csnp-on-p2p *boolean*

Synopsis	Send periodic CSNP PDUs on point-to-point interfaces
Context	configure service vprn <i>service-name</i> isis <i>number</i> csnp-on-p2p <i>boolean</i>

Tree	csnp-on-p2p
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

default-route-tag *number*

Synopsis	Route tag for the default route
Context	configure service vprn <i>service-name</i> isis <i>number</i> default-route-tag <i>number</i>
Tree	default-route-tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-limit <i>number</i> number <i>number</i>

Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> isis <i>number</i> graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-mode *boolean*

Synopsis	Enable the Graceful Restart helper for IS-IS
Context	configure service vprn <i>service-name</i> isis <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure service vprn <i>service-name</i> isis <i>number</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	IS-IS Hello message padding
Context	configure service vprn <i>service-name</i> isis <i>number</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-attached-bit *boolean*

Synopsis	Ignore attached bit on received Layer 1 LSPs
Context	configure service vprn <i>service-name</i> isis <i>number</i> ignore-attached-bit <i>boolean</i>
Tree	ignore-attached-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-lsp-errors *boolean*

Synopsis	Ignore LSP packets with errors
Context	configure service vprn <i>service-name</i> isis <i>number</i> ignore-lsp-errors <i>boolean</i>
Tree	ignore-lsp-errors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-narrow-metric *boolean*

Synopsis	Ignore links with narrow metrics
Context	configure service vprn <i>service-name</i> isis <i>number</i> ignore-narrow-metric <i>boolean</i>
Tree	ignore-narrow-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

iid-tlv *boolean*

Synopsis	Use IID TLVs with IS-IS multi-instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> iid-tlv <i>boolean</i>
Tree	iid-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure service vprn <i>service-name</i> isis <i>number</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [\[interface-name\]](#) *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IS-IS interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enable the ipv4 context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv4 include-bfd-tlv <i>boolean</i>
Tree	include-bfd-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enable the ipv6 context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv6
Tree	ipv6

Introduced	25.3.R2
Platforms	7705 SAR-1

include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	configure service vprn service-name isis number interface interface-name bfd-liveness ipv6 include-bfd-tlv <i>boolean</i>
Tree	include-bfd-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure service vprn service-name isis number interface interface-name conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

csnp-interval *number*

Synopsis	Time interval between successive CSN PDUs sent
Context	configure service vprn service-name isis number interface interface-name csnp-interval <i>number</i>
Tree	csnp-interval
Range	1 to 65535
Units	seconds

Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

default-instance *boolean*

Synopsis	Allow non-MI capable router to establish an adjacency
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> default-instance <i>boolean</i>
Tree	default-instance
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-key *encrypted-leaf*

Synopsis	Authentication key or hash string for Hello PDUs
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-key <i>encrypted-leaf</i>
Tree	hello-authentication-key
String length	1 to 366
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-type *keyword*

Synopsis	Hello authentication type
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-type <i>keyword</i>
Tree	hello-authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-type *keyword*

Synopsis	Interface type to broadcast, point-to-point, or to be default
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> interface-type <i>keyword</i>
Tree	interface-type

Options	point-to-point, broadcast
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast *boolean*

Synopsis	Enable IPv4 multicast routing for the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> ipv4-multicast <i>boolean</i>
Tree	ipv4-multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-unicast *boolean*

Synopsis	Enable IPv6 unicast routing for the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> ipv6-unicast <i>boolean</i>
Tree	ipv6-unicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i>
Tree	level
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[level-number] keyword

Synopsis	ISIS protocol level number
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i>
Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-key *encrypted-leaf*

Synopsis	Authentication key for Hello PDUs
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-key <i>encrypted-leaf</i>
Tree	hello-authentication-key
Description	<p>This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.</p> <p>If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.</p>
String length	1 to 366
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-authentication-type *keyword*

Synopsis	Hello authentication enabled on the context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-type <i>keyword</i>
Tree	hello-authentication-type
Description	This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello authentication-key statement must also be included.
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Interval between Hello messages sent on this level
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 20000
Units	seconds
Default	9
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-multiplier *number*

Synopsis	Hello messages missed from neighbor before router declares adjacency down
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	2 to 100
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv4 multicast
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> ipv4-multicast-metric <i>number</i>
Tree	ipv4-multicast-metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-unicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv6 unicast
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> ipv6-unicast-metric <i>number</i>
Tree	ipv6-unicast-metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	IS-IS interface metric applied for IPv4 unicast
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> metric <i>number</i>
Tree	metric

Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Passive interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Router to become the designated router on a multi-access network
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> priority <i>number</i>
Tree	priority
Range	0 to 127
Default	64
Introduced	25.3.R2
Platforms	7705 SAR-1

sd-offset *number*

Synopsis	Value of the signal degrade offset
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> sd-offset <i>number</i>
Tree	sd-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

sf-offset *number*

Synopsis	Value of the signal fail offset
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> sf-offset <i>number</i>
Tree	sf-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR-1

level-capability *keyword*

Synopsis	IS-IS levels for this interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-weight *number*

Synopsis	Load balancing weight
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate

Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude *boolean*

Synopsis	Exclude Loopfree Alternative at the interface level
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-map

Synopsis	Enable the policy-map context
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2
Platforms	7705 SAR-1

route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate policy-map route-nh-template <i>reference</i>
Tree	route-nh-template
Reference	configure routing-options route-next-hop-policy template <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-pacing-interval *number*

Synopsis	Interval for sending LSPs from interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> lsp-pacing-interval <i>number</i>
Tree	lsp-pacing-interval
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

mesh-group

Synopsis	Enable the mesh-group context
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> mesh-group
Tree	mesh-group
Introduced	25.3.R2
Platforms	7705 SAR-1

blocked

Synopsis	Prevent the interface from flooding LSPs
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> mesh-group blocked
Tree	blocked
Notes	The following elements are part of a choice: blocked or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	Mesh group for the interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> mesh-group value <i>number</i>
Tree	value

Range	1 to 2000000000
Notes	The following elements are part of a choice: blocked or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Passive interface
Context	configure <i>service vprn service-name isis number interface interface-name</i> passive <i>boolean</i>
Tree	<i>passive</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	configure <i>service vprn service-name isis number interface interface-name</i> retransmit-interval <i>number</i>
Tree	<i>retransmit-interval</i>
Range	1 to 65535
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

tag *number*

Synopsis	Route tag for IP address of interface
Context	configure <i>service vprn service-name isis number interface interface-name</i> tag <i>number</i>
Tree	<i>tag</i>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-multicast-routing *keyword*

Synopsis	IS-IS topology for IPv4 multicast routing
Context	configure service vprn <i>service-name</i> isis <i>number</i> ipv4-multicast-routing <i>keyword</i>
Tree	ipv4-multicast-routing
Options	false, native, mt
Default	native
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-routing *boolean*

Synopsis	Support IPv4 routing for IS-IS instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> ipv4-routing <i>boolean</i>
Tree	ipv4-routing
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-routing *keyword*

Synopsis	Routing topology for IPv6
Context	configure service vprn <i>service-name</i> isis <i>number</i> ipv6-routing <i>keyword</i>
Tree	ipv6-routing
Options	false, native, mt
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i>
Tree	level

Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[level-number] keyword

Synopsis	ISIS protocol level number
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i>
Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability boolean

Synopsis	Allow router advertisement capabilities
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key encrypted-leaf

Synopsis	Authentication key to verify PDUs sent on the interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.</p> <p>Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included.</p>
String length	1 to 366

Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-keychain *reference*

Synopsis Keychain used to sign and authenticate
Context **configure** [service vprn](#) *service-name isis number level keyword authentication-keychain reference*
Tree [authentication-keychain](#)
Reference **configure** [system security keychains keychain](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-type *keyword*

Synopsis Authentication type to be used
Context **configure** [service vprn](#) *service-name isis number level keyword authentication-type keyword*
Tree [authentication-type](#)
Options password, message-digest
Introduced 25.3.R2
Platforms 7705 SAR-1

csnp-authentication *boolean*

Synopsis Enable authentication of CSNP IS-IS protocol packets
Context **configure** [service vprn](#) *service-name isis number level keyword csnp-authentication boolean*
Tree [csnp-authentication](#)
Default true
Introduced 25.3.R2
Platforms 7705 SAR-1

default-ipv4-multicast-metric *number*

Synopsis Default metric for IPv4 unicast

Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> default-ipv4-multicast-metric <i>number</i>
Tree	default-ipv4-multicast-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

default-ipv6-unicast-metric *number*

Synopsis	Default metric for IPv6 unicast
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> default-ipv6-unicast-metric <i>number</i>
Tree	default-ipv6-unicast-metric
Range	1 to 16777215

Synopsis	Advertise the external routes when router is in overloaded
Context	configure service vprn <i>service-name</i> isis <i>number</i> overload-export-external <i>boolean</i>
Tree	overload-export-external
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-export-interlevel *boolean*

Synopsis	Advertise the inter-level routes when router is overloaded
Context	configure service vprn <i>service-name</i> isis <i>number</i> overload-export-interlevel <i>boolean</i>
Tree	overload-export-interlevel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-fib-error-notify-only

Synopsis	Enable the overload-fib-error-notify-only context
Context	configure service vprn <i>service-name</i> isis <i>number</i> overload-fib-error-notify-only
Tree	overload-fib-error-notify-only
Description	Commands in this context configure the IS-IS router to send a notification when an overload condition occurs while programming the FIB, instead of advertising the overload condition of the router in the IS-IS LSP.

Note: Nokia recommends being careful using this command. When you configure the router not to advertise the IS-IS overload state in the IS-IS LSP, other routers are not instructed to take the overloaded router out of the IS-IS forwarding topology and this will cause suboptimal forwarding and non-deterministic behavior on the overloaded router. To avoid changing the default IS-IS overflow behavior, leave this command disabled.

When this command is configured, the IS-IS router enters a suboptimal state where it sends only a notification trap; transit traffic can still use the router in this state.

The IS-IS router tracks the segment routing prefix SIDs where FIB programming failed. With the **retry** command configured, the router retries programming the segment routing prefix SIDs in the FIB using this tracked information.

When this command is not configured, during normal operation, the system may force the router to enter an overload state because of a lack of FIB resources. In this state, the router is used to terminate traffic and is not used to transit traffic.

Introduced 25.3.R2
Platforms 7705 SAR-1

retry number

Synopsis Time to retry programming failed entries in the FIB

Context **configure** [service vprn](#) *service-name* [isis number](#) [overload-fib-error-notify-only](#) [retry number](#)

Tree [retry](#)

Description This command configures the time the router uses to retry programming the failed entries in the FIB.

The **overload-fib-error-notify-only** command must be configured to use the retry timer. The removal of the **overload-fib-error-notify-only** configuration causes the system to program the failed entries in the FIB by triggering an immediate SPF.

Range 10 to 1800

Units seconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

overload-on-boot

Synopsis Enable the **overload-on-boot** context

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

psnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type
Context	configure service vprn <i>service-name isis number psnp-authentication boolean</i>
Tree	psnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

reference-bandwidth *number*

Synopsis	Reference bandwidth for bandwidth relative costing
Context	configure service vprn <i>service-name isis number reference-bandwidth number</i>
Tree	reference-bandwidth

Range	1 to 18446744073709551615
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-priority

Synopsis	Enter the rib-priority context
Context	configure service vprn <i>service-name</i> isis <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR-1

high

Synopsis	Enter the high context
Context	configure service vprn <i>service-name</i> isis <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list *reference*

Synopsis	List used to select routes processed at higher priority through OSPF route calculation process
Context	configure service vprn <i>service-name</i> isis <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Notes	The following elements are part of a choice: prefix-list or tag .
Introduced	25.3.R2
Platforms	7705 SAR-1

tag *number*

Synopsis	Tag value that is used to match IS-IS routes
----------	--

Context	configure service vprn <i>service-name isis number rib-priority high tag number</i>
Tree	tag
Range	1 to 4294967295
Notes	The following elements are part of a choice: prefix-list or tag .
Introduced	25.3.R2
Platforms	7705 SAR-1

router-id *router-id*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the ISIS instance
Context	configure service vprn <i>service-name isis number router-id router-id</i>
Tree	router-id
Introduced	25.3.R2
Platforms	7705 SAR-1

standard-multi-instance *boolean*

Synopsis	Enable RFC standards compliant multi-instance behavior
Context	configure service vprn <i>service-name isis number standard-multi-instance boolean</i>
Tree	standard-multi-instance
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-adjacency-check *boolean*

Synopsis	Enable strict checking of address families for IS-IS adjacencies
Context	configure service vprn <i>service-name isis number strict-adjacency-check boolean</i>
Tree	strict-adjacency-check
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

summary-address [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the summary-address list instance
Context	configure service vpn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	summary-address
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for the summary address
Context	configure service vpn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	summary-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

level-capability *keyword*

Synopsis	IS-IS level for the summary address
Context	configure service vpn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR-1

route-tag *number*

Synopsis	Route tag assigned to the summary address
Context	configure service vpn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-tag <i>number</i>
Tree	route-tag

Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress-attached-bit *boolean*

Synopsis	Allow IS-IS to suppress setting attached bit on LSPs
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>isis</i> <i>number</i> suppress-attached-bit <i>boolean</i>
Tree	suppress-attached-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

system-id *system-id*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System ID
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>isis</i> <i>number</i> system-id <i>system-id</i>
Tree	system-id
String length	14
Default	0000.0000.0000
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enter the timers context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>isis</i> <i>number</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-wait

Synopsis	Enter the lsp-wait context
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait
Tree	lsp-wait
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-initial-wait *number*

Synopsis	Initial LSP generation delay
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait lsp-initial-wait <i>number</i>
Tree	lsp-initial-wait
Range	10 to 100000
Units	milliseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-max-wait *number*

Synopsis	Maximum time between two consecutive LSP occurrences
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait lsp-max-wait <i>number</i>
Tree	lsp-max-wait
Range	10 to 120000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsp-second-wait *number*

Synopsis	Delay between first and second LSP generation
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait lsp-second-wait <i>number</i>

Tree	lsp-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-wait

Synopsis	Enter the spf-wait context
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after topology change
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-max-wait *number*

Synopsis	Maximum interval amid two consecutive SPF calculations
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2

Platforms 7705 SAR-1

spf-second-wait *number*

Synopsis Hold time between first and second SPF calculations

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [timers](#) [spf-wait](#) [spf-second-wait](#) *number*

Tree [spf-second-wait](#)

Range 10 to 100000

Units milliseconds

Default 1000

Introduced 25.3.R2

Platforms 7705 SAR-1

unicast-import

Synopsis Enter the **unicast-import** context

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [unicast-import](#)

Tree [unicast-import](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4 *boolean*

Synopsis Submit IPv4 routes into unicast RTM

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [unicast-import](#) [ipv4](#) *boolean*

Tree [ipv4](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 *boolean*

Synopsis Submit IPv6 routes into unicast RTM

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [unicast-import](#) [ipv6](#) *boolean*

Tree [ipv6](#)

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

label-mode *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allocation mode for VPRN service labels
Context	configure <i>service vprn service-name label-mode keyword</i>
Tree	<i>label-mode</i>
Options	vrf, next-hop
Default	vrf
Introduced	25.3.R2
Platforms	7705 SAR-1

local-routes-domain-id *domain-id*

Synopsis	Local routes domain ID
Context	configure <i>service vprn service-name local-routes-domain-id domain-id</i>
Tree	<i>local-routes-domain-id</i>
Description	<p>This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP.</p> <p>The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

log

Synopsis	Enter the log context
Context	configure service vprn <i>service-name</i> log
Tree	log
Introduced	25.3.R2
Platforms	7705 SAR-1

filter [[filter-name](#)] *log-filter-name*

Synopsis	Enter the filter list instance
Context	configure service vprn <i>service-name</i> log filter <i>log-filter-name</i>
Tree	filter
Max. instances	1500
Introduced	25.3.R2
Platforms	7705 SAR-1

[[filter-name](#)] *log-filter-name*

Synopsis	Filter ID
Context	configure service vprn <i>service-name</i> log filter <i>log-filter-name</i>
Tree	filter
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Default action for the event filter
Context	configure service vprn <i>service-name</i> log filter <i>log-filter-name</i> default-action <i>keyword</i>
Tree	default-action
Options	drop, forward
Default	forward

Introduced 25.3.R2
Platforms 7705 SAR-1

description *description*

Synopsis Text description
Context **configure** *service vpn service-name log filter log-filter-name description description*
Tree *description*
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

named-entry [*entry-name*] *log-filter-entry-name*

Synopsis Enter the **named-entry** list instance
Context **configure** *service vpn service-name log filter log-filter-name named-entry log-filter-entry-name*
Tree *named-entry*
Description Commands in this context create or edit an event filter entry.
Max. instances 999
Notes This element is ordered by the user.
Introduced 25.3.R2
Platforms 7705 SAR-1

[entry-name] *log-filter-entry-name*

Synopsis Entry name
Context **configure** *service vpn service-name log filter log-filter-name named-entry log-filter-entry-name*
Tree *named-entry*
String length 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

action *keyword*

Synopsis	Action for this event filter entry
Context	configure service vpn <i>service-name</i> log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i> action <i>keyword</i>
Tree	action
Options	drop, forward
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description

Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

syslog reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Index with the information to format event messages sent to a specific SYSLOG collector
Context	configure service vprn <i>service-name</i> log log-id <i>li-log-name</i> destination syslog <i>reference</i>
Tree	syslog
Reference	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i>
Notes	The following elements are part of a choice: netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR-1

filter reference

Synopsis	Event filter policy with the log destination
Context	configure service vprn <i>service-name</i> log log-id <i>li-log-name</i> filter <i>reference</i>
Tree	filter
Reference	configure service vprn <i>service-name</i> log filter <i>log-filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf-stream *named-item*

Synopsis	Destination NETCONF stream name
Context	configure service vprn <i>service-name</i> log log-id <i>li-log-name</i> netconf-stream <i>named-item</i>

Tree	netconf-stream
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

source

Synopsis	Enter the source context
Context	configure service vprn <i>service-name</i> log log-id li-log-name source
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR-1

change *boolean*

Synopsis	Collect log events from the change event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source change <i>boolean</i>
Tree	change
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

debug *boolean*

Synopsis	Collect log events from the debug event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source debug <i>boolean</i>
Tree	debug
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

main *boolean*

Synopsis	Collect log events from the main event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source main <i>boolean</i>

Tree	main
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

security *boolean*

Synopsis	Collect log events from the security event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source security <i>boolean</i>
Tree	security
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

time-format *keyword*

Synopsis	Time zone output for file log contents and syslog
Context	configure service vprn <i>service-name</i> log log-id li-log-name time-format <i>keyword</i>
Tree	time-format
Options	utc, local
Default	utc
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp-trap-group [[log-name](#)] *svc-vprn-snmp-trap-group-name*

Synopsis	Enter the snmp-trap-group list instance
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i>
Tree	snmp-trap-group
Introduced	25.3.R2
Platforms	7705 SAR-1

[log-name] *svc-vprn-snmp-trap-group-name*

Synopsis	Log ID
----------	--------

Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i>
Tree	snmp-trap-group
String length	1 to 17
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

trap-target [*name*] *string*

Synopsis	Enter the trap-target list instance
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i>
Tree	trap-target
Max. instances	25
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *string*

Synopsis	Trap target name
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i>
Tree	trap-target
String length	1 to 28

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the trap receiver
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

notify-community *string*

Synopsis	SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> notify-community <i>string</i>
Tree	notify-community
String length	1 to 31
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

port number

Synopsis	UDP port number to send messages to this remote SNMP notification collector
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	162
Introduced	25.3.R2
Platforms	7705 SAR-1

replay boolean

Synopsis	Retransmit missed notifications
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> replay <i>boolean</i>
Tree	replay
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

security-level keyword

Synopsis	Security level at which SNMP notification messages are sent to SNMP notification collector
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> security-level <i>keyword</i>
Tree	security-level
Options	no-auth-no-privacy, auth-no-privacy, privacy
Default	no-auth-no-privacy
Introduced	25.3.R2
Platforms	7705 SAR-1

version keyword

Synopsis	SNMP version to format notification messages sent to this SNMP notification collector
----------	---

Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> version <i>keyword</i>
Tree	version
Options	snmpv1, snmpv2c, snmpv3
Default	snmpv3
Introduced	25.3.R2
Platforms	7705 SAR-1

syslog [**syslog-name**] *log-vprn-syslog-name*

Synopsis	Enter the syslog list instance
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i>
Tree	syslog
Max. instances	30
Introduced	25.3.R2
Platforms	7705 SAR-1

[syslog-name] *log-vprn-syslog-name*

Synopsis	Syslog name
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i>
Tree	syslog
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the Syslog target host
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>service vprn service-name log syslog log-vprn-syslog-name description description</i>
Tree	<i>description</i>
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

facility *keyword*

Synopsis	Facility code for messages
Context	configure <i>service vprn service-name log syslog log-vprn-syslog-name facility keyword</i>
Tree	<i>facility</i>
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local7
Introduced	25.3.R2
Platforms	7705 SAR-1

hostname

Synopsis	Enter the hostname context
Context	configure <i>service vprn service-name log syslog log-vprn-syslog-name hostname</i>
Tree	<i>hostname</i>
Description	Commands in this context control how the HOSTNAME field of syslog messages is populated. If no command option is configured, the HOSTNAME is populated with an IP address.
Introduced	25.3.R2
Platforms	7705 SAR-1

use-system-name

Synopsis	Enable the use-system-name context
----------	---

Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> hostname use-system-name
Tree	use-system-name
Description	Commands in this context configure the system to use the system name configured with the configure system name command as the HOSTNAME field of syslog messages. Do not use any spaces in the system name if it is used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: use-system-name , use-vprn-name , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

use-vprn-name

Synopsis	Enable the use-vprn-name context
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> hostname use-vprn-name
Tree	use-vprn-name
Description	Commands in this context configure the system to use the VPRN service name configured with the configure service vprn service-name command as the HOSTNAME field of syslog messages sent in this VPRN. Do not use any spaces in the VPRN name if it is used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: use-system-name , use-vprn-name , or value .
Introduced	25.3.R2
Platforms	7705 SAR-1

value *named-item-255*

Synopsis	Syslog HOSTNAME field value
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> hostname value <i>named-item-255</i>
Tree	value
Description	This command configures a string as the HOSTNAME field of syslog messages. Do not use any spaces in the string used for the syslog HOSTNAME.
String length	1 to 255
Notes	The following elements are part of a choice: use-system-name , use-vprn-name , or value .

Introduced 25.3.R2
Platforms 7705 SAR-1

log-prefix (*keyword* | *string*)

Synopsis Prefix string to log message sent to target syslog host
Context **configure** [service vprn](#) *service-name* **log syslog** *log-vprn-syslog-name* **log-prefix** (*keyword* | *string*)
Tree [log-prefix](#)
String length 1 to 32
Options no-prefix
Default TMNX
Introduced 25.3.R2
Platforms 7705 SAR-1

port *number*

Synopsis Destination port when sending syslog over UDP
Context **configure** [service vprn](#) *service-name* **log syslog** *log-vprn-syslog-name* **port** *number*
Tree [port](#)
Range 0 | 1 to 65535
Default 514
Introduced 25.3.R2
Platforms 7705 SAR-1

severity *keyword*

Synopsis Severity level threshold for the syslog message
Context **configure** [service vprn](#) *service-name* **log syslog** *log-vprn-syslog-name* **severity** *keyword*
Tree [severity](#)
Options emergency, alert, critical, error, warning, notice, info, debug
Default info
Introduced 25.3.R2
Platforms 7705 SAR-1

timestamp-format *keyword*

Synopsis	Syslog timestamp format
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> timestamp-format <i>keyword</i>
Tree	timestamp-format
Options	millisecond – Set timestamp format to milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TLS client profile used to encrypt syslog communication
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Description	<p>This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.</p> <p>Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.</p> <p>When this command is unconfigured, the syslog messages are sent over UDP.</p>
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

management

Synopsis	Enable the management context
Context	configure service vprn <i>service-name</i> management
Tree	management
Description	<p>Commands in this context control which management protocols can be used to access the SR OS router via the VPRN router instance.</p> <p>For SNMP control, see the configure service vprn snmp access command.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

allow-ftp *boolean*

Synopsis	Allow access to the FTP server
Context	configure <i>service vprn service-name management allow-ftp boolean</i>
Tree	<i>allow-ftp</i>
Description	<p>When configured to true, this command allows FTP access to the SR OS router via the VPRN router instance.</p> <p>When configured to false, this command disallows access to the SR OS FTP server.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	configure <i>service vprn service-name management allow-grpc boolean</i>
Tree	<i>allow-grpc</i>
Description	<p>When configured to true, this command allows access to the gRPC server via the VPRN router instance.</p> <p>When configured to false, this command disallows gRPC server access.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-netconf *boolean*

Synopsis	Allow access to the NETCONF server
Context	configure <i>service vprn service-name management allow-netconf boolean</i>
Tree	<i>allow-netconf</i>
Description	<p>When configured to true, this command allows NETCONF server access to the SR OS router via the VPRN router instance.</p> <p>When configured to false, this command disallows access to the NETCONF server.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

allow-ssh *boolean*

Synopsis	Allow access to the SSH server
Context	configure <i>service vprn service-name management allow-ssh boolean</i>
Tree	allow-ssh
Description	<p>When configured to true, this command allows SSH server access to the SR OS router via the VPRN router instance.</p> <p>When configured to false, this command disallows SSH server access.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-telnet *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	configure <i>service vprn service-name management allow-telnet boolean</i>
Tree	allow-telnet
Description	<p>When configured to true, this command allows IPv4 Telnet server access to the SR OS router via the VPRN router instance.</p> <p>When configured to false, this command disallows access to the IPv4 Telnet server.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-telnet6 *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	configure <i>service vprn service-name management allow-telnet6 boolean</i>
Tree	allow-telnet6
Description	<p>When configured to true, this command allows IPv6 Telnet server access to the SR OS router via the VPRN router instance.</p> <p>When configured to false, this command removes access to the IPv6 Telnet server.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-ipv4-routes

Synopsis	Enter the maximum-ipv4-routes context
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes
Tree	maximum-ipv4-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Action when the maximum number of routes, held within a VRF context, is reached
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Mid-level water marker for the number of routes which this VRF holds
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of routes that are configured on this virtual router
Context	configure <i>service vprn service-name maximum-ipv4-routes value number</i>
Tree	<i>value</i>
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-ipv6-routes

Synopsis	Enter the maximum-ipv6-routes context
Context	configure <i>service vprn service-name maximum-ipv6-routes</i>
Tree	<i>maximum-ipv6-routes</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Action when the maximum number of routes, held within a VRF context, is reached
Context	configure <i>service vprn service-name maximum-ipv6-routes log-only boolean</i>
Tree	<i>log-only</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Mid-level water marker for the number of routes which this VRF holds
Context	configure <i>service vprn service-name maximum-ipv6-routes threshold number</i>
Tree	<i>threshold</i>
Range	1 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of routes that are configured on this virtual router
Context	configure service vprn <i>service-name</i> maximum-ipv6-routes value <i>number</i>
Tree	value
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-maximum-routes

Synopsis	Enter the mc-maximum-routes context
Context	configure service vprn <i>service-name</i> mc-maximum-routes
Tree	mc-maximum-routes
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Log and allow learning of new multicast routes
Context	configure service vprn <i>service-name</i> mc-maximum-routes log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold *number*

Synopsis	Maximum multicast routes which the VRF holds
Context	configure service vprn <i>service-name</i> mc-maximum-routes threshold <i>number</i>
Tree	threshold
Range	1 to 100

Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

value *number*

Synopsis	Maximum multicast routes configured on virtual router
Context	configure service vprn <i>service-name</i> mc-maximum-routes value <i>number</i>
Tree	value
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

mld

Synopsis	Enable the mld context
Context	configure service vprn <i>service-name</i> mld
Tree	mld
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of MLD
Context	configure service vprn <i>service-name</i> mld admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

group-if-query-source-address *ipv6-unicast-or-linklocal-address*

Synopsis	Source address in queries for group interfaces when not configured at group interface level
----------	---

Context	configure service vprn <i>service-name</i> mld group-if-query-source-address <i>ipv6-unicast-or-linklocal-address</i>
Tree	group-if-query-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

interface **[ip-interface-name]** *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MLD interface
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy to filter MLD packets
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> import-policy reference
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR-1

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Introduced	25.3.R2
Platforms	7705 SAR-1

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR-1

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> query-response-interval <i>number</i>
Tree	query-response-interval

Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR-1

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [start](#) *ipv6-multicast-address* [end](#) *ipv6-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

start *ipv6-multicast-address*

Synopsis	Lower bound of the group range
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>

Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

end *ipv6-multicast-address*

Synopsis	Upper bound of the group range
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[[source-address](#)] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

static

Synopsis Enter the **static** context

icmp-echo-reply *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> icmp-echo-reply <i>boolean</i>
Tree	icmp-echo-reply
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use.

In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it.

In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.

In LSN, the reply from an outside IP address is generated regardless if a binding is present.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

large-scale

Synopsis	Enter the large-scale context

Platforms7705 SAR-1

cpm-reserved-ports *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisNumber of ports per protocol reserved for CPM traffic

Context**configure** *service vprn service-name nat outside pool named-item large-scale use-interface-ip cpm-reserved-ports number*

Treecpm-reserved-ports

DescriptionThis command configures the router to reserve ports specifically for local (CPM) traffic. On the public IPv4 address of a NAT interface, the ports are shared between CPM traffic and transit traffic passing through the node. This reservation ensures that NAT traffic destined for the local node (CPM traffic) is guaranteed a minimum number of available ports, even if the public IPv4 port pool becomes exhausted.

Range0 to 65535

Default10

Introduced25.7.R1

Platforms7705 SAR-1

mode *keyword*

**WARNING:**

Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-block-reservation *boolean*

- **WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	configure <i>service vpn</i> <i>service-name</i> <i>nat outside pool</i> <i>named-item</i> <i>port-forwarding</i> <i>dynamic-block-reservation</i> <i>boolean</i>
Tree	<i>dynamic-block-reservation</i>
Description	When configured to true , the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.

The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.

Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.

When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

range-end *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> port-forwarding range-end <i>number</i>
Tree	range-end
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0 1023 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

port-reservation

Synopsis	Enter the port-reservation context
----------	---

Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> port-reservation
Tree	port-reservation
Introduced	25.3.R2
Platforms	7705 SAR-1

port-blocks *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> port-reservation port-blocks <i>number</i>
Tree	port-blocks
Description	<p>In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the l2-aware port-block-extension hierarchy in the NAT pool.</p>
Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-1

ports *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	configure <i>service vprn service-name nat outside pool named-item</i> port-reservation ports <i>number</i>
Tree	ports
Description	<p>For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.</p> <p>For Layer 2 aware NAT, this command specifies the size of the initial port block of a subscriber in the pool. Additional port blocks (extended port blocks) for the Layer 2 aware subscriber must be explicitly enabled under the l2-aware port-block-extension hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port blocks.</p> <p>For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.</p>
Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool type
Context	configure <i>service vprn service-name nat outside pool named-item</i> type <i>keyword</i>
Tree	type
Options	large-scale, l2-aware, wlan-gw-anchor
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
----------	--------------------------------------

Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.3.R2
Platforms	7705 SAR-1

high number

Synopsis	High watermark percentage
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

low number

Synopsis	Low watermark percentage
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

network

Synopsis	Enter the network context
Context	configure <i>service vpn service-name</i> network
Tree	network

Synopsis	Network policy name associated with a VPRN
Context	configure service vprn <i>service-name</i> network ingress qos network-policy <i>reference</i>
Tree	network-policy
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-check *boolean*

Synopsis	Enable unicast RPF check of network ingress traffic
Context	configure service vprn <i>service-name</i> network ingress urpf-check <i>boolean</i>
Tree	urpf-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

network-interface [[interface-name](#)] *interface-name*

Synopsis	Enter the network-interface list instance
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i>
Tree	network-interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[[interface-name](#)] *interface-name*

Synopsis	Network interface name
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i>
Tree	network-interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *very-long-description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> description <i>very-long-description</i>
Tree	description
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

egress

Synopsis	Enter the egress context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> egress
Tree	egress

Introduced 25.3.R2
Platforms 7705 SAR-1

filter

Synopsis Enter the **filter** context
Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *egress* *filter*
Tree *filter*
Introduced 25.3.R2
Platforms 7705 SAR-1

ip reference

Synopsis IPv4 filter policy name
Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *egress* *filter* *ip reference*
Tree *ip*
Reference **configure** *filter* *ip-filter* *filter-name*
Introduced 25.3.R2
Platforms 7705 SAR-1

hold-time

Synopsis Enter the **hold-time** context
Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *hold-time*
Tree *hold-time*
Introduced 25.3.R2

ipv4

Synopsis Enter the **ipv4** context
Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *hold-time* *ipv4*
Tree *ipv4*
Introduced 25.3.R2

Platforms 7705 SAR-1

down

Synopsis Enter the **down** context

Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *hold-time* *ipv4*
down

Tree **down**

Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced 25.3.R2

Platforms 7705 SAR-1

init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *hold-time* *ipv4*
down **init-only** *boolean*

Tree **init-only**

Description This command applies a delay only when the IP interface is first configured or after a system reboot.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

seconds *number*

Synopsis Down hold time for the IP interface

Context **configure** *service* *vpn* *service-name* *network-interface* *interface-name* *hold-time* *ipv4*
down **seconds** *number*

Tree **seconds**

Range 1 to 1200

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR-1

up

Synopsis	Enter the up context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> hold-time ipv4 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress

Synopsis	Enter the ingress context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR-1

filter

Synopsis	Enter the filter context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ingress filter
Tree	filter

Introduced	25.3.R2
Platforms	7705 SAR-1

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ingress filter ip reference
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-mtu number

Synopsis	IP MTU applied to outgoing packets
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-directed-broadcasts boolean

Synopsis	Accept broadcasts that are directed to this interface
----------	---

Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 allow-directed-broadcasts <i>boolean</i>
Tree	allow-directed-broadcasts
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd

Synopsis	Enter the bfd context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

receive *number*

Synopsis	BFD receive interval over this interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals.
Range	10 to 100000
Units	milliseconds

Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR-1

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

param-problem

Synopsis	Enter the param-problem context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
----------	---

Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

redirects

Synopsis	Enter the redirects context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects

Tree	redirects
Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface. The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60

Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2

Platforms 7705 SAR-1

seconds *number*

Synopsis Time used to limit the number of TTL expired messages

Context **configure** *service* *vprn* *service-name* *network-interface* *interface-name* *ipv4* *icmp* *tll-expired* **seconds** *number*

Tree **seconds**

Range 1 to 60

Units seconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

unreachables

Synopsis Enter the **unreachables** context

Context **configure** *service* *vprn* *service-name* *network-interface* *interface-name* *ipv4* *icmp* **unreachables**

Tree **unreachables**

Description Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of sending unreachable messages

Context **configure** *service* *vprn* *service-name* *network-interface* *interface-name* *ipv4* *icmp* **unreachables** **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp unreachables number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp unreachables seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-timer *number*

Synopsis	ARP retry interval
----------	--------------------

Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>network-interface</i> <i>interface-name</i> <i>ipv4</i> <i>neighbor-discovery</i> <i>retry-timer</i> <i>number</i>
Tree	<i>retry-timer</i>
Range	1 to 300
Units	deciseconds
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

static-neighbor [*ipv4-address*] *ipv4-address*

Synopsis	Enter the static-neighbor list instance
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>network-interface</i> <i>interface-name</i> <i>ipv4</i> <i>neighbor-discovery</i> <i>static-neighbor</i> <i>ipv4-address</i>
Tree	<i>static-neighbor</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>network-interface</i> <i>interface-name</i> <i>ipv4</i> <i>neighbor-discovery</i> <i>static-neighbor</i> <i>ipv4-address</i>
Tree	<i>static-neighbor</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>network-interface</i> <i>interface-name</i> <i>ipv4</i> <i>neighbor-discovery</i> <i>static-neighbor</i> <i>ipv4-address</i> <i>mac-address</i> <i>mac-address</i>
Tree	<i>mac-address</i>
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-1

timeout *number*

Synopsis Timeout for an ARP entry learned on the interface

Context **configure** *service vprn service-name network-interface interface-name ipv4 neighbor-discovery timeout number*

Tree *timeout*

Description This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.

Range 0 to 65535

Units seconds

Default 14400

Introduced 25.3.R2

Platforms 7705 SAR-1

primary

Synopsis Enable the **primary** context

Context **configure** *service vprn service-name network-interface interface-name ipv4 primary*

Tree *primary*

Introduced 25.3.R2

Platforms 7705 SAR-1

address *ipv4-unicast-address*

Synopsis Primary IPv4 address assigned to the interface

Context **configure** *service vprn service-name network-interface interface-name ipv4 primary address ipv4-unicast-address*

Tree *address*

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary [[address](#)] *ipv4-unicast-address*

Synopsis	Enter the secondary list instance
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] *ipv4-unicast-address*

Synopsis	Secondary IPv4 address assigned to the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>

Tree	secondary
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR-1

igp-inhibit *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address igp-inhibit <i>boolean</i>
Tree	igp-inhibit
Description	When configured to true , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 tcp-mss <i>number</i>
Tree	tcp-mss
Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR-1

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>

Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR-1

lag

Synopsis	Enter the lag context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> lag
Tree	lag
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing

Synopsis	Enter the load-balancing context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> load-balancing
Tree	load-balancing
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	25.3.R2

Platforms 7705 SAR-1

lsr-load-balancing *keyword*

Synopsis LSR load-balancing algorithm

Context **configure** [service vprn](#) *service-name* [network-interface](#) *interface-name* **load-balancing** **lsr-load-balancing** *keyword*

Tree [lsr-load-balancing](#)

Description This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.

Options lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid

Introduced 25.3.R2

Platforms 7705 SAR-1

loopback

Synopsis Use interface as a loopback interface

Context **configure** [service vprn](#) *service-name* [network-interface](#) *interface-name* **loopback**

Tree [loopback](#)

Notes The following elements are part of a choice: **loopback** or **port**.

Introduced 25.3.R2

Platforms 7705 SAR-1

mac *mac-unicast-address*

Synopsis MAC address for the interface

Context **configure** [service vprn](#) *service-name* [network-interface](#) *interface-name* **mac** *mac-unicast-address*

Tree [mac](#)

Description This command assigns a specific MAC address to an IP interface.

Introduced 25.3.R2

Platforms 7705 SAR-1

port *port-and-encap*

Synopsis Port to bind the interface

Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> port <i>port-and-encap</i>
Tree	port
String length	1 to 45
Notes	The following elements are part of a choice: loopback or port .
Introduced	25.3.R2
Platforms	7705 SAR-1

qos

Synopsis	Enter the qos context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-instance *number*

Synopsis	Port egress queue group instance for this interface
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> qos egress-instance <i>number</i>
Tree	egress-instance
Description	This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

egress-port-redirect-group *reference*

Synopsis	QoS queue group name
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> qos egress-port-redirect-group <i>reference</i>
Tree	egress-port-redirect-group
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group

name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.

Reference	configure qos queue-group-templates egress queue-group named-item
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress-fp-redirect-group *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	configure service vprn service-name network-interface interface-name qos ingress-fp-redirect-group reference
Tree	ingress-fp-redirect-group
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	configure qos queue-group-templates ingress queue-group named-item
Introduced	25.3.R2
Platforms	7705 SAR-1

ingress-instance *number*

Synopsis	Forwarding plane ingress queue group for this interface
Context	configure service vprn service-name network-interface interface-name qos ingress-instance number
Tree	ingress-instance
Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

network-policy *reference*

Synopsis	Network policy name associated with a network interface
Context	configure service vprn service-name network-interface interface-name qos network-policy reference

Tree	network-policy
Description	This command associates an existing network policy name with the IP interface.
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> tos-marking-state <i>keyword</i>
Tree	tos-marking-state
Options	trusted, untrusted
Default	trusted
Introduced	25.3.R2
Platforms	7705 SAR-1

ntp

Synopsis	Enable the ntp context
Context	configure service vprn <i>service-name</i> ntp
Tree	ntp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of NTP execution
Context	configure service vprn <i>service-name</i> ntp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

authenticate *boolean*

Synopsis	Authentication of NTP PDUs when acting as a server
Context	configure service vprn <i>service-name</i> ntp authenticate <i>boolean</i>
Tree	authenticate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-check *boolean*

Synopsis	Authenticate NTP PDUs and reject mismatches
Context	configure service vprn <i>service-name</i> ntp authentication-check <i>boolean</i>
Tree	authentication-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key [[key-id](#)] *number*

Synopsis	Enter the authentication-key list instance
Context	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i>
Tree	authentication-key
Introduced	25.3.R2
Platforms	7705 SAR-1

[key-id] *number*

Synopsis	Authentication key ID used for NTP packets
Context	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i>
Tree	authentication-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

key encrypted-leaf

Synopsis	Key to authenticate NTP packets
Context	configure service vpn <i>service-name</i> ntp authentication-key <i>number</i> key <i>encrypted-leaf</i>
Tree	key
String length	1 to 71
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Authentication method to authenticate NTP packet
Context	configure service vpn <i>service-name</i> ntp authentication-key <i>number</i> type <i>keyword</i>
Tree	type
Options	des, message-digest
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain reference

Synopsis	Authentication keychain for unsolicited traffic
Context	configure service vpn <i>service-name</i> ntp authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	<p>This command configures the authentication keychain used to handle unsolicited NTP requests.</p> <p>If a request is received with a key ID that matches both a configured key and the keychain, the MAC is checked first using the key information. If the authentication fails, the MAC is checked using the information from the keychain.</p>
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

broadcast [\[interface-name\]](#) *reference*

Synopsis	Enter the broadcast list instance
Context	configure service vpn <i>service-name</i> ntp broadcast <i>reference</i>
Tree	broadcast
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *reference*

Synopsis	Local interface used to transmit NTP broadcast packets
Context	configure service vpn <i>service-name</i> ntp broadcast <i>reference</i>
Tree	broadcast
Reference	configure service vpn <i>service-name</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	configure service vpn <i>service-name</i> ntp broadcast <i>reference</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	<p>This command configures the keychain used to authenticate messages sent by this node.</p> <p>The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.</p>
Reference	configure system security keychains keychain <i>named-item</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2

Platforms 7705 SAR-1

key-id *reference*

Synopsis Authentication key and type used by the node

Synopsis	Force adjacency down on failure until session returns
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict *boolean*

Synopsis	Enable BFD strict mode
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict <i>boolean</i>
Tree	strict
Description	When configured to true , the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing

a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.

During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict-mode-holddown <i>number</i>
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1

Platforms 7705 SAR-1

interface-type *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> interface-type <i>keyword</i>
Tree	<i>interface-type</i>
Description	This command specifies the interface type. broadcast - Broadcast network

To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.

non-broadcast - Non-broadcast network

point-to-point - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support

No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.

secondary - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-weight *number*

Synopsis	Load-balancing weight

Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> message-digest-key <i>number</i>
Tree	message-digest-key
Introduced	25.3.R2
Platforms	7705 SAR-1

[key-id] *number*

Synopsis	Message digest index
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

md5 *encrypted-leaf*

Synopsis	MD5 hash key
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> message-digest-key <i>number</i> md5 <i>encrypted-leaf</i>
Tree	md5
String length	1 to 51
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

metric number

Synopsis	Route cost metric for the interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> metric <i>number</i>
Tree	metric
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu number

Synopsis	MTU for the OSPF to use on the interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> mtu <i>number</i>
Tree	mtu
Range	512 to 9786
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [address] ipv4-unicast-address

Synopsis	Add a list entry for neighbor
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor <i>ipv4-unicast-address</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] ipv4-unicast-address

Synopsis	IPv4 address of the OSPFv2 neighbor
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor <i>ipv4-unicast-address</i>
Tree	neighbor
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR-1

passive *boolean*

Synopsis Advertise passive interfaces as OSPF interfaces
Context **configure** [service vprn](#) *service-name* [ospf number area ipv4-address](#) [interface interface-name](#) **passive** *boolean*
Tree [passive](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

poll-interval *number*

Synopsis Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context **configure** [service vprn](#) *service-name* [ospf number area ipv4-address](#) [interface interface-name](#) **poll-interval** *number*
Tree [poll-interval](#)
Max. range 0 to 4294967295
Units seconds
Default 120
Introduced 25.3.R2
Platforms 7705 SAR-1

priority *number*

Synopsis Interface priority in the DR election on the subnet
Context **configure** [service vprn](#) *service-name* [ospf number area ipv4-address](#) [interface interface-name](#) **priority** *number*
Tree [priority](#)
Range 0 to 255
Default 1
Introduced 25.3.R2
Platforms 7705 SAR-1

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-priority *keyword*

Synopsis	RIB priority for OSPF
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> rib-priority <i>keyword</i>
Tree	rib-priority
Options	high
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address loopfree-alternate-exclude <i>boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nssa

Synopsis	Enable the nssa context
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address nssa
Tree	nssa
Introduced	25.3.R2
Platforms	7705 SAR-1

area-range [[ip-prefix-mask](#)] *ipv4-unicast-prefix*

Synopsis	Enter the area-range list instance
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address nssa area-range <i>ipv4-unicast-prefix</i>
Tree	area-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix-mask] *ipv4-unicast-prefix*

Synopsis	IPv4 unicast address prefix and mask
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address nssa area-range <i>ipv4-unicast-prefix</i>
Tree	area-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa area-range ipv4-unicast-prefix advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

originate-default-route

Synopsis	Enable the originate-default-route context
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa originate-default-route
Tree	originate-default-route
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-check *boolean*

Synopsis	Perform adjacency checks before originating a default route
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa originate-default-route adjacency-check <i>boolean</i>
Tree	adjacency-check
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

type-nssa *boolean*

Synopsis	Generate a default route using NSSA-LSA type
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa originate-default-route type-nssa <i>boolean</i>
Tree	type-nssa
Default	false

Introduced 25.3.R2
 Platforms 7705 SAR-1

redistribute-external *boolean*

Synopsis Redistribute external routes into the NSSA
 Context **configure** *service* *vpn* *service-name* *ospf* *number* *area* *ipv4-address* *nssa* **redistribute-external** *boolean*
 Tree **redistribute-external**
 Default true
 Introduced 25.3.R2
 Platforms 7705 SAR-1

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the NSSA on an ABR
 Context **configure** *service* *vpn* *service-name* *ospf* *number* *area* *ipv4-address* *nssa* **summaries** *boolean*
 Tree **summaries**
 Default true
 Introduced 25.3.R2
 Platforms 7705 SAR-1

sham-link [*interface*] *interface-name* *ip-address* *ipv4-unicast-address*

Synopsis Enter the **sham-link** list instance
 Context **configure** *service* *vpn* *service-name* *ospf* *number* *area* *ipv4-address* **sham-link** *interface-name* *ip-address* *ipv4-unicast-address*
 Tree **sham-link**
 Introduced 25.3.R2
 Platforms 7705 SAR-1

[interface] *interface-name*

Synopsis Local interface name used for the sham-link
 Context **configure** *service* *vpn* *service-name* *ospf* *number* *area* *ipv4-address* **sham-link** *interface-name* *ip-address* *ipv4-unicast-address*

Tree	sham-link
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-unicast-address*

Synopsis	IP address of the sham-link neighbor
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i>
Tree	sham-link
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key to send and receive OSPF packets
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
String length	1 to 38
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type to be used
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address hello-interval <i>number</i>

Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-digest-key [[key-id](#)] *number*

Synopsis	Enter the message-digest-key list instance
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i> message-digest-key <i>number</i>
Tree	message-digest-key
Introduced	25.3.R2
Platforms	7705 SAR-1

[key-id] *number*

Synopsis	Message digest index
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

md5 *encrypted-leaf*

Synopsis	MD5 key or hash key
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i> message-digest-key <i>number</i> md5 <i>encrypted-leaf</i>
Tree	md5
String length	1 to 51
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	Explicit route cost metric that is applied to the sham link
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address metric <i>number</i>
Tree	metric
Range	1 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2

Platforms 7705 SAR-1

stub

Synopsis Enable the **stub** context

Context **configure** [service vprn](#) *service-name* [ospf number](#) [area ipv4-address](#) **stub**

Tree [stub](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

default-metric *number*

Synopsis Metric used by ABR for default route into the stub area

Context **configure** [service vprn](#) *service-name* [ospf number](#) [area ipv4-address](#) [stub default-metric](#) *number*

Tree [default-metric](#)

Range 1 to 16777214

Default 1

Introduced 25.3.R2

Platforms 7705 SAR-1

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the stub area on an ABR

Context **configure** [service vprn](#) *service-name* [ospf number](#) [area ipv4-address](#) [stub summaries](#) *boolean*

Tree [summaries](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

virtual-link [[router-id](#)] [ipv4-address](#) [transit-area](#) *reference*

Synopsis Enter the **virtual-link** list instance

Context **configure** [service vprn](#) *service-name* [ospf number](#) [area ipv4-address](#) [virtual-link](#) [ipv4-address](#) [transit-area](#) *reference*

Tree	virtual-link
Introduced	25.3.R2
Platforms	7705 SAR-1

[router-id] *ipv4-address*

Synopsis	Router identity of the virtual link neighbor
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-area reference

Synopsis	Transit area that links backbone area to area without physical connection with the backbone
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
Reference	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the OSPF interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
String length	1 to 38
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type used on OSPF interface
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR-1

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> dead-interval <i>number</i>
Tree	dead-interval

Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

message-digest-key [[key-id](#)] *number*

Synopsis	Enter the message-digest-key list instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Introduced	25.3.R2
Platforms	7705 SAR-1

[key-id] *number*

Synopsis	Message digest index
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

md5 encrypted-leaf

Synopsis	MD5 hash key
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address virtual-link ipv4-address transit-area <i>reference</i> message-digest-key number md5 encrypted-leaf
Tree	md5
String length	1 to 51
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval number

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address virtual-link ipv4-address transit-area <i>reference</i> retransmit-interval number
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay number

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address virtual-link ipv4-address transit-area <i>reference</i> transit-delay number
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

compatible-rfc1583 *boolean*

Synopsis	OSPF summary and external route calculations
Context	configure service vprn <i>service-name</i> ospf <i>number</i> compatible-rfc1583 <i>boolean</i>
Tree	compatible-rfc1583
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> ospf <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure service vprn <i>service-name</i> ospf <i>number</i> export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

external-db-overflow

Synopsis	Enable the external-db-overflow context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-db-overflow
Tree	external-db-overflow
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time during which the router operates in overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	seconds

Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-db-overflow limit <i>number</i>
Tree	limit
Range	0 to 2147483647
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
----------	---

Context	configure service vprn <i>service-name</i> ospf <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure service vprn <i>service-name</i> ospf <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-dn-bit *boolean*

Synopsis	Ignore the DN bit for OSPF LSA packets for the instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> ignore-dn-bit <i>boolean</i>
Tree	ignore-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure service vprn <i>service-name</i> ospf <i>number</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms 7705 SAR-1

loopfree-alternate

Synopsis Enable the **loopfree-alternate** context

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [loopfree-alternate](#)

Tree [loopfree-alternate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

exclude

Synopsis Enter the **exclude** context

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [loopfree-alternate](#) [exclude](#)

Tree [exclude](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix-policy *reference*

Synopsis Policy to exclude prefixes from LFA SPF calculation

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [loopfree-alternate](#) [exclude](#) [prefix-policy](#) *reference*

Tree [prefix-policy](#)

Description This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

 An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.

Reference **configure** [policy-options](#) [policy-statement](#) *named-item-64*

Max.
instances 5

Notes This element is ordered by the user.

Introduced 25.3.R2

Platforms 7705 SAR-1

multicast-import *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	configure service vprn <i>service-name</i> ospf <i>number</i> multicast-import <i>boolean</i>
Tree	multicast-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload *boolean*

Synopsis	Change local router state to appear overloaded
Context	configure service vprn <i>service-name</i> ospf <i>number</i> overload <i>boolean</i>
Tree	overload
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-ext-1 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> overload-include-ext-1 <i>boolean</i>
Tree	overload-include-ext-1
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-ext-2 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> overload-include-ext-2 <i>boolean</i>
Tree	overload-include-ext-2
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-stub *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> overload-include-stub <i>boolean</i>
Tree	<i>overload-include-stub</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-on-boot

Synopsis	Enable the overload-on-boot context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> overload-on-boot
Tree	<i>overload-on-boot</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time during which the router operates in overload state before reestablishing normal operations
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> overload-on-boot timeout <i>number</i>
Tree	<i>timeout</i>
Range	60 to 1800
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Preference for OSPF internal routes
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> preference <i>number</i>
Tree	<i>preference</i>
Range	1 to 255
Default	10

Introduced	25.3.R2
Platforms	7705 SAR-1

reference-bandwidth *number*

Synopsis	Bandwidth to reference default costing of interfaces
Context	configure service vprn <i>service-name</i> ospf <i>number</i> reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-priority

Synopsis	Enter the rib-priority context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR-1

high

Synopsis	Enter the high context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list *reference*

Synopsis	Higher priority list used during OSPF route calculation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list

Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

router-id *router-id*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the OSPF instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> router-id <i>router-id</i>
Tree	router-id
Introduced	25.3.R2
Platforms	7705 SAR-1

rtr-adv-lsa-limit

Synopsis	Enable the rtr-adv-lsa-limit context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit
Tree	rtr-adv-lsa-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Log the event without triggering overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

max-lsa-count *number*

Synopsis	Max number of LSAs one router can advertise
----------	---

Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit max-lsa-count <i>number</i>
Tree	max-lsa-count
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-timeout (*number* | *keyword*)

Synopsis	Maximum time in overload after LSA limit is reached
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit overload-timeout (<i>number</i> <i>keyword</i>)
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2
Platforms	7705 SAR-1

warning-threshold *number*

Synopsis	Percentage of the max LSA count that causes a warning
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit warning-threshold <i>number</i>
Tree	warning-threshold
Range	0 to 100
Units	percent
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

super-backbone *boolean*

Synopsis	Enable super backbone functionality
----------	-------------------------------------

Context	configure service vprn service-name ospf number super-backbone boolean
Tree	super-backbone
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress-dn-bit *boolean*

Synopsis	Suppress the DN bit setting for OSPF LSA packets
Context	configure service vprn service-name ospf number suppress-dn-bit boolean
Tree	suppress-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enter the timers context
Context	configure service vprn service-name ospf number timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	configure service vprn service-name ospf number timers incremental-spf-wait number
Tree	incremental-spf-wait
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-accumulate *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-accumulate <i>number</i>
Tree	lsa-accumulate
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-arrival *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-arrival <i>number</i>
Tree	lsa-arrival
Range	0 to 600000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-generate

Synopsis	Enter the lsa-generate context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-generate
Tree	lsa-generate
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-initial-wait *number*

Synopsis	First wait period between OSPF LSA generation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-generate lsa-initial-wait <i>number</i>

Tree	lsa-initial-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-second-wait *number*

Synopsis	Hold time between the first and second LSA generation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-generate lsa-second-wait <i>number</i>
Tree	lsa-second-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

max-lsa-wait *number*

Synopsis	Max time between two LSAs being generated
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-generate max-lsa-wait <i>number</i>
Tree	max-lsa-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

redistribute-delay *number*

Synopsis	Hold down timer for external routes into OSPF
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers redistribute-delay <i>number</i>
Tree	redistribute-delay

Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-wait

Synopsis	Enter the spf-wait context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-second-wait *number*

Synopsis	Hold time between the first and second SPF calculation
Context	configure service vpn <i>service-name</i> ospf <i>number</i> timers spf-wait spf-second-wait <i>number</i>
Tree	spf-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

unicast-import *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	configure service vpn <i>service-name</i> ospf <i>number</i> unicast-import <i>boolean</i>
Tree	unicast-import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-domain

Synopsis	Enable the vpn-domain context
Context	configure service vpn <i>service-name</i> ospf <i>number</i> vpn-domain
Tree	vpn-domain
Introduced	25.3.R2
Platforms	7705 SAR-1

id *system-id*

Synopsis	OSPF VPN domain ID
Context	configure service vpn <i>service-name</i> ospf <i>number</i> vpn-domain id <i>system-id</i>
Tree	id
Description	This command specifies the OSPF VPN domain. This is exchanged using BGP in the Extended Community attribute associated with a prefix.

String length	14
Default	0000.0000.0000
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	VPN domain type
Context	configure <i>service vpn</i> <i>service-name ospf</i> <i>number vpn-domain</i> <i>type keyword</i>
Tree	<i>type</i>
Options	0005, 0105, 0205, 8005
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-tag *number*

Synopsis	OSPF VPN tag
Context	configure <i>service vpn</i> <i>service-name ospf</i> <i>number vpn-tag</i> <i>number</i>
Tree	<i>vpn-tag</i>
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf3 [*ospf-instance*] *number*

Synopsis	Enter the ospf3 list instance
Context	configure <i>service vpn</i> <i>service-name ospf3</i> <i>number</i>
Tree	<i>ospf3</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR-1

[ospf-instance] *number*

Synopsis	Integrated OSPF instance
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i>
Tree	ospf3
Range	0 to 31 64 to 95
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the OSPF instance
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability *keyword*

Synopsis	Allow router advertisement capabilities
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	false, link, area, as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

area [[area-id](#)] *ipv4-address*

Synopsis	Enter the area list instance
----------	-------------------------------------

Context	configure service vpn <i>service-name ospf3</i> <i>number area</i> <i>ipv4-address</i>
Tree	area
Introduced	25.3.R2
Platforms	7705 SAR-1

[area-id] *ipv4-address*

Synopsis	Area-ID attribute
Context	configure service vpn <i>service-name ospf3</i> <i>number area</i> <i>ipv4-address</i>
Tree	area
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure service vpn <i>service-name ospf3</i> <i>number area</i> <i>ipv4-address</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

area-range [[ip-prefix-mask](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the area-range list instance
Context	configure service vpn <i>service-name ospf3</i> <i>number area</i> <i>ipv4-address</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Address ranges to create on an ABR for route summarization or suppression
----------	---

Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

blackhole-aggregate *boolean*

Synopsis	Install a low priority blackhole route to avoid loops
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> blackhole-aggregate <i>boolean</i>
Tree	blackhole-aggregate
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Route imported as Summary Type 3/Inter-Area-Prefix-LSA
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication

Synopsis	Enable the authentication context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> authentication
Tree	authentication
Introduced	25.3.R2
Platforms	7705 SAR-1

inbound *reference*

Synopsis	sa-name
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> authentication inbound <i>reference</i>
Tree	inbound

Reference	configure ipsec static-sa <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

outbound *reference*

Synopsis	sa-name
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> authentication outbound <i>reference</i>
Tree	outbound
Reference	configure ipsec static-sa <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR-1

remain-down-on-failure *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict boolean

Synopsis	Enable BFD strict mode
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict <i>boolean</i>
Tree	strict
Description	<p>When configured to true, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.</p> <p>During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-mode-holddown number

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict-mode-holddown <i>number</i>
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

conditional-advertise-prefix reference

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix

Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR-1

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

interface-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> interface-type <i>keyword</i>
Tree	interface-type
Description	<p>This command specifies the interface type.</p> <p>broadcast - Broadcast network</p> <p>To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.</p> <p>non-broadcast - Non-broadcast network</p> <p>point-to-point - Point-to-point link</p> <p>Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.</p> <p>p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support</p> <p>No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.</p> <p>secondary - Multiple secondary adjacencies allowed</p> <p>A secondary interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p>
Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-weight *number*

Synopsis	Load-balancing weight
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight

Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface interface-name loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface interface-name loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

policy-map

Synopsis	Enable the policy-map context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface interface-name loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2
Platforms	7705 SAR-1

route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface interface-name loopfree-alternate policy-map route-nh-template <i>reference</i>

Tree	route-nh-template
Reference	configure routing-options route-next-hop-policy template <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-filter-out *keyword*

Synopsis	LSA flooding reduction
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> lsa-filter-out <i>keyword</i>
Tree	lsa-filter-out
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	Route cost metric for the interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> metric <i>number</i>
Tree	metric
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu *number*

Synopsis	MTU for the OSPF to use on the interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> mtu <i>number</i>
Tree	mtu
Range	512 to 9786
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for neighbor
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv6 link local address of the OSPFv3 neighbor
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

passive *boolean*

Synopsis	Advertise passive interfaces as OSPF interfaces
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> passive <i>boolean</i>
Tree	passive
Introduced	25.3.R2
Platforms	7705 SAR-1

poll-interval *number*

Synopsis	Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> poll-interval <i>number</i>
Tree	poll-interval
Max. range	0 to 4294967295
Units	seconds

Default	120
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Interface priority in the DR election on the subnet
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface <i>interface-name</i> priority <i>number</i>
Tree	priority
Range	0 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

rib-priority *keyword*

Synopsis	RIB priority for OSPF
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address interface <i>interface-name</i> rib-priority <i>keyword</i>
Tree	rib-priority
Options	high
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

key-rollover-interval *number*

Synopsis	Key rollover interval
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> key-rollover-interval <i>number</i>
Tree	key-rollover-interval
Range	10 to 300
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> loopfree-alternate-exclude <i>boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nssa

Synopsis	Enable the nssa context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa
Tree	nssa
Introduced	25.3.R2
Platforms	7705 SAR-1

area-range [**ip-prefix-mask**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the area-range list instance
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[**ip-prefix-mask**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Address ranges to create on an ABR for route summarization or suppression
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise **boolean**

Synopsis	Advertise summarized range of addresses to other areas
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise boolean
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

originate-default-route

Synopsis	Enable the originate-default-route context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa originate-default-route
Tree	originate-default-route
Introduced	25.3.R2
Platforms	7705 SAR-1

adjacency-check *boolean*

Synopsis	Perform adjacency checks before originating a default route
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa originate-default-route adjacency-check <i>boolean</i>
Tree	adjacency-check
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

type-nssa *boolean*

Synopsis	Generate a default route using NSSA-LSA type
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa originate-default-route type-nssa <i>boolean</i>
Tree	type-nssa
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

redistribute-external *boolean*

Synopsis	Redistribute external routes into the NSSA
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> nssa redistribute-external <i>boolean</i>
Tree	redistribute-external
Default	true

Introduced	25.3.R2
Platforms	7705 SAR-1

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the NSSA on an ABR
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address nssa summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

stub

Synopsis	Enable the stub context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address stub
Tree	stub
Introduced	25.3.R2
Platforms	7705 SAR-1

default-metric *number*

Synopsis	Metric used by ABR for default route into the stub area
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address stub default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777214
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
----------	---

Context	configure service vprn <i>service-name ospf3 number area ipv4-address stub summaries boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

virtual-link [[router-id](#)] [ipv4-address](#) [transit-area](#) *reference*

Synopsis	Enter the virtual-link list instance
Context	configure service vprn <i>service-name ospf3 number area ipv4-address virtual-link ipv4-address transit-area reference</i>
Tree	virtual-link
Introduced	25.3.R2
Platforms	7705 SAR-1

[router-id] [ipv4-address](#)

Synopsis	Router identity of the virtual link neighbor
Context	configure service vprn <i>service-name ospf3 number area ipv4-address virtual-link ipv4-address transit-area reference</i>
Tree	virtual-link
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-area *reference*

Synopsis	Transit area that links backbone area to area without physical connection with the backbone
Context	configure service vprn <i>service-name ospf3 number area ipv4-address virtual-link ipv4-address transit-area reference</i>
Tree	virtual-link
Reference	configure service vprn <i>service-name ospf3 number area ipv4-address</i>
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the OSPF interface

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [area](#) *ipv4-address* [virtual-link](#) *ipv4-address* [transit-area](#) *reference* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication

Synopsis Enable the **authentication** context

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [area](#) *ipv4-address* [virtual-link](#) *ipv4-address* [transit-area](#) *reference* [authentication](#)

Tree [authentication](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

inbound *reference*

Synopsis *sa-name*

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [area](#) *ipv4-address* [virtual-link](#) *ipv4-address* [transit-area](#) *reference* [authentication inbound](#) *reference*

Tree [inbound](#)

Reference **configure** [ipsec static-sa](#) *named-item*

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

outbound *reference*

Synopsis *sa-name*

Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication outbound <i>reference</i>
Tree	outbound
Reference	configure ipsec static-sa <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> retransmit-interval <i>number</i>

Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area ipv4-address virtual-link ipv4-address transit-area <i>reference</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> export-limit <i>number</i> <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

external-db-overflow

Synopsis	Enable the external-db-overflow context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> external-db-overflow
Tree	external-db-overflow

Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time during which the router operates in overload
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> external-db-overflow limit <i>number</i>
Tree	limit
Range	0 to 2147483647
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR-1

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-dn-bit *boolean*

Synopsis	Ignore the DN bit for OSPF LSA packets for the instance
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> ignore-dn-bit <i>boolean</i>
Tree	ignore-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> import-policy reference
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR-1

exclude

Synopsis	Enter the exclude context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> loopfree-alternate exclude
Tree	exclude
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> loopfree-alternate exclude prefix-policy reference
Tree	prefix-policy
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.

Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-import *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> multicast-import <i>boolean</i>
Tree	multicast-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload *boolean*

Synopsis	Change local router state to appear overloaded
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> overload <i>boolean</i>
Tree	overload
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-ext-1 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> overload-include-ext-1 <i>boolean</i>
Tree	overload-include-ext-1
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-ext-2 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> overload-include-ext-2 <i>boolean</i>
Tree	overload-include-ext-2
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-include-stub *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> overload-include-stub <i>boolean</i>
Tree	overload-include-stub
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-on-boot

Synopsis	Enable the overload-on-boot context
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> overload-on-boot
Tree	overload-on-boot
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Time during which the router operates in overload state before reestablishing normal operations
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> overload-on-boot timeout <i>number</i>
Tree	timeout
Range	60 to 1800
Units	seconds
Introduced	25.3.R2

Platforms 7705 SAR-1

preference *number*

Synopsis Preference for OSPF internal routes

Context **configure** *service* *vpn* *service-name* *ospf3* *number* **preference** *number*

Tree *preference*

Range 1 to 255

Default 10

Introduced 25.3.R2

Platforms 7705 SAR-1

reference-bandwidth *number*

Synopsis Bandwidth to reference default costing of interfaces

Context **configure** *service* *vpn* *service-name* *ospf3* *number* **reference-bandwidth** *number*

Tree *reference-bandwidth*

Range 1 to 18446744073709551615

Units kilobps

Default 100000000

Introduced 25.3.R2

Platforms 7705 SAR-1

rib-priority

Synopsis Enter the **rib-priority** context

Context **configure** *service* *vpn* *service-name* *ospf3* *number* **rib-priority**

Tree *rib-priority*

Introduced 25.3.R2

Platforms 7705 SAR-1

high

Synopsis Enter the **high** context

Context **configure** *service* *vpn* *service-name* *ospf3* *number* **rib-priority** **high**

Tree	high
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list *reference*

Synopsis	Higher priority list used during OSPF route calculation
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rib-priority high prefix-list reference
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

router-id *router-id*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the OSPF instance
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> router-id <i>router-id</i>
Tree	router-id
Introduced	25.3.R2
Platforms	7705 SAR-1

rtr-adv-lsa-limit

Synopsis	Enable the rtr-adv-lsa-limit context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rtr-adv-lsa-limit
Tree	rtr-adv-lsa-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-only *boolean*

Synopsis	Log the event without triggering overload
----------	---

Context	configure service vpn <i>service-name ospf3 number rtr-adv-lsa-limit log-only boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

max-lsa-count *number*

Synopsis	Max number of LSAs one router can advertise
Context	configure service vpn <i>service-name ospf3 number rtr-adv-lsa-limit max-lsa-count number</i>
Tree	max-lsa-count
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

overload-timeout (*number* | *keyword*)

Synopsis	Maximum time in overload after LSA limit is reached
Context	configure service vpn <i>service-name ospf3 number rtr-adv-lsa-limit overload-timeout (number keyword)</i>
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2
Platforms	7705 SAR-1

warning-threshold *number*

Synopsis	Percentage of the max LSA count that causes a warning
Context	configure service vpn <i>service-name ospf3 number rtr-adv-lsa-limit warning-threshold number</i>
Tree	warning-threshold

Range	0 to 100
Units	percent
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

suppress-dn-bit *boolean*

Synopsis	Suppress the DN bit setting for OSPF LSA packets
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> suppress-dn-bit <i>boolean</i>
Tree	suppress-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enter the timers context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers incremental-spf-wait <i>number</i>
Tree	incremental-spf-wait
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-accumulate *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers lsa-accumulate <i>number</i>
Tree	lsa-accumulate
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-arrival *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers lsa-arrival <i>number</i>
Tree	lsa-arrival
Range	0 to 600000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-generate

Synopsis	Enter the lsa-generate context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers lsa-generate
Tree	lsa-generate
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-initial-wait *number*

Synopsis	First wait period between OSPF LSA generation
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers lsa-generate lsa-initial-wait <i>number</i>

Tree	lsa-initial-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

lsa-second-wait *number*

Synopsis	Hold time between the first and second LSA generation
Context	configure service vprn service-name ospf3 number timers lsa-generate lsa-second-wait number
Tree	lsa-second-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

max-lsa-wait *number*

Synopsis	Max time between two LSAs being generated
Context	configure service vprn service-name ospf3 number timers lsa-generate max-lsa-wait number
Tree	max-lsa-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR-1

redistribute-delay *number*

Synopsis	Hold down timer for external routes into OSPF
Context	configure service vprn service-name ospf3 number timers redistribute-delay number
Tree	redistribute-delay

Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-wait

Synopsis	Enter the spf-wait context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR-1

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2

Platforms 7705 SAR-1

spf-second-wait *number*

Synopsis Hold time between the first and second SPF calculation

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [timers spf-wait](#) [spf-second-wait](#) *number*

Tree [spf-second-wait](#)

Range 10 to 100000

Units milliseconds

Default 1000

Introduced 25.3.R2

Platforms 7705 SAR-1

unicast-import *boolean*

Synopsis Submit routes into the unicast Route Table Manager

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [unicast-import](#) *boolean*

Tree [unicast-import](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

pim

Synopsis Enable the **pim** context

Context **configure** [service vprn](#) *service-name* [pim](#)

Tree [pim](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of PIM

Context **configure** [service vprn](#) *service-name* [pim](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

apply-to *keyword*

Synopsis	IES and non-IES interfaces to create in PIM
Context	configure service vprn <i>service-name</i> pim apply-to <i>keyword</i>
Tree	apply-to
Options	all, none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

bgp-nh-override *boolean*

Synopsis	Disable VRF import EC support for next-hop resolution
Context	configure service vprn <i>service-name</i> pim bgp-nh-override <i>boolean</i>
Tree	bgp-nh-override
Description	When configured to true , the RPF check is performed using IPv4 VPN AF next-hop instead of IPv4 AF VRF import extended community (EC). When configured to false , the RPF check is performed using IPv4 AF VRF import EC.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

import

Synopsis	Enter the import context
Context	configure service vprn <i>service-name</i> pim import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR-1

join-policy *reference*

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> pim import join-policy <i>reference</i>
Tree	join-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

register-policy *reference*

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> pim import register-policy <i>reference</i>
Tree	register-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	Interface name
----------	----------------

Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the PIM interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

assert-period *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> assert-period <i>number</i>
Tree	assert-period
Range	1 to 300
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 boolean

Synopsis	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> bfd-liveness ipv4 boolean
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 boolean

Synopsis	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> bfd-liveness ipv6 boolean
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bsm-check-rtr-alert boolean

Synopsis	Check router alert option in bootstrap messages received
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> bsm-check-rtr-alert boolean
Tree	bsm-check-rtr-alert
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval number

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> hello-interval <i>number</i>
Tree	hello-interval
Range	0 to 255

Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-multiplier *number*

Synopsis	Multiplier to determine the hold time for PIM neighbor
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	20 to 100
Default	35
Introduced	25.3.R2
Platforms	7705 SAR-1

improved-assert *boolean*

Synopsis	Allow improved assert processing on interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> improved-assert <i>boolean</i>
Tree	improved-assert
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

instant-prune-echo *boolean*

Synopsis	Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> instant-prune-echo <i>boolean</i>
Tree	instant-prune-echo
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group
Tree	monitor-oper-group
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	Operational group identifier
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group priority-delta <i>number</i>
Tree	priority-delta
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 multicast <i>boolean</i>
Tree	multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group
Tree	monitor-oper-group
Introduced	25.3.R2
Platforms	7705 SAR-1

name *reference*

Synopsis	Operational group identifier
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group priority-delta <i>number</i>
Tree	priority-delta
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 multicast <i>boolean</i>
Tree	multicast

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

max-groups *number*

Synopsis	Maximum number of groups for the interface
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> max-groups <i>number</i>
Tree	max-groups
Range	0 1 to 16000
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

multicast-senders *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> multicast-senders <i>keyword</i>
Tree	multicast-senders
Options	auto, always, never
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	DR election priority for this interface
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> priority <i>number</i>
Tree	priority
Description	This command sets the priority value to elect the DR. The DR election priority is a 32-bit unsigned number and the numerically larger priority is always preferred.
Range	1 to 4294967295
Default	1
Introduced	25.3.R2

Platforms 7705 SAR-1

sticky-dr

Synopsis Enable the **sticky-dr** context

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **sticky-dr**

Tree [sticky-dr](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

priority *number*

Synopsis DR election priority for this interface

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **sticky-dr** **priority** *number*

Tree [priority](#)

Range 1 to 4294967295

Default 1024

Introduced 25.3.R2

Platforms 7705 SAR-1

three-way-hello *boolean*

Synopsis Allow three-way hello compatibility mode

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **three-way-hello** *boolean*

Tree [three-way-hello](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

tracking-support *boolean*

Synopsis Allow upstream routers to explicitly track join membership

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **tracking-support** *boolean*

Tree	tracking-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> pim ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv4
Context	configure service vprn <i>service-name</i> pim ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

rpf-table *keyword*

Synopsis	Route table for RPF lookup
Context	configure service vprn <i>service-name</i> pim ipv4 rpf-table <i>keyword</i>
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure service vprn <i>service-name</i> pim ipv4 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

register-message *ipv4-unicast-address*

Synopsis	Source IPv4 address for PIM register messages
Context	configure service vprn <i>service-name</i> pim ipv4 source-address register-message <i>ipv4-unicast-address</i>
Tree	register-message
Description	<p>This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-assert-compatible-mode *boolean*

Synopsis	Enable SSM assert compatible mode
Context	configure service vprn <i>service-name</i> pim ipv4 ssm-assert-compatible-mode <i>boolean</i>
Tree	ssm-assert-compatible-mode
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-default-range *boolean*

Synopsis	SSM default range
----------	-------------------

Context	configure service vprn <i>service-name</i> pim ipv4 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vprn <i>service-name</i> pim ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv6
Context	configure service vprn <i>service-name</i> pim ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

rpf-table *keyword*

Synopsis	Route table for RPF lookup
Context	configure service vprn <i>service-name</i> pim ipv6 rpf-table <i>keyword</i>
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure service vprn <i>service-name</i> pim ipv6 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

register-message *ipv6-unicast-address*

Synopsis	Source IPv6 address for PIM register messages
Context	configure service vprn <i>service-name</i> pim ipv6 source-address register-message <i>ipv6-unicast-address</i>
Tree	register-message
Description	<p>This command configures the source IPv6 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-default-range *boolean*

Synopsis	SSM default range
Context	configure service vprn <i>service-name</i> pim ipv6 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

mtu-over-head *number*

Synopsis	MVPN tunnel MTU size reduction to allow for BIER header
----------	---

Context	configure service vprn service-name pim mtu-over-head number
Tree	mtu-over-head
Description	This command subtracts the specified value from the MVPN tunnel MTU to allow a BIER header to be added without exceeding the network MTU.
Range	0 44 76 140 268 536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

non-dr-attract-traffic boolean

Synopsis	Attract traffic when the router is not the designated one
Context	configure service vprn service-name pim non-dr-attract-traffic boolean
Tree	non-dr-attract-traffic
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

rp

Synopsis	Enter the rp context
Context	configure service vprn service-name pim rp
Tree	rp
Introduced	25.3.R2
Platforms	7705 SAR-1

bootstrap

Synopsis	Enter the bootstrap context
Context	configure service vprn service-name pim rp bootstrap
Tree	bootstrap
Introduced	25.3.R2
Platforms	7705 SAR-1

export reference

Synopsis	Export policy to control the flow of bootstrap messages
Context	configure service vprn <i>service-name</i> pim rp bootstrap export reference
Tree	export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

import reference

Synopsis	Import policy to control the flow of bootstrap messages
Context	configure service vprn <i>service-name</i> pim rp bootstrap import reference
Tree	import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> pim rp ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

anycast [[ipv4-address](#)] *ipv4-unicast-address* [rp-set-peer](#) *ipv4-unicast-address*

Synopsis	Add a list entry for anycast
----------	-------------------------------------

Context	configure service vprn <i>service-name</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-address] *ipv4-unicast-address*

Synopsis	Loopback IP address shared by routes in RP set
Context	configure service vprn <i>service-name</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-set-peer *ipv4-unicast-address*

Synopsis	Peer in the anycast RP-set
Context	configure service vprn <i>service-name</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-rp-discovery *boolean*

Synopsis	Enable auto-RP discovery mode and auto-RP listener
Context	configure service vprn <i>service-name</i> pim rp ipv4 auto-rp-discovery <i>boolean</i>
Tree	auto-rp-discovery
Description	When configured to true , the system enables the auto-RP protocol in discovery mode and the auto-RP listener functionality.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv4-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate address <i>ipv4-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-mask-len *number*

Synopsis	Length for bootstrap hash mask
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate hash-mask-len <i>number</i>
Tree	hash-mask-len
Range	0 to 32
Default	30
Introduced	25.3.R2

Platforms 7705 SAR-1

priority *number*

Synopsis Bootstrap priority of the router

Context **configure** *service vprn service-name pim rp ipv4 bsr-candidate* *priority number*

Tree *priority*

Range 0 to 255

Default 0

Introduced 25.3.R2

Platforms 7705 SAR-1

candidate *boolean*

Synopsis Enable auto-RP to advertise candidate RP information

Context **configure** *service vprn service-name pim rp ipv4 candidate* *boolean*

Tree *candidate*

Description When configured to **true**, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.

When configured to **false**, the candidate RP information is not specified.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

mapping-agent *boolean*

Synopsis Enable the mapping agent on the node

Context **configure** *service vprn service-name pim rp ipv4 mapping-agent* *boolean*

Tree *mapping-agent*

Description When configured to **true**, the mapping agent is enabled on the node. The auto-RP MA observes the **auto-rp-announcement** messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

rp-candidate

Synopsis Enter the **rp-candidate** context

Context **configure** [service vprn](#) *service-name* [pim rp ipv4 rp-candidate](#)

Tree [rp-candidate](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

address *ipv4-unicast-address*

Synopsis Local RP address

Context **configure** [service vprn](#) *service-name* [pim rp ipv4 rp-candidate](#) [address](#) *ipv4-unicast-address*

Tree [address](#)

Description This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the Candidate RP

Context **configure** [service vprn](#) *service-name* [pim rp ipv4 rp-candidate](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

group-range [[ipv4-prefix](#)] *ipv4-multicast-prefix*

Synopsis Add a list entry for **group-range**

Context **configure** [service vprn](#) *service-name* [pim rp ipv4 rp-candidate](#) [group-range](#) *ipv4-multicast-prefix*

Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-prefix] *ipv4-multicast-prefix*

Synopsis	IPv4 address and prefix length
Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate group-range <i>ipv4-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate holdtime <i>number</i>
Tree	holdtime
Range	5 to 255
Units	seconds
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Candidate RP priority
Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate priority <i>number</i>
Tree	priority
Range	0 to 255
Default	192
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vprn <i>service-name</i> pim rp ipv4 static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Enter the address list instance
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	IPv4 address for the static RP
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

group-prefix [[ipv4-prefix](#)] *ipv4-multicast-prefix*

Synopsis	Add a list entry for group-prefix
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv4-prefix] *ipv4-multicast-prefix*

Synopsis	IPv4 address and prefix length
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

override *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> override <i>boolean</i>
Tree	override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vprn <i>service-name</i> pim rp ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

anycast [[ipv6-address](#)] *ipv6-unicast-address* [rp-set-peer](#) *ipv6-unicast-address*

Synopsis	Add a list entry for anycast
Context	configure service vprn <i>service-name</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-unicast-address*

Synopsis	Loopback IP address shared by routes in RP set
Context	configure service vprn <i>service-name</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

rp-set-peer *ipv6-unicast-address*

Synopsis	Peer in the anycast RP set
Context	configure service vprn <i>service-name</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-mask-len *number*

Synopsis	Length for bootstrap hash mask
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate hash-mask-len <i>number</i>
Tree	hash-mask-len
Range	0 to 128
Default	126
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Bootstrap priority of the router
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate priority <i>number</i>
Tree	priority
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

embedded-rp

Synopsis	Enable the embedded-rp context
Context	configure service vprn <i>service-name</i> pim rp ipv6 embedded-rp
Tree	embedded-rp

Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of embedded RP
Context **configure** [service vprn](#) *service-name* [pim rp ipv6 embedded-rp admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR-1

group-range [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis Add a list entry for **group-range**
Context **configure** [service vprn](#) *service-name* [pim rp ipv6 embedded-rp group-range](#) *ipv6-multicast-prefix*
Tree [group-range](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[ipv6-prefix] *ipv6-multicast-prefix*

Synopsis IPv6 address and prefix length
Context **configure** [service vprn](#) *service-name* [pim rp ipv6 embedded-rp group-range](#) *ipv6-multicast-prefix*
Tree [group-range](#)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

rp-candidate

Synopsis Enter the **rp-candidate** context
Context **configure** [service vprn](#) *service-name* [pim rp ipv6 rp-candidate](#)

Tree	rp-candidate
Introduced	25.3.R2
Platforms	7705 SAR-1

address *ipv6-unicast-address*

Synopsis	Local RP address
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis	Add a list entry for group-range
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
----------	--------------------------------

Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

holdtime *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate holdtime <i>number</i>
Tree	holdtime
Range	5 to 255
Units	seconds
Default	150
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	Candidate RP priority
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate priority <i>number</i>
Tree	priority
Range	0 to 255
Default	192
Introduced	25.3.R2
Platforms	7705 SAR-1

static

Synopsis	Enter the static context
Context	configure service vprn <i>service-name</i> pim rp ipv6 static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ipv6-address](#)] *ipv6-unicast-address*

Synopsis	Enter the address list instance
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-address] *ipv6-unicast-address*

Synopsis	Static IP address of the RP
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

group-prefix [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis	Add a list entry for group-prefix
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> group-prefix <i>ipv6-multicast-prefix</i>
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

[ipv6-prefix] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> group-prefix <i>ipv6-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

override *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	configure <i>service vpn</i> <i>service-name</i> <i>pim rp</i> <i>ipv6 static address</i> <i>ipv6-unicast-address</i> <i>override</i> <i>boolean</i>
Tree	<i>override</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

spt-switchover [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the spt-switchover list instance
Context	configure <i>service vpn</i> <i>service-name</i> <i>pim spt-switchover</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	<i>spt-switchover</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	configure <i>service vpn</i> <i>service-name</i> <i>pim spt-switchover</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	<i>spt-switchover</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

threshold (*number* | *keyword*)

Synopsis	SPT switchover threshold
Context	configure <i>service vpn</i> <i>service-name</i> <i>pim spt-switchover</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>threshold</i> (<i>number</i> <i>keyword</i>)
Tree	<i>threshold</i>
Range	1 to 4294967294
Units	kilobps
Options	infinity

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

ssm-groups

Synopsis	Enter the ssm-groups context
Context	configure service vpn <i>service-name</i> pim ssm-groups
Tree	ssm-groups
Introduced	25.3.R2
Platforms	7705 SAR-1

group-range [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for group-range
Context	configure service vpn <i>service-name</i> pim ssm-groups group-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR-1

[[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	configure service vpn <i>service-name</i> pim ssm-groups group-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure service vpn <i>service-name</i> radius
Tree	radius

Introduced 25.3.R2
Platforms 7705 SAR-1

server [*name*] *named-item*

Synopsis Enter the **server** list instance
Context **configure** *service vprn* *service-name* *radius server* *named-item*
Tree *server*
Max. instances 64
Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *named-item*

Synopsis External RADIUS server name
Context **configure** *service vprn* *service-name* *radius server* *named-item*
Tree *server*
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

accept-coa *boolean*

Synopsis Process Change of Authorization (CoA) messages
Context **configure** *service vprn* *service-name* *radius server* *named-item* *accept-coa* *boolean*
Tree *accept-coa*
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

acct-port *number*

Synopsis UDP port number of the RADIUS for accounting events

Context	configure service vpn <i>service-name radius server named-item acct-port number</i>
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure service vpn <i>service-name radius server named-item address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	configure service vpn <i>service-name radius server named-item auth-port number</i>
Tree	auth-port
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name radius server named-item description description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

pending-requests-limit *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i> pending-requests-limit <i>number</i>
Tree	pending-requests-limit
Range	1 to 4096
Default	4096
Introduced	25.3.R2
Platforms	7705 SAR-1

secret *encrypted-leaf*

Synopsis	Secret key associated with this RADIUS server
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i> secret <i>encrypted-leaf</i>
Tree	secret
String length	1 to 115
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

rip

Synopsis	Enable the rip context
Context	configure service vprn <i>service-name</i> rip
Tree	rip
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the RIP instance
Context	configure service vprn <i>service-name</i> rip admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure service vprn <i>service-name</i> rip authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	configure service vprn <i>service-name</i> rip authentication-type keyword
Tree	authentication-type
Description	<p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure service vprn <i>service-name</i> rip bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure service vprn <i>service-name</i> rip check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> rip description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> rip export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR-1

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> rip export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR-1

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure service vprn <i>service-name</i> rip export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Policies to determine exported routes
Context	configure service vprn <i>service-name</i> rip export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

group [group-name] *named-item*

Synopsis	Enter the group list instance
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR-1

[group-name] *named-item*

Synopsis	RIP group name
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i>
Tree	group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of RIP neighbor interface group
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
----------	--

Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>rip</i> <i>group</i> <i>named-item</i> <i>authentication-key</i> <i>encrypted-leaf</i>
Tree	<i>authentication-key</i>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, the authentication password is removed from the configuration and authentication is disabled.</p>
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>rip</i> <i>group</i> <i>named-item</i> <i>authentication-type</i> <i>keyword</i>
Tree	<i>authentication-type</i>
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	25.3.R2
Platforms	7705 SAR-1

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>rip</i> <i>group</i> <i>named-item</i> <i>bfd-liveness</i> <i>boolean</i>
Tree	<i>bfd-liveness</i>
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Introduced	25.3.R2

Platforms 7705 SAR-1

check-zero *boolean*

Synopsis Enable checking of mandatory zero fields

Context **configure** *service vprn service-name rip group named-item* **check-zero** *boolean*

Tree **check-zero**

Description When configured to **true**, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.

When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.

Introduced 25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

Context **configure** *service vprn service-name rip group named-item* **description** *description*

Tree **description**

String length 1 to 80

Introduced 25.3.R2

Platforms 7705 SAR-1

export-policy *reference*

Synopsis Policies used to rule which routes are exported to RIP

Context **configure** *service vprn service-name rip group named-item* **export-policy** *reference*

Tree **export-policy**

Description This command specifies the export route policies used to determine which routes are exported to RIP.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

Reference **configure** *policy-options policy-statement named-item-64*

Max. instances 5

Notes This element is ordered by the user.

Introduced 25.3.R2
Platforms 7705 SAR-1

import-policy *reference*

Synopsis Policies to decide routes accepted from RIP neighbors

Context **configure** [service vprn](#) *service-name* [rip group](#) *named-item* [import-policy](#) *reference*

Tree [import-policy](#)

Description This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

Reference **configure** [policy-options](#) [policy-statement](#) *named-item-64*

Max. instances 5

Notes This element is ordered by the user.

Introduced 25.3.R2

Platforms 7705 SAR-1

message-size *number*

Synopsis Maximum number of routes per RIP update message

Context **configure** [service vprn](#) *service-name* [rip group](#) *named-item* [message-size](#) *number*

Tree [message-size](#)

Range 25 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

metric-in *number*

Synopsis Metric added to routes received from a RIP neighbor

Context **configure** [service vprn](#) *service-name* [rip group](#) *named-item* [metric-in](#) *number*

Tree [metric-in](#)

Range 1 to 16

Introduced 25.3.R2

Platforms 7705 SAR-1

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

neighbor [[interface-name](#)] *interface-name*

Synopsis	Enter the neighbor list instance
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR-1

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the RIP neighbor interface
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced 25.3.R2
Platforms 7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis Authentication password passed between RIP neighbors

Context **configure** *service vpn* *service-name rip* *group named-item neighbor* *interface-name authentication-key encrypted-leaf*

Tree *authentication-key*

Description This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication password from the configuration and disables authentication.

String length 1 to 51

Introduced 25.3.R2

Platforms 7705 SAR-1

authentication-type *keyword*

Synopsis Authentication type

Context **configure** *service vpn* *service-name rip* *group named-item neighbor* *interface-name authentication-type keyword*

Tree *authentication-type*

Description This command configures the type of authentication to be used.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.

Options none, password, md5, md20

Introduced 25.3.R2

Platforms 7705 SAR-1

bfd-liveness *boolean*

Synopsis Enable BFD to control the state of protocol adjacency

Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	When configured to true , this command enables BFD to control the state of the associated protocol adjacency. When configured to false , this command removes BFD from the associated protocol adjacency.
Introduced	25.3.R2
Platforms	7705 SAR-1

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
----------	--

Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> export-policy <i>reference</i>
Tree	export-policy
Description	This command specifies the export route policies used to determine which routes are exported to RIP. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

message-size *number*

Synopsis	Maximum number of routes per RIP update message
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> message-size <i>number</i>
Tree	message-size

Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Route preference
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

receive keyword

Synopsis	Accepted version on received packets
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> receive <i>keyword</i>
Tree	receive
Options	version-1, version-2, both, none
Introduced	25.3.R2
Platforms	7705 SAR-1

send keyword

Synopsis	RIP version and method used to send RIP updates
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> send <i>keyword</i>
Tree	send
Options	none, version-1, broadcast, multicast, unicast
Introduced	25.3.R2
Platforms	7705 SAR-1

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enable the timers context
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

flush *number*

Synopsis	RIP flush timer
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	RIP timeout timer
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2

Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

import-policy *reference*

Synopsis	Import policies to decide routes for routing table
Context	configure service vprn <i>service-name</i> ripng import-policy <i>reference</i>
Tree	import-policy

Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

message-size *number*

Synopsis	Maximum number of routes in the message
Context	configure service vpn <i>service-name</i> ripng message-size <i>number</i>
Tree	message-size
Range	25 to 255
Default	25
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-in *number*

Synopsis	Metric added to routes received from the neighbor
Context	configure service vpn <i>service-name</i> ripng metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

metric-out *number*

Synopsis	Metric added to routes exported into RIPng
Context	configure service vpn <i>service-name</i> ripng metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Default	1
Introduced	25.3.R2

Platforms 7705 SAR-1

preference *number*

Synopsis Route preference

Context **configure** [service vprn](#) *service-name* [ripng](#) [preference](#) *number*

Tree [preference](#)

Range 1 to 255

Default 100

Introduced 25.3.R2

Platforms 7705 SAR-1

receive *keyword*

Synopsis Accepted version on received packets

Context **configure** [service vprn](#) *service-name* [ripng](#) [receive](#) *keyword*

Tree [receive](#)

Options none, ripng

Default ripng

Introduced 25.3.R2

Platforms 7705 SAR-1

send *keyword*

Synopsis RIPng version and method used to send RIPng updates

Context **configure** [service vprn](#) *service-name* [ripng](#) [send](#) *keyword*

Tree [send](#)

Options none, ripng

Default ripng

Introduced 25.3.R2

Platforms 7705 SAR-1

split-horizon *boolean*

Synopsis Enable split horizon and poison reverse

Context	configure service vprn <i>service-name ripng split-horizon boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

timers

Synopsis	Enable the timers context
Context	configure service vprn <i>service-name ripng timers</i>
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR-1

flush number

Synopsis	RIP flush timer
Context	configure service vprn <i>service-name ripng timers flush number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	RIP timeout timer
Context	configure service vpn <i>service-name</i> ripng timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure service vpn <i>service-name</i> ripng timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-id *router-id*

Synopsis	Unique router ID for the router in the AS
Context	configure service vpn <i>service-name</i> router-id <i>router-id</i>
Tree	router-id
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure service vprn <i>service-name</i> service-id <i>number</i>
Tree	service-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR-1

sfm-overload

Synopsis	Enable the sfm-overload context
Context	configure service vprn <i>service-name</i> sfm-overload
Tree	sfm-overload
Introduced	25.3.R2
Platforms	7705 SAR-1

holdoff-time *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	configure service vprn <i>service-name</i> sfm-overload holdoff-time <i>number</i>
Tree	holdoff-time
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

sgt-qos

Synopsis	Enter the sgt-qos context
Context	configure service vprn <i>service-name</i> sgt-qos
Tree	sgt-qos

Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p

Synopsis	Enter the dot1p context
Context	configure service vprn <i>service-name</i> sgt-qos dot1p
Tree	dot1p
Introduced	25.3.R2
Platforms	7705 SAR-1

application [[dot1p-app-name](#)] *keyword*

Synopsis	Enter the application list instance
Context	configure service vprn <i>service-name</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Introduced	25.3.R2
Platforms	7705 SAR-1

[dot1p-app-name] *keyword*

Synopsis	Dot1p application ID that generates control traffic
Context	configure service vprn <i>service-name</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Options	arp, isis, pppoe
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p (*keyword* | *number*)

Synopsis	Dot1p value to the traffic generated by this application
Context	configure service vprn <i>service-name</i> sgt-qos dot1p application <i>keyword</i> dot1p (<i>keyword</i> <i>number</i>)
Tree	dot1p

Range	0 to 7
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp

Synopsis	Enter the dscp context
Context	configure service vprn <i>service-name</i> sgt-qos dscp
Tree	dscp
Introduced	25.3.R2
Platforms	7705 SAR-1

application [[dscp-app-name](#)] *keyword*

Synopsis	Enter the application list instance
Context	configure service vprn <i>service-name</i> sgt-qos dscp application <i>keyword</i>
Tree	application
Description	<p>Commands in this context configure DSCP remarking for self-generated application traffic.</p> <p>All packets generated by the configured application instance use the value configured for the DSCP name or value. The instance can be Base, router, VPRN, or management.</p> <p>The system uses the DSCP value configured in this instance to:</p> <ul style="list-style-type: none"> • set the DSCP bits in the IP packet • signal from the CPM to the egress FC QoS policy to set the Ethernet 802.1p and MPLS EXP bits including, PPPoE, and IS-IS packets that do not carry DSCP bits • configure the DSCP value in the egress IP header (which the egress QoS policy does not overwrite)
Introduced	25.3.R2
Platforms	7705 SAR-1

[dscp-app-name] keyword

Synopsis	DSCP application ID that generates control traffic
Context	configure service vprn <i>service-name</i> sgt-qos dscp application <i>keyword</i>
Tree	application
Description	This command configures the DSCP application ID that generates control traffic.
Options	bgp, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, gtp, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, pfc, ibcp, bfd
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	configure service vprn <i>service-name</i> sgt-qos dscp application <i>keyword</i> dscp (<i>keyword</i> <i>number</i>)
Tree	dscp
Range	0 to 63
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

dscp-map [[dscp-name](#)] keyword

Synopsis	Enter the dscp-map list instance
Context	configure service vprn <i>service-name</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Introduced	25.3.R2
Platforms	7705 SAR-1

[dscp-name] keyword

Synopsis	DSCP name mapped to forwarding class
Context	configure service vpn <i>service-name</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

fc keyword

Synopsis	Value for the forwarding class for this mapping
Context	configure service vpn <i>service-name</i> sgt-qos dscp dscp-map <i>keyword</i> fc <i>keyword</i>
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp

Synopsis	Enter the snmp context
Context	configure service vpn <i>service-name</i> snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR-1

access boolean

Synopsis	Enable SNMP access for the VPRN service
Context	configure service vprn <i>service-name</i> snmp access <i>boolean</i>
Tree	access
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

community [[community-string](#)] *encrypted-leaf*

Synopsis	Enter the community list instance
Context	configure service vprn <i>service-name</i> snmp community <i>encrypted-leaf</i>
Tree	community
Description	<p>Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance.</p> <p>VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the "vprn-view" view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn" and the "vprn-view" view (read/write).</p> <p>The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface "ringo" with a destination IP address equal to the "ringo" interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[community-string] *encrypted-leaf*

Synopsis	SNMP v1/v2c community name associated with the VPRN
Context	configure service vprn <i>service-name</i> snmp community <i>encrypted-leaf</i>

hold-down

Synopsis	Enable the hold-down context
Context	configure service vprn <i>service-name</i> static-routes hold-down
Tree	hold-down
Description	<p>Commands in this context enable the hold-down time feature globally for static routes in the system.</p> <p>The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap.</p> <p>The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

initial number

Synopsis	Value for the initial hold-down time
Context	configure service vprn <i>service-name</i> static-routes hold-down initial <i>number</i>
Tree	initial
Description	<p>This command specifies the initial value of the hold-down time globally for static routes in the system.</p> <p>When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.</p>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

max-value number

Synopsis	Maximum value of the hold-down time
Context	configure service vprn <i>service-name</i> static-routes hold-down max-value <i>number</i>
Tree	max-value
Description	This command specifies the maximum value of the hold-down time globally for static routes in the system.

Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

multiplier *number*

Synopsis	Multiplier of the previous hold-down time
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>static-routes</i> <i>hold-down</i> multiplier <i>number</i>
Tree	<i>multiplier</i>
Description	This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.
Range	1 to 10
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

route [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*) *route-type* *keyword*

cpe-check [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address</p>

for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

router-instance *string*

Synopsis	Router instance used for matching prefix list
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) prefix-list router-instance <i>string</i>
Tree	router-instance
Description	This command configures the router instance used for matching against the prefix list. If the conditional static route is configured in a VPRN and the router instance is configured

as "Base", the activation of the static route is dependent on the existence of routes in the Base router and the evaluation of the prefix list and flag is done in that context.

By default there is no configured value for this command option, and the conditional static route is dependent on the existence of routes in the same router instance as the static route itself, subject to the details of the prefix list and the flag setting.

Entries in a referenced prefix list that are not match type 'exact' are interpreted as though they are 'exact'.

Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) log <i>boolean</i>
Tree	log
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
----------	--

Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) description <i>description-allow-all-white-spaces</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing-weight *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

metric *number*

Synopsis	Static route metric
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) metric <i>number</i>

Tree	metric
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

preference *number*

Synopsis	Priority of this static route over the routes from different sources
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-list

Synopsis	Enter the prefix-list context
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR-1

flag *keyword*

Synopsis	Static route match condition from prefix list
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list flag <i>keyword</i>
Tree	flag
Options	any, all, none
Default	any
Introduced	25.3.R2

Platforms 7705 SAR-1

name *reference*

Synopsis Prefix list name

Context **configure** **service** **vprn** *service-name* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **prefix-list** **name** *reference*

Tree **name**

Reference **configure** **policy-options** **prefix-list** *named-item-64*

Introduced 25.3.R2

Platforms 7705 SAR-1

router-instance *string*

Synopsis Router instance used for matching prefix list

Context **configure** **service** **vprn** *service-name* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **prefix-list** **router-instance** *string*

Tree **router-instance**

Description This command configures the router instance used for matching against the prefix list. If the conditional static route is configured in a VPRN and the router instance is configured as "Base", the activation of the static route is dependent on the existence of routes in the Base router and the evaluation of the prefix list and flag is done in that context.

By default there is no configured value for this command option, and the conditional static route is dependent on the existence of routes in the same router instance as the static route itself, subject to the details of the prefix list and the flag setting.

Entries in a referenced prefix list that are not match type 'exact' are interpreted as though they are 'exact'.

Introduced 25.3.R2

Platforms 7705 SAR-1

tag *number*

Synopsis Static route tag

Context **configure** **service** **vprn** *service-name* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **tag** *number*

Tree **tag**

Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

validate-next-hop *boolean*

Synopsis	Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) validate-next-hop <i>boolean</i>
Tree	validate-next-hop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tag *number*

Synopsis	Static route tag
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-propagate

Synopsis	Enter the ttl-propagate context
Context	configure service vprn <i>service-name</i> ttl-propagate
Tree	ttl-propagate
Introduced	25.3.R2
Platforms	7705 SAR-1

local *keyword*

Synopsis	Local TTL propagation control for the VPRN
----------	--

Context	configure service vprn service-name ttl-propagate local keyword
Tree	local
Description	This command specifies the local TTL propagation control for the VPRN and overrides the global configuration of the TTL propagation for locally generated packets that are forwarded over MPLS LSPs in a given VPRN service context.
Options	none, all, vc-only, use-base
Default	use-base
Introduced	25.3.R2
Platforms	7705 SAR-1

transit keyword

Synopsis	Transit TTL propagation control for the VPRN
Context	configure service vprn service-name ttl-propagate transit keyword
Tree	transit
Description	This command overrides the global configuration of the TTL propagation for in transit packets that are forwarded over MPLS LSPs in a given VPRN service context.
Options	none, all, vc-only, use-base
Default	use-base
Introduced	25.3.R2
Platforms	7705 SAR-1

twamp-light

Synopsis	Enter the twamp-light context
Context	configure service vprn service-name twamp-light
Tree	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR-1

reflector

Synopsis	Enable the reflector context
Context	configure service vprn service-name twamp-light reflector
Tree	reflector
Introduced	25.3.R2

Platforms7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the TWAMP Light reflector
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>twamp-light reflector</i> admin-state <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-ipv6-udp-checksum-zero *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>twamp-light reflector</i> allow-ipv6-udp-checksum-zero <i>boolean</i>
Tree	<i>allow-ipv6-udp-checksum-zero</i>
Description	<p>When configured to true, this command allows the processing of IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.</p> <p>When configured to false, IPv6 packets that arrive with a UDP checksum of zero are discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>twamp-light reflector</i> description <i>description</i>
Tree	<i>description</i>
String length	1 to 80

Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Enter the prefix list instance
Context	configure service vprn service-name twamp-light reflector prefix (ipv4-prefix ipv6-prefix)
Tree	prefix
Max. instances	50
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Source prefix for the TWAMP-Light reflector
Context	configure service vprn service-name twamp-light reflector prefix (ipv4-prefix ipv6-prefix)
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description description

Synopsis	Text description
Context	configure service vprn service-name twamp-light reflector prefix (ipv4-prefix ipv6-prefix) description description
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Processing behavior type for the reflector
Context	configure <i>service vprn service-name twamp-light reflector type keyword</i>
Tree	<i>type</i>
Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is twamp-light the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is stamp, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to stamp. When the reflector is operating in stamp mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp, twamp-light
Default	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR-1

udp-port *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Context	configure <i>service vprn service-name twamp-light reflector udp-port number</i>
Tree	<i>udp-port</i>
Range	862 64364 to 64373
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

vprn-type keyword

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VPRN type
Context	configure service vprn <i>service-name</i> vprn-type <i>keyword</i>
Tree	vprn-type
Options	regular, hub, spoke, subscriber-split-horizon
Default	regular
Introduced	25.3.R2
Platforms	7705 SAR-1

weighted-ecmp keyword

Synopsis	Weighted load-balancing capability for ECMP routes
Context	configure service vprn <i>service-name</i> weighted-ecmp <i>keyword</i>
Tree	weighted-ecmp
Options	false, true, strict
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR-1

gi-address *keyword*

Synopsis	Use gi-address to select a pool with the given scope
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address gi-address <i>keyword</i>
Tree	gi-address
Options	subnet-scope, pool-scope
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-address *ipv4-unicast-address*

Synopsis	Fixed IPv4 address of the host
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR-1

pool

Synopsis	Enable the pool context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool
Tree	pool
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR-1

delimiter *string*

Synopsis	Delimiter separating primary and secondary pool names
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool delimiter <i>string</i>
Tree	delimiter
String length	1
Introduced	25.3.R2
Platforms	7705 SAR-1

primary *named-item*

Synopsis	Primary pool name
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool primary <i>named-item</i>

Tree	primary
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

secondary *named-item*

Synopsis	Secondary pool name
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool secondary <i>named-item</i>
Tree	secondary
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

use-pool-from-client

Synopsis	Enable the use-pool-from-client context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address use-pool-from-client
Tree	use-pool-from-client
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR-1

delimiter *string*

Synopsis	Delimiter character to combine primary and secondary pool names
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address use-pool-from-client delimiter <i>string</i>
Tree	delimiter
String length	1
Introduced	25.3.R2
Platforms	7705 SAR-1

gi-address *ipv4-unicast-address*

Synopsis	GI addresses based on the host entry in the LUDB
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 gi-address <i>ipv4-unicast-address</i>
Tree	gi-address
Introduced	25.3.R2
Platforms	7705 SAR-1

option [[number](#)] (*number* | *keyword*)

Synopsis	Enter the option list instance
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>)
Tree	option
Introduced	25.3.R2
Platforms	7705 SAR-1

[number] (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>)
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string

String length	1 to 127
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR-1

duration *number*

Synopsis	DHCP option as time duration
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) duration <i>number</i>
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR-1

empty

Synopsis	Remove DHCP option configuration
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) empty
Tree	empty
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR-1

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256

Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) ipv4-address <i>ipv4-address</i>
Tree	ipv4-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) netbios-node-type <i>keyword</i>
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask [type](#) *keyword*

Synopsis	Enter the mask list instance
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i>
Tree	mask
Introduced	25.3.R2

Platforms 7705 SAR-1

type *keyword*

Synopsis Matching type to identify a host

Context **configure** [subscriber-mgmt](#) [local-user-db](#) *named-item* [ipoe](#) [mask](#) [type](#) *keyword*

Tree [mask](#)

Description This command configures the data type that represents the type of matching performed to identify a DHCP host.

Options circuit-id, remote-id, sap-id, string, system-id, option60, duid-en, duid-ll-llt

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

prefix

Synopsis Enable the **prefix** context

Context **configure** [subscriber-mgmt](#) [local-user-db](#) *named-item* [ipoe](#) [mask](#) [type](#) *keyword* [prefix](#)

Tree [prefix](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

length *number*

Synopsis PPP mask prefix length

Context **configure** [subscriber-mgmt](#) [local-user-db](#) *named-item* [ipoe](#) [mask](#) [type](#) *keyword* [prefix](#) [length](#) *number*

Tree [length](#)

Range 1 to 127

Notes The following elements are part of a mandatory choice: **length** or **string**.

Introduced 25.3.R2

Platforms 7705 SAR-1

string *string*

Synopsis Prefix string

Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> prefix string <i>string</i>
Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

suffix

Synopsis	Enable the suffix context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> suffix
Tree	suffix
Introduced	25.3.R2
Platforms	7705 SAR-1

length *number*

Synopsis	PPP mask suffix length
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> suffix length <i>number</i>
Tree	length
Range	1 to 127
Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

string *string*

Synopsis	Suffix substring
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> suffix string <i>string</i>
Tree	string
Description	This command specifies a substring that is stripped off the end of the incoming circuit ID before it is matched against the value configured in the circuit ID.
String length	1 to 127

Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR-1

match-list *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE host match type
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe match-list <i>keyword</i>
Tree	match-list
Description	This command specifies the type of matching done to identify a host. There are different match-types for IPoE hosts.
Options	circuit-id, mac, remote-id, sap-id, service-id, string, system-id, option60, encap-tag-range, dual-stack-remote-id, derived-id, ip, encap-tag-separate-range, duid-en, duid-ll-llt
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

rip-policy [[name](#)] *named-item*

Synopsis	Enter the rip-policy list instance
Context	configure subscriber-mgmt rip-policy <i>named-item</i>
Tree	rip-policy
Max. instances	255
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	RIP policy name
----------	-----------------

Context	configure subscriber-mgmt rip-policy <i>named-item</i>
Tree	rip-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure subscriber-mgmt rip-policy <i>named-item</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
String length	1 to 51
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	configure subscriber-mgmt rip-policy <i>named-item</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest, message-digest-20
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure subscriber-mgmt rip-policy <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

4.28.1 system command descriptions

system

Synopsis	Enter the system context
Context	configure system
Tree	system
Description	Commands in this context enable configuring of general system level functions and router management protocols.
Introduced	25.3.R2
Platforms	7705 SAR-1

alarms

Synopsis	Enter the alarms context
Context	configure system alarms
Tree	alarms
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the system alarm
Context	configure system alarms admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

max-cleared *number*

Synopsis	Maximum number of cleared alarms
Context	configure system alarms max-cleared <i>number</i>
Tree	max-cleared

Range	0 to 500
Default	500
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-boot-license-violations *boolean*

Synopsis	Allow boot license violations in boot-up configuration
Context	configure system allow-boot-license-violations <i>boolean</i>
Tree	allow-boot-license-violations
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

boot-bad-exec *url*

Synopsis	CLI script file to execute following a failed boot
Context	configure system boot-bad-exec <i>url</i>
Tree	boot-bad-exec
Description	This command configures the name of the CLI script file to be run following the failure of a boot configuration. Note: This command has no effect in model-driven mode.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

boot-good-exec *url*

Synopsis	CLI script file to execute following successful boot
Context	configure system boot-good-exec <i>url</i>
Tree	boot-good-exec
Description	This command configures a URL for a CLI script to exec following the success of a boot configuration. Related Commands exec - This command executes the contents of a text file as if they were CLI commands entered at the console.

String length 1 to 180
Introduced 25.3.R2
Platforms 7705 SAR-1

cli-code *cli-description*

Synopsis CLLI code value for the system
Context **configure** [system cli-code](#) *cli-description*
Tree [cli-code](#)
String length 11
Introduced 25.3.R2
Platforms 7705 SAR-1

congestion-management *boolean*

Synopsis Enable Virtual Service Router congestion management
Context **configure** [system congestion-management](#) *boolean*
Tree [congestion-management](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

contact *description*

Synopsis Contact information for the managed node
Context **configure** [system contact](#) *description*
Tree [contact](#)
String length 1 to 80
Introduced 25.3.R2
Platforms 7705 SAR-1

coordinates *description*

Synopsis GPS coordinates for the system location
Context **configure** [system coordinates](#) *description*

Tree	coordinates
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

cron

Synopsis	Enter the cron context
Context	configure system cron
Tree	cron
Introduced	25.3.R2
Platforms	7705 SAR-1

schedule [[schedule-name](#)] *named-item* *owner* *named-item*

Synopsis	Enter the schedule list instance
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i>
Tree	schedule
Max. instances	255
Introduced	25.3.R2
Platforms	7705 SAR-1

[schedule-name] *named-item*

Synopsis	Schedule name
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i>
Tree	schedule
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

owner *named-item*

Synopsis	Schedule owner
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i>
Tree	schedule
String length	1 to 32
MD-CLI default	TIMOS CLI
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the CRON schedule
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

count *number*

Synopsis	Number of times to repeat a periodic schedule run
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> count <i>number</i>
Tree	count
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

day-of-month *number*

Synopsis	Days in a month when a schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> day-of-month <i>number</i>

Tree	day-of-month
Range	-31 to -1 1 to 31
Max. instances	62
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

end-time

Synopsis	Enter the end-time context
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> end-time
Tree	end-time
Introduced	25.3.R2
Platforms	7705 SAR-1

date-and-time *date-and-time*

Synopsis	Date and time to stop triggering the schedule
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> end-time date-and-time <i>date-and-time</i>
Tree	date-and-time
Notes	The following elements are part of a choice: date-and-time or (day and time).
Introduced	25.3.R2
Platforms	7705 SAR-1

day keyword

Synopsis	Day to stop triggering the schedule
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> end-time day <i>keyword</i>
Tree	day
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Notes	The following elements are part of a choice: date-and-time or (day and time).
Introduced	25.3.R2
Platforms	7705 SAR-1

time hours-minutes-twenty-four

Synopsis	Time to stop triggering the schedule
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> end-time time <i>hours-minutes-twenty-four</i>
Tree	time
String length	5
Notes	The following elements are part of a choice: date-and-time or (day and time).
Introduced	25.3.R2
Platforms	7705 SAR-1

hour number

Synopsis	Hours within a day when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> hour <i>number</i>
Tree	hour
Range	0 to 23
Max. instances	24
Introduced	25.3.R2
Platforms	7705 SAR-1

interval number

Synopsis	Time between each periodic schedule run
----------	---

Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> interval <i>number</i>
Tree	interval
Range	30 to 42949672
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

minute *number*

Synopsis	Minutes in an hour when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> minute <i>number</i>
Tree	minute
Range	0 to 59
Max. instances	60
Introduced	25.3.R2
Platforms	7705 SAR-1

month (*keyword* | *number*)

Synopsis	Months when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> month (<i>keyword</i> <i>number</i>)
Tree	month
Range	1 to 12
Options	january, february, march, april, may, june, july, august, september, october, november, december
Max. instances	12
Introduced	25.3.R2
Platforms	7705 SAR-1

script-policy

Synopsis	Enter the script-policy context
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> script-policy

Tree	script-policy
Introduced	25.3.R2
Platforms	7705 SAR-1

name *named-item*

Synopsis	CLI script policy name
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> script-policy name <i>named-item</i>
Tree	name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

owner *named-item*

Synopsis	Script policy owner
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> script-policy owner <i>named-item</i>
Tree	owner
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

type *keyword*

Synopsis	Schedule type
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> type <i>keyword</i>
Tree	type
Options	periodic, calendar, oneshot
Default	periodic
Introduced	25.3.R2
Platforms	7705 SAR-1

weekday (*keyword* | *number*)

Synopsis	Weekdays when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> weekday (<i>keyword</i> <i>number</i>)
Tree	weekday
Range	1 to 7
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR-1

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure system dhcp6
Tree	dhcp6
Introduced	25.3.R2
Platforms	7705 SAR-1

adv-noaddrs-global *keyword*

Synopsis	Applications to send NoAddrsAvail in Advertise messages
Context	configure system dhcp6 adv-noaddrs-global <i>keyword</i>
Tree	adv-noaddrs-global
Options	esm-relay, server
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

dns

Synopsis	Enter the dns context
Context	configure system dns

Tree	dns
Introduced	25.3.R2
Platforms	7705 SAR-1

address-pref *keyword*

Synopsis	Preference in DNS address resolving order
Context	configure system dns address-pref <i>keyword</i>
Tree	address-pref
Options	ipv4-only, ipv6-first
Introduced	25.3.R2
Platforms	7705 SAR-1

dnssec

Synopsis	Enter the dnssec context
Context	configure system dns dnssec
Tree	dnssec
Introduced	25.3.R2
Platforms	7705 SAR-1

ad-validation *keyword*

Synopsis	Validation of AD-bit presence in DNS server responses
Context	configure system dns dnssec ad-validation <i>keyword</i>
Tree	ad-validation
Options	fall-through – Allow non-DNSSEC responses to fall-through to permit resolution in case of validation failure drop – Drop non-DNSSEC responses in case of validation failure
Introduced	25.3.R2
Platforms	7705 SAR-1

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure system eth-cfm

Tree	eth-cfm
Introduced	25.3.R2
Platforms	7705 SAR-1

md-auto-id

Synopsis	Enter the md-auto-id context
Context	configure system eth-cfm md-auto-id
Tree	md-auto-id
Introduced	25.3.R2
Platforms	7705 SAR-1

ma-index-range

Synopsis	Enable the ma-index-range context
Context	configure system eth-cfm md-auto-id ma-index-range
Tree	ma-index-range
Introduced	25.3.R2
Platforms	7705 SAR-1

end *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the range
Context	configure system eth-cfm md-auto-id ma-index-range end <i>number</i>
Tree	end
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the range
Context	configure system eth-cfm md-auto-id ma-index-range start number
Tree	start
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

md-index-range

Synopsis	Enable the md-index-range context
Context	configure system eth-cfm md-auto-id md-index-range
Tree	md-index-range
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the range
Context	configure system eth-cfm md-auto-id md-index-range end number
Tree	end
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the range
Context	configure system eth-cfm md-auto-id md-index-range start number
Tree	start
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

named-display boolean

Synopsis	Enable administrative name display in CLI show outputs
Context	configure system eth-cfm named-display boolean
Tree	named-display
Description	<p>When configured to true, the system displays the administrative names for domains, associations, and bridge-identifiers in show eth-cfm command outputs in addition to the numerical maintenance domain (MD) index, maintenance association (MA) index, and bridge ID values. The administrative names are displayed underneath the numerical values, each on a separate row.</p> <p>When configured to false, the system only displays the numerical MD index, MA index, and bridge ID values in show eth-cfm command outputs.</p>
Default	false
Introduced	25.10.R1
Platforms	7705 SAR-1

redundancy

Synopsis	Enter the redundancy context
Context	configure system eth-cfm redundancy
Tree	redundancy
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-lag

Synopsis	Enter the mc-lag context
Context	configure system eth-cfm redundancy mc-lag
Tree	mc-lag
Introduced	25.3.R2
Platforms	7705 SAR-1

propagate-hold-time (*number* | *keyword*)

Synopsis	Delay timer value for the fault propagation
Context	configure system eth-cfm redundancy mc-lag propagate-hold-time (<i>number</i> <i>keyword</i>)
Tree	propagate-hold-time
Range	1 to 60
Units	seconds
Options	none
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-1

standby-mep *boolean*

Synopsis	Allow standby MC-LAG MEPs to act administratively down
Context	configure system eth-cfm redundancy mc-lag standby-mep <i>boolean</i>
Tree	standby-mep
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

slm

Synopsis	Enter the slm context
Context	configure system eth-cfm slm
Tree	slm
Introduced	25.3.R2

Platforms 7705 SAR-1

inactivity-timer *number*

Synopsis SLR inactivity timer to maintain the stale test data

Context **configure** [system](#) [eth-cfm](#) [slm](#) **inactivity-timer** *number*

Tree [inactivity-timer](#)

Description This command configures the time that the responder keeps a test active. If the time between packets exceeds this value within a test, the responder marks the previous test as complete. It treats any new packets from a peer with the same test ID, source MAC, and MEP-ID as a new test responding with the sequence number one.

Range 10 to 100

Units seconds

Default 100

Introduced 25.3.R2

Platforms 7705 SAR-1

grpc

Synopsis Enter the **grpc** context

Context **configure** [system](#) [grpc](#)

Tree [grpc](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the gRPC server

Context **configure** [system](#) [grpc](#) **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	configure system grpc allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, the system allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-server-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-on-boot *number*

Synopsis	Delay for gRPC connections after system boot
Context	configure system grpc delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for gRPC connections. When the timer expires, gRPC becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging.</p> <p>When no delay is configured, connections are accepted after the system boots and gRPC becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

gnmi

Synopsis	Enter the gnmi context
Context	configure system grpc gnmi
Tree	gnmi
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the gNMI service
Context	configure system grpc gnmi admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	configure system grpc gnmi auto-config-save <i>boolean</i>
Tree	auto-config-save
Description	When configured to true , the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

proto-version *keyword*

Synopsis	gnmi.proto version
Context	configure system grpc gnmi proto-version <i>keyword</i>
Tree	proto-version
Description	This command sets the gnmi.proto version that the gRPC server should use for all gNMI RPCs. Only use options other than latest for backward compatibility with legacy collectors.
Options	latest – Latest supported version v070 – gNMI version 0.7.0
Default	latest
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi

Synopsis	Enter the gnoi context
Context	configure system grpc gnoi
Tree	gnoi
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-mgmt

Synopsis	Enter the cert-mgmt context
Context	configure system grpc gnoi cert-mgmt
Tree	cert-mgmt
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of gNOI CertificateManagement
Context	configure system grpc gnoi cert-mgmt admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

file

Synopsis	Enter the file context
Context	configure system grpc gnoi file
Tree	file
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the gNOI File service
Context	configure system grpc gnoi file admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

system

Synopsis	Enter the system context
Context	configure system grpc gnoi system
Tree	system
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the gNOI System service
Context	configure system grpc gnoi system admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

listening-port *number*

Synopsis	Listening port for the gRPC server
Context	configure system grpc listening-port <i>number</i>
Tree	listening-port
Range	1024 to 49151 57400
Default	57400

Introduced	25.3.R2
Platforms	7705 SAR-1

max-msg-size *number*

Synopsis	Maximum size of received message
Context	configure system grpc max-msg-size <i>number</i>
Tree	max-msg-size
Range	1 to 1024
Units	megabytes
Default	512
Introduced	25.3.R2
Platforms	7705 SAR-1

md-cli

Synopsis	Enter the md-cli context
Context	configure system grpc md-cli
Tree	md-cli
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the MD-CLI service
Context	configure system grpc md-cli admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-keepalive

Synopsis	Enter the tcp-keepalive context
----------	--

Context	configure system grpc tcp-keepalive
Tree	tcp-keepalive
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the TCP keepalive algorithm
Context	configure system grpc tcp-keepalive admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
Context	configure system grpc tcp-keepalive idle-time <i>number</i>
Tree	idle-time
Description	This command configures the amount of time the connection must be idle before TCP keepalives are sent.
Range	1 to 100000
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time between TCP keep-alive probes
Context	configure system grpc tcp-keepalive interval <i>number</i>
Tree	interval
Range	1 to 100000
Units	seconds

Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	configure system grpc tcp-keepalive retries <i>number</i>
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-server-profile *reference*

Synopsis	Preferred TLS server profile
Context	configure system grpc tls-server-profile <i>reference</i>
Tree	tls-server-profile
Reference	configure system security tls server-tls-profile <i>named-item</i>
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-server-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc-tunnel

Synopsis	Enter the grpc-tunnel context
Context	configure system grpc-tunnel
Tree	grpc-tunnel
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-on-boot *number*

Synopsis	Delay for gRPC tunnels after system boot
Context	configure system grpc-tunnel delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for gRPC tunnels. When the timer expires, gRPC tunnels become operational and connections are accepted. This delay prevents the system from trying to initiate gRPC tunnels while it is still converging.</p> <p>When no delay is configured, gRPC tunnels are initiated after the system boots and gRPC becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-group [[name](#)] *named-item*

Synopsis	Enter the destination-group list instance
Context	configure system grpc-tunnel destination-group <i>named-item</i>
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Destination group name
Context	configure system grpc-tunnel destination-group <i>named-item</i>
Tree	destination-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-unsecure-connection

Synopsis	Allow unsecured operation of gRPC connections
Context	configure system grpc-tunnel destination-group <i>named-item</i> allow-unsecure-connection
Tree	allow-unsecure-connection
Description	This command allows a gRPC tunnel to run without a secured transport protocol. Data is transferred in unencrypted form.
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system grpc-tunnel destination-group <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*) [port](#) *number*

Synopsis	Enter the destination list instance
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i>
Tree	destination
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone | ipv6-address-no-zone | fully-qualified-domain-name*)

Synopsis	Address of the destination within the destination group
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone ipv6-address-no-zone fully-qualified-domain-name</i>) port number
Tree	destination
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

port number

Synopsis	TCP port number for the destination
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone ipv6-address-no-zone fully-qualified-domain-name</i>) port number
Tree	destination
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Local IP address of packets sent from the source
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone ipv6-address-no-zone fully-qualified-domain-name</i>) port number local-source-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	local-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

originated-qos-marking *keyword*

Synopsis	QoS marking used for gRPC tunnel packets
----------	--

Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i> originated-qos-marking <i>keyword</i>
Tree	originated-qos-marking
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router instance for the destination group
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-keepalive

Synopsis	Enter the tcp-keepalive context
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive
Tree	tcp-keepalive
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the TCP keepalive algorithm
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	25.3.R2
Platforms	7705 SAR-1

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive idle-time <i>number</i>
Tree	idle-time
Description	This command configures the amount of time the connection must be idle before TCP keepalives are sent.
Range	1 to 100000
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time between TCP keep-alive probes
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive interval <i>number</i>
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive retries <i>number</i>
Tree	retries

Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference*

Synopsis	TLS client profile assigned to the destination group
Context	configure system grpc-tunnel destination-group <i>named-item</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

tunnel [*name*] *named-item*

Synopsis	Enter the tunnel list instance
Context	configure system grpc-tunnel tunnel <i>named-item</i>
Tree	tunnel
Description	Commands in this context configure gRPC-tunnel-related parameters.
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Tunnel name
Context	configure system grpc-tunnel tunnel <i>named-item</i>
Tree	tunnel
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the tunnel
Context	configure system grpc-tunnel tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system grpc-tunnel tunnel <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-group *reference*

Synopsis	Destination group used in the tunnel
Context	configure system grpc-tunnel tunnel <i>named-item</i> destination-group <i>reference</i>
Tree	destination-group
Reference	configure system grpc-tunnel destination-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

handler [*name*] *named-item*

Synopsis	Enter the handler list instance
----------	--

Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i>
Tree	handler
Description	Commands in this context configure handler parameters for this instance. Multiple handlers can be created for any tunnel.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Handler name
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i>
Tree	handler
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the handler
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	TCP port number the handler listens to internally
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> port <i>number</i>
Tree	port
Range	1 to 65535

Introduced	25.3.R2
Platforms	7705 SAR-1

target-type

Synopsis	Enter the target-type context
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> target-type
Tree	target-type
Introduced	25.3.R2
Platforms	7705 SAR-1

custom-type *string*

Synopsis	Custom string for target type
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> target-type custom-type <i>string</i>
Tree	custom-type
Description	This command configures a custom string for the target type. This string can correspond to specific values used by the gRPC tunnel protocol, such as GNMI_GNOI or SSH. If a custom string is defined, the gRPC tunnel client must specify the string to request a session for that handler. The string must be unique within a tunnel.
String length	1 to 64
Notes	The following elements are part of a choice: custom-type , grpc-server , or ssh-server .
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc-server

Synopsis	Target type set to GNMI_GNOI
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> target-type grpc-server
Tree	grpc-server
Description	When configured, this command assigns the gRPC server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of GNMI_GNOI.
Notes	The following elements are part of a choice: custom-type , grpc-server , or ssh-server .
Introduced	25.3.R2

Platforms7705 SAR-1

ssh-server

SynopsisTarget type is SSH

Context**configure** **system** **grpc-tunnel** **tunnel** *named-item* **handler** *named-item* **target-type** **ssh-server**

Tree**ssh-server**

DescriptionWhen configured, this command assigns the SSH server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of SSH.

NotesThe following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.

Introduced25.3.R2

Platforms7705 SAR-1

target-name

SynopsisEnter the **target-name** context

Context**configure** **system** **grpc-tunnel** **tunnel** *named-item* **target-name**

Tree**target-name**

Introduced25.3.R2

Platforms7705 SAR-1

custom-string *named-item-64*

SynopsisCustom target name

Context**configure** **system** **grpc-tunnel** **tunnel** *named-item* **target-name** **custom-string** *named-item-64*

Tree**custom-string**

String length1 to 64

NotesThe following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.

Introduced25.3.R2

Platforms7705 SAR-1

node-name

Synopsis	Set the node name as target name
Context	configure system grpc-tunnel tunnel <i>named-item</i> target-name node-name
Tree	node-name
Description	When configured, this command uses the node name as the target name. The node name is configured by the configure system name command.
Notes	The following elements are part of a choice: custom-string , node-name , or user-agent .
Introduced	25.3.R2
Platforms	7705 SAR-1

user-agent

Synopsis	Set the user agent as the target name
Context	configure system grpc-tunnel tunnel <i>named-item</i> target-name user-agent
Tree	user-agent
Description	When configured, this command uses the user agent as the target name. The agent is a string consisting of <i>node-name:vendor:model:software-version</i> .
Notes	The following elements are part of a choice: custom-string , node-name , or user-agent .
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp-vse *boolean*

Synopsis	Enable vendor-specific extensions to ICMP
Context	configure system icmp-vse <i>boolean</i>
Tree	icmp-vse
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ip

Synopsis	Enter the ip context
----------	-----------------------------

Context	configure system ip
Tree	ip
Description	Commands in this context configure system-wide IP router options.
Introduced	25.3.R2
Platforms	7705 SAR-1

buffer-unresolved-packets *boolean*

Synopsis	Buffer unresolved packets during ARP
Context	configure system ip buffer-unresolved-packets <i>boolean</i>
Tree	buffer-unresolved-packets
Description	<p>When configured to true, the system buffers IPv4 and IPv6 packets waiting for the address resolution process (ARP) or neighbor discovery (ND) reply.</p> <p>When configured to false, the system discards packets during the address resolution process. The system discards IPv4 and IPv6 traffic needing a destination resolution that is buffered while waiting for a response to avoid any potential of out-of-order delivery of packets to the resolved destination. As a result, after the ARP or ND entry is populated, the system delivers only newly received packets in order.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

enforce-unique-if-index *boolean*

Synopsis	Force creation of globally unique IP interface indexes
Context	configure system ip enforce-unique-if-index <i>boolean</i>
Tree	enforce-unique-if-index
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

forward-6in4 *boolean*

Synopsis	Allow forwarding of IPv6 over IPv4 to system IP address
Context	configure system ip forward-6in4 <i>boolean</i>
Tree	forward-6in4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

forward-ip-over-gre *boolean*

Synopsis	Allow forwarding of IP over GRE to system IP address
Context	configure system ip forward-ip-over-gre <i>boolean</i>
Tree	forward-ip-over-gre
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-eh *keyword*

Synopsis	Number of IPv6 extension headers parsed in line cards
Context	configure system ip ipv6-eh <i>keyword</i>
Tree	ipv6-eh
Options	max, limited
Default	max
Introduced	25.3.R2
Platforms	7705 SAR-1

lACP

Synopsis	Enter the lACP context
Context	configure system lACP
Tree	lACP
Introduced	25.3.R2
Platforms	7705 SAR-1

system-priority *number*

Synopsis	LACP system priority on aggregated Ethernet interfaces
Context	configure system lACP system-priority <i>number</i>

Tree	system-priority
Range	1 to 65535
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR-1

lldp

Synopsis	Enter the lldp context
Context	configure system lldp
Tree	lldp
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of LLDP
Context	configure system lldp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

message-fast-tx *number*

Synopsis	Interval at which LLDP frames are transmitted
Context	configure system lldp message-fast-tx <i>number</i>
Tree	message-fast-tx
Description	This command configures the interval at which LLDP frames are transmitted on behalf of the LLDP during a fast transmission period.
Range	1 to 3600
Units	seconds
Default	1
Introduced	25.3.R2

Platforms 7705 SAR-1

message-fast-tx-init *number*

Synopsis PDUs to transmit during the fast transmission period

Context **configure** [system lldp message-fast-tx-init](#) *number*

Tree [message-fast-tx-init](#)

Range 1 to 8

Default 4

Introduced 25.3.R2

Platforms 7705 SAR-1

notification-interval *number*

Synopsis Minimum interval between change notifications

Context **configure** [system lldp notification-interval](#) *number*

Tree [notification-interval](#)

Range 5 to 3600

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR-1

reinit-delay *number*

Synopsis Time required before re-initializing LLDP on a port

Context **configure** [system lldp reinit-delay](#) *number*

Tree [reinit-delay](#)

Range 1 to 10

Units seconds

Default 2

Introduced 25.3.R2

Platforms 7705 SAR-1

tx-credit-max *number*

Synopsis	Maximum consecutive LLDPDUs that can be transmitted
Context	configure system lldp tx-credit-max <i>number</i>
Tree	tx-credit-max
Range	1 to 100
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-hold-multiplier *number*

Synopsis	Transmit interval multiplier
Context	configure system lldp tx-hold-multiplier <i>number</i>
Tree	tx-hold-multiplier
Range	2 to 10
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

tx-interval *number*

Synopsis	LLDP transmit interval
Context	configure system lldp tx-interval <i>number</i>
Tree	tx-interval
Range	5 to 32768
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

load-balancing

Synopsis	Enter the load-balancing context
Context	configure system load-balancing

Tree	load-balancing
Description	<p>Commands in this context configure the interface per-flow load-balancing options that apply to traffic entering this interface and egressing over a LAG or ECMP on system egress. This setting is per interface.</p> <p>Load-balancing options configured at the interface level overwrite load-balancing options configured at the system level.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

l4-load-balancing *boolean*

Synopsis	Use load balancing based on Layer 4 fields
Context	configure system load-balancing l4-load-balancing <i>boolean</i>
Tree	l4-load-balancing
Introduced	25.3.R2
Platforms	7705 SAR-1

lsr-load-balancing *keyword*

Synopsis	Algorithm for system-wide LSR load balancing
Context	configure system load-balancing lsr-load-balancing <i>keyword</i>
Tree	lsr-load-balancing
Description	<p>This command configures system-wide LSR load balancing. Hashing can be enabled on the label stack, IP header, or both. The hashing can be at an LSR for spraying labeled IP packets over multiple equal-cost paths, or over multiple links of a LAG group.</p> <p>The LSR hash routine operates on the label stack and the IP header, if a packet is IPv4. An LSR considers a packet to be IPv4 if the first nibble following the bottom of the label stack is 4. The hash on the label stack and IPv4 and IPv6 headers can be enabled or disabled at the system level or incoming network IP interface level.</p> <p>lbl-ip-l4-teid - Specifies that the hashing applies as follows for Layer 2 and Layer 3 encapsulated traffic:</p> <ul style="list-style-type: none"> • If an IPv4 or IPv6 header is found immediately after the MPLS label stack, the hashing includes label stack, source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values. • If an IPv4 or IPv6 header is not found immediately after the MPLS label stack, the data plane searches for a valid Ethertype value for the IPv4 and IPv6 payload. If a valid Ethertype value is found and an IP header follows the Ethernet header, hashing includes the source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values.

eth-encap-ip - Specifies that the hash algorithm parses down the label stack and after it reaches the bottom, the stack assumes the Ethernet II non-tagged, dot1q, or QinQ header follows. At the expected Ethertype offset location, the algorithm checks whether the value present is IPv4/IPv6 (0x0800/0x86DD). If the check passes, the hash algorithm checks the first nibble at the expected IP header location for IPv4/IPv6 (0x0100/0x0110). If the secondary check passes, the algorithm performs the hash using the IP SA/DA fields in the expected IP header. If any of the checks fail, the label-stack hash is performed.

Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid, lbl-eth-ip-l4-teid, lbl-ip-or-teid
Introduced	25.3.R2
Platforms	7705 SAR-1

service-id-lag-hashing *boolean*

Synopsis	Enable enhanced VLL LAG service ID hashing
Context	configure system load-balancing service-id-lag-hashing <i>boolean</i>
Tree	service-id-lag-hashing
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

location *description*

Synopsis	Site location of the system
Context	configure system location <i>description</i>
Tree	location
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

login-control

Synopsis	Enter the login-control context
Context	configure system login-control
Tree	login-control
Description	Commands in this context configure the session control for console, Telnet, SSH, and FTP sessions.
Introduced	25.3.R2

Platforms 7705 SAR-1

exponential-backoff *boolean*

Synopsis Enable exponential-backoff of the login prompt

Context **configure** [system login-control exponential-backoff](#) *boolean*

Tree [exponential-backoff](#)

Description When configured to **true**, the router enables exponential backoff for the login prompt. The **exponential-backoff** command is used to deter dictionary attacks, when a malicious user can gain access to the CLI by using a script to attempt to log in to the admin account with any conceivable password.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

ftp

Synopsis Enter the **ftp** context

Context **configure** [system login-control ftp](#)

Tree [ftp](#)

Description Commands in this context configure FTP login control command options.

Introduced 25.3.R2

Platforms 7705 SAR-1

inbound-max-sessions *number*

Synopsis Maximum number of concurrent inbound FTP sessions

Context **configure** [system login-control ftp inbound-max-sessions](#) *number*

Tree [inbound-max-sessions](#)

Description This command configures the maximum number of concurrent inbound FTP sessions. This value is the combined total of inbound and outbound sessions.

Range 0 to 5

Default 3

Introduced 25.3.R2

Platforms 7705 SAR-1

idle-timeout (*keyword* | *number*)

Synopsis	Idle timeout for console, FTP, Telnet, and SSH sessions
Context	configure system login-control idle-timeout (<i>keyword</i> <i>number</i>)
Tree	idle-timeout
Range	1 to 1440
Units	minutes
Options	none
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

login-banner *boolean*

Synopsis	Display login banner
Context	configure system login-control login-banner <i>boolean</i>
Tree	login-banner
Description	<p>When configured to true, the system displays a login banner. The login banner contains the SR OS copyright and build date information for a console login attempt.</p> <p>When configured to false, the system displays only the configured pre-login-message and a generic login prompt.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

login-scripts

Synopsis	Enter the login-scripts context
Context	configure system login-control login-scripts
Tree	login-scripts
Description	Commands in this context configure CLI scripts that execute when a user (authenticated via any method including local user database, TACACS+, or RADIUS) first logs into a CLI session.
Introduced	25.3.R2
Platforms	7705 SAR-1

global-script *string-not-all-spaces*

Synopsis	URL of the global CLI login script
Context	configure system login-control login-scripts global-script <i>string-not-all-spaces</i>
Tree	global-script
Description	<p>This command specifies a common CLI script that executes when any user logs into a CLI session. This login exec script is executed when any user (authenticated by any means including local user database, TACACS+, or RADIUS) opens a CLI session. This allows a user, for example, to define a common set of CLI aliases that are made available on the router for all users. This global login exec script is executed before any user-specific login exec files that may be configured.</p> <p>This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.</p>
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

per-user-script

Synopsis	Enter the per-user-script context
Context	configure system login-control login-scripts per-user-script
Tree	per-user-script
Description	<p>Commands in this context allow users to define their own login scripts that can be executed each time they first login to a CLI session. The command executes the script "<i>file-url / username / file-name</i>" when the user <i>username</i> logs into a CLI session (authenticated by any means including local user database, TACACS+, or RADIUS).</p> <p>For example:</p> <p>per-user user-directory "cf1:/local/users" file-name "login-script.txt"</p> <p>would search for the following script when user "admin" logs in and authenticates via RADIUS:</p> <p>cf1:/local/users/admin/login-script.txt</p> <p>The per user login script is executed after any global script executes and before any login-exec script configured against a local user is executed. This allows users, for example, who are authenticated via TACACS+ or RADIUS to define their own login scripts.</p> <p>This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

file-name *filename*

Synopsis	File name of the per-user login script
Context	configure system login-control login-scripts per-user-script file-name <i>filename</i>
Tree	file-name
Description	This command specifies the name of the file (located in the configure system login-control login-scripts per-user-script user-directory directory) including the extension.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

user-directory *string-not-all-spaces*

Synopsis	Directory name of user-defined login script
Context	configure system login-control login-scripts per-user-script user-directory <i>string-not-all-spaces</i>
Tree	user-directory
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

motd

Synopsis	Enter the motd context
Context	configure system login-control motd
Tree	motd
Description	Commands in this context create the message of the day displayed after a successful console login. Only one message can be configured.
Introduced	25.3.R2
Platforms	7705 SAR-1

text *string-not-all-spaces*

Synopsis	Message of the day displayed after console login
Context	configure system login-control motd text <i>string-not-all-spaces</i>

Tree	text
String length	1 to 900
Notes	The following elements are part of a choice: text or url .
Introduced	25.3.R2
Platforms	7705 SAR-1

url *string-not-all-spaces*

Synopsis	URL of the location of message of the day
Context	configure system login-control motd url <i>string-not-all-spaces</i>
Tree	url
String length	1 to 180
Notes	The following elements are part of a choice: text or url .
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-login-message

Synopsis	Enter the pre-login-message context
Context	configure system login-control pre-login-message
Tree	pre-login-message
Description	<p>Commands in this context configure a message to display before logging in to the router using Telnet, SSH, or the console port.</p> <p>Only one message can be configured. If a new pre-login message is configured, the new message overwrites the previous message.</p> <p>Note: The pre-login message is displayed on both active and standby systems.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

message *string-not-all-spaces*

Synopsis	Message displayed before the login prompt
Context	configure system login-control pre-login-message message <i>string-not-all-spaces</i>
Tree	message
Description	This command configures the pre-login message.

Any printable, 7-bit ASCII characters can be used. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Some special characters can be used to format the message text. Use the newline (\n) character to create multiline messages. A newline (\n) character in the message moves to the beginning of the next line by sending ASCII/UTF-8 characters 0xA (LF) and 0xD (CR) to the client terminal. A carriage return (\r) character in the message sends the ASCII/UTF-8 character 0xD (CR) to the client terminal.

String length	1 to 900
Introduced	25.3.R2
Platforms	7705 SAR-1

name *boolean*

Synopsis	Display the system name before the pre-login message
Context	configure system login-control pre-login-message name <i>boolean</i>
Tree	name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ssh

Synopsis	Enter the ssh context
Context	configure system login-control ssh
Tree	ssh
Description	Commands in this context configure the SSH command options.
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of SSH sessions
Context	configure system login-control ssh graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	configure system login-control ssh inbound-max-sessions <i>number</i>
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

max-channels-per-connection *number*

Synopsis	Maximum number of channels per SSH connection
Context	configure system login-control ssh max-channels-per-connection <i>number</i>
Tree	max-channels-per-connection
Range	1 to 50
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

outbound-max-sessions *number*

Synopsis	Maximum number of concurrent outbound sessions
Context	configure system login-control ssh outbound-max-sessions <i>number</i>
Tree	outbound-max-sessions
Description	This command configures the maximum number of outbound Telnet and SSH sessions. The local serial port cannot be disabled.
Range	0 to 15
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
----------	--

Context	configure system login-control ssh ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures TTL security command options for incoming packets. When the feature is enabled, LDP accepts incoming IP packets from a peer only if the TTL value in the packet is greater than or equal to the minimum TTL value configured for that peer. Per-peer-queueing must be enabled in order for TTL protection to operate.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet

Synopsis	Enter the telnet context
Context	configure system login-control telnet
Tree	telnet
Description	Commands in this context configure the Telnet command options.
Introduced	25.3.R2
Platforms	7705 SAR-1

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of Telnet sessions
Context	configure system login-control telnet graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	configure system login-control telnet inbound-max-sessions <i>number</i>
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	25.3.R2

Platforms 7705 SAR-1

outbound-max-sessions *number*

Synopsis Maximum number of concurrent outbound sessions

Context **configure** [system login-control telnet outbound-max-sessions](#) *number*

Tree [outbound-max-sessions](#)

Description This command configures the maximum number of outbound Telnet and SSH sessions. The local serial port cannot be disabled.

Range 0 to 15

Default 5

Introduced 25.3.R2

Platforms 7705 SAR-1

ttl-security *number*

Synopsis Minimum TTL value for incoming packets

Context **configure** [system login-control telnet ttl-security](#) *number*

Tree [ttl-security](#)

Description This command configures TTL security command options for incoming packets. When the feature is enabled, LDP accepts incoming IP packets from a peer only if the TTL value in the packet is greater than or equal to the minimum TTL value configured for that peer. Per-peer-queueing must be enabled in order for TTL protection to operate.

Range 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

management-interface

Synopsis Enter the **management-interface** context

Context **configure** [system management-interface](#)

Tree [management-interface](#)

Description Commands in this context configure the capabilities of router management interfaces such as CLI and NETCONF.

Introduced 25.3.R2

Platforms 7705 SAR-1

cli

Synopsis	Enter the cli context
Context	configure system management-interface cli
Tree	cli
Description	Commands in this context configure the CLI management interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

classic-cli

Synopsis	Enter the classic-cli context
Context	configure system management-interface cli classic-cli
Tree	classic-cli
Description	Commands in this context configure the classic CLI management interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-immediate *boolean*

Synopsis	Allow writable access in classic CLI configure branch
Context	configure system management-interface cli classic-cli allow-immediate <i>boolean</i>
Tree	allow-immediate
Description	<p>When configured to true, this command enables write access in the classic CLI configuration branch without having to use the classic CLI candidate edit functionality.</p> <p>When configured to false, this command blocks write access and configuration changes in the classic CLI configuration branch, and the classic CLI configuration branch is read-only. This enforces using the classic CLI candidate edit functionality, including candidate commit, to modify the router configuration, instead of allowing immediate line-by-line configuration changes.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

rollback

Synopsis	Enter the rollback context
Context	configure system management-interface cli classic-cli rollback
Tree	rollback
Description	Commands in this context control classic CLI configuration rollback functionality, such as the maximum number of rollback checkpoints the system maintains. Configuration rollback allows the operator to revert to previous router configuration states while minimizing impacts to services.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-checkpoints *number*

Synopsis	Maximum number of rollback files on local storage
Context	configure system management-interface cli classic-cli rollback local-checkpoints <i>number</i>
Tree	local-checkpoints
Range	1 to 50
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

location *url*

Synopsis	Path and filename prefix for rollback checkpoint files
Context	configure system management-interface cli classic-cli rollback location <i>url</i>
Tree	location
Description	This command configures the local (for example, compact flash) or remote location and name of the classic CLI rollback checkpoint files. The filename must not contain a suffix. The suffixes for rollback checkpoint files are, for example, .rb, .rb.1, .rb.2, and so on. The suffixes are automatically appended to rollback checkpoint files.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-checkpoints *number*

Synopsis	Maximum rollback files saved at a remote location
Context	configure system management-interface cli classic-cli rollback remote-checkpoints <i>number</i>
Tree	remote-checkpoints
Range	1 to 200
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

rescue

Synopsis	Enter the rescue context
Context	configure system management-interface cli classic-cli rollback rescue
Tree	rescue
Introduced	25.3.R2
Platforms	7705 SAR-1

location *url*

Synopsis	Location of the rescue configuration file
Context	configure system management-interface cli classic-cli rollback rescue location <i>url</i>
Tree	location
Description	This command configures the local or remote location and filename of the classic CLI rescue configuration file. The suffix (.rc) is automatically appended to the filename when a rescue configuration file is saved. Trivial FTP (TFTP) is not supported for remote locations.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-engine *keyword*

Synopsis	System-wide CLI engine access
Context	configure system management-interface cli cli-engine <i>keyword</i>

Tree	cli-engine
Description	This command configures the system-wide CLI engine. The operator can configure one or both engines. For the configuration to take effect, exit the running CLI session and start a new session after committing the new value.
Options	classic-cli, md-cli
Max. instances	2
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

md-cli

Synopsis	Enter the md-cli context
Context	configure system management-interface cli md-cli
Tree	md-cli
Description	Commands in this context configure the MD-CLI management interface.
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	configure system management-interface cli md-cli auto-config-save <i>boolean</i>
Tree	auto-config-save
Description	When configured to true , the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

environment

Synopsis	Enter the environment context
Context	configure system management-interface cli md-cli environment
Tree	environment

Introduced	25.3.R2
Platforms	7705 SAR-1

command-alias

Synopsis	Enter the command-alias context
Context	configure system management-interface cli md-cli environment command-alias
Tree	command-alias
Introduced	25.3.R2
Platforms	7705 SAR-1

alias [\[alias-name\]](#) *string*

Synopsis	Enter the alias list instance
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i>
Tree	alias
Description	<p>Commands in this context create aliases to existing MD-CLI commands or to Python applications.</p> <p>Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

[alias-name] *string*

Synopsis	Alias name
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i>
Tree	alias
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the alias
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Description	This command controls the administrative state of the MD-CLI alias. MD-CLI aliases that are administratively disabled cannot be executed, are not displayed in command completion, and do not appear in ? help .
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> cli-command <i>string</i>
Tree	cli-command
String length	1 to 255
Notes	The following elements are part of a mandatory choice: cli-command or python-script .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *string-not-all-spaces*

Synopsis	Alias description
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> description <i>string-not-all-spaces</i>
Tree	description
String length	1 to 110
Introduced	25.3.R2
Platforms	7705 SAR-1

mount-point [[path](#)] (*keyword* | *string*)

Synopsis	Add a list entry for mount-point
Context	configure system management-interface cli md-cli environment command-alias alias string mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[path] (*keyword* | *string*)

Synopsis	Mount point where the alias is available
Context	configure system management-interface cli md-cli environment command-alias alias string mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
String length	1 to 255
Options	global
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

command-completion

Synopsis	Enter the command-completion context
Context	configure system management-interface cli md-cli environment command-completion
Tree	command-completion
Introduced	25.3.R2
Platforms	7705 SAR-1

enter *boolean*

Synopsis	Complete the command when the Enter key is pressed
Context	configure system management-interface cli md-cli environment command-completion enter <i>boolean</i>

Tree	enter
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

space *boolean*

Synopsis	Complete the command when the Space key is pressed
Context	configure system management-interface cli md-cli environment command-completion space <i>boolean</i>
Tree	space
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

tab *boolean*

Synopsis	Complete the command when the Tab key is pressed
Context	configure system management-interface cli md-cli environment command-completion tab <i>boolean</i>
Tree	tab
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

commit-options

Synopsis	Enter the commit-options context
Context	configure system management-interface cli md-cli environment commit-options
Tree	commit-options
Introduced	25.3.R2
Platforms	7705 SAR-1

comment *boolean*

Synopsis	Require a commit comment when committing configuration
----------	--

Context	configure system management-interface cli md-cli environment commit-options comment <i>boolean</i>
Tree	comment
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

confirm *boolean*

Synopsis	Require confirmed commit when committing configuration
Context	configure system management-interface cli md-cli environment commit-options confirm <i>boolean</i>
Tree	confirm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

console

Synopsis	Enter the console context
Context	configure system management-interface cli md-cli environment console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR-1

length *number*

Synopsis	Number of lines displayed on the console
Context	configure system management-interface cli md-cli environment console length <i>number</i>
Tree	length
Range	24 to 512
Default	24
Introduced	25.3.R2
Platforms	7705 SAR-1

width *number*

Synopsis	Number of columns displayed on the console
Context	configure system management-interface cli md-cli environment console width <i>number</i>
Tree	width
Range	80 to 512
Default	80
Introduced	25.3.R2
Platforms	7705 SAR-1

history

Synopsis	Enter the history context
Context	configure system management-interface cli md-cli environment history
Tree	history
Introduced	25.3.R2
Platforms	7705 SAR-1

recall *boolean*

Synopsis	Allow command history recall and search execution
Context	configure system management-interface cli md-cli environment history recall <i>boolean</i>
Tree	recall
Description	<p>When configured to true, the command history recall (!), substitution (!\$), display (:p, Esc+.), and backward search (Ctrl-R) are enabled.</p> <p>When configured to false, the command history can be displayed using the history command, but commands in the history cannot be executed.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

size *number*

Synopsis	Command history size
Context	configure system management-interface cli md-cli environment history size <i>number</i>
Tree	size

Description	This command specifies the maximum size of the command history. A value of 0 disables the command history.
Range	0 to 1000
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

info-output

Synopsis	Enter the info-output context
Context	configure system management-interface cli md-cli environment info-output
Tree	info-output
Introduced	25.3.R2
Platforms	7705 SAR-1

always-display

Synopsis	Enter the always-display context
Context	configure system management-interface cli md-cli environment info-output always-display
Tree	always-display
Description	Commands in this context specify elements that are always displayed in the info output, regardless of whether the detail option is used.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *boolean*

Synopsis	Always display admin-state elements
Context	configure system management-interface cli md-cli environment info-output always-display admin-state <i>boolean</i>
Tree	admin-state
Description	When configured to true , the values of the admin-state elements in info output (without the detail option) are always displayed, even if they are the default values.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

message-severity-level

Synopsis Enter the **message-severity-level** context

Context **configure** [system management-interface cli md-cli environment message-severity-level](#)

Tree [message-severity-level](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

cli keyword

Synopsis Message severity threshold for CLI messages

Context **configure** [system management-interface cli md-cli environment message-severity-level cli keyword](#)

Tree [cli](#)

Options warning, info

Default info

Introduced 25.3.R2

Platforms 7705 SAR-1

more boolean

Synopsis Activate the pager when output is longer than a screen

Context **configure** [system management-interface cli md-cli environment more boolean](#)

Tree [more](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

progress-indicator

Synopsis Enter the **progress-indicator** context

Context **configure** [system management-interface cli md-cli environment progress-indicator](#)

Tree [progress-indicator](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the progress indicator

Context **configure** [system management-interface cli md-cli environment progress-indicator admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

delay *number*

Synopsis Delay before the progress indicator is displayed

Context **configure** [system management-interface cli md-cli environment progress-indicator delay](#) *number*

Tree [delay](#)

Range 0 to 10000

Units milliseconds

Default 1000

Introduced 25.3.R2

Platforms 7705 SAR-1

type *keyword*

Synopsis Progress indicator output style

Context **configure** [system management-interface cli md-cli environment progress-indicator type](#) *keyword*

Tree [type](#)

Options dots

Default dots

Introduced 25.3.R2

Platforms 7705 SAR-1

prompt

Synopsis	Enter the prompt context
Context	configure system management-interface cli md-cli environment prompt
Tree	prompt
Introduced	25.3.R2
Platforms	7705 SAR-1

context *boolean*

Synopsis	Show the current command context in the prompt
Context	configure system management-interface cli md-cli environment prompt context <i>boolean</i>
Tree	context
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	configure system management-interface cli md-cli environment prompt newline <i>boolean</i>
Tree	newline
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	configure system management-interface cli md-cli environment prompt timestamp <i>boolean</i>
Tree	timestamp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	configure system management-interface cli md-cli environment prompt uncommitted-changes-indicator <i>boolean</i>
Tree	uncommitted-changes-indicator
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

python

Synopsis	Enter the python context
Context	configure system management-interface cli md-cli environment python
Tree	python
Description	Commands in this context customize Python settings used with the Python 3 interpreter in MD-CLI applications such as pyexec, command aliases, EHS, and CRON.
Introduced	25.3.R2
Platforms	7705 SAR-1

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	configure system management-interface cli md-cli environment python memory-reservation <i>number</i>
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	configure system management-interface cli md-cli environment python minimum-available-memory <i>number</i>

Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	configure system management-interface cli md-cli environment python timeout <i>number</i>
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

time-display *keyword*

Synopsis	Time zone to display time
Context	configure system management-interface cli md-cli environment time-display <i>keyword</i>
Tree	time-display
Description	<p>This command configures the time zone for a timestamp displayed in outputs, such as event logs and show commands for the current CLI session.</p> <p>In event logs, the selected time is used to control the timestamps in the CLI output of show log log-id and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF).</p> <p>Also see the configure log log-id time-format command.</p>
Options	local, utc
Default	local
Introduced	25.3.R2
Platforms	7705 SAR-1

time-format *keyword*

Synopsis	Format to display the date and time
----------	-------------------------------------

Context	configure system management-interface cli md-cli environment time-format <i>keyword</i>
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain show command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	25.3.R2
Platforms	7705 SAR-1

commit-history *number*

Synopsis	Number of commit history IDs to store
Context	configure system management-interface commit-history <i>number</i>
Tree	commit-history
Description	This command sets the number of IDs to store in the commit history. Setting the value to 0 disables the commit history.
Range	0 to 200
Default	50
Introduced	25.3.R2
Platforms	7705 SAR-1

commit-management

Synopsis	Enter the commit-management context
Context	configure system management-interface commit-management
Tree	commit-management
Introduced	25.10.R1
Platforms	7705 SAR-1

python-scripts

Synopsis	Enter the python-scripts context
Context	configure system management-interface commit-management python-scripts
Tree	python-scripts
Introduced	25.10.R1

Platforms 7705 SAR-1

gnmi-trigger *boolean*

Synopsis Trigger commit scripts from gNMI

Context **configure** [system management-interface commit-management python-scripts gnmi-trigger](#) *boolean*

Tree [gnmi-trigger](#)

Default true

Introduced 25.10.R1

Platforms 7705 SAR-1

md-cli-trigger *boolean*

Synopsis Trigger commit scripts from the MD-CLI

Context **configure** [system management-interface commit-management python-scripts md-cli-trigger](#) *boolean*

Tree [md-cli-trigger](#)

Default true

Introduced 25.10.R1

Platforms 7705 SAR-1

netconf-trigger *boolean*

Synopsis Trigger commit scripts from NETCONF

Context **configure** [system management-interface commit-management python-scripts netconf-trigger](#) *boolean*

Tree [netconf-trigger](#)

Default true

Introduced 25.10.R1

Platforms 7705 SAR-1

configuration-mode *keyword*

Synopsis Management interfaces allowed to edit the configuration

Context **configure** [system management-interface configuration-mode](#) *keyword*

Tree	configuration-mode
Description	<p>This command controls which of the classic or model-driven management interfaces can modify the configuration of the router.</p> <p>Any management interface can be used in any configuration mode (to gather state information or perform operations, for example), but only specific management interfaces (CLI, NETCONF, and so on) are allowed to edit the configuration of the router in different modes. For example, only classic CLI and SNMP can be used to edit the configuration when in classic mode.</p>
Options	classic, model-driven, mixed
Introduced	25.3.R2
Platforms	7705 SAR-1

configuration-save

Synopsis	Enter the configuration-save context
Context	configure system management-interface configuration-save
Tree	configuration-save
Description	Commands in this context configure the attributes for saved configuration files.
Introduced	25.3.R2
Platforms	7705 SAR-1

configuration-backups *number*

Synopsis	Maximum number of configuration versions maintained
Context	configure system management-interface configuration-save configuration-backups <i>number</i>
Tree	configuration-backups
Description	<p>This command configures the maximum number of saved configuration file versions the router maintains.</p> <p>When the configuration is saved, configuration file names are appended with a numeric extension. Each subsequent configuration save creates a new configuration file version with an incremented numeric extension until the maximum count is reached, after which the next configuration save overwrites the oldest file version.</p> <p>Each persistent index file is updated at the same time as the associated configuration file. The system synchronizes the active and standby CPM for all configurations and their associated persistent index files.</p>
Range	1 to 200
Default	50

Introduced	25.3.R2
Platforms	7705 SAR-1

incremental-saves *boolean*

Synopsis	Use incremental saved configuration files
Context	configure system management-interface configuration-save incremental-saves <i>boolean</i>
Tree	incremental-saves
Description	When configured to true , the system saves each commit to the configure configuration region in a separate incremental saved configuration file, which allows for faster commits, instead of saving a complete saved configuration file each time.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf

Synopsis	Enter the netconf context
Context	configure system management-interface netconf
Tree	netconf
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	configure system management-interface netconf auto-config-save <i>boolean</i>
Tree	auto-config-save
Description	When configured to true , the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

call-home

Synopsis	Enter the call-home context
Context	configure system management-interface netconf call-home
Tree	call-home
Description	Commands in this context configure NETCONF Call Home, which enables an SR OS node to trigger a NETCONF client to start a connection.
Introduced	25.3.R2
Platforms	7705 SAR-1

device-labels

Synopsis	Enter the device-labels context
Context	configure system management-interface netconf call-home device-labels
Tree	device-labels
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-operating-system *boolean*

Synopsis	Advertise the network operating system
Context	configure system management-interface netconf call-home device-labels advertise-operating-system <i>boolean</i>
Tree	advertise-operating-system
Description	When configured to true , the network operating system is encoded as a NETCONF capability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-software-version *boolean*

Synopsis	Advertise the software version
Context	configure system management-interface netconf call-home device-labels advertise-software-version <i>boolean</i>
Tree	advertise-software-version

Description	When configured to true , the software version is encoded as a NETCONF capability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

advertise-system-name *boolean*

Synopsis	Advertise the system name
Context	configure system management-interface netconf call-home device-labels advertise-system-name <i>boolean</i>
Tree	advertise-system-name
Description	When configured to true , the system name is encoded as a NETCONF capability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

device-label *string*

Synopsis	Device label
Context	configure system management-interface netconf call-home device-labels device-label <i>string</i>
Tree	device-label
Description	This command encodes the device label as a NETCONF capability.
String length	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf-client [[name](#)] *named-item*

Synopsis	Enter the netconf-client list instance
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i>
Tree	netconf-client
Description	Commands in this context configure the list of NETCONF clients with which the NETCONF server maintains simultaneous Call Home connections.
Max. instances	10

Introduced 25.3.R2
Platforms 7705 SAR-1

[name] *named-item*

Synopsis Remote NETCONF client name
Context **configure** [system](#) [management-interface](#) [netconf](#) [call-home](#) [netconf-client](#) *named-item*
Tree [netconf-client](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the NETCONF Call Home endpoint
Context **configure** [system](#) [management-interface](#) [netconf](#) [call-home](#) [netconf-client](#) *named-item* [admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR-1

connection-type *keyword*

Synopsis Call Home connection type
Context **configure** [system](#) [management-interface](#) [netconf](#) [call-home](#) [netconf-client](#) *named-item* [connection-type](#) *keyword*
Tree [connection-type](#)
Options persistent – Enable persistent connection mode
Default persistent
Introduced 25.3.R2
Platforms 7705 SAR-1

delay-on-boot *number*

Synopsis	Delay for Call Home connections after system boot
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> delay-on-boot <i>number</i>
Tree	delay-on-boot
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the NETCONF client
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> remote-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-port *number*

Synopsis	Port that the NETCONF client is listening on
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> remote-port <i>number</i>

Tree	remote-port
Range	1 to 65535
Default	4334
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router instance or VPRN service name
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

transport *keyword*

Synopsis	Transport type
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> transport <i>keyword</i>
Tree	transport
Options	ssh – Transport type is SSH
Default	ssh
Introduced	25.3.R2
Platforms	7705 SAR-1

capabilities

Synopsis	Enter the capabilities context
Context	configure system management-interface netconf capabilities
Tree	capabilities
Description	Commands in this context configure explicit capabilities for the NETCONF server.
Introduced	25.3.R2
Platforms	7705 SAR-1

candidate *boolean*

Synopsis	Allow the NETCONF server to access candidate datastore
Context	configure system management-interface netconf capabilities candidate <i>boolean</i>
Tree	candidate
Description	<p>When configured to true, this command allows the SR OS NETCONF server to access the candidate configuration datastore. Configuring this command to true also enables using commit and discard-changes.</p> <p>When configure system management-interface configuration-mode is set to classic, the candidate capability is disabled, even if this command is configured to true.</p> <p>When configured to false, this command disables the SR OS NETCONF server from accessing the candidate datastore. If the candidate is disabled, requests that reference the candidate datastore return an error, and when a NETCONF client establishes a new session, the candidate capability is not advertised in the SR OS NETCONF Hello message.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

listen

Synopsis	Enter the listen context
Context	configure system management-interface netconf listen
Tree	listen
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of NETCONF server in listen mode
Context	configure system management-interface netconf listen admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-on-boot *number*

Synopsis	Delay before NETCONF server is operational after boot
Context	configure system management-interface netconf listen delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for NETCONF connections. When the timer expires, NETCONF becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging.</p> <p>When no delay is configured, connections are accepted after the system boots and NETCONF becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	Port on which NETCONF server listens for connections
Context	configure system management-interface netconf listen port <i>number</i>
Tree	port
Description	<p>This command specifies the port on which the SR OS NETCONF server listens for new connections. One port can be configured for NETCONF management.</p> <p>The configured port applies to both non-VRPN and VRPN management. New NETCONF connections are able to use the configured port.</p> <p>For NETCONF connections not using VRPN management, active NETCONF connections are not disconnected if the connection port changes. For NETCONF connections using VRPN management, active NETCONF connections are disconnected if the connection port changes.</p>
Range	22 830 1024 to 49151
Default	830
Introduced	25.3.R2
Platforms	7705 SAR-1

operations

Synopsis	Enter the operations context
Context	configure system management-interface operations

Tree	operations
Description	Commands in this context configure parameters associated with operational commands in model-driven interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

global-timeouts

Synopsis	Enter the global-timeouts context
Context	configure system management-interface operations global-timeouts
Tree	global-timeouts
Description	<p>Commands in this context configure system timeout parameters for operational commands.</p> <p>Timeout parameters provide default system-level control for various types of operational commands in model-driven interfaces. The timeout values are used when specific execution and retention timeouts are not requested for a specific operation.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

asynchronous-execution (*number* | *keyword*)

Synopsis	Timeout for asynchronous operation execution
Context	configure system management-interface operations global-timeouts asynchronous-execution (<i>number</i> <i>keyword</i>)
Tree	asynchronous-execution
Description	<p>This command configures the period of time that operations launched as “asynchronous” are allowed to execute before being automatically stopped by the SR OS.</p> <p>An asynchronous operation is not deleted from the system when it is stopped. See the asynchronous-retention command.</p> <p>If a specific execution timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.</p> <p>Note: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the ping operation also has its own timeout parameter).</p>
Range	1 to 604800
Units	seconds
Options	never

Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

asynchronous-retention (*number* | *keyword*)

Synopsis	Timeout for asynchronous operation data retention
Context	configure system management-interface operations global-timeouts asynchronous-retention (<i>number</i> <i>keyword</i>)
Tree	asynchronous-retention
Description	<p>This command configures the period of time that data related to operations launched as “asynchronous” is retained in the system. After the retention timeout expires, all information related to the operation is deleted, including any status information and result data.</p> <p>If a specific retention timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.</p>
Range	1 to 604800
Units	seconds
Options	never
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

synchronous-execution (*number* | *keyword*)

Synopsis	Timeout for synchronous operation execution
Context	configure system management-interface operations global-timeouts synchronous-execution (<i>number</i> <i>keyword</i>)
Tree	synchronous-execution
Description	<p>This command configures the period of time that operations launched as “synchronous” (the default method for all operations) are allowed to execute before they are automatically stopped, and their associated data is deleted.</p> <p>If a specific execution timeout is not included in the request for a particular synchronous operation, this system-level timeout applies.</p> <p>Note: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the ping operation also has its own timeout parameter).</p> <p>Caution: If this command is set with a specific time value, MD-CLI operations are subject to the timeout and are interrupted if they execute longer than the time value.</p>

This situation can arise because the timeout also applies to operations requested in the MD-CLI interface (for example, **ping**, **file dir**, and so on).

Range	1 to 604800
Units	seconds
Options	never
Default	never
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-management

Synopsis	Enter the remote-management context
Context	configure system management-interface remote-management
Tree	remote-management
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of remote management registration
Context	configure system management-interface remote-management admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
----------	---

Context	configure system management-interface remote-management allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, this command allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: allow-unsecure-connection or client-tls-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile *reference*

Synopsis	TLS client profile name
Context	configure system management-interface remote-management client-tls-profile reference
Tree	client-tls-profile
Description	This command specifies the client TLS profile to all remote managers.
Reference	configure system security tls client-tls-profile <i>named-item</i>
Notes	The following elements are part of a choice: allow-unsecure-connection or client-tls-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

connection-timeout *number*

Synopsis	Time without a response before manager declared down
Context	configure system management-interface remote-management connection-timeout number
Tree	connection-timeout
Range	1 to 3600
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-on-boot *number*

Synopsis	Delay for remote management after system boot
Context	configure system management-interface remote-management delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for remote management connections over gRPC. When the timer expires, remote management becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging.</p> <p>When no delay is configured, remote management connections are accepted after the system boots and gRPC becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

device-label *named-item-64*

Synopsis	Device label supplied to the remote manager
Context	configure system management-interface remote-management device-label <i>named-item-64</i>
Tree	device-label
Description	This command specifies a metadata label that is supplied to the manager. This label is used to group devices or network nodes with a common purpose or goal.
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

device-name *named-item-64*

Synopsis	Device name supplied to the remote manager
Context	configure system management-interface remote-management device-name <i>named-item-64</i>
Tree	device-name
Description	<p>This command specifies a device name that is supplied to the manager. The name identifies a specific SR OS node in the network.</p> <p>When unconfigured, the default system name is used.</p>

String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

hello-interval *number*

Synopsis	Time between hello messages from SR OS node to manager
Context	configure system management-interface remote-management hello-interval <i>number</i>
Tree	hello-interval
Range	10 to 216000
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

manager [[manager-name](#)] *named-item-64*

Synopsis	Enter the manager list instance
Context	configure system management-interface remote-management manager <i>named-item-64</i>
Tree	manager
Description	<p>Commands in this context configure options for a specific manager.</p> <p>Commands configured in this context take precedence over command values specified directly in the configure management-interface remote-management context.</p> <p>If a command is not configured in this context, the command setting is inherited from the higher level context.</p>
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR-1

[manager-name] *named-item-64*

Synopsis	Remote management manager name
Context	configure system management-interface remote-management manager <i>named-item-64</i>
Tree	manager
String length	1 to 64

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of remote management registration
Context	configure system management-interface remote-management manager <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	configure system management-interface remote-management manager <i>named-item-64</i> allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, the system allows an unsecured connection to the remote managers; the TCP connection is not encrypted. This includes username and password information.
Notes	The following elements are part of a choice: allow-unsecure-connection or client-tls-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile *reference*

Synopsis	TLS client profile name assigned to the remote manager
Context	configure system management-interface remote-management manager <i>named-item-64</i> client-tls-profile <i>reference</i>
Tree	client-tls-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>

Notes	The following elements are part of a choice: allow-unsecure-connection or client-tls-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

connection-timeout *number*

Synopsis	Time without response before manager is declared down
Context	configure system management-interface remote-management manager <i>named-item-64</i> connection-timeout <i>number</i>
Tree	connection-timeout
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system management-interface remote-management manager <i>named-item-64</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

device-label *named-item-64*

Synopsis	Device label supplied to the remote manager
Context	configure system management-interface remote-management manager <i>named-item-64</i> device-label <i>named-item-64</i>
Tree	device-label
Description	This command specifies a metadata label that is supplied to the manager. This label is used to group devices or network nodes with a common purpose or goal.
String length	1 to 64
Introduced	25.3.R2

Platforms 7705 SAR-1

device-name *named-item-64*

Synopsis Device name supplied to the remote manager

Context **configure** [system management-interface remote-management manager](#) *named-item-64* [device-name](#) *named-item-64*

Tree [device-name](#)

Description This command specifies a device name that is supplied to the manager. The name identifies a specific SR OS node in the network.
When unconfigured, the default system name is used.

String length 1 to 64

Introduced 25.3.R2

Platforms 7705 SAR-1

manager-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*)

Synopsis Destination IP address of the manager

Context **configure** [system management-interface remote-management manager](#) *named-item-64* [manager-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*)

Tree [manager-address](#)

String length 1 to 255

Introduced 25.3.R2

Platforms 7705 SAR-1

manager-port *number*

Synopsis Destination TCP port for gRPC connections to manager

Context **configure** [system management-interface remote-management manager](#) *named-item-64* [manager-port](#) *number*

Tree [manager-port](#)

Range 1 to 65535

Default 57400

Introduced 25.3.R2

Platforms 7705 SAR-1

router-instance *string*

Synopsis	Reference to a router or VPRN service name
Context	configure system management-interface remote-management manager <i>named-item-64</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for connection to the manager
Context	configure system management-interface remote-management manager <i>named-item-64</i> source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

source-port (*number* | *keyword*)

Synopsis	Source TCP destination port number
Context	configure system management-interface remote-management manager <i>named-item-64</i> source-port (<i>number</i> <i>keyword</i>)
Tree	source-port
Range	1 to 65535
Options	grpc-default
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or VPRN service name
Context	configure system management-interface remote-management router-instance <i>string</i>
Tree	router-instance
Default	management
Introduced	25.3.R2

Platforms 7705 SAR-1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Source IP address for connection to the manager

Context **configure** [system](#) [management-interface](#) [remote-management](#) **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [source-address](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

source-port (*number* | *keyword*)

Synopsis Source TCP port number to connection to the manager

Context **configure** [system](#) [management-interface](#) [remote-management](#) **source-port** (*number* | *keyword*)

Tree [source-port](#)

Range 1 to 65535

Options grpc-default

Default grpc-default

Introduced 25.3.R2

Platforms 7705 SAR-1

schema-path *url*

Synopsis Schema path URL

Context **configure** [system](#) [management-interface](#) **schema-path** *url*

Tree [schema-path](#)

Description This command specifies the schema path where the SR OS YANG modules can be placed by the user before using a <get-schema> request. Nokia recommends that the URL string not exceed 135 characters for the <get-schema> request to work correctly with all schema files.

If this command is not configured, the software upgrade process manages the YANG schema files to ensure the schema files are synchronized with the software image on both the primary and standby CPM.

String length 1 to 180

Introduced 25.3.R2

Platforms 7705 SAR-1

snmp

Synopsis Enter the **snmp** context

Context **configure** [system management-interface snmp](#)

Tree [snmp](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the SNMP agent

Context **configure** [system management-interface snmp admin-state](#) *keyword*

Tree [admin-state](#)

Description This command administratively enables or disables SNMP agent operations. Disabling SNMP does not prevent the agent from sending SNMP notifications to configured SNMP trap destinations.

In classic and mixed configuration mode, the agent is administratively disabled in the event of a reboot when the processing of the configuration file fails to complete or when an SNMP persistent index file fails while the **bof system persistent-indices** command is set to **true**. This prevents an SNMP-based management system from accessing and possibly synchronizing with a partially booted or incomplete network element. This auto-disable behavior is not applicable to model-driven configuration mode.

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR-1

engine-id *engine-id-as-string*

Synopsis SNMP engine ID that identifies the SNMPv3 node

Context **configure** [system management-interface snmp engine-id](#) *engine-id-as-string*

Tree [engine-id](#)

Description This command sets the SNMP engine ID that uniquely identifies the SNMPv3 node.

If unconfigured, the system uses an engine ID based on the information from the system backplane.

If the SNMP engine ID is changed, the current configuration must be saved and a reboot must be executed. Otherwise, the previously configured SNMP communities and logger trap-target notify communities will not be valid for the new engine ID.

Note: Changing the SNMP engine ID invalidates all SNMPv3 MD5 and SHA security digest keys, which may render the node unmanageable.

When replacing a chassis, configure the new router to use the same engine ID as the previous router. This preserves SNMPv3 security keys and allows management stations to use their existing authentication keys for the new router.

Ensure that the engine ID of each router is unique. A management domain can only maintain one instance of a specific engine ID.

String length	10 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

general-port *number*

Synopsis	Port number used to send general SNMP messages
Context	configure system management-interface snmp general-port <i>number</i>
Tree	general-port
Description	This command configures the port number used to receive SNMP request messages and send replies. For the port used for SNMP notifications, configure the configure log snmp-trap-group trap-target port command.
Range	0 1 to 65535
Default	161
Introduced	25.3.R2
Platforms	7705 SAR-1

max-bulk-duration *number*

Synopsis	Maximum process duration before responses are returned
Context	configure system management-interface snmp max-bulk-duration <i>number</i>
Tree	max-bulk-duration
Description	This command sets the maximum duration to process an SNMP request before bulk responses are returned to avoid a timeout on the management system when a lot of information is returned in the response.
Range	100 to 5000
Units	milliseconds

Introduced	25.3.R2
Platforms	7705 SAR-1

packet-size *number*

Synopsis	Maximum SNMP packet size generated by the node
Context	configure system management-interface snmp packet-size <i>number</i>
Tree	packet-size
Range	484 to 9216
Default	1500
Introduced	25.3.R2
Platforms	7705 SAR-1

streaming

Synopsis	Enter the streaming context
Context	configure system management-interface snmp streaming
Tree	streaming
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of SNMP streaming
Context	configure system management-interface snmp streaming admin-state <i>keyword</i>
Tree	admin-state
Description	This command enables or disables the proprietary SNMP request and response bundling as well as the TCP-based transport mechanism for optimizing network management of the router nodes. In higher latency networks, synchronizing router MIBs from network management using streaming takes less time than synchronizing using classic SNMP UDP requests. Streaming operates on TCP port 1491 and runs over IPv4 or IPv6.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

transport keyword

Synopsis	Transport protocol used by the SNMP agent
Context	configure system management-interface snmp transport keyword
Tree	transport
Options	udp – UDP only tcp – TCP only both – TCP and UDP
Default	udp
Introduced	25.3.R2
Platforms	7705 SAR-1

yang-modules

Synopsis	Enter the yang-modules context
Context	configure system management-interface yang-modules
Tree	yang-modules
Description	Commands in this context determine the system support of the Nokia YANG models. The settings affect the data sent in a NETCONF <hello>, data populated in the RFC 6022 /netconf-state/schemas list, data returned in a <get-schema> request, and data populated in the RFC 8525 /yang-library. See "NETCONF monitoring" and "YANG library" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
Introduced	25.3.R2
Platforms	7705 SAR-1

nmda

Synopsis	Enter the nmda context
Context	configure system management-interface yang-modules nmda
Tree	nmda
Description	Commands in this context configure the attributes for the Network Management Datastores Architecture (NMDA).
Introduced	25.3.R2
Platforms	7705 SAR-1

nmda-support *boolean*

Synopsis	Advertise NMDA support over NETCONF
Context	configure system management-interface yang-modules nmda nmda-support <i>boolean</i>
Tree	nmda-support
Description	<p>When configured to true, this command enables the advertisement of NMDA support over NETCONF through the use of YANG library 1.1.</p> <p>When configured to false, this command disables NMDA advertisement over NETCONF and YANG library 1.0 is used.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-combined-modules *boolean*

Synopsis	Support access to combined Nokia YANG models
Context	configure system management-interface yang-modules nokia-combined-modules <i>boolean</i>
Tree	nokia-combined-modules
Description	<p>When configured to true, the system supports the combined Nokia YANG files for both configuration and state data in the NETCONF server.</p> <p>When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to true.</p> <p>When configured to false, access to the combined Nokia YANG files is not supported.</p> <p>This command and the nokia-submodules command cannot both be set to true at the same time.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-submodules *boolean*

Synopsis	Support submodule-based packaging of Nokia YANG models
Context	configure system management-interface yang-modules nokia-submodules <i>boolean</i>
Tree	nokia-submodules

Description	<p>When configured to true, the system supports the alternative submodule-based packaging of the Nokia YANG files for both configuration and state data in the NETCONF server.</p> <p>When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to true.</p> <p>When configured to false, access to the submodule-based packaging of the Nokia YANG files is not supported.</p> <p>This command and the nokia-combined-modules command cannot both be set to true at the same time.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

name *named-item-64*

Synopsis	Administrative name assigned to the system
Context	configure system name <i>named-item-64</i>
Tree	name
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

network-element-discovery

Synopsis	Enter the network-element-discovery context
Context	configure system network-element-discovery
Tree	network-element-discovery
Introduced	25.3.R2
Platforms	7705 SAR-1

generate-traps *boolean*

Synopsis	Generate NE discovery traps
Context	configure system network-element-discovery generate-traps <i>boolean</i>
Tree	generate-traps
Default	false

Introduced	25.3.R2
Platforms	7705 SAR-1

profile [name] *named-item*

Synopsis	Enter the profile list instance
Context	configure system network-element-discovery profile <i>named-item</i>
Tree	profile
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Profile name
Context	configure system network-element-discovery profile <i>named-item</i>
Tree	profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

neid *string*

Synopsis	Network element ID of the advertised node
Context	configure system network-element-discovery profile <i>named-item</i> neid <i>string</i>
Tree	neid
String length	7 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

neip

Synopsis	Enter the neip context
----------	-------------------------------

Context	configure system network-element-discovery profile <i>named-item</i> neip
Tree	neip
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-generate

Synopsis	Enter the auto-generate context
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate
Tree	auto-generate
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4

Synopsis	Enable the ipv4 context
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-id-value *number*

Synopsis	Most significant byte if the NE IPv4 address
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv4 vendor-id-value <i>number</i>
Tree	vendor-id-value
Range	1 to 255
Default	140
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enable the ipv6 context
----------	--------------------------------

Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-id-value *number*

Synopsis	Most significant byte of the NE IPv6 address
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv6 vendor-id-value <i>number</i>
Tree	vendor-id-value
Range	1 to 255
Default	140
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4 *ipv4-unicast-address*

Synopsis	NEIP IPv4 address
Context	configure system network-element-discovery profile <i>named-item</i> neip ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6 *ipv6-address*

Synopsis	NEIP IPv6 address
Context	configure system network-element-discovery profile <i>named-item</i> neip ipv6 <i>ipv6-address</i>
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

platform-type *named-item-255*

Synopsis	Platform name and chassis type to be advertised
Context	configure system network-element-discovery profile <i>named-item</i> platform-type <i>named-item-255</i>
Tree	platform-type
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

system-mac *mac-unicast-address-no-zero*

Synopsis	MAC address of the advertised node
Context	configure system network-element-discovery profile <i>named-item</i> system-mac <i>mac-unicast-address-no-zero</i>
Tree	system-mac
Introduced	25.3.R2
Platforms	7705 SAR-1

vendor-id *named-item-255*

Synopsis	Vendor ID to be advertised
Context	configure system network-element-discovery profile <i>named-item</i> vendor-id <i>named-item-255</i>
Tree	vendor-id
String length	1 to 255
Default	Nokia
Introduced	25.3.R2
Platforms	7705 SAR-1

ospf-dynamic-hostnames *boolean*

Synopsis	Process received OSPF dynamic hostname information
Context	configure system ospf-dynamic-hostnames <i>boolean</i>
Tree	ospf-dynamic-hostnames

Description	When configured to true , OSPF dynamic hostnames are enabled. The router receiving the new dynamic hostname within the OSPF Router Information (RI) LSA is instructed to process the received dynamic hostname information. When configured to false , dynamic hostname information is not processed.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

persistence

Synopsis	Enter the persistence context
Context	configure system persistence
Tree	persistence
Description	Commands in this context configure persistence on the system. The persistence feature enables the system to retain state information learned through DHCP snooping across reboots. This information includes data such as the IP address and MAC binding information, lease-length information, and ingress SAP information (required for VPLS snooping to identify the ingress interface). If persistence is enabled when there are no DHCP relay or snooping commands enabled, the system creates an empty file.
Introduced	25.3.R2
Platforms	7705 SAR-1

ancp

Synopsis	Enter the ancp context
Context	configure system persistence ancp

Introduced	25.3.R2
Platforms	7705 SAR-1

[user-profile-name] *named-item*

Synopsis	User profile name
Context	configure system security aaa local-profiles profile <i>named-item</i>
Tree	profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-session-group *reference*

Synopsis	CLI session group to which the profile belongs
Context	configure system security aaa local-profiles profile <i>named-item</i> cli-session-group <i>reference</i>
Tree	cli-session-group
Reference	configure system security aaa cli-session-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

combined-max-sessions *number*

Synopsis	Maximum number of concurrent SSH and Telnet sessions
Context	configure system security aaa local-profiles profile <i>named-item</i> combined-max-sessions <i>number</i>
Tree	combined-max-sessions
Range	0 to 50
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Action for non-matching entry
Context	configure system security aaa local-profiles profile <i>named-item</i> default-action <i>keyword</i>
Tree	default-action

Description	<p>This command specifies the default action to be applied when no match conditions are met in the list of profile entry match commands. It does not apply to other parts of the profile such as grpc rpc-authorization or netconf base-op-authorization.</p> <p>When a user is a member of multiple profiles, profiles are evaluated in the order that they are configured. Evaluation stops if there is a match, or when the default action of the profile is deny-all, permit-all, or read-only-all. When the profile default action is none and if no match conditions are met in the profile, the next profile is evaluated. When the default action of the last profile is none and no explicit match is found, the command is denied.</p>
Options	<p>deny-all – Deny access to all commands</p> <p>permit-all – Allow access to all commands</p> <p>none – No action; evaluate the next profile</p> <p>read-only-all – Allow read-only access to all commands</p>
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

entry *[entry-id] number*

Synopsis	Enter the entry list instance
Context	configure system security aaa local-profiles profile <i>named-item entry number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] number

Synopsis	User profile entry ID
Context	configure system security aaa local-profiles profile <i>named-item entry number</i>
Tree	entry
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action keyword

Synopsis	Action when a command matches the entry
----------	---

Context	configure system security aaa local-profiles profile <i>named-item</i> entry <i>number</i> action <i>keyword</i>
Tree	action
Description	This command configures the action associated with the profile entry.
Options	deny – Keyword permit – Keyword none – No action; evaluate the next entry read-only – Keyword
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system security aaa local-profiles profile <i>named-item</i> entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

match *display-string*

Synopsis	Command to match the entry
Context	configure system security aaa local-profiles profile <i>named-item</i> entry <i>number</i> match <i>display-string</i>
Tree	match
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc

Synopsis	Enter the grpc context
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc
Tree	grpc

Introduced	25.3.R2
Platforms	7705 SAR-1

rpc-authorization

Synopsis	Enter the rpc-authorization context
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization
Tree	rpc-authorization
Description	Commands in this context control the authorization of each RPC in gRPC interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

gnmi-capabilities *keyword*

Synopsis	gNMI Capabilities RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnmi-capabilities <i>keyword</i>
Tree	gnmi-capabilities
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnmi-get *keyword*

Synopsis	gNMI Get RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnmi-get <i>keyword</i>
Tree	gnmi-get
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnmi-set *keyword*

Synopsis	gNMI Set RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnmi-set <i>keyword</i>
Tree	gnmi-set
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnmi-subscribe *keyword*

Synopsis	gNMI Subscribe RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnmi-subscribe <i>keyword</i>
Tree	gnmi-subscribe
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-cert-mgmt-cangenerate *keyword*

Synopsis	gNOI CanGenerateCSR RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-cert-mgmt-cangenerate <i>keyword</i>
Tree	gnoi-cert-mgmt-cangenerate
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-cert-mgmt-getcert *keyword*

Synopsis	gNOI GetCertificates RPC authorization
----------	--

Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-cert-mgmt-getcert <i>keyword</i>
Tree	gnoi-cert-mgmt-getcert
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-cert-mgmt-install *keyword*

Synopsis	gNOI Install RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-cert-mgmt-install <i>keyword</i>
Tree	gnoi-cert-mgmt-install
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-cert-mgmt-revoke *keyword*

Synopsis	gNOI RevokeCertificates RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-cert-mgmt-revoke <i>keyword</i>
Tree	gnoi-cert-mgmt-revoke
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-cert-mgmt-rotate *keyword*

Synopsis	gNOI Rotate RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-cert-mgmt-rotate <i>keyword</i>
Tree	gnoi-cert-mgmt-rotate

Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-file-get *keyword*

Synopsis	gNOI File Get RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-file-get <i>keyword</i>
Tree	gnoi-file-get
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-file-put *keyword*

Synopsis	gNOI File Put RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-file-put <i>keyword</i>
Tree	gnoi-file-put
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-file-remove *keyword*

Synopsis	gNOI File Remove RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-file-remove <i>keyword</i>
Tree	gnoi-file-remove
Options	permit, deny
Default	permit
Introduced	25.3.R2

Platforms 7705 SAR-1

gnoi-file-stat *keyword*

Synopsis gNOI File Stat RPC authorization

Context **configure** [system security aaa local-profiles profile](#) *named-item* [grpc rpc-authorization gnoi-file-stat](#) *keyword*

Tree [gnoi-file-stat](#)

Options permit, deny

Default permit

Introduced 25.3.R2

Platforms 7705 SAR-1

gnoi-file-transfertoremove *keyword*

Synopsis gNOI File TransferToRemote RPC authorization

Context **configure** [system security aaa local-profiles profile](#) *named-item* [grpc rpc-authorization gnoi-file-transfertoremove](#) *keyword*

Tree [gnoi-file-transfertoremove](#)

Options permit, deny

Default permit

Introduced 25.3.R2

Platforms 7705 SAR-1

gnoi-system-cancelreboot *keyword*

Synopsis gNOI System CancelReboot RPC authorization

Context **configure** [system security aaa local-profiles profile](#) *named-item* [grpc rpc-authorization gnoi-system-cancelreboot](#) *keyword*

Tree [gnoi-system-cancelreboot](#)

Options permit, deny

Default deny

Introduced 25.3.R2

Platforms 7705 SAR-1

gnoi-system-ping *keyword*

Synopsis	gNOI System Ping RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-ping <i>keyword</i>
Tree	gnoi-system-ping
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-system-reboot *keyword*

Synopsis	gNOI System Reboot RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-reboot <i>keyword</i>
Tree	gnoi-system-reboot
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-system-rebootstatus *keyword*

Synopsis	gNOI System RebootStatus RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-rebootstatus <i>keyword</i>
Tree	gnoi-system-rebootstatus
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-system-setpackage *keyword*

Synopsis	gNOI System SetPackage RPC authorization
----------	--

Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-setpackage <i>keyword</i>
Tree	gnoi-system-setpackage
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-system-switchcontrolprocessor *keyword*

Synopsis	gNOI System SwitchControlProcessor RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-switchcontrolprocessor <i>keyword</i>
Tree	gnoi-system-switchcontrolprocessor
Options	permit, deny
Default	deny
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-system-time *keyword*

Synopsis	gNOI System Time RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-time <i>keyword</i>
Tree	gnoi-system-time
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

gnoi-system-traceroute *keyword*

Synopsis	gNOI System Traceroute RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-traceroute <i>keyword</i>
Tree	gnoi-system-traceroute

Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

md-cli-session *keyword*

Synopsis	gNOI MdCli Session RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization md-cli-session <i>keyword</i>
Tree	md-cli-session
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf

Synopsis	Enter the netconf context
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf
Tree	netconf
Introduced	25.3.R2
Platforms	7705 SAR-1

base-op-authorization

Synopsis	Enter the base-op-authorization context
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization
Tree	base-op-authorization
Description	Commands in this context configure the permission to use NETCONF operations at the base operation level for the specified profile. The NETCONF operations are authorized by default in the built-in system-generated administrative profile.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *boolean*

Synopsis	Allow the NETCONF <action> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization action <i>boolean</i>
Tree	action
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cancel-commit *boolean*

Synopsis	Allow the NETCONF <cancel-commit> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization cancel-commit <i>boolean</i>
Tree	cancel-commit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

close-session *boolean*

Synopsis	Allow the NETCONF <close-session> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization close-session <i>boolean</i>
Tree	close-session
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

commit *boolean*

Synopsis	Allow the NETCONF <commit> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization commit <i>boolean</i>
Tree	commit

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

copy-config *boolean*

Synopsis	Allow the NETCONF <copy-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization copy-config <i>boolean</i>
Tree	copy-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

create-subscription *boolean*

Synopsis	Allow the NETCONF <create-subscription> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization create-subscription <i>boolean</i>
Tree	create-subscription
Description	<p>When configured to true, the system enables the NETCONF create-subscription operation in the default profile.</p> <p>The configuration of this command is checked only at the time of the initial subscription. Configuration changes to this command do not cancel any in-progress subscriptions, and users who successfully subscribed initially continue to receive messages.</p> <p>The operation is enabled by default in the built-in system-generated administrative profile.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

delete-config *boolean*

Synopsis	Allow the NETCONF <delete-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization delete-config <i>boolean</i>
Tree	delete-config

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

discard-changes *boolean*

Synopsis	Allow the NETCONF <discard-changes> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization discard-changes <i>boolean</i>
Tree	discard-changes
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

edit-config *boolean*

Synopsis	Allow the NETCONF <edit-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization edit-config <i>boolean</i>
Tree	edit-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

get *boolean*

Synopsis	Allow the NETCONF <get> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization get <i>boolean</i>
Tree	get
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

get-config *boolean*

Synopsis	Allow the NETCONF <get-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op- authorization get-config <i>boolean</i>
Tree	get-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

get-data *boolean*

Synopsis	Allow the NETCONF <get-data> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op- authorization get-data <i>boolean</i>
Tree	get-data
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

get-schema *boolean*

Synopsis	Allow the NETCONF <get-schema> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op- authorization get-schema <i>boolean</i>
Tree	get-schema
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

kill-session *boolean*

Synopsis	Allow the NETCONF <kill-session> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op- authorization kill-session <i>boolean</i>
Tree	kill-session

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

lock *boolean*

Synopsis	Allow the NETCONF <lock> and <unlock> RPCs
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization lock <i>boolean</i>
Tree	lock
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

validate *boolean*

Synopsis	Allow the NETCONF <validate> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization validate <i>boolean</i>
Tree	validate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ssh-max-sessions *number*

Synopsis	Maximum number of concurrent SSH sessions
Context	configure system security aaa local-profiles profile <i>named-item</i> ssh-max-sessions <i>number</i>
Tree	ssh-max-sessions
Range	0 to 50
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-max-sessions *number*

Synopsis	Maximum number of concurrent Telnet sessions
Context	configure system security aaa local-profiles profile <i>named-item</i> telnet-max-sessions <i>number</i>
Tree	telnet-max-sessions
Range	0 to 50
Introduced	25.3.R2
Platforms	7705 SAR-1

management-interface

Synopsis	Enter the management-interface context
Context	configure system security aaa management-interface
Tree	management-interface
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc

Synopsis	Enter the grpc context
Context	configure system security aaa management-interface grpc
Tree	grpc
Description	Commands in this context configure gRPC TLS authentication options.
Introduced	25.7.R1
Platforms	7705 SAR-1

tls-authentication

Synopsis	Enter the tls-authentication context
Context	configure system security aaa management-interface grpc tls-authentication
Tree	tls-authentication
Introduced	25.7.R1
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of mTLS authentication
Context	configure system security aaa management-interface grpc tls-authentication admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.7.R1
Platforms	7705 SAR-1

default-user *reference*

Synopsis	Local user to display with mTLS authentication
Context	configure system security aaa management-interface grpc tls-authentication default-user <i>reference</i>
Tree	default-user
Description	<p>This command configures the local user to display for gRPC sessions authenticated using mTLS when the username metadata is not sent during authentication. The configured local user is associated with every session that authenticates with mTLS without a username. This username is displayed in several places, for example, in the command output for the show users command, YANG state, log messages, and debug messages.</p> <p>The local user must be configured but is not used in mTLS authentication.</p>
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR-1

md-cli

Synopsis	Enter the md-cli context
Context	configure system security aaa management-interface md-cli
Tree	md-cli
Introduced	25.3.R2
Platforms	7705 SAR-1

command-accounting-during-load *boolean*

Synopsis	Perform file command accounting for load or rollback
Context	configure system security aaa management-interface md-cli command-accounting-during-load <i>boolean</i>
Tree	command-accounting-during-load
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

output-authorization

Synopsis	Enter the output-authorization context
Context	configure system security aaa management-interface output-authorization
Tree	output-authorization
Description	<p>Commands in this context configure output authorization for model-driven interfaces and telemetry.</p> <p>When output authorization is performed, commands that display configuration or state output must authorize every element in the output. If a remote AAA server is configured, there may be delays in displaying output while the output is authorized. The remote AAA server may receive a large volume of authorization requests when substantial output displays are needed, such as for system configuration details.</p> <p>Input to edit the configuration is always authorized, and is not affected by commands in this context.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

md-interfaces *boolean*

Synopsis	Authorize output in model-driven interfaces
Context	configure system security aaa management-interface output-authorization md-interfaces <i>boolean</i>
Tree	md-interfaces
Description	<p>When configured to true, output is authorized for the following:</p> <ul style="list-style-type: none">• MD-CLI info and compare commands• MD-CLI command completion of list key values• NETCONF <get> and <get-config> RPC

	<ul style="list-style-type: none">gRPC/gNMI Get RPCs
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

telemetry-data *boolean*

Synopsis	Authorize dial-in telemetry output
Context	configure system security aaa management-interface output-authorization telemetry-data <i>boolean</i>
Tree	telemetry-data
Description	When configured to true , the system authorizes telemetry data in gNMI Subscriber RPC responses for dial-in telemetry. When configured to false , telemetry data is not authorized.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telemetry-default-user *reference*

Synopsis	Local user for dial-out telemetry output authorization
Context	configure system security aaa management-interface output-authorization telemetry-default-user <i>reference</i>
Tree	telemetry-default-user
Description	This command specifies the local user for telemetry data authorization in gNMI Publish RPCs for dial-out telemetry. The administrator must configure the local user to ensure the subscription is operational.
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

remote-servers

Synopsis	Enter the remote-servers context
Context	configure system security aaa remote-servers
Tree	remote-servers

Introduced	25.3.R2
Platforms	7705 SAR-1

ldap

Synopsis	Enter the ldap context
Context	configure system security aaa remote-servers ldap
Tree	ldap
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the LDAP operation protocol
Context	configure system security aaa remote-servers ldap admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

public-key-authentication *boolean*

Synopsis	Allow SSH public key authentication from LDAP server
Context	configure system security aaa remote-servers ldap public-key-authentication <i>boolean</i>
Tree	public-key-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

route-preference *keyword*

Synopsis	Route preference to reach the AAA server
Context	configure system security aaa remote-servers ldap route-preference <i>keyword</i>
Tree	route-preference

Description	This command specifies the routing preference to reach the AAA server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the Base routing instance are used to reach the server before the in-band routes in the management routing instance.
Options	both, inband, outband
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure system security aaa remote-servers ldap server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	LDAP server ID
Context	configure system security aaa remote-servers ldap server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the address list instance
Context	configure system security aaa remote-servers ldap server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Max. instances	1

Introduced 25.3.R2
Platforms 7705 SAR-1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis LDAP server address
Context **configure** **system** **security** **aaa** **remote-servers** **ldap** **server** *number* **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Tree **address**
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

port *number*

Synopsis Port number on which to contact the LDAP server
Context **configure** **system** **security** **aaa** **remote-servers** **ldap** **server** *number* **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Tree **port**
Range 1 to 65535
Default 389
Introduced 25.3.R2
Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the LDAP server
Context **configure** **system** **security** **aaa** **remote-servers** **ldap** **server** *number* **admin-state** *keyword*
Tree **admin-state**
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR-1

bind-authentication

Synopsis	Enter the bind-authentication context
Context	configure system security aaa remote-servers ldap server <i>number</i> bind-authentication
Tree	bind-authentication
Introduced	25.3.R2
Platforms	7705 SAR-1

password *encrypted-leaf*

Synopsis	Password used for authentication with the LDAP server
Context	configure system security aaa remote-servers ldap server <i>number</i> bind-authentication password <i>encrypted-leaf</i>
Tree	password
String length	1 to 199
Introduced	25.3.R2
Platforms	7705 SAR-1

root-dn *string-not-all-spaces*

Synopsis	Root domain used for authentication with LDAP server
Context	configure system security aaa remote-servers ldap server <i>number</i> bind-authentication root-dn <i>string-not-all-spaces</i>
Tree	root-dn
String length	1 to 512
Introduced	25.3.R2
Platforms	7705 SAR-1

search

Synopsis	Enter the search context
Context	configure system security aaa remote-servers ldap server <i>number</i> search
Tree	search
Introduced	25.3.R2
Platforms	7705 SAR-1

base-dn *string-not-all-spaces*

Synopsis	LDAP server search base domain name
Context	configure system security aaa remote-servers ldap server <i>number</i> search base-dn <i>string-not-all-spaces</i>
Tree	base-dn
String length	1 to 512
Introduced	25.3.R2
Platforms	7705 SAR-1

server-name *named-item*

Synopsis	LDAP server name
Context	configure system security aaa remote-servers ldap server <i>number</i> server-name <i>named-item</i>
Tree	server-name
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-profile *reference*

Synopsis	TLS client profile used to encrypt the LDAP connection
Context	configure system security aaa remote-servers ldap server <i>number</i> tls-profile <i>reference</i>
Tree	tls-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

server-retry *number*

Synopsis	Number of attempts to retry contacting the LDAP server
Context	configure system security aaa remote-servers ldap server-retry <i>number</i>
Tree	server-retry
Range	1 to 10
Default	3

Introduced	25.3.R2
Platforms	7705 SAR-1

server-timeout *number*

Synopsis	Timeout for a response from the LDAP server
Context	configure system security aaa remote-servers ldap server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

use-default-template *boolean*

Synopsis	Apply the default template to LDAP
Context	configure system security aaa remote-servers ldap use-default-template <i>boolean</i>
Tree	use-default-template
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure system security aaa remote-servers radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-1

access-algorithm *keyword*

Synopsis	Algorithm used to access the set of RADIUS servers
Context	configure system security aaa remote-servers radius access-algorithm <i>keyword</i>

Tree	access-algorithm
Options	direct, round-robin
Default	direct
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting *boolean*

Synopsis	Enable RADIUS command accounting
Context	configure system security aaa remote-servers radius accounting boolean
Tree	accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

accounting-port *number*

Synopsis	Port number on RADIUS server for accounting requests
Context	configure system security aaa remote-servers radius accounting-port number
Tree	accounting-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the authentication server
Context	configure system security aaa remote-servers radius admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authorization *boolean*

Synopsis	Enable RADIUS authorization
Context	configure system security aaa remote-servers radius authorization <i>boolean</i>
Tree	authorization
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interactive-authentication *boolean*

Synopsis	Enable RADIUS interactive authentication
Context	configure system security aaa remote-servers radius interactive-authentication <i>boolean</i>
Tree	interactive-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	UDP port number on which to contact RADIUS server
Context	configure system security aaa remote-servers radius port <i>number</i>
Tree	port
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR-1

route-preference *keyword*

Synopsis	Route preference to reach the AAA server
Context	configure system security aaa remote-servers radius route-preference <i>keyword</i>
Tree	route-preference
Description	This command specifies the routing preference to reach the AAA server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes

in the Base routing instance are used to reach the server before the in-band routes in the management routing instance.

Options	both, inband, outband
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

server [\[index\]](#) *number*

Synopsis	Enter the server list instance
Context	configure system security aaa remote-servers radius server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[\[index\]](#) *number*

Synopsis	RADIUS server ID
Context	configure system security aaa remote-servers radius server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure system security aaa remote-servers radius server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

authenticator *keyword*

Synopsis	Authenticator hash algorithm for the RADIUS server
Context	configure system security aaa remote-servers radius server <i>number</i> authenticator <i>keyword</i>
Tree	authenticator
Description	This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.
Options	md5, sm3
Default	md5
Introduced	25.3.R2
Platforms	7705 SAR-1

secret *encrypted-leaf*

Synopsis	Secret key to access the RADIUS server
Context	configure system security aaa remote-servers radius server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference*

Synopsis	TLS client profile for the RADIUS server
Context	configure system security aaa remote-servers radius server <i>number</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Description	This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS.
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

server-retry *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	configure system security aaa remote-servers radius server-retry <i>number</i>
Tree	server-retry
Range	1 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

server-timeout *number*

Synopsis	Time to wait for a response from the RADIUS server
Context	configure system security aaa remote-servers radius server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

use-default-template *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
Context	configure system security aaa remote-servers radius use-default-template <i>boolean</i>
Tree	use-default-template
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tacplus

Synopsis	Enter the tacplus context
Context	configure system security aaa remote-servers tacplus
Tree	tacplus

Introduced	25.3.R2
Platforms	7705 SAR-1

accounting

Synopsis	Enable the accounting context
Context	configure system security aaa remote-servers tacplus accounting
Tree	accounting
Introduced	25.3.R2
Platforms	7705 SAR-1

record-type *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	configure system security aaa remote-servers tacplus accounting record-type keyword
Tree	record-type
Options	start-stop, stop-only
Default	stop-only
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-control

Synopsis	Enter the admin-control context
Context	configure system security aaa remote-servers tacplus admin-control
Tree	admin-control
Introduced	25.3.R2
Platforms	7705 SAR-1

tacplus-map-to-priv-lvl *number*

Synopsis	Interactive authentication from node to TACACS+ server
Context	configure system security aaa remote-servers tacplus admin-control tacplus-map-to-priv-lvl number
Tree	tacplus-map-to-priv-lvl
Range	0 to 15

Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the TACACS+ protocol
Context	configure system security aaa remote-servers tacplus admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

authorization

Synopsis	Enable the authorization context
Context	configure system security aaa remote-servers tacplus authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR-1

request-format

Synopsis	Enter the request-format context
Context	configure system security aaa remote-servers tacplus authorization request-format
Tree	request-format
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	25.3.R2
Platforms	7705 SAR-1

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	configure system security aaa remote-servers tacplus authorization request-format access-operation-cmd <i>keyword</i>

Tree	access-operation-cmd
Description	<p>This command sends an operation argument in authorization requests.</p> <p>In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.</p>
Options	delete
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	configure system security aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i>
Tree	use-priv-lvl
Description	<p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ignore-unknown-mandatory-vsas *boolean*

Synopsis	Ignore unknown mandatory VSAs and fail authentication
Context	configure system security aaa remote-servers tacplus ignore-unknown-mandatory-vsas <i>boolean</i>
Tree	ignore-unknown-mandatory-vsas
Description	When configured to true , the system ignores unknown mandatory VSAs and authentication succeeds.

When configured to **false**, the system ignores unknown mandatory VSAs received in a reply from the TACACS+ server. Authentication fails and the user is disconnected because the system cannot process a mandatory VSA that is unknown.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	configure system security aaa remote-servers tacplus interactive-authentication <i>boolean</i>
Tree	interactive-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

priv-lvl-map

Synopsis	Enter the priv-lvl-map context
Context	configure system security aaa remote-servers tacplus priv-lvl-map
Tree	priv-lvl-map
Introduced	25.3.R2
Platforms	7705 SAR-1

priv-lvl [[level](#)] *number*

Synopsis	Enter the priv-lvl list instance
Context	configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Introduced	25.3.R2
Platforms	7705 SAR-1

[level] *number*

Synopsis	Privilege level for the mapping
----------	---------------------------------

Context	configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Range	0 to 15
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

user-profile-name *reference*

Synopsis	User profile for the mapping
Context	configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number user-profile-name</i> <i>reference</i>
Tree	user-profile-name
Reference	configure system security aaa local-profiles profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

route-preference *keyword*

Synopsis	Route preference to reach the AAA server
Context	configure system security aaa remote-servers tacplus route-preference <i>keyword</i>
Tree	route-preference
Description	This command specifies the routing preference to reach the AAA server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the Base routing instance are used to reach the server before the in-band routes in the management routing instance.
Options	both, inband, outband
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure system security aaa remote-servers tacplus server <i>number</i>

Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	TACACS+ server ID
Context	configure system security aaa remote-servers tacplus server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	configure system security aaa remote-servers tacplus server <i>number</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

port *number*

Synopsis	TCP port ID on which to contact TACACS+ server
Context	configure system security aaa remote-servers tacplus server <i>number</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	49
Introduced	25.3.R2
Platforms	7705 SAR-1

secret encrypted-leaf

Synopsis	Secret key to access the TACACS+ server
Context	configure system security aaa remote-servers tacplus server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
String length	1 to 199
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-retry-timeout (*number* | *keyword*)

Synopsis	Time before retrying requests when health checks are disabled
Context	configure system security aaa remote-servers tacplus server-retry-timeout (<i>number</i> <i>keyword</i>)
Tree	server-retry-timeout
Description	This command configures the maximum timeout before retrying requests when health checks are disabled and all TACACS+ servers are operationally down. Set the value of this timer to a lower value or disable it to increase the interactive responsiveness of AAA requests after the servers become unreachable.
Range	1 to 300
Units	seconds
Options	none – Disable retry timeout and send requests immediately
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-1

server-timeout *number*

Synopsis	Time to wait for a response from the TACACS+ server
Context	configure system security aaa remote-servers tacplus server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3

Introduced	25.3.R2
Platforms	7705 SAR-1

service-request

Synopsis	Enter the service-request context
Context	configure system security aaa remote-servers tacplus service-request
Tree	service-request
Description	Commands in this context enable Nokia services to be requested from the TACACS+ server when a user authenticates.
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-grpc-rpc-authorization *boolean*

Synopsis	Request nokia-grpc-rpc-authorization service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-grpc-rpc-authorization <i>boolean</i>
Tree	nokia-grpc-rpc-authorization
Description	When configured to true , the nokia-grpc-rpc-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-netconf-base-op-authorization *boolean*

Synopsis	Request nokia-netconf-base-op-authorization service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-netconf-base-op-authorization <i>boolean</i>
Tree	nokia-netconf-base-op-authorization
Description	When configured to true , the nokia-netconf-base-op-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-user *boolean*

Synopsis	Request nokia-user service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-user <i>boolean</i>
Tree	nokia-user
Description	When configured to true , the nokia-user service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

nokia-user-profile *boolean*

Synopsis	Request nokia-user-profile service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-user-profile <i>boolean</i>
Tree	nokia-user-profile
Description	When configured to true , the nokia-user-profile service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

use-default-template *boolean*

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	configure system security aaa remote-servers tacplus use-default-template <i>boolean</i>
Tree	use-default-template
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

vpnr-server

Synopsis	Enter the vpnr-server context
----------	--------------------------------------

Context	configure system security aaa remote-servers vprn-server
Tree	vprn-server
Introduced	25.3.R2
Platforms	7705 SAR-1

inband *reference*

Synopsis	VPRN service used for AAA by in-band sessions
Context	configure system security aaa remote-servers vprn-server inband <i>reference</i>
Tree	inband
Description	This command configures TACACS+ or RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions in the Base routing instance.
Reference	configure service vprn <i>service-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

outband *reference*

Synopsis	VPRN service used for AAA by out-of-band sessions
Context	configure system security aaa remote-servers vprn-server outband <i>reference</i>
Tree	outband
Description	This command configures TACACS+ and RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions on the console or out-of-band (OOB) Ethernet ports.
Reference	configure service vprn <i>service-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

vprn *reference*

Synopsis	VPRN used for AAA in VPRNs without a AAA server
Context	configure system security aaa remote-servers vprn-server vprn <i>reference</i>
Tree	vprn
Description	This command configures TACACS+ or RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions in VPRNs without a AAA server configured.
Reference	configure service vprn <i>service-name</i>

Introduced 25.3.R2
Platforms 7705 SAR-1

user-template [[user-template-name](#)] *keyword*

Synopsis Enter the **user-template** list instance
Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword*
Tree [user-template](#)
Description Commands in this context configure templates for remote users.
Introduced 25.3.R2
Platforms 7705 SAR-1

[user-template-name] *keyword*

Synopsis Default user template applied to the remote user
Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword*
Tree [user-template](#)
Options ldap-default – Default LDAP user template
radius-default – Default RADIUS user template
tacplus-default – Default TACACS+ user template
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

access

Synopsis Enter the **access** context
Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword* [access](#)
Tree [access](#)
Description Commands in this context grant a user access to the router management access methods. If a user requires access to more than one method, multiple methods can be specified.
Introduced 25.3.R2
Platforms 7705 SAR-1

bluetooth *boolean*

Synopsis	Allow Bluetooth access
Context	configure system security aaa user-template <i>keyword</i> access bluetooth <i>boolean</i>
Tree	bluetooth
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

console *boolean*

Synopsis	Allow Bluetooth, console port CLI, SCP/SFTP, SSH CLI, and Telnet CLI access
Context	configure system security aaa user-template <i>keyword</i> access console <i>boolean</i>
Tree	console
Description	When configured to true , the system allows this access method to take precedence over other access methods in all cases.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

console-port-cli *boolean*

Synopsis	Allow console port CLI access
Context	configure system security aaa user-template <i>keyword</i> access console-port-cli <i>boolean</i>
Tree	console-port-cli
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ftp *boolean*

Synopsis	Allow FTP access
Context	configure system security aaa user-template <i>keyword</i> access ftp <i>boolean</i>
Tree	ftp
Default	false

Introduced 25.3.R2
Platforms 7705 SAR-1

grpc *boolean*

Synopsis Allow gRPC access
Context **configure** [system security aaa user-template](#) *keyword* [access grpc](#) *boolean*
Tree [grpc](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

netconf *boolean*

Synopsis Allow NETCONF access
Context **configure** [system security aaa user-template](#) *keyword* [access netconf](#) *boolean*
Tree [netconf](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

scp-sftp *boolean*

Synopsis Allow SCP/SFTP access
Context **configure** [system security aaa user-template](#) *keyword* [access scp-sftp](#) *boolean*
Tree [scp-sftp](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR-1

ssh-cli *boolean*

Synopsis Allow SSH CLI access
Context **configure** [system security aaa user-template](#) *keyword* [access ssh-cli](#) *boolean*
Tree [ssh-cli](#)

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-cli *boolean*

Synopsis	Allow Telnet CLI access
Context	configure system security aaa user-template <i>keyword</i> access telnet-cli <i>boolean</i>
Tree	telnet-cli
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

console

Synopsis	Enter the console context
Context	configure system security aaa user-template <i>keyword</i> console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR-1

login-exec *string-not-all-spaces*

Synopsis	File to execute when the user logs in
Context	configure system security aaa user-template <i>keyword</i> console login-exec <i>string-not-all-spaces</i>
Tree	login-exec
String length	1 to 200
Introduced	25.3.R2
Platforms	7705 SAR-1

home-directory *cflash-without-slot-url*

Synopsis	User local home directory based on the template
Context	configure system security aaa user-template <i>keyword</i> home-directory <i>cflash-without-slot-url</i>

Tree	home-directory
Description	<p>This command configures the home directory of the user for file access. Files can be accessed locally by CLI file commands and output modifiers such as > (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in.</p> <p>When restricted-to-home is configured, file access is denied unless the home-directory is configured and the directory is created by an administrator.</p>
String length	1 to 200
Introduced	25.3.R2
Platforms	7705 SAR-1

profile *named-item*

Synopsis	User profile based on the template
Context	configure system security aaa user-template <i>keyword</i> profile <i>named-item</i>
Tree	profile
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	configure system security aaa user-template <i>keyword</i> restricted-to-home <i>boolean</i>
Tree	restricted-to-home
Description	<p>When configured to true, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as > (file redirect). The system denies all configuration save operations (such as admin save) via any management interface (such as CLI and NETCONF) unless save-when-restricted is enabled.</p> <p>File access is denied unless a home directory is configured and the directory is created by an administrator.</p> <p>When configured to false, the router permits the user to access all files on the system and to remote files.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	configure system security aaa user-template <i>keyword</i> save-when-restricted <i>boolean</i>
Tree	save-when-restricted
Description	<p>When configured to true, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if restricted-to-home is enabled.</p> <p>The configuration for each region can be saved with admin save CLI commands or when committed over NETCONF and gRPC.</p> <p>When configured to false, the system denies saving the configuration when restricted-to-home is enabled, unless the home directory of the user includes the location of the saved configuration file.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-script

Synopsis	Enter the cli-script context
Context	configure system security cli-script
Tree	cli-script
Introduced	25.3.R2
Platforms	7705 SAR-1

authorization

Synopsis	Enter the authorization context
Context	configure system security cli-script authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR-1

cron

Synopsis	Enter the cron context
Context	configure system security cli-script authorization cron

Tree	cron
Description	Commands in this context configure authorization for the cron job scheduler.
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-user reference

Synopsis	User profile name for CLI command script authorization
Context	configure system security cli-script authorization cron cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

event-handler

Synopsis	Enter the event-handler context
Context	configure system security cli-script authorization event-handler
Tree	event-handler
Description	Commands in this context configure authorization for the Event Handling System (EHS). EHS allows user-controlled programmatic exception handling by allowing a CLI script to be executed upon the detection of a log event.
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-user reference

Synopsis	User profile name for CLI command script authorization
Context	configure system security cli-script authorization event-handler cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dist-cpu-protection

Synopsis	Enter the dist-cpu-protection context
Context	configure system security dist-cpu-protection
Tree	dist-cpu-protection
Description	Commands in this context configure distributed CPU protection (DCP) attributes.
Introduced	25.3.R2
Platforms	7705 SAR-1

policy [[policy-name](#)] *named-item*

Synopsis	Enter the policy list instance
Context	configure system security dist-cpu-protection policy <i>named-item</i>
Tree	policy
Description	Commands in this context configure the attributes of DCP policies. These policies can be applied to objects such as SAPs, network interfaces or ports
Max. instances	130
Introduced	25.3.R2
Platforms	7705 SAR-1

[[policy-name](#)] *named-item*

Synopsis	Policy name
Context	configure system security dist-cpu-protection policy <i>named-item</i>
Tree	policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system security dist-cpu-protection policy <i>named-item</i> description <i>description</i>

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

local-monitoring-policer [\[policer-name\]](#) *named-item*

Synopsis	Enter the local-monitoring-policer list instance
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i>
Tree	local-monitoring-policer
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-1

[policer-name] *named-item*

Synopsis	Local monitoring policer name
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i>
Tree	local-monitoring-policer
String length	1 to 32
Notes	This element is part of a list key.

Synopsis	Action taken when policer rates are exceeded
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> exceed-action <i>keyword</i>
Tree	exceed-action
Description	This command specifies the action taken on the extracted control packets when the configured policer rates are exceeded.
Options	discard, low-priority, none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-1

log-events *keyword*

Synopsis	Control of log events creation for status and activity
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> log-events <i>keyword</i>
Tree	log-events
Description	This command controls the creation of log events related to the status and activity of the local monitoring policer.
Options	false, true, verbose
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

rate

Synopsis	Enter the rate context
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate
Tree	rate
Description	Commands in this context specify the rate and burst tolerance for the policer. The actual hardware may not be able to perfectly rate limit to the exact configured parameters. In this case, the configured parameters will be adapted to the closest supported rate.
Introduced	25.3.R2

Platforms 7705 SAR-1

Introduced	25.3.R2
Platforms	7705 SAR-1

management-interface

Synopsis	Enter the management-interface context
----------	---

Context	configure system security hash-control management-interface
Tree	management-interface
Description	Commands in this context configure encryption parameters for different management interfaces.
Introduced	25.3.R2
Platforms	7705 SAR-1

classic-cli

Synopsis	Enter the classic-cli context
Context	configure system security hash-control management-interface classic-cli
Tree	classic-cli
Introduced	25.3.R2
Platforms	7705 SAR-1

read-algorithm *keyword*

Synopsis	Input encryption algorithm for configuration secrets
Context	configure system security hash-control management-interface classic-cli read-algorithm <i>keyword</i>
Tree	read-algorithm
Description	This command specifies how encrypted configuration secrets are interpreted and which encryption types are accepted when secrets are input into the system or read from a configuration file (for example, at system startup time).
Options	all-hash, hash, hash2, custom
Default	all-hash
Introduced	25.3.R2
Platforms	7705 SAR-1

write-algorithm *keyword*

Synopsis	Output encryption algorithm for configuration secrets
Context	configure system security hash-control management-interface classic-cli write-algorithm <i>keyword</i>
Tree	write-algorithm

Description	This command specifies the format of the output for encrypted configuration secrets (for example, in the saved configuration file, or in the output of the info or show commands).
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc

Synopsis	Enter the grpc context
Context	configure system security hash-control management-interface grpc

Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm *keyword*

Synopsis	Encryption algorithm for configuration secrets
Context	configure system security hash-control management-interface grpc hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Description	This command specifies the format of the input and output for encrypted configuration secrets.
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	25.3.R2
Platforms	7705 SAR-1

md-cli

Synopsis	Enter the md-cli context
Context	configure system security hash-control management-interface md-cli
Tree	md-cli
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm keyword

Synopsis	Encryption algorithm for configuration secrets
Context	configure system security hash-control management-interface md-cli hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Description	This command specifies the format of the input and output for encrypted configuration secrets.
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf

Synopsis	Enter the netconf context
Context	configure system security hash-control management-interface netconf
Tree	netconf
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm keyword

Synopsis	Encryption algorithm for configuration secrets
Context	configure system security hash-control management-interface netconf hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Description	This command specifies the format of the input and output for encrypted configuration secrets.
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	25.3.R2
Platforms	7705 SAR-1

keychains

Synopsis	Enter the keychains context
Context	configure system security keychains
Tree	keychains
Description	Commands in this context configure the keychains for the authentication of control protocol peers, such as BGP, IS-IS, LDP, OSPF, and RSVP peers.
Introduced	25.3.R2
Platforms	7705 SAR-1

keychain [[keychain-name](#)] *named-item*

Synopsis	Enter the keychain list instance
Context	configure system security keychains keychain <i>named-item</i>
Tree	keychain
Description	Commands in this context configure keychain options.
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[[keychain-name](#)] *named-item*

Synopsis	Keychain name
Context	configure system security keychains keychain <i>named-item</i>
Tree	keychain
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the keychain
Context	configure system security keychains keychain <i>named-item</i> admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

bidirectional

Synopsis	Enter the bidirectional context
Context	configure system security keychains keychain <i>named-item</i> bidirectional
Tree	bidirectional
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[keychain-entry-index](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i>
Tree	entry
Description	Commands in this context create a keychain entry, which represents a key configuration to apply to a keychain.
Introduced	25.3.R2
Platforms	7705 SAR-1

[keychain-entry-index] *number*

Synopsis	Keychain ID
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i>
Tree	entry
Range	0 to 63 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the keychain entry
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

algorithm *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encryption algorithm used by the keychain key
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> algorithm <i>keyword</i>
Tree	algorithm
Options	aes-128-cmac-96, hmac-sha-1-96, password, message-digest, hmac-md5, hmac-sha-1, hmac-sha-256, aes-128-gcm-16, aes-128-cmac-128, hmac-sha-256-96, hmac-sha-256-128
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Authentication key used by the encryption algorithm
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key

Description	This command configures the authentication key used by the encryption algorithm to sign and authenticate the protocol packet.
String length	1 to 54
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-time *date-and-time*

Synopsis	Calendar date and time to start using the key
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> begin-time <i>date-and-time</i>
Tree	begin-time
Description	This command specifies the calendar date and time which this specific key entry becomes active and creates an MKA session. If no date and time is set, the begin-time is represented by a date and time string with all NULLs and the key is not valid.
Introduced	25.3.R2
Platforms	7705 SAR-1

option *keyword*

Synopsis	Keychain key option
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> option <i>keyword</i>

macsec

Synopsis	Enter the macsec context
Context	configure system security keychains keychain <i>named-item</i> macsec
Tree	macsec
Description	Commands in this context configure the key entries for the MACsec keychain.
Introduced	25.10.R1
Platforms	7705 SAR-1

entry [[keychain-entry-index](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security keychains keychain <i>named-item</i> macsec entry <i>number</i>
Tree	entry
Description	<p>Commands in this context configure a specific key entry in the keychain. Entries are defined by an entry ID. Each MACsec key entry creates a dedicated MKA for that key entry. MKA uses the key entry's CAK and its encryption algorithm to secure the SAK between peers.</p> <p>The MACsec key entry with an ID of 0 can be configured with a tolerance of forever and can be used as a backup key entry. If at the begin time of any key entry there is a problem with establishing MKA, the keychain may fallback to the backup key entry.</p>

Introduced 25.10.R1
 Platforms 7705 SAR-1

[keychain-entry-index] *number*

Synopsis Keychain ID
 Context **configure** [system](#) [security](#) [keychains](#) [keychain](#) *named-item* [macsec](#) [entry](#) *number*

Tree	algorithm
Options	aes-128-cmac-96, hmac-sha-1-96, password, message-digest, hmac-md5, hmac-sha-1, hmac-sha-256, aes-128-gcm-16, aes-128-cmac-128, hmac-sha-256-96, hmac-sha-256-128
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Authentication key used by the encryption algorithm
Context	configure system security keychains keychain <i>named-item</i> send entry <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	This command configures the authentication key used by the encryption algorithm to sign and authenticate the protocol packet.
String length	1 to 54
Introduced	25.3.R2
Platforms	7705 SAR-1

begin-time *date-and-time*

Synopsis	Calendar date and time to start using the key
Context	configure system security keychains keychain <i>named-item</i> send entry <i>number</i> begin-time <i>date-and-time</i>
Tree	begin-time

Description	This command specifies the calendar date and time which this specific key entry becomes active and creates an MKA session. If no date and time is set, the begin-time is represented by a date and time string with all NULLs and the key is not valid.
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-option-number

Synopsis	Enter the tcp-option-number context
Context	configure system security keychains keychain <i>named-item</i> tcp-option-number
Tree	tcp-option-number
Introduced	25.3.R2
Platforms	7705 SAR-1

receive keyword

Synopsis	TCP option accepted in received TCP packets
Context	configure system security keychains keychain <i>named-item</i> tcp-option-number receive <i>keyword</i>
Tree	receive
Options	option-253, option-254, both, tcp-ao
Default	option-254
Introduced	25.3.R2
Platforms	7705 SAR-1

send keyword

Synopsis	TCP option accepted in sent TCP packets
Context	configure system security keychains keychain <i>named-item</i> tcp-option-number send <i>keyword</i>
Tree	send
Options	option-253, option-254, tcp-ao
Default	option-254
Introduced	25.3.R2
Platforms	7705 SAR-1

management

Synopsis	Enter the management context
Context	configure system security management
Tree	management
Description	Commands in this context control which management protocols can be used to access the SR OS router via the 'Base' and 'management' router instances.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-ftp *boolean*

Synopsis	Allow access to the FTP server
Context	configure system security management allow-ftp <i>boolean</i>
Tree	allow-ftp
Description	When configured to true , this command allows FTP access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , this command disallows access to the SR OS FTP server.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	configure system security management allow-grpc <i>boolean</i>
Tree	allow-grpc
Description	When configured to true , the system allows access to the gRPC server via the 'Base' and 'management' router instances.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-netconf *boolean*

Synopsis	Allow access to the NETCONF server
----------	------------------------------------

Context	configure system security management allow-netconf <i>boolean</i>
Tree	allow-netconf
Description	When configured to true , the system allows NETCONF server access to the SR OS router via the 'Base' and 'management' router instances.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-ssh *boolean*

Synopsis	Allow access to the SSH server
Context	configure system security management allow-ssh <i>boolean</i>
Tree	allow-ssh
Description	When configured to true , this command allows SSH server access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , this command disallows SSH server access.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-telnet *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	configure system security management allow-telnet <i>boolean</i>
Tree	allow-telnet
Description	When configured to true , the system allows IPv4 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , access to the IPv4 Telnet server is not allowed.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-telnet6 *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	configure system security management allow-telnet6 <i>boolean</i>

Tree	allow-telnet6
Description	When configured to true , the system allows IPv6 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , the system prevents access to the IPv6 Telnet server.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

management-access-filter

Synopsis	Enter the management-access-filter context
Context	configure system security management-access-filter
Tree	management-access-filter
Description	Commands in this context configure the attributes for management access filters. Management access filters control all traffic in and out of the CPM. The filters can be used to restrict management of the router by other nodes outside of specific networks (or sub-networks) or through designated ports. Management filters are enforced by the system software.
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-filter

Synopsis	Enter the ip-filter context
Context	configure system security management-access-filter ip-filter
Tree	ip-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	configure system security management-access-filter ip-filter admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Default action for the management access filter
Context	configure system security management-access-filter ip-filter default-action <i>keyword</i>
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security management-access-filter ip-filter entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	configure system security management-access-filter ip-filter entry <i>number</i>
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword*

Synopsis	Action associated with the management access filter
Context	configure system security management-access-filter ip-filter entry <i>number</i> action <i>keyword</i>
Tree	action
Description	<p>This command specifies the action associated with the management access filter match criteria entry.</p> <p>If the packet does not meet any of the match criteria, the configured default action is applied.</p>
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system security management-access-filter ip-filter entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

log-events *boolean*

Synopsis	Enable match logging
Context	configure system security management-access-filter ip-filter entry <i>number</i> log-events <i>boolean</i>
Tree	log-events
Description	<p>When configured to true, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised.</p> <p>When configured to false, match logging is disabled.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR-1

match

Synopsis Enter the **match** context

Context **configure** [system security management-access-filter ip-filter entry](#) *number match*

Tree [match](#)

Description Commands in this context specify match criteria for the entry.

Introduced 25.3.R2

Platforms 7705 SAR-1

dst-port

Synopsis Enable the **dst-port** context

Context **configure** [system security management-access-filter ip-filter entry](#) *number match dst-port*

Tree [dst-port](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

mask *number*

Synopsis IP address mask as the match criterion

Context **configure** [system security management-access-filter ip-filter entry](#) *number match dst-port mask* *number*

Tree [mask](#)

Range 1 to 65535

Default 65535

Introduced 25.3.R2

Platforms 7705 SAR-1

port *number*

Synopsis TCP or UDP port number as the match criterion

Context **configure** [system security management-access-filter ip-filter entry](#) *number match dst-port port* *number*

Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mgmt-port

Synopsis	Enter the mgmt-port context
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port
Tree	mgmt-port
Description	Commands in this context specify match criteria based on the Ethernet port.
Introduced	25.3.R2
Platforms	7705 SAR-1

cpm

Synopsis	Match any traffic received on any Ethernet port
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port cpm
Tree	cpm
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

lag lag-interface

Synopsis	LAG ID as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port lag lag-interface
Tree	lag
String length	1 to 27
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2

Platforms 7705 SAR-1

port-id *port*

Synopsis Port ID as the match criterion

Context **configure** [system](#) [security](#) [management-access-filter](#) [ip-filter](#) [entry](#) *number* [match](#) [mgmt-port](#) **port-id** *port*

Tree [port-id](#)

Notes The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.

Introduced 25.3.R2

Platforms 7705 SAR-1

protocol (*number* | *keyword*)

Synopsis IP protocol as the match criterion

Context **configure** [system](#) [security](#) [management-access-filter](#) [ip-filter](#) [entry](#) *number* [match](#) [protocol](#) (*number* | *keyword*)

Tree [protocol](#)

Range 0 to 255

Options tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp

Introduced 25.3.R2

Platforms 7705 SAR-1

router-instance *string*

Synopsis Router instance as the match criterion

Context **configure** [system](#) [security](#) [management-access-filter](#) [ip-filter](#) [entry](#) *number* [match](#) [router-instance](#) *string*

Tree [router-instance](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

src-ip

Synopsis Enter the **src-ip** context

Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-ip
Tree	src-ip
Description	Commands in this context specify match criteria based on the source IP address.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-prefix* | *ipv4-address*)

Synopsis	IP address or IP prefix as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-ip address (<i>ipv4-prefix</i> <i>ipv4-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ip-prefix-list *reference*

Synopsis	IP prefix list as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure filter match-list ip-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv4-address*

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-ip mask <i>ipv4-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2

Platforms 7705 SAR-1

src-port

Synopsis Enable the **src-port** context

Context **configure** [system security management-access-filter ip-filter entry number match src-port](#)

Tree [src-port](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

mask number

Synopsis IP address mask as the match criterion

Context **configure** [system security management-access-filter ip-filter entry number match src-port mask number](#)

Tree [mask](#)

Range 1 to 65535

Default 65535

Introduced 25.3.R2

Platforms 7705 SAR-1

Synopsis TCP or UDP port number as the match criterion

Context **configure** [system security management-access-filter ip-filter entry number match src-port port number](#)

Tree [port](#)

Range 1 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6-filter

Synopsis Enter the **ipv6-filter** context

Context	configure system security management-access-filter ipv6-filter
Tree	ipv6-filter
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	configure system security management-access-filter ipv6-filter admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Default action for the management access filter
Context	configure system security management-access-filter ipv6-filter default-action <i>keyword</i>
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security management-access-filter ipv6-filter entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	configure system security management-access-filter ipv6-filter entry <i>number</i>
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword*

Synopsis	Action associated with the management access filter
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> action <i>keyword</i>
Tree	action
Description	<p>This command specifies the action associated with the management access filter match criteria entry.</p> <p>If the packet does not meet any of the match criteria, the configured default action is applied.</p>
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2

Platforms 7705 SAR-1

log-events *boolean*

Synopsis	Enable match logging
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> log-events <i>boolean</i>
Tree	log-events
Description	When configured to true , this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised. When configured to false , match logging is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-port

Synopsis	Enable the dst-port context
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match dst-port
Tree	dst-port
Description	Commands in this context specify match criteria based on the destination port.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask number

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match dst-port mask number</i>
Tree	mask
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR-1

port number

Synopsis	TCP or UDP port number as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match dst-port port number</i>
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

flow-label number

Synopsis	Flow identifier used to discriminate traffic flows
Context	configure system security management-access-filter ipv6-filter entry <i>number match flow-label number</i>
Tree	flow-label
Range	0 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR-1

mgmt-port

Synopsis	Enter the mgmt-port context
----------	------------------------------------

Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port
Tree	mgmt-port
Description	Commands in this context specify match criteria based on the Ethernet port.
Introduced	25.3.R2
Platforms	7705 SAR-1

cpm

Synopsis	Match any traffic received on any Ethernet port
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port cpm
Tree	cpm
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

lag *lag-interface*

Synopsis	LAG ID as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port lag <i>lag-interface</i>
Tree	lag
String length	1 to 27
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR-1

port-id *port*

Synopsis	Port ID as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port port-id <i>port</i>
Tree	port-id
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2

Platforms 7705 SAR-1

next-header (*number* | *keyword*)

Synopsis IP protocol to match

Context **configure** [system security management-access-filter ipv6-filter entry](#) *number* [match next-header](#) (*number* | *keyword*)

Tree [next-header](#)

Range 0 to 255

Options tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp

Introduced 25.3.R2

Platforms 7705 SAR-1

router-instance *string*

Synopsis Router instance as the match criterion

Context **configure** [system security management-access-filter ipv6-filter entry](#) *number* [match router-instance](#) *string*

Tree [router-instance](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

src-ip

Synopsis Enter the **src-ip** context

Context **configure** [system security management-access-filter ipv6-filter entry](#) *number* [match src-ip](#)

Tree [src-ip](#)

Description Commands in this context specify match criteria based on the source port.

Introduced 25.3.R2

Platforms 7705 SAR-1

address (*ipv6-prefix* | *ipv6-address*)

Synopsis IPv6 address or IPv6 prefix to match

Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match src-ip address (<i>ipv6-prefix</i> <i>ipv6-address</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match src-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *ipv6-address*

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match src-ip mask <i>ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR-1

src-port

Synopsis	Enable the src-port context
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match src-port
Tree	src-port
Description	Commands in this context specify match criteria based on the source port.
Introduced	25.3.R2

Platforms 7705 SAR-1

mask *number*

Synopsis IP address mask as the match criterion

Context **configure** [system security management-access-filter ipv6-filter entry](#) *number match src-port mask number*

Tree [mask](#)

Range 1 to 65535

Default 65535

Introduced 25.3.R2

Platforms 7705 SAR-1

port *number*

Synopsis TCP or UDP port number as the match criterion

Context **configure** [system security management-access-filter ipv6-filter entry](#) *number match src-port port number*

Tree [port](#)

Range 1 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

mac-filter

Synopsis Enter the **mac-filter** context

Context **configure** [system security management-access-filter mac-filter](#)

Tree [mac-filter](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of management access MAC filter

Context **configure** [system security management-access-filter mac-filter admin-state](#) *keyword*

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-1

default-action *keyword*

Synopsis	Default action for the management access filter
Context	configure system security management-access-filter mac-filter default-action <i>keyword</i>
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security management-access-filter mac-filter entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	configure system security management-access-filter mac-filter entry <i>number</i>
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

action *keyword*

Synopsis	Action associated with the management access filter
Context	configure system security management-access-filter mac-filter entry <i>number</i> action <i>keyword</i>
Tree	action
Description	<p>This command specifies the action associated with the management access filter match criteria entry.</p> <p>If the packet does not meet any of the match criteria, the configured default action is applied.</p>
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system security management-access-filter mac-filter entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

log-events *boolean*

Synopsis	Enable match logging
Context	configure system security management-access-filter mac-filter entry <i>number</i> log-events <i>boolean</i>
Tree	log-events
Description	When configured to true , this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised.

	When configured to false , match logging is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

match

Synopsis	Enter the match context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	25.3.R2
Platforms	7705 SAR-1

cfm-opcode

Synopsis	Enter the cfm-opcode context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	25.3.R2
Platforms	7705 SAR-1

eq *number*

Synopsis	Equal to comparison operator for the CFM opcode
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode eq <i>number</i>
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

gt number

Synopsis	Greater than comparison operator for the CFM opcode
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode gt <i>number</i>
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

lt number

Synopsis	Less than comparison operator for the CFM opcode
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode lt <i>number</i>
Tree	lt
Range	1 to 255
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

range

Synopsis	Enable the range context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR-1

end number

Synopsis	Upper bound of the range for the OpCode to match
----------	--

Context	configure system security management-access-filter mac-filter entry <i>number match cfm-opcode range end</i> <i>number</i>
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

start *number*

Synopsis	Lower bound of the range for the OpCode to match
Context	configure system security management-access-filter mac-filter entry <i>number match cfm-opcode range start</i> <i>number</i>
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

dot1p

Synopsis	Enable the dot1p context
Context	configure system security management-access-filter mac-filter entry <i>number match dot1p</i>
Tree	dot1p
Description	Commands in this context specify match criteria based on the IEEE 802.1p value.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *number*

Synopsis	3-bit mask as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match dot1p mask</i> <i>number</i>
Tree	mask
Range	1 to 7

Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

priority *number*

Synopsis	IEEE 802.1p value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match dot1p priority number</i>
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

dst-mac

Synopsis	Enable the dst-mac context
Context	configure system security management-access-filter mac-filter entry <i>number match dst-mac</i>
Tree	dst-mac
Description	Commands in this context specify match criteria based on the destination MAC.
Introduced	25.3.R2
Platforms	7705 SAR-1

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match dst-mac address mac-address</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match dst-mac mask <i>mac-address</i>
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	25.3.R2
Platforms	7705 SAR-1

etype *etype-value*

Synopsis	Ethernet type II Ethertype value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match etype <i>etype-value</i>
Tree	etype
Description	<p>This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion.</p> <p>The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.</p>
String length	5 to 6
Introduced	25.3.R2
Platforms	7705 SAR-1

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match frame-type <i>keyword</i>
Tree	frame-type
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, 802dot1-ag
Default	802dot3
Introduced	25.3.R2
Platforms	7705 SAR-1

llc-dsap

Synopsis	Enable the llc-dsap context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	25.3.R2
Platforms	7705 SAR-1

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match llc-dsap dsap <i>number</i>
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *number*

Synopsis	Mask for DSAP value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match llc-dsap mask <i>number</i>
Tree	mask
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

llc-ssap

Synopsis	Enable the llc-ssap context
----------	------------------------------------

Context	configure system security management-access-filter mac-filter entry <i>number match llc-ssap</i>
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match llc-ssap mask</i> <i>number</i>
Tree	mask
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR-1

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match llc-ssap ssap</i> <i>number</i>
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

service *service-name*

Synopsis	Service ID used as the match condition
Context	configure system security management-access-filter mac-filter entry <i>number match service</i> <i>service-name</i>
Tree	service

String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

snap-oui *keyword*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame OUI value for match
Context	configure system security management-access-filter mac-filter entry <i>number</i> match snap-oui <i>keyword</i>
Tree	snap-oui
Description	This command specifies the IEEE 802.3 LLC SNAP Ethernet Frame OUI value as the MAC filter match criterion.
Options	zero, non-zero
Introduced	25.3.R2
Platforms	7705 SAR-1

snap-pid *number*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame PID as the match
Context	configure system security management-access-filter mac-filter entry <i>number</i> match snap-pid <i>number</i>
Tree	snap-pid
Description	<p>This command specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value used as the MAC filter match criterion.</p> <p>The SNAP PID match criterion is independent of the OUI field within the SNAP header. Two packets with different 3-byte OUI fields but the same PID field match the same filter entry based on a SNAP PID match criterion.</p>
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-1

src-mac

Synopsis	Enable the src-mac context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match src-mac
Tree	src-mac

Description	Commands in this context specify match criteria based on the source MAC.
Introduced	25.3.R2
Platforms	7705 SAR-1

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match src-mac address</i> <i>mac-address</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match src-mac mask</i> <i>mac-address</i>
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	25.3.R2
Platforms	7705 SAR-1

pki

Synopsis	Enter the pki context
Context	configure system security pki
Tree	pki
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile [[ca-profile-name](#)] *named-item*

Synopsis	Enter the ca-profile list instance
Context	configure system security pki ca-profile <i>named-item</i>

Tree	ca-profile
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[ca-profile-name] *named-item*

Synopsis	CA profile name
Context	configure system security pki ca-profile <i>named-item</i>
Tree	ca-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the CA profile
Context	configure system security pki ca-profile <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

auto-crl-update

Synopsis	Enable the auto-crl-update context
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update
Tree	auto-crl-update
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the automatic CRL update
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

crl-urls**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the crl-urls context
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls
Tree	crl-urls
Introduced	25.3.R2
Platforms	7705 SAR-1

url-entry [[entry-id](#)] *number*

Synopsis	Enter the url-entry list instance
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i>
Tree	url-entry
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	URL on this system
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i>

Tree	url-entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

transmission-profile *reference*

Synopsis	File transmission profile to update CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i> transmission-profile <i>reference</i>
Tree	transmission-profile
Reference	configure system transmission-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

url *http-url-path-loose*

Synopsis	Location of updated CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i> url <i>http-url-path-loose</i>
Tree	url
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

periodic-update-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval between two consecutive CRL updates
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update periodic-update-interval <i>number</i>
Tree	periodic-update-interval
Range	3600 to 31622400

Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR-1

pre-update-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time prior to the next update time of the current CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update pre-update-time <i>number</i>
Tree	pre-update-time
Range	0 to 31622400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval before retrying to update CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update retry-interval <i>number</i>
Tree	retry-interval
Range	0 to 31622400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR-1

schedule-type keyword

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time scheduler type for an automated CRL update
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update schedule-type keyword
Tree	schedule-type
Options	next-update-based, periodic
Default	next-update-based
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-file pki-file-name

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate file name
Context	configure system security pki ca-profile <i>named-item</i> cert-file pki-file-name
Tree	cert-file
String length	1 to 95
Introduced	25.3.R2
Platforms	7705 SAR-1

cmpv2

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cmpv2 context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2
Tree	cmpv2
Description	Commands in this context configure CMPv2 options.

Introduced 25.3.R2
Platforms 7705 SAR-1

accept-unprotected-message

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **accept-unprotected-message** context

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [cmpv2](#) [accept-unprotected-message](#)

Tree [accept-unprotected-message](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

error-message *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Accept unprotected error messages

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [cmpv2](#) [accept-unprotected-message](#) [error-message](#) *boolean*

Tree [error-message](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

pkiconf-message *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Accept unprotected PKI confirmation messages

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [cmpv2](#) [accept-unprotected-message](#) [pkiconf-message](#) *boolean*

Tree	pkiconf-message
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

always-set-sender-for-ir *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Set subject name in CMPv2 header for all IR messages
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 always-set-sender-for-ir <i>boolean</i>
Tree	always-set-sender-for-ir
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

http

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the http context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 http
Tree	http
Introduced	25.3.R2
Platforms	7705 SAR-1

response-timeout *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	HTTP response timeout
----------	-----------------------

Context	configure system security pki ca-profile <i>named-item</i> cmpv2 http response-timeout <i>number</i>
Tree	response-timeout
Range	1 to 3600
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	HTTP version for CMPv2 messages
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 http version <i>keyword</i>
Tree	version
Options	1.0, 1.1
Default	1.1
Introduced	25.3.R2
Platforms	7705 SAR-1

key-list

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-list context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 key-list
Tree	key-list
Introduced	25.3.R2
Platforms	7705 SAR-1

key [\[reference-number\]](#) *display-string*

Synopsis	Enter the key list instance
Context	configure system security pki ca-profile <i>named-item cmpv2 key-list key display-string</i>
Tree	key
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[reference-number] *display-string*

Synopsis	Unique identifier for the CA initial authentication key
Context	configure system security pki ca-profile <i>named-item cmpv2 key-list key display-string</i>
Tree	key
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

password *encrypted-leaf*

Synopsis	Shared secret for this CA initial authentication key
Context	configure system security pki ca-profile <i>named-item cmpv2 key-list key display-string password encrypted-leaf</i>
Tree	password
String length	1 to 115
Introduced	25.3.R2
Platforms	7705 SAR-1

recipient-subject *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DN attributes for recipient subject of CMPv2 requests
Context	configure system security pki ca-profile <i>named-item cmpv2 recipient-subject</i> <i>string</i>
Tree	recipient-subject
String length	1 to 256
Notes	The following elements are part of a choice: recipient-subject or use-ca-subject .
Introduced	25.3.R2
Platforms	7705 SAR-1

response-signing-cert *pki-file-name*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	File name of the certificate to verify CMPv2 responses
Context	configure system security pki ca-profile <i>named-item cmpv2 response-signing-cert</i> <i>pki-file-name</i>
Tree	response-signing-cert
Description	This command specifies an imported certificate used to verify the CMP response message that they are protected by signature. When unconfigured, CA's certificate is used.
String length	1 to 95
Notes	The following elements are part of a choice: response-signing-cert or response-signing-use-extracert .
Introduced	25.3.R2
Platforms	7705 SAR-1

response-signing-use-extracert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use extraCerts certificate to verify response signature
Context	configure system security pki ca-profile <i>named-item cmpv2 response-signing-use-extracert</i>
Tree	response-signing-use-extracert

Notes	The following elements are part of a choice: response-signing-cert or response-signing-use-extracert .
Introduced	25.3.R2
Platforms	7705 SAR-1

same-recipient-nonce-for-poll-request *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use same recipNonce as last CMPv2 response
Context	configure system security pki ca-profile <i>named-item cmpv2</i> same-recipient-nonce-for-poll-request <i>boolean</i>
Tree	same-recipient-nonce-for-poll-request
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

signing-cert-subject *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Subject DN attributes to identify signing certificate
Context	configure system security pki ca-profile <i>named-item cmpv2</i> signing-cert-subject <i>string</i>
Tree	signing-cert-subject
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

url

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the url context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 url
Tree	url
Introduced	25.3.R2
Platforms	7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 url service-name <i>service-name</i>
Tree	service-name
String length	1 to 64
Notes	The following elements are part of a choice: service-name or transmission-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

transmission-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Transmission profile for CMPv2
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 url transmission-profile <i>reference</i>
Tree	transmission-profile
Reference	configure system transmission-profile <i>named-item</i>
Notes	The following elements are part of a choice: service-name or transmission-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

url-string *http-optional-url-loose*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	URL for CMPv2
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 url url-string <i>http-optional-url-loose</i>
Tree	url-string
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

use-ca-subject

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use subject DN in CA certificate as CMPv2 request recipient
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 use-ca-subject
Tree	use-ca-subject
Notes	The following elements are part of a choice: recipient-subject or use-ca-subject .
Introduced	25.3.R2
Platforms	7705 SAR-1

crl-file *pki-file-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate Revocation List (CRL) file name
Context	configure system security pki ca-profile <i>named-item</i> crl-file <i>pki-file-name</i>
Tree	crl-file
String length	1 to 95
Introduced	25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [description](#) *description*

Tree [description](#)

String length 1 to 80

Introduced 25.3.R2

Platforms 7705 SAR-1

ocsp

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **ocsp** context

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [ocsp](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

responder-url *http-optional-url-loose*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis HTTP URL of the OCSP responder for the CA

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [ocsp](#) [responder-url](#) *http-optional-url-loose*

Tree [responder-url](#)

String length 1 to 180

Introduced 25.3.R2

Platforms 7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure system security pki ca-profile <i>named-item</i> ocsp service-name <i>service-name</i>
Tree	service-name
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-1

transmission-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Transmission profile for the OCSP
Context	configure system security pki ca-profile <i>named-item</i> ocsp transmission-profile <i>reference</i>
Tree	transmission-profile
Reference	configure system transmission-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

revocation-check *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Revocation method to check status of CA certificates
Context	configure system security pki ca-profile <i>named-item</i> revocation-check <i>keyword</i>
Tree	revocation-check
Description	This command specifies the revocation method the system uses to check the revocation status of certificate issued by the CA.

Note: The **crl-optional** command option makes configuration of a valid CRL in a **ca-profile** optional. However, from a security point of view, it is important to always verify the revocation status of a certificate.

Options	crl, crl-optional
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate-auto-update [[certificate-file-name](#)] *pki-file-name*

Synopsis	Enter the certificate-auto-update list instance
Context	configure system security pki certificate-auto-update <i>pki-file-name</i>
Tree	certificate-auto-update
Description	Commands in this context configure automatic certificate update associations.
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[certificate-file-name] *pki-file-name*

Synopsis	Certificate file name
Context	configure system security pki certificate-auto-update <i>pki-file-name</i>
Tree	certificate-auto-update
String length	1 to 95
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

key-file-name *pki-file-name*

Synopsis	Imported key filename
Context	configure system security pki certificate-auto-update <i>pki-file-name</i> key-file-name <i>pki-file-name</i>
Tree	key-file-name
String length	1 to 95

Introduced 25.3.R2
Platforms 7705 SAR-1

profile *reference*

Synopsis Certificate update profile name
Context **configure** [system security pki certificate-auto-update](#) *pki-file-name* [profile](#) *reference*
Tree [profile](#)
Reference **configure** [system security pki certificate-update-profile](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR-1

certificate-display-format *keyword*

Synopsis Display format for Certificates and CRLs
Context **configure** [system security pki certificate-display-format](#) *keyword*
Tree [certificate-display-format](#)
Options `ascii`, `utf8`
Default `ascii`
Introduced 25.3.R2
Platforms 7705 SAR-1

certificate-expiration-warning

Synopsis Enter the **certificate-expiration-warning** context
Context **configure** [system security pki certificate-expiration-warning](#)
Tree [certificate-expiration-warning](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

hours *number*

Synopsis Time before system generates certificate warning trap
Context **configure** [system security pki certificate-expiration-warning](#) [hours](#) *number*
Tree [hours](#)

Range	0 to 8760
Units	hours
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat-hours *number*

Synopsis	Time system repeats certificate expiration warning trap
Context	configure system security pki certificate-expiration-warning repeat-hours <i>number</i>
Tree	repeat-hours
Range	0 to 8760
Units	hours
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate-update-profile [[name](#)] *named-item*

Synopsis	Enter the certificate-update-profile list instance
Context	configure system security pki certificate-update-profile <i>named-item</i>
Tree	certificate-update-profile
Description	Commands in this context configure a certificate update profile that specifies the behavior of the automatic update certificate.
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Certificate update profile name
Context	configure system security pki certificate-update-profile <i>named-item</i>
Tree	certificate-update-profile
Description	This command configures the certificate update profile name.
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

after-issue *number*

Synopsis	Time for scheduler updates after certificate issuance
Context	configure system security pki certificate-update-profile <i>named-item</i> after-issue <i>number</i>
Tree	after-issue
Description	This command configures the time for scheduler updates after the certificate issue time.
Range	864000 to 157680000
Units	seconds
Notes	The following elements are part of a choice: after-issue or before-expiry .
Introduced	25.3.R2
Platforms	7705 SAR-1

before-expiry *number*

Synopsis	Time scheduler updates before certificate expiry
Context	configure system security pki certificate-update-profile <i>named-item</i> before-expiry <i>number</i>
Tree	before-expiry
Description	This command configures the time that the scheduler updates before the certificate expiration time.
Range	3600 to 157680000
Units	seconds
Default	86400
Notes	The following elements are part of a choice: after-issue or before-expiry .
Introduced	25.3.R2
Platforms	7705 SAR-1

cmpv2

Synopsis	Enter the cmpv2 context
Context	configure system security pki certificate-update-profile <i>named-item</i> cmpv2

Tree	cmpv2
Notes	The following elements are part of a choice: cmpv2 or est .
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile *reference*

Synopsis	CA profile name
Context	configure system security pki certificate-update-profile <i>named-item</i> cmpv2 ca-profile <i>reference</i>
Tree	ca-profile
Description	This command specifies the use of CMPv2 as the protocol to update the certificate. The CMPv2 configuration is derived from the referenced CA profile.
Reference	configure system security pki ca-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

dsa

Synopsis	Enter the dsa context
Context	configure system security pki certificate-update-profile <i>named-item</i> dsa
Tree	dsa
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR-1

key-size *number*

Synopsis	Length of the generated DSA key
Context	configure system security pki certificate-update-profile <i>named-item</i> dsa key-size <i>number</i>
Tree	key-size
Description	This command specifies that the newly generated key is an DSA key with the specified key length in bits.
Range	512 to 8192
Default	2048

Introduced	25.3.R2
Platforms	7705 SAR-1

ecdsa

Synopsis	Enter the ecdsa context
Context	configure system security pki certificate-update-profile <i>named-item</i> ecdsa
Tree	ecdsa
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR-1

curve *keyword*

Synopsis	Elliptic curve to be used in ECDSA key generation
Context	configure system security pki certificate-update-profile <i>named-item</i> ecdsa curve <i>keyword</i>
Tree	curve
Description	This command specifies that the newly generated key is an ECDSA key with the specified curve.
Options	secp256r1, secp384r1, secp521r1
Default	secp256r1
Introduced	25.3.R2
Platforms	7705 SAR-1

est

Synopsis	Enter the est context
Context	configure system security pki certificate-update-profile <i>named-item</i> est
Tree	est
Notes	The following elements are part of a choice: cmpv2 or est .
Introduced	25.3.R2
Platforms	7705 SAR-1

est-profile *reference*

Synopsis	EST profile name
Context	configure system security pki certificate-update-profile <i>named-item</i> est est-profile <i>reference</i>
Tree	est-profile
Description	This command specifies the use of EST as the protocol to update the certificate. The EST configuration is derived from the referenced EST profile.
Reference	configure system security pki est-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

hash-algorithm *keyword*

Synopsis	Hash algorithm for a certificate request
Context	configure system security pki certificate-update-profile <i>named-item</i> hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Description	This command specifies the hash algorithm used to generate a certificate request.
Options	md5, sha1, sha224, sha256, sha384, sha512
Default	sha256
Introduced	25.3.R2
Platforms	7705 SAR-1

retry-interval *number*

Synopsis	Retry interval after a failed update
Context	configure system security pki certificate-update-profile <i>named-item</i> retry-interval <i>number</i>
Tree	retry-interval
Description	This command configures the retry interval after the update fails.
Range	60 to 36000
Units	seconds
Default	3600
Introduced	25.3.R2

Platforms 7705 SAR-1

rsa

Synopsis	Enter the rsa context
Context	configure system security pki certificate-update-profile <i>named-item</i> rsa
Tree	rsa
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR-1

key-size *number*

Synopsis	Length of the generated RSA key
Context	configure system security pki certificate-update-profile <i>named-item</i> rsa key-size <i>number</i>
Tree	key-size
Description	This command specifies that the newly generated key is a RSA key with the specified key length in bits.
Range	512 to 8192
Default	2048
Introduced	25.3.R2
Platforms	7705 SAR-1

same-as-existing-key

Synopsis	Generate the new key to same type and key length
Context	configure system security pki certificate-update-profile <i>named-item</i> same-as-existing-key
Tree	same-as-existing-key
Description	When configured, this command specifies that the newly generated key is the same type and key length as the existing key.
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR-1

common-name-list [[cn-list-name](#)] *named-item*

Synopsis	Enter the common-name-list list instance
Context	configure system security pki common-name-list <i>named-item</i>
Tree	common-name-list
Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR-1

[cn-list-name] *named-item*

Synopsis	CN list name
Context	configure system security pki common-name-list <i>named-item</i>
Tree	common-name-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

common-name [[cn-index](#)] *number*

Synopsis	Enter the common-name list instance
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i>
Tree	common-name
Introduced	25.3.R2
Platforms	7705 SAR-1

[cn-index] *number*

Synopsis	Common name index
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i>
Tree	common-name
Range	1 to 128
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

cn-type *keyword*

Synopsis	Common name type
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i> cn-type <i>keyword</i>
Tree	cn-type
Options	ip-address, domain-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

cn-value *regular-expression-not-all-spaces*

Synopsis	Common name value
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i> cn-value <i>regular-expression-not-all-spaces</i>
Tree	cn-value
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

crl-expiration-warning

Synopsis	Enter the crl-expiration-warning context
Context	configure system security pki crl-expiration-warning
Tree	crl-expiration-warning
Introduced	25.3.R2
Platforms	7705 SAR-1

hours *number*

Synopsis	Time before system generates CRL expiration warning trap
----------	--

Context	configure system security pki <i>crl-expiration-warning</i> hours <i>number</i>
Tree	hours
Range	0 to 8760
Units	hours
Introduced	25.3.R2
Platforms	7705 SAR-1

repeat-hours *number*

Synopsis	Time system repeats CRL expiration warning trap
Context	configure system security pki <i>crl-expiration-warning</i> repeat-hours <i>number</i>
Tree	repeat-hours
Range	0 to 8760
Units	hours
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-1

dynamic-ca *boolean*

Synopsis	Enable the dynamic sub-CA support for IPsec
Context	configure system security pki <i>dynamic-ca</i> <i>boolean</i>
Tree	dynamic-ca
Description	When configured to true , the system may authenticate the IPsec peer using a certificate without provisioning the peer's sub-CAs locally, if the peer sends sub-CA certificates during IKEv2 exchanges.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

est-profile [*name*] *named-item*

Synopsis	Enter the est-profile list instance
Context	configure system security pki <i>est-profile</i> <i>named-item</i>
Tree	est-profile

Description	Commands in this context configure an Enrollment over Secure Transport (EST) profile.
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR-1

[name] *named-item*

Synopsis	Enrollment over Secured Transport profile name
Context	configure system security pki est-profile <i>named-item</i>
Tree	est-profile
Description	This command configures the EST profile name.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

check-id-kp-cmcra-only *boolean*

Synopsis	Check id-kp-cmcra in the EST certificate
Context	configure system security pki est-profile <i>named-item</i> check-id-kp-cmcra-only <i>boolean</i>
Tree	check-id-kp-cmcra-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile *named-item*

Synopsis	TLS client profile assigned to applications
Context	configure system security pki est-profile <i>named-item</i> client-tls-profile <i>named-item</i>
Tree	client-tls-profile
Description	This command specifies the TLS client profile to be assigned to applications for encryption. The profile creates the TLS connection to the EST server.
String length	1 to 32
Introduced	25.3.R2

Platforms 7705 SAR-1

http-authentication

Synopsis Enter the **http-authentication** context

Context **configure** [system security pki est-profile](#) *named-item* [http-authentication](#)

Tree [http-authentication](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

password *encrypted-leaf*

Synopsis Password for EST authentication

Context **configure** [system security pki est-profile](#) *named-item* [http-authentication password](#) *encrypted-leaf*

Tree [password](#)

String length 1 to 115

Introduced 25.3.R2

Platforms 7705 SAR-1

username *string*

Synopsis Username for the EST authentication

Context **configure** [system security pki est-profile](#) *named-item* [http-authentication username](#) *string*

Tree [username](#)

String length 1 to 32

Introduced 25.3.R2

Platforms 7705 SAR-1

server

Synopsis Enter the **server** context

Context **configure** [system security pki est-profile](#) *named-item* [server](#)

Tree [server](#)

Description Commands in this context configure EST server parameters.

Introduced 25.3.R2
Platforms 7705 SAR-1

fqdn *fully-qualified-domain-name*

Synopsis Fully Qualified Domain Name (FQDN) of the EST server

Context **configure** *system security pki est-profile named-item server fqdn fully-qualified-domain-name*

Tree *fqdn*

Description This command specifies to use the FQDN of the EST server.

String length 1 to 255

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv4 *ipv4-unicast-address*

Synopsis IPv4 address of the EST server

Context **configure** *system security pki est-profile named-item server ipv4 ipv4-unicast-address*

Tree *ipv4*

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IPv6 address of the EST server

Context **configure** *system security pki est-profile named-item server ipv6 (ipv4-address-no-zone | ipv6-address-no-zone)*

Tree *ipv6*

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 25.3.R2

Platforms 7705 SAR-1

port *number*

Synopsis	Port number of the EST server
Context	configure system security pki est-profile <i>named-item</i> server port <i>number</i>
Tree	port
Range	1 to 65535
Default	443
Introduced	25.3.R2
Platforms	7705 SAR-1

transmission-profile *named-item*

Synopsis	Transmission profile name for EST
Context	configure system security pki est-profile <i>named-item</i> transmission-profile <i>named-item</i>
Tree	transmission-profile
Description	This command associates a file transmission profile to the EST profile. The transmission profile defines transport parameters for protocol such as HTTP, include routing instance, source address, timeout value, and so on.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

imported-format *keyword*

Synopsis	The supported encrypted file formats
Context	configure system security pki imported-format <i>keyword</i>
Tree	imported-format
Options	any, secure
Default	any
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-cert-chain-depth *number*

Synopsis	Maximum depth of certificate chain verification
----------	---

Context	configure system security pki maximum-cert-chain-depth <i>number</i>
Tree	maximum-cert-chain-depth
Range	1 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR-1

python-script

Synopsis	Enter the python-script context
Context	configure system security python-script
Tree	python-script
Introduced	25.3.R2
Platforms	7705 SAR-1

authorization

Synopsis	Enter the authorization context
Context	configure system security python-script authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR-1

cron

Synopsis	Enter the cron context
Context	configure system security python-script authorization cron
Tree	cron
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-user *reference*

Synopsis	User profile name when executing a Python application
Context	configure system security python-script authorization cron cli-user <i>reference</i>

Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

event-handler

Synopsis	Enter the event-handler context
Context	configure system security python-script authorization event-handler
Tree	event-handler
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-user reference

Synopsis	User profile name when executing a Python application
Context	configure system security python-script authorization event-handler cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

subscriber-mgmt

Synopsis	Enter the subscriber-mgmt context
Context	configure system security python-script authorization subscriber-mgmt
Tree	subscriber-mgmt
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-user reference

Synopsis	User profile name when executing a Python application
Context	configure system security python-script authorization subscriber-mgmt cli-user <i>reference</i>

Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp

Synopsis	Enter the snmp context
Context	configure system security snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR-1

access [[group](#)] *named-item* [context](#) *named-item-or-empty* [security-model](#) *keyword* [security-level](#) *keyword*

Synopsis	Enter the access list instance
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
Introduced	25.3.R2
Platforms	7705 SAR-1

[group] *named-item*

Synopsis	Group name
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

context *named-item-or-empty*

Synopsis	String to match context name for access rights
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
String length	0 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

security-model *keyword*

Synopsis	Security model
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
Options	snmpv1, snmpv2c, usm
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

security-level *keyword*

Synopsis	Minimum security level required to gain access rights
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
Options	no-auth-no-privacy, auth-no-privacy, privacy
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

notify *named-item*

Synopsis	SNMP view for notification access
----------	-----------------------------------

Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> notify <i>named-item</i>
Tree	notify
Description	This command specifies the SNMP view used to control which MIB objects can be accessed for notifications.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix-match *keyword*

Synopsis	Match type for the context
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> prefix-match <i>keyword</i>
Tree	prefix-match
Options	exact, prefix
Introduced	25.3.R2
Platforms	7705 SAR-1

read *named-item*

Synopsis	SNMP view for read access
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> read <i>named-item</i>
Tree	read
Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a read (get) operation.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

write *named-item*

Synopsis	SNMP view for write access
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> write <i>named-item</i>
Tree	write

Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a write (set) operation.
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

attempts

Synopsis	Enter the attempts context
Context	configure system security snmp attempts
Tree	attempts
Description	<p>Commands in this context configure settings for SNMPv2 or SNMPv3 connection attempts. The command settings are used to counter Denial of Service (DOS) attacks through SNMP.</p> <p>If the threshold is exceeded, the host is locked out for the lockout time period.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

count *number*

Synopsis	Unsuccessful attempts allowed within time period
Context	configure system security snmp attempts count <i>number</i>
Tree	count
Range	1 to 64
Default	20
Introduced	25.3.R2
Platforms	7705 SAR-1

lockout *number*

Synopsis	Lockout period during which the host cannot log in
Context	configure system security snmp attempts lockout <i>number</i>
Tree	lockout
Description	This command configures the time period during which the host cannot log in. When the host exceeds the attempted counts setting, the host is locked out from further login attempts for the configured time period.

Range	0 to 1440
Units	minutes
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

time *number*

Synopsis	Time before host lockout after unsuccessful attempts
Context	configure system security snmp attempts time <i>number</i>
Tree	time
Range	0 to 60
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

community [[community-string](#)] *encrypted-leaf*

Synopsis	Enter the community list instance
Context	configure system security snmp community <i>encrypted-leaf</i>
Tree	community
Introduced	25.3.R2
Platforms	7705 SAR-1

[community-string] *encrypted-leaf*

Synopsis	SNMPv1 or SNMPv2c community string
Context	configure system security snmp community <i>encrypted-leaf</i>
Tree	community
String length	1 to 114
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

access-permissions *keyword*

Synopsis	Access permissions for objects in the MIB
Context	configure system security snmp community <i>encrypted-leaf</i> access-permissions <i>keyword</i>
Tree	access-permissions
Options	r, rw, rwa, mgmt, vpls-mgmt
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

source-access-list *reference*

Synopsis	Source access list to validate received SNMP requests
Context	configure system security snmp community <i>encrypted-leaf</i> source-access-list <i>reference</i>
Tree	source-access-list
Reference	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

version *keyword*

Synopsis	SNMP version
Context	configure system security snmp community <i>encrypted-leaf</i> version <i>keyword</i>
Tree	version
Options	v1, v2c, both
Default	both
Introduced	25.3.R2
Platforms	7705 SAR-1

source-access-list [[list-name](#)] *string-not-all-spaces*

Synopsis	Enter the source-access-list list instance
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Tree	source-access-list

Description	Commands in this context configure SNMP source access lists. SNMP source access lists are used to validate the source IP address of received SNMP requests. Multiple community (VPRN or Base router) and USM community instances can reference the same SNMP source access list.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[list-name] *string-not-all-spaces*

Synopsis	Source access list name
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Tree	source-access-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

source-host [\[host-name\]](#) *named-item*

Synopsis	Enter the source-host list instance
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i> source-host <i>named-item</i>
Tree	source-host
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[host-name] *named-item*

Synopsis	Source host entry name
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i> source-host <i>named-item</i>
Tree	source-host
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address entry used to validate SNMP requests
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i> source-host <i>named-item</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

usm-community [[community-string](#)] *encrypted-leaf*

Synopsis	Enter the usm-community list instance
Context	configure system security snmp usm-community <i>encrypted-leaf</i>
Tree	usm-community
Introduced	25.3.R2
Platforms	7705 SAR-1

[community-string] *encrypted-leaf*

Synopsis	Community string associated with SNMPv3 access group
Context	configure system security snmp usm-community <i>encrypted-leaf</i>
Tree	usm-community
String length	1 to 114
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

group *named-item*

Synopsis	Group to manage access rights of the community string
----------	---

Context	configure system security snmp usm-community <i>encrypted-leaf</i> group <i>named-item</i>
Tree	group
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

source-access-list *reference*

Synopsis	Source access list to validate received SNMP requests
Context	configure system security snmp usm-community <i>encrypted-leaf</i> source-access-list <i>reference</i>
Tree	source-access-list
Reference	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

view [[view-name](#)] *named-item subtree string*

Synopsis	Enter the view list instance
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i>
Tree	view
Introduced	25.3.R2
Platforms	7705 SAR-1

[view-name] *named-item*

Synopsis	View name
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i>
Tree	view
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

subtree string

Synopsis	Object Identifier (OID) value
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i>
Tree	view
String length	1 to 256
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

mask string

Synopsis	Mask value as binary value, or hex value
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i> mask <i>string</i>
Tree	mask
String length	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR-1

type keyword

Synopsis	Type of SNMP security view mask
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i> type <i>keyword</i>
Tree	type
Options	included, excluded
Introduced	25.3.R2
Platforms	7705 SAR-1

source-address

Synopsis	Enter the source-address context
Context	configure system security source-address
Tree	source-address
Description	Commands in this context configure the IP source address that is used in all unsolicited packets sent by the specified applications.

This configuration applies to packets transmitted in-band (for example, a network port on an IOM) and does not apply to packets transmitted out-of-band on the management interface on the CPM Ethernet port. Packets transmitted using the CPM Ethernet port use the address of the CPM Ethernet port as the IP source address in the packet.

When a source address is specified for the PTP application, the port-based 1588 hardware timestamping assist function is applied to PTP packets matching the IPv4 address of the router interface used to ingress the SR/ESS or IP address specified in this command. If the IP address is removed, the port-based 1588 hardware timestamping assist function is only applied to PTP packets matching the IPv4 address of the router interface.

Introduced 25.3.R2
Platforms 7705 SAR-1

ipv4 [[application](#)] *keyword*

Synopsis Enter the **ipv4** list instance
Context **configure** [system security source-address ipv4](#) *keyword*
Tree [ipv4](#)
Introduced 25.3.R2
Platforms 7705 SAR-1

[application] *keyword*

Synopsis Application that uses the source IP address

Tree	cipher
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Algorithm for performing encryption or decryption
Context	configure system security ssh server-cipher-list-v2 cipher <i>number</i> name <i>keyword</i>
Tree	name
Options	3des-cbc, aes128-cbc, aes192-cbc, aes256-cbc, aes128-ctr, aes192-ctr, aes256-ctr
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-host-key-list-v2

Synopsis	Enter the server-host-key-list-v2 context
Context	configure system security ssh server-host-key-list-v2
Tree	server-host-key-list-v2
Introduced	25.3.R2
Platforms	7705 SAR-1

host-key [[index](#)] *number*

Synopsis	Enter the host-key list instance
Context	configure system security ssh server-host-key-list-v2 host-key <i>number</i>
Tree	host-key
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	SSHv2 host key algorithm index
Context	configure system security ssh server-host-key-list-v2 host-key <i>number</i>
Tree	host-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Host key algorithm for computing a signature
Context	configure system security ssh server-host-key-list-v2 host-key <i>number</i> name <i>keyword</i>
Tree	name
Options	ssh-rsa, rsa-sha2-256, rsa-sha2-512, ecdsa-sha2-nistp256, ecdsa-sha2-nistp384, ecdsa-sha2-nistp521, ssh-ed25519
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-kex-list-v2

Synopsis	Enter the server-kex-list-v2 context
Context	configure system security ssh server-kex-list-v2
Tree	server-kex-list-v2
Introduced	25.3.R2

Platforms 7705 SAR-1

kex [[index](#)] *number*

Synopsis Enter the **kex** list instance

Context **configure** [system security ssh server-kex-list-v2 kex](#) *number*

Tree [kex](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

[index] *number*

Synopsis SSHv2 KEX algorithm index

Context **configure** [system security ssh server-kex-list-v2 kex](#) *number*

Tree [kex](#)

Description This command configures the index of the KEX algorithm in the list. The lowest index in the list is negotiated first on the SSH negotiation list, while the highest index is at the bottom of the SSH negotiation list.

Range 1 to 255

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-1

name *keyword*

Synopsis KEX algorithm for computing a shared secret key

Context **configure** [system security ssh server-kex-list-v2 kex](#) *number* [name](#) *keyword*

Tree [name](#)

Options diffie-hellman-group1-sha1, diffie-hellman-group14-sha1, diffie-hellman-group-exchange-sha1, diffie-hellman-group14-sha256, diffie-hellman-group16-sha512, ecdh-sha2-nistp256, ecdh-sha2-nistp384, ecdh-sha2-nistp521

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

server-mac-list-v2

Synopsis	Enter the server-mac-list-v2 context
Context	configure system security ssh server-mac-list-v2
Tree	server-mac-list-v2
Introduced	25.3.R2
Platforms	7705 SAR-1

mac [[index](#)] *number*

Synopsis	Enter the mac list instance
Context	configure system security ssh server-mac-list-v2 mac <i>number</i>
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR-1

[[index](#)] *number*

Synopsis	MAC algorithm index
Context	configure system security ssh server-mac-list-v2 mac <i>number</i>
Tree	mac
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Algorithm for calculating message authentication code
Context	configure system security ssh server-mac-list-v2 mac <i>number</i> name <i>keyword</i>
Tree	name
Options	hmac-sha2-512, hmac-sha2-256, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

system-passwords

Synopsis	Enter the system-passwords context
Context	configure system security system-passwords
Tree	system-passwords
Description	This command enters the context to configure system passwords.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-password *hashed-leaf*

Synopsis	Administrative password for the enable command
Context	configure system security system-passwords admin-password <i>hashed-leaf</i>
Tree	admin-password
Description	<p>This command allows a user with administrative permissions to configure a password that enables a user to become an administrator.</p> <p>This password is valid only for one session. When enabled, no authorization to TACACS + or RADIUS is performed and the user is locally regarded as an administrative user.</p> <p>If the admin-password is configured in the configure system security system-passwords admin-password context, any user can enter the special mode by entering the enable command.</p> <p>enable is in the default profile. By default, all users are given access to this command.</p> <p>After the enable command is entered, the user is prompted for a password. If the password matches, user is given unrestricted access to all commands.</p> <p>The minimum length of the password is determined by the minimum-length command. The complexity requirements for the password are determined by the complexity command.</p> <p>Note: This command applies to a local user, in addition to users on RADIUS, TACACS, and LDAP.</p>
String length	3 to 136
Introduced	25.3.R2
Platforms	7705 SAR-1

tech-support

Synopsis	Enter the tech-support context
Context	configure system security tech-support

Tree	tech-support
Introduced	25.3.R2
Platforms	7705 SAR-1

ts-location (*ts-sat-url | cflash-url | string*)

Synopsis	Default file path for generated tech-support files
Context	configure system security tech-support ts-location (<i>ts-sat-url cflash-url string</i>)
Tree	ts-location
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet

Synopsis	Enter the telnet context
Context	configure system security telnet
Tree	telnet
Introduced	25.3.R2
Platforms	7705 SAR-1

listening-port *number*

Synopsis	TCP port for Telnet connections for VPRN or base routing
Context	configure system security telnet listening-port <i>number</i>
Tree	listening-port
Range	23 1024 to 49151
Default	23
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-server *boolean*

Synopsis	Enable Telnet servers running on the system
Context	configure system security telnet-server <i>boolean</i>

Tree	telnet-server
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet6-server *boolean*

Synopsis	Enable Telnet IPv6 servers running on the system
Context	configure system security telnet6-server <i>boolean</i>
Tree	telnet6-server
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

tls

Synopsis	Enter the tls context
Context	configure system security tls
Tree	tls
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile [[cert-profile-name](#)] *named-item*

Synopsis	Enter the cert-profile list instance
Context	configure system security tls cert-profile <i>named-item</i>
Tree	cert-profile
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[[cert-profile-name](#)] *named-item*

Synopsis	TLS certificate profile name
Context	configure system security tls cert-profile <i>named-item</i>

Tree	cert-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the certificate profile
Context	configure system security tls cert-profile <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i>
Tree	entry
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-1

[entry-id] *number*

Synopsis	Certificate profile ID
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i>
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

certificate-file *string-not-all-spaces*

Synopsis	Certificate file name
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> certificate-file <i>string-not-all-spaces</i>
Tree	certificate-file
String length	1 to 95
Introduced	25.3.R2
Platforms	7705 SAR-1

key-file *string-not-all-spaces*

Synopsis	Key file name
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> key-file <i>string-not-all-spaces</i>
Tree	key-file
String length	1 to 95
Introduced	25.3.R2
Platforms	7705 SAR-1

send-chain

Synopsis	Enter the send-chain context
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> send-chain
Tree	send-chain
Introduced	25.3.R2
Platforms	7705 SAR-1

ca-profile [[ca-profile-name](#)] *reference*

Synopsis	Add a list entry for ca-profile
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> send-chain ca-profile <i>reference</i>
Tree	ca-profile
Max. instances	7

Introduced 25.3.R2
Platforms 7705 SAR-1

[ca-profile-name] *reference*

Synopsis CA profile name
Context **configure** [system](#) [security](#) [tls](#) [cert-profile](#) [named-item](#) [entry](#) [number](#) [send-chain](#) [ca-profile](#) *reference*
Tree [ca-profile](#)
Reference **configure** [system](#) [security](#) [pki](#) [ca-profile](#) [named-item](#)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

client-cipher-list [[client-cipher-list-name](#)] *named-item*

Synopsis Enter the **client-cipher-list** list instance
Context **configure** [system](#) [security](#) [tls](#) [client-cipher-list](#) *named-item*
Tree [client-cipher-list](#)
Max. instances 16
Introduced 25.3.R2
Platforms 7705 SAR-1

[client-cipher-list-name] *named-item*

Synopsis Client cipher list name
Context **configure** [system](#) [security](#) [tls](#) [client-cipher-list](#) *named-item*
Tree [client-cipher-list](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

tls12-cipher [[index](#)] *number*

Synopsis	Enter the tls12-cipher list instance
Context	configure system security tls client-cipher-list <i>named-item</i> tls12-cipher <i>number</i>
Tree	tls12-cipher
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	Index of the cipher
Context	configure system security tls client-cipher-list <i>named-item</i> tls12-cipher <i>number</i>
Tree	tls12-cipher
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Cipher suite code
Context	configure system security tls client-cipher-list <i>named-item</i> tls12-cipher <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-rsa-with3des-edc-cbc-sha, tls-rsa-with-aes128-cbc-sha, tls-rsa-with-aes256-cbc-sha, tls-rsa-with-aes128-cbc-sha256, tls-rsa-with-aes256-cbc-sha256, tls-rsa-with-aes128-gcm-sha256, tls-rsa-with-aes256-gcm-sha384, tls-ecdh-rsa-aes128-gcm-sha256, tls-ecdh-rsa-aes256-gcm-sha384
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

tls13-cipher [[index](#)] *number*

Synopsis	Enter the tls13-cipher list instance
Context	configure system security tls client-cipher-list <i>named-item</i> tls13-cipher <i>number</i>

Tree	tls13-cipher
Description	Commands in this context configure the TLS 1.3-supported ciphers used by the client.
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	Index number of the TLS 1.3 cipher
Context	configure system security tls client-cipher-list <i>named-item</i> tls13-cipher <i>number</i>
Tree	tls13-cipher
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Name of the TLS 1.3 cipher suite code
Context	configure system security tls client-cipher-list <i>named-item</i> tls13-cipher <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-aes128-gcm-sha256 , tls-aes256-gcm-sha384 , tls-chacha20-poly1305-sha256 , tls-aes128-ccm-sha256 , tls-aes128-ccm8-sha256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-group-list [[client-group-list-name](#)] *named-item*

Synopsis	Enter the client-group-list list instance
Context	configure system security tls client-group-list <i>named-item</i>
Tree	client-group-list
Description	Commands in this context configure the list of TLS 1.3-supported group suite codes that the client sends in a client Hello message.
Max. instances	16

Introduced 25.3.R2
Platforms 7705 SAR-1

[client-group-list-name] *named-item*

Synopsis Name of the TLS client group list
Context **configure** [system](#) [security](#) [tls](#) [client-group-list](#) *named-item*
Tree [client-group-list](#)
String length 1 to 32
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

tls13-group [[index](#)] *number*

Synopsis Enter the **tls13-group** list instance
Context **configure** [system](#) [security](#) [tls](#) [client-group-list](#) *named-item* [tls13-group](#) *number*
Tree [tls13-group](#)
Description Commands in this context configure the TLS 1.3-supported group suite codes sent by the client in its Hello messages.
SR OS supports the use of Elliptic-Curve Diffie-Hellman Ephemeral (ECDHE) groups.
Introduced 25.3.R2
Platforms 7705 SAR-1

[index] *number*

Synopsis Index number of the TLS 1.3 group
Context **configure** [system](#) [security](#) [tls](#) [client-group-list](#) *named-item* [tls13-group](#) *number*
Tree [tls13-group](#)
Range 1 to 255
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR-1

name *keyword*

Synopsis	Name of the TLS 1.3 group suite code
Context	configure system security tls client-group-list <i>named-item</i> tls13-group <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-ecdhe-256 , tls-ecdhe-384 , tls-ecdhe-521 , tls-x25519 , tls-x448
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-signature-list [[client-signature-list-name](#)] *named-item*

Synopsis	Enter the client-signature-list list instance
Context	configure system security tls client-signature-list <i>named-item</i>
Tree	client-signature-list
Description	Commands in this context configure the list of TLS 1.3-supported signature suite codes that the client sends in a client Hello message.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[client-signature-list-name] *named-item*

Synopsis	Name of the TLS 1.3 client signature list
Context	configure system security tls client-signature-list <i>named-item</i>
Tree	client-signature-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

tls13-signature [[index](#)] *number*

Synopsis	Enter the tls13-signature list instance
----------	--

Context	configure system security tls client-signature-list <i>named-item</i> tls13-signature <i>number</i>
Tree	tls13-signature
Description	Commands in this context configure the TLS 1.3-supported signature suite codes sent by the client in its Hello messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	Index number of the TLS 1.3 signature
Context	configure system security tls client-signature-list <i>named-item</i> tls13-signature <i>number</i>
Tree	tls13-signature
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Name of the TLS 1.3 signature suite code
Context	configure system security tls client-signature-list <i>named-item</i> tls13-signature <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-rsa-pkcs1-sha256 , tls-ecdsa-secp256r1-sha256 , tls-rsa-pkcs1-sha384 , tls-ecdsa-secp384r1-sha384 , tls-rsa-pkcs1-sha512 , tls-ecdsa-secp521r1-sha512 , tls-rsa-pss-rsae-sha256 , tls-rsa-pss-rsae-sha384 , tls-rsa-pss-rsae-sha512 , tls-ed25519 , tls-ed448 , tls-rsa-pss-pss-sha256 , tls-rsa-pss-pss-sha384 , tls-rsa-pss-pss-sha512
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

client-tls-profile [[client-profile-name](#)] *named-item*

Synopsis	Enter the client-tls-profile list instance
Context	configure system security tls client-tls-profile <i>named-item</i>
Tree	client-tls-profile

Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[client-profile-name] *named-item*

Synopsis	Client TLS profile name
Context	configure system security tls client-tls-profile <i>named-item</i>
Tree	client-tls-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the client TLS profile
Context	configure system security tls client-tls-profile <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile ID
Context	configure system security tls client-tls-profile <i>named-item</i> cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure system security tls cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

cipher-list *reference*

Synopsis	Cipher list for negotiation in the client Hello message
Context	configure system security tls client-tls-profile <i>named-item</i> cipher-list <i>reference</i>
Tree	cipher-list
Reference	configure system security tls client-cipher-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

group-list *reference*

Synopsis	Name of the list of supported group suite codes
Context	configure system security tls client-tls-profile <i>named-item</i> group-list <i>reference</i>
Tree	group-list
Description	This command assigns an existing TLS 1.3 group list to the TLS client profile.
Reference	configure system security tls client-group-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-version *keyword*

Synopsis	TLS protocol version used by the TLS client profile
Context	configure system security tls client-tls-profile <i>named-item</i> protocol-version <i>keyword</i>
Tree	protocol-version
Description	<p>This command configures the TLS version to be negotiated between the client and the server.</p> <p>The client adds the specified version as a supported version in its Hello message to the server.</p>
Options	tls-version-all, tls-version-12, tls-version-13
Default	tls-version-12
Introduced	25.3.R2
Platforms	7705 SAR-1

signature-list *reference*

Synopsis	Name of the list of supported signature suite codes
Context	configure system security tls client-tls-profile <i>named-item</i> signature-list <i>reference</i>
Tree	signature-list
Description	This command assigns an existing TLS 1.3 signature list to the TLS client profile.
Reference	configure system security tls client-signature-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

Synopsis	Enter the status-verify context
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS client.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify default-result <i>keyword</i>
Tree	default-result
Description	<p>This command configures the default result of the entity certificate verification in the TLS client profile. This command overwrites the EE certificate revocation verification for the TLS client profile.</p> <p>By default the router checks the certification revocation status, but if this command is set to good, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate.</p> <p>If this command is set to revoked, the router returns the actual revocation status of the end-entity certificate.</p>
Options	revoked, good
Default	revoked
Introduced	25.3.R2

Platforms 7705 SAR-1

ee-revocation

Synopsis Enter the **ee-revocation** context

Context **configure** [system security tls client-tls-profile](#) *named-item* [status-verify ee-revocation](#)

Tree [ee-revocation](#)

Description Commands in this context configure the methods used to verify the end entity certificate revocation status for the TLS client profile.

Introduced 25.3.R2

Platforms 7705 SAR-1

primary keyword

Synopsis Primary method used to verify certificate revocation

Context **configure** [system security tls client-tls-profile](#) *named-item* [status-verify ee-revocation](#)
[primary keyword](#)

Tree [primary](#)

Options [crl](#), [ocsp](#)

Options	tls-aes128-gcm-sha256 , tls-aes256-gcm-sha384 , tls-chacha20-poly1305-sha256 , tls-aes128-ccm-sha256 , tls-aes128-ccm8-sha256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-group-list [[server-group-list-name](#)] *named-item*

Synopsis	Enter the server-group-list list instance
Context	configure system security tls server-group-list <i>named-item</i>
Tree	server-group-list
Description	Commands in this context configure the list of TLS 1.3-supported group suite codes that the server sends in a server Hello message.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[server-group-list-name] *named-item*

Synopsis	Name of the TLS server group list
Context	configure system security tls server-group-list <i>named-item</i>
Tree	server-group-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

tls13-group [[index](#)] *number*

Synopsis	Enter the tls13-group list instance
Context	configure system security tls server-group-list <i>named-item</i> tls13-group <i>number</i>
Tree	tls13-group
Description	Commands in this context configure the TLS 1.3-supported group suite codes sent by the server in its Hello messages. SR OS supports the use of Elliptic-Curve Diffie-Hellman Ephemeral (ECDHE) groups.
Introduced	25.3.R2
Platforms	7705 SAR-1

[[index](#)] *number*

Synopsis	Index number of the TLS 1.3 group
Context	configure system security tls server-group-list <i>named-item</i> tls13-group <i>number</i>
Tree	tls13-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Name of the TLS 1.3 group suite code
----------	--------------------------------------

Context	configure system security tls server-group-list <i>named-item</i> tls13-group <i>number</i> <i>name</i> <i>keyword</i>
Tree	name
Options	tls-ecdhe-256 , tls-ecdhe-384 , tls-ecdhe-521 , tls-x25519 , tls-x448
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

server-signature-list [[server-signature-list-name](#)] *named-item*

Synopsis	Enter the server-signature-list list instance
Context	configure system security tls server-signature-list <i>named-item</i>
Tree	server-signature-list
Description	Commands in this context configure the list of TLS 1.3-supported signature suite codes for the digital signature that the server sends in a server Hello message.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-1

[server-signature-list-name] *named-item*

Synopsis	Name of the TLS 1.3 server signature list
Context	configure system security tls server-signature-list <i>named-item</i>
Tree	server-signature-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

tls13-signature [[index](#)] *number*

Synopsis	Enter the tls13-signature list instance
Context	configure system security tls server-signature-list <i>named-item</i> tls13-signature <i>number</i>
Tree	tls13-signature

Description	Commands in this context configure the TLS 1.3-supported signature suite codes sent by the server in its Hello messages.
Introduced	25.3.R2
Platforms	7705 SAR-1

[index] *number*

Synopsis	Index number of the TLS 1.3 signature
Context	configure system security tls server-signature-list <i>named-item</i> tls13-signature <i>number</i>
Tree	tls13-signature
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Context	configure system security tls server-tls-profile <i>named-item</i> cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure system security tls cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

cipher-list *reference*

Synopsis	Cipher list used by the TLS server profile
Context	configure system security tls server-tls-profile <i>named-item</i> cipher-list <i>reference</i>
Tree	cipher-list
Reference	configure system security tls server-cipher-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

group-list *reference*

Synopsis	Name of the list of supported group suite codes
Context	configure system security tls server-tls-profile <i>named-item</i> group-list <i>reference</i>
Tree	group-list
Description	This command assigns an existing TLS 1.3 group list to the TLS server profile.
Reference	configure system security tls server-group-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol-version *keyword*

Synopsis	TLS protocol version used by the TLS server profile
Context	configure system security tls server-tls-profile <i>named-item</i> protocol-version <i>keyword</i>
Tree	protocol-version
Description	<p>This command configures the TLS version to be negotiated between the server and the client.</p> <p>The server adds the specified version as a supported version in its Hello message to the client.</p>
Options	tls-version-all, tls-version-12, tls-version-13
Default	tls-version-12
Introduced	25.3.R2
Platforms	7705 SAR-1

signature-list *reference*

Synopsis	Name of the list of supported signature suite codes
Context	configure system security tls server-tls-profile <i>named-item</i> signature-list <i>reference</i>
Tree	signature-list
Description	This command assigns an existing TLS 1.3 signature list to the TLS server profile.
Reference	configure system security tls server-signature-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

status-verify

Synopsis	Enter the status-verify context
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS server.
Introduced	25.3.R2
Platforms	7705 SAR-1

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify default-result <i>keyword</i>
Tree	default-result
Description	<p>This command configures the default result of the entity certificate verification in the TLS server profile. This command overwrites the EE certificate revocation verification for the TLS server profile.</p> <p>By default the router checks the certification revocation status, but if this command is set to good, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate.</p> <p>If this command is set to revoked, the router returns the actual revocation status of the end-entity certificate.</p>
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-1

ee-revocation

Synopsis	Enter the ee-revocation context
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify ee-revocation
Tree	ee-revocation
Description	Commands in this context configure the methods used to verify the end entity certificate revocation status for the TLS server profile.
Introduced	25.3.R2

Platforms 7705 SAR-1

primary *keyword*

Synopsis Primary method used to verify certificate revocation

attempts

Synopsis	Enter the attempts context
Context	configure system security user-params attempts
Tree	attempts
Introduced	25.3.R2
Platforms	7705 SAR-1

count *number*

Synopsis	Number of unsuccessful login attempts
Context	configure system security user-params attempts count <i>number</i>
Tree	count
Range	1 to 64
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

lockout *number*

Synopsis	Lockout period after unsuccessful login attempts
Context	configure system security user-params attempts lockout <i>number</i>

Tree	lockout
Range	0 to 1440
Units	minutes
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

time *number*

Synopsis	Time frame of unsuccessful login attempts
Context	configure system security user-params attempts time <i>number</i>
Tree	time
Range	0 to 60
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-order

Synopsis	Enter the authentication-order context
Context	configure system security user-params authentication-order
Tree	authentication-order
Description	<p>Commands in this context configure the sequence in which the system attempts authentication and authorization among the local user database, RADIUS servers, TACACS+ servers, and LDAP servers.</p> <p>Configure the order from the most preferred method to the least preferred. The presence of all methods in the command line does not guarantee they are all operational. Specifying options that are not available delays user authentication.</p> <p>If all operational methods are attempted and no authentication for a particular login has been granted, an entry in the security log records the failed attempt. Both the attempted login identification and originating IP address are logged with a timestamp.</p> <p>The default order is [radius tacplus ldap local].</p> <p>The order is not applicable to SNMPv3. SNMPv3 messages ignore the configured order and are authorized using the locally configured users only. TACACS+, RADIUS, and LDAP are not supported for SNMPv3 authentication.</p> <p>Note: This command applies to a local user, in addition to users on RADIUS, TACACS+, and LDAP.</p>

Introduced	25.3.R2
Platforms	7705 SAR-1

exit-on-reject *boolean*

Synopsis	Ignore subsequent AAA methods after a reject
Context	configure system security user-params authentication-order exit-on-reject <i>boolean</i>
Tree	exit-on-reject
Description	<p>When configured to true, the router stops authentication if one of the AAA methods configured in the authentication order sends a rejection.</p> <p>When configured to false, the router attempts the next AAA method if a AAA method sends a rejection. If all AAA methods are exhausted, authentication and authorization is rejected.</p> <p>If the order specifies local as the first method, the following actions apply:</p> <ul style="list-style-type: none">• If this command is set to true and the user does not exist, the user is not authenticated.• If the user can be authenticated locally, other methods, if configured, are used for authorization and accounting.• If the user is configured locally but without console access, login is denied.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

order *keyword*

Synopsis	Authentication and authorization order
Context	configure system security user-params authentication-order order <i>keyword</i>
Tree	order
Description	<p>This command specifies the order of authentication and authorization.</p> <p>The default order is [radius tacplus ldap local]</p>
Options	local, radius, tacplus, ldap
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

local-user

Synopsis	Enter the local-user context
Context	configure system security user-params local-user
Tree	local-user
Introduced	25.3.R2

password

Synopsis	Enter the password context
Context	configure system security user-params local-user password
Tree	password
Introduced	25.3.R2
Platforms	7705 SAR-1

aging *number*

Synopsis	Maximum time during which a user password is valid
Context	configure system security user-params local-user password aging <i>number</i>
Tree	aging
Range	1 to 500
Units	days
Introduced	25.3.R2
Platforms	7705 SAR-1

complexity-rules

Synopsis	Enter the complexity-rules context
Context	configure system security user-params local-user password complexity-rules
Tree	complexity-rules
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-user-name *boolean*

Synopsis	Allow the username to be used as part of the password
Context	configure system security user-params local-user password complexity-rules allow-user-name <i>boolean</i>
Tree	allow-user-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

credits

Synopsis	Enter the credits context
Context	configure system security user-params local-user password complexity-rules credits
Tree	credits
Notes	The following elements are part of a choice: credits or required .
Introduced	25.3.R2
Platforms	7705 SAR-1

lowercase *number*

Synopsis	Maximum credits for the use of lowercase letters
Context	configure system security user-params local-user password complexity-rules credits lowercase <i>number</i>
Tree	lowercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR-1

numeric *number*

Synopsis	Maximum credits for the use of numeric characters
Context	configure system security user-params local-user password complexity-rules credits numeric <i>number</i>
Tree	numeric
Range	1 to 10

Introduced	25.3.R2
Platforms	7705 SAR-1

special-character *number*

Synopsis	Maximum credits for the use of special characters
Context	configure system security user-params local-user password complexity-rules credits special-character <i>number</i>
Tree	special-character
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR-1

uppercase *number*

Synopsis	Maximum credits for the use of uppercase letters
Context	configure system security user-params local-user password complexity-rules credits uppercase <i>number</i>
Tree	uppercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR-1

disallow-sequence-keys *number*

Synopsis	Minimum length of disallowed sequential characters
Context	configure system security user-params local-user password complexity-rules disallow-sequence-keys <i>number</i>
Tree	disallow-sequence-keys
Description	<p>This command configures the number of consecutive characters that are not allowed to be entered as part of the password on a U.S. English or Korean keyboard. These characters can be lowercase or uppercase letters, or numbers. Special characters are not taken into account. These consecutive characters can be horizontal (left to right) or (right to left) or diagonal (up to bottom or bottom to top). If the number of consecutive characters is equal to or larger than the configured value, the password is disallowed.</p> <p>For example, if the user attempts to use the password "dsalkjhgfdsa", with this command configured to 8, the system rejects the password because the first consecutive sequence "dsa" is 3 lowercase letters, which passes the check, but the</p>

second consecutive sequence is "lkjhgfdsa", which consists of 9 consecutive lowercase letters and this does not pass the check.

Range	2 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-classes *number*

Synopsis	Minimum number of different character classes to use
Context	configure system security user-params local-user password complexity-rules minimum-classes <i>number</i>
Tree	minimum-classes
Range	2 to 4
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-length *number*

Synopsis	Minimum length required for local passwords
Context	configure system security user-params local-user password complexity-rules minimum-length <i>number</i>
Tree	minimum-length
Range	6 to 50
Default	6
Introduced	25.3.R2
Platforms	7705 SAR-1

repeated-characters *number*

Synopsis	Number of times same character can repeat consecutively
Context	configure system security user-params local-user password complexity-rules repeated-characters <i>number</i>
Tree	repeated-characters
Range	2 to 8
Introduced	25.3.R2
Platforms	7705 SAR-1

required

Synopsis	Enter the required context
Context	configure system security user-params local-user password complexity-rules required
Tree	required
Notes	The following elements are part of a choice: credits or required .
Introduced	25.3.R2
Platforms	7705 SAR-1

lowercase *number*

Synopsis	Number of lowercase letters required
Context	configure system security user-params local-user password complexity-rules required lowercase <i>number</i>
Tree	lowercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR-1

numeric *number*

Synopsis	Number of numeric characters required
Context	configure system security user-params local-user password complexity-rules required numeric <i>number</i>
Tree	numeric
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR-1

special-character *number*

Synopsis	Number of special characters required
Context	configure system security user-params local-user password complexity-rules required special-character <i>number</i>
Tree	special-character
Range	1 to 10

Introduced 25.3.R2
Platforms 7705 SAR-1

uppercase *number*

Synopsis Number of uppercase letters required
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [password](#) [complexity-rules](#) [required](#) [uppercase](#) *number*
Tree [uppercase](#)
Range 1 to 10
Introduced 25.3.R2

hashing *keyword*

Synopsis Hashing algorithm for user passwords
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [password](#) [hashing](#) *keyword*
Tree [hashing](#)
Options bcrypt, sha2-pbkdf2, sha3-pbkdf2
Default bcrypt
Introduced 25.3.R2
Platforms 7705 SAR-1

history-size *number*

Synopsis Number of previous passwords to compare against
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [password](#) [history-size](#) *number*
Tree [history-size](#)
Range 0 to 20
Introduced 25.3.R2
Platforms 7705 SAR-1

minimum-age *number*

Synopsis Minimum age required for a password before changing it
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [password](#) [minimum-age](#) *number*

Tree	minimum-age
Range	0 to 86400
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

minimum-change *number*

Synopsis	Minimum character differences between passwords
Context	configure system security user-params local-user password minimum-change <i>number</i>
Tree	minimum-change
Range	1 to 20
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-1

user [[user-name](#)] *named-item*

Synopsis	Enter the user list instance
Context	configure system security user-params local-user user <i>named-item</i>
Tree	user
Description	Commands in this context configure local users.
Introduced	25.3.R2
Platforms	7705 SAR-1

[user-name] *named-item*

Synopsis	Local user name
Context	configure system security user-params local-user user <i>named-item</i>
Tree	user
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

access

Synopsis	Enter the access context
Context	configure system security user-params local-user user <i>named-item</i> access
Tree	access
Description	Commands in this context grant a user access to the router management access methods. If a user requires access to more than one method, multiple methods can be specified.
Introduced	25.3.R2
Platforms	7705 SAR-1

bluetooth *boolean*

Synopsis	Allow Bluetooth access
Context	configure system security user-params local-user user <i>named-item</i> access bluetooth <i>boolean</i>
Tree	bluetooth
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

console *boolean*

Synopsis	Allow Bluetooth, console port CLI, SCP/SFTP, SSH CLI, and Telnet CLI access
Context	configure system security user-params local-user user <i>named-item</i> access console <i>boolean</i>
Tree	console
Description	When configured to true , the system allows this access method to take precedence over other access methods in all cases.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

console-port-cli *boolean*

Synopsis	Allow console port CLI access
----------	-------------------------------

Context	configure system security user-params local-user user <i>named-item</i> access console-port-cli <i>boolean</i>
Tree	console-port-cli
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ftp *boolean*

Synopsis	Allow FTP access
Context	configure system security user-params local-user user <i>named-item</i> access ftp <i>boolean</i>
Tree	ftp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

grpc *boolean*

Synopsis	Allow gRPC access
Context	configure system security user-params local-user user <i>named-item</i> access grpc <i>boolean</i>
Tree	grpc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

netconf *boolean*

Synopsis	Allow NETCONF access
Context	configure system security user-params local-user user <i>named-item</i> access netconf <i>boolean</i>
Tree	netconf
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

scp-sftp boolean

Synopsis	Allow SCP/SFTP access
Context	configure system security user-params local-user user <i>named-item</i> access scp-sftp boolean
Tree	scp-sftp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp boolean

Synopsis	Allow SNMP access
Context	configure system security user-params local-user user <i>named-item</i> access snmp boolean
Tree	snmp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

ssh-cli boolean

Synopsis	Allow SSH CLI access
Context	configure system security user-params local-user user <i>named-item</i> access ssh-cli boolean
Tree	ssh-cli
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

telnet-cli boolean

Synopsis	Allow Telnet CLI access
Context	configure system security user-params local-user user <i>named-item</i> access telnet-cli boolean
Tree	telnet-cli

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

cli-engine *keyword*

Synopsis	User level override for CLI engine access
Context	configure system security user-params local-user user <i>named-item</i> cli-engine <i>keyword</i>
Tree	cli-engine
Options	classic-cli, md-cli
Max. instances	2
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

console

Synopsis	Enter the console context
Context	configure system security user-params local-user user <i>named-item</i> console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR-1

cannot-change-password *boolean*

Synopsis	Change password privileges
Context	configure system security user-params local-user user <i>named-item</i> console cannot-change-password <i>boolean</i>
Tree	cannot-change-password
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

login-exec (*sat-url* | *cflash-url* | *ftp-tftp-url* | *filename*)

Synopsis	File to execute when the user logs in
Context	configure system security user-params local-user user <i>named-item</i> console login-exec (<i>sat-url</i> <i>cflash-url</i> <i>ftp-tftp-url</i> <i>filename</i>)
Tree	login-exec
String length	1 to 200 (<i>sat-url</i> , <i>cflash-url</i>) 1 to 180 (<i>ftp-tftp-url</i> , <i>filename</i>)
Introduced	25.3.R2
Platforms	7705 SAR-1

member reference

Synopsis	User profiles for this user
Context	configure system security user-params local-user user <i>named-item</i> console member reference
Tree	member
Reference	configure system security aaa local-profiles profile <i>named-item</i>
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

new-password-at-login *boolean*

Synopsis	Prompt the user to change their password at next login
Context	configure system security user-params local-user user <i>named-item</i> console new-password-at-login <i>boolean</i>
Tree	new-password-at-login
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

home-directory *cflash-without-slot-url*

Synopsis	Home directory for the user
Context	configure system security user-params local-user user <i>named-item</i> home-directory <i>cflash-without-slot-url</i>
Tree	home-directory
Description	<p>This command configures the home directory of the user for file access. Files can be accessed locally by CLI file commands and output modifiers such as > (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in.</p> <p>When restricted-to-home is configured, file access is denied unless the home-directory is configured and the directory is created by an administrator.</p>
String length	1 to 200
Introduced	25.3.R2
Platforms	7705 SAR-1

password *hashed-leaf*

Synopsis	User password
Context	configure system security user-params local-user user <i>named-item</i> password <i>hashed-leaf</i>
Tree	password
String length	3 to 136
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

public-keys

Synopsis	Enter the public-keys context
Context	configure system security user-params local-user user <i>named-item</i> public-keys
Tree	public-keys
Description	Commands in this context configure public keys for SSH.
Introduced	25.3.R2
Platforms	7705 SAR-1

ecdsa

Synopsis	Enter the ecdsa context
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa
Tree	ecdsa
Description	Commands in this context configure Elliptic Curve Digital Signature Algorithm (ECDSA) public keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

ecdsa-key [[ecdsa-public-key-id](#)] *number*

Synopsis	Enter the ecdsa-key list instance
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i>
Tree	ecdsa-key
Description	Commands in this context configure an ECDSA public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

[**ecdsa-public-key-id**] *number*

Synopsis	ECDSA public key identifier
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i>
Tree	ecdsa-key
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
----------	------------------

Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

key-value *string-not-all-spaces*

Synopsis	ECDSA public key value
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i> key-value <i>string-not-all-spaces</i>
Tree	key-value
Description	This command configures a value for the ECDSA public key. The public key must be enclosed in quotation marks. For ECDSA, the key is between 1 and 1024 bits.
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR-1

rsa

Synopsis	Enter the rsa context
Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa
Tree	rsa
Description	Commands in this context configure RSA public keys.
Introduced	25.3.R2
Platforms	7705 SAR-1

rsa-key [[rsa-public-key-id](#)] *number*

Synopsis	Enter the rsa-key list instance
Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa rsa-key <i>number</i>
Tree	rsa-key
Description	Commands in this context configure an RSA public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.

Introduced 25.3.R2
Platforms 7705 SAR-1

[rsa-public-key-id] *number*

Synopsis RSA public key identifier

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [public-keys](#) [rsa](#) [rsa-key](#) *number*

Tree [rsa-key](#)

String length 1 to 80

Introduced 25.3.R2

Platforms 7705 SAR-1

key-value *string-not-all-spaces*

Synopsis RSA public key value

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [public-keys](#) [rsa](#) [rsa-key](#) *number* [key-value](#) *string-not-all-spaces*

Tree [key-value](#)

Description This command configures a value for the RSA public key. The public key must be enclosed in quotation marks. For RSA, the key is between 768 and 4096 bits.

String length 1 to 800

Introduced 25.3.R2

Platforms 7705 SAR-1

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	configure system security user-params local-user user <i>named-item</i> restricted-to-home <i>boolean</i>
Tree	restricted-to-home
Description	<p>When configured to true, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as > (file redirect). The system denies all configuration save operations (such as admin save) via any management interface (such as CLI and NETCONF) unless save-when-restricted is enabled.</p> <p>File access is denied unless a home directory is configured and the directory is created by an administrator.</p> <p>When configured to false, the router permits the user to access all files on the system and to remote files.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	configure system security user-params local-user user <i>named-item</i> save-when-restricted <i>boolean</i>
Tree	save-when-restricted
Description	<p>When configured to true, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if restricted-to-home is enabled.</p> <p>The configuration for each region can be saved with admin save CLI commands or when committed over NETCONF and gRPC.</p> <p>When configured to false, the system denies saving the configuration when restricted-to-home is enabled, unless the home directory of the user includes the location of the saved configuration file.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-1

snmp

Synopsis	Enter the snmp context
Context	configure system security user-params local-user user <i>named-item</i> snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication

Synopsis	Enable the authentication context
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication
Tree	authentication
Description	<p>Commands in this context configure the SNMPv3 authentication and privacy protocols for the user to communicate with the router. The keys are stored in an encrypted format in the configuration.</p> <p>The keys configured with these commands must be localized keys, which are a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the tools perform system management-interface snmp generate-key command to generate localized authentication and privacy keys.</p> <p>If authentication is not configured, only the username is required to allow and authenticate SNMPv3 operations.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

authentication-key *encrypted-leaf-hex-without-prefix*

Synopsis	Localized authentication key
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication authentication-key <i>encrypted-leaf-hex-without-prefix</i>
Tree	authentication-key
Description	<p>This command specifies the authentication key for the authentication protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the tools perform system management-interface snmp generate-key command to generate a localized authentication key.</p>
String length	1 to 115
Introduced	25.3.R2

Platforms 7705 SAR-1

authentication-protocol *keyword*

Synopsis Authentication protocol

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [snmp](#)
[authentication](#) [authentication-protocol](#) *keyword*

Tree [authentication-protocol](#)

Options hmac-md5-96, hmac-sha1-96, hmac-sha2-224, hmac-sha2-256, hmac-sha2-384,
hmac-sha2-512

Introduced 25.3.R2

Platforms 7705 SAR-1

privacy

Synopsis Enable the **privacy** context

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [snmp](#)
[authentication](#) [privacy](#)

Tree [privacy](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

privacy-key *encrypted-leaf-hex-without-prefix*

Synopsis Localized privacy key

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [snmp](#)
[authentication](#) [privacy](#) [privacy-key](#) *encrypted-leaf-hex-without-prefix*

Tree [privacy-key](#)

Description This command specifies the privacy key for the privacy protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate a localized privacy key.

String length 1 to 71

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-1

privacy-protocol *keyword*

Synopsis	Privacy protocol
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication privacy privacy-protocol <i>keyword</i>
Tree	privacy-protocol
Options	cbc-des, cfb128-aes-128, cfb128-aes-192, cfb128-aes-256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

group *named-item*

Synopsis	User to associate with a group name
Context	configure system security user-params local-user user <i>named-item</i> snmp group <i>named-item</i>
Tree	group
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR-1

ssh-authentication-method

Synopsis	Enter the ssh-authentication-method context
Context	configure system security user-params local-user user <i>named-item</i> ssh-authentication-method
Tree	ssh-authentication-method
Introduced	25.3.R2
Platforms	7705 SAR-1

client

Synopsis	Enter the client context
Context	configure system security user-params local-user user <i>named-item</i> ssh-authentication-method client
Tree	client

Introduced	25.3.R2
Platforms	7705 SAR-1

public-key-only *keyword*

Synopsis	Public key only SSH authentication for this user
Context	configure system security user-params local-user user <i>named-item</i> ssh-authentication-method client public-key-only <i>keyword</i>
Tree	public-key-only
Description	<p>This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the configure system security ssh authentication-method public-key-only command.</p> <p>When unconfigured, the command inherits the setting from the system level command.</p> <p>The command options are:</p> <ul style="list-style-type: none"> • true — accept only public key client authentication for the SSH server • false — accept public key or password client authentication for the SSH server. If interactive-authentication is configured to true in the configure system security aaa remote-servers radius or configure system security aaa remote-servers tacplus context, the system also accepts interactive keyboard authentication.
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

server

Synopsis	Enter the server context
Context	configure system security user-params local-user user <i>named-item</i> ssh-authentication-method server
Tree	server
Introduced	25.3.R2
Platforms	7705 SAR-1

public-key-only *keyword*

Synopsis	Public key only SSH authentication for this user
Context	configure system security user-params local-user user <i>named-item</i> ssh-authentication-method server public-key-only <i>keyword</i>

Tree	public-key-only
Description	<p>This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the configure system security ssh authentication-method public-key-only command.</p> <p>When unconfigured, the command inherits the setting from the system level command.</p> <p>The command options are:</p> <ul style="list-style-type: none"> • true — accept only public key client authentication for the SSH server • false — accept public key or password client authentication for the SSH server. If interactive-authentication is configured to true in the configure system security aaa remote-servers radius or configure system security aaa remote-servers tacplus context, the system also accepts interactive keyboard authentication.
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR-1

vpn-network-exceptions

Synopsis	Enable the vpn-network-exceptions context
Context	configure system security vpn-network-exceptions
Tree	vpn-network-exceptions
Description	<p>Commands in this context configure the rate limiting attributes for processing packets with label TTL expiry received within an LSP shortcut or VPRN instances in the system and from all network IP interfaces. This includes labeled user and control plan packets, ping, and traceroute packets within GRT and VPRN, and ICMP replies.</p> <p>These commands do not rate limit MPLS or service OAM packets.</p>
Introduced	25.3.R2
Platforms	7705 SAR-1

count *number*

Synopsis	Limit of exception messages received
Context	configure system security vpn-network-exceptions count <i>number</i>
Tree	count
Description	This command specifies the threshold limit of exception messages. If the threshold value is exceeded within the configured time interval, packets are dropped.
Range	10 to 1000
Default	100

Introduced	25.3.R2
Platforms	7705 SAR-1

window *number*

Synopsis	Time interval to measure exception messages
Context	configure system security vprn-network-exceptions window <i>number</i>
Tree	window
Description	This command configures the time interval within which exception messages are counted. If the threshold value is exceeded within the configured time interval, packets are dropped.
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-1

telemetry

Synopsis	Enter the telemetry context
Context	configure system telemetry
Tree	telemetry
Description	Commands in this context configure the parameters for the dial-out telemetry functionality.
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-group [[name](#)] *named-item*

Synopsis	Enter the destination-group list instance
Context	configure system telemetry destination-group <i>named-item</i>
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. instances	225
Introduced	25.3.R2

Platforms 7705 SAR-1

[name] *named-item*

Synopsis	Destination group name
Context	configure system telemetry destination-group <i>named-item</i>
Tree	destination-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	configure system telemetry destination-group <i>named-item</i> allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, this command allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure system telemetry destination-group <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*) [port number](#)

Synopsis	Enter the destination list instance
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port number
Tree	destination
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR-1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*)

Synopsis	Address of the destination within the destination group
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port number
Tree	destination
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

port number

Synopsis	TCP port number for the destination
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port number
Tree	destination
Range	0 1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *string*

Synopsis	Router name or VPRN service name
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-1

tcp-keepalive

Synopsis	Enter the tcp-keepalive context
Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive
Tree	tcp-keepalive
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the TCP keep-alive algorithm
Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive idle-time <i>number</i>
Tree	idle-time
Range	1 to 100000

Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Time between TCP keepalive probes
Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive interval <i>number</i>
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-1

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive retries <i>number</i>
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	25.3.R2
Platforms	7705 SAR-1

tls-client-profile *reference*

Synopsis	TLS client profile assigned to the destination group
Context	configure system telemetry destination-group <i>named-item</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>

Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR-1

notification-bundling

Synopsis	Enter the notification-bundling context
Context	configure system telemetry notification-bundling
Tree	notification-bundling
Description	Commands in this context configure the bundling of multiple notifications into one telemetry message.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of notification bundling
Context	configure system telemetry notification-bundling admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

max-msg-count *number*

Synopsis	Maximum notifications count in telemetry message bundle
Context	configure system telemetry notification-bundling max-msg-count <i>number</i>
Tree	max-msg-count
Range	2 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

max-time-granularity *number*

Synopsis	Maximum interval when bundling of notifications occurs
Context	configure system telemetry notification-bundling max-time-granularity <i>number</i>
Tree	max-time-granularity
Description	This command sets the maximum time interval during which telemetry notifications are bundled. All bundled notifications have the same timestamp, which is the timestamp of the bundle.
Range	1 to 1000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

persistent-subscriptions

Synopsis	Enter the persistent-subscriptions context
Context	configure system telemetry persistent-subscriptions
Tree	persistent-subscriptions
Introduced	25.3.R2
Platforms	7705 SAR-1

delay-on-boot *number*

Synopsis	Delay for persistent subscriptions after system boot
Context	configure system telemetry persistent-subscriptions delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for gRPC telemetry persistent subscriptions. When the timer expires, gRPC telemetry persistent subscriptions become operational and connections are initiated. This delay prevents the system from trying to establish gRPC persistent subscriptions while it is still converging.</p> <p>When no delay is configured, gRPC telemetry persistent subscriptions are initiated after the system boots and gRPC becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2

Platforms 7705 SAR-1

subscription *[name] named-item*

Synopsis Enter the **subscription** list instance

Context **configure** [system](#) [telemetry](#) [persistent-subscriptions](#) [subscription](#) *named-item*

Tree [subscription](#)

Max. instances 225

Introduced 25.3.R2

Platforms 7705 SAR-1

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-1

description *description*

Synopsis Text description

Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

destination-group *reference*

Synopsis	Name of the destination group used in the subscription
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> destination-group <i>reference</i>
Tree	destination-group
Reference	configure system telemetry destination-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

encoding *keyword*

Synopsis	Encoding used for telemetry notifications
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> encoding <i>keyword</i>
Tree	encoding
Description	This command specifies the encoding used for telemetry notifications as defined by the gNMI OpenConfig standard.
Options	json – JSON encoded text bytes – Encoded according to gnmi.schemas proto – Encoded with scalar TypedValue values json-ietf – JSON encoded text as per RFC 7951
Default	json
Introduced	25.3.R2
Platforms	7705 SAR-1

local-source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Local IP address of packets sent from the source
----------	--

Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> local-source-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	local-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

mode *keyword*

Synopsis	Mode for telemetry notifications
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> mode <i>keyword</i>
Tree	mode
Description	This command specifies the subscription path mode for telemetry notifications sent out for the persistent subscription.
Options	target-defined, on-change, sample
Introduced	25.3.R2
Platforms	7705 SAR-1

originated-qos-marking *keyword*

Synopsis	QoS marking used for telemetry notification packets
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> originated-qos-marking <i>keyword</i>
Tree	originated-qos-marking
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR-1

sample-interval *number*

Synopsis	Sampling interval for the persistent subscription
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> sample-interval <i>number</i>
Tree	sample-interval

Description	This command configures the sampling interval for the persistent subscription. The interval applies only in sampling or target-defined modes.
Range	1000 to 18446744073709551615
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR-1

sensor-group *reference*

Synopsis	Sensor group used in the persistent subscription
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> sensor-group reference
Tree	sensor-group
Description	This command specifies the sensor group to be used in the persistent subscription. If no valid paths exist in the sensor group, the configuration is accepted, however, no gRPC connection is established when persistent subscription is activated.
Reference	configure system telemetry sensor-groups sensor-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[xpath] *string*

Synopsis gNMI path to be streamed

Context	configure system telemetry sensor-groups sensor-group <i>named-item</i> path <i>string</i>
Tree	path
Description	This command configures a path for the specified sensor group. Multiple paths can be defined for a single sensor group. Streamed data includes all descendants of the tree indicated by the path. The path is defined in the form of an XML Path (XPath) syntax that refers to single or multiple objects within the YANG model. The path must be enclosed in quotation marks (") when it includes a list key, for example, <code>"/state/router[router-name=Base]"</code> .
String length	1 to 512
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

falling-threshold *number*

Synopsis	Falling threshold for the sampled statistic
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url falling-threshold <i>number</i>
Tree	falling-threshold
Description	<p>This command specifies a falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single threshold-crossing event is generated. A single threshold-crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated startup-alarm command is equal to the falling or either values.</p> <p>After a falling threshold-crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the rising-threshold command.</p>
Range	0 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR-1

interval *number*

Synopsis	Polling period over which data is sampled and compared
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url interval <i>number</i>
Tree	interval
Description	This command specifies the polling interval over which the data is sampled and compared with the rising and falling thresholds.
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

rising-threshold *number*

Synopsis	Rising threshold for the sampled statistic
Context	configure system thresholds cflash-cap-alarm-percent <i>thresholds-cflash-url</i> rising-threshold <i>number</i>
Tree	rising-threshold
Description	<p>This command specifies a rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single threshold-crossing event is generated. A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated startup-alarm command is equal to the rising or either values.</p> <p>After a rising threshold-crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the falling-threshold command.</p>
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-1

alarm [[rmon-alarm-id](#)] *number*

Synopsis	Enter the alarm list instance
Context	configure system thresholds rmon alarm <i>number</i>
Tree	alarm
Description	Commands in this context configure an entry in the RMON-MIB alarmTable and controls the monitoring and triggering of threshold crossing events.

At least one associated **configure system thresholds rmon event** command must be configured to trigger the notification or logging of a threshold crossing event.

The agent periodically takes statistical sample values from the MIB variable specified for monitoring and compares them to thresholds configured with this command. This command configures the MIB variable for monitoring, the polling period (interval), the sampling type (absolute or delta value), and the rising and falling threshold commands. If a sample has crossed a threshold value, the associated event is generated.

Max. instances	1200
Introduced	25.3.R2
Platforms	7705 SAR-1

[rmon-alarm-id] *number*

Synopsis	RMON alarm identifier
Context	configure system thresholds rmon alarm <i>number</i>
Tree	alarm
Range	0 to 65400
Notes	This element is part of a list key.

Description	<p>This command configures the owner of the entry.</p> <p>This command allows entries created in the HC-ALARM-MIB hcAlarmTable by a remote SNMP or YANG manager to be tagged as belonging to a set of entries defined by the manager.</p>
String length	1 to 127
Default	TiMOS CLI
Introduced	25.10.R1
Platforms	7705 SAR-1

rising-event *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	RMON event ID for rising threshold crossing event
Context	configure system thresholds rmon hc-alarm <i>number</i> rising-event <i>number</i>
Tree	rising-event
Range	1 to 65400
Introduced	25.10.R1
Platforms	7705 SAR-1

rising-threshold *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Threshold for the rising sampled statistic
Context	configure system thresholds rmon hc-alarm <i>number</i> rising-threshold <i>number</i>
Tree	rising-threshold
Description	<p>This command configures the router to create a single threshold crossing event when the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold.</p> <p>A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated startup-alarm is equal to rising or either.</p> <p>After a rising threshold crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the falling-threshold value.</p>
Range	-9223372036854775806 to 9223372036854775807
Introduced	25.10.R1
Platforms	7705 SAR-1

sample-type keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Sampling type for value comparison with thresholds
Context	configure system thresholds rmon hc-alarm <i>number</i> sample-type <i>keyword</i>
Tree	sample-type
Options	absolute – Value compared with end sampling interval thresholds delta – Selected minus current and compared with thresholds
Default	absolute
Introduced	25.10.R1
Platforms	7705 SAR-1

startup-alarm keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TCA type eligible to be raised on the test's first poll
Context	configure system thresholds rmon hc-alarm <i>number</i> startup-alarm <i>keyword</i>
Tree	startup-alarm
Options	rising – Raise TCA if threshold is crossed in upward direction falling – Raise TCA if threshold is crossed in downward direction either – Raise TCA if threshold is crossed from either direction
Default	either
Introduced	25.10.R1
Platforms	7705 SAR-1

variable-oid string

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Object identifier to sample the specific variable
----------	---

Context	configure system thresholds rmon hc-alarm <i>number</i> variable-oid <i>string</i>
Tree	variable-oid
Description	This command configures the SNMP object identifier of the particular variable for sampling. Only SNMP variables that resolve to an ASN.1 primitive type of integer (Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled. The <i>oid-string</i> may be expressed using either the dotted string notation or as object name plus dotted instance identifier. For example, "1.3.6.1.2.1.2.2.1.10.184582144" or "ifInOctets.184582144".
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR-1

time

Synopsis	Enter the time context
Context	configure system time
Tree	time
Introduced	25.3.R2
Platforms	7705 SAR-1

daylight-saving-time-zone

Synopsis	Enter the daylight-saving-time-zone context
Context	configure system time daylight-saving-time-zone
Tree	daylight-saving-time-zone
Description	Commands in this context configure the start and end dates and offset for summer time (or Daylight Savings Time [DST]). A daylight savings time zone can be specified using a standard name or a non-standard name. The parameters (start day, end day, and offset) for a standard name zone are well defined and not configurable. The parameters for a nonstandard name zone are configurable. The time is adjusted by adding the offset when summer time starts and subtracting the offset when summer time ends. If no summer (daylight savings) time is supplied, the system assumes no summer time adjustment is required.
Introduced	25.3.R2
Platforms	7705 SAR-1

non-standard

Synopsis	Enter the non-standard context
Context	configure system time daylight-saving-time-zone non-standard
Tree	non-standard
Notes	The following elements are part of a choice: non-standard or standard .
Introduced	25.3.R2
Platforms	7705 SAR-1

end

Synopsis	Enter the end context
Context	configure system time daylight-saving-time-zone non-standard end
Tree	end
Description	Commands in this context configure the end of summer time settings.
Introduced	25.3.R2
Platforms	7705 SAR-1

day keyword

Synopsis	Day of the week when summer time ends
Context	configure system time daylight-saving-time-zone non-standard end day keyword
Tree	day
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Default	sunday
Introduced	25.3.R2
Platforms	7705 SAR-1

hours-minutes *hours-minutes-twenty-four*

Synopsis	Time when summer time ends, in hh:mm format
Context	configure system time daylight-saving-time-zone non-standard end hours-minutes hours-minutes-twenty-four
Tree	hours-minutes
String length	5

Default	00:00
Introduced	25.3.R2
Platforms	7705 SAR-1

month *keyword*

Synopsis	Month when summer time ends
Context	configure system time daylight-saving-time-zone non-standard end month <i>keyword</i>
Tree	month
Options	january, february, march, april, may, june, july, august, september, october, november, december
Default	january
Introduced	25.3.R2

version *number*

Synopsis	SNTP version supported by this server
Context	configure system time sntp server (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) version <i>number</i>
Tree	version
Range	1 to 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

sntp-state *keyword*

Synopsis	Mode for Simple Network Time Protocol (SNTP)
Context	configure system time sntp sntp-state <i>keyword</i>
Tree	sntp-state
Options	unicast, broadcast
Default	unicast
Introduced	25.3.R2
Platforms	7705 SAR-1

zone

Synopsis	Enter the zone context
Context	configure system time zone
Tree	zone
Introduced	25.3.R2
Platforms	7705 SAR-1

non-standard

Synopsis	Enter the non-standard context
Context	configure system time zone non-standard
Tree	non-standard
Notes	The following elements are part of a choice: non-standard or standard .
Introduced	25.3.R2
Platforms	7705 SAR-1

name *string*

Synopsis	Non-standard time zone name
Context	configure system time zone non-standard name <i>string</i>
Tree	name
String length	1 to 5
Introduced	25.3.R2
Platforms	7705 SAR-1

offset *hours-minutes-with-range*

Synopsis	Offset from UTC
Context	configure system time zone non-standard offset <i>hours-minutes-with-range</i>
Tree	offset
String length	5 to 6
Introduced	25.3.R2
Platforms	7705 SAR-1

standard

Synopsis	Enter the standard context
Context	configure system time zone standard
Tree	standard
Notes	The following elements are part of a choice: non-standard or standard .
Introduced	25.3.R2
Platforms	7705 SAR-1

name *keyword*

Synopsis	Standard time zone name
Context	configure system time zone standard name <i>keyword</i>
Tree	name
Options	hst, akst, pst, mst, cst, est, ast, nst, utc, gmt, wet, cet, eet, msk, msd, awst, acst, aest, nzst
Default	utc
Introduced	25.3.R2
Platforms	7705 SAR-1

transmission-profile [[name](#)] *named-item*

Synopsis	Enter the transmission-profile list instance
Context	configure system transmission-profile <i>named-item</i>
Tree	transmission-profile
Introduced	25.3.R2
Platforms	7705 SAR-1

[[name](#)] *named-item*

Synopsis	File transmission profile name
Context	configure system transmission-profile <i>named-item</i>
Tree	transmission-profile
String length	1 to 32
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-1

http-version *keyword*

Synopsis	HTTP version
Context	configure system transmission-profile <i>named-item</i> http-version <i>keyword</i>
Tree	http-version
Options	1.0, 1.1
Default	1.1
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv4-source-address *ipv4-unicast-address*

Synopsis	IPv4 source address used for the transport protocol
Context	configure system transmission-profile <i>named-item</i> ipv4-source-address <i>ipv4-unicast-address</i>
Tree	ipv4-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6-source-address *ipv6-address*

Synopsis	IPv6 source address used for the transport protocol
Context	configure system transmission-profile <i>named-item</i> ipv6-source-address <i>ipv6-address</i>
Tree	ipv6-source-address
Introduced	25.3.R2
Platforms	7705 SAR-1

redirection *number*

Synopsis	Maximum level of redirection
Context	configure system transmission-profile <i>named-item</i> redirection <i>number</i>
Tree	redirection
Range	1 to 8

Introduced	25.3.R2
Platforms	7705 SAR-1

retry *number*

Synopsis	Number of attempts to reconnecting to the server
Context	configure system transmission-profile <i>named-item</i> retry <i>number</i>
Tree	retry
Range	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR-1

router-instance *router-instance-base-management-vprn-loose*

Synopsis	Router instance used by the transport protocol
Context	configure system transmission-profile <i>named-item</i> router-instance <i>router-instance-base-management-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR-1

timeout *number*

Synopsis	Timeout for a response from the server
Context	configure system transmission-profile <i>named-item</i> timeout <i>number</i>
Tree	timeout
Range	1 to 3600
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-1

usb [**usb-cflash**] *keyword*

Synopsis	Enter the usb list instance
Context	configure system usb <i>keyword</i>
Tree	usb
Description	Commands in this context configure the operational state of the USB port.
Introduced	25.3.R2
Platforms	7705 SAR-1

[usb-cflash] *keyword*

Synopsis	Specifies the compact flash ID
Context	configure system usb <i>keyword</i>
Tree	usb
Options	cf2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the USB port
Context	configure system usb <i>keyword</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-1

4.29 test-oam commands

```

configure
- test-oam
  - apply-groups reference
  - apply-groups-exclude reference
  - icmp
    - ipv6
      - apply-groups reference
      - apply-groups-exclude reference
      - length-field boolean
      - maximum-original-datagram boolean
    - mpls
      - apply-groups reference
      - apply-groups-exclude reference
      - echo-request-downstream-map keyword
      - timestamp-format keyword
    - twamp
      - apply-groups reference
      - apply-groups-exclude reference
      - server
        - admin-state keyword
        - allow-ipv6-udp-checksum-zero boolean
        - apply-groups reference
        - apply-groups-exclude reference
        - enforce-test-session-start-time boolean
        - inactivity-timeout number
        - max-connections number
        - max-sessions number
        - prefix (ipv4-prefix | ipv6-prefix)
          - apply-groups reference
          - apply-groups-exclude reference
          - description description
          - max-connections number
          - max-sessions number
      - twamp-light
        - apply-groups reference
        - apply-groups-exclude reference
        - inactivity-timeout number

```

4.29.1 test-oam command descriptions

test-oam

Synopsis	Enter the test-oam context
Context	configure test-oam
Tree	test-oam
Introduced	25.3.R2
Platforms	7705 SAR-1

icmp

Synopsis	Enter the icmp context
Context	configure test-oam icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure test-oam icmp ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-1

length-field *boolean*

Synopsis	Use length field in ICMPv6 responses
Context	configure test-oam icmp ipv6 length-field boolean
Tree	length-field
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

maximum-original-datagram *boolean*

Synopsis	ICMPv6 traceroute responses with largest datagram
Context	configure test-oam icmp ipv6 maximum-original-datagram <i>boolean</i>
Tree	maximum-original-datagram
Description	<p>When configured to true, this command enables the original datagram field of the ICMPv6 error message to be a maximum of 1232 bytes.</p> <p>When configured to false, the original datagram field of the ICMPv6 error message smaller than 1232 bytes be built smaller.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-1

mpls

Synopsis	Enter the mpls context
Context	configure test-oam mpls
Tree	mpls
Introduced	25.3.R2
Platforms	7705 SAR-1

echo-request-downstream-map *keyword*

Synopsis	Format of the downstream mapping TLV
Context	configure test-oam mpls echo-request-downstream-map <i>keyword</i>
Tree	echo-request-downstream-map
Description	<p>This command specifies the format of the downstream mapping TLV to use in all LSP trace packets and LDP tree trace packets originated on this node.</p> <p>The following downstream mapping TLVs are supported: the original Downstream Mapping (DSMAP) TLV, defined in RFC 4379 (obsoleted by RFC 8029) and the Downstream Detailed Mapping (DDMAP) TLV, defined in RFC 6424.</p> <p>See the "DDMAP TLV" section in the <i>7705 SAR Gen 2 OAM and Diagnostics Guide</i> for more information.</p>
Options	dsmap – Downstream Mapping TLV ddmmap – Downstream Detailed Mapping TLV
Default	dsmap
Introduced	25.3.R2

Platforms 7705 SAR-1

timestamp-format *keyword*

Synopsis Timestamp format for MPLS ping request and reply PDUs

Context **configure** [test-oam mpls timestamp-format](#) *keyword*

Tree [timestamp-format](#)

Options rfc4379 – 1900-based timestamp (standard)
unix – 1970-based timestamp

Default unix

Introduced 25.3.R2

Platforms 7705 SAR-1

twamp

Synopsis Enter the **twamp** context

Context **configure** [test-oam twamp](#)

Tree [twamp](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

server

Synopsis Enter the **server** context

Context **configure** [test-oam twamp server](#)

Tree [server](#)

Introduced 25.3.R2

Platforms 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the TWAMP server

Context **configure** [test-oam twamp server admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2
Platforms 7705 SAR-1

allow-ipv6-udp-checksum-zero *boolean*

Synopsis Process IPv6 packets with a zero UDP checksum

Context **configure** [test-oam twamp server](#) **allow-ipv6-udp-checksum-zero** *boolean*

Tree [allow-ipv6-udp-checksum-zero](#)

Description When configured to **true**, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x0000 arriving packets are discarded.

When configured to **false**, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

enforce-test-session-start-time *boolean*

Synopsis Discard TWAMP packets before test-session start time

Context **configure** [test-oam twamp server](#) **enforce-test-session-start-time** *boolean*

Tree [enforce-test-session-start-time](#)

Description When configured to **true**, the router checks the signalled test-session start time against the server time and discards TWAMP test packets that arrive before the negotiated test-session start time.

When configured to **false**, the router processes all TWAMP test packets without checking the test-session start time against the server time.

Default true

Introduced 25.3.R2

Platforms 7705 SAR-1

inactivity-timeout *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Inactivity timeout for TWAMP control connections
Context	configure test-oam twamp server inactivity-timeout <i>number</i>
Tree	inactivity-timeout
Range	60 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-1

max-connections *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Limit of concurrent TWAMP server control connections
Context	configure test-oam twamp server max-connections <i>number</i>
Tree	max-connections
Range	0 to 64
Default	32
Introduced	25.3.R2
Platforms	7705 SAR-1

max-sessions *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of concurrent TWAMP server test sessions
Context	configure test-oam twamp server max-sessions <i>number</i>

Tree	max-sessions
Range	0 to 128
Default	32
Introduced	25.3.R2
Platforms	7705 SAR-1

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Max. instances	100
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix to match against TWAMP client address
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

description *description*

Synopsis	Text description
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR-1

max-connections *number*

Synopsis	Maximum number of control connections for TWAMP prefix
Context	configure test-oam twamp server prefix (ipv4-prefix ipv6-prefix) max-connections number
Tree	max-connections
Range	0 to 64
Default	32
Introduced	25.3.R2
Platforms	7705 SAR-1

max-sessions *number*

Synopsis	Maximum concurrent TWAMP test sessions based on prefix
Context	configure test-oam twamp server prefix (ipv4-prefix ipv6-prefix) max-sessions number
Tree	max-sessions
Range	0 to 128
Default	32
Introduced	25.3.R2
Platforms	7705 SAR-1

twamp-light

Synopsis	Enter the twamp-light context
Context	configure test-oam twamp twamp-light
Tree	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR-1

inactivity-timeout *number*

Synopsis	Time to maintain stale state on the session reflector
Context	configure test-oam twamp twamp-light inactivity-timeout number
Tree	inactivity-timeout
Range	10 to 100

Units	seconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-1

Platforms	7705 SAR-1

priority-event

Synopsis	Enter the priority-event context
Context	configure <i>vrrp policy number</i> priority-event
Tree	priority-event
Introduced	25.3.R2
Platforms	7705 SAR-1

host-unreachable [*ip-address*] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the host-unreachable list instance
Context	configure <i>vrrp policy number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	host-unreachable
Introduced	25.3.R2
Platforms	7705 SAR-1

[*ip-address*] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Host IP address that receives a constant ping probe
Context	configure <i>vrrp policy number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	host-unreachable
Description	This command configures the host IP address for which the specific host unreachable priority event monitors connectivity with a continuous ICMP echo request (ping) probe.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

drop-count *number*

Synopsis	Threshold for consecutive message send attempts
Context	configure <i>vrrp policy number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) drop-count <i>number</i>
Tree	drop-count
Range	1 to 60

Default	3
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-clear <i>number</i>
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-set <i>number</i>
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

padding-size *number*

Synopsis	Packet length padding of the ICMP packet
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2

Platforms 7705 SAR-1

priority

Synopsis Enter the **priority** context

event-type *keyword*

Synopsis Effect of priority-level value on base priority value

Context **configure** [vrrp policy](#) *number* [priority-event](#) [lag-port-down](#) [lag-interface](#) [weight-down](#) *number* [priority](#) [event-type](#) *keyword*

Tree	event-type
Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure vrrp policy <i>number</i> priority-event lag-port-down lag-interface weight-down <i>number</i> priority priority-level <i>number</i>
Tree	priority-level
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR-1

mc-ipsec-non-forwarding [[tunnel-group-id](#)] *number*

Synopsis	Enter the mc-ipsec-non-forwarding list instance
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i>
Tree	mc-ipsec-non-forwarding
Introduced	25.3.R2
Platforms	7705 SAR-1

[tunnel-group-id] *number*

Synopsis	IPSEC tunnel group monitored by priority control event
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i>
Tree	mc-ipsec-non-forwarding
Range	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure <i>vrrp policy number priority-event mc-ipsec-non-forwarding number hold-clear number</i>
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure <i>vrrp policy number priority-event mc-ipsec-non-forwarding number hold-set number</i>
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

priority

Synopsis	Enter the priority context
Context	configure <i>vrrp policy number priority-event mc-ipsec-non-forwarding number priority</i>
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

event-type *keyword*

Synopsis	Event type
Context	configure <i>vrrp policy number priority-event mc-ipsec-non-forwarding number priority event-type keyword</i>
Tree	event-type

Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure <i>vrrp policy number priority-event mc-ipsec-non-forwarding number priority priority-level number</i>
Tree	<i>priority-level</i>
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR-1

port-down [*port-id*] *port-named*

Synopsis	Enter the port-down list instance
Context	configure <i>vrrp policy number priority-event port-down port-named</i>
Tree	<i>port-down</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[port-id] *port-named*

Synopsis	Port ID for the reduced LAG ports
Context	configure <i>vrrp policy number priority-event port-down port-named</i>
Tree	<i>port-down</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
----------	---

Context	configure <i>vrrp policy number priority-event port-down port-named hold-clear number</i>
Tree	<i>hold-clear</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure <i>vrrp policy number priority-event port-down port-named hold-set number</i>
Tree	<i>hold-set</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-1

priority

Synopsis	Enter the priority context
Context	configure <i>vrrp policy number priority-event port-down port-named priority</i>
Tree	<i>priority</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	configure <i>vrrp policy number priority-event port-down port-named priority event-type keyword</i>
Tree	<i>event-type</i>
Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure <i>vrrp policy number priority-event port-down port-named priority priority-level number</i>
Tree	<i>priority-level</i>
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR-1

route-unknown [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the route-unknown list instance
Context	configure <i>vrrp policy number priority-event route-unknown (ipv4-prefix ipv6-prefix)</i>
Tree	<i>route-unknown</i>
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix of route monitored by priority control event
Context	configure <i>vrrp policy number priority-event route-unknown (ipv4-prefix ipv6-prefix)</i>
Tree	<i>route-unknown</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure <i>vrrp policy number priority-event route-unknown (ipv4-prefix ipv6-prefix) hold-clear number</i>
Tree	<i>hold-clear</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2

Platforms 7705 SAR-1

hold-set *number*

Synopsis Hold time before transitioning to cleared state

Context **configure** *vrrp policy number priority-event route-unknown (ipv4-prefix | ipv6-prefix)*
hold-set number

Tree *hold-set*

Range 1 to 86400

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR-1

less-specific

Synopsis Enable the **less-specific** context

Context **configure** *vrrp policy number priority-event route-unknown (ipv4-prefix | ipv6-prefix)*
less-specific

Tree *less-specific*

Introduced 25.3.R2

Platforms 7705 SAR-1

allow-default *boolean*

Synopsis Match on default route

Context **configure** *vrrp policy number priority-event route-unknown (ipv4-prefix | ipv6-prefix)*
less-specific allow-default boolean

Tree *allow-default*

Default false

Introduced 25.3.R2

Platforms 7705 SAR-1

next-hop [*ip-address*] (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis Add a list entry for **next-hop**

Context **configure** *vrrp policy number priority-event route-unknown (ipv4-prefix | ipv6-prefix)*
next-hop (ipv4-address-with-zone | ipv6-address-with-zone)

Tree	next-hop
Introduced	25.3.R2
Platforms	7705 SAR-1

[ip-address] (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis	Next-hop IP address for a returned route prefix
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix ipv6-prefix</i>) next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>)
Tree	next-hop
Description	This command configures the next-hop IP address used to match the route prefix being monitored by the priority control event with the results of a route table lookup.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-1

priority

Synopsis	Enter the priority context
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix ipv6-prefix</i>) priority
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-1

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix ipv6-prefix</i>) priority event-type <i>keyword</i>
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR-1

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) priority priority-level <i>number</i>
Tree	priority-level
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR-1

protocol *keyword*

Synopsis	Routing protocol as match criterion
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) protocol <i>keyword</i>
Tree	protocol
Options	bgp, ospf, isis, rip, static, bgp-vpn
Max. instances	6
Introduced	25.3.R2
Platforms	7705 SAR-1

5 Deprecated and obsolete commands

This section lists the deprecated and obsolete commands in this major release.

5.1 Deprecated commands

This chapter provides a list of commands that are marked as “status deprecated” in the Nokia YANG models and the MD-CLI and should no longer be used. Only releases in which commands are initially deprecated are included in this section. If applicable, the equivalent configuration groups command is also deprecated (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.1.1 25.3.R2

aaa commands:

- configure aaa diameter peer-policy
- configure aaa diameter peer-policy applications
- configure aaa diameter peer-policy applications gx
- configure aaa diameter peer-policy applications gy
- configure aaa diameter peer-policy applications nasreq
- configure aaa diameter peer-policy apply-groups
- configure aaa diameter peer-policy connection-timer
- configure aaa diameter peer-policy description
- configure aaa diameter peer-policy ipv4-source-address
- configure aaa diameter peer-policy ipv6-source-address
- configure aaa diameter peer-policy name
- configure aaa diameter peer-policy origin-host
- configure aaa diameter peer-policy origin-realm
- configure aaa diameter peer-policy peer
- configure aaa diameter peer-policy peer address
- configure aaa diameter peer-policy peer admin-state
- configure aaa diameter peer-policy peer apply-groups
- configure aaa diameter peer-policy peer connection-timer
- configure aaa diameter peer-policy peer destination-host
- configure aaa diameter peer-policy peer destination-realm
- configure aaa diameter peer-policy peer peer-name
- configure aaa diameter peer-policy peer preference
- configure aaa diameter peer-policy peer statistics
- configure aaa diameter peer-policy peer transaction-timer
- configure aaa diameter peer-policy peer transport
- configure aaa diameter peer-policy peer transport port-number

- configure aaa diameter peer-policy peer watchdog-timer
- configure aaa diameter peer-policy proxy
- configure aaa diameter peer-policy proxy admin-state
- configure aaa diameter peer-policy proxy local-address
- configure aaa diameter peer-policy proxy mcs-peer
- configure aaa diameter peer-policy proxy mcs-peer address
- configure aaa diameter peer-policy proxy mcs-peer apply-groups
- configure aaa diameter peer-policy proxy mcs-peer sync-tag
- configure aaa diameter peer-policy proxy router-instance
- configure aaa diameter peer-policy python-policy
- configure aaa diameter peer-policy role
- configure aaa diameter peer-policy router-instance
- configure aaa diameter peer-policy transaction-timer
- configure aaa diameter peer-policy vendor-support
- configure aaa diameter peer-policy watchdog-timer

service commands:

- configure service ies interface ipv4 neighbor-discovery populate-host
- configure service ies interface ipv4 neighbor-discovery route-tag
- configure service ies interface ipv6 neighbor-discovery populate-host
- configure service ies interface ipv6 neighbor-discovery route-tag
- configure service vprn interface ipv4 neighbor-discovery populate-host
- configure service vprn interface ipv4 neighbor-discovery route-tag
- configure service vprn interface ipv6 neighbor-discovery populate-host
- configure service vprn interface ipv6 neighbor-discovery route-tag

subscriber-mgmt commands:

- configure subscriber-mgmt diameter-gx-policy peer-policy
- configure subscriber-mgmt diameter-gy-policy peer-policy
- configure subscriber-mgmt diameter-nasreq-policy peer-policy

5.2 Obsolete commands

This chapter provides a list of commands that are marked as “status obsolete” in the Nokia YANG models and the MD-CLI. These commands can no longer be used and are considered invalid. Only releases in which commands are initially obsoleted are included in this section. If applicable, the equivalent configuration groups command is also obsoleted (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.2.1 25.3.R2

aaa commands:

- configure aaa diameter peer-policy
- configure aaa diameter peer-policy applications
- configure aaa diameter peer-policy applications gx
- configure aaa diameter peer-policy applications gy
- configure aaa diameter peer-policy applications nasreq
- configure aaa diameter peer-policy apply-groups
- configure aaa diameter peer-policy connection-timer
- configure aaa diameter peer-policy description
- configure aaa diameter peer-policy ipv4-source-address
- configure aaa diameter peer-policy ipv6-source-address
- configure aaa diameter peer-policy name
- configure aaa diameter peer-policy origin-host
- configure aaa diameter peer-policy origin-realm
- configure aaa diameter peer-policy peer
- configure aaa diameter peer-policy peer address
- configure aaa diameter peer-policy peer admin-state
- configure aaa diameter peer-policy peer apply-groups
- configure aaa diameter peer-policy peer connection-timer
- configure aaa diameter peer-policy peer destination-host
- configure aaa diameter peer-policy peer destination-realm
- configure aaa diameter peer-policy peer peer-name
- configure aaa diameter peer-policy peer preference
- configure aaa diameter peer-policy peer statistics
- configure aaa diameter peer-policy peer transaction-timer
- configure aaa diameter peer-policy peer transport
- configure aaa diameter peer-policy peer transport port-number

- configure aaa diameter peer-policy peer watchdog-timer
- configure aaa diameter peer-policy proxy
- configure aaa diameter peer-policy proxy admin-state
- configure aaa diameter peer-policy proxy local-address
- configure aaa diameter peer-policy proxy mcs-peer
- configure aaa diameter peer-policy proxy mcs-peer address
- configure aaa diameter peer-policy proxy mcs-peer apply-groups
- configure aaa diameter peer-policy proxy mcs-peer sync-tag
- configure aaa diameter peer-policy proxy router-instance
- configure aaa diameter peer-policy python-policy
- configure aaa diameter peer-policy role
- configure aaa diameter peer-policy router-instance
- configure aaa diameter peer-policy transaction-timer
- configure aaa diameter peer-policy vendor-support
- configure aaa diameter peer-policy watchdog-timer

card commands:

- configure card fp dist-cpu-protection
- configure card fp dist-cpu-protection dynamic-enforcement-policer-pool
- configure card fp policy-accounting
- configure card mda access egress pool
- configure card mda access egress pool amber-alarm-threshold
- configure card mda access egress pool apply-groups
- configure card mda access egress pool name
- configure card mda access egress pool red-alarm-threshold
- configure card mda access egress pool resv-cbs
- configure card mda access egress pool resv-cbs amber-alarm-action
- configure card mda access egress pool resv-cbs amber-alarm-action max
- configure card mda access egress pool resv-cbs amber-alarm-action step
- configure card mda access egress pool resv-cbs cbs
- configure card mda access egress pool slope-policy
- configure card mda access ingress pool
- configure card mda access ingress pool amber-alarm-threshold
- configure card mda access ingress pool apply-groups
- configure card mda access ingress pool name
- configure card mda access ingress pool red-alarm-threshold
- configure card mda access ingress pool resv-cbs

- configure card mda access ingress pool resv-cbs amber-alarm-action
- configure card mda access ingress pool resv-cbs amber-alarm-action max
- configure card mda access ingress pool resv-cbs amber-alarm-action step
- configure card mda access ingress pool resv-cbs cbs
- configure card mda access ingress pool slope-policy
- configure card mda clock-mode
- configure card mda clock-mode mode
- configure card mda clock-mode timestamp-freq
- configure card mda network egress pool
- configure card mda network egress pool amber-alarm-threshold
- configure card mda network egress pool apply-groups
- configure card mda network egress pool name
- configure card mda network egress pool red-alarm-threshold
- configure card mda network egress pool resv-cbs
- configure card mda network egress pool resv-cbs amber-alarm-action
- configure card mda network egress pool resv-cbs amber-alarm-action max
- configure card mda network egress pool resv-cbs amber-alarm-action step
- configure card mda network egress pool resv-cbs cbs
- configure card mda network egress pool slope-policy

cflowd commands:

- configure cflowd active-timeout
- configure cflowd inactive-timeout

filter commands:

- configure filter ip-filter entry action forward next-hop interface-name
- configure filter log destination syslog syslog-id

fwd-path-ext commands:

- configure fwd-path-ext fpe application pw-port
- configure fwd-path-ext fpe application vxlan-termination
- configure fwd-path-ext fpe application vxlan-termination router-instance

isa commands:

- configure isa video-group ad-insert
- configure isa video-group rt-client

lag commands:

- configure lag port-weight-speed
- configure lag weight-threshold
- configure lag weight-threshold action

- configure lag weight-threshold cost
- configure lag weight-threshold value

log commands:

- configure log accounting-policy custom-record override-counter
- configure log accounting-policy custom-record override-counter apply-groups
- configure log accounting-policy custom-record override-counter e-counters
- configure log accounting-policy custom-record override-counter e-counters in-profile-octets-discarded-count
- configure log accounting-policy custom-record override-counter e-counters in-profile-octets-forwarded-count
- configure log accounting-policy custom-record override-counter e-counters in-profile-packets-discarded-count
- configure log accounting-policy custom-record override-counter e-counters in-profile-packets-forwarded-count
- configure log accounting-policy custom-record override-counter e-counters out-profile-octets-discarded-count
- configure log accounting-policy custom-record override-counter e-counters out-profile-octets-forwarded-count
- configure log accounting-policy custom-record override-counter e-counters out-profile-packets-discarded-count
- configure log accounting-policy custom-record override-counter e-counters out-profile-packets-forwarded-count
- configure log accounting-policy custom-record override-counter i-counters
- configure log accounting-policy custom-record override-counter i-counters all-octets-offered-count
- configure log accounting-policy custom-record override-counter i-counters all-packets-offered-count
- configure log accounting-policy custom-record override-counter i-counters high-octets-discarded-count
- configure log accounting-policy custom-record override-counter i-counters high-packets-discarded-count
- configure log accounting-policy custom-record override-counter i-counters in-profile-octets-forwarded-count
- configure log accounting-policy custom-record override-counter i-counters in-profile-packets-forwarded-count
- configure log accounting-policy custom-record override-counter i-counters low-octets-discarded-count
- configure log accounting-policy custom-record override-counter i-counters low-packets-discarded-count
- configure log accounting-policy custom-record override-counter i-counters out-profile-octets-forwarded-count
- configure log accounting-policy custom-record override-counter i-counters out-profile-packets-forwarded-count
- configure log accounting-policy custom-record override-counter id
- configure log accounting-policy custom-record ref-override-counter

- configure log accounting-policy custom-record ref-override-counter all
- configure log accounting-policy custom-record ref-override-counter e-counters
- configure log accounting-policy custom-record ref-override-counter e-counters in-profile-octets-discarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters in-profile-octets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters in-profile-packets-discarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters in-profile-packets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters out-profile-octets-discarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters out-profile-octets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters out-profile-packets-discarded-count
- configure log accounting-policy custom-record ref-override-counter e-counters out-profile-packets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters
- configure log accounting-policy custom-record ref-override-counter i-counters all-octets-offered-count
- configure log accounting-policy custom-record ref-override-counter i-counters all-packets-offered-count
- configure log accounting-policy custom-record ref-override-counter i-counters high-octets-discarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters high-packets-discarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters in-profile-octets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters in-profile-packets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters low-octets-discarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters low-packets-discarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters out-profile-octets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter i-counters out-profile-packets-forwarded-count
- configure log accounting-policy custom-record ref-override-counter id
- configure log filter entry
- configure log filter entry action
- configure log filter entry apply-groups

- configure log filter entry description
- configure log filter entry entry-id
- configure log filter entry match
- configure log filter entry match application
- configure log filter entry match application eq
- configure log filter entry match application neq
- configure log filter entry match event
- configure log filter entry match event eq
- configure log filter entry match event gt
- configure log filter entry match event gte
- configure log filter entry match event lt
- configure log filter entry match event lte
- configure log filter entry match event neq
- configure log filter entry match message
- configure log filter entry match message eq
- configure log filter entry match message neq
- configure log filter entry match message regexp
- configure log filter entry match severity
- configure log filter entry match severity eq
- configure log filter entry match severity gt
- configure log filter entry match severity gte
- configure log filter entry match severity lt
- configure log filter entry match severity lte
- configure log filter entry match severity neq
- configure log filter entry match subject
- configure log filter entry match subject eq
- configure log filter entry match subject neq
- configure log filter entry match subject regexp
- configure log filter entry match vrtr-name
- configure log filter entry match vrtr-name eq
- configure log filter entry match vrtr-name neq
- configure log filter entry match vrtr-name regexp
- configure log snmp-trap-group log-id

openflow commands:

- configure openflow of-controller
- configure openflow of-controller address

- configure openflow of-controller admin-state
- configure openflow of-controller apply-groups
- configure openflow of-controller controller-id
- configure openflow of-controller description
- configure openflow of-controller echo-interval
- configure openflow of-controller echo-multiple
- configure openflow of-controller ipv6-address
- configure openflow of-controller role
- configure openflow of-controller tls-server-profile
- configure openflow of-controller version

port commands:

- configure port dwdm channel
- configure port dwdm coherent channel
- configure port dwdm rxdtv-adjust
- configure port dwdm wavetracker
- configure port dwdm wavetracker apply-groups
- configure port dwdm wavetracker encode
- configure port dwdm wavetracker encode key1
- configure port dwdm wavetracker encode key2
- configure port dwdm wavetracker power-control
- configure port dwdm wavetracker power-control target-power
- configure port dwdm wavetracker report-alarm
- configure port dwdm wavetracker report-alarm encoder-degrade
- configure port dwdm wavetracker report-alarm encoder-failure
- configure port dwdm wavetracker report-alarm missing-pluggable-voa
- configure port dwdm wavetracker report-alarm power-control-degrade
- configure port dwdm wavetracker report-alarm power-control-failure
- configure port dwdm wavetracker report-alarm power-control-high-limit
- configure port dwdm wavetracker report-alarm power-control-low-limit
- configure port ethernet access egress queue-group queue-overrides queue monitor-depth
- configure port ethernet access ingress queue-group queue-overrides queue monitor-depth
- configure port ethernet network egress queue-group queue-overrides queue monitor-depth
- configure port sonet-sdh reset-port-on-path-down

python commands:

- configure python python-policy vsd
- configure python python-policy vsd apply-groups

- configure python python-policy vsd script

qos commands:

- configure qos adv-config-policy child-control offered-measurement sample-interval
- configure qos vlan-qos-policy queue queue-type
- configure qos vlan-qos-policy queue queue-type best-effort
- configure qos vlan-qos-policy queue queue-type best-effort cir-weight-profile
- configure qos vlan-qos-policy queue queue-type best-effort percent-rate
- configure qos vlan-qos-policy queue queue-type best-effort percent-rate cir
- configure qos vlan-qos-policy queue queue-type best-effort percent-rate pir
- configure qos vlan-qos-policy queue queue-type expedite-hi
- configure qos vlan-qos-policy queue queue-type expedite-hi percent-rate
- configure qos vlan-qos-policy queue queue-type expedite-hi percent-rate cir
- configure qos vlan-qos-policy queue queue-type expedite-hi percent-rate pir
- configure qos vlan-qos-policy queue queue-type expedite-lo
- configure qos vlan-qos-policy queue queue-type expedite-lo percent-rate
- configure qos vlan-qos-policy queue queue-type expedite-lo percent-rate cir
- configure qos vlan-qos-policy queue queue-type expedite-lo percent-rate pir

redundancy commands:

- configure redundancy multi-chassis peer sync diameter-proxy

router commands:

- configure router interface ip-tunnel
- configure router interface ip-tunnel remote-ip
- configure router mpls lsp class-forwarding default-lsp
- configure router mpls lsp class-forwarding fc
- configure router mpls lsp cspf
- configure router mpls lsp cspf use-te-metric
- configure router mpls lsp pce-computation
- configure router mpls lsp-template class-forwarding default-lsp
- configure router mpls lsp-template class-forwarding fc
- configure router mpls lsp-template cspf
- configure router mpls lsp-template cspf admin-state
- configure router mpls lsp-template cspf use-te-metric
- configure router nat inside large-scale dual-stack-lite deterministic policy-map
- configure router nat inside large-scale dual-stack-lite deterministic policy-map admin-state
- configure router nat inside large-scale dual-stack-lite deterministic policy-map apply-groups
- configure router nat inside large-scale dual-stack-lite deterministic policy-map map

- configure router nat inside large-scale dual-stack-lite deterministic policy-map map apply-groups
- configure router nat inside large-scale dual-stack-lite deterministic policy-map map first-outside-address
- configure router nat inside large-scale dual-stack-lite deterministic policy-map map from
- configure router nat inside large-scale dual-stack-lite deterministic policy-map map to
- configure router nat inside large-scale dual-stack-lite deterministic policy-map nat-policy
- configure router nat inside large-scale dual-stack-lite deterministic policy-map source-prefix
- configure router nat inside large-scale nat44 deterministic policy-map
- configure router nat inside large-scale nat44 deterministic policy-map admin-state
- configure router nat inside large-scale nat44 deterministic policy-map apply-groups
- configure router nat inside large-scale nat44 deterministic policy-map map
- configure router nat inside large-scale nat44 deterministic policy-map map apply-groups
- configure router nat inside large-scale nat44 deterministic policy-map map first-outside-address
- configure router nat inside large-scale nat44 deterministic policy-map map from
- configure router nat inside large-scale nat44 deterministic policy-map map to
- configure router nat inside large-scale nat44 deterministic policy-map nat-policy
- configure router nat inside large-scale nat44 deterministic policy-map source-prefix

routing-options commands:

- configure routing-options policy-accounting policy-acct-template dest-class
- configure routing-options policy-accounting policy-acct-template dest-class index

service commands:

- configure service epipe bgp-evpn local-ac
- configure service epipe bgp-evpn local-ac eth-tag
- configure service epipe bgp-evpn local-ac name
- configure service epipe bgp-evpn mpls endpoint
- configure service epipe bgp-evpn mpls endpoint name
- configure service epipe bgp-evpn remote-ac
- configure service epipe bgp-evpn remote-ac eth-tag
- configure service epipe bgp-evpn remote-ac name
- configure service epipe sap egress qos sap-egress overrides queue monitor-depth
- configure service epipe sap ingress aggregate-policer burst
- configure service epipe sap ingress qos sap-ingress overrides queue monitor-depth
