Introduced	25.3.R2
Platforms	7705 SAR Gen 2

additional-frr-labels *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of additional overhead labels
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> max-sr-labels additional-frr-labels <i>number</i>
Tree	additional-frr-labels
Range	0 to 4
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-stack-size *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size for the maximum segment routing label stack
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> max-sr-labels label-stack-size <i>number</i>
Tree	label-stack-size
Range	1 to 11
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP template metric
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> metric <i>number</i>
Tree	metric
Description	<p>This command allows the user to override the LSP operational metric with a constant administrative value that does not change regardless of the actual path the LSP uses over its lifetime.</p> <p>The LSP operational metric matches the metric that the active path of this LSP uses at any specific time. For a CSPF LSP, this metric represents the cumulative IGP metric of all links the active path uses. If CSPF for this LSP is configured to use the TE metric, the LSP operational metric is set to the maximum value. For a non-CSPF LSP, the operational metric is the shortest IGP cost to the destination of the LSP.</p> <p>The LSP operational metric is used by some applications to select an LSP among a set of LSPs that are destined to the same egress router. The LSP with the lowest operational metric is selected. If more than one LSP has the same lowest LSP metric, the LSP with the lowest tunnel index is selected. The configuration of a constant metric by the user ensures that the LSP always maintains its preference in this selection regardless of the path it uses at any given time. Applications that use the LSP operational metric include LDP-over-RSVP, VPRN auto-bind, IGP, BGP, and static route shortcuts.</p> <p>This command and the use-computed-metric command are mutually exclusive.</p>
Range	0 to 16777215
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-type *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Metric type used for LSP path computation
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> metric-type <i>keyword</i>
Tree	metric-type
Options	igp, te, delay
Default	igp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

override-tunnel-elc *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Override any received entropy label capability
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Description	When configured to true , this command allows the system to override any received entropy label capability advertisement. When configured to false , this command disables the override.
Default	false
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

path-computation-method *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Path computation method
----------	-------------------------

Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> path-computation-method <i>keyword</i>
Tree	path-computation-method
Description	<p>This command configures the path computation method of an RSVP-TE or SR-TE LSP.</p> <p>If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the hop-to-label translation is used for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP.</p> <p>See "SR-TE LSP path computation using hop-to-label translation" in the <i>7705 SAR Gen 2 Segment Routing and PCE User Guide</i> for more information.</p>
Options	local-cspf, pce
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-profile [**profile-id**] *number*

Synopsis	Enter the path-profile list instance
Context	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i> path-profile <i>number</i>
Tree	path-profile
Description	Commands in this context configure the attributes of the PCE path profile.
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[profile-id] *number*

Synopsis	Profile ID for the specified LSP

Context	configure router <i>named-item-64</i> mpls max-bypass-plr-associations <i>number</i>
Tree	max-bypass-plr-associations
Range	1 to 16
Default	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbb-prefer-current-hops *boolean*

Synopsis	Select preference to use the current hops for MBB
Context	configure router <i>named-item-64</i> mpls mbb-prefer-current-hops <i>boolean</i>
Tree	mbb-prefer-current-hops
Description	<p>When configured to true, the router instructs CSPF to select an MBB path of a RSVP-TE LSP which has the most overlapping links with the current path.</p> <p>When MPLS performs an MBB for the primary or secondary path of a P2P LSP, or the S2L path of a P2MP LSP, and this command is enabled in the MPLS context, CSPF selects a path, among equal-cost candidate paths, with the most overlapping links with the current path. Normally, CSPF selects the path randomly.</p> <p>The procedures for the MBB CSPF path selection apply to LSP without the least-fill command enabled. If the least-fill rule results in a different path, the LSP path is moved. Users can still favor stability over the least-fill condition by applying a larger value to the least-fill-min-thd command, under the MPLS context, such that a path is only moved when the difference of the least-available bandwidth becomes significant enough between the most used links in the equal-cost paths. If that difference is not significant enough, CSPF selects the path with the most overlapping links instead of selecting a path randomly.</p> <p>The procedures when this command is enabled apply to the following MBB types:</p> <ul style="list-style-type: none"> • RSVP P2P LSP: • global revertive MBB • autobandwidth MBB • configuration change MBB

- soft preemption MBB
- TE graceful shutdown MBB
- delayed retry MBB (for SRLG secondary LSP path)
- path change MBB
- timer resignal MBB
- manual resignal MBB
- S2L path of a RSVP P2MP LSP:
- global revertive MBB
- soft preemption MBB
- TE graceful shutdown MBB

During the FRR global revertive MBB, CSPF selects a random link from those available between the PLR node and the Merge Point node, including the failed link if it has restored in the meantime. These links cannot be checked for overlap with the current path.

The TE graceful shutdown MBB still avoids the link or node that is in maintenance and the soft preemption MBB still avoids the link that is overbooked.

For an inter-area LSP, this feature applies to the subset of the path from the ingress LER to the exit ABR.

The procedures of this feature are not applied to a zero-bandwidth CSPF LSP, including an autobandwidth CSPF LSP while its operational bandwidth is zero, and to a non-CSPF LSP.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Tree	rsvp-te
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te boolean

Synopsis	Allow PCE reporting for all TE LSPs of SR-TE type
Context	configure router <i>named-item-64</i> mpls pce-report sr-te <i>boolean</i>
Tree	sr-te
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resignal-on-igp-event boolean

Synopsis	Reoptimize RSVP LSP paths upon IGP events
Context	configure router <i>named-item-64</i> mpls resignal-on-igp-event <i>boolean</i>

Tree [resignal-on-igp-event](#)

Description When configured to **true**, the system enables the ad hoc reoptimization of the active CSPF path of all RSVP-TE LSPs at the receipt of an IGP link event. The following link events are supported:

- link down
- link up
- IGP or TE metric change
- SRLG change
- admin group change

The ad hoc reoptimization follows the same behavior as in the timer-based resignal Make-Before-Break (MBB) feature. MPLS reevaluates the active paths of all RSVP-TE LSPs. The reevaluation consists of updating the total IGP or TE metric of the current path, checking the validity of the hops, and computing a new CSPF path. MPLS signals and programs the new path only if its total metric is different than the updated metric of the current path, or if one or more hops of the current path are invalid. Otherwise, the current path is considered to be the most optimal and retained.

This feature does not require that the timer-based resignal (**configure router mpls resignal-timer**) command be enabled. If enabled, the resignal timer is aborted and an ad hoc reoptimization is performed.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

resignal-on-igp-overload *boolean*

Synopsis Resignal all RSVP-TE LSPs upon IGP overload

Context **configure router** *named-item-64* **mpls** [resignal-on-igp-overload](#) *boolean*

Tree [resignal-on-igp-overload](#)

Description When configured to **true**, the receipt of the IS-IS overload bit in the TE-DB triggers the immediate resignaling of all RSVP-TE LSPs. MPLS forces the expiry of the resignal timer and the TE-DB computes a new CSPF for each RSVP-TE LSP active path. The re-optimization causes the immediate transition of RSVP-TE LSP paths away from the IS-IS node in overload using the MBB operation.

This command cannot be configured to **true** when the **retry-on-igp-overload** command is configured to **true**.

When configured to **false**, the default behavior is maintained where MBB re-optimization occurs only when a timer-based resignal is performed or a manual resignal is executed.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

resignal-timer *number*

Synopsis	Resignal timer for RSVP LSPs
Context	configure router <i>named-item-64</i> mpls resignal-timer <i>number</i>

sr-te-resignal

Synopsis	Enter the sr-te-resignal context
Context	configure router <i>named-item-64</i> mpls sr-te-resignal
Tree	sr-te-resignal
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resignal-on-igp-event *boolean*

Synopsis	Reoptimize SR-TE LSPs upon IGP link events
Context	configure router <i>named-item-64</i> mpls sr-te-resignal resignal-on-igp-event <i>boolean</i>
Tree	resignal-on-igp-event
Description	<p>When configured to true, the system enables the ad hoc reoptimization of all CSPF paths in the operational UP state of all SR-TE LSPs at the receipt of an IGP link event. The following link events are supported:</p> <ul style="list-style-type: none"> • link down • link up • IGP or TE metric change • SRLG change • admin group change

The ad hoc reoptimization follows the same behavior as in the timer-based resignal Make-Before-Break (MBB) feature. MPLS reevaluates all the paths in the operational UP state of all SR-TE LSPs. The reevaluation consists of updating the total IGP or TE metric of the current path, checking the validity of the hops and labels, and computing

a new CSPF path. MPLS programs the new path only if its total metric is different than the updated metric of the current path, or if one or more hops or labels of the current path are invalid. Otherwise, the current path is considered to be the most optimal and retained.

This feature does not require that the timer-based resignal (**configure router mpls sr-te-resignal resignal-timer**) command be enabled. If enabled, the resignal timer is aborted and an ad hoc reoptimization is performed.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resignal-on-igp-overload *boolean*

Synopsis	Enable resignaling of SR-TE LSPs upon IGP overload
Context	configure <i>router</i> <i>named-item-64</i> mpls sr-te-resignal resignal-on-igp-overload <i>boolean</i>
Tree	resignal-on-igp-overload
Description	When configured to true , the system enables ad-hoc re-optimization of the CSPF paths of all SR-TE LSPs when IS-IS receives an IS-IS overload bit advertisement from a remote router.

When this command is enabled on the router and an IGP overload bit is set in a Layer 1 or Layer 2 IS-IS LSP received from a remote router, MPLS performs an ad-hoc re-optimization of all the paths of all the SR-TE LSPs that have paths computed by the local CSPF. For each SR-TE LSP current path that transits the router in overload, the CSPF looks for a new path that avoids the router. For each SR-TE LSP current path that terminates on the router in overload, the CSPF checks if a better path exists. In both cases, if a new path is not found the system maintains the current path when operationally up.

The ad-hoc re-optimization triggers the timer-based re-optimization by forcing the resignal timer to expire. Therefore, the user must use the **configure router mpls sr-te-resignal resignal-timer** command to configure the resignal timer for the SR-TE application.

When configured to **false**, MPLS does not act immediately on an IS-IS overload bit from a remote router. MPLS acts on it at the next timer-based or manual re-optimization of the SR-TE LSPs.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resignal-timer *number*

Synopsis	Resignal timer for SR-TE LSPs
----------	-------------------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>mpls</i> <i>sr-te-resignal</i> <i>resignal-timer</i> <i>number</i>
Tree	resignal-timer
Description	This command configures the time the system waits before signaling the re-optimization of all SR-TE LSPs.

metric *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS static LSP metric to select an LSP
Context	configure <i>router</i> <i>named-item-64</i> <i>mpls static-lsp</i> <i>named-item-64</i> metric <i>number</i>
Tree	<i>metric</i>
Description	<p>This command allows the user to override the LSP operational metric with a constant administrative value that does not change regardless of the actual path the LSP uses over its lifetime.</p> <p>The LSP operational metric matches the metric that the active path of this LSP uses at any specific time. For a CSPF LSP, this metric represents the cumulative IGP metric of all links the active path uses. If CSPF for this LSP is configured to use the TE metric, the LSP operational metric is set to the maximum value. For a non-CSPF LSP, the operational metric is the shortest IGP cost to the destination of the LSP.</p> <p>The LSP operational metric is used by some applications to select an LSP among a set of LSPs that are destined to the same egress router. The LSP with the lowest operational metric is selected. If more than one LSP has the same lowest LSP metric, the LSP with the lowest tunnel index is selected. The configuration of a constant metric by the user ensures that the LSP always maintains its preference in this selection regardless of the path it uses at any given time. Applications that use the LSP operational metric include LDP-over-RSVP, VPRN auto-bind, IGP, BGP, and static route shortcuts.</p> <p>This command and the use-computed-metric command are mutually exclusive.</p>
Range	1 to 16777215

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

push

Synopsis	Enable the push context

strict-ero-nhop-direct-resolution *boolean*

Synopsis	Resolves RSVP-TE LSP ERO to local and host routes only
Context	configure router <i>named-item-64</i> mpls strict-ero-nhop-direct-resolution <i>boolean</i>
Tree	strict-ero-nhop-direct-resolution
Description	<p>When configured to true, the router enables the strict Explicit Route Object (ERO) next-hop direct resolution. The feature restricts the routes used to resolve the next hop of an ERO address to local and host routes. This command avoids using a next hop over a parallel link when a half link is up in the routing table.</p> <p>This command applies to an ERO when all of the following conditions are met:</p> <ul style="list-style-type: none"> • the ERO next hop is an IPv4 address • the ERO object is a strict hop

- the IPv4 address matches the primary subnet of a local numbered interface

If no such route exists, RSVP rejects the PATH message with ErrCode = Routing Error (24) and SubErrCode = Bad Strict Node (2).

When configured to **false**, the router disables the strict ERO next-hop direct resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-table-pref

Synopsis	Enter the tunnel-table-pref context
Context	configure router <i>named-item-64</i> mpls tunnel-table-pref
Tree	tunnel-table-pref
Description	Commands in this context configure the tunnel table preference for RSVP-TE LSP and SR-TE LSP tunnel types.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp-te number

Synopsis	RSVP-TE tunnel table preference
Context	configure router <i>named-item-64</i> mpls tunnel-table-pref rsvp-te <i>number</i>
Tree	rsvp-te
Description	<p>This command configures the tunnel table preference for RSVP-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>Nokia recommends that tunnel types have unique preference values. In a situation where two or more tunnel types are set to the same preference value, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te number

Synopsis	SR-TE tunnel table preference
Context	configure router <i>named-item-64</i> mpls tunnel-table-pref sr-te <i>number</i>
Tree	sr-te
Description	<p>This command configures the tunnel table preference for SR-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user-srlg-db boolean

Synopsis	Enable the use of user SRLG database
Context	configure router <i>named-item-64</i> mpls user-srlg-db <i>boolean</i>
Tree	user-srlg-db
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls-labels

Synopsis	Enter the mpls-labels context
Context	configure router <i>named-item-64</i> mpls-labels
Tree	mpls-labels
Description	Commands in this context configure global MPLS label parameters for the router.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

bgp-labels-hold-timer *number*

Synopsis	BGP labels hold timer for the ingress router
Context	configure router <i>named-item-64</i> mpls-labels bgp-labels-hold-timer <i>number</i>
Tree	bgp-labels-hold-timer
Description	<p>This command configures the number of seconds the IOM retains a BGP per-next-hop label forwarding entry (ILM entry) after BGP determines the label is no longer associated with any best or best-external path. Retaining the entry for a short period allows in-flight traffic bearing the old label to continue forwarding while upstream routers converge to the new label value, enabling MBB behavior during primary path reoptimization.</p> <p>A non-zero delay is useful in the following situations:</p> <ul style="list-style-type: none"> • a label-unicast route is readvertised with a new label by an ABR/ASBR operating in label-per-next-hop mode after it selects a new primary path • an IP VPN route is readvertised with a new label by an ABR/ASBR operating in label-per-next-hop mode after it selects a new primary path • an IP VPN route is readvertised with a new label by a VPRN with best-external enabled when its best-external path changes • an IP VPN route is readvertised with a new label by a VPRN in label-per-next-hop mode after the CE next hop changes <p>In the preceding situations, configure the hold timer to be large enough to account for the propagation delay of the route withdrawal to all ingress routers.</p> <p>This command applies to the Base router BGP instance and all VPRN BGP instances. It affects per-next-hop labels for labeled-IPv4 routes, VPN-IPv4 and VPN-IPv6 routes, including best-external, and LPN-mode VPRN per-CE labels.</p> <p>When set to zero, label forwarding entries are deleted immediately when BGP no longer requires them.</p>
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reserved-label-block [**label-block-name**] *named-item-64*

Synopsis	Enter the reserved-label-block list instance
Context	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>

sr-labels

Synopsis	Enter the sr-labels context
Context	configure router <i>named-item-64</i> mpls-labels sr-labels
Tree	sr-labels
Description	<p>Commands in this context configure the range of the Segment Routing Global Block (SRGB), which assigns labels to segment routing prefix SIDs originated by this router. The range is taken from the system dynamic label range and is not instantiated by default.</p> <p>Segment routing labels are reserved labels. After they are instantiated, they cannot be used for dynamic label assignment by other protocols, such as RSVP, LDP, and BGP.</p> <p>Note: Changes to the SRGB range do not impact the actual MPLS datapath table sizes.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end number

Synopsis	Upper bound of the label range
Context	configure router <i>named-item-64</i> mpls-labels sr-labels end number
Tree	end
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start number

Synopsis	Lower bound of the label range
Context	configure router <i>named-item-64</i> mpls-labels sr-labels start number
Tree	start
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-label-range *number*

Synopsis	Static label range on the ingress router
Context	configure router <i>named-item-64</i> mpls-labels static-label-range <i>number</i>
Tree	static-label-range
Range	0 to 1048544
Default	18400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mss-adjust

Synopsis	Enable the mss-adjust context
Context	configure router <i>named-item-64</i> mss-adjust
Tree	mss-adjust
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-group *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group used for TCP-MSS adjustment
Context	configure router <i>named-item-64</i> mss-adjust nat-group <i>number</i>
Tree	nat-group
Max. range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

segment-size *number*

Synopsis	TCP-MSS option value in transmitted TCP SYN requests
Context	configure router <i>named-item-64</i> mss-adjust segment-size <i>number</i>

Tree	segment-size
Range	160 to 10240
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat

Synopsis	Enable the nat context
Context	configure router <i>named-item-64</i> nat
Tree	nat
Introduced	25.3.R2

7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-subscriber-limit *number*

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis

Ingress hashing for load distribution across ESA-VMs

Context

configure **router** *named-item-64* **nat** **inside** **large-scale** **nat44** **max-subscriber-limit** *number*

Tree

max-subscriber-limit

Description

This command configures the maximum number of classic LSN subscribers within a consecutive range of IP addresses that are processed by the same ESA-VM. It directly defines the granularity of upstream traffic distribution across ESA-VMs within the scope of an inside routing context. The ingress hashing mechanism used for traffic distribution is based on source IPv4 addresses or prefixes.

Range

1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768 | 65536

use-interface-ip *boolean*

- **WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use an IPv4 interface for NAT
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> applications use-interface-ip <i>boolean</i>
Tree	use-interface-ip
Description	When configured to true , the router uses the IPv4 address of a NAT enabled local interface as the public IP address, within the same outside (public) routing context. Only one such NAT'd interface can be defined per outside routing context.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-echo-reply *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> icmp-echo-reply <i>boolean</i>
Tree	icmp-echo-reply
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use. In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it. In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.

	In LSN, the reply from an outside IP address is generated regardless if a binding is present.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

large-scale

Synopsis	Enter the large-scale context
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> large-scale
Tree	large-scale
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

subscriber-limit *number*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of subscribers per IP address
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> large-scale subscriber-limit <i>number</i>
Tree	subscriber-limit
Range	1 to 65535 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

use-interface-ip

Synopsis	Enter the use-interface-ip context
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> large-scale use-interface-ip
Tree	use-interface-ip
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-reserved-ports *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of ports per protocol reserved for CPM traffic
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> large-scale use-interface-ip cpm-reserved-ports <i>number</i>
Tree	cpm-reserved-ports
Description	This command configures the router to reserve ports specifically for local (CPM) traffic. On the public IPv4 address of a NAT interface, the ports are shared between CPM traffic and transit traffic passing through the node. This reservation ensures that NAT traffic destined for the local node (CPM traffic) is guaranteed a minimum number of available ports, even if the public IPv4 port pool becomes exhausted.
Range	0 to 65535
Default	10
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

use-well-known-ports *boolean*

Synopsis	Enable dynamic allocation of well-known ports
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> large-scale use-interface-ip use-well-known-ports <i>boolean</i>
Tree	use-well-known-ports
Description	<p>When configured to true, the router configures the dynamic allocation of well-known ports for interface-based NAT.</p> <p>When configured to false, well-known ports are not dynamically allocated for either transit traffic or traffic initiated from the control plane.</p> <p>This command can only be configured when the configure service vprn nat outside pool application use-interface-ip is set to true.</p> <p>Ports within the well-known range (0-1023) can still be allocated statically using static port forwarding.</p>
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mode *keyword*

**WARNING:**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a NAT group
Context	configure router named-item-64 nat outside pool named-item nat-group <i>reference</i>
Tree	nat-group
Reference	configure isa nat-group <i>number</i>
Notes	The following elements are part of a mandatory choice: nat-group or wlan-gw-group .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-forwarding

Synopsis	Enter the port-forwarding context
Context	configure router named-item-64 nat outside pool named-item port-forwarding

Tree	port-forwarding
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic-block-reservation *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	configure router <i>named-item-64</i> nat outside pool <i>named-item</i> port-forwarding dynamic-block-reservation <i>boolean</i>
Tree	dynamic-block-reservation
Description	<p>When configured to true, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p> <p>When configured to false, dynamic port blocks are not reserved when the first port forward for the subscriber is created.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

range-end *number*

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>nat</i> <i>outside</i> <i>pool</i> <i>named-item</i> <i>port-forwarding</i> <i>range-end</i> <i>number</i>
Tree	<i>range-end</i>
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0 1023 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-reservation

Synopsis	Enter the port-reservation context
Context	configure <i>router</i> <i>named-item-64</i> <i>nat</i> <i>outside</i> <i>pool</i> <i>named-item</i> <i>port-reservation</i>
Tree	<i>port-reservation</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-blocks *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	configure <i>router</i> <i>named-item-64</i> <i>nat</i> <i>outside</i> <i>pool</i> <i>named-item</i> <i>port-reservation</i> <i>port-blocks</i> <i>number</i>
Tree	<i>port-blocks</i>
Description	In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.

For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the **l2-aware port-block-extension** hierarchy in the NAT pool.

Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ports *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	configure <i>router</i> <i>named-item-64</i> nat <i>outside pool</i> <i>named-item</i> port-reservation ports <i>number</i>
Tree	ports
Description	<p>For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.</p> <p>For Layer 2 aware NAT, this command specifies the size of the initial port block of a subscriber in the pool. Additional port blocks (extended port blocks) for the Layer 2 aware subscriber must be explicitly enabled under the l2-aware port-block-extension hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port blocks.</p> <p>For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.</p>
Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

rpki-session [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the rpki-session list instance
----------	---

Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	rpki-session
Description	This command configures a session with an RPKI local cache server by using the RPKI to Router (RPKI-RTR) protocol. Using these sessions, the router learns dynamic VRP entries expressing valid origin AS and prefix associations. SR OS supports the RPKI-RTR protocol over TCP/IPv4 or TCP/IPv6 transport. The router can set up an RPKI-RTR session using the base routing table (in-band) or the management router (out-of-band). Use the configure router management command to configure a session using the management port.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address for the RPKI local cache server
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	rpki-session
Description	This command specifies an IPv4 address or an IPv6 address for the RPKI local cache server. If the IPv6 address is link-local, the interface name must be appended to the IPv6 address after a hyphen (-).
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the RPKI session
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

connect-retry *number*

Synopsis	RPKI connect retry timer value
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) connect-retry <i>number</i>
Tree	connect-retry
Description	This command configures the time to wait between one failed TCP connection attempt and the next attempt.
Range	1 to 65535
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) description <i>description</i>

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local address for the TCP connection setup
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination port used to connect to the cache server
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port <i>number</i>
Tree	port
Range	0 to 65535
Default	323
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

refresh-time

Synopsis	Enter the refresh-time context
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) refresh-time
Tree	refresh-time
Description	Commands in this context configure the refresh-time and hold-time intervals that are used for liveness detection of the RPKI-RTR session.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-time number

Synopsis	Length of time that the session is considered Up
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) refresh-time hold-time <i>number</i>
Tree	hold-time
Description	This command specifies the length of time that the session is considered Up without any indication that the cache server is alive and reachable. The hold time must be at least twice the refresh time, otherwise the command configuration is not accepted. The timer is reset when any PDU from the cache server is received. When the hold time expires, the session is considered Down and the stale timer starts.
Range	60 to 65535

Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value number

Synopsis	Periodic Serial Query PDUs sent for liveness detection
Context	configure router <i>named-item-64</i> origin-validation rpk-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) refresh-time value <i>number</i>
Tree	value
Description	This command configures the refresh-time interval used for liveness detection of the RPKI-RTR session. The refresh time is reset when a Reset Query PDU or Serial Query PDU is sent to the cache server. When the timer expires, a new Serial Query PDU is sent with the last known serial number.
Range	30 to 32767
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stale-time number

Synopsis	Maximum time prefix origin validation remains usable
Context	configure router <i>named-item-64</i> origin-validation rpk-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) stale-time <i>number</i>
Tree	stale-time
Description	This command configures the maximum length of time that prefix origin validation records learned from the cache server remain usable after the RPKI-RTR session goes down. When the timer expires, all remaining stale entries associated with the session are deleted.
Range	60 to 3600
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-transport-security

Synopsis	Enter the tls-transport-security context
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tls-transport-security
Tree	tls-transport-security
Description	Commands in this context configure TLS transport security for an RPKI session. This context does not enable TLS. TLS is enabled for the RPKI session only when a valid TLS client profile is assigned.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

server-san-dns-auth *named-item-255*

Synopsis	DNS name used to authenticate the server SAN
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tls-transport-security server-san-dns-auth <i>named-item-255</i>
Tree	server-san-dns-auth
Description	<p>This command configures the DNS domain name used to authenticate the SAN field in the TLS certificate presented by the RPKI cache server.</p> <p>The DNS domain name is used only to authenticate the SAN field. It is not used for DNS resolution and does not set the destination address of the RPKI session.</p> <p>When this command is not configured, TLS does not authenticate the SAN field and accepts the SAN value presented in the server certificate.</p>
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS client profile for the RPKI session
Context	configure router <i>named-item-64</i> origin-validation rpki-session (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tls-transport-security tls-client-profile <i>reference</i>
Tree	tls-client-profile
Description	<p>This command assigns a TLS client profile to the RPKI session.</p> <p>Assigning a valid TLS client profile to an RPKI session enables TLS on that session and allows it to initiate the TLS handshake.</p>

When this command is deleted, TLS is disabled for the RPKI session.

Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

static-entry [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [upto](#) *number* [origin-as](#) *number*

Synopsis	Enter the static-entry list instance
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i>
Tree	static-entry
Description	<p>Commands in this context configure a static VRP entry indicating that a specific origin AS is either valid or invalid for a specific IP prefix range. Static VRP entries are stored, along with dynamic VRP entries (learned from local cache servers using the RPKI-RTR protocol), in the origin validation database of the router. This database is used for determining the origin validation state of IPv4 and IPv6 BGP routes received over sessions with origin validation enabled.</p> <p>Static entries can be configured only in the configure router origin-validation context of the base router.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IPv4 or IPv6 address with the minimum prefix and length
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i>
Tree	static-entry
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

upto *number*

Synopsis	Maximum prefix length
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i>
Tree	static-entry

Range	1 to 128
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

origin-as *number*

Synopsis	Origin AS number
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i>
Tree	static-entry
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

valid *boolean*

Synopsis	Designate mix of origin AS and prefix range as valid
Context	configure router <i>named-item-64</i> origin-validation static-entry (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) upto <i>number</i> origin-as <i>number</i> valid <i>boolean</i>
Tree	valid
Description	When configured to true , the router considers this route entry as a valid combination of the origin AS and prefix range. When configured to false , the router considers this route entry as an invalid combination of the origin AS and prefix range.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ospf [**ospf-instance**] *number*

Synopsis	Enter the ospf list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i>
Tree	ospf
Description	Commands in this context create and configure an OSPF routing instance.

Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ospf-instance] *number*

Synopsis	OSPF instance
Context	configure router <i>named-item-64</i> ospf <i>number</i>
Tree	ospf
Range	0 to 31
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Context **configure** [router](#) *named-item-64* [ospf](#) *number* [area](#) *ipv4-address* [interface](#) *interface-name* [authentication-type](#) *keyword*

Tree [authentication-type](#)

Options password, message-digest

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remain-down-on-failure *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict *boolean*

Synopsis	Enable BFD strict mode
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict <i>boolean</i>
Tree	strict
Description	<p>When configured to true, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.</p> <p>During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict-mode-holddown <i>number</i>
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535

Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay-normalization

Synopsis	Enable the delay-normalization context
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> delay-normalization
Tree	delay-normalization
Description	<p>Commands in this context configure delay normalization for the interface within the IGP instance. When configured, the normalized delay is used by the TLVs within the IGP link-state packets.</p> <p>When unconfigured, the measured delay is used by the respective TLVs within the IGP link-state packets.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay-tolerance-interval *number*

Synopsis	Interval between two delay values on the interface
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> delay-normalization delay-tolerance-interval <i>number</i>
Tree	delay-tolerance-interval
Description	This command defines the interval used by the IGP to differentiate between two delay values.
Range	1 to 10000000
Units	microseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-delay *number*

Synopsis	Minimum delay on the interface
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> delay-normalization minimum-delay <i>number</i>

Tree	minimum-delay
Range	1 to 10000000
Units	microseconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo [[flex-algo-id](#)] *number*

Synopsis	Enter the flex-algo list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> flex-algo <i>number</i>
Tree	flex-algo
Description	Commands in this context configure the attributes of OSPFv2 flexible algorithms interface.
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[flex-algo-id] *number*

Synopsis	Flexible algorithm ID
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> flex-algo <i>number</i>
Tree	flex-algo
Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

node-sid

Synopsis	Enable the node-sid context

Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> interface-type <i>keyword</i>
Tree	interface-type
Description	<p>This command specifies the interface type.</p> <p>broadcast - Broadcast network</p> <p>To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.</p> <p>non-broadcast - Non-broadcast network</p> <p>point-to-point - Point-to-point link</p> <p>Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.</p> <p>p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support</p> <p>No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.</p> <p>secondary - Multiple secondary adjacencies allowed</p> <p>A secondary interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p>
Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load balancing weight for an OSPF interface
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> load-balancing-weight <i>number</i>

Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-map

Synopsis	Enable the policy-map context
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-nh-template *reference*

Synopsis	Route next hop policy template name
----------	-------------------------------------

Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate policy-map route-nh-template reference

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[address] *ipv4-unicast-address*

Synopsis IPv4 address of the OSPFv2 neighbor

Context **configure** **router** *named-item-64* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **neighbor** *ipv4-unicast-address*

Tree **neighbor**

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

node-sid

Synopsis Enable the **node-sid** context

Context **configure** **router** *named-item-64* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**

Tree **node-sid**

Description Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.

In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.

This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.

The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.

The **clear-n-flag** option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

clear-n-flag *boolean*

Synopsis Clear the N-flag in an OSPF prefix

Context **configure** *router* *named-item-64* *ospf* *number* *area* *ipv4-address* *interface* *interface-name* *node-sid* **clear-n-flag** *boolean*

Tree **clear-n-flag**

Description When configured to **true**, this command allows the user to clear the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system.

When configured to **false**, the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.

When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

index *number*

Synopsis Node SID index for this interface

Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid index <i>number</i>

Platforms	7705 SAR Gen 2

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
----------	---

Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> stub summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

virtual-link [**router-id**] *ipv4-address* **transit-area** *reference*

Synopsis	Enter the virtual-link list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[router-id] *ipv4-address*

Synopsis	Router identity of the virtual link neighbor
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit-area *reference*

Synopsis	Transit area linking the backbone to not-connected area
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
Reference	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i>
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	This command specifies the authentication key in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 94
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

authentication-type *keyword*

Synopsis Authentication type used on OSPF interface

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

message-digest-key [*key-id*] *number*

Synopsis	Enter the message-digest-key list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[key-id] *number*

Synopsis	Message digest index
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md5 *encrypted-leaf*

Synopsis	MD5 hash key
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i> md5 <i>encrypted-leaf</i>
Tree	md5
Description	This command specifies the MD5 hash key in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 102
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure router <i>named-item-64</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

asbr

Synopsis	Enable the asbr context
Context	configure router <i>named-item-64</i> ospf <i>number</i> asbr
Tree	asbr
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trace-path (*number* | *keyword*)

Synopsis	Domain identity
----------	-----------------

Context	configure router <i>named-item-64</i> ospf <i>number</i> asbr trace-path (<i>number</i> <i>keyword</i>)
Tree	trace-path
Range	0 to 31
Options	none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

compatible-rfc1583 *boolean*

Synopsis	OSPF summary and external route calculations
Context	configure router <i>named-item-64</i> ospf <i>number</i> compatible-rfc1583 <i>boolean</i>
Tree	compatible-rfc1583
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

database-export

Synopsis	Enable the database-export context
Context	configure router <i>named-item-64</i> ospf <i>number</i> database-export
Tree	database-export
Description	<p>Commands in this context enable the population of the extended TE Database (TE-DB) with the link-state information from a specific IGP instance.</p> <p>This information includes the IGP, TE, and SR information, prefix SID sub-TLV, adjacency SID sub-TLV, and router SR capability TLV.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-ls-identifier

Synopsis	Enable the bgp-ls-identifier context
Context	configure router <i>named-item-64</i> ospf <i>number</i> database-export bgp-ls-identifier
Tree	bgp-ls-identifier

Description	Commands in this context correlate, along with the Autonomous System Number (ASN), the BGP-LS NLRI advertisements of multiple BGP-LS speakers of the same IGP domain.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	BGP-LS ID sent in the BGP-LS NLRI
Context	configure router <i>named-item-64</i> ospf <i>number</i> database-export bgp-ls-identifier value <i>number</i>
Tree	value
Description	<p>This command configures the BGP-LS ID to export.</p> <p>If an NRC-P network domain has multiple IGP domains, a user must configure BGP-LS speakers within each IGP domain with the same unique ASN, BGP-LS ID tuple. The BGP-LS identifier is optional and is only sent in a BGP-LS NLRI if configured in the IGP instance of an IGP domain.</p> <p>Note: If this IGP instance participates in traffic engineering with RSVP-TE or SR-TE, the traffic-engineering command configuration is not strictly required because enabling the extended TE-DB populates this information automatically. However, Nokia recommends enabling the traffic-engineering command to make the configuration consistent with other routers in the network that do not require the enabling of the extended TE-DB.</p>
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-identifier *number*

Synopsis	IGP instance in the BGP-LS NLRI
Context	configure router <i>named-item-64</i> ospf <i>number</i> database-export igp-identifier <i>number</i>
Tree	igp-identifier
Description	<p>This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a specified IGP domain when the router sends the IGP link state information using BGP-LS.</p>
Max. range	0 to 18446744073709551615
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

reachable-ls-only *boolean*

Synopsis Encode only reachable link-state information

Context **configure** *router* *named-item-64* *ospf* *number* *database-export* *reachable-ls-only* *boolean*

Tree *reachable-ls-only*

Description When configured to **true**, the router, acting as a BGP-LS producer, must withdraw all link-state objects it has advertised in BGP, in accordance with section 5.9 of RFC 9552. This withdrawal occurs when the node that originated the corresponding LSPs is determined to be unreachable in the IGP based on the failure of a reachability check for that node. This withdrawal operation assists network controllers in assessing a reachable IGP topology, even in networks with segmented areas. For backward compatibility, the default behavior remains unchanged.

When configure to **false**, the router continues to send link-state objects even for links that fail an IGP reachability check.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

entropy-label

Synopsis Enter the **entropy-label** context

Context **configure** *router* *named-item-64* *ospf* *number* *entropy-label*

Tree *entropy-label*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

override-tunnel-elc *boolean*

Synopsis Enable override of received ELC advertisements

Context **configure** *router* *named-item-64* *ospf* *number* *entropy-label* *override-tunnel-elc* *boolean*

Tree *override-tunnel-elc*

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

export-limit

Synopsis	Enable the export-limit context
Context	configure router <i>named-item-64</i> ospf <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router <i>named-item-64</i> ospf <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure router <i>named-item-64</i> ospf <i>number</i> export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure router <i>named-item-64</i> ospf <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p>

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.

Routing policies are created in the **configure router policy-options** context.

Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-db-overflow

Synopsis	Enable the external-db-overflow context
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-db-overflow
Tree	external-db-overflow
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Time during which the router operates in overload
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-db-overflow limit <i>number</i>
Tree	limit

Range	0 to 2147483647
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	configure router <i>named-item-64</i> ospf <i>number</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Default	150
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flexible-algorithms

Synopsis	Enter the flexible-algorithms context
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms
Tree	flexible-algorithms
Description	Commands in this context configure the OSPFv2 parameters for flexible algorithm participation.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms admin-state <i>keyword</i>
Tree	admin-state
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

advertise-admin-group *keyword*

Synopsis	Administrative group TLV to advertise
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms advertise-admin-group <i>keyword</i>
Tree	advertise-admin-group
Description	This command configures the type of Administrative Group TLV the router advertises as an IGP link attribute. This command is configured for this IGP instance.
Options	prefer-ag, eag-only, ag-eag
Default	prefer-ag
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo [**flex-algo-id**] *number*

Synopsis	Enter the flex-algo list instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i>
Tree	flex-algo
Description	<p>Commands in this context configure the attributes of the OSPFv2 flexible algorithm.</p> <p>The maximum unique flexible algorithms can be configured on a router across all configured OSPFv2 instances. In each OSPF flexible algorithm configuration context, the OSPFv2 instance participation can be either enabled or disabled, and it configures the advertising of a locally-configured flexible algorithm definition.</p> <p>When flexible algorithm is enabled in an OSPF instance, it is enabled for all areas within the OSPF instance.</p>
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[flex-algo-id] *number*

Synopsis	Flexible algorithm ID
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i>
Tree	flex-algo

Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise reference

Synopsis	Flexible Algorithm Definition advertisement
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> advertise <i>reference</i>
Tree	advertise
Description	<p>This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).</p> <p>The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.</p>
Reference	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> micro-loop-avoidance
Tree	micro-loop-avoidance

Description	<p>When configured, the system enables micro-loop avoidance for an SR-OSPF flexible algorithm, and consequently, inherits the FIB delay timer from the SR-OSPF configure router ospf segment-routing context.</p> <p>When this command is configured, FIB updates are delayed before the system programs new primary next hops to avoid micro-loops.</p> <p>When configured, the feature applies to the following contexts:</p> <ul style="list-style-type: none"> • OSPFv2 SR-OSPF IPv4 tunnel (node SID) • IPv4 and IPv6 SR-TE LSPs that use a node SID in their segment list • IPv4 and IPv6 SR policies that use a node SID in their segment list <p>When micro-loop-avoidance is disabled (by removing this command from the configuration), the system forces any running FIB delay to expire immediately and programs the new next hops for all impacted node SIDs. When disabled, micro-loop avoidance is disabled instantaneously and will be disabled for the next SPF runs. Micro-loop avoidance remains disabled until it is re-enabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	configure router <i>named-item-64</i> ospf <i>number</i> flexible-algorithms flex-algo <i>number</i> participate <i>boolean</i>
Tree	participate
Description	<p>When configured to true, the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.</p> <p>When configured to false, flexible algorithm participation is not enabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart
Tree	graceful-restart
Description	Commands in this context enable OSPF graceful restart (GR) to minimize service interruption.

When the control plane of a GR-capable router fails or restarts, the neighboring routers (GR helpers) temporarily preserve OSPF forwarding information. Traffic continues to be forwarded to the restarting router using the last-known forwarding tables. If the control plane of the restarting router becomes operationally and administratively up within the grace period, the restarting router resumes normal OSPF operation. If the grace period expires, the restarting router is presumed inactive and the OSPF topology is recalculated to route traffic around the failure.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

helper-mode *boolean*

Synopsis Enable graceful restart helper for OSPF

Context **configure** *router* *named-item-64* *ospf* *number* *graceful-restart* *helper-mode* *boolean*

Tree [helper-mode](#)

Description When configured to **true**, the router operates in OSPF graceful restart helper mode and assists restarting neighbors by maintaining adjacencies and forwarding state during their graceful restart interval.

When configured to **false**, the router does not provide helper support and does not preserve adjacency or forwarding state for neighbors performing a graceful restart.

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

helper-resync-timeout *number*

Synopsis Maximum resynchronization period

Context **configure** *router* *named-item-64* *ospf* *number* *graceful-restart* *helper-resync-timeout* *number*

Tree [helper-resync-timeout](#)

Description This command configures the maximum resynchronization period. If the resynchronization takes longer than the configured value, the graceful restart process stops, and the OSPF neighbor session falls back to the ExStart state for normal adjacency establishment.

Range 120 to 900

Units seconds

Default 120

Introduced 26.3.R1

Platforms 7705 SAR Gen 2

protocol

Synopsis	Enter the protocol context
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart protocol
Tree	protocol
Description	Commands in this context configure which RFC is used for OSPF graceful restart signaling. If both protocols are enabled, the OSPF interface automatically uses the method indicated by the first received graceful restart signaling packet on that interface.
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

lls-restart-signaling *boolean*

Synopsis	Enable LLS restart signaling protocol
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart protocol lls-restart-signaling <i>boolean</i>
Tree	lls-restart-signaling
Description	When configured to true , the system enables support for RFC 4811 and RFC 4812. When configured to false , the system disables support for RFC 4811 and RFC 4812.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

standard *boolean*

Synopsis	Enable standard protocol for restart signaling
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart protocol standard <i>boolean</i>
Tree	standard
Description	When configured to true , the system enables support for RFC 3623. When configured to false , the system disables support for RFC 3623.
Default	true
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure router <i>named-item-64</i> ospf <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-shortcut

Synopsis	Enter the igp-shortcut context
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut
Tree	igp-shortcut
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the IGP shortcuts
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-sr-over-srte *boolean*

Synopsis	Enable SR over SR-TE LSPs
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut allow-sr-over-srte <i>boolean</i>
Tree	allow-sr-over-srte
Description	When configured to true , the router only allows SR-MPLS SRv4 and SRv6 IGP shortcuts to use SR-TE LSPs with allow-sr-over-srte explicitly enabled with an adjacency SID as top SID in the SR-TE LSP. IPv4 and IPv6 addresses can use all

available SR-TE LSPs as IGP shortcuts regardless of the explicit **allow-sr-over-srte** configuration.

Under ECMP, when this command is configured to **true**, preference is given to the SR-TE LSPs with **allow-sr-over-srte** explicitly configured over the LSPs that do not have **allow-sr-over-srte** configured.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-next-hop

Synopsis	Enter the tunnel-next-hop context
Context	configure router <i>named-item-64</i> ospf <i>number</i> igp-shortcut tunnel-next-hop
Tree	tunnel-next-hop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Description	<p>Commands in this context enable Loop-Free Alternate (LFA) computation by SPF under the IS-IS routing protocol level or under the OSPF routing protocol instance.</p> <p>When this command is enabled, it instructs the IGP SPF to attempt to pre-compute both a primary next hop and an LFA next hop for every learned prefix. IS-IS computes the primary SPF first and then computes the LFA SPF. The LFA backup next hop is only available after the LFA SPF is completed. When found, the LFA next hop is populated into the routing table along with the primary next hop for the prefix.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

augment-route-table *boolean*

Synopsis	Attach remote LFA information to RTM entries
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate augment-route-table <i>boolean</i>
Tree	augment-route-table
Description	<p>When configured to true, this command enables IS-IS to attach remote LFA-specific information to RTM entries for use by protocols such as LDP.</p> <p>When configured to false, rLFA-specific information is not added to RTM entries.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude

Synopsis	Enter the exclude context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate exclude
Tree	exclude
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-policy reference

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>loopfree-alternate</i> <i>exclude prefix-policy reference</i>
Tree	<i>prefix-policy</i>
Description	<p>This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.</p> <p>An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.</p>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multi-homed-prefix

Synopsis	Enable the multi-homed-prefix context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>loopfree-alternate</i> <i>multi-homed-prefix</i>
Tree	<i>multi-homed-prefix</i>
Description	<p>Commands in this context configure a multihomed prefix LFA for both RTM routes (IP FRR) and SR-OSPF tunnels. SR-OSPF tunnels enable multihomed prefix extension in both algorithm 0 and flexible-algorithm numbers.</p> <p>This feature makes use of the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of local anycast prefixes.</p> <p>The computed IP next-hop based backup path is added to OSPF routes of external /32 prefixes (OSPFv2 routes types 3, 4, 5, and 7) and local /32 anycast prefixes in the RTM if the prefix is not protected by base LFA or if the user set leaf preference value to all. The user must enable the ip-fast-reroute leaf to have these backup paths programmed into the FIB in datapath.</p> <p>The computed IP next hop or repair tunnel based backup path is also programmed for SR-OSPF node SID tunnels of external /32 prefixes and to /32 prefixes in same area as</p>

the computing node S and which are advertised by multiple routers (anycast prefix) in both algorithm 0 and flexible-algorithm numbers.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *keyword*

Synopsis	Multi-homed prefix LFA backup path preference
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate multi-homed-prefix preference <i>keyword</i>
Tree	preference
Options	none, all
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-lfa

Synopsis	Enable the remote-lfa context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate remote-lfa
Tree	remote-lfa
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-pq-cost *number*

Synopsis	Destination max cost for reverse SPF calculation
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate remote-lfa max-pq-cost <i>number</i>
Tree	max-pq-cost
Max. range	0 to 4294967295
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate remote-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate remote-lfa node-protect max-pq-nodes <i>number</i>
Tree	max-pq-nodes
Range	1 to 32
Default	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ti-lfa

Synopsis	Enable the ti-lfa context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa
Tree	ti-lfa
Description	Commands in this context enable the use of the Topology Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this OSPF instance.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa max-sr-frr-labels <i>number</i>
Tree	max-sr-frr-labels

Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor-path-expand *boolean*

Synopsis	Expand the neighbor path
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa neighbor-path-expand <i>boolean</i>
Tree	neighbor-path-expand
Description	<p>When configured to true, the router uses the TI-LFA backup path computation algorithm for the protection of an IPv4 SR-OSPF node SID of a neighbor and of an adjacency SID over a link to that neighbor to avoid traffic loops when the neighbor node fails.</p> <p>The SR-OSPF TI-LFA expanded neighbor backup path expands the path from the Q node to the destination node, which is the neighbor node in this case, by first visiting the penultimate node and then riding an unprotected adjacency SID over a link to the destination node. When applied to the backup path of a neighbor IPv4 SR-OSPF node SID or of an adjacency SID over a link to this neighbor, it forces the traffic to drop at the penultimate node and does not loop in case of neighbor node failure.</p>
Default	false
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> ospf <i>number</i> loopfree-alternate ti-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multi-instance *boolean*

Synopsis	Enable OSPF Multi Instance Extensions
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> multi-instance <i>boolean</i>
Tree	multi-instance
Description	<p>When configured to true, the Base router supports RFC 6549, OSPFv2 Multi-Instance Extensions.</p> <p>This support is enabled per instance and allows flexibility when migrating a particular instance from classic OSPFv2 to a multi-instance OSPFv2.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-import *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> multicast-import <i>boolean</i>
Tree	multicast-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-import-policy *reference*

Synopsis	Import policy to submit IGP routes to the multicast RTM
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> multicast-import-policy <i>reference</i>
Tree	multicast-import-policy
Description	<p>This command specifies the policy used by OSPF to submit routes to the multicast RTM.</p> <p>This command applies only when the configure router ospf multicast-import command is enabled. By default, enabling multicast-import causes OSPF to submit all IGP routes to the multicast RTM. Configuring this command allows the user to specify prefixes in the policy prefix list to control OSPF route submission.</p>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	1
Notes	This element is ordered by the user.

Introduced 25.10.R1
Platforms 7705 SAR Gen 2

overload *boolean*

Synopsis Change local router state to appear overloaded
Context **configure** [router](#) *named-item-64* [ospf](#) *number* [overload](#) *boolean*
Tree [overload](#)

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing
Tree	segment-routing
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

adj-sid-hold (*number* | *keyword*)

Synopsis Adjacency SID hold time

Context **configure** **router** *named-item-64* **ospf** *number* **segment-routing** **adj-sid-hold** (*number* | *keyword*)

Tree **adj-sid-hold**

Description This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range 1 to 1800

Units seconds

Options none

Default 15

Introduced 25.3.R2

override-bmi *number*

Synopsis	Value to override the announced node MSD-BMI value
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>segment-routing</i> <i>maximum-sid-depth</i> override-bmi <i>number</i>
Tree	<i>override-bmi</i>
Description	<p>This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.</p> <p>When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.</p>
Range	0 to 13
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

override-erld *number*

Synopsis	Value to override the announced node MSD-ERLD value
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf</i> <i>number</i> <i>segment-routing</i> <i>maximum-sid-depth</i> override-erld <i>number</i>
Tree	<i>override-erld</i>
Description	<p>This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing.</p> <p>When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.</p>
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing micro-loop-avoidance
Tree	micro-loop-avoidance
Description	Commands in this context configure micro-loop avoidance for SR-OSPF.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fib-delay *number*

Synopsis	FIB delay
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing micro-loop-avoidance fib-delay <i>number</i>
Tree	fib-delay
Description	<p>This command configures the FIB delay before programming new primary next hops.</p> <p>Configure the FIB delay timer to a value that corresponds to the worst-case IGP convergence in a network domain. The default FIB delay timer value corresponds to a network with a nominal convergence time.</p> <p>When configured, the feature applies to the following contexts:</p> <ul style="list-style-type: none">• SPFv2 SR-OSPF IPv4 tunnel (node SID)• IPv4 and IPv6 SR-TE LSPs that use a node SID in their segment list• IPv4 and IPv6 SR policies that use a node SID in their segment list <p>When micro-loop avoidance is disabled, the system forces any running FIB delay to expire immediately and the system programs new next hops for all impacted node SIDs. When disabled, micro-loop avoidance is disabled instantaneously and will be disabled for the next SPF runs. Micro-loop avoidance remains disabled until it is re-enabled.</p>
Range	1 to 300
Units	deciseconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-sid-range

Synopsis	Enable the prefix-sid-range context
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing prefix-sid-range

Tree	prefix-sid-range
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

global

Synopsis	BGP global SR range allocation
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing prefix-sid-range global
Tree	global
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the configure router mpls-labels sr-labels context.
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-index *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing prefix-sid-range max-index <i>number</i>
Tree	max-index
Range	0 to 1048575
Default	1
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing prefix-sid-range start-label <i>number</i>
Tree	start-label
Range	0 to 1048575
Default	0
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srlb *reference*

Synopsis	Segment routing local block
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing srlb <i>reference</i>
Tree	srlb
Reference	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-mtu *number*

Synopsis	Tunnel MTU size
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing tunnel-mtu <i>number</i>
Tree	tunnel-mtu
Range	512 to 9786
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-table-pref *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure router <i>named-item-64</i> ospf <i>number</i> segment-routing tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref

Description This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the **any** value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

Note: The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more instances of that protocol programmed a tunnel for the same prefix. The selection of a SR tunnel in this case is based on the lowest preference IGP instance. In the case of a tie, the instance with the lowest metric SR tunnel is selected over the lowest numbered IGP instance. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enter the timers context
Context	configure router <i>named-item-64</i> ospf <i>number</i> timers
Tree	timers
Introduced	25.3.R2

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-wait

Synopsis	Enter the spf-wait context
Context	configure router <i>named-item-64</i> ospf <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure router <i>named-item-64</i> ospf <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	configure router <i>named-item-64</i> ospf <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-second-wait *number*

Synopsis	Hold time between the first and second SPF calculation
Context	configure router <i>named-item-64</i> ospf <i>number</i> timers spf-wait spf-second-wait <i>number</i>
Tree	spf-second-wait

Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traffic-engineering *boolean*

Synopsis	Calculate traffic engineering route
Context	configure router <i>named-item-64</i> ospf <i>number</i> traffic-engineering <i>boolean</i>
Tree	traffic-engineering
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traffic-engineering-options

Synopsis	Enter the traffic-engineering-options context
Context	configure router <i>named-item-64</i> ospf <i>number</i> traffic-engineering-options
Tree	traffic-engineering-options
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-delay *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	configure router <i>named-item-64</i> ospf <i>number</i> traffic-engineering-options advertise-delay <i>boolean</i>
Tree	advertise-delay
Description	<p>When configured to true, the router advertises link delay in the IGP LSDB within the OSPF-TE TLV attribute or when the Application-Specific Link Attribute (ASLA) is enabled within SR-TE ASLA.</p> <p>When the router is configured under the configure router ospf traffic-engineering-options sr-te application-specific-link-attributes command to generate SR-TE ASLA attributes, link delay is advertised as a legacy RFC 3630 TLV when RSVP-TE is enabled and as an ASLA RFC 8920 TLV for SR-TE when MPLS is enabled for an interface.</p>

SR OS accepts and handles both legacy RSVP-TE TLVs and ASLAs for the RSVP application. However, SR OS only advertises RFC 3630 legacy RSVP-TE TLVs (as recommended by RFC 8920) to avoid compatibility issues.

When configured to **false**, the router disables link delay advertisement.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te *keyword*

Synopsis	Advertisement of link attributes for SR-TE
Context	configure router <i>named-item-64</i> ospf <i>number</i> traffic-engineering-options sr-te <i>keyword</i>
Tree	sr-te
Description	This command specifies the advertisement of TE attributes of each link on a per-application basis for RSVP-TE and SR-TE applications.
Options	false, legacy, application-specific-link-attributes
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast-import *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	configure router <i>named-item-64</i> ospf <i>number</i> unicast-import <i>boolean</i>
Tree	unicast-import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ospf3 [[ospf-instance](#)] *number*

Synopsis	Enter the ospf3 list instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i>
Tree	ospf3
Description	Commands in this context create or edit an OSPFv3 routing instance.

Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ospf-instance] *number*

Synopsis	OSPF instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i>
Tree	ospf3
Range	0 to 31 64 to 95
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the OSPF instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *keyword*

Synopsis	Allow router advertisement capabilities
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	false, link, area, as
Default	false
Introduced	25.3.R2

Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remain-down-on-failure *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict boolean

Synopsis	Enable BFD strict mode
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> <i>bfd-liveness</i> <i>strict</i> <i>boolean</i>
Tree	<i>strict</i>
Description	<p>When configured to true, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.</p> <p>During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-mode-holddown number

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> <i>bfd-liveness</i> <i>strict-mode-holddown</i> <i>number</i>
Tree	<i>strict-mode-holddown</i>
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

conditional-advertise-prefix reference

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> <i>conditional-advertise-prefix</i> <i>reference</i>

Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535

 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

node-sid

Synopsis Enable the **node-sid** context
 Context **configure** [router](#) *named-item-64* [ospf3](#) *number* [area](#) *ipv4-address* [interface](#) *interface-name* [node-sid](#)
 Tree [node-sid](#)
 Description Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.
 In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.
 This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.

The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.

The **clear-n-flag** option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

clear-n-flag *boolean*

Synopsis Clear the N-flag in an OSPF3 prefix

Context **configure** *router* *named-item-64* *ospf3* *number* *area* *ipv4-address* *interface* *interface-name* *node-sid* **clear-n-flag** *boolean*

Tree **clear-n-flag**

Description When configured to **true**, this command allows the user to clear the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system.

When configured to **false**, the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.

When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

index *number*

Synopsis Node SID index for this interface

Context	configure router <i>named-item-64</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> node-sid index <i>number</i>
Tree	index
Range	0 to 4294967295

Tree	asbr
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

database-export

Synopsis	Enable the database-export context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> database-export
Tree	database-export
Description	<p>Commands in this context enable the population of the extended TE Database (TE-DB) with the link-state information from a specific IGP instance.</p> <p>This information includes the IGP, TE, and the SR information, prefix SID sub-TLV, adjacency SID sub-TLV, and router SR capability TLV.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-ls-identifier

Synopsis	Enable the bgp-ls-identifier context
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> database-export bgp-ls-identifier
Tree	bgp-ls-identifier
Description	Commands in this context correlate, along with the Autonomous System Number (ASN), the BGP-LS NLRI advertisements of multiple BGP-LS speakers of the same IGP domain.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	BGP-LS ID sent in the BGP-LS NLRI
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> database-export bgp-ls-identifier value <i>number</i>
Tree	value
Description	<p>This command configures the BGP-LS ID to export.</p> <p>If an NRC-P network domain has multiple IGP domains, a user must configure BGP-LS speakers within each IGP domain with the same unique ASN, BGP-LS ID tuple. The BGP-LS identifier is optional and is only sent in a BGP-LS NLRI if configured in the IGP instance of an IGP domain.</p> <p>Note: If this IGP instance participates in traffic engineering with RSVP-TE or SR-TE, the traffic-engineering command configuration is not strictly required because enabling the</p>

extended TE-DB populates this information automatically. However, Nokia recommends enabling the **traffic-engineering** command to make the configuration consistent with other routers in the network that do not require the enabling of the extended TE-DB.

Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-identifier *number*

Synopsis	IGP instance in the BGP-LS NLRI
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> database-export igp-identifier <i>number</i>
Tree	igp-identifier
Description	This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a specified IGP domain when the router sends the IGP link state information using BGP-LS.
Max. range	0 to 18446744073709551615
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reachable-ls-only *boolean*

Synopsis	Encode only reachable link-state information
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> database-export reachable-ls-only <i>boolean</i>
Tree	reachable-ls-only
Description	<p>When configured to true, the router, acting as a BGP-LS producer, must withdraw all link-state objects it has advertised in BGP, in accordance with section 5.9 of RFC 9552. This withdrawal occurs when the node that originated the corresponding LSPs is determined to be unreachable in the IGP based on the failure of a reachability check for that node. This withdrawal operation assists network controllers in assessing a reachable IGP topology, even in networks with segmented areas. For backward compatibility, the default behavior remains unchanged.</p> <p>When configure to false, the router continues to send link-state objects even for links that fail an IGP reachability check.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

export-limit

export-policy *reference*

Synopsis Export policies that determine exported routes

Context **configure** [router](#) *named-item-64* [ospf3](#) *number* **export-policy** *reference*

Tree [export-policy](#)

Description This command configures export routing policies for the routes exported from the routing table to IS-IS.

If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.

Routing policies are created in the **configure router policy-options** context.

Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> graceful-restart

Tree	graceful-restart
Description	<p>Commands in this context enable OSPF graceful restart (GR) to minimize service interruption.</p> <p>When the control plane of a GR-capable router fails or restarts, the neighboring routers (GR helpers) temporarily preserve OSPF forwarding information. Traffic continues to be forwarded to the restarting router using the last-known forwarding tables. If the control plane of the restarting router becomes operationally and administratively up within the grace period, the restarting router resumes normal OSPF operation. If the grace period expires, the restarting router is presumed inactive and the OSPF topology is recalculated to route traffic around the failure.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Description	<p>When configured to true, the router operates in OSPF graceful restart helper mode and assists restarting neighbors by maintaining adjacencies and forwarding state during their graceful restart interval.</p> <p>When configured to false, the router does not provide helper support and does not preserve adjacency or forwarding state for neighbors performing a graceful restart.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-shortcut

Synopsis	Enter the igp-shortcut context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> igp-shortcut
Tree	igp-shortcut
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the IGP shortcuts
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> igp-shortcut admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-next-hop

Synopsis	Enter the tunnel-next-hop context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> igp-shortcut tunnel-next-hop
Tree	tunnel-next-hop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> igp-shortcut tunnel-next-hop family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[family-type] keyword

Synopsis	Address family type for the tunnel next hop
Context	configure router named-item-64 ospf3 number igp-shortcut tunnel-next-hop family keyword
Tree	family
Options	ipv4, ipv6, srv4, srv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution keyword

Synopsis	Resolution state for IGP shortcut tunnels
Context	configure router named-item-64 ospf3 number igp-shortcut tunnel-next-hop family keyword resolution keyword
Tree	resolution
Options	none, filter, any, match-family-ip
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure router named-item-64 ospf3 number igp-shortcut tunnel-next-hop family keyword resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure router named-item-64 ospf3 number igp-shortcut tunnel-next-hop family keyword resolution-filter rsvp boolean

Tree	rsvp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> igp-shortcut tunnel-next-hop <i>family</i> <i>keyword</i> resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp-sync *boolean*

Synopsis	Configure IGP-LDP synchronization for interfaces
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> ldp-sync <i>boolean</i>
Tree	ldp-sync
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Description	<p>Commands in this context enable Loop-Free Alternate (LFA) computation by SPF under the IS-IS routing protocol level or under the OSPF routing protocol instance.</p> <p>When this command is enabled, it instructs the IGP SPF to attempt to pre-compute both a primary next hop and an LFA next hop for every learned prefix. IS-IS computes the primary SPF first and then computes the LFA SPF. The LFA backup next hop is only available after the LFA SPF is completed. When found, the LFA next hop is populated into the routing table along with the primary next hop for the prefix.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude

Synopsis	Enter the exclude context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate exclude
Tree	exclude
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate exclude prefix-policy <i>reference</i>
Tree	prefix-policy
Description	<p>This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.</p> <p>An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-lfa

Synopsis	Enable the remote-lfa context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate remote-lfa
Tree	remote-lfa
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-pq-cost *number*

Synopsis	Destination max cost for reverse SPF calculation
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate remote-lfa max-pq-cost <i>number</i>
Tree	max-pq-cost
Max. range	0 to 4294967295
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate remote-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate remote-lfa node-protect max-pq-nodes <i>number</i>

Tree	max-pq-nodes
Range	1 to 32
Default	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ti-lfa

Synopsis	Enable the ti-lfa context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate ti-lfa
Tree	ti-lfa
Description	Commands in this context enable the use of the Topology Independent Loop-Free Alternate (TI-LFA) algorithm in the LFA SPF calculation for this OSPFv3 instance.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate ti-lfa max-sr-frr-labels <i>number</i>
Tree	max-sr-frr-labels
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

node-protect

Synopsis	Enable the node-protect context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> loopfree-alternate ti-lfa node-protect
Tree	node-protect

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

multicast-import *boolean*

Synopsis Submit routes into the multicast Route Table Manager
Context **configure** *router* *named-item-64* *ospf3* *number* **multicast-import** *boolean*
Tree **multicast-import**
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overload *boolean*

Synopsis Change local router state to appear overloaded
Context **configure** *router* *named-item-64* *ospf3* *number* **overload** *boolean*
Tree **overload**
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overload-include-ext-1 *boolean*

Synopsis Advertise routes with maximum metric value for overload
Context **configure** *router* *named-item-64* *ospf3* *number* **overload-include-ext-1** *boolean*
Tree **overload-include-ext-1**
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overload-include-ext-2 *boolean*

Synopsis Advertise routes with maximum metric value for overload
Context **configure** *router* *named-item-64* *ospf3* *number* **overload-include-ext-2** *boolean*
Tree **overload-include-ext-2**

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-include-stub *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> overload-include-stub <i>boolean</i>
Tree	overload-include-stub
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-on-boot

Synopsis	Enable the overload-on-boot context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> overload-on-boot
Tree	overload-on-boot
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Router interval in overload before normal operations
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> overload-on-boot timeout <i>number</i>
Tree	timeout
Range	60 to 1800
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Preference for OSPF internal routes
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> preference <i>number</i>

Tree	preference
Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reference-bandwidth *number*

Synopsis	Bandwidth to reference default costing of interfaces
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rib-priority

Synopsis	Enter the rib-priority context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

high

Synopsis	Enter the high context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list *reference*

Synopsis	Higher priority list used during OSPF route calculation
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-id *router-id***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the OSPF instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> router-id <i>router-id</i>
Tree	router-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rtr-adv-lsa-limit

Synopsis	Enable the rtr-adv-lsa-limit context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rtr-adv-lsa-limit
Tree	rtr-adv-lsa-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Log the event without triggering overload
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rtr-adv-lsa-limit log-only <i>boolean</i>
Tree	log-only

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-lsa-count *number*

Synopsis	Max number of LSAs one router can advertise
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rtr-adv-lsa-limit max-lsa-count <i>number</i>
Tree	max-lsa-count
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-timeout (*number* | *keyword*)

Synopsis	Maximum time in overload after LSA limit is reached
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rtr-adv-lsa-limit overload-timeout (<i>number</i> <i>keyword</i>)
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

warning-threshold *number*

Synopsis	Percentage of the max LSA count that causes a warning
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> rtr-adv-lsa-limit warning-threshold <i>number</i>
Tree	warning-threshold
Range	0 to 100
Units	percent

Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing
Tree	segment-routing
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing adj-sid-hold (<i>number</i> <i>keyword</i>)
Tree	adj-sid-hold
Description	This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool

where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.

- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 1800
Units	seconds
Options	none
Default	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adjacency-sid

Synopsis	Enter the adjacency-sid context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing adjacency-sid
Tree	adjacency-sid
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

allocate-dual-sids *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing adjacency-sid allocate-dual-sids <i>boolean</i>
Tree	allocate-dual-sids
Description	<p>When configured to true, the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.</p> <p>When configured to false, the router disables the support of two SR-MPLS adjacency SIDs per interface.</p>
Default	false
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of segment routing
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-sid-range

Synopsis	Enable the prefix-sid-range context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing prefix-sid-range
Tree	prefix-sid-range
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

global

Synopsis	BGP global SR range allocation
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing prefix-sid-range global
Tree	global
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the configure router mpls-labels sr-labels context.
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-index *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>segment-routing prefix-sid-range max-index</i> <i>number</i>
Tree	<i>max-index</i>
Range	0 to 1048575
Default	1
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>segment-routing prefix-sid-range start-label</i> <i>number</i>
Tree	<i>start-label</i>
Range	0 to 1048575
Default	0
Notes	The following elements are part of a choice: global or (max-index and start-label).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-mtu *number*

Synopsis	Tunnel MTU size
Context	configure <i>router</i> <i>named-item-64</i> <i>ospf3</i> <i>number</i> <i>segment-routing tunnel-mtu</i> <i>number</i>
Tree	<i>tunnel-mtu</i>
Range	512 to 9786
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-table-pref *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> segment-routing tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref
Description	<p>This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the any value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.</p> <p>The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.</p> <p>The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).</p> <p>Note: The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.</p> <p>The global default TTM preference for the tunnel types is as follows:</p> <ul style="list-style-type: none"> • ROUTE_PREF_RSVP 7 • ROUTE_PREF_SR_TE 8 • ROUTE_PREF_LDP 9 • ROUTE_PREF_OSPF_TTM 10 • ROUTE_PREF_ISIS_TTM 11 • ROUTE_PREF_BGP_TTM 12 • ROUTE_PREF_GRE 255 <p>The default value for SR-ISIS or SR-OSPF is the same regardless if one or more instances of that protocol programmed a tunnel for the same prefix. The selection of a SR tunnel in this case is based on the lowest preference IGP instance. In the case of a tie, the instance with the lowest metric SR tunnel is selected over the lowest numbered IGP instance. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.</p>

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enter the timers context
Context	configure router <i>named-item-64</i> ospf3 <i>number</i> timers

Context	configure router <i>named-item-64</i> pcep pcc
Tree	pcc
Description	Commands in this context configure the PCC command options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the PCEP session element
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pcc admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dead-timer *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure dead timer
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pcc dead-timer number</i>
Tree	<i>dead-timer</i>
Range	1 to 255
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

keepalive *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure keepalive
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pcc keepalive number</i>
Tree	<i>keepalive</i>
Range	1 to 255
Units	seconds

Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-address *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
Context	configure router <i>named-item-64</i> pcep pcc local-address <i>ipv4-unicast-address</i>
Tree	local-address
Description	This command configures the local IPv4 address of the PCEP speaker.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-address-ipv6 *ipv6-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	configure router <i>named-item-64</i> pcep pcc local-address-ipv6 <i>ipv6-unicast-address</i>
Tree	local-address-ipv6
Description	This command configures the local IPv6 address of the PCEP speaker.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-srte-pce-init-lsps *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure max sr te pce init LSP
Context	configure router <i>named-item-64</i> pcep pcc max-srte-pce-init-lsps <i>number</i>
Tree	max-srte-pce-init-lsps
Range	0 to 8191
Default	8191
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pce-associations

Synopsis	Enter the pce-associations context
Context	configure router <i>named-item-64</i> pcep pcc pce-associations
Tree	pce-associations
Description	Commands in this context configure PCE association groups.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

diversity [[assoc-name](#)] *named-item*

Synopsis	Enter the diversity list instance
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i>
Tree	diversity
Description	Commands in this context create a named diversity association from which the parameters for the specified diversity association are configured.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[assoc-name](#)] *named-item*

Synopsis	Name of the association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i>
Tree	diversity
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

association-id *number*

Synopsis	Association ID for the diversity association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i> association-id <i>number</i>
Tree	association-id
Description	This command configures the diversity association ID. The user must specify an association ID.
Range	0 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

association-source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address of the diversity association
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i> association-source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	association-source
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

disjointness-reference *boolean*

Synopsis	Configure P-flag in the disjointness configuration TLV
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item</i> disjointness-reference <i>boolean</i>
Tree	disjointness-reference
Description	<p>When configured to true, the router sets the P-flag in the disjointness configuration TLV. When the P-flag is set, it indicates that this LSP path is the reference path for the disjoint set of paths. The PCE must first compute the path of this LSP and then apply the requested disjointness type to compute the path of all other paths in the same diversity association ID.</p> <p>When configured to false, the router does not set the P-flag in the disjointness configuration TLV.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

disjointness-type *keyword*

Synopsis	Disjointness type for the association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item disjointness-type keyword</i>
Tree	disjointness-type
Options	strict, loose
Default	loose
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

diversity-type *keyword*

Synopsis	Diversity type for the association group
Context	configure router <i>named-item-64</i> pcep pcc pce-associations diversity <i>named-item diversity-type keyword</i>
Tree	diversity-type
Description	This command configures the diversity type for the association group.
Options	none, link, node, srlg-link, srlg-node
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy [*assoc-name*] *named-item*

Synopsis	Enter the policy list instance
Context	configure router <i>named-item-64</i> pcep pcc pce-associations policy <i>named-item</i>
Tree	policy
Description	Commands in this context create a named policy association from which the parameters for the specified policy association are configured.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[assoc-name] *named-item*

Synopsis Name of the association group

Context **configure** **router** *named-item-64* **pcep** **pcc** **pce-associations** **policy** *named-item*

Tree **policy**

String length 1 to 32

String format 'string-not-all-spaces' must contain at least one non-space character

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

association-id *number*

Synopsis Association ID for the policy association group

Context **configure** **router** *named-item-64* **pcep** **pcc** **pce-associations** **policy** *named-item* **association-id** *number*

Tree **association-id**

Description This command configures the policy association ID. The user must specify an association ID.

Range 0 to 65535

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

association-source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Source IP address for the association

Context **configure** **router** *named-item-64* **pcep** **pcc** **pce-associations** **policy** *named-item* **association-source** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **association-source**

Description This command configures the source IP address of the policy association.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

peer [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination IP address of a PCE peer in a PCEP session
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the PCC peer
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Keychain for TCP-AO authentication between PCC and PCE
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Preference value of the peer
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) preference <i>number</i>
Tree	preference
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-preference *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route preference to reach the PCE server
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) route-preference <i>keyword</i>

Tree	route-preference
Description	This command specifies the routing preference to reach the PCE server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the management routing instance are used to reach the PCE server before the in-band routes in the Base routing instance.
Options	inband, outband, both
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS client profile name assigned to this PCC peer
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-wait-timer *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time the PCC waits until declaring handshake failure
Context	configure router <i>named-item-64</i> pcep pcc peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) tls-wait-timer <i>number</i>
Tree	tls-wait-timer
Range	60 to 255
Units	seconds
Default	60
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

redelegation-timer *number*

Synopsis Configure redelegation-timer

Context **configure** [router](#) *named-item-64* [pcep pcc redelegation-timer](#) *number*

Tree [redelegation-timer](#)

Range 1 to 3600

Units seconds

Default 90

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

report-path-constraints *boolean*

Synopsis Include LSP path constraints in PCE report messages

Context **configure** [router](#) *named-item-64* [pcep pcc report-path-constraints](#) *boolean*

Tree [report-path-constraints](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

state-timer

Synopsis Enter the **state-timer** context

Context **configure** [router](#) *named-item-64* [pcep pcc state-timer](#)

Tree [state-timer](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

timer *number*

Synopsis Configure state-timer

Context **configure** [router](#) *named-item-64* [pcep pcc state-timer timer](#) *number*

Tree [timer](#)

Range	1 to 3600
Units	seconds
Default	180
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timer-action *keyword*

Synopsis	State timer action remove/none
Context	configure router <i>named-item-64</i> pcep pcc state-timer timer-action <i>keyword</i>
Tree	timer-action
Options	none, remove
Default	remove
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unknown-message-rate *number*

Synopsis	Configure unknown message rate
Context	configure router <i>named-item-64</i> pcep pcc unknown-message-rate <i>number</i>
Tree	unknown-message-rate
Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pce

Synopsis	Enable the pce context
Context	configure router <i>named-item-64</i> pcep pce
Tree	pce
Description	Commands in this context configure PCE command options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the PCEP session element
Context	configure router <i>named-item-64</i> pcep pce admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Keychain for TCP-AO authentication between PCC and PCE
Context	configure router <i>named-item-64</i> pcep pce authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dead-timer *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure dead timer
Context	configure router <i>named-item-64</i> pcep pce dead-timer <i>number</i>
Tree	dead-timer
Range	1 to 255
Units	seconds
Default	120
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

keepalive *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure keepalive
Context	configure router <i>named-item-64</i> pcep pce keepalive <i>number</i>
Tree	keepalive
Range	1 to 255
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-address *ipv4-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
Context	configure router <i>named-item-64</i> pcep pce local-address <i>ipv4-unicast-address</i>
Tree	local-address
Description	This command configures the local IPv4 address of the PCEP speaker.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-address-ipv6 *ipv6-unicast-address*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	configure router <i>named-item-64</i> pcep pce local-address-ipv6 <i>ipv6-unicast-address</i>
Tree	local-address-ipv6
Description	This command configures the local IPv6 address of the PCEP speaker.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-server-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS server profile name assigned to this PCE
Context	configure router <i>named-item-64</i> pcep pce tls-server-profile <i>reference</i>
Tree	tls-server-profile
Reference	configure system security tls server-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-wait-timer *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure tls-wait-timer
Context	configure router <i>named-item-64</i> pcep pce tls-wait-timer <i>number</i>
Tree	tls-wait-timer
Range	60 to 255
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unknown-message-rate *number*

Synopsis	Configure unknown message rate
Context	configure <i>router</i> <i>named-item-64</i> <i>pcep pce unknown-message-rate</i> <i>number</i>
Tree	<i>unknown-message-rate</i>
Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pim

Synopsis	Enable the pim context
Context	configure <i>router</i> <i>named-item-64</i> <i>pim</i>
Tree	<i>pim</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM
Context	configure <i>router</i> <i>named-item-64</i> <i>pim admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

apply-to *keyword*

Synopsis	IES and non-IES interfaces to create in PIM
Context	configure <i>router</i> <i>named-item-64</i> <i>pim apply-to</i> <i>keyword</i>
Tree	<i>apply-to</i>
Options	ies, non-ies, all, none
Default	none

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import

Synopsis	Enter the import context
Context	configure router <i>named-item-64</i> pim import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

join-policy *reference*

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim import join-policy <i>reference</i>
Tree	join-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

register-policy *reference*

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim import register-policy <i>reference</i>
Tree	register-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [*interface-name*] *interface-name*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the PIM interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

assert-period *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> assert-period <i>number</i>
Tree	assert-period
Range	1 to 300
Default	60

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 boolean

Synopsis	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> bfd-liveness ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 boolean

Synopsis	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> bfd-liveness ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bsm-check-rtr-alert boolean

Synopsis	Check router alert option in bootstrap messages received
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> bsm-check-rtr-alert <i>boolean</i>
Tree	bsm-check-rtr-alert

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> hello-interval <i>number</i>
Tree	hello-interval
Range	0 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-multiplier *number*

Synopsis	Multiplier to determine the hold time for PIM neighbor
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	20 to 100
Default	35
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

improved-assert *boolean*

Synopsis	Allow improved assert processing on interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> improved-assert <i>boolean</i>
Tree	improved-assert
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

instant-prune-echo *boolean*

Synopsis	Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> instant-prune-echo <i>boolean</i>
Tree	instant-prune-echo
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group
Tree	monitor-oper-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *reference*

Synopsis	Operational group identifier
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group priority-delta <i>number</i>
Tree	priority-delta
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv4 multicast <i>boolean</i>
Tree	multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

monitor-oper-group

Synopsis Enter the **monitor-oper-group** context

Context **configure** [router](#) *named-item-64* [pim interface](#) *interface-name* [ipv6 monitor-oper-group](#)

Tree [monitor-oper-group](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

name *reference*

Synopsis Operational group identifier

Context **configure** [router](#) *named-item-64* [pim interface](#) *interface-name* [ipv6 monitor-oper-group](#) [name](#) *reference*

Tree [name](#)

Reference **configure** [service oper-group](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

operation *keyword*

Synopsis Operation performed when operational group is active

Context **configure** [router](#) *named-item-64* [pim interface](#) *interface-name* [ipv6 monitor-oper-group](#) [operation](#) *keyword*

Tree [operation](#)

Options add, subtract, set

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

priority-delta *number*

Synopsis Delta priority with operation when operational group is active

Context **configure** [router](#) *named-item-64* [pim interface](#) *interface-name* [ipv6 monitor-oper-group](#) [priority-delta](#) *number*

Tree [priority-delta](#)

Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> ipv6 multicast <i>boolean</i>
Tree	multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-groups *number*

Synopsis	Maximum number of groups for the interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> max-groups <i>number</i>
Tree	max-groups
Range	0 1 to 16000
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-senders *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> multicast-senders <i>keyword</i>
Tree	multicast-senders
Options	auto, always, never
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	DR election priority for this interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> priority number
Tree	priority
Description	This command sets the priority value to elect the DR. The DR election priority is a 32-bit unsigned number and the numerically larger priority is always preferred.
Range	1 to 4294967295
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sticky-dr

Synopsis	Enable the sticky-dr context
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> sticky-dr
Tree	sticky-dr
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	DR election priority for this interface
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> sticky-dr priority number
Tree	priority
Range	1 to 4294967295
Default	1024
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

three-way-hello boolean

Synopsis	Allow three-way hello compatibility mode
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> three-way-hello <i>boolean</i>
Tree	three-way-hello

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tracking-support *boolean*

Synopsis	Allow upstream routers to explicitly track join membership
Context	configure router <i>named-item-64</i> pim interface <i>interface-name</i> tracking-support <i>boolean</i>
Tree	tracking-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> pim ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv4
Context	configure router <i>named-item-64</i> pim ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rpf-table *keyword*

Synopsis	Route tables for RPF lookup
Context	configure router <i>named-item-64</i> pim ipv4 rpf-table <i>keyword</i>

Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address

Synopsis	Enter the source-address context
Context	configure router <i>named-item-64</i> pim ipv4 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

register-message *ipv4-unicast-address*

Synopsis	Source IPv4 address for PIM register messages
Context	configure router <i>named-item-64</i> pim ipv4 source-address register-message <i>ipv4-unicast-address</i>
Tree	register-message
Description	<p>This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-assert-compatible-mode *boolean*

Synopsis	Enable SSM assert compatible mode
Context	configure router <i>named-item-64</i> pim ipv4 ssm-assert-compatible-mode <i>boolean</i>
Tree	ssm-assert-compatible-mode

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-default-range *boolean*

Synopsis	SSM default range
Context	configure router <i>named-item-64</i> pim ipv4 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>named-item-64</i> pim ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv6
Context	configure router <i>named-item-64</i> pim ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rpf-table *keyword*

Synopsis	Route tables for RPF lookup
Context	configure router <i>named-item-64</i> pim ipv6 rpf-table <i>keyword</i>

Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address

Synopsis	Enter the source-address context
Context	configure router <i>named-item-64</i> pim ipv6 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

register-message *ipv6-unicast-address*

Synopsis	Source IPv6 address for PIM register messages
Context	configure router <i>named-item-64</i> pim ipv6 source-address register-message <i>ipv6-unicast-address</i>
Tree	register-message
Description	<p>This command configures the source IPv6 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-default-range *boolean*

Synopsis	SSM default range
Context	configure router <i>named-item-64</i> pim ipv6 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mdt-spt *boolean*

Synopsis	Use SPT switchover for default MDT
Context	configure router <i>named-item-64</i> pim mdt-spt <i>boolean</i>
Tree	mdt-spt
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

non-dr-attract-traffic *boolean*

Synopsis	Attract traffic when the router is not the designated one
Context	configure router <i>named-item-64</i> pim non-dr-attract-traffic <i>boolean</i>
Tree	non-dr-attract-traffic
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pim-ssm-scaling *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PIM-SSM scaling
Context	configure router <i>named-item-64</i> pim pim-ssm-scaling <i>boolean</i>
Tree	pim-ssm-scaling
Description	<p>When configured to true, this command enables an increase of PIM SSM (S,G) scaling to a maximum of 256000 per system. The total maximum multicast capacity is, however, constrained by the lowest-performance FP.</p> <p>When the maximum link capacity from the fabric to the lowest-performance FP is reached, the link to that FP is overloaded, resulting in packet loss for all FPs. This capacity constraint is independent of whether the lowest-performance FP has a receiver on it or not. If the multicast management chassis per-plane total capacity is configured to an explicit value larger than that supported by the lowest-performance FP, then IMPM</p>

believes that there is more plane capacity available than there actually is and the result is (S,G) packet loss instead of blackholing. By setting the multicast management chassis per-plane total capacity to **dynamic**, the system automatically sets the switch fabric multicast plane capacity to the minimum value supported by the fabric and all line cards in the system.

When PIM SSM scaling is enabled, the following multicast features are disabled:

- DM
- MoFRR
- JP policy
- InBand features (BIER and MLDP)
- Extranet
- ASM

When configured to **false**, there is no increase of PIM SSM (S,G) scaling.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp

Synopsis	Enter the rp context
Context	configure <i>router</i> <i>named-item-64</i> <i>pim</i> <i>rp</i>
Tree	<i>rp</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bootstrap

Synopsis	Enter the bootstrap context
Context	configure <i>router</i> <i>named-item-64</i> <i>pim</i> <i>rp</i> <i>bootstrap</i>
Tree	<i>bootstrap</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export reference

Synopsis	Character limit for policy name
Context	configure <i>router</i> <i>named-item-64</i> <i>pim</i> <i>rp</i> <i>bootstrap</i> <i>export</i> <i>reference</i>

Tree	export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import *reference*

Synopsis	Character limit for policy name
Context	configure router <i>named-item-64</i> pim rp bootstrap import reference
Tree	import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>named-item-64</i> pim rp ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

anycast [[ipv4-address](#)] *ipv4-unicast-address* [rp-set-peer](#) *ipv4-unicast-address*

Synopsis	Add a list entry for anycast
Context	configure router <i>named-item-64</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[ipv4-address] *ipv4-unicast-address*

Synopsis Loopback IP address shared by routes in RP set

Context **configure** *router* *named-item-64* *pim rp ipv4 anycast ipv4-unicast-address rp-set-peer*
ipv4-unicast-address

Tree *anycast*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

rp-set-peer *ipv4-unicast-address*

Synopsis Peer in the anycast RP-set

Context **configure** *router* *named-item-64* *pim rp ipv4 anycast ipv4-unicast-address rp-set-peer*
ipv4-unicast-address

Tree *anycast*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

auto-rp-discovery *boolean*

Synopsis Enable auto-RP discovery mode and auto-RP listener

Context **configure** *router* *named-item-64* *pim rp ipv4 auto-rp-discovery boolean*

Tree *auto-rp-discovery*

Description When configured to **true**, the system enables the auto-RP protocol in discovery mode and the auto-RP listener functionality.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-mask-len *number*

Synopsis	Length for bootstrap hash mask
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate hash-mask-len <i>number</i>
Tree	hash-mask-len
Range	0 to 32

Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Bootstrap priority of the router
Context	configure router <i>named-item-64</i> pim rp ipv4 bsr-candidate priority <i>number</i>
Tree	priority
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

candidate *boolean*

Synopsis	Enable auto-RP to advertise candidate RP information
Context	configure router <i>named-item-64</i> pim rp ipv4 candidate <i>boolean</i>
Tree	candidate
Description	<p>When configured to true, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.</p> <p>When configured to false, the candidate RP information is not specified.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mapping-agent *boolean*

Synopsis	Enable the mapping agent on the node
Context	configure router <i>named-item-64</i> pim rp ipv4 mapping-agent <i>boolean</i>
Tree	mapping-agent
Description	When configured to true , the mapping agent is enabled on the node. The auto-RP MA observes the auto-rp-announcement messages, selects the RP and generates the RP

discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp-candidate

Synopsis	Enter the rp-candidate context
Context	configure router named-item-64 pim rp ipv4 rp-candidate
Tree	rp-candidate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Local RP address
Context	configure router named-item-64 pim rp ipv4 rp-candidate address <i>ipv4-unicast-address</i>
Tree	address
Description	This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
Context	configure router named-item-64 pim rp ipv4 rp-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [ipv4-prefix] *ipv4-multicast-prefix*

Synopsis	Add a list entry for group-range
Context	configure router <i>named-item-64</i> pim rp ipv4 rp-candidate group-range <i>ipv4-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Platforms	7705 SAR Gen 2

core *boolean*

Synopsis	Include proxy RPF vector for core
Context	configure router <i>named-item-64</i> pim rpfv core <i>boolean</i>
Tree	core
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

mvpn *boolean*

Synopsis Include proxy RPF vector for Inter-AS Rosen MVPN

Context **configure** *router* *named-item-64* *pim rpfv mvpn boolean*

Tree *mvpn*

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

spt-switchover [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **spt-switchover** list instance

Context **configure** *router* *named-item-64* *pim spt-switchover* (*ipv4-prefix* | *ipv6-prefix*)

Tree *spt-switchover*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IP address and mask length

Context **configure** *router* *named-item-64* *pim spt-switchover* (*ipv4-prefix* | *ipv6-prefix*)

Tree *spt-switchover*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

threshold (*number* | *keyword*)

Synopsis SPT switchover threshold

Context **configure** *router* *named-item-64* *pim spt-switchover* (*ipv4-prefix* | *ipv6-prefix*) **threshold** (*number* | *keyword*)

Tree *threshold*

Range 1 to 4294967294

Units	kilobps
Options	infinity
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-groups

Synopsis	Enter the ssm-groups context
Context	configure router <i>named-item-64</i> pim ssm-groups
Tree	ssm-groups
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Add a list entry for group-range
Context	configure router <i>named-item-64</i> pim ssm-groups group-range (ipv4-prefix ipv6-prefix)
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	IP address and mask length
Context	configure router <i>named-item-64</i> pim ssm-groups group-range (ipv4-prefix ipv6-prefix)
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

radius

Synopsis	Enter the radius context
Context	configure router <i>named-item-64</i> radius

Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[name](#)] *named-item*

Synopsis	Enter the server list instance
Context	configure router <i>named-item-64</i> radius server <i>named-item</i>
Tree	server
Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	External RADIUS server name
Context	configure router <i>named-item-64</i> radius server <i>named-item</i>
Tree	server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> accept-coa <i>boolean</i>
Tree	accept-coa
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

acct-port *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> acct-port <i>number</i>
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> auth-port <i>number</i>
Tree	auth-port
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> description <i>description</i>
Tree	description

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

insert-message-authenticator *boolean*

Synopsis	Insert Message-Authenticator in Access-Request
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> insert-message-authenticator <i>boolean</i>
Tree	insert-message-authenticator
Description	When configured to true , the router inserts a Message-Authenticator attribute as the first attribute in Access-Request messages.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

pending-requests-limit *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> pending-requests-limit <i>number</i>
Tree	pending-requests-limit
Range	1 to 4096
Default	4096
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

require-message-authenticator *boolean*

Synopsis	Require Message-Authenticator in Access-Request reply
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> require-message-authenticator <i>boolean</i>
Tree	require-message-authenticator
Description	When configured to true , the router silently drops responses to Access-Requests without a Message-Authenticator attribute.

Default	false
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

secret encrypted-leaf

Synopsis	Secret key associated with this RADIUS server
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> secret encrypted-leaf
Tree	secret
Description	This command specifies the secret key associated with this RADIUS server in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile reference

Synopsis	Use the TLS client profile for RADIUS over TLS
Context	configure router <i>named-item-64</i> radius server <i>named-item</i> tls-client-profile reference
Tree	tls-client-profile
Description	When configured, the router uses the TLS client profile to encrypt RADIUS communication and RADIUS messages are sent using TLS.
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

rip

Synopsis	Enable the rip context
Context	configure router <i>named-item-64</i> rip
Tree	rip
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the RIP instance

Context **configure** *router* *named-item-64* *rip* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis Authentication password passed between RIP neighbors

Context **configure** *router* *named-item-64* *rip* **authentication-key** *encrypted-leaf*

Tree [authentication-key](#)

Description This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication password from the configuration and disables authentication.

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 102

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

authentication-type *keyword*

Synopsis Authentication type used between RIP neighbors

Context **configure** *router* *named-item-64* *rip* **authentication-type** *keyword*

Tree [authentication-type](#)

Description This command sets the type of authentication to be used between RIP neighbors.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.

Options	none, password, md5, md20
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> rip bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>named-item-64</i> rip check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> rip description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-limit

Synopsis	Enable the export-limit context
Context	configure router <i>named-item-64</i> rip export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router <i>named-item-64</i> rip export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure router <i>named-item-64</i> rip export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies to determine exported routes
Context	configure router <i>named-item-64</i> rip export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-name](#)] *named-item*

Synopsis	Enter the group list instance
Context	configure router <i>named-item-64</i> rip group <i>named-item</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *named-item*

Synopsis	RIP group name
Context	configure router <i>named-item-64</i> rip group <i>named-item</i>
Tree	group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of RIP neighbor interface group
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, the authentication password is removed from the configuration and authentication is disabled.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 102
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> authentication-type <i>keyword</i>
Tree	authentication-type
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p>

	When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.
Options	none, password, md5, md20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	When configured to true , this command enables BFD to control the state of the associated protocol adjacency. When configured to false , this command removes BFD from the associated protocol adjacency.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command specifies the export route policies used to determine which routes are exported to RIP.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes per RIP update message
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor [**interface-name**] *interface-name*

Synopsis	Enter the neighbor list instance
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	Neighbor added through the interface to the RIP group
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the RIP neighbor interface
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>

String length	1 to 102
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> authentication-type <i>keyword</i>
Tree	authentication-type
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> check-zero <i>boolean</i>

Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command specifies the export route policies used to determine which routes are exported to RIP.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes per RIP update message
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> receive <i>keyword</i>
Tree	receive
Options	version-1, version-2, both, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> send <i>keyword</i>
Tree	send

Options	none, version-1, broadcast, multicast, unicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush *number*

Synopsis	RIP flush timer
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast-address [*address*] *ipv4-unicast-address*

Synopsis	Add a list entry for unicast-address
----------	---

Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> unicast-address <i>ipv4-unicast-address</i>
Tree	unicast-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *ipv4-unicast-address*

Synopsis	Unicast address for the neighbor
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> neighbor <i>interface-name</i> unicast-address <i>ipv4-unicast-address</i>
Tree	unicast-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> receive <i>keyword</i>
Tree	receive
Options	version-1, version-2, both, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send keyword

Synopsis	RIP version and method used to send RIP updates
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> send <i>keyword</i>
Tree	send
Options	none, version-1, broadcast, multicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush number

Synopsis	RIP flush timer
Context	configure <i>router</i> <i>named-item-64</i> <i>rip group</i> <i>named-item</i> timers flush <i>number</i>

Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure router <i>named-item-64</i> rip group <i>named-item</i> timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policies to decide routes for routing table
Context	configure router <i>named-item-64</i> rip import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes in the RIP message
Context	configure router <i>named-item-64</i> rip message-size <i>number</i>
Tree	message-size
Range	25 to 255
Default	25
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure router <i>named-item-64</i> rip metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIP
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> <i>metric-out</i> <i>number</i>
Tree	<i>metric-out</i>
Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> <i>preference</i> <i>number</i>
Tree	<i>preference</i>
Range	1 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> <i>receive</i> <i>keyword</i>
Tree	<i>receive</i>
Options	version-1, version-2, both, none
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> <i>send</i> <i>keyword</i>
Tree	<i>send</i>
Options	none, version-1, broadcast, multicast
Default	broadcast

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush *number*

Synopsis	RIP flush timer
Context	configure <i>router</i> <i>named-item-64</i> <i>rip</i> timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200

Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure router <i>named-item-64</i> rip timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure router <i>named-item-64</i> rip timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ripng

Synopsis	Enable the ripng context
Context	configure router <i>named-item-64</i> ripng
Tree	ripng

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the RIPng instance
Context	configure router <i>named-item-64</i> ripng admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> ripng bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>named-item-64</i> ripng check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Default	false

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

description *description*

Synopsis Text description
Context **configure** [router](#) *named-item-64* [ripng](#) [description](#) *description*
Tree [description](#)
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

export-limit

Synopsis Enable the **export-limit** context
Context **configure** [router](#) *named-item-64* [ripng](#) [export-limit](#)
Tree [export-limit](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

log-percent *number*

Synopsis Export limit before warning and SNMP notification sent
Context **configure** [router](#) *named-item-64* [ripng](#) [export-limit](#) [log-percent](#) *number*
Tree [log-percent](#)
Range 1 to 100
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

number *number*

Synopsis Maximum routes or prefixes exported from route table
Context **configure** [router](#) *named-item-64* [ripng](#) [export-limit](#) [number](#) *number*
Tree [number](#)

Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies to determine exported routes
Context	configure router <i>named-item-64</i> ripng export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-name](#)] *named-item*

Synopsis	Enter the group list instance
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *named-item*

Synopsis	RIP group name
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i>
Tree	group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of RIPvng neighbor interface group
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command specifies the export route policies used to determine which routes are exported to RIP.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>

Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes in the message
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from the neighbor
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIPng
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor [*interface-name*] *interface-name*

Synopsis	Enter the neighbor list instance
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	Neighbor added to the RIPng group through the interface
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the RIPng neighbor
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Description	When configured to true , this command enables BFD to control the state of the associated protocol adjacency. When configured to false , this command removes BFD from the associated protocol adjacency.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> description <i>description</i>

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> export-policy <i>reference</i>
Tree	export-policy

Description	<p>This command specifies the export route policies used to determine which routes are exported to RIP.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes in the message
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from the neighbor
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIPng
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> receive <i>keyword</i>
Tree	receive

Options	none, ripng
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> send <i>keyword</i>
Tree	send
Options	none, ripng, unicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> timers
Tree	timers
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

flush *number*

Synopsis RIP flush timer

Context **configure** **router** *named-item-64* **ripng group** *named-item* **neighbor** *interface-name*
timers flush *number*

Tree **flush**

Description This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range 1 to 1200

Units seconds

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

timeout *number*

Synopsis RIP timeout timer

Context **configure** **router** *named-item-64* **ripng group** *named-item* **neighbor** *interface-name*
timers timeout *number*

Tree **timeout**

Description This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.

Range 1 to 1200

Units seconds

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

update *number*

Synopsis Timer that controls the frequency of updates

Context **configure** **router** *named-item-64* **ripng group** *named-item* **neighbor** *interface-name*
timers update *number*

Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast-address [[address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for unicast-address
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> unicast-address <i>ipv6-unicast-address</i>
Tree	unicast-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *ipv6-unicast-address*

Synopsis	Unicast address for the neighbor
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> neighbor <i>interface-name</i> unicast-address <i>ipv6-unicast-address</i>
Tree	unicast-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive keyword

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> receive <i>keyword</i>
Tree	receive
Options	none, ripng
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send keyword

Synopsis	RIPng version and method used to send RIPng updates
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> send <i>keyword</i>
Tree	send
Options	none, ripng
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure router <i>named-item-64</i> ripng group <i>named-item</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
----------	----------------------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>ripng group</i> <i>named-item</i> <i>timers</i>
Tree	<i>timers</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush *number*

Synopsis	RIP flush timer
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng group</i> <i>named-item</i> <i>timers</i> <i>flush</i> <i>number</i>
Tree	<i>flush</i>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng group</i> <i>named-item</i> <i>timers</i> <i>timeout</i> <i>number</i>
Tree	<i>timeout</i>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
----------	--

Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>group</i> <i>named-item</i> <i>timers</i> <i>update</i> <i>number</i>
Tree	<i>update</i>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policies to decide routes for routing table
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>import-policy</i> <i>reference</i>
Tree	<i>import-policy</i>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes in the message
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>message-size</i> <i>number</i>
Tree	<i>message-size</i>
Range	25 to 255
Default	25
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from the neighbor
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>metric-in</i> <i>number</i>
Tree	<i>metric-in</i>

Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIPng
Context	configure router <i>named-item-64</i> ripng metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure router <i>named-item-64</i> ripng preference <i>number</i>
Tree	preference
Range	1 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure router <i>named-item-64</i> ripng receive <i>keyword</i>
Tree	receive
Options	none, ripng
Default	ripng
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send keyword

Synopsis	RIPng version and method used to send RIPng updates
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>send</i> <i>keyword</i>
Tree	<i>send</i>
Options	none, ripng
Default	ripng
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>split-horizon</i> <i>boolean</i>
Tree	<i>split-horizon</i>
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure <i>router</i> <i>named-item-64</i> <i>ripng</i> <i>timers</i>
Tree	<i>timers</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush *number*

Synopsis	RIP flush timer
Context	configure router <i>named-item-64</i> ripng timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure router <i>named-item-64</i> ripng timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure router <i>named-item-64</i> ripng timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-id *router-id*

Synopsis	Unique router ID for the router in the AS
Context	configure router <i>named-item-64</i> router-id <i>router-id</i>
Tree	router-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp

Synopsis	Enable the rsvp context
Context	configure router <i>named-item-64</i> rsvp
Tree	rsvp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of RSVP
Context	configure router <i>named-item-64</i> rsvp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-over-bypass *boolean*

Synopsis	Enable MD5 authentication over bypass LSP of PLR and MP
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>rsvp authentication-over-bypass</i> <i>boolean</i>
Tree	<i>authentication-over-bypass</i>
Description	<p>When configured to true, this command configures the MD5 authentication over the bypass LSP of all Point of Local Repairs (PLRs) and Merge Points (MPs) on the router. Only enable this command when the TE interfaces in the RSVP-TE network use the same MD5 authentication parameters.</p> <p>When a Point of Local Repair (PLR) activates a bypass LSP towards a Merge Point (MP), by default, the INTEGRITY object corresponding to the bypass LSP interface is not added to a transmitted RSVP message except for packets of routed RSVP messages (Resv, Srefresh, and ACK), and only when the packet is intended for a bypass LSP endpoint (PLR or MP) that is a directly connected neighbor.</p> <p>When this command is enabled, the INTEGRITY object of the interface corresponding to the bypass LSP is added to a transmitted RSVP message regardless of whether the bypass LSP endpoint (PLR or MP) is a directly connected RSVP neighbor. The INTEGRITY object is included with the following RSVP messages: Path, PathTear, PathErr, Resv, ResvTear, ResvErr, Srefresh, and ACK.</p> <p>In all cases, an RSVP message received from a PLR or a MP (sender address in the SenderTemplate or FilterSpec is different from an Extended Tunnel Id in a Session Object), and which includes the INTEGRITY object is authenticated against the bypass LSP interface. An RSVP message received from a PLR or MP without the INTEGRITY object is also accepted.</p> <p>When configured to false, the router disables MD5 authentication over bypass LSP of the PLRs and MPs.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

diffserv-te

Synopsis	Enable the diffserv-te context
Context	configure <i>router</i> <i>named-item-64</i> <i>rsvp diffserv-te</i>
Tree	<i>diffserv-te</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admission-control-model *keyword*

Synopsis	Parameters for the DiffServ TE node
Context	configure <i>router</i> <i>named-item-64</i> <i>rsvp diffserv-te admission-control-model</i> <i>keyword</i>
Tree	<i>admission-control-model</i>

Options	mam, rdm
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

class-type-bw

Synopsis	Enter the class-type-bw context
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw
Tree	class-type-bw
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct0 number

Synopsis	RSVP interface bandwidth percentage for class type 0
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct0 <i>number</i>
Tree	ct0
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct1 number

Synopsis	RSVP interface bandwidth percentage for class type 1
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct1 <i>number</i>

Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct2 number

Synopsis	RSVP interface bandwidth percentage for class type 2
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct2 <i>number</i>
Tree	ct2
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct3 number

Synopsis	RSVP interface bandwidth percentage for class type 3
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct3 <i>number</i>
Tree	ct3
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct4 number

Synopsis	RSVP interface bandwidth percentage for class type 4
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct4 <i>number</i>
Tree	ct4
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct5 number

Synopsis	RSVP interface bandwidth percentage for class type 5
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct5 <i>number</i>
Tree	ct5

Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct6 number

Synopsis	RSVP interface bandwidth percentage for class type 6
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct6 <i>number</i>
Tree	ct6
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ct7 number

Synopsis	RSVP interface bandwidth percentage for class type 7
Context	configure router <i>named-item-64</i> rsvp diffserv-te class-type-bw ct7 <i>number</i>
Tree	ct7
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc [[fc-name](#)] *keyword*

Synopsis	Enter the fc list instance
Context	configure router <i>named-item-64</i> rsvp diffserv-te fc <i>keyword</i>
Tree	fc
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[fc-name] keyword

Synopsis	Forwarding class for this mapping
Context	configure router <i>named-item-64</i> rsvp diffserv-te fc <i>keyword</i>
Tree	fc
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

class-type number

Synopsis	Diff-Serv Class Type (CT) for an LSP
Context	configure router <i>named-item-64</i> rsvp diffserv-te fc <i>keyword</i> class-type <i>number</i>
Tree	class-type
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

te-class [te-class-number] number

Synopsis	Enter the te-class list instance
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i>
Tree	te-class
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[te-class-number] *number*

Synopsis	TE class number
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i>
Tree	te-class
Range	0 to 7
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

class-type *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Class type (CT) associated with the TE class
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i> class-type <i>number</i>
Tree	class-type
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TE class priority
Context	configure router <i>named-item-64</i> rsvp diffserv-te te-class <i>number</i> priority <i>number</i>
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

entropy-label-capability *boolean*

Synopsis Allow receiving and processing of the entropy label and ELI on incoming packets of RSVP LSPs

Context **configure** [router](#) *named-item-64* [rsvp](#) **entropy-label-capability** *boolean*

Tree [entropy-label-capability](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

graceful-restart

Synopsis Enter the **graceful-restart** context

Context **configure** [router](#) *named-item-64* [rsvp](#) **graceful-restart**

Tree [graceful-restart](#)

Description Commands in this context configure the local values for the recovery and the restart intervals used in the RSVP Graceful Restart helper.

The values are configured globally in RSVP but separate instances of the timers are applied to each RSVP interface that has the RSVP Graceful Restart helper enabled.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

max-recovery *number*

Synopsis Maximum recovery interval

Context **configure** [router](#) *named-item-64* [rsvp](#) **graceful-restart** **max-recovery** *number*

Tree [max-recovery](#)

Range 1 to 1800

Units seconds

Default 300

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

max-restart *number*

Synopsis	Maximum restart interval
Context	configure router <i>named-item-64</i> rsvp graceful-restart max-restart <i>number</i>
Tree	max-restart
Range	1 to 300
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-shutdown *boolean*

Synopsis	Initiate a graceful shutdown of all RSVP interfaces on the node
Context	configure router <i>named-item-64</i> rsvp graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

implicit-null-label *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal the implicit null option for all RSVP LSPs
Context	configure router <i>named-item-64</i> rsvp implicit-null-label <i>boolean</i>
Tree	implicit-null-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-node-id-in-rro *boolean*

Synopsis	Include the node-id sub-object in the RRO (Record Route Object) on the RSVP instance
----------	--

Context	configure router <i>named-item-64</i> rsvp include-node-id-in-rro <i>boolean</i>
Tree	include-node-id-in-rro
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [[interface-name](#)] *reference*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i>
Tree	interface
Description	<p>Commands in this context configure the attributes of the RSVP protocol support on an IP interface. RSVP commands are not executed on an IP interface if RSVP is not enabled.</p> <p>The RSVP interface must be administratively disabled before it can be deleted.</p> <p>A corresponding MPLS interface must also be configured. The RSVP interface cannot be deleted without also deleting the MPLS interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *reference*

Synopsis	Index for router RSVP interface
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i>
Tree	interface
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of RSVP on the IP interface
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication or hash key string
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command configures the authentication key for use between RSVP neighbors to authenticate RSVP messages. Authentication uses the MD5 message-based digest.</p> <p>When enabled on an RSVP interface, authentication of RSVP messages operates in both directions of the interface. A router maintains a security association using one authentication key for each interface to an RSVP neighbor.</p> <p>An RSVP neighbor transmits an authenticating digest of the RSVP message that is computed using the shared authentication key and a keyed-hash algorithm. The message digest is included in an INTEGRITY object, which also contains a flags field, a key identifier field, and a sequence number field. An RSVP neighbor uses the key together with the authentication algorithm to process received RSVP messages. The RSVP MD5 authentication complies to the procedures for RSVP message generation in RFC 2747, <i>RSVP Cryptographic Authentication</i>.</p> <p>The MD5 implementation does not support the authentication challenge procedures in RFC 2747.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 102
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> authentication-keychain reference
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis Enable BFD

Context **configure** [router](#) *named-item-64* [rsvp interface](#) *reference* [bfd-liveness](#) *boolean*

Tree [bfd-liveness](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

class-type-bw

ct7 number

Synopsis	Percentage of link bandwidth for class type (CT) 7
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> class-type-bw ct7 <i>number</i>
Tree	ct7
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-restart-helper-mode boolean

Synopsis	Enable Graceful Restart helper for the RSVP interface
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> graceful-restart-helper-mode <i>boolean</i>
Tree	graceful-restart-helper-mode
Description	When configured to true , the system enables the RSVP Graceful Restart helper.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-shutdown boolean

Synopsis	Initiate a graceful shutdown of RSVP interface
----------	--

Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Time between RSVP Hello messages
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> hello-interval <i>number</i>
Tree	hello-interval
Range	0 to 60
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

implicit-null-label *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal the implicit null label value for all LSPs
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> implicit-null-label <i>boolean</i>
Tree	implicit-null-label
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

refresh-reduction

Synopsis	Enable the refresh-reduction context
Context	configure router <i>named-item-64</i> rsvp interface <i>reference</i> refresh-reduction
Tree	refresh-reduction
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

reliable-delivery *boolean*

Synopsis Reliable delivery of RSVP messages over the RSVP interface

Context **configure** [router](#) *named-item-64* [rsvp interface](#) *reference* [refresh-reduction reliable-delivery](#) *boolean*

Tree [reliable-delivery](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

subscription *number*

Synopsis Percentage of the link bandwidth to use for reservation

Context **configure** [router](#) *named-item-64* [rsvp interface](#) *reference* [subscription](#) *number*

Tree [subscription](#)

Range 0 to 1000

Default 100

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

te-down-threshold

Synopsis Enable the **te-down-threshold** context

Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

te-down-threshold *number*

Synopsis	Value for the te-down-threshold
Context	configure <i>router</i> <i>named-item-64</i> <i>rsvp</i> <i>te-down-threshold</i> <i>number</i>
Tree	<i>te-down-threshold</i>
Range	0 to 100
Max. instances	16

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

te-threshold-update

Synopsis	Enable the te-threshold-update context
Context	configure router <i>named-item-64</i> rsvp te-threshold-update
Tree	te-threshold-update
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

on-cac-failure *boolean*

Synopsis	CAC (Call Admission Control) failure-triggered IGP update
Context	configure router <i>named-item-64</i> rsvp te-threshold-update on-cac-failure <i>boolean</i>
Tree	on-cac-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update-timer *number*

Synopsis	Timer-based IGP updates
Context	configure router <i>named-item-64</i> rsvp te-threshold-update update-timer <i>number</i>
Tree	update-timer
Range	1 to 300
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

te-up-threshold *number*

Synopsis	Value for the te-up-threshold
Context	configure router <i>named-item-64</i> rsvp te-up-threshold <i>number</i>

Tree	te-up-threshold
Range	0 to 100
Max. instances	16
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>named-item-64</i> segment-routing
Tree	segment-routing
Description	Commands in this context configure protocol-independent options for segment routing.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maintenance-policy [[policy-name](#)] *named-item*

Synopsis	Enter the maintenance-policy list instance
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i>
Tree	maintenance-policy
Description	Commands in this context configure a named maintenance policy that can be applied to SR policy candidate paths that are either statically configured or imported via BGP.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[policy-name](#)] *named-item*

Synopsis	Maintenance policy name
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i>
Tree	maintenance-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the maintenance policy
Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing maintenance-policy</i> <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>This command sets the administrative state of the maintenance policy.</p> <p>A maintenance policy must be administratively disabled to change any of the parameters.</p> <p>When a maintenance template is administratively disabled, all applicable candidate paths are removed from the data path.</p>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable seamless BFD for segment lists of candidate path
Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing maintenance-policy</i> <i>named-item</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables seamless BFD on every segment list of an SR policy candidate path to which the maintenance policy is applied. The BFD template configures the parameters for the BFD session.</p> <p>When configured to false, seamless BFD is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-template *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BFD template to be used by seamless BFD
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> bfd-template <i>reference</i>
Tree	bfd-template
Description	This command references a named BFD template to be used by seamless BFD. A BFD template must exist on the system before being referenced from a maintenance policy. The template specifies parameters that are used by the BFD session, such as the minimum transmit and receive control packet timer intervals.
Reference	configure bfd bfd-template <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-down-timer *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold down timer for SR policy candidate paths
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> hold-down-timer <i>number</i>
Tree	hold-down-timer
Description	<p>This command configures the hold down timer for the maintenance policy. The purpose of the timer is to prevent bouncing of the SR policy path state if S-BFD sessions associated with the segment lists flap, causing the threshold to be repeatedly crossed in a short period of time.</p> <p>The timer is started when the number of up S-BFD sessions drops below the threshold. The SR policy path is not considered to be up again until the hold down timer has expired and the number of up S-BFD sessions reaches or exceeds the threshold and the internal hold timer is not running.</p> <p>If the revert timer is also configured, the revert timer is not started until after the number of up S-BFD sessions equals or exceeds the threshold and the hold down timer for the primary candidate path has expired.</p>
Range	0 to 5000

Units	deciseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protection mode for SR policy candidate paths
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> mode <i>keyword</i>
Tree	mode
Description	This command specifies the data path programming and protection mechanism for SR policy candidate paths to which the maintenance policy is applied.
Options	none, ecmp-protected, linear
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

return-path-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> return-path-label <i>number</i>
Tree	return-path-label
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p>

If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.

Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

revert-timer *number*

Synopsis	Revert timer for SR policy candidate paths
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> revert-timer <i>number</i>
Tree	revert-timer
Description	This command configures the revert timer for SR Policy candidate paths. The revert timer is started when the primary path recovers (the number of S-BFD sessions that are up equals or exceeds the threshold value and the hold down timer has expired). When the timer expires, the system reverts to the primary path.
Range	0 to 4320
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum number of up S-BFD sessions for up path status
Context	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i> threshold <i>number</i>
Tree	threshold
Description	This command configures the minimum number of S-BFD sessions that must be up for the SR policy candidate path to be considered up. If the number of up sessions is below this threshold value, the policy candidate path is marked as BFD degraded by the system. This command is only valid in the ecmp-protected mode.
Range	1 to 32

Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-mpls

Synopsis	Enter the sr-mpls context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls
Tree	sr-mpls
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-sids [[interface-name](#)] *reference*

Synopsis	Enter the prefix-sids list instance
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i>
Tree	prefix-sids
Description	Commands in this context configure the prefix SIDs for an interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[\[interface-name\]](#) *reference*

Synopsis	Loopback interface name that owns prefix to advertise
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i>
Tree	prefix-sids
Reference	configure router <i>named-item-64</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo [[flex-algo-id](#)] *number*

Synopsis	Enter the flex-algo list instance
----------	--

Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo <i>number</i>
Tree	flex-algo
Max. instances	7
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

[flex-algo-id] *number*

Synopsis	Flexible algorithm ID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo <i>number</i>
Tree	flex-algo
Range	128 to 255
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ipv4-sid

Synopsis	Enable the ipv4-sid context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo <i>number</i> ipv4-sid
Tree	ipv4-sid
Description	Commands in this context configure IPv4 SIDs associated with the flexible algorithm instances on the shared loopback interfaces used with IS-IS or OSPF.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

index *number*

Synopsis	Node SID index for the interface
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> flex-algo <i>number</i> ipv4-sid index <i>number</i>
Tree	index
Range	0 to 4294967295

Notes	The following elements are part of a choice: index or label .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv4-sid label number</i>
Tree	label
Range	32 to 1048575
Notes	The following elements are part of a choice: index or label .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ipv6-sid

Synopsis	Enable the ipv6-sid context
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv6-sid</i>
Tree	ipv6-sid
Description	Commands in this context configure IPv6 SIDs associated with the flexible algorithm instances on the shared loopback interfaces used with IS-IS or OSPF.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

index *number*

Synopsis	Node SID index for the interface
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference flex-algo</i> <i>number ipv6-sid index number</i>

Tree	index
Range	0 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> ipv6-sid label <i>number</i>
Tree	label
Range	32 to 1048575
Notes	The following elements are part of a choice: index or label .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

node-sid *boolean*

Synopsis	Assign a node SID to the prefix referencing the router
Context	configure router <i>named-item-64</i> segment-routing sr-mpls prefix-sids <i>reference</i> node-sid <i>boolean</i>
Tree	node-sid
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-policies

Synopsis	Enter the sr-policies context
Context	configure router <i>named-item-64</i> segment-routing sr-policies
Tree	sr-policies
Description	Commands in this context configure SR policies. An SR policy specifies the traffic to be matched by the policy and actions to take on the matched traffic by applying the instructions encoded in one or more segment lists.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of segment routing policies
Context	configure router <i>named-item-64</i> segment-routing sr-policies admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reserved-label-block *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved local block for segment routing policies
Context	configure router <i>named-item-64</i> segment-routing sr-policies reserved-label-block reference
Tree	reserved-label-block
Reference	configure router <i>named-item-64</i> mpls-labels reserved-label-block <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-policy [[name](#)] *named-item-64*

Synopsis	Enter the static-policy list instance
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i>
Tree	static-policy
Description	Commands in this context configure an SR policy. The resulting SR policy is targeted for local installation or propagation by BGP to another router.
Max. instances	32768
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item-64*

Synopsis	Name of the static SR policy
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i>
Tree	static-policy
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of segment routing static policy
----------	---

Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>named-item-64</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

binding-sid *number*

Synopsis	Binding Segment ID for SR policy to upstream routers
Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>named-item-64</i> <i>binding-sid</i> <i>number</i>
Tree	<i>binding-sid</i>
Description	This command associates a B-SID with a statically defined SR policy. This is a mandatory command to enable the SR policy. The B-SID label must be an available label in the reserved label block range.
Range	32 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

color *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Color value for static policy
Context	configure <i>router</i> <i>named-item-64</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>named-item-64</i> <i>color</i> <i>number</i>
Tree	<i>color</i>
Description	This command configures a color value to associate with a statically defined segment-routing policy. This is a mandatory command to enable the SR policy.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

distinguisher *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique value for a policy
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> distinguisher <i>number</i>
Tree	distinguisher
Description	<p>This command configures a distinguisher value to associate with a statically defined SR policy. This is a mandatory command for non-local SR policies. Every non-local SR policy must have a unique distinguisher value.</p> <p>When a non-local static SR policy is imported into BGP and originated as a BGP route, the configured distinguisher value is copied into the NLRI of the route.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination of the source-routed path
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Description	<p>This command associates an IPv4 or IPv6 endpoint address with a statically defined SR policy. This association is mandatory when enabling an SR policy.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

head-end (*ipv4-address-no-zone | ipv6-address-no-zone | keyword*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Head-end address for this static policy
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> head-end (<i>ipv4-address-no-zone ipv6-address-no-zone keyword</i>)
Tree	head-end
Description	This command associates a head-end location with a statically defined SR policy. The head end identifies the target router to install the policy. This is a mandatory command for enabling the SR policy.
Options	local
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maintenance-policy *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policy name
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> maintenance-policy <i>reference</i>
Tree	maintenance-policy
Reference	configure router <i>named-item-64</i> segment-routing maintenance-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference value of this static policy
----------	--

Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> preference <i>number</i>
Tree	preference
Description	This command configures a preference value to associate with a statically defined SR policy. When there are multiple policies for the same (color, endpoint) combination that are targeted for local installation, only one is selected as the active path for the (color, endpoint). In this selection process, which considers both static local policies and BGP-signaled policies, the policy with the highest preference value is preferred over all policies with a lower preference value.
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-list [**seg-list-index**] *number*

Synopsis	Enter the segment-list list instance
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i>
Tree	segment-list
Description	Commands in this context configure a segment list for the statically defined segment routing policy.
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[seg-list-index] *number*

Synopsis	Index for identifying a specific segment list
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i>
Tree	segment-list
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of segment list for static policy

Synopsis Enter the **segment** list instance

Context **configure** *router* *named-item-64* *segment-routing* *sr-policies* *static-policy* *named-item-64* *segment-list* *number* **segment** *number*

Tree **segment**

Description Commands in this context configure a segment inside a segment-list of a statically-defined segment routing policy candidate path.

A segment list of a statically-defined SR policy candidate path of type **sr-mpls** can only accept a segment of type **mpls-label**.

A segment list of a statically-defined SR policy candidate path of type **srv6** can only accept a segment of type **srv6-sid**. However, you can mix SRv6 segments derived from both classic SRv6 and micro-segment SRv6 locators.

Max. instances 24

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[segment-index] *number*

Synopsis Index for identifying a segment in a segment list

Context **configure** *router* *named-item-64* *segment-routing* *sr-policies* *static-policy* *named-item-64* *segment-list* *number* **segment** *number*

Tree **segment**

Description	This command configures the index for identifying a segment in a segment list. Each segment list can have up to 11 segments for SR-MPLS policies, and 24 segments for an SRv6 segment list which only includes micro-segments. For an SRv6 segment list that mixes regular and micro-segments, up to 7 regular segments can be configured.
Range	1 to 24
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls-label *number*

Synopsis	Value for the MPLS label
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i> segment <i>number</i> mpls-label <i>number</i>
Tree	mpls-label
Range	0 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weight *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Weight of the segment list
Context	configure router <i>named-item-64</i> segment-routing sr-policies static-policy <i>named-item-64</i> segment-list <i>number</i> weight <i>number</i>
Tree	weight
Description	This command associates an optional weight value with a segment list of a statically defined segment routing policy to achieve weighted ECMP behavior. When any segment list in the active policy has a weight greater than 1, traffic matching the policy is load-balanced across the segment lists according to their relative weight values.
Max. range	0 to 4294967295
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[dot1p-app-name] *keyword*

Synopsis	Dot1p application ID that generates control traffic
Context	configure router <i>named-item-64</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Options	arp, isis, pppoe
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dot1p (*keyword | number*)

Synopsis	Dot1p value to the traffic generated by this application
Context	configure router <i>named-item-64</i> sgt-qos dot1p application <i>keyword</i> dot1p (<i>keyword number</i>)
Tree	dot1p
Range	0 to 7
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dscp

Synopsis	Enter the dscp context
Context	configure router <i>named-item-64</i> sgt-qos dscp
Tree	dscp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

application [[dscp-app-name](#)] keyword

Synopsis	Enter the application list instance
Context	configure router <i>named-item-64</i> sgt-qos dscp application <i>keyword</i>
Tree	application
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[dscp-app-name](#)] keyword

Synopsis	DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP
Context	configure router <i>named-item-64</i> sgt-qos dscp application <i>keyword</i>
Tree	application
Options	bgp, cflowd, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, igmp-reporter, gtp, sflow, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, mpls-udp-return, pfcp, ibcp, bfd
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dscp (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	configure router <i>named-item-64</i> sgt-qos dscp application <i>keyword</i> dscp (<i>keyword</i> <i>number</i>)
Tree	dscp
Range	0 to 63

Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dscp-map [[dscp-name](#)] *keyword*

Synopsis	Enter the dscp-map list instance
Context	configure router <i>named-item-64</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[dscp-name] *keyword*

Synopsis	DSCP name mapped to forwarding class
Context	configure router <i>named-item-64</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc *keyword*

Synopsis	Value for the forwarding class for this mapping
Context	configure router <i>named-item-64</i> sgt-qos dscp dscp-map <i>keyword</i> fc <i>keyword</i>
Tree	fc
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured)

	h2 – High 2 (high priority)
	ef – Expedited Forwarding (high priority)
	h1 – High 1 (high priority)
	nc – Network Control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-routes

Synopsis	Enter the static-routes context
Context	configure router <i>named-item-64</i> static-routes
Tree	static-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-down

Synopsis	Enable the hold-down context
Context	configure router <i>named-item-64</i> static-routes hold-down
Tree	hold-down
Description	<p>Commands in this context enable the hold-down time feature globally for static routes in the system.</p> <p>The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap.</p> <p>The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial number

Synopsis	Value for the initial hold-down time
Context	configure router <i>named-item-64</i> static-routes hold-down initial <i>number</i>
Tree	initial
Description	<p>This command specifies the initial value of the hold-down time globally for static routes in the system.</p> <p>When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route</p>

becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.

Range 1 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

max-value *number*

Synopsis Maximum value of the hold-down time

Context **configure** *router* *named-item-64* *static-routes* *hold-down* *max-value* *number*

Tree *max-value*

Description This command specifies the maximum value of the hold-down time globally for static routes in the system.

Range 1 to 65535

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

multiplier *number*

Synopsis Multiplier of the previous hold-down time

Context **configure** *router* *named-item-64* *static-routes* *hold-down* *multiplier* *number*

Tree *multiplier*

Description This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.

Range 1 to 10

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

route [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*) *route-type* *keyword*

Synopsis Enter the **route** list instance

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i>
Tree	route
Description	<p>Commands in this context create a static route entry. A prefix and netmask must be specified.</p> <p>After the static route context for the specified prefix and netmask has been created, additional options associated with the static route or routes may be specified through the inclusion of additional static route commands.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the static routes
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i>
Tree	route
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-type *keyword*

Synopsis	Static route type
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i>
Tree	route
Options	unicast, multicast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blackhole

Synopsis	Enable the blackhole context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole

Tree	blackhole
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole community <i>community</i>
Tree	community
Description	<p>This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.</p> <p>If at least one community is specified at the prefix level of the static route entry, this command is ignored.</p>
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole description <i>description-allow-all-white-spaces</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

dynamic-bgp *boolean*

Synopsis Derive static route next hop from BGP next hop value

Context **configure** **router** *named-item-64* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type**
keyword **blackhole** **dynamic-bgp** *boolean*

Tree **dynamic-bgp**

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

generate-icmp *boolean*

Synopsis Send ICMP unreachable messages when received packets match a static route with black-hole next-hop

Context **configure** **router** *named-item-64* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type**
keyword **blackhole** **generate-icmp** *boolean*

Tree **generate-icmp**

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

metric *number*

Synopsis Static route metric

Context **configure** **router** *named-item-64* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type**
keyword **blackhole** **metric** *number*

Tree **metric**

Description This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.

Range 0 to 65535

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

preference *number*

Synopsis	Priority of static route over different route sources
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole preference <i>number</i>
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list

Synopsis	Enter the prefix-list context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole prefix-list
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flag *keyword*

Synopsis	Static route match condition from prefix list
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole prefix-list flag <i>keyword</i>
Tree	flag
Options	any, all, none
Default	any
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *reference*

Synopsis	Prefix list name
----------	------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword blackhole prefix-list name reference
Tree	name
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword blackhole tag number
Tree	tag
Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols. If a tag is specified at the prefix level of the static route entry, this command is ignored.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword community community
Tree	community
String length	1 to 72
Max. instances	12
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp-next-hop [**interface-name**] *interface-name*

Synopsis	Enter the dhcp-next-hop list instance
----------	--

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword dhcp-next-hop interface-name</i>
Tree	dhcp-next-hop
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	Router interface name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword dhcp-next-hop interface-name</i>
Tree	dhcp-next-hop
String length	1 to 32
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword dhcp-next-hop interface-name admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword dhcp-next-hop interface-name community community</i>
Tree	community
Description	This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.

If at least one community is specified at the prefix level of the static route entry, this command is ignored.

String length	1 to 72
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

description *description-allow-all-white-spaces*

metric *number*

Synopsis	Static route metric
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword dhcp-next-hop <i>interface-name</i> metric <i>number</i>
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Priority of static route over different route sources
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword dhcp-next-hop <i>interface-name</i> preference <i>number</i>
Tree	preference

Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

tag number

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword dhcp-next-hop <i>interface-name</i> tag <i>number</i>
Tree	tag
Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols. If a tag is specified at the prefix level of the static route entry, this command is ignored.
Range	1 to 4294967295
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

indirect [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the indirect list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address used to reach the destination
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect

Description	This command specifies the next-hop IP address used to reach the destination. The specified IP address can be either on the network side or the access side and is typically at least one hop away from the node.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) community <i>community</i>
Tree	community
Description	<p>This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.</p> <p>If at least one community is specified at the prefix level of the static route entry, this command is ignored.</p>
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cpe-check [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)

Tree	cpe-check
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) log <i>boolean</i>

tag number

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tag <i>number</i>
Tree	tag
Description	<p>This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols.</p> <p>If a tag is specified at the prefix level of the static route entry, this command is ignored.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-next-hop

Synopsis	Enter the tunnel-next-hop context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop
Tree	tunnel-next-hop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

disallow-igp boolean

Synopsis	Do not resolve indirect static routes using IGP next-hops in RTM if no tunnel next-hops found in TTM
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop disallow-igp <i>boolean</i>
Tree	disallow-igp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flex-algo number

Synopsis	Flexible Algorithm ID
----------	-----------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop flex-algo <i>number</i>
Tree	flex-algo
Range	128 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution *keyword*

Synopsis	Tunnel next hop resolution to resolve indirect static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp *boolean*

Synopsis	Use LDP Route Forwarding Equivalence Class (FEC) tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter ldp <i>boolean</i>
Tree	ldp

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp-te

Synopsis	Enable the rsvp-te context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword indirect</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter rsvp-te
Tree	rsvp-te
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp [*lsp-name*] *named-item-64*

Synopsis	Add a list entry for lsp
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword indirect</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter rsvp-te lsp <i>named-item-64</i>
Tree	lsp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[*lsp-name*] *named-item-64*

Synopsis	Labeled Switch Path name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword indirect</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter rsvp-te lsp <i>named-item-64</i>
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis boolean

Synopsis	Use the SR ISIS tunneling mechanism to resolve next hop for the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter sr-isis boolean
Tree	sr-isis
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf boolean

Synopsis	Use SR OSPF tunneling for next-hop resolution
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter sr-ospf boolean
Tree	sr-ospf
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3 boolean

Synopsis	Use SR OSPFv3 tunneling mechanism to resolve next-hop
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter sr-ospf3 boolean
Tree	sr-ospf3
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te

Synopsis	Enable the sr-te context
----------	---------------------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword indirect</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter sr-te
Tree	sr-te
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp [**lsp-name**] *named-item-64*

Synopsis	Add a list entry for lsp
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword indirect</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter sr-te lsp <i>named-item-64</i>
Tree	lsp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[lsp-name] *named-item-64*

Synopsis	Labeled Switch Path name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword indirect</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) tunnel-next-hop resolution-filter sr-te lsp <i>named-item-64</i>
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [**interface-name**] *interface-name*

Synopsis	Enter the interface list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword interface</i> <i>interface-name</i>
Tree	interface
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis Router interface name

Context **configure** **router** *named-item-64* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type**
keyword interface interface-name

Tree **interface**

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the static route operation

Context **configure** **router** *named-item-64* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type**
keyword interface interface-name admin-state keyword

Tree **admin-state**

Options enable, disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

community *community*

Synopsis Community ID associated with the static route

Context **configure** **router** *named-item-64* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type**
keyword interface interface-name community community

Tree **community**

Description This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.

If at least one community is specified at the prefix level of the static route entry, this command is ignored.

String length 1 to 72

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

cpe-check [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) log <i>boolean</i>
Tree	log
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> interface <i>interface-name</i> description <i>description-allow-all-white-spaces</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> interface <i>interface-name</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

Synopsis	Static route metric
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> interface <i>interface-name</i> metric <i>number</i>
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Priority of static route over different route sources
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> preference <i>number</i>
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list

Synopsis	Enter the prefix-list context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> prefix-list
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flag *keyword*

Synopsis	Static route match condition from prefix list
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword interface <i>interface-name</i> prefix-list flag <i>keyword</i>
Tree	flag
Options	any, all, none
Default	any
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *reference*

Synopsis	Prefix list name
----------	------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword interface interface-name prefix-list name reference</i>
Tree	name
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword interface interface-name tag number</i>
Tree	tag
Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols. If a tag is specified at the prefix level of the static route entry, this command is ignored.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipsec-tunnel [**ipsec-tunnel-name**] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword ipsec-tunnel named-item</i>
Tree	ipsec-tunnel
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[ipsec-tunnel-name] *named-item*

Synopsis	IPsec tunnel name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword ipsec-tunnel named-item</i>
Tree	ipsec-tunnel
String length	1 to 32

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword ipsec-tunnel <i>named-item</i> admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword ipsec-tunnel <i>named-item</i> community <i>community</i>
Tree	community
Description	<p>This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.</p> <p>If at least one community is specified at the prefix level of the static route entry, this command is ignored.</p>
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword ipsec-tunnel <i>named-item</i> description <i>description-allow-all-white-spaces</i>
Tree	description
String length	1 to 80

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

metric number

Synopsis	Static route metric
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword ipsec-tunnel <i>named-item</i> metric number
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

preference number

Synopsis	Priority of static route over different route sources
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword ipsec-tunnel <i>named-item</i> preference number
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tag number

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword ipsec-tunnel <i>named-item</i> tag number
Tree	tag

Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols. If a tag is specified at the prefix level of the static route entry, this command is ignored.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

leak-destination

Synopsis	Enter the leak-destination context
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword leak-destination
Tree	leak-destination
Description	<p>Commands in this context configure a list of VPRNs that receive a leaked copy of the static route. When a VPRN service is added to this list, the static route is leaked into that VPRN if the following conditions are met:</p> <ul style="list-style-type: none"> • all the configured next hops of the static route are direct next hops • the static route is an active route, or it is capable of immediately becoming an active route when a more-preferred route for the same prefix is removed <p>Static routes leaked using this method appear as "VPN Leak" protocol routes in the route table of the VPRN.</p> <p>When a packet received by a VPRN matches a "VPN Leak" route leaked using this method, the packet is forwarded according to the configuration of the static route in the GRT, even if the static route is currently non-best in the GRT.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance [[service-name](#)] *reference*

Synopsis	Add a list entry for router-instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword leak-destination router-instance <i>reference</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[service-name] reference

Synopsis	VPRN service name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> leak-destination router-instance reference
Tree	router-instance
Reference	configure service vpn <i>service-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop [ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the next-hop list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the directly-connected next hop
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Description	This command specifies the IP address of the directly-connected next hop. The IP address can either be on the network side or the access side on the node. The address must be associated with a network directly connected to a network configured on the node.
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) community <i>community</i>
Tree	community
Description	<p>This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.</p> <p>If at least one community is specified at the prefix level of the static route entry, this command is ignored.</p>
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cpe-check [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) log <i>boolean</i>
Tree	log
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
----------	--

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) description <i>description-allow-all-white-spaces</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp-sync *boolean*

Synopsis	Use LDP synchronization feature for a static route
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ldp-sync <i>boolean</i>
Tree	ldp-sync
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) load-balancing-weight <i>number</i>

Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric number

Synopsis	Static route metric
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) metric <i>number</i>
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference number

Synopsis	Priority of static route over different route sources
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list

Synopsis	Enter the prefix-list context
----------	--------------------------------------

Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flag *keyword*

Synopsis	Static route match condition from prefix list
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list flag keyword
Tree	flag
Options	any, all, none
Default	any
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *reference*

Synopsis	Prefix list name
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list name reference
Tree	name
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tag number
Tree	tag
Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols.

If a tag is specified at the prefix level of the static route entry, this command is ignored.

Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

validate-next-hop *boolean*

Synopsis	Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) validate-next-hop <i>boolean</i>
Tree	validate-next-hop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure router <i>named-item-64</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

triggered-policy *boolean*

Synopsis	Trigger route policy re-evaluation
Context	configure router <i>named-item-64</i> triggered-policy <i>boolean</i>
Tree	triggered-policy
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-propagate

Synopsis	Enter the ttl-propagate context
Context	configure router <i>named-item-64</i> ttl-propagate
Tree	ttl-propagate
Description	Commands in this context configure TTL propagation for transit and locally generated packets in the Global Routing Table (GRT) and VPRN routing contexts.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-route-local *keyword*

Synopsis	TTL propagation from IP header into label stack for local packets
Context	configure router <i>named-item-64</i> ttl-propagate label-route-local <i>keyword</i>
Tree	label-route-local
Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-route-transit *keyword*

Synopsis	TTL propagation from IP header into label stack for transit packets
Context	configure router <i>named-item-64</i> ttl-propagate label-route-transit <i>keyword</i>
Tree	label-route-transit
Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsr-label-route *keyword*

Synopsis	TTL propagation from IP header into label stack
Context	configure router <i>named-item-64</i> ttl-propagate lsr-label-route <i>keyword</i>

Tree	lsr-label-route
Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-mpls-local *keyword*

Synopsis	TTL propagation for local CPM generated IP packets
Context	configure router <i>named-item-64</i> ttl-propagate sr-mpls-local <i>keyword</i>
Tree	sr-mpls-local
Description	<p>This command configures TTL or hop-limit propagation for all segment routing MPLS tunnels carrying IPv4 or IPv6 packets. This applies to IPv4 and IPv6 packets of IGP, BGP unlabelled (except 6PE), and static routes in the base router whose next hop is resolved to a Segment Routing MPLS (SR-MPLS) tunnel of any of the following types: SR-ISIS, SR-OSPF, SR-OSPF3, SR-TE LSP, and SR policy.</p> <p>This command enables or disables propagation of the TTL or hop-limit field value of CPM originated IP packet to all labels in the segment routing transport label stack. Use the sr-mpls-transit command to configure TTL or hop-limit propagation for transit IP packets.</p>
Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	all
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-mpls-transit *keyword*

Synopsis	TTL propagation for in-transit user IP packets
Context	configure router <i>named-item-64</i> ttl-propagate sr-mpls-transit <i>keyword</i>
Tree	sr-mpls-transit
Description	<p>This command configures TTL or hop-limit propagation for all segment routing MPLS tunnels carrying IPv4 or IPv6 packets. This applies to IPv4 and IPv6 packets of IGP, BGP unlabelled (except 6PE), and static routes in the base router whose next hop is resolved to a Segment Routing MPLS (SR-MPLS) tunnel of any of the following types: SR-ISIS, SR-OSPF, SR-OSPF3, SR-TE LSP, and SR policy.</p> <p>This command enables or disables propagation of the TTL or hop-limit field value for transit IP packets to all labels in the segment routing transport label stack. Transit IP packets are packets of base router prefixes received on an access interface or a</p>

network interface (with or without tunnel encapsulation) and whose FIB lookup results in forwarding them over an SR-MPLS tunnel. Use the **sr-mpls-local** command to configure TTL or hop-limit propagation for CPM originated IP packets.

Options	none – Do not propagate TTL or hop-limit field value all – Propagate TTL or hop-limit field value
Default	all
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn-local keyword

Synopsis	TTL propagation from IP header into label stack for VPRN local packets
Context	configure router <i>named-item-64</i> ttl-propagate vprn-local keyword
Tree	vprn-local
Options	none, all, vc-only
Default	vc-only
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn-transit keyword

Synopsis	TTL propagation from IP header into label stack for VPRN transit packets
Context	configure router <i>named-item-64</i> ttl-propagate vprn-transit keyword
Tree	vprn-transit
Options	none, all, vc-only
Default	vc-only
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-interface

Synopsis	Enter the tunnel-interface context
Context	configure router <i>named-item-64</i> tunnel-interface
Tree	tunnel-interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp-p2mp-leaf [**p2mp-id**] *number* **sender-address** *ipv4-unicast-address*

Synopsis	Enter the ldp-p2mp-leaf list instance
Context	configure router <i>named-item-64</i> tunnel-interface ldp-p2mp-leaf <i>number</i> sender-address <i>ipv4-unicast-address</i>
Tree	ldp-p2mp-leaf
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[p2mp-id] *number*

Synopsis	Identifier used for signaling MLDP P2MP LSP
Context	configure router <i>named-item-64</i> tunnel-interface ldp-p2mp-leaf <i>number</i> sender-address <i>ipv4-unicast-address</i>
Tree	ldp-p2mp-leaf
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sender-address *ipv4-unicast-address*

Synopsis	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Context	configure router <i>named-item-64</i> tunnel-interface ldp-p2mp-leaf <i>number</i> sender-address <i>ipv4-unicast-address</i>
Tree	ldp-p2mp-leaf
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
----------	------------------

Context	configure <i>router</i> <i>named-item-64</i> <i>tunnel-interface</i> <i>ldp-p2mp-leaf</i> <i>number</i> <i>sender-address</i> <i>ipv4-unicast-address</i> <i>description</i> <i>description</i>
Tree	<i>description</i>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp-p2mp-root [*p2mp-id*] *number* *sender-address* *ipv4-unicast-address*

Synopsis	Enter the ldp-p2mp-root list instance
Context	configure <i>router</i> <i>named-item-64</i> <i>tunnel-interface</i> <i>ldp-p2mp-root</i> <i>number</i> <i>sender-address</i> <i>ipv4-unicast-address</i>
Tree	<i>ldp-p2mp-root</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[p2mp-id] *number*

Synopsis	Identifier used for signaling MLDP P2MP LSP
Context	configure <i>router</i> <i>named-item-64</i> <i>tunnel-interface</i> <i>ldp-p2mp-root</i> <i>number</i> <i>sender-address</i> <i>ipv4-unicast-address</i>
Tree	<i>ldp-p2mp-root</i>
Range	1 to 8192
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sender-address *ipv4-unicast-address*

Synopsis	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Context	configure <i>router</i> <i>named-item-64</i> <i>tunnel-interface</i> <i>ldp-p2mp-root</i> <i>number</i> <i>sender-address</i> <i>ipv4-unicast-address</i>
Tree	<i>ldp-p2mp-root</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description

Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

twamp-light

Synopsis	Enter the twamp-light context
Context	configure router <i>named-item-64</i> twamp-light
Tree	twamp-light
Description	Commands in this context configure TWAMP Light parameters.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reflector

Synopsis	Enable the reflector context
Context	configure router <i>named-item-64</i> twamp-light reflector
Tree	reflector
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the TWAMP Light reflector
----------	---

Context	configure router <i>named-item-64</i> twamp-light reflector admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ipv6-udp-checksum-zero *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	configure router <i>named-item-64</i> twamp-light reflector allow-ipv6-udp-checksum-zero <i>boolean</i>
Tree	allow-ipv6-udp-checksum-zero
Description	<p>When configured to true, the router processes IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.</p> <p>When configured to false, the router discards IPv6 packets that arrive with a UDP checksum of zero.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> twamp-light reflector description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure router <i>named-item-64</i> twamp-light reflector prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Description	Commands in this context configure which TWAMP Light packet prefixes the reflector processes.
Max. instances	50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Source prefix for the TWAMP-Light reflector
Context	configure router <i>named-item-64</i> twamp-light reflector prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure router <i>named-item-64</i> twamp-light reflector prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Processing behavior type for the reflector
Context	configure router <i>named-item-64</i> twamp-light reflector type <i>keyword</i>

Tree	type
Description	<p>This command configures the processing behavior of the TWAMP Light reflector.</p> <p>When the value is twamp-light the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is stamp, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to stamp. When the reflector is operating in stamp mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp – Reflector finds and processes supported STAMP TLVs twamp-light – Reflector does not check received PDU
Default	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udp-port *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Context	configure router <i>named-item-64</i> twamp-light reflector udp-port <i>number</i>
Tree	udp-port
Range	862 64364 to 64373
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weighted-ecmp *keyword*

Synopsis	Weighted load-balancing capability for ECMP routes
Context	configure router <i>named-item-64</i> weighted-ecmp <i>keyword</i>
Tree	weighted-ecmp
Options	false, true, strict

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flexible-algorithm-definitions

Synopsis	Enter the flexible-algorithm-definitions context
Context	configure routing-options flexible-algorithm-definitions
Tree	flexible-algorithm-definitions
Description	Commands in this context enable locally-configured algorithm definitions and configure administrative groups.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

flex-algo [[flex-algo-name](#)] *named-item*

Synopsis	Enter the flex-algo list instance
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i>
Tree	flex-algo
Description	Commands in this context configure the definition context for a Flexible Algorithm Definition (FAD).
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[flex-algo-name] *named-item*

Synopsis	Flexible Algorithm Definition (FAD) name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i>
Tree	flex-algo
Description	This command specifies the name of the flexible algorithm definition that is used as a reference anchor for the configuration.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the FAD
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

exclude

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **exclude** context

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *named-item* [exclude](#)

Tree [exclude](#)

Description Commands in this context define administrative groups that are used to exclude links from the Flexible Algorithm topology graph.

Administrative groups, also known as link colors, are attributes associated with a link. The exclude rule that is part of the FAD specifies that links with the named administrative groups set are to be excluded from the topology graph.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-group [[group-name](#)] *reference*

Synopsis Add a list entry for **admin-group**

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *named-item* [exclude](#) [admin-group](#) *reference*

Tree [admin-group](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> exclude admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flags-tlv *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise the FAD Flags TLV
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> flags-tlv <i>boolean</i>
Tree	flags-tlv
Description	<p>When configured to true, the router advertises the FAD Flags TLV within the FAD. The M-flag within the TLV is set to 1, specifying the use of a Flex-Algorithm specific prefix metric. A router receiving the TLV modifies the constrained SPF (cSPF) based on the M-flag status.</p> <p>When configured to false, the FAD Flags TLV is not included with the FAD advertisement.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-all

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the include-all context
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-all
Tree	include-all
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that all named administrative groups must be present in a link to be included in the topology graph.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-group [\[group-name\]](#) *reference*

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-all admin-group <i>reference</i>
Tree	admin-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[\[group-name\]](#) *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-all admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-any

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the include-any context
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-any
Tree	include-any
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that any link with the named administrative groups is included in the topology graph.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-group [[group-name](#)] *reference*

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-any admin-group <i>reference</i>
Tree	admin-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[group-name](#)] *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> include-any admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-type *keyword*

 **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD metric type
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> metric-type <i>keyword</i>
Tree	metric-type
Options	igp, delay, te-metric
Default	igp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

 **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD priority
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>named-item</i> priority <i>number</i>
Tree	priority
Description	This command configures the priority of the FAD. The priority is used as a tie-breaker when the router has received multiple FADs for the same flexible algorithm.
Range	0 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

if-attribute

Synopsis	Enter the if-attribute context
Context	configure routing-options if-attribute
Tree	if-attribute

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-group *[group-name] named-item*

Synopsis	Enter the admin-group list instance
Context	configure routing-options if-attribute admin-group <i>named-item</i>
Tree	admin-group
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *named-item*

Synopsis	Interface group name
Context	configure routing-options if-attribute admin-group <i>named-item</i>
Tree	admin-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the group
Context	configure routing-options if-attribute admin-group <i>named-item</i> value <i>number</i>
Tree	value
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

srlg-group [*name*] *named-item*

Synopsis Enter the **srlg-group** list instance

Context **configure** [routing-options](#) [if-attribute srlg-group](#) *named-item*

Tree [srlg-group](#)

Max. instances 1024

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[name] *named-item*

Synopsis SRLG name

Context **configure** [routing-options](#) [if-attribute srlg-group](#) *named-item*

Tree [srlg-group](#)

String length 1 to 32

String format 'string-not-all-spaces' must contain at least one non-space character

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

penalty-weight *number*

Synopsis Integer value of the penalty weight assigned to SRLG

Context **configure** [routing-options](#) [if-attribute srlg-group](#) *named-item* [penalty-weight](#) *number*

Tree [penalty-weight](#)

Description This command specifies the penalty weight associated with a SRLG. The higher the penalty weight, the less desirable it is to use the link with a given SRLG.

Range 0 to 65535

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

value *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the SRLG
Context	configure routing-options if-attribute srlg-group <i>named-item</i> value <i>number</i>
Tree	value
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-next-hop-policy

Context	configure routing-options route-next-hop-policy template <i>named-item</i>
Tree	template
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[template-name] *named-item*

Synopsis	Template name
Context	configure routing-options route-next-hop-policy template <i>named-item</i>
Tree	template
String length	1 to 32

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure routing-options route-next-hop-policy template <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude-group [[group-name](#)] *reference*

Synopsis	Add a list entry for exclude-group
Context	configure routing-options route-next-hop-policy template <i>named-item</i> exclude-group <i>reference</i>
Tree	exclude-group
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options route-next-hop-policy template <i>named-item</i> exclude-group <i>reference</i>
Tree	exclude-group
Description	<p>This command specifies the name of the administrative group.</p> <p>If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.</p>

Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-group [\[group-name\]](#) *reference*

Synopsis	Enter the include-group list instance
Context	configure routing-options route-next-hop-policy template <i>named-item</i> include-group reference
Tree	include-group
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options route-next-hop-policy template <i>named-item</i> include-group reference
Tree	include-group
Description	<p>This command specifies the name of the administrative group.</p> <p>If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.</p>
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Preference number for the admin group
Context	configure routing-options route-next-hop-policy template <i>named-item</i> include-group reference preference <i>number</i>

Tree	preference
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nh-type *keyword*

Synopsis	Preferred next hop
Context	configure routing-options route-next-hop-policy template <i>named-item</i> nh-type <i>keyword</i>
Tree	nh-type
Options	ip, tunnel
Default	ip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protection-type *keyword*

Synopsis	Protection type used
Context	configure routing-options route-next-hop-policy template <i>named-item</i> protection-type <i>keyword</i>
Tree	protection-type
Options	link, node
Default	node
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srlg *boolean*

Synopsis	Select next hops from the SRLG
Context	configure routing-options route-next-hop-policy template <i>named-item</i> srlg <i>boolean</i>
Tree	srlg
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

4.26.1 saa command descriptions

saa	
Synopsis	Enter the saa context
Context	configure saa
Tree	saa
Description	Commands in this context configure the Service Assurance Agent (SAA) tests.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner [owner-name] <i>named-item</i> test <i>named-item</i>	
Synopsis	Enter the owner list instance
Context	configure saa owner <i>named-item</i> test <i>named-item</i>
Tree	owner
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[owner-name] <i>named-item</i>	
Synopsis	Optional owner name of the SAA operation
Context	configure saa owner <i>named-item</i> test <i>named-item</i>
Tree	owner
Description	This command configures the owner associated with the SAA operation.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
MD-CLI default	TiMOS CLI
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test *named-item*

Synopsis	SAA test name
Context	configure <i>saa owner named-item test named-item</i>
Tree	<i>owner</i>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy associated with the SAA test
Context	configure <i>saa owner named-item test named-item accounting-policy reference</i>
Tree	<i>accounting-policy</i>
Reference	configure <i>log accounting-policy number</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the SAA test
Context	configure <i>saa owner named-item test named-item admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

continuous *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Execute the SAA tests as continuous
Context	configure <i>saa owner named-item test named-item continuous boolean</i>
Tree	<i>continuous</i>
Description	<p>When configured to true, the SAA test execution is continuous, that is, it cannot be started or stopped with the oam saa test start or stop commands.</p> <p>The SAA test types supported by this command include the following:</p> <ul style="list-style-type: none">• cpe-ping• dns• eth-cfm-loopback• eth-cfm-two-way-delay• eth-cfm-two-way-slm• icmp-ping (not applicable to rapid type)• lsp-ping• mac-ping• sdp-ping• vccv-ping• vprn-ping
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure <i>saa owner named-item test named-item description description</i>
Tree	<i>description</i>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

jitter-event [*direction*] *keyword* *threshold-type* *keyword*

Synopsis	Enter the jitter-event list instance
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>jitter-event</i> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<i>jitter-event</i>
Description	Commands in this context configure the jitter event thresholds used to evaluate the jitter event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>jitter-event</i> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<i>jitter-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold-type *keyword*

Synopsis	Threshold type
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>jitter-event</i> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<i>jitter-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Threshold jitter value
Context	configure <i>saa owner named-item test named-item jitter-event keyword threshold-type keyword threshold number</i>
Tree	<i>threshold</i>
Description	This command specifies the threshold jitter value. The system generates an SAA threshold event when the jitter value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

latency-event [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the latency-event list instance
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Description	Commands in this context configure the latency event thresholds used to evaluate the latency event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold-type *keyword*

Synopsis	Threshold type
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Threshold latency value
Context	configure <i>saa owner named-item test named-item latency-event keyword threshold-type keyword threshold number</i>
Tree	<i>threshold</i>
Description	This command specifies the threshold latency value. The system generates an SAA threshold event when the latency value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loss-event [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the loss-event list instance
Context	configure <i>saa owner named-item test named-item loss-event keyword threshold-type keyword</i>
Tree	<i>loss-event</i>
Description	Commands in this context configure the loss event thresholds used to evaluate the loss event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[direction] keyword

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner named-item test named-item loss-event keyword threshold-type keyword</i>
Tree	<i>loss-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold-type keyword

Synopsis	Threshold type
Context	configure <i>saa owner named-item test named-item loss-event keyword threshold-type keyword</i>
Tree	<i>loss-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold number

Synopsis	Threshold loss event value
Context	configure <i>saa owner named-item test named-item loss-event keyword threshold-type keyword threshold number</i>
Tree	<i>threshold</i>
Description	This command specifies the threshold loss value. The system generates an SAA threshold event when the loss value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	packets
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-history keyword

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	History probe behavior
Context	configure saa owner <i>named-item</i> test <i>named-item</i> probe-history keyword
Tree	probe-history
Options	keep, drop, auto
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type

Synopsis	Enter the type context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type
Tree	type
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-cfm-loopback

Synopsis	Enable the eth-cfm-loopback context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback
Tree	eth-cfm-loopback
Description	Commands in this context configure an Ethernet CFM loopback test in SAA.
Notes	The following elements are part of a choice: dns , eth-cfm-loopback , icmp-ping , lsp-ping , sdp-ping , or vccv-ping .
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

count number

Synopsis	Number of packets to send
----------	---------------------------

Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> count <i>number</i>
Tree	count
Range	1 to 100
Units	packets
Default	1
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination (*mac-unicast-address-no-zero* | *number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> destination (<i>mac-unicast-address-no-zero</i> <i>number</i>)
Tree	destination
Description	This command specifies the Layer 2 unicast MAC address of the destination MEP or, alternatively, the remote MEP ID. When the remote MEP ID option is used instead of the MAC address, the domain and association information of the source MEP for the test is used to check for a locally stored unicast MAC address for the peer. The local MEP must be administratively enabled.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Interval between packets sent
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> interval <i>number</i>
Tree	interval
Range	1 to 10
Units	seconds
Default	5
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ma-admin-name (*named-item-64* | *admin-name*)

Synopsis	Source Ethernet Maintenance Association (MA) name
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> ma-admin-name (<i>named-item-64</i> <i>admin-name</i>)
Tree	<i>ma-admin-name</i>
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

md-admin-name (*named-item-64* | *admin-name*)

Synopsis	Source Ethernet Maintenance Domain (MD) name
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> md-admin-name (<i>named-item-64</i> <i>admin-name</i>)
Tree	<i>md-admin-name</i>
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

mep *number*

Synopsis	Source Ethernet MEP ID
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> mep <i>number</i>
Tree	<i>mep</i>
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback qos
Tree	qos
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	FC for the sent echo request packets
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback qos fc keyword
Tree	fc
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Default	nc
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

profile keyword

Synopsis	QoS profile for the sent echo request packets
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type eth-cfm-loopback qos profile keyword
Tree	profile
Options	in – In profile out – Out of profile
Default	in
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

size number

Synopsis	Size of the value field in the sent frames
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> size <i>number</i>
Tree	<i>size</i>
Range	0 to 1500
Units	bytes
Default	0
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

timeout number

Synopsis	Maximum time to wait for a reply packet
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> timeout <i>number</i>
Tree	<i>timeout</i>
Description	This command configures the maximum time the router waits for a reply packet after sending the last probe for the test. When the timeout expires, the test is marked complete and no more packets are processed.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type eth-cfm-loopback</i> trap-generation
Tree	<i>trap-generation</i>
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	<p>When configured to true, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Default	false
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	<p>This command configures the number of consecutive ping probe failures required to generate a trap.</p> <p>This command has no effect if the probe-fail command is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner named-item test named-item type eth-cfm-loopback trap-generation test-complete boolean</i>
Tree	<i>test-complete</i>
Default	false
Introduced	25.10.R1

Platforms 7705 SAR Gen 2

test-fail *boolean*

Synopsis Enable the generation of test fail notifications

Context **configure** *saa owner named-item test named-item type eth-cfm-loopback trap-generation test-fail boolean*

Tree *test-fail*

Description When configured to **true**, the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the **test-fail-threshold** setting.

Default false

Introduced 25.10.R1

Platforms 7705 SAR Gen 2

test-fail-threshold *number*

Synopsis Total probe failures for trap generation

Context **configure** *saa owner named-item test named-item type eth-cfm-loopback trap-generation test-fail-threshold number*

Tree *test-fail-threshold*

Description This command configures the number of consecutive test failures required to generate a trap.
This command has no effect when **test-fail** is set to **false**.
This command is not applicable to SAA traceroute tests.

Range 0 to 15

Default 1

Introduced 25.10.R1

Platforms 7705 SAR Gen 2

icmp-ping

Synopsis Enable the **icmp-ping** context

Context **configure** *saa owner named-item test named-item type icmp-ping*

Tree *icmp-ping*

Description Commands in this context configure an ICMP ping test.

Notes	The following elements are part of a choice: dns , eth-cfm-loopback , icmp-ping , lsp-ping , sdp-ping , or vccv-ping .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bypass-routing *boolean*

Synopsis	Bypass routing table for directly connected interfaces
Context	configure <i>saa owner named-item test named-item type icmp-ping bypass-routing boolean</i>
Tree	<i>bypass-routing</i>
Default	false
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count *number*

Synopsis	ICMP Echo Request packets to send in a sample window
Context	configure <i>saa owner named-item test named-item type icmp-ping count number</i>
Tree	<i>count</i>
Range	1 to 100000
Units	packets
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

destination-address (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name to send ping request
Context	configure <i>saa owner named-item test named-item type icmp-ping destination-address (ipv4-address-no-zone ipv6-address-no-zone string-not-all-spaces)</i>
Tree	<i>destination-address</i>
String length	1 to 128

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

do-not-fragment *boolean*

Synopsis	Do not fragment echo request packets (valid for IPv4)
Context	configure <i>saa owner named-item test named-item type icmp-ping do-not-fragment boolean</i>
Tree	<i>do-not-fragment</i>
Description	This command sets the Do Not Fragment (DF) bit in the IPv4 header. This prevents packet fragmentation along the path when there is an MTU mismatch.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Interface name
Context	configure <i>saa owner named-item test named-item type icmp-ping interface interface-name</i>
Tree	<i>interface</i>
String length	1 to 32
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval (*number* | *decimal-number*)

Synopsis	Minimum time to expire before message request is sent
Context	configure <i>saa owner named-item test named-item type icmp-ping interval (number decimal-number)</i>
Tree	<i>interval</i>
Range	1 to 10000

Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address to reach destination
Context	configure <i>saa owner named-item test named-item type icmp-ping next-hop-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	<i>next-hop-address</i>
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern (*keyword* | *number*)

Synopsis	Pattern to fill the data portion in a ping packet
Context	configure <i>saa owner named-item test named-item type icmp-ping pattern (keyword number)</i>
Tree	<i>pattern</i>
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure <i>saa owner named-item test named-item type icmp-ping qos</i>
Tree	<i>qos</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc keyword

Synopsis	Forwarding class
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping qos fc keyword</i>
Tree	<i>fc</i>
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Default	nc
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tos number

Synopsis	Type of service
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping qos tos number</i>
Tree	<i>tos</i>
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance string

Synopsis	Router name or VPRN service name
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping router-instance string</i>
Tree	<i>router-instance</i>
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Packet padding size
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping</i> size <i>number</i>
Tree	<i>size</i>
Description	This command configures the number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packets.
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping</i> source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>source-address</i>
Description	This command configures the source IP address to be loaded into the IP header of the ICMP Echo Request packet. If unconfigured, the router uses a system-selected local address.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout number

Synopsis	Time router waits for a reply after sending last probe
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping</i> timeout <i>number</i>
Tree	<i>timeout</i>
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping</i> trap-generation
Tree	<i>trap-generation</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping</i> trap-generation probe-fail <i>boolean</i>
Tree	<i>probe-fail</i>
Description	<p>When configured to true, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type icmp-ping</i> trap-generation probe-fail-threshold <i>number</i>
Tree	<i>probe-fail-threshold</i>
Description	<p>This command configures the number of consecutive ping probe failures required to generate a trap.</p> <p>This command has no effect if the probe-fail command is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation test-complete boolean</i>
Tree	<i>test-complete</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation test-fail boolean</i>
Tree	<i>test-fail</i>
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner named-item test named-item type icmp-ping trap-generation test-fail-threshold number</i>
Tree	<i>test-fail-threshold</i>
Description	<p>This command configures the number of consecutive test failures required to generate a trap.</p> <p>This command has no effect when test-fail is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ttl number

Synopsis Time to live in the IP header

Context **configure** *saa owner named-item test named-item type icmp-ping ttl number*

Tree *ttl*

Range 1 to 128

Default 64

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

lsp-ping

Synopsis Enable the **lsp-ping** context

Context **configure** *saa owner named-item test named-item type lsp-ping*

Tree *lsp-ping*

Description Commands in this context configure the command options to perform in-band LSP connectivity tests.

LSP ping uses the protocol and data structures defined in RFC 8029, *Detecting Multiprotocol Label Switched (MPLS) Data-Plane Failures*.

Notes The following elements are part of a choice: **dns**, **eth-cfm-loopback**, **icmp-ping**, **lsp-ping**, **sd-ping**, or **vccv-ping**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

interval number

Synopsis Minimum time before the next lsp-ping request is sent

Context **configure** *saa owner named-item test named-item type lsp-ping interval number*

Tree *interval*

Range 1 to 10

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

qos

Synopsis Enter the **qos** context

Context **configure** *saa owner* *named-item* *test* *named-item* *type* *lsp-ping* **qos**

Tree **qos**

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

fc keyword

Synopsis Forwarding class

Context **configure** *saa owner* *named-item* *test* *named-item* *type* *lsp-ping* **qos** **fc** *keyword*

Tree **fc**

Options
 be – Best Effort
 l2 – Low 2 (best effort)
 af – Assured Forwarding (assured)
 l1 – Low 1 (assured)
 h2 – High 2 (high priority)
 ef – Expedited Forwarding (high priority)
 h1 – High 1 (high priority)
 nc – Network Control (high priority)

Default be

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile keyword

Synopsis Profile

Context **configure** *saa owner* *named-item* *test* *named-item* *type* *lsp-ping* **qos** **profile** *keyword*

Tree **profile**

Options
 in – In profile
 out – Out of profile

Default out

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

send-count *number*

Synopsis	Number of request packets to send in a sample window
Context	configure <i>saa owner named-item test named-item type lsp-ping send-count number</i>
Tree	<i>send-count</i>
Range	1 to 100
Units	packets
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Packet pad size
Context	configure <i>saa owner named-item test named-item type lsp-ping size number</i>
Tree	<i>size</i>
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address
Context	configure <i>saa owner named-item test named-item type lsp-ping source-ip-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	<i>source-ip-address</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sub-type

Synopsis	Enter the sub-type context
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type</i>

Tree	sub-type
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-label

Synopsis	Enable the bgp-label context
Context	configure saa owner named-item test named-item type lsp-ping sub-type bgp-label
Tree	bgp-label
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner named-item test named-item type lsp-ping sub-type bgp-label path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type bgp-label path-destination interface interface-name
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>bgp-label</i> <i>path-destination</i> ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>ip-address</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>bgp-label</i> <i>path-destination</i> next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>next-hop</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> <i>bgp-label</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	<i>prefix</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp

Synopsis	Enable the ldp context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type</i> <i>lsp-ping</i> <i>sub-type</i> ldp
Tree	<i>ldp</i>
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner named-item test named-item type lsp-ping sub-type ldp path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type ldp path-destination interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner named-item test named-item type lsp-ping sub-type ldp path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
----------	---

Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type ldp path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type ldp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp-te

Synopsis	Enable the rsvp-te context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type rsvp-te
Tree	rsvp-te
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *named-item-64*

Synopsis	Name of the LSP to be tested
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type rsvp-te lsp-name <i>named-item-64</i>
Tree	lsp-name
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

path *named-item-64*

Synopsis Name of the MPLS path to be tested
Context **configure** *saa owner named-item test named-item type lsp-ping sub-type rsvp-te path named-item-64*
Tree *path*
String length 1 to 64
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

sr-isis

Synopsis Enable the **sr-isis** context
Context **configure** *saa owner named-item test named-item type lsp-ping sub-type sr-isis*
Tree *sr-isis*
Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

igp-instance *number*

Synopsis IGP instance for the SR IS-IS test
Context **configure** *saa owner named-item test named-item type lsp-ping sub-type sr-isis igp-instance number*
Tree *igp-instance*
Range 0 to 127
Default 0
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-isis path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-isis prefix (ipv4-prefix ipv6-prefix)</i>
Tree	<i>prefix</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf

Synopsis	Enable the sr-ospf context
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-ospf</i>
Tree	<i>sr-ospf</i>
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR OSPF test
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-ospf igp-instance number</i>
Tree	<i>igp-instance</i>
Range	0 to 31
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf path-destination
Tree	path-destination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf path-destination interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-ospf path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-ospf prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-policy

Synopsis	Enable the sr-policy context
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-policy
Tree	sr-policy
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

color *number*

Synopsis	Segment Routing color for the test
Context	configure saa owner named-item test named-item type lsp-ping sub-type sr-policy color <i>number</i>
Tree	color
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy endpoint</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>endpoint</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy path-destination</i>
Tree	<i>path-destination</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy path-destination interface</i> <i>interface-name</i>
Tree	<i>interface</i>
String length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure <i>saa owner</i> <i>named-item</i> test <i>named-item</i> <i>type lsp-ping sub-type sr-policy path-destination ip-address</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>ip-address</i>

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-policy path-destination next-hop</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>next-hop</i>
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-list *number*

Synopsis	Segment Routing segment list for the test
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-policy segment-list number</i>
Tree	<i>segment-list</i>
Range	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te

Synopsis	Enable the sr-te context
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-te</i>
Tree	<i>sr-te</i>
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *named-item-64*

Synopsis	Name of the LSP to be tested
----------	------------------------------

Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-te lsp-name named-item-64</i>
Tree	<i>lsp-name</i>
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path *named-item-64*

Synopsis	Name of the MPLS path to be tested
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-te path named-item-64</i>
Tree	<i>path</i>
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-te path-destination</i>
Tree	<i>path-destination</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *interface-name*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner named-item test named-item type lsp-ping sub-type sr-te path-destination interface interface-name</i>
Tree	<i>interface</i>
String length	1 to 32

Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-te path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping sub-type sr-te path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time router waits for a reply to an echo request
Context	configure saa owner <i>named-item</i> test <i>named-item</i> type lsp-ping timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	<p>When configured to true, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	<p>This command configures the number of consecutive ping probe failures required to generate a trap.</p> <p>This command has no effect if the probe-fail command is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation test-complete boolean</i>
Tree	<i>test-complete</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation test-fail boolean</i>
Tree	<i>test-fail</i>
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner named-item test named-item type lsp-ping trap-generation test-fail-threshold number</i>
Tree	<i>test-fail-threshold</i>
Description	<p>This command configures the number of consecutive test failures required to generate a trap.</p> <p>This command has no effect when test-fail is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ttl *number*

Synopsis TTL value for the echo request MPLS label

Context **configure** *saa owner named-item test named-item type lsp-ping ttl number*

Tree *tll*

Range 1 to 255

Default 255

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

sdp-ping

Synopsis Enable the **sdp-ping** context

Context **configure** *saa owner named-item test named-item type sdp-ping*

Tree *sdp-ping*

Description Commands in this context configure tests on SDPs for unidirectional or round-trip connectivity, as well as for performing SDP MTU path tests.

Notes The following elements are part of a choice: **dns**, **eth-cfm-loopback**, **icmp-ping**, **lsp-ping**, **sdp-ping**, or **vccv-ping**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

count *number*

Synopsis Number of SDP echo request packets to send

Context **configure** *saa owner named-item test named-item type sdp-ping count number*

Tree *count*

Description This command specifies the number of echo request packets to send. Each request must either time out or receive a reply before the next message request is sent. The **interval** value must expire before the next message request is sent.

Range 1 to 100

Units packets

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

interval *number*

Synopsis Interval between SDP echo request packets sent

Context **configure** *saa owner named-item test named-item type sdp-ping interval number*

Tree *interval*

Range 1 to 10

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

originating-sdp-identifier *number*

Synopsis SDP ID used to send packets

Context **configure** *saa owner named-item test named-item type sdp-ping originating-sdp-identifier number*

Tree *originating-sdp-identifier*

Description This command specifies the SDP ID that is used by SDP ping.
The far-end address of the specified SDP ID is the expected responder ID within each reply received. The SDP ID defines the SDP tunnel encapsulation used to reach the far end. This can be IP/GRE or MPLS. If this ID is invalid, administratively down, or otherwise unavailable, the SDP echo request message is not sent, and an error message is displayed. After the interval timer expires, the SDP ping attempts to send the next request, if required.

Range 1 to 32767

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

qos

Synopsis Enter the **qos** context

Context **configure** *saa owner named-item test named-item type sdp-ping qos*

Tree *qos*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

fc *keyword*

Synopsis FC for the transmitted SDP echo request packets

Context **configure** *saa owner named-item test named-item type sdp-ping qos fc keyword*

Tree *fc*

Options
 be – Best Effort
 l2 – Low 2 (best effort)
 af – Assured Forwarding (assured)
 l1 – Low 1 (assured)
 h2 – High 2 (high priority)
 ef – Expedited Forwarding (high priority)
 h1 – High 1 (high priority)
 nc – Network Control (high priority)

Default be

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile *keyword*

Synopsis QoS profile for transmitted SDP echo request packets

Context **configure** *saa owner named-item test named-item type sdp-ping qos profile keyword*

Tree *profile*

Options
 in – In profile
 out – Out of profile

Default out

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

responder-sdp-identifier *number*

Synopsis SDP ID used by the far-end to reply to the request

Context **configure** *saa owner named-item test named-item type sdp-ping responder-sdp-identifier number*

Tree *responder-sdp-identifier*

Description This command configures the return SDP ID to be used by the far-end router for the message reply for round-trip SDP connectivity testing.

If this ID does not exist on the far-end router, or terminates on a different router from the originating router, or another issue prevents the far-end router from using this ID, the SDP echo reply is sent using generic IP or GRE OAM encapsulation. The received FC (as mapped on the ingress network interface for the far end) defines the FC encapsulation for the reply message.

Range	1 to 32767
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size number

Synopsis	Size of the SDP echo request packets
Context	configure saa owner named-item test named-item type sdp-ping size number
Tree	size
Description	This command configures the size of the SDP echo request packets, which includes the SDP header and payload. The size does not include the SDP encapsulation, VC label (if applied), or any DLC headers or trailers.
Range	72 to 9786
Units	bytes
Default	72
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout number

Synopsis	Maximum time to wait for SDP echo reply packets
Context	configure saa owner named-item test named-item type sdp-ping timeout number
Tree	timeout
Description	This command configures the time the router waits for a message reply after sending the last probe for a specific test. When the timeout expires, the test is marked complete and no more packets are processed.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	<p>When configured to true, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	<p>This command configures the number of consecutive ping probe failures required to generate a trap.</p> <p>This command has no effect if the probe-fail command is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation test-complete boolean</i>
Tree	<i>test-complete</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation test-fail boolean</i>
Tree	<i>test-fail</i>
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner named-item test named-item type sdp-ping trap-generation test-fail-threshold number</i>
Tree	<i>test-fail-threshold</i>
Description	<p>This command configures the number of consecutive test failures required to generate a trap.</p> <p>This command has no effect when test-fail is set to false.</p> <p>This command is not applicable to SAA traceroute tests.</p>
Range	0 to 15
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

4.27.1 service command descriptions

service

Synopsis	Enter the service context
Context	configure service
Tree	service
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cpipe [[service-name](#)] *service-name*

Synopsis	Enter the cpipe list instance
Context	configure service cpipe <i>service-name</i>
Tree	cpipe
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[[service-name](#)] *service-name*

Synopsis	Administrative service name
Context	configure service cpipe <i>service-name</i>
Tree	cpipe
Description	<p>This command creates or edits a service instance.</p> <p>When a service is created, the customer keyword and <i>customer-id</i> must be specified and associates the service with a customer. The <i>customer-id</i> must already exist having been created using the customer command in the service context. When a service is created with a customer association, it is not possible to edit the customer association. The service must be deleted and re-created with a new customer association.</p> <p>When a service is created, the use of the customer<i>customer-id</i> is optional to navigate into the service configuration context. If attempting to edit a service with the incorrect <i>customer-id</i> results in an error.</p> <p>This command specifies the unique service identification number identifying the service in the service domain. This ID must be unique to this service and may not be used for any other service of any type. The service ID must be the same number used for every platform on which this service is defined.</p>
String length	1 to 64

String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the service
Context	configure service cpipe <i>service-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

customer *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	configure service cpipe <i>service-name</i> customer <i>reference</i>
Tree	customer
Reference	configure service customer <i>customer-name</i>
Notes	This element is mandatory.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *description*

Synopsis	Text description
Context	configure service cpipe <i>service-name</i> description <i>description</i>
Tree	description
String length	1 to 80

String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 26.3.R1
Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

endpoint *[name] named-item*

Synopsis Enter the **endpoint** list instance
Context **configure** *service cpipe service-name endpoint named-item*
Tree *endpoint*
Max. instances 2
Introduced 26.3.R1
Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[name] *named-item*

Synopsis Service endpoint name
Context **configure** *service cpipe service-name endpoint named-item*
Tree *endpoint*
String length 1 to 32
String format 'string-not-all-spaces' must contain at least one non-space character
Notes This element is part of a list key.
Introduced 26.3.R1
Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

active-multipath *boolean*

Synopsis Active multi-path protection status
Context **configure** *service cpipe service-name endpoint named-item active-multipath boolean*
Tree *active-multipath*
Default false
Introduced 26.7.R1
Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

active-multipath-timeout *number*

Synopsis	Active Multipath timeout
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>endpoint</i> <i>named-item</i> active-multipath-timeout <i>number</i>
Tree	active-multipath-timeout
Range	1 to 60
Units	seconds
Introduced	26.7.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *description*

Synopsis	Text description
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>endpoint</i> <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

hold-time-active *number*

Synopsis	Time before entering standby when MC-LAG SAP goes down
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>endpoint</i> <i>named-item</i> hold-time-active <i>number</i>
Tree	hold-time-active
Range	1 to 60
Units	deciseconds
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

revert-time (*number* | *keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>endpoint</i> <i>named-item</i> revert-time (<i>number</i> <i>keyword</i>)

Tree	revert-time
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

standby-signaling *keyword*

Synopsis	Status of whether PW standby bit is sent to T-LDP peer
Context	configure service cpipe <i>service-name</i> endpoint <i>named-item</i> standby-signaling <i>keyword</i>
Tree	standby-signaling
Description	This command configures whether the pseudowire standby bit (value 0x00000020) is sent to the T-LDP peer for each spoke-SDP of the endpoint that is selected as a standby. This command is mutually exclusive with the vc-switching command.
Options	master, slave
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

network-latency-measurement *boolean*

Synopsis	Enable/disable network latency measurement
Context	configure service cpipe <i>service-name</i> network-latency-measurement <i>boolean</i>
Tree	network-latency-measurement
Default	false
Introduced	26.7.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

sap [[sap-id](#)] *sap*

Synopsis	Enter the sap list instance
Context	configure service cpipe <i>service-name</i> sap <i>sap</i>
Tree	sap

Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[sap-id] sap

Synopsis	SAP ID
Context	configure service cpipe <i>service-name</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service cpipe <i>service-name</i> sap <i>sap</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service cpipe <i>service-name</i> sap <i>sap</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

cem

Synopsis	Enter the cem context
----------	------------------------------

Context	configure service cpipe <i>service-name</i> sap sap cem
Tree	cem
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

asym-delay-control

Synopsis	Enable the asym-delay-control context
Context	configure service cpipe <i>service-name</i> sap sap cem asym-delay-control
Tree	asym-delay-control
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

min-repeat *number*

Synopsis	Interval at which the ADC function will repeat after the service is up
Context	configure service cpipe <i>service-name</i> sap sap cem asym-delay-control min-repeat <i>number</i>
Tree	min-repeat
Range	0 to 1440
Units	minutes
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

samples *number*

Synopsis	Sample size in thousands
Context	configure service cpipe <i>service-name</i> sap sap cem asym-delay-control samples <i>number</i>
Tree	samples
Range	1 2 4 8 16 32
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

threshold-repeat *number*

Synopsis	Threshold to determine if an octet correction is made after an ADC repeat or on-demand ADC analysis in 125 microseconds increments
Context	configure service cpipe <i>service-name</i> sap sap cem asym-delay-control threshold-repeat <i>number</i>
Tree	threshold-repeat
Range	125 to 4000
Units	microseconds
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

packet

Synopsis	Enter the packet context
Context	configure service cpipe <i>service-name</i> sap sap cem packet
Tree	packet
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

jitter-buffer *number*

Synopsis	Jitter buffer size
Context	configure service cpipe <i>service-name</i> sap sap cem packet jitter-buffer <i>number</i>
Tree	jitter-buffer
Range	1 to 250
Units	milliseconds
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

payload-size *number*

Synopsis	Size of payload packets transmitted to PSN by CEM SAP
Context	configure service cpipe <i>service-name</i> sap sap cem packet payload-size <i>number</i>
Tree	payload-size
Range	2 to 1514

Units	bytes
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

report-alarm

Synopsis	Enter the report-alarm context
Context	configure service cpipe service-name sap sap cem report-alarm
Tree	report-alarm
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

buffer-overflow *boolean*

Synopsis	Report alarm for buffer overrun
Context	configure service cpipe service-name sap sap cem report-alarm buffer-overflow <i>boolean</i>
Tree	buffer-overflow
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

buffer-underrun *boolean*

Synopsis	Report alarm for buffer underrun
Context	configure service cpipe service-name sap sap cem report-alarm buffer-underrun <i>boolean</i>
Tree	buffer-underrun
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

malformed-packets *boolean*

Synopsis	Report alarm for malformed packets
Context	configure service cpipe service-name sap sap cem report-alarm malformed-packets <i>boolean</i>

Tree	malformed-packets
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

packet-loss *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	configure service cpipe service-name sap sap cem report-alarm packet-loss <i>boolean</i>
Tree	packet-loss
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

remote-fault *boolean*

Synopsis	Report remote TDM interface is currently not in service
Context	configure service cpipe service-name sap sap cem report-alarm remote-fault <i>boolean</i>
Tree	remote-fault
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

remote-packet-loss *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	configure service cpipe service-name sap sap cem report-alarm remote-packet-loss <i>boolean</i>
Tree	remote-packet-loss
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

remote-rdi *boolean*

Synopsis	Report remote TDM interface is currently in RDI status
Context	configure service cpipe service-name sap sap cem report-alarm remote-rdi <i>boolean</i>
Tree	remote-rdi
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

stray-packets *boolean*

Synopsis	Report alarm for stray packets
Context	configure service cpipe service-name sap sap cem report-alarm stray-packets <i>boolean</i>
Tree	stray-packets
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

rtp-header *boolean*

Synopsis	Use RTP header for transmitted packets to the PSN
Context	configure service cpipe service-name sap sap cem rtp-header <i>boolean</i>
Tree	rtp-header
Description	When configured to true , the router uses the RTP header when packets are transmitted to the packet service network (PSN) by the CEM SAP. This mode must be enabled for differential-timed E1s.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service cpipe service-name sap sap collect-stats <i>boolean</i>
Tree	collect-stats

Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *long-description*

Synopsis	Text description
Context	configure service cpipe <i>service-name</i> sap sap description <i>long-description</i>
Tree	description
String length	1 to 160
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

endpoint *reference*

Synopsis	Endpoint name
Context	configure service cpipe <i>service-name</i> sap sap endpoint <i>reference</i>
Tree	endpoint
Reference	configure service cpipe <i>service-name</i> endpoint <i>named-item</i>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ingress

Synopsis	Enter the ingress context
Context	configure service cpipe <i>service-name</i> sap sap ingress
Tree	ingress
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

qos

Synopsis	Enter the qos context
Context	configure service cpipe <i>service-name</i> sap sap ingress qos

Tree	qos
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

sap-ingress

Synopsis	Enter the sap-ingress context
Context	configure service cpipe <i>service-name</i> sap sap ingress qos sap-ingress
Tree	sap-ingress
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

overrides

Synopsis	Enter the overrides context
Context	configure service cpipe <i>service-name</i> sap sap ingress qos sap-ingress overrides
Tree	overrides
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

policy-name *reference*

Synopsis	Policy ID
Context	configure service cpipe <i>service-name</i> sap sap ingress qos sap-ingress policy-name reference
Tree	policy-name
Reference	configure qos sap-ingress <i>qos-policy-name</i>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

lag

Synopsis	Enter the lag context
Context	configure service cpipe <i>service-name</i> sap sap lag
Tree	lag

Introduced26.3.R1

Platforms7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

service-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

SynopsisService ID

Context**configure** *service* *cpipe* *service-name* *service-id* *number*

Range1 to 9194

Introduced26.3.R1

Platforms7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

spoke-sdp [*sdp-bind-id*] *sdp-bind-id*

SynopsisEnter the **spoke-sdp** list instance

Context**configure** *service* *cpipe* *service-name* *spoke-sdp* *sdp-bind-id*

Tree*spoke-sdp*

Introduced26.3.R1

Platforms7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[sdp-bind-id] *sdp-bind-id*

SynopsisSDP binding ID

Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i>
Tree	<i>spoke-sdp</i>
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> admin-state <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

bandwidth (*number* | *keyword*)

Synopsis	Bandwidth that is reserved for this SDP binding
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> bandwidth (<i>number</i> <i>keyword</i>)
Tree	<i>bandwidth</i>
Range	0 to 1000000000
Units	kilobps
Options	max
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

control-word *boolean*

Synopsis	Use control word as part of packet encapsulation
Context	configure <i>service</i> <i>cpipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> control-word <i>boolean</i>

Tree	control-word
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *description*

Synopsis	Text description
Context	configure service cpipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> description <i>description</i>

SynopsisScheduler name

Context**configure** [service](#) [customer](#) *customer-name* [multi-service-site](#) *named-item* [egress](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *named-item*

Tree[scheduler](#)

DescriptionThis command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on),

the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

epipe [**service-name**] *service-name*

Synopsis Enter the **epipe** list instance

Context **configure** **service** **epipe** *service-name*

Tree **epipe**

Description Commands in this context configure an Epipe service instance.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[service-name] *service-name*

Synopsis Administrative service name

Context **configure** **service** **epipe** *service-name*

Tree **epipe**

Description This command creates or edits a service instance.

When a service is created, the **customer** keyword and *customer-id* must be specified and associates the service with a customer. The *customer-id* must already exist having been created using the customer command in the service context. When a service is created with a customer association, it is not possible to edit the customer association. The service must be deleted and re-created with a new customer association.

When a service is created, the use of the **customer***customer-id* is optional to navigate into the service configuration context. If attempting to edit a service with the incorrect *customer-id* results in an error.

This command specifies the unique service identification number identifying the service in the service domain. This ID must be unique to this service and may not be used for

any other service of any type. The service ID must be the same number used for every platform on which this service is defined.

String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the service
Context	configure service epipe <i>service-name</i> admin-state <i>keyword</i>

bgp [[bgp-instance](#)] *number*

Synopsis	Enter the bgp list instance
Context	configure service epipe <i>service-name</i> bgp <i>number</i>
Tree	bgp
Description	Commands in this context configure the BGP related options that BGP uses for multihoming and BGP VPWS.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[bgp-instance] *number*

Synopsis	BGP instance
Context	configure service epipe <i>service-name</i> bgp <i>number</i>
Tree	bgp
Range	1 to 2
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adv-service-mtu *number*

Synopsis	Advertised service MTU value
Context	configure service epipe <i>service-name</i> bgp <i>number</i> adv-service-mtu <i>number</i>
Tree	adv-service-mtu
Description	This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-template-binding [[pw-template-name](#)] *reference*

Synopsis	Enter the pw-template-binding list instance
Context	configure service epipe <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i>

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name associated with the BGP PW template
Context	configure service epipe <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i> endpoint <i>reference</i>
Tree	endpoint
Description	This command specifies the endpoint name associated with the BGP PW template. When an endpoint is associated to the PW template binding of a BGP VPWS service, EVPN MPLS can also be configured and associated to the same endpoint in the same Epipe service.
Reference	configure service epipe <i>service-name</i> endpoint <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-rt *route-target*

Synopsis	Import route-target communities
Context	configure service epipe <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i> import-rt <i>route-target</i>
Tree	import-rt
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

Synopsis	RD component for NLRI for L2VPN and EVPN families
Context	configure service epipe <i>service-name</i> bgp <i>number</i> route-distinguisher (<i>keyword</i> <i>vpn-route-distinguisher</i>)
Tree	route-distinguisher

String format	'vpn-route-distinguisher' must be IP:comm or AS-number pair per RD rules
Options	auto-rd
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-target

Synopsis	Enter the route-target context
Context	configure service epipe <i>service-name</i> bgp <i>number</i> route-target
Tree	route-target
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export route-target

Synopsis	Extended community name for default import policy
Context	configure service epipe <i>service-name</i> bgp <i>number</i> route-target export route-target
Tree	export
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import route-target

Synopsis	Extended community name for default import policy
Context	configure service epipe <i>service-name</i> bgp <i>number</i> route-target import route-target
Tree	import
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vsi-export *reference*

Synopsis	VSI export policies
Context	configure service epipe <i>service-name</i> bgp <i>number</i> vsi-export <i>reference</i>
Tree	vsi-export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vsi-import *reference*

Synopsis	VSI import policies
Context	configure service epipe <i>service-name</i> bgp <i>number</i> vsi-import <i>reference</i>
Tree	vsi-import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-evpn

Synopsis	Enable the bgp-evpn context
Context	configure service epipe <i>service-name</i> bgp-evpn
Tree	bgp-evpn
Description	Commands in this context configure the BGP-EVPN options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evi number

Synopsis	EVPN ID
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn</i> <i>evi</i> <i>number</i>
Tree	<i>evi</i>
Description	<p>This command configures an EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.</p> <p>The following options are supported:</p> <p>If this EVPN identifier is not specified, the value is zero and no route distinguisher or route target is automatically derived from it. If the specified EVPN identifier is lower than 65535 and no other route distinguisher or route target is configured in the service, the following applies:</p> <ul style="list-style-type: none"> the route distinguisher is derived from <system_ip>:evi the route target is derived from <autonomous-system>:evi <p>If the specified EVPN identifier is higher than 65535 and no other route distinguisher or route target is configured in the service, the following applies.</p> <ul style="list-style-type: none"> The route distinguisher cannot be automatically derived. An error is generated if enabling EVPN is attempted without a route distinguisher. A manual or an auto-rd route distinguisher must be configured. The route target can only be automatically derived if the evi-three-byte-auto-rt command is configured. If configured, the route target is automatically derived in accordance with the rules described in RFC8365.
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-mtu-mismatch boolean

Synopsis	Ignore MTU mismatch
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn</i> <i>ignore-mtu-mismatch</i> <i>boolean</i>
Tree	<i>ignore-mtu-mismatch</i>
Description	<p>When configured to true, the system ignores the received Layer 2 MTU in the Layer 2 Attributes extended community of the AD per-EVI route for a peer.</p> <p>When configured to false, the system compares the local service MTU against the received Layer 2 MTU and if there is a mismatch, removes the EVPN destination to the peer.</p>
Default	false
Introduced	26.7.R1

Platforms 7705 SAR Gen 2

local-attachment-circuit [[name](#)] *named-item*

Synopsis	Enter the local-attachment-circuit list instance
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i>
Tree	local-attachment-circuit
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Attachment circuit name
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i>
Tree	local-attachment-circuit
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	BGP instance ID
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i> bgp <i>number</i>
Tree	bgp
Range	1 to 2
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

endpoint *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i> endpoint <i>reference</i>
Tree	endpoint
Reference	configure service epipe <i>service-name</i> endpoint <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-tag *number*

Synopsis	Ethernet tag of the attachment circuit
Context	configure service epipe <i>service-name</i> bgp-evpn local-attachment-circuit <i>named-item</i> eth-tag <i>number</i>
Tree	eth-tag
Description	<p>This command configures the Ethernet tag value of the attachment circuit.</p> <p>When configured in the local attachment circuit context, the tag value is used in the advertised AD per-EVI route sent for the attachment circuit.</p> <p>When configured in the remote attachment circuit context, the value is compared with the Ethernet tag value of the imported D per-EVI routes for the service. When there is a match, the system creates an EVPN destination for the Epipe.</p>
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls [**bgp-instance**] *number*

Synopsis	Enter the mpls list instance
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls

Description	Commands in this context configure the BGP-EVPN MPLS options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[bgp-instance] *number*

Synopsis	BGP instance
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Range	1 to 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure automatic binding of a VPRN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel</i> allow-flex-algo-fallback <i>boolean</i>
Tree	<i>allow-flex-algo-fallback</i>
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum number of ECMP paths
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel</i> ecmp <i>number</i>
Tree	<i>ecmp</i>
Description	This command configures the number of paths that are allowed to reach a specified remote Ethernet tag that is associated to an EVPN destination.
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-strict-tunnel-tagging *boolean*

Synopsis	Enable/disable enforcement of strict tunnel tagging
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel</i> enforce-strict-tunnel-tagging <i>boolean</i>
Tree	<i>enforce-strict-tunnel-tagging</i>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel enforce-untagged-route <i>keyword</i>
Tree	enforce-untagged-route
Description	This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.
Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution *keyword*

Synopsis	Resolution method for tunnel selection
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution <i>keyword</i>
Tree	resolution
Options	none , filter , any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	<p>When configured to true, BGP searches the BGP LSP for the address of the BGP next hop.</p> <p>When configured to false, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter ldp <i>boolean</i>
Tree	ldp
Description	<p>When configured to true, BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.</p> <p>When configured to false, LDP tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	<p>When configured to true, BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p>

	When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter sr-isis</i> <i>boolean</i>
Tree	<i>sr-isis</i>
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter sr-ospf</i> <i>boolean</i>
Tree	<i>sr-ospf</i>
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.

- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID.

When configured to **false**, OSPF tunneling is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter</i> sr-ospf3 <i>boolean</i>
Tree	<i>sr-ospf3</i>
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop. When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>resolution-filter</i> sr-policy <i>boolean</i>
Tree	<i>sr-policy</i>
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP-EVPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and

- a color value that matches the highest numbered color for the extended community attached to the service route

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	When configured to true , BGP uses an SR-TE tunnel type to resolve the BGP next hop. In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID. When configured to false , SR-TE tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter udp <i>boolean</i>
Tree	udp
Description	When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to false , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weighted-ecmp *boolean*

Synopsis	Allow weighted load balancing
----------	-------------------------------

Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>auto-bind-tunnel</i> <i>weighted-ecmp</i> <i>boolean</i>
Tree	<i>weighted-ecmp</i>
Description	<p>When configured to true, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.</p> <p>When configured to false, this command disables weighted ECMP for next-hop tunnel selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

control-word *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable support for control word
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>control-word</i> <i>boolean</i>
Tree	<i>control-word</i>
Description	When configured to true , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-route-tag *one-byte-value*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>default-route-tag</i> <i>one-byte-value</i>
Tree	<i>default-route-tag</i>

Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

domain-id *domain-id*

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>domain-id</i> <i>domain-id</i>
Tree	<i>domain-id</i>
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as <i>domain-id:isf_safi_type</i> in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> <p>The command is also supported in Epipe services with two instances. As in the case of multi-instance VPRN services, the configured domain ID in an Epipe instance is prepended to the AD per EVI route redistributed to the other instance.</p>
String format	'domain-id' must be global-field:local-field (uint32:uint16 range)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure <i>service epipe service-name bgp-evpn mpls number dynamic-egress-label-limit boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum ECMP routes information
Context	configure <i>service epipe service-name bgp-evpn mpls number ecmp number</i>
Tree	<i>ecmp</i>
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entropy-label *boolean*

Synopsis	Enable use of entropy-labels
Context	configure <i>service epipe service-name bgp-evpn mpls number entropy-label boolean</i>
Tree	<i>entropy-label</i>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

evi-three-byte-auto-rt *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls number</i> <i>evi-three-byte-auto-rt boolean</i>
Tree	<i>evi-three-byte-auto-rt</i>
Description	<p>When configured to true, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).</p> <p>Where:</p> <ul style="list-style-type: none"> • Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken • A=0 (for auto-derivation) • Type=4 (EVI-based route-target) • D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance • Service ID=3-octet EVI <p>When configured to false, route target derivation is not allowed.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

force-vc-forwarding *keyword*

Synopsis	VC forwarding action
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>bgp-evpn mpls number</i> <i>force-vc-forwarding keyword</i>
Tree	<i>force-vc-forwarding</i>
Description	<p>This command configures the VLAN tag processing used on the service.</p> <p>The vlan option configures the router to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag, which is sent in the customer frame to the EVPN destinations.</p>

The **qinq-c-tag-c-tag** option configures the router to push two tags with the same value derived from the inner service-delimiting tag. At network ingress, two VLAN tags are extracted at most and the C-tag and S-tag p/de bits are propagated to the egress SAPs.

The **qinq-s-tag-c-tag** option configures the router to push two tags that are copied from the QinQ service-delimiting VLAN values and may be different. At network ingress, two VLAN tags are extracted at most and the p/de bits are propagated to the egress SAP service-delimiting S-tag and C-tag respectively.

Options	vlan – Push VLAN ID and 802.1p bits of service-delimiting qtag qinq-c-tag-c-tag – Push two tags identical to inner service-delimiting tag qinq-s-tag-c-tag – Push two tags based on QinQ service-delimiting values
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label *boolean*

Synopsis	Default profile when the CP-provided profile is unknown
Context	configure service epipe service-name bgp-evpn mpls number hash-label <i>boolean</i>
Tree	hash-label
Description	When configured to true , the router pushes the hash label. The hash label is never used for BUM packets. The hash-label push is based on the following: <ul style="list-style-type: none"> • If advertise-l2-attributes (in the configure service vpls bgp-evpn routes incl-mcast context) is set to false, the hash label is pushed to a unicast EVPN destination. • If advertise-l2-attributes is set to true, the F bit is set to 1 in the Layer 2 Attributes Extended Community of the EVPN IMET route for the service. The hash label is pushed only if the remote PE signaled support for hash label (received F bit is set to 1).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mh-mode *keyword*

Synopsis	Multihoming mode
Context	configure service epipe service-name bgp-evpn mpls number mh-mode <i>keyword</i>
Tree	mh-mode
Description	This command configures each BGP-EVPN instance in a multi-instance Epipe service to behave as network or access.

	You can only configure one network instance for the service. If the service has a provider tunnel enabled, it requires a network instance.
Options	access, network
Default	network
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-next-hop

Synopsis	Enter the route-next-hop context
Context	configure service epipe <i>service-name</i> bgp-evpn mpls <i>number</i> route-next-hop
Tree	route-next-hop
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap [[sap-id](#)] *sap*

Synopsis	Enter the sap list instance
Context	configure service epipe <i>service-name</i> sap <i>sap</i>
Tree	sap
Description	<p>Commands in this context configure a SAP within a service. A SAP is a combination of port and encapsulation parameters which identifies the SAP on the interface and within the device. Each SAP must be unique.</p> <p>All SAPs must be explicitly created. If no SAPs are created within a service or on an IP interface, a SAP does not exist on that object.</p> <p>A SAP can only be associated with a single service. A SAP can only be defined on a port that has been configured as an access port.</p>
Max. instances	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sap-id] *sap*

Synopsis	SAP ID
Context	configure service epipe <i>service-name</i> sap <i>sap</i>
Tree	sap

String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service epipe <i>service-name</i> sap <i>sap</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service epipe <i>service-name</i> sap <i>sap</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bandwidth *number*

Synopsis	SAP bandwidth
Context	configure service epipe <i>service-name</i> sap <i>sap</i> bandwidth <i>number</i>
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service epipe <i>service-name</i> sap sap collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *long-description*

Synopsis	Text description
Context	configure service epipe <i>service-name</i> sap sap description <i>long-description</i>
Tree	description
String length	1 to 160
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	configure service epipe <i>service-name</i> sap sap dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection policy <i>named-item</i>
Introduced	25.3.R2

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service epipe <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number admin-state keyword
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ais

Synopsis	Enable the ais context
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais
Tree	ais
Description	Commands in this context enable the reception of AIS messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level <i>number</i>
Tree	client-meg-level
Description	This command configures the client Maintenance Entity Group (MEG) level to use for AIS message generation. One restriction is that the client MEG level must be higher than the local MEG level. Only the lowest client MEG level is used for facility MEPs.
Range	1 to 7
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support <i>boolean</i>
Tree	interface-support

Description	<p>When configured to true, the system enables the generation of AIS PDUs based on the associated endpoint state.</p> <p>AIS on Down MEPs triggers and clears based on the operational status of the entity it is configured on. If CCM is configured to true, transmission of the AIS PDU is based on either the nonoperational state of the entity or on any CCM defect conditions. AIS generation ceases if both the operational state is up and CCM has no defect conditions. If the MEP is not enabled with CCM, the operational state of the entity is the only consideration, assuming the command is present for the MEP.</p> <p>When configured to false, the generation of AIS PDUs is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval number

Synopsis	Transmission interval for AIS messages
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>sap</i> <i>sap</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>ais</i> <i>interval</i> <i>number</i>
Tree	<i>interval</i>
Range	1 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect keyword

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>sap</i> <i>sap</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>ais</i> <i>low-priority-defect</i> <i>keyword</i>
Tree	<i>low-priority-defect</i>
Options	<p>all-def – Generate AIS frame for any defect in CCM state machine</p> <p>mac-rem-err-xcon – Generate AIS frame for def-mac-status defect or higher</p>
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ccm *boolean*

Synopsis	Generate CCM messages
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm <i>boolean</i>
Tree	ccm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service epipe service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
----------	------------------

Context	configure service epipe <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>description</i> <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

direction *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	configure service epipe <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> direction <i>keyword</i>
Tree	direction
Description	This command configures the direction in which the MEP faces on the bridge port.
Options	down – Send ETH-CFM messages toward the MAC relay entity up – Send ETH-CFM messages away from the MAC relay entity
Default	down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-test

Synopsis	Enable the eth-test context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
----------	---------------------------------------

Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern <i>pattern</i> keyword
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv – Use the interface TLV suspend-ccm – Suspend continuity check messages
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service epipe <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>

Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service epipe <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ethernet

Synopsis	Enter the ethernet context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> ethernet
Tree	ethernet
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

llf

Synopsis	Enter the llf context
Context	configure service epipe <i>service-name</i> sap <i>sap</i> ethernet llf
Tree	llf
Description	Commands in this context enable Link Loss Forwarding (LLF) on an Ethernet port. This feature provides an end-to-end OAM fault notification for Ethernet VLL service. It brings down the Ethernet port (Ethernet LLF) or sends a SONET/SDH Path AIS (ATM LLF) toward the attached CE when there is a local fault on the pseudowire or service, or a

remote fault on the SAP or pseudowire, signaled with label withdrawal or T-LDP status bits. It ceases when the fault disappears.

The Ethernet port must be configured for null encapsulation.

This feature is also supported in Epipes with BGP-EVPN enabled. In this case, after removal of the EVPN destination, the port transitions to an operationally down state, however the AD per-EVI route for the SAP is still advertised (the SAP remains operationally up). The port transitions to the operationally up state when the EVPN destination is created.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of Link Loss Forwarding
Context **configure** *service epipe service-name sap sap ethernet llf admin-state keyword*
Tree *admin-state*
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ignore-oper-down *boolean*

Synopsis Ignore operational down state of the SAP on SAP failure
Context **configure** *service epipe service-name sap sap ignore-oper-down boolean*
Tree *ignore-oper-down*
Description When configured to **true**, the Epipe service does not transition to the operational down state when the SAP fails. This command can only be set to **true** for a single SAP in an Epipe. The command can be used in Epipes with or without EVPN enabled.
When configured to **false**, the Epipe service transitions to the operational down state when SAP fails.
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ingress

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service epipe <i>service-name</i> sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service epipe <i>service-name</i> sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>service-id</i> <i>number</i>
Tree	<i>service-id</i>
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-mtu *number*

Synopsis	MTU size
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>service-mtu</i> <i>number</i>
Tree	<i>service-mtu</i>
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spoke-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the spoke-sdp list instance
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
Description	<p>Commands in this context bind a service to an existing SDP. A spoke SDP is treated like a traditional bridge "port" where flooded traffic received on the spoke SDP is replicated on all other "ports" (other spoke and mesh SDPs or SAPs) and not transmitted on the port it was received.</p> <p>The SDP has an operational state that determines the operational state of the SDP within the service. For example, if the SDP is administratively or operationally down, the SDP for the service is down.</p> <p>The SDP must already be defined in the configure service sdp context to associate an SDP with an Epipe, VPLS, VPRN, or VPRN service. SDPs must be explicitly associated and bound to a service. If an SDP is not bound to a service, no far-end devices can participate in the service.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sdp-bind-id] *sdp-bind-id*

Synopsis	SDP binding ID
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.

Default enable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

adv-service-mtu *number*

Synopsis Service MTU used in signaling

Context **configure** [service epipe](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [adv-service-mtu](#) *number*

Tree [adv-service-mtu](#)

Description This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP, instead of the service MTU. However, the configuration does not affect the locally enforced value, which is still based on the service MTU.

This MTU value cannot be configured on a spoke-SDP that is bound to an SDP with the **adv-mtu-override** command (**configure service sdp** context).

When unconfigured, an adjusted service MTU is used (**service-mtu** command).

Range 0 to 9782

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

Synopsis	Lowest priority defect allowed to generate fault alarm
----------	--

Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def – Generate AIS frame for any defect in CCM state machine mac-rem-err-xcon – Generate AIS frame for def-mac-status defect or higher
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service epipe service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure service epipe service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ccm *boolean*

Synopsis	Generate CCM messages
Context	configure service epipe service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean
Tree	ccm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
----------	---

Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>ccm-ltm-priority</i> <i>number</i>
Tree	<i>ccm-ltm-priority</i>
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>description</i> <i>description</i>
Tree	<i>description</i>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

direction *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	configure <i>service</i> <i>epipe</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> <i>eth-cfm</i> <i>mep</i> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i> <i>direction</i> <i>keyword</i>
Tree	<i>direction</i>
Description	This command configures the direction in which the MEP faces on the bridge port.
Options	down – Send ETH-CFM messages toward the MAC relay entity up – Send ETH-CFM messages away from the MAC relay entity
Default	down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-test

Synopsis	Enable the eth-test context
Context	configure service epipe service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service epipe service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv – Use the interface TLV suspend-ccm – Suspend continuity check messages
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

force-vc-forwarding *keyword*

Synopsis	VLAN tag processing action
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Description	<p>This command configures the VLAN tag processing used on the service.</p> <p>The vlan option configures the router to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag, which is sent in the customer frame to the EVPN destinations.</p> <p>The qinq-c-tag-c-tag option configures the router to pushes two tags with the same value derived from the inner service delimiting tag. At network ingress, two VLAN tags are extracted at most and the C-tag and S-tag p/de bits are propagated to the egress SAPs.</p> <p>The qinq-s-tag-c-tag option configures the router to push two tags that are copied from the QinQ service-delimiting VLAN values and may be different. At network ingress, two VLAN tags are extracted at most and the p/de bits are propagated to the egress SAP service-delimiting S-tag and C-tag respectively.</p>
Options	vlan – Push VLAN ID and 802.1p bits of service-delimiting qtag qinq-c-tag-c-tag – Push two tags identical to inner service-delimiting tag qinq-s-tag-c-tag – Push two tags based on QinQ service-delimiting values
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label

Synopsis	Enable the hash-label context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> hash-label
Tree	hash-label
Description	<p>Commands in this context configure the use of hash labels for egress datapaths.</p> <p>For information about hash-label handling, see the "Hash label" section of the <i>7705 SAR Gen 2 MPLS Guide</i>.</p>
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> hash-label signal-capability
Tree	signal-capability
Description	<p>When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.</p> <p>The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

filter

Synopsis	Enter the filter context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip reference

Synopsis	IPv4 filter policy name
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2

Platforms7705 SAR Gen 2

ipv6 reference

SynopsisIPv6 filter policy name

Context**configure** service epipe service-name spoke-sdp sdp-bind-id ingress filter ipv6 reference

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-status

Synopsis	Enter the pw-status context
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> pw-status
Tree	pw-status
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

block-on-peer-fault *boolean*

Synopsis	Block transmit direction of PW based on status code
Context	configure service epipe service-name spoke-sdp sdp-bind-id pw-status block-on-peer-fault <i>boolean</i>
Tree	block-on-peer-fault
Default	false
Notes	The following elements are part of a choice: block-on-peer-fault or standby-signaling-slave .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signaling *boolean*

Synopsis	Allow SDP binding to support pseudowire status signaling
Context	configure service epipe service-name spoke-sdp sdp-bind-id pw-status signaling <i>boolean</i>
Tree	signaling
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standby-signaling-slave *boolean*

Synopsis	Block spoke transmission based on PW standby status
Context	configure service epipe service-name spoke-sdp sdp-bind-id pw-status standby-signaling-slave <i>boolean</i>
Tree	standby-signaling-slave
Default	false
Notes	The following elements are part of a choice: block-on-peer-fault or standby-signaling-slave .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-type *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Virtual circuit type associated with the SDP binding
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> vc-type <i>keyword</i>
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure service epipe <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test *boolean*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate as a test service
Context	configure service epipe <i>service-name</i> test <i>boolean</i>
Tree	test
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-switching *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	configure service epipe <i>service-name</i> vc-switching <i>boolean</i>
Tree	vc-switching
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpn-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	configure service epipe <i>service-name</i> vpn-id <i>number</i>
Tree	vpn-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ies [*service-name*] *service-name*

Synopsis	Enter the ies list instance
Context	configure service ies <i>service-name</i>
Tree	ies
Description	<p>Commands in this context specify an IES service instance.</p> <p>Multiple IES services are created to separate customer-owned IP interfaces. More than one IES service can be created for a single customer ID. More than one IP interface can be created within a single IES service ID. All IP interfaces created within an IES service ID belong to the same customer.</p>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[service-name] *service-name*

Synopsis	Administrative service name
Context	configure service ies <i>service-name</i>
Tree	ies
Description	<p>This command creates or edits a service instance.</p> <p>When a service is created, the customer keyword and <i>customer-id</i> must be specified and associates the service with a customer. The <i>customer-id</i> must already exist having been created using the customer command in the service context. When a service is created with a customer association, it is not possible to edit the customer association. The service must be deleted and re-created with a new customer association.</p> <p>When a service is created, the use of the customer<i>customer-id</i> is optional to navigate into the service configuration context. If attempting to edit a service with the incorrect <i>customer-id</i> results in an error.</p> <p>This command specifies the unique service identification number identifying the service in the service domain. This ID must be unique to this service and may not be used for any other service of any type. The service ID must be the same number used for every platform on which this service is defined.</p>
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the service
Context	configure service ies <i>service-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

customer *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	configure service ies <i>service-name</i> customer <i>reference</i>
Tree	customer
Reference	configure service customer <i>customer-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [**interface-name**] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i>
Tree	interface
Description	Commands in this context create a logical IP routing interface. When created, attributes such as an IP address and SAP ID can be associated with the IP interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	Interface name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

autoconfigure

Synopsis	Enter the autoconfigure context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure
Tree	autoconfigure
Description	Commands in this context configure the autoconfigure functionality for the interface.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4
Tree	ipv4
Description	Commands in this context configure IPv4 autoconfigure settings.

Introduced	25.7.R1
Platforms	7705 SAR Gen 2

dhcp-client

Synopsis	Enable the dhcp-client context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client
Tree	dhcp-client
Description	Commands in this context configure the node as an IPv4 DHCP client. When the node operates as a DHCP client, it learns the IP address of the interface via dynamic IP address assignment.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the DHCP client
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

class-id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the class-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id
Tree	class-id
Description	Commands in this context configure the vendor class ID for the DHCP client.

Introduced 25.7.R1
Platforms 7705 SAR Gen 2

ascii-string *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Vendor class ID as an ASCII string
Context **configure** *service ies service-name interface interface-name autoconfigure ipv4 dhcp-client class-id* **ascii-string** *string*
Tree **ascii-string**
String length 1 to 127
Notes The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced 25.7.R1
Platforms 7705 SAR Gen 2

hex-string *hex-string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Vendor class ID as a hexadecimal string
Context **configure** *service ies service-name interface interface-name autoconfigure ipv4 dhcp-client class-id* **hex-string** *hex-string*
Tree **hex-string**
String length 1 to 256
String format 'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced 25.7.R1
Platforms 7705 SAR Gen 2

client-id

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the client-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id
Tree	client-id
Description	Commands in this context configure the client ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ascii-string *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as an ASCII string
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

hex-string *hex-string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as a hexadecimal string
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id hex-string <i>hex-string</i>

Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

interface

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interface name as the client ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client <i>client-id</i> interface
Tree	interface
Description	This command configures the node to use the interface name as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

mac

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address as the client ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client <i>client-id</i> mac
Tree	mac
Description	This command configures the node to use the MAC address as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

lease-time (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lease time the DHCP client requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client lease-time (<i>number</i> <i>keyword</i>)
Tree	lease-time
Description	This command configures the lease time that the DHCP client requests to the DHCP server. The DHCP server can override the configured value.
Range	10 to 315446399
Units	seconds
Options	infinite – Request an infinite lease with no expiry
Default	86400
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

request-options**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the request-options context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options
Tree	request-options
Description	Commands in this context configure the DHCP options to include in the parameter request list as part of the DHCPREQUEST message to the server.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

dns-server *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the DNS server option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options dns-server <i>boolean</i>
Tree	dns-server
Description	When configured to true , the node includes the DNS server option (Option 54) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

router *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the router option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options router <i>boolean</i>
Tree	router
Description	When configured to true , the node includes the router option (Option 3) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

static-route *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the static route option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options static-route <i>boolean</i>
Tree	static-route
Description	When configured to true , the node includes the static route option (Option 121) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

description *very-long-description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> description <i>very-long-description</i>
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> dynamic-tunnel-redundant-nexthop <i>ipv4-unicast-address</i>
Tree	dynamic-tunnel-redundant-nexthop
Description	<p>This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for dynamic IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work.</p> <p>The next-hop address is resolved in the routing table of a corresponding service.</p>
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

hold-time

Synopsis Enter the **hold-time** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **hold-time**

Tree [hold-time](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv4

Synopsis Enter the **ipv4** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **hold-time** [ipv4](#)

Tree [ipv4](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

down

Synopsis Enter the **down** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **hold-time** [ipv4](#) **down**

Tree [down](#)

Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **hold-time** [ipv4](#) **down** **init-only** *boolean*

Tree [init-only](#)

Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

up

Synopsis	Enter the up context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

down

Synopsis	Enter the down context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down init-only <i>boolean</i>
Tree	init-only
Description	When configured to true , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

up

Synopsis	Enter the up context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

if-attribute

Synopsis	Enter the if-attribute context
----------	---------------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute
Tree	if-attribute
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-group *reference*

Synopsis	Administrative group name for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute admin-group <i>reference</i>
Tree	admin-group
Description	This command specifies the administrative group membership to an interface. The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srlg-group [[name](#)] *reference*

Synopsis	Add a list entry for srlg-group
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *reference*

Synopsis	SRLG name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Reference	configure routing-options if-attribute srlg-group <i>named-item</i>

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-tunnel-interface *boolean*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable IP tunnel interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ip-tunnel-interface <i>boolean</i>
Tree	ip-tunnel-interface
Description	When configured to true , the system enables a GRE virtual IP interface.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ipsec

Synopsis Enable the **ipsec** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **ipsec**

Tree [ipsec](#)

Description Commands in this context configure an IPsec secured interface.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of IPsec secured interface

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **ipsec** **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-exception *reference*

Synopsis IP exception filter

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* **ipsec** **ip-exception** *reference*

Tree [ip-exception](#)

Description This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.

Reference **configure** [filter](#) [ip-exception](#) *filter-name*

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-tunnel [[name](#)] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[name] *named-item*

Synopsis	IPsec tunnel name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'name' must not start with a number (e.g. tunnel-1)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd-designate *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-designate <i>boolean</i>
Tree	bfd-designate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd-liveness

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness
Tree	bfd-liveness

Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dest-ip *ipv4-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item bfd bfd-liveness</i> dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interface *interface-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item bfd bfd-liveness</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

service-name *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness service-name <i>service-name</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

clear-df-bit *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encapsulated-ip-mtu *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu

Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp-generation frag-required admin-state</i> <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp-generation frag-required interval</i> <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big</i>
Tree	packet-too-big
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item icmp6-generation packet-too-big interval number</i>
Tree	interval

Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

key-exchange

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-exchange context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange
Tree	key-exchange
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the dynamic context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic
Tree	dynamic
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto-establish *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish <i>boolean</i>
Tree	auto-establish
Description	<p>When configured to true, the system automatically attempts to establish a phase 1 exchange.</p> <p>The system automatically establishes phase 1 SA as soon as the tunnel is provisioned and enabled. This command should only be configured on one side of the tunnel.</p> <p>Static routes that use the auto-establish tunnel as the next hop are brought down when the tunnel goes down.</p> <p>When configured to false, the system does not automatically attempt to establish a phase 1 exchange.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto-establish-sustain *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable sustain mode for auto-establish tunnels
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish-sustain <i>boolean</i>
Tree	auto-establish-sustain
Description	<p>When configured to true, the tunnel initiator keeps the IKE_SA and CHILD_SA up to prevent phase 2 expiry when there is no traffic, and starts a new exchange to establish a replacement when the peer deletes the SA.</p> <p>When configured to false, the tunnel initiator does not prevent the SA from expiring and does not establish a replacement when the peer deletes the SA.</p>
Default	false
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cert context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

status-verify**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the status-verify context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-result keyword

Synopsis	Default result for Certificate Status Verification
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

primary keyword

Synopsis	Primary method of CSV to verify the revocation status
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

secondary keyword

Synopsis	Secondary method used to verify certificate revocation
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none"> • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fqdn *fully-qualified-domain-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
----------	------------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 *ipv4-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ike-policy <i>reference</i>
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ppk

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ppk context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

list reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK list instance name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>

Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pre-shared-key *encrypted-leaf*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key
Description	This command specifies the pre-shared key for authentication in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

reverse-route-injection

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the reverse-route-injection context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection
Tree	reverse-route-injection
Description	Commands in this context configure reverse route injection for IPsec tunnels. When reverse route injection is enabled, the system injects routes into the service based on the final TSr. One route is created for each TS in the TSr, with the prefix length as the longest number that covers the address range in the TS. The system removes the reverse route when the corresponding CHILD_SA is removed.
Introduced	26.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

metric *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Metric to use for reverse route injection
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection metric <i>number</i>
Tree	metric
Description	<p>This command configures the metric for reverse routes installed by reverse route injection. The system uses the metric when selecting a route to install in the route table.</p> <p>If there are multiple reverse routes with the same preference but different metrics, the lower cost (metric) route is installed.</p>
Range	0 to 65535
Default	0
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

preference *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference to use for reverse route injection
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection preference <i>number</i>
Tree	preference
Description	<p>This command configures the route preference assigned to reverse routes installed by reverse route injection. The system uses this preference when selecting a route to install in the route table. The lower the preference value, the more the route is preferred by the system.</p>
Range	0 to 255
Default	0
Introduced	26.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

manual

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the manual context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual
Tree	manual
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

keys [**security-association**] *number direction keyword*

Synopsis	Enter the keys list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number direction keyword</i>
Tree	keys
Description	Commands in this context configure the security association list for the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[**security-association**] *number*

Synopsis	SA entry ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number direction keyword</i>
Tree	keys
Range	1 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

direction *keyword*

Synopsis Direction of the IPsec tunnel

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipsec ipsec-tunnel](#) *named-item* [key-exchange](#) [manual keys](#) *number* [direction](#) *keyword*

Tree [keys](#)

Options inbound, outbound

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

authentication-key *hex-string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Key used for the authentication algorithm

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipsec ipsec-tunnel](#) *named-item* [key-exchange](#) [manual keys](#) *number* [direction](#) *keyword* [authentication-key](#) *hex-string*

Tree [authentication-key](#)

String length 1 to 130

String format 'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encryption-key *hex-string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Key used for the encryption algorithm

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipsec ipsec-tunnel](#) *named-item* [key-exchange](#) [manual keys](#) *number* [direction](#) *keyword* [encryption-key](#) *hex-string*

Tree [encryption-key](#)

String length	1 to 66
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transform *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

spi *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i>
Tree	spi
Description	<p>This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.</p> <p>The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p>
Range	256 to 16383
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local-gateway-address-override (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> local-gateway-address-override (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

esp *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pmtu-discovery-aging number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-sap *number*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-sap <i>number</i>
Tree	private-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-service *service-name*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-service <i>service-name</i>
Tree	private-service
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String length	1 to 64
String format	'service-name' must contain at least one non-space character

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v6 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

remote-gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> remote-gateway-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	remote-gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

replay-window number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

security-policy**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy

Tree	security-policy
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy id <i>number</i>
Tree	id
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

strict-match boolean**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec ipv6-exception <i>reference</i>
Tree	ipv6-exception
Description	This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.
Reference	configure filter ipv6-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-sap *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec public-sap <i>number</i>
Tree	public-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tunnel-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Reference	configure isa tunnel-group <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4
Tree	ipv4
Description	Commands in this context configure the IPv4 command options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

addresses

Synopsis	Enter the addresses context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses
Tree	addresses
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Enter the address list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses address <i>ipv4-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-address] *ipv4-unicast-address*

Synopsis	IPv4 address for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 addresses address <i>ipv4-unicast-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 allow-directed-broadcasts <i>boolean</i>
Tree	allow-directed-broadcasts
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd

Synopsis	Enter the bfd context
----------	------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd
Tree	bfd
Description	Commands in this context configure the BFD command options for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier

Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive number

Synopsis	Receive interval
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd receive number
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmit-interval number

Synopsis	Transmit interval
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd transmit-interval number
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Local termination point for the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 bfd type keyword

Tree	type
Options	cpm-np – Terminate on the CPM network processor auto – Terminate on the system-selected termination point fp – Terminate on the forwarding plane
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp

Synopsis	Enter the dhcp context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp
Tree	dhcp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp gi-address <i>ipv4-unicast-address</i>
Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	0 to 511999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option-82

Synopsis	Enter the option-82 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action keyword

Synopsis	Action to take with received DHCP Option 82
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 action <i>keyword</i>
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple

Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

none

Synopsis	Do not include the circuit ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap-id

Synopsis	Use the SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	<p>When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.</p> <p>When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.</p>
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-id

Synopsis	Enter the remote-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

mac

Synopsis Use the MAC address for the remote ID

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp option-82](#)
[remote-id mac](#)

Tree [mac](#)

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

none

Synopsis Do not include the remote ID

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp option-82](#)
[remote-id none](#)

Tree [none](#)

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

vendor-specific-option

Synopsis Enter the **vendor-specific-option** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp option-82](#)
[vendor-specific-option](#)

Tree [vendor-specific-option](#)

Description Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

client-mac-address *boolean*

Synopsis Send the MAC address in the VSO

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i>
Tree	client-mac-address
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i>
Tree	pool-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as the DHCP server address for the SAP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server emulated-server <i>ipv4-unicast-address</i>
Tree	emulated-server
Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-time

Synopsis	Enter the lease-time context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time
Tree	lease-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	DHCP lease time
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server lease-time value <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

relay-plain-bootp *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-plain-bootp boolean
Tree	relay-plain-bootp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

relay-proxy

Synopsis	Enable the relay-proxy context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy release-update-src-ip boolean
Tree	release-update-src-ip
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

siaddr-override *ipv4-unicast-address*

Synopsis	DHCP server IP address for address hiding function
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy siaddr-override <i>ipv4-unicast-address</i>
Tree	siaddr-override
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp server ipv4-unicast-address
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp src-ip-addr <i>keyword</i>

Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trusted boolean

Synopsis	Relay untrusted packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	<p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-arp boolean

Synopsis	Use ARP to determine the destination hardware address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp use-arp <i>boolean</i>
Tree	use-arp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp

Synopsis	Enter the icmp context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp

Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

param-problem

Synopsis	Enter the param-problem context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redirects

Synopsis	Enter the redirects context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects
Tree	redirects
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unreachables

Synopsis	Enter the unreachables context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachables
Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachables admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachables number <i>number</i>
Tree	number

Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachable seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-helper-address *ipv4-unicast-address*

Synopsis	Gateway address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 ip-helper-address <i>ipv4-unicast-address</i>
Tree	ip-helper-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 local-dhcp-server <i>reference</i>
Tree	local-dhcp-server
Reference	configure router <i>named-item-64</i> dhcp-server dhcpv4 <i>named-item</i>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

nat

Synopsis Enable the **nat** context

Context **configure** **service** **ies** *service-name* **interface** *interface-name* **ipv4** **nat**

Tree **nat**

Description Commands in this context enable NAT and configure CPM NAT policies for the IPv4 interface.

These commands must be used in conjunction with NAT pools where the pool application is configured with the **configure router nat outside pool applications use-interface-ip** command.

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-nat-policy *reference*

Synopsis CPM NAT policy association with public IPv4 interface

Context **configure** **service** **ies** *service-name* **interface** *interface-name* **ipv4** **nat** **cpm-nat-policy** *reference*

Tree **cpm-nat-policy**

Description This command associates a CPM NAT policy to the interface. The NAT policy applies to traffic that either originates from, or is destined to, the local node itself (CPM traffic). Specifically, it is used when the traffic is routed through a public NAT IPv4 interface in the outside routing context.

A CPM NAT policy should be used when the local node communicates with public networks over NAT, and the source or destination is a local interface within the outside routing context. This can include the public IPv4 interface or any other interface assigned to that routing context.

Reference **configure** **service** **nat** **cpm-nat-policy** *external-named-item*

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-spf-nat-policy *reference*

Synopsis CPM NAT policy for static port forwards

Context **configure** **service** **ies** *service-name* **interface** *interface-name* **ipv4** **nat** **cpm-spf-nat-policy** *reference*

Tree	cpm-spf-nat-policy
Description	This command associates a CPM NAT policy to the interface for static port forwards. The configurations for traffic using static port forwards to a local IP address in the outside routing context are separate from those used for other CPM traffic going through NAT. This command allows the router to apply different NAT behavior for port-forwarded traffic than for general traffic originating from the local node.
Reference	configure service nat cpm-nat-policy <i>external-named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

host-route

Synopsis	Enter the host-route context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route
Tree	host-route
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

populate [[route-type](#)] *keyword*

Synopsis	Enter the populate list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Description	Commands in this context enable the creation of ARP or ND host route entries in the route table from a certain ARP or ND entry type.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[route-type] keyword

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service ies service-name interface interface-name ipv4 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Options	static – Host routes created from EVPN ARP or ND entries dynamic – Host routes created from dynamic ARP or ND entries evpn – Host routes created from EVPN entries evpn-local-es – Host routes created from EVPN local ES entries
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service ies service-name interface interface-name ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learn-unsolicited boolean

Synopsis	Learn new entries from any received NA message
Context	configure service ies service-name interface interface-name ipv4 neighbor-discovery learn-unsolicited <i>boolean</i>
Tree	learn-unsolicited
Description	When configured to true , the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.

When configured to **false**, the router follows standard behavior for learning neighbor entries.

- If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.
- If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit

Synopsis	Enter the limit context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Range	0 to 524288

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Threshold value that triggers a warning message
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

populate *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery populate <i>boolean</i>
Tree	populate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i>
Tree	proactive-refresh
Description	<p>When configured to true, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).</p> <p>When configured to false, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i>
Tree	proxy-arp-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i>
Tree	remote-proxy-arp
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry-timer *number*

Synopsis	ARP retry interval
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery retry-timer <i>number</i>
Tree	retry-timer
Range	1 to 300
Units	deciseconds
Default	50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-neighbor [[ipv4-address](#)] *ipv4-address*

Synopsis	Enter the static-neighbor list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-address] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-neighbor-unnumbered

Synopsis	Enable the static-neighbor-unnumbered context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request

or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.

Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary

Synopsis	Enable the primary context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 primary address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag (*number* | *keyword*)

Synopsis	Route tag to be matched by BGP export policy rules
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 primary tag (<i>number</i> <i>keyword</i>)
Tree	tag
Description	This command associates an administrative tag value with an interface IP address. This tag value is added to the IP FIB entries corresponding to the subnet route and host route created by IP address configuration. This tag can be used to filter these routes when they are processed by a BGP export policy, a BGP RIB-management route table import policy, as IS-IS export policy or an OSPF export policy.
Range	1 to 4294967295
Options	no-tag
Default	no-tag
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

secondary [[address](#)] *ipv4-unicast-address*

Synopsis	Enter the secondary list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**address**] *ipv4-unicast-address*

Synopsis	Secondary IPv4 address assigned to the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-inhibit *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> igp-inhibit <i>boolean</i>
Tree	igp-inhibit
Description	When configured to true , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

prefix-length *number*

Synopsis IPv4 address prefix length

Context **configure** *service ies service-name interface interface-name* **ipv4 secondary** *ipv4-unicast-address prefix-length number*

Tree [prefix-length](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

system

Synopsis IP interface as an unnumbered interface

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 unnumbered system
Tree	system
Notes	The following elements are part of a choice: ip-address , ip-int-name , or system .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrrp [*virtual-router-id*] *number*

Synopsis	Enter the vrrp list instance
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>vrrp</i> <i>number</i>
Tree	<i>vrrp</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>vrrp</i> <i>number</i>
Tree	<i>vrrp</i>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>vrrp</i> <i>number</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable

Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Password for simple text authentication
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> authentication-key encrypted-leaf
Tree	authentication-key
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 94
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

backup *ipv4-unicast-address*

Synopsis	Virtual router IP addresses for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> backup ipv4-unicast-address
Tree	backup
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The</p>

specified *unicast-ipv4-address* must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-ip ipv4-address

Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac mac-unicast-address

Synopsis	Virtual MAC address to use in ARP responses
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number mac mac-unicast-address
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

master-int-inherit boolean

Synopsis	Allow master instance to dictate the master down timer
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number master-int-inherit boolean
Tree	master-int-inherit
Description	When configured to true , the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

message-interval *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** **service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **message-interval** *number*

Tree **message-interval**

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range 1 to 2559

Units deciseconds

Default 10

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

monitor-oper-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group

Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> passive <i>boolean</i>
Tree	passive
Description	When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance

does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy *reference*

Synopsis	VRRP priority control policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p>

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference	configure vrrp policy number
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service ies service-name interface interface-name ipv4 vrrp number preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	Base priority for the VRRP
Context	configure service ies service-name interface interface-name ipv4 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ssh-reply *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number ssh-reply <i>boolean</i>
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number telnet-reply <i>boolean</i>
Tree	telnet-reply

Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enable the ipv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6
Tree	ipv6
Description	Commands in this context configure IPv6 command options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address [*ipv6-address*] *ipv6-address*

Synopsis	Enter the address list instance
Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>ipv6 address ipv6-address</i>
Tree	<i>address</i>
Description	<p>This command assigns an IPv6 address/subnet to the interface.</p> <p>Up to 16 total primary and secondary IPv4 and IPv6 addresses can be assigned to network interfaces, and up to 256 to access interfaces.</p> <p>Caution: Configurations must not exceed 16 secondary IP addresses when IPsec, GRE, L2TPv3, or IP in IP protocols are active on an access interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv6-address] *ipv6-address*

Synopsis	IPv6 address assigned to the interface
Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>ipv6 address ipv6-address</i>
Tree	<i>address</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure <i>service ies service-name</i> <i>interface interface-name</i> <i>ipv6 address ipv6-address</i> <i>duplicate-address-detection boolean</i>
Tree	<i>duplicate-address-detection</i>
Description	<p>When configured to true, the router enables Duplicate Address Detection (DAD).</p> <p>When configured to false, the router disables DAD and sets the address to preferred, even if there is a duplicated address.</p>
Default	true
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

eui-64 *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> eui-64 <i>boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> primary-preference <i>number</i>
Tree	primary-preference

Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag (*number* | *keyword*)

Synopsis	Route tag to be matched by BGP export policy rules
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> tag (<i>number</i> <i>keyword</i>)
Tree	tag
Description	<p>This command associates an administrative tag value with an interface IP address. This tag value is added to the IP FIB entries corresponding to the subnet route and host route created by IP address configuration. This tag can be used to filter these routes when they are processed by a BGP export policy, a BGP RIB-management route table import policy, as IS-IS export policy or an OSPF export policy.</p>
Range	1 to 4294967295
Options	no-tag
Default	no-tag
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

bfd

Synopsis	Enter the bfd context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 bfd
Tree	bfd
Description	<p>Commands in this context configure the BFD command options for the associated IP interface.</p>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of BFD sessions

Context **configure** **service** **ies** *service-name* **interface** *interface-name* **ipv6** **bfd** **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

echo-receive *number*

Synopsis Minimum echo interval over this interface

Context **configure** **service** **ies** *service-name* **interface** *interface-name* **ipv6** **bfd** **echo-receive** *number*

Tree **echo-receive**

Range 100 to 100000

Units milliseconds

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

multiplier *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** **service** **ies** *service-name* **interface** *interface-name* **ipv6** **bfd** **multiplier** *number*

Tree **multiplier**

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

receive number

Synopsis	Receive interval
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 bfd receive <i>number</i>
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmit-interval number

Synopsis	Transmit interval
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Local termination point for the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 bfd type <i>keyword</i>
Tree	type
Options	cpm-np – Terminate on the CPM network processor auto – Terminate on the system-selected termination point fp – Terminate on the forwarding plane
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6
Tree	dhcp6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

relay

Synopsis	Enter the relay context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay
Tree	relay
Description	Commands in this context configure DHCPv6 relay command options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

route-populate

Synopsis Enter the **route-populate** context

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay lease-populate route-populate](#)

Tree [route-populate](#)

Description Commands in this context configure the route populate command options.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

na boolean

Synopsis	Create route based on the IA_NA option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate na boolean
Tree	na
Description	When configured to true , the router creates the route based on the IA_NA option in the Relay-Reply message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pd

Synopsis	Enable the pd context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate pd
Tree	pd
Description	When enabled, the router creates the route based on the IA_PD option in the Relay-Reply message.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude boolean

Synopsis	Create blackhole route based on prefix exclude option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate pd exclude boolean
Tree	exclude
Description	When configured to true , the router creates a blackhole route based on the PD_EXCLUDE option contained in the IA_PD option of the Relay-Reply message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ta boolean

Synopsis	Create route based on IA_TA option
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate ta <i>boolean</i>
Tree	ta
Description	When configured to true , the router creates the route based on the IA_TA option in the Relay-Reply message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option

Synopsis	Enter the option context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option
Tree	option
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-id

Synopsis	Enter the interface-id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id
Tree	interface-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

if-index

Synopsis Use interface index in the DHCPv6 relay packet
Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [interface-id](#) [if-index](#)
Tree [if-index](#)
Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

sap-id

Synopsis Use SAP ID in interface ID option in relay packet
Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [interface-id](#) [sap-id](#)
Tree [sap-id](#)
Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

string *string-not-all-spaces*

Synopsis String for interface ID option in DHCPv6 relay packet
Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [interface-id](#) [string](#) *string-not-all-spaces*
Tree [string](#)
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

remote-id *boolean*

Synopsis	Send remote ID option in the DHCPv6 relay packet
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option remote-id <i>boolean</i>
Tree	remote-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server *ipv6-address-with-zone*

Synopsis	DHCPv6 server to which the DHCPv6 requests are forwarded
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay server ipv6-address-with-zone
Tree	server
String format	'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address *ipv6-unicast-or-linklocal-address*

Synopsis	Source IPv6 address of the DHCPv6 relay messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay source-address <i>ipv6-unicast-or-linklocal-address</i>
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection per interface
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forward-ipv4-packets *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 forward-ipv4-packets <i>boolean</i>
Tree	forward-ipv4-packets
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp6

Synopsis	Enter the icmp6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6
Tree	icmp6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

packet-too-big

Synopsis	Enter the packet-too-big context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big
Tree	packet-too-big
Description	Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit Packet Too Big messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

param-problem

Synopsis	Enter the param-problem context
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem
Tree	param-problem
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Parameter Problem message sends
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Tree	host-route
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

populate [[route-type](#)] *keyword*

Synopsis	Enter the populate list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[route-type] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Options	static – Host routes created from EVPN ARP or ND entries dynamic – Host routes created from dynamic ARP or ND entries evpn – Host routes created from EVPN entries evpn-local-es – Host routes created from EVPN local ES entries
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>

Tree	route-tag
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery learn-unsolicited <i>keyword</i>
Tree	learn-unsolicited
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set. When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit

Synopsis	Enter the limit context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only

Description	When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned. When configured to false , the router does not send the warning message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Description	This command configures the maximum number of entries that can be learned on an IP interface. When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i>
Tree	local-proxy-nd
Description	<p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i>
Tree	proxy-nd-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

reachable-time *number*

Synopsis Neighbor reachability detection timer

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) [reachable-time](#) *number*

Tree [reachable-time](#)

Range 30 to 3600

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor ipv6-address mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 tcp-mss <i>number</i>
Tree	tcp-mss
Range	1220 to 9726
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 urpf-check ignore-default <i>boolean</i>

Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrrp [[virtual-router-id](#)] *number*

Synopsis	Enter the vrrp list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

backup *ipv6-address*

Synopsis	Virtual router IP addresses for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> backup <i>ipv6-address</i>
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a</p>

routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for the BFD session
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> bfd-liveness dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number bfd-liveness <i>interface-name</i> <i>interface-name</i>
Tree	<i>interface-name</i>
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-name *service-name***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number bfd-liveness <i>service-name</i> <i>service-name</i>
Tree	<i>service-name</i>
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

init-delay *number*

Synopsis	VRRP initialization delay timer
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number <i>init-delay number</i>
Tree	<i>init-delay</i>
Range	1 to 65535

Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac mac-unicast-address

Synopsis	Virtual MAC address to use in ARP responses
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number mac mac-unicast-address
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

master-int-inherit boolean

Synopsis	Allow master instance to dictate the master down timer
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number master-int-inherit boolean
Tree	master-int-inherit
Description	When configured to true , the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none">• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master.• When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.• When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.
Range	10 to 4095
Units	centiseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group

Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> passive <i>boolean</i>
Tree	passive
Description	When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance

does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy *reference*

Synopsis	VRRP priority control policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p>

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference	configure vrrp policy number
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service ies service-name interface interface-name ipv6 vrrp number preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	Base priority for the VRRP
Context	configure service ies service-name interface interface-name ipv6 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	When configured to true , the standby router forwards all traffic. When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number telnet-reply <i>boolean</i>
Tree	telnet-reply
Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number traceroute-reply <i>boolean</i>
Tree	traceroute-reply

Description	<p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing

Synopsis	Enter the load-balancing context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> load-balancing
Tree	load-balancing
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopback *boolean*

Synopsis	Use interface as a loopback interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> loopback <i>boolean</i>

Tree	loopback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-unicast-address*

Synopsis	MAC address for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	This command assigns a specific MAC address to an IP interface.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-accounting *boolean*

Synopsis	Enable MAC accounting functionality
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> mac-accounting <i>boolean</i>
Tree	mac-accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multi-chassis-shunting-profile *reference*

Synopsis	Multi-chassis shunting profile name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> multi-chassis-shunting-profile <i>reference</i>
Tree	multi-chassis-shunting-profile
Description	This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces.
Reference	configure router <i>named-item-64</i> ipsec multi-chassis-shunting-profile <i>named-item</i>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

multicast-network-domain *reference*

Synopsis	Network domain name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> multicast-network-domain <i>reference</i>
Tree	multicast-network-domain
Reference	configure router <i>named-item-64</i> network-domains network-domain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ptp-hw-assist

Synopsis	Enter the ptp-hw-assist context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ptp-hw-assist
Tree	ptp-hw-assist
Description	<p>Commands in this context enable the port-based timestamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.</p> <p>Only one interface per physical port can have port-based timestamping assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.</p>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the PTP timestamping assist
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> ptp-hw-assist admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

sap [[sap-id](#)] *sap*

Synopsis	Enter the sap list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i>
Tree	sap
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sap-id] *sap*

Synopsis	SAP ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i>
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> accounting-policy <i>reference</i>

Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bandwidth *number*

Synopsis	SAP bandwidth
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> bandwidth <i>number</i>
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

description *long-description*

Synopsis Text description

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

parent

Synopsis	Enter the parent context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> parent

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the

policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

cir (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy overrides scheduler <i>named-item</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pir (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy overrides scheduler <i>named-item</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

policy-name *reference*

Synopsis Scheduler policy name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ingress qos](#) [scheduler-policy](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos scheduler-policy](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ip-tunnel [[tunnel-name](#)] *interface-name*

Synopsis Enter the **ip-tunnel** list instance

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ip-tunnel](#) *interface-name*

Tree [ip-tunnel](#)

Description Commands in this context configure an IP-GRE or IP-IP tunnel and associate it with a private tunnel SAP within an IES service.

Max. instances 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[tunnel-name] *interface-name*

Synopsis IP tunnel name

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ip-tunnel](#) *interface-name*

Tree [ip-tunnel](#)

String length 1 to 32

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the IP tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

backup-remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup remote IP address that is applied to this tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> backup-remote-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	backup-remote-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum.

	When configured to false , clearing of the DF bit is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

delivery-service *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> delivery-service <i>service-name</i>
Tree	delivery-service
Description	<p>This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel.</p> <p>The GRE tunnel does not come up until a valid delivery service is configured.</p>
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Text description
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-ip [**dest-ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for dest-ip
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[dest-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote IP tunnel endpoint
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Description	This command configures the IP address of the remote IP tunnel endpoint. If the remote IP address is not within the subnet of the IP interface associated with the tunnel, the tunnel fails to come up.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dscp *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Differentiated Services Code Point (DSCP) name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encapsulated-ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet for the IP tunnel. If the packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

gre-header

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the gre-header context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header
Tree	gre-header
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the GRE header in the tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key
Tree	key
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the keys in the GRE header
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Receive key of the GRE header
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key receive <i>number</i>
Tree	receive
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send number

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send key of the GRE header
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> gre-header key send <i>number</i>
Tree	send
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp-generation

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation
Tree	icmp-generation
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required
Tree	frag-required
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP messages that can be sent during the period specified by the interval command.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation
Tree	icmp6-generation
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big
Tree	packet-too-big
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

number *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big number <i>number</i>
Tree	number
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

seconds *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp6-generation packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-mtu *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	<p>This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.</p> <p>When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.</p>
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transport-mode-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> ipsec-transport-mode-profile <i>reference</i>
Tree	ipsec-transport-mode-profile
Reference	configure ipsec ipsec-transport-mode-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-ip-address
Description	<p>This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).</p> <p>When this command specifies an IPv6 address, it must be a global unicast address.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pmtu-discovery-aging *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-tcp-mss-adjust *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the private side
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v4 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v6 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> propagate-pmtu-v6 <i>boolean</i>

Tree	propagate-pmtu-v6
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

reassemble (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> reassemble (<i>number</i> <i>keyword</i>)
Tree	reassemble
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none

Introduced25.3.R2

Platforms7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

remote-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db
Tree	client-db
Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fallback *boolean*

Synopsis	Fall back to the default authentication policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db fallback <i>boolean</i>
Tree	fallback
Description	When configured to true , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.

When configured to **false** and the client database lookup fails to return a matched result, the system fails the tunnel setup.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

name *reference*

Synopsis	Client database name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db name <i>reference</i>
Tree	name
Reference	configure ipsec client-db <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-secure-service

Synopsis	Enable the default-secure-service context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-secure-service
Tree	default-secure-service
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interface *interface-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private IPsec tunnel interface name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-secure-service interface <i>interface-name</i>
Tree	interface
String length	1 to 32

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

service-name *service-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default security service name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-secure-service <i>service-name</i> <i>service-name</i>
Tree	service-name
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-tunnel-template *reference*

Synopsis	Default tunnel policy template for the gateway
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-tunnel-template <i>reference</i>
Tree	default-tunnel-template
Reference	configure ipsec tunnel-template <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcp-address-assignment

Synopsis	Enter the dhcp-address-assignment context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment
Tree	dhcp-address-assignment
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcpv4

Synopsis	Enable the dhcpv4 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4
Tree	dhcpv4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the IPsec DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

gi-address ipv4-unicast-address

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 gi-address ipv4-unicast-address
Tree	gi-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv4 send-release</i> <i>boolean</i>
Tree	send-release
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the server context
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv4 server</i>
Tree	server
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address *ipv4-unicast-address*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv4 server addresses
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item dhcp-address-assignment dhcpv4 server address</i> <i>ipv4-unicast-address</i>
Tree	address

Description	This command specifies DHCPv4 server addresses for the DHCPv4-based address assignment. If multiple server addresses are specified, the first advertised DHCPv4 address received is chosen.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *router-instance-base-vprn-loose*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance used to reach the DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcpv6

Synopsis	Enable the dhcpv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6
Tree	dhcpv6
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 server
----------	---

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

link-address *ipv6-unicast-address*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Link address of the relayed DHCPv6 packets
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 link-address <i>ipv6-unicast-address</i>
Tree	link-address
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv6 release message when IPsec tunnel removed
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 send-release <i>boolean</i>
Tree	send-release
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

server

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the server context
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 server
Tree	server
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address *ipv6-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv6 server addresses
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 server address <i>ipv6-unicast-address</i>
Tree	address
Description	This command specifies DHCPv6 server addresses for the DHCPv6-based address assignment. If multiple server addresses are specified, the first advertised DHCPv6 address received is chosen.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *router-instance-base-vprn-loose*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance to reach the DHCPv6 server
----------	--

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv6 server router-instance router-instance-base-vprn-loose
Tree	router-instance
String length	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike-policy *reference*

Synopsis	IKE policy ID
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> ike-policy <i>reference</i>
Tree	ike-policy
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local

Synopsis	Enter the local context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local
Tree	local
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address-assignment

Synopsis	Enable the address-assignment context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment
Tree	address-assignment
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of local address assignments
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv4 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcp-server *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv4 server name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 dhcp-server <i>named-item</i>
Tree	dhcp-server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pool *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the pool defined in the specified DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 pool <i>named-item</i>
Tree	pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *router-instance-base-vprn-loose***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID for the local DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

secondary-pool *named-item*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 secondary-pool <i>named-item</i>
Tree	secondary-pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv6 context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcp-server *named-item*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 dhcp-server <i>named-item</i>
Tree	dhcp-server

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pool *named-item*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 pool <i>named-item</i>
Tree	pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *router-instance-base-vprn-loose*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 router-instance <i>router-instance-base-vprn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local gateway-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id

Synopsis	Enter the id context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id
Tree	id
Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id auto
Tree	auto
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fqdn *fully-qualified-domain-name***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 *ipv4-unicast-address***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
----------	-----------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

esp number

Synopsis	Maximum number of recent records
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike number

Synopsis	Maximum number of historical IKE keys recorded
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

removed-tunnels *number*

Synopsis	Maximum number of removed tunnels to record keys
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> max-history-key-records removed-tunnels <i>number</i>
Tree	removed-tunnels
Description	This command configures the maximum number of removed tunnels on the IPsec gateway for which to record IKE and ESP keys. When the number of recorded tunnels reaches the configured limit, the system removes the oldest tunnel from the history to record the newest tunnel. If this command is modified to a lower limit than the current number of recorded tunnels, the system immediately removes as many of the oldest tunnels as needed to comply with the new limit.
Range	1 to 256
Introduced	26.10.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mixed-tunnel-mode**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the mixed-tunnel-mode context
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> mixed-tunnel-mode
Tree	mixed-tunnel-mode
Description	Commands in this context configure the IPsec gateway to support both remote access and dynamic LAN-to-LAN tunnels. When unconfigured, support of both tunnel types is disabled.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for the IPsec gateway
Context	configure service ies <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key

Description	This command specifies the pre-shared key for the IPsec gateway in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

accounting-policy reference

Synopsis	RADIUS accounting policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure ipsec radius accounting-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

authentication-policy reference

Synopsis	RADIUS authentication policy
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius authentication-policy <i>reference</i>
Tree	authentication-policy
Reference	configure ipsec radius authentication-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> ts-list <i>reference</i>
Tree	ts-list
Reference	configure ipsec ts-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

lag

Synopsis	Enter the lag context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> lag
Tree	lag
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multi-service-site *reference*

Synopsis	Multi service site name
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> multi-service-site <i>reference</i>
Tree	multi-service-site
Reference	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spoke-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the spoke-sdp list instance
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
Max. instances	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[sdp-bind-id] *sdp-bind-id*

Synopsis SDP binding ID

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [spoke-sdp](#) *sdp-bind-id*

Tree [spoke-sdp](#)

String length 3 to 16

String format 'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

Tree	vc-type
Options	ether – Ethernet pseudowire associated with SDP binding ipipe – Ipipe pseudowire associated with SDP binding
Default	ether
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

static-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Address for the static ISA tunnel redundant next-hop
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> static-tunnel-redundant-nexthop <i>ipv4-unicast-address</i>
Tree	static-tunnel-redundant-nexthop
Description	<p>This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for a static IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work.</p> <p>The next-hop address is resolved in the routing table of the corresponding service.</p>
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop) .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> tos-marking-state <i>keyword</i>
Tree	tos-marking-state
Options	trusted, untrusted
Default	untrusted
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable/disable tunnel interface
----------	---------------------------------

Context	configure service ies <i>service-name</i> interface <i>interface-name</i> tunnel <i>boolean</i>
Tree	tunnel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vas-if-type *keyword*

Synopsis	VAS interface type
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vas-if-type <i>keyword</i>
Tree	vas-if-type

Context **configure** [service ies](#) *service-name* [interface](#) *interface-name* [vpls](#) *named-item-64* [evpn](#) [arp](#) **advertise** *keyword*

Tree [advertise](#)

Description Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.

The **learn-dynamic** command must be set to **false** when using this functionality.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[route-type] keyword

Synopsis Type of ARP or ND entries that generate host routes
Context **configure** [service ies](#) [service-name](#) [interface](#) [interface-name](#) [vpls](#) [named-item-64](#) [evpn](#) [arp](#) [advertise](#) [keyword](#)
Tree [advertise](#)
Description This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options static, dynamic, evpn-local-es
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

route-tag number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tag value used with the host route from an ARP/ND entry
Context **configure** [service ies](#) [service-name](#) [interface](#) [interface-name](#) [vpls](#) [named-item-64](#) [evpn](#) [arp](#) [advertise](#) [keyword](#) [route-tag](#) [number](#)
Tree [route-tag](#)
Description This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range 0 to 255
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

evpn-local-es

Synopsis Enter the **evpn-local-es** context

Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>vpls</i> <i>named-item-64</i> <i>evpn</i> <i>arp evpn-local-es</i>
Tree	<i>evpn-local-es</i>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

entry-type *keyword*

Synopsis	Type of EVPN entry
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>vpls</i> <i>named-item-64</i> <i>evpn</i> <i>arp evpn-local-es entry-type keyword</i>
Tree	<i>entry-type</i>
Description	This command configures the type of EVPN entry. When configured to evpn , received EVPN MAC/IP advertisement routes matching a local ESI to create an ARP or ND route of type EVPN are enabled. When configured to evpn-local-es , ARP or ND entries are classified as the EVPN local ES type. The EVPN local ES ARP or ND entries then trigger the local router to advertise corresponding MAC/IP advertisement routes with the proxy bit set if the advertise evpn-local-es command is configured.
Options	evpn – Allow EVPN routes to be advertised evpn-local-es – Allow EVPN local ES routes to be advertised
Default	evpn
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

retention-timer *number*

Synopsis	Retention timer of the entry
Context	configure <i>service</i> <i>ies</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>vpls</i> <i>named-item-64</i> <i>evpn</i> <i>arp evpn-local-es retention-timer number</i>
Tree	<i>retention-timer</i>
Description	The timer defines how long the EVPN local ES entry is retained. While the timer is active, the router sends ARP requests or neighbor solicitations for the entry to the local ES. If a response is received, the entry is converted into a dynamic entry. The command can only be set to a value different from 0 if the entry type is configured as EVPN local ES.
Range	0 to 65535
Units	seconds

Default	0
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

flood-garp-and-unknown-req *boolean*

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp flood-garp-and-unknown-req <i>boolean</i>
Tree	flood-garp-and-unknown-req
Description	When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to false , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp learn-dynamic <i>boolean</i>
Tree	learn-dynamic
Description	When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to false , learning is disabled and table entries are not created for these messages.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nd

Synopsis	Enter the nd context
Context	configure service ies <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd

Context	configure service ies <i>service-name</i> ip-transport <i>port</i>
Tree	ip-transport
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the IP transport.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *description*

Synopsis	Description for the IP transport.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

dscp-name *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	dscp name
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> dscp-name <i>keyword</i>
Tree	dscp-name
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	ef
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

filter-unknown-host *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable/Disable unknown host filtering.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> filter-unknown-host <i>boolean</i>
Tree	filter-unknown-host
Default	false

Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

local-host

Synopsis	Enter the local-host context
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> local-host
Tree	local-host
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ip-address *ipv4-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address used for this local host.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> local-host ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

port-num *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP/UDP port number.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> local-host port-num <i>number</i>
Tree	port-num
Range	1026 to 49150
Introduced	26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

protocol *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Protocol used.

Context **configure** *service ies* *service-name ip-transport* *port local-host* **protocol** *keyword*

Tree *protocol*

Options tcp, udp

Introduced 26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

remote-host [*remote-host-id*] *number*

Synopsis Enter the **remote-host** list instance

Context **configure** *service ies* *service-name ip-transport* *port remote-host* *number*

Tree *remote-host*

Introduced 26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[remote-host-id] *number*

Synopsis remote host identifier

Context **configure** *service ies* *service-name ip-transport* *port remote-host* *number*

Tree *remote-host*

Range 1 to 2147483647

Notes This element is part of a list key.

Introduced 26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *description*

Synopsis User provided description for the remote host.

Context	configure service ies <i>service-name</i> ip-transport <i>port</i> remote-host <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ip-address *ipv4-unicast-address*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address used for this remote host.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> remote-host <i>number</i> ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

port-num *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TCP/UDP port number.
Context	configure service ies <i>service-name</i> ip-transport <i>port</i> remote-host <i>number</i> port-num <i>number</i>
Tree	port-num
Range	1 to 65535
Notes	This element is mandatory.
Introduced	26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

remote-host-name *string*

Synopsis User provided name for the remote host.

Context **configure** *service ies* *service-name ip-transport* *port remote-host* *number remote-host-name* *string*

Tree *remote-host-name*

String length 1 to 64

Introduced 26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

tcp

Synopsis Enter the **tcp** context

Context **configure** *service ies* *service-name ip-transport* *port tcp*

Tree *tcp*

Introduced 26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

inactivity-timeout *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Length of time to wait before disconnecting an inactive TCP connection.

Context **configure** *service ies* *service-name ip-transport* *port tcp* *inactivity-timeout* *number*

Tree *inactivity-timeout*

Range 1 to 65535

Units seconds

Default 30

Introduced 26.3.R1

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

max-retries *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of max retries.
Context	configure <i>service ies service-name ip-transport port tcp max-retries number</i>
Tree	<i>max-retries</i>
Range	0 to 10
Default	5
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

retry-interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Length of time to wait before a TCP retry.
Context	configure <i>service ies service-name ip-transport port tcp retry-interval number</i>
Tree	<i>retry-interval</i>
Range	0 to 300
Units	seconds
Default	5
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure <i>service ies service-name service-id number</i>

Tree	service-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpn-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	configure service ies <i>service-name</i> vpn-id <i>number</i>
Tree	vpn-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-list [[name](#)] *named-item*

Synopsis	Enter the mac-list list instance
Context	configure service mac-list <i>named-item</i>
Tree	mac-list
Description	Commands in this context specify the MAC addresses to be included in a MAC list to be used with the Auto-Learn MAC Protect (ALMP) functionality. The list is used to exclude certain MAC addresses from protection, for example, on SAPs or spoke SDPs configured with ALMP where certain MAC addresses (such as VRRP virtual MAC addresses) must be able to move to other objects.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	MAC list name
Context	configure service mac-list <i>named-item</i>
Tree	mac-list
String length	1 to 32

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service mac-list <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac [[address](#)] *mac-address*

Synopsis	Enter the mac list instance
Context	configure service mac-list <i>named-item</i> mac <i>mac-address</i>
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *mac-address*

Synopsis	MAC address
Context	configure service mac-list <i>named-item</i> mac <i>mac-address</i>
Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *mac-address*

Synopsis	Mask for the MAC address
----------	--------------------------

Context	configure service mac-list <i>named-item</i> mac <i>mac-address</i> mask <i>mac-address</i>
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-auto-id

Synopsis	Enter the md-auto-id context
Context	configure service md-auto-id
Tree	md-auto-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

customer-id-range

Synopsis	Enable the customer-id-range context
Context	configure service md-auto-id customer-id-range
Tree	customer-id-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the ID range
Context	configure service md-auto-id customer-id-range end <i>number</i>
Tree	end
Range	2 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the ID range
Context	configure service md-auto-id customer-id-range start <i>number</i>
Tree	start
Range	2 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-template-id-range

Synopsis	Enable the pw-template-id-range context
Context	configure service md-auto-id pw-template-id-range
Tree	pw-template-id-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the PW template ID range
Context	configure service md-auto-id pw-template-id-range end <i>number</i>
Tree	end
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the PW template ID range
Context	configure service md-auto-id pw-template-id-range start <i>number</i>
Tree	start
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-id-range

Synopsis	Enable the service-id-range context
Context	configure service md-auto-id service-id-range
Tree	service-id-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the service ID range
Context	configure service md-auto-id service-id-range end <i>number</i>
Tree	end
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the service ID range
Context	configure service md-auto-id service-id-range start number
Tree	start
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nat

Synopsis	Enter the nat context
Context	configure service nat
Tree	nat
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-nat-policy [[name](#)] *external-named-item*

Synopsis	Enter the cpm-nat-policy list instance
Context	configure service nat cpm-nat-policy external-named-item
Tree	cpm-nat-policy
Description	Commands in this context configure CPM NAT policies.
Max. instances	64
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[name] *external-named-item*

Synopsis	CPM NAT policy name
----------	---------------------

Context	configure service nat cpm-nat-policy <i>external-named-item</i>
Tree	cpm-nat-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

alg

Synopsis	Enter the alg context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> alg
Tree	alg
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ftp *boolean*

Synopsis	Use FTP ALG for the policy
Context	configure service nat cpm-nat-policy <i>external-named-item</i> alg ftp <i>boolean</i>
Tree	ftp
Default	true
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service nat cpm-nat-policy <i>external-named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

filtering *keyword*

Synopsis Filtering method for inbound traffic for the policy

Context **configure** [service nat cpm-nat-policy](#) *external-named-item* [filtering](#) *keyword*

Tree [filtering](#)

Options endpoint-independent, address-and-port-dependent

Default endpoint-independent

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-limits

Synopsis Enter the **port-limits** context

Context **configure** [service nat cpm-nat-policy](#) *external-named-item* [port-limits](#)

Tree [port-limits](#)

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic-ports *number*

Synopsis Maximum number of dynamic ports per subscriber

Context **configure** [service nat cpm-nat-policy](#) *external-named-item* [port-limits](#) [dynamic-ports](#) *number*

Tree [dynamic-ports](#)

Description This command limits the number of ports per protocol on an outside IP address for a subscriber regardless of the pool pairing mode. This command applies to LSN44 pools with flexible port allocation.

Range 1 to 65536

Default 65536

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

forwarding number

Synopsis	Maximum number of port forwarding entries
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits forwarding number
Tree	forwarding
Range	1 to 65535
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

high number

Synopsis	High watermark percentage
Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

low number

Synopsis	Low watermark percentage
----------	--------------------------

Context	configure service nat cpm-nat-policy <i>external-named-item</i> port-limits watermarks low <i>number</i>
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max *number*

Synopsis	Maximum number of sessions per subscriber
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits max <i>number</i>
Tree	max
Range	1 to 65535
Default	100
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits watermarks
Tree	watermarks

Description	This command configures watermarks for NAT resources.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

high number

Synopsis	High watermark percentage
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

low number

Synopsis	Low watermark percentage
Context	configure service nat cpm-nat-policy <i>external-named-item</i> session-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> tcp

Tree	tcp
Description	Commands in this context configure the Transmission Control Protocol (TCP) attributes of the policy.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mss-adjust *number*

Synopsis	TCP MSS adjustment value
Context	configure service nat cpm-nat-policy <i>external-named-item</i> tcp mss-adjust <i>number</i>
Tree	mss-adjust
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

timeouts

Synopsis	Enter the timeouts context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts
Tree	timeouts
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-query *number*

Synopsis	Timeout applied to an ICMP Query session
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts icmp-query <i>number</i>
Tree	icmp-query
Range	60 to 240
Units	seconds
Default	60
Introduced	25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tcp

Synopsis Enter the **tcp** context

Context **configure** [service nat cpm-nat-policy](#) *external-named-item* [timeouts tcp](#)

Tree [tcp](#)

Description Commands in this context configure TCP timeout attributes.

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

established *number*

Synopsis Idle timeout for TCP session in established state

Context **configure** [service nat cpm-nat-policy](#) *external-named-item* [timeouts tcp established](#) *number*

Tree [established](#)

Range 60 to 86400

Units seconds

Default 7440

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

syn *number*

Synopsis TCP session timeout when synchronizing initial sequence

Context **configure** [service nat cpm-nat-policy](#) *external-named-item* [timeouts tcp syn](#) *number*

Tree [syn](#)

Range 6 to 86400

Units seconds

Default 15

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

time-wait *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp time-wait number
Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

transitory *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts tcp transitory number
Tree	transitory
Range	60 to 86400
Units	seconds
Default	240
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp
Tree	udp
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dns number

Synopsis	Timeout applied to UDP session with destination port 53
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp dns number
Tree	dns
Range	15 to 86400
Units	seconds
Default	15
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

initial number

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp initial number
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

normal number

Synopsis	UDP mapping timeout
Context	configure service nat cpm-nat-policy <i>external-named-item</i> timeouts udp normal number
Tree	normal
Range	60 to 86400
Units	seconds
Default	300
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat cpm-nat-policy <i>external-named-item</i> udp
Tree	udp
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	configure service nat cpm-nat-policy <i>external-named-item</i> udp inbound-refresh <i>boolean</i>
Tree	inbound-refresh
Description	When configured to true , the router extends the UDP session timeout on inbound traffic. When configured to false , the router does not extend the UDP session timeout.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-policy [[name](#)] *external-named-item*

Synopsis	Enter the nat-policy list instance
Context	configure service nat nat-policy <i>external-named-item</i>
Tree	nat-policy
Max. instances	4096
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[[name](#)] *external-named-item*

Synopsis	NAT policy name
Context	configure service nat nat-policy <i>external-named-item</i>
Tree	nat-policy
String length	1 to 32

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

alg

Synopsis	Enter the alg context
Context	configure service nat nat-policy external-named-item alg
Tree	alg
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ftp boolean

Synopsis	Use FTP ALG for the policy
Context	configure service nat nat-policy external-named-item alg ftp boolean
Tree	ftp
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pptp boolean

Synopsis	Use PPTP ALG for the policy
Context	configure service nat nat-policy external-named-item alg pptp boolean
Tree	pptp
Description	<p>When configured to true, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to false, PPTP ALG is not used.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

rtsp boolean

Synopsis	Use RTSP ALG for the policy
Context	configure service nat nat-policy <i>external-named-item</i> alg rtsp <i>boolean</i>
Tree	rtsp
Description	When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

sip boolean

Synopsis	Use SIP ALG for the policy
Context	configure service nat nat-policy <i>external-named-item</i> alg sip <i>boolean</i>
Tree	sip
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

block-limit number

Synopsis	Maximum number of port blocks per subscriber
Context	configure service nat nat-policy <i>external-named-item</i> block-limit <i>number</i>
Tree	block-limit
Range	1 to 40
Default	1
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service nat nat-policy <i>external-named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

filtering *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	configure service nat nat-policy <i>external-named-item</i> filtering <i>keyword</i>
Tree	filtering
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pool

Synopsis	Enter the pool context
Context	configure service nat nat-policy <i>external-named-item</i> pool
Tree	pool
Notes	The following elements are part of a choice: dnat-only , l2-outside , or pool .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

name *named-item***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT pool name
----------	---------------

Context	configure service nat nat-policy <i>external-named-item</i> pool name <i>named-item</i>
Tree	name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router or VPRN service name
Context	configure service nat nat-policy <i>external-named-item</i> pool router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-limits

Synopsis	Enter the port-limits context
Context	configure service nat nat-policy <i>external-named-item</i> port-limits
Tree	port-limits
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic-ports *number*

Synopsis	Maximum number of dynamic ports per subscriber
Context	configure service nat nat-policy <i>external-named-item</i> port-limits dynamic-ports <i>number</i>
Tree	dynamic-ports
Description	This command limits the number of ports per protocol on an outside IP address for a subscriber regardless of the pool pairing mode. This command applies to LSN44 pools with flexible port allocation.
Range	1 to 65536
Default	65536

Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	configure service nat nat-policy external-named-item port-limits forwarding <i>number</i>
Tree	forwarding
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat nat-policy external-named-item port-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

high *number*

Synopsis	High watermark percentage
Context	configure service nat nat-policy external-named-item port-limits watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

low number

Synopsis	Low watermark percentage
Context	configure service nat nat-policy external-named-item port-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat nat-policy external-named-item session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max number

Synopsis	Maximum number of sessions per subscriber
Context	configure service nat nat-policy external-named-item session-limits max number
Tree	max
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat nat-policy <i>external-named-item</i> session-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

high number

Synopsis	High watermark percentage
Context	configure service nat nat-policy <i>external-named-item</i> session-limits watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

low number

Synopsis	Low watermark percentage
Context	configure service nat nat-policy <i>external-named-item</i> session-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tcp

Synopsis Enter the **tcp** context

Context **configure** [service nat nat-policy external-named-item tcp](#)

Tree [tcp](#)

Description Commands in this context configure the Transmission Control Protocol (TCP) attributes of the policy.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mss-adjust *number*

Synopsis TCP MSS adjustment value

Context **configure** [service nat nat-policy external-named-item tcp mss-adjust number](#)

Tree [mss-adjust](#)

Description This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.

Range 160 to 10240

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

timeouts

Synopsis Enter the **timeouts** context

Context **configure** [service nat nat-policy external-named-item timeouts](#)

Tree [timeouts](#)

Description Commands in this context configure the attributes of session idle timeouts for the policy.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-query *number*

Synopsis Timeout applied to an ICMP Query session

Context **configure** [service nat nat-policy external-named-item timeouts icmp-query number](#)

Tree	icmp-query
Range	60 to 240
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tcp

Synopsis	Enter the tcp context
Context	configure service nat nat-policy external-named-item timeouts tcp
Tree	tcp
Description	Commands in this context configure TCP timeout attributes.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

established *number*

Synopsis	Idle timeout for TCP session in established state
Context	configure service nat nat-policy external-named-item timeouts tcp established number
Tree	established
Range	60 to 86400
Units	seconds
Default	7440
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

syn *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	configure service nat nat-policy external-named-item timeouts tcp syn number
Tree	syn
Range	6 to 86400
Units	seconds

Default	15
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

time-wait *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat nat-policy <i>external-named-item</i> timeouts tcp time-wait <i>number</i>
Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

transitory *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat nat-policy <i>external-named-item</i> timeouts tcp transitory <i>number</i>
Tree	transitory
Range	60 to 86400
Units	seconds
Default	240
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat nat-policy <i>external-named-item</i> timeouts udp
Tree	udp
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dns number

Synopsis	Timeout applied to UDP session with destination port 53
Context	configure service nat nat-policy <i>external-named-item</i> timeouts udp dns number
Tree	dns
Range	15 to 86400
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

initial number

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat nat-policy <i>external-named-item</i> timeouts udp initial number
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

normal number

Synopsis	UDP mapping timeout
Context	configure service nat nat-policy <i>external-named-item</i> timeouts udp normal number
Tree	normal
Range	60 to 86400
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

udp

Synopsis	Enter the udp context
Context	configure service nat nat-policy external-named-item udp
Tree	udp
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	configure service nat nat-policy external-named-item udp inbound-refresh <i>boolean</i>
Tree	inbound-refresh
Description	When configured to true , the router extends the UDP session timeout on inbound traffic. When configured to false , the router does not extend the UDP session timeout.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

oper-group [[name](#)] *named-item*

Synopsis	Enter the oper-group list instance
Context	configure service oper-group <i>named-item</i>
Tree	oper-group
Max. instances	32768
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[name](#)] *named-item*

Synopsis	Operational group name
Context	configure service oper-group <i>named-item</i>
Tree	oper-group
String length	1 to 32

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service oper-group <i>named-item</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-ip *ipv4-unicast-address*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for BFD
Context	configure service oper-group <i>named-item</i> bfd-liveness dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Source interface name
Context	configure service oper-group <i>named-item</i> bfd-liveness interface-name <i>interface-name</i>
Tree	interface-name

String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context used for route lookup
Context	configure service oper-group <i>named-item</i> bfd-liveness router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-time

Synopsis	Enter the hold-time context
Context	configure service oper-group <i>named-item</i> hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

down *number*

Synopsis	Oper group hold down time
Context	configure service oper-group <i>named-item</i> hold-time down <i>number</i>
Tree	down
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

up *number*

Synopsis	Oper group hold up time
Context	configure service oper-group <i>named-item</i> hold-time up <i>number</i>
Tree	up
Range	0 to 3600
Units	seconds
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-arp-nd

Synopsis	Enter the proxy-arp-nd context
Context	configure service proxy-arp-nd
Tree	proxy-arp-nd
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-list

Synopsis	Enter the mac-list context
Context	configure service proxy-arp-nd mac-list
Tree	mac-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

list [[list-name](#)] *named-item*

Synopsis	Enter the list list instance
Context	configure service proxy-arp-nd mac-list list <i>named-item</i>
Tree	list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[list-name] *named-item*

Synopsis	Specify name for mac list
Context	configure service proxy-arp-nd mac-list list <i>named-item</i>
Tree	list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac [[address](#)] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for mac
Context	configure service proxy-arp-nd mac-list list <i>named-item</i> mac <i>mac-unicast-address-no-zero</i>
Tree	mac
Max. instances	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *mac-unicast-address-no-zero*

Synopsis	MAC address to be added to the list
Context	configure service proxy-arp-nd mac-list list <i>named-item</i> mac <i>mac-unicast-address-no-zero</i>
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-template [[pw-template-name](#)] *pw-template-name*

Synopsis	Enter the pw-template list instance
----------	--

Context	configure service pw-template <i>pw-template-name</i>
Tree	pw-template
Max. instances	2048
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[pw-template-name] *pw-template-name*

Synopsis	SDP template name
Context	configure service pw-template <i>pw-template-name</i>
Tree	pw-template
String length	1 to 64
String format	'pw-template-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting-policy *number*

Synopsis	Accounting policy
Context	configure service pw-template <i>pw-template-name</i> accounting-policy <i>number</i>
Tree	accounting-policy
Range	1 to 99
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-fragmentation *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	configure service pw-template <i>pw-template-name</i> allow-fragmentation <i>boolean</i>
Tree	allow-fragmentation
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-gre-sdp *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use a GRE tunnel to automatically create an SDP
Context	configure service pw-template <i>pw-template-name</i> auto-gre-sdp <i>boolean</i>
Tree	auto-gre-sdp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

block-on-peer-fault *boolean*

Synopsis	Enable block traffic on peer fault
Context	configure service pw-template <i>pw-template-name</i> block-on-peer-fault <i>boolean</i>
Tree	block-on-peer-fault
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure service pw-template <i>pw-template-name</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

control-word *boolean*

Synopsis	Enable/Disable the use of ControlWord
Context	configure service pw-template <i>pw-template-name</i> control-word <i>boolean</i>
Tree	control-word

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

egress

Synopsis	Enter the egress context
Context	configure service pw-template <i>pw-template-name</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

filter

Synopsis	Enter the filter context
Context	configure service pw-template <i>pw-template-name</i> egress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip named-item-64

Synopsis	IPv4 filter policy name
Context	configure service pw-template <i>pw-template-name</i> egress filter ip <i>named-item-64</i>
Tree	ip
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 named-item-64

Synopsis	IPv6 filter policy name
Context	configure service pw-template <i>pw-template-name</i> egress filter ipv6 <i>named-item-64</i>
Tree	ipv6

String length 1 to 64
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mac *named-item-64*

Synopsis MAC filter policy name
Context **configure** [service](#) [pw-template](#) *pw-template-name* [egress filter mac](#) *named-item-64*
Tree [mac](#)
String length 1 to 64
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mfib-allowed-mda-destinations

Synopsis Enter the **mfib-allowed-mda-destinations** context
Context **configure** [service](#) [pw-template](#) *pw-template-name* [egress mfib-allowed-mda-destinations](#)
Tree [mfib-allowed-mda-destinations](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mda [[mda-id](#)] *slot-mda*

Synopsis Add a list entry for **mda**
Context **configure** [service](#) [pw-template](#) *pw-template-name* [egress mfib-allowed-mda-destinations](#) [mda](#) *slot-mda*
Tree [mda](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[[mda-id](#)] *slot-mda*

Synopsis MFIB allowed MDA destination

Context	configure service pw-template <i>pw-template-name</i> egress mfib-allowed-mda-destinations mda <i>slot-mda</i>
Tree	mda
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure service pw-template <i>pw-template-name</i> egress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

network

Synopsis	Enter the network context
Context	configure service pw-template <i>pw-template-name</i> egress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name *named-item-64*

Synopsis	Network policy ID
Context	configure service pw-template <i>pw-template-name</i> egress qos network policy-name <i>named-item-64</i>
Tree	policy-name
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure service pw-template <i>pw-template-name</i> egress qos network port-redirect-group
Tree	port-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-name *named-item*

Synopsis	Name of the egress port queue group template
Context	configure service pw-template <i>pw-template-name</i> egress qos network port-redirect-group group-name <i>named-item</i>
Tree	group-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

instance *number*

Synopsis	Instance for FP ingress queue group
Context	configure service pw-template <i>pw-template-name</i> egress qos network port-redirect-group instance <i>number</i>
Tree	instance
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

encryption-keygroup

Synopsis	Enter the encryption-keygroup context
Context	configure service pw-template <i>pw-template-name</i> encryption-keygroup
Tree	encryption-keygroup
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

inbound number

Synopsis Keygroup identifier in the inbound direction

Context **configure** [service pw-template pw-template-name encryption-keygroup inbound number](#)

Tree [inbound](#)

Range 1 to 127

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

outbound number

Synopsis Keygroup identifier in the outbound direction

Context **configure** [service pw-template pw-template-name encryption-keygroup outbound number](#)

Tree [outbound](#)

Range 1 to 127

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

entropy-label

Synopsis Enable the use of an entropy label

Context **configure** [service pw-template pw-template-name entropy-label](#)

Tree [entropy-label](#)

Notes The following elements are part of a choice: **entropy-label** or **hash-label**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

fdb

Synopsis Enter the **fdb** context

Context **configure** [service pw-template pw-template-name fdb](#)

Tree [fdb](#)

Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

auto-learn-mac-protect *boolean*

Synopsis Enable automatic update of MAC protect list
 Context **configure** [service](#) [pw-template](#) *pw-template-name* [fdb](#) [auto-learn-mac-protect](#) *boolean*
 Tree [auto-learn-mac-protect](#)
 Default false
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

auto-learn-mac-protect-exclude-list *named-item*

Synopsis Name of the MAC protect exclusion list
 Context **configure** [service](#) [pw-template](#) *pw-template-name* [fdb](#) [auto-learn-mac-protect-exclude-list](#) *named-item*
 Tree [auto-learn-mac-protect-exclude-list](#)
 Description This command configures the name of a MAC protect exclusion list.
 Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.
 An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.
 String length 1 to 32
 String format 'string-not-all-spaces' must contain at least one non-space character
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

discard-unknown-source *boolean*

Synopsis Discard frames with unknown source
 Context **configure** [service](#) [pw-template](#) *pw-template-name* [fdb](#) [discard-unknown-source](#) *boolean*
 Tree [discard-unknown-source](#)
 Default false
 Introduced 25.3.R2

Platforms 7705 SAR Gen 2

limit-mac-move *keyword*

Synopsis MAC move limit

Context **configure** [service pw-template pw-template-name fdb limit-mac-move keyword](#)

Tree [limit-mac-move](#)

Options blockable, non-blockable

Default blockable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mac-learning

Synopsis Enter the **mac-learning** context

Context **configure** [service pw-template pw-template-name fdb mac-learning](#)

Tree [mac-learning](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

aging *boolean*

Synopsis Enable aging of MAC addresses

Context **configure** [service pw-template pw-template-name fdb mac-learning aging boolean](#)

Tree [aging](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

learning *boolean*

Synopsis Enable learning of new MAC addresses

Context **configure** [service pw-template pw-template-name fdb mac-learning learning boolean](#)

Tree [learning](#)

Default true

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-pinning *boolean*

Synopsis	Enable MAC address pinning on this spoke SDP
Context	configure service pw-template <i>pw-template-name</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service pw-template <i>pw-template-name</i> fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this PW template.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service pw-template fdb discard-unknown-source command is set to true for this PW template, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the PW template uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Action taken after a relearn request for protected MAC
----------	--

Context	configure service pw-template <i>pw-template-name</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Description	This command configures how the system handles relearn requests for protected MAC addresses.
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

force-vc-forwarding *keyword*

Synopsis	VLAN tag processing action
Context	configure service pw-template <i>pw-template-name</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Description	<p>This command configures the VLAN tag processing used on the service.</p> <p>The vlan option configures the router to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag, which is sent in the customer frame to the EVPN destinations.</p> <p>The qinq-c-tag-c-tag option configures the router to pushes two tags with the same value derived from the inner service delimiting tag. At network ingress, two VLAN tags are extracted at most and the C-tag and S-tag p/de bits are propagated to the egress SAPs.</p> <p>The qinq-s-tag-c-tag option configures the router to push two tags that are copied from the QinQ service-delimiting VLAN values and may be different. At network ingress, two VLAN tags are extracted at most and the p/de bits are propagated to the egress SAP service-delimiting S-tag and C-tag respectively.</p>
Options	vlan – Push VLAN ID and 802.1p bits of service-delimiting qtag qinq-c-tag-c-tag – Push two tags identical to inner service-delimiting tag qinq-s-tag-c-tag – Push two tags based on QinQ service-delimiting values
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label

Synopsis	Enable the hash-label context
Context	configure service pw-template <i>pw-template-name</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths.

For information about hash-label handling, see the "Hash labels" section of the *7705 SAR Gen 2 MPLS Guide*.

Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service pw-template pw-template-name hash-label signal-capability
Tree	signal-capability
Description	<p>When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.</p> <p>The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration. The node must withdraw the label it sent to its peer and send a new label mapping message with the new value of the F-bit in the flow label interface option sub-TLV of the pseudowire ID FEC element.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service pw-template pw-template-name igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service pw-template pw-template-name igmp-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *named-item*

Synopsis	Import policy that filters IGMP packets
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping import-policy <i>named-item</i>
Tree	import-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum multicast groups
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
----------	--

Context	configure service pw-template <i>pw-template-name</i> igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping send-queries <i>boolean</i>

Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version keyword

Synopsis	IGMP version
Context	configure service pw-template <i>pw-template-name</i> igmp-snooping version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
Context	configure service pw-template <i>pw-template-name</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

filter

Synopsis	Enter the filter context
Context	configure service pw-template <i>pw-template-name</i> ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip *named-item-64*

Synopsis	IPv4 filter policy name
Context	configure service pw-template <i>pw-template-name</i> ingress filter ip <i>named-item-64</i>

Tree	ip
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *named-item-64*

Synopsis	IPv6 filter policy name
Context	configure service pw-template <i>pw-template-name</i> ingress filter ipv6 <i>named-item-64</i>
Tree	ipv6
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *named-item-64*

Synopsis	MAC filter policy name
Context	configure service pw-template <i>pw-template-name</i> ingress filter mac <i>named-item-64</i>
Tree	mac
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure service pw-template <i>pw-template-name</i> ingress qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

network

Synopsis	Enter the network context
Context	configure service pw-template <i>pw-template-name</i> ingress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure service pw-template <i>pw-template-name</i> ingress qos network fp-redirect-group
Tree	fp-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-name *named-item*

Synopsis	Name of the forwarding plane queue group template
Context	configure service pw-template <i>pw-template-name</i> ingress qos network fp-redirect-group group-name <i>named-item</i>
Tree	group-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

instance *number*

Synopsis	Instance for FP ingress queue group
Context	configure service pw-template <i>pw-template-name</i> ingress qos network fp-redirect-group instance <i>number</i>
Tree	instance
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name *named-item-64*

Synopsis	Network policy ID
Context	configure service pw-template <i>pw-template-name</i> ingress qos network policy-name <i>named-item-64</i>
Tree	policy-name
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

l2pt

Synopsis	Enter the l2pt context
Context	configure service pw-template <i>pw-template-name</i> l2pt

cdp boolean

Synopsis	Enable Cisco discovery protocol
Context	configure service pw-template pw-template-name l2pt termination protocols cdp boolean
Tree	cdp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dtp boolean

Synopsis	Enable dynamic trunking protocol
Context	configure service pw-template pw-template-name l2pt termination protocols dtp boolean
Tree	dtp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pagp boolean

Synopsis	Enable port aggregation protocol
Context	configure service pw-template pw-template-name l2pt termination protocols pagp boolean
Tree	pagp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stp boolean

Synopsis	Enable all spanning tree protocols
Context	configure service pw-template pw-template-name l2pt termination protocols stp boolean
Tree	stp

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udld *boolean*

Synopsis	Enable unidirectional link detection
Context	configure service pw-template <i>pw-template-name</i> l2pt termination protocols udld <i>boolean</i>
Tree	udld
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vtp *boolean*

Synopsis	Enable virtual trunk protocol
Context	configure service pw-template <i>pw-template-name</i> l2pt termination protocols vtp <i>boolean</i>
Tree	vtp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-mtu *number*

Synopsis	MTU the SDP can transmit
Context	configure service pw-template <i>pw-template-name</i> path-mtu <i>number</i>
Tree	path-mtu
Description	<p>This command configures the path MTU that the SDP can transmit.</p> <p>When an SDP created using the PW template is in use by a service, the path MTU cannot be modified.</p> <p>When not configured, the path MTU is derived from the network interface IP MTU.</p>
Range	576 to 9782
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

provisioned-sdp *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Provisioned SDP type
Context	configure service pw-template <i>pw-template-name</i> provisioned-sdp <i>keyword</i>
Tree	provisioned-sdp
Options	use, prefer
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-template-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PW template ID
Context	configure service pw-template <i>pw-template-name</i> pw-template-id <i>number</i>
Tree	pw-template-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sdp-exclude [[group-name](#)] *reference*

Synopsis	Add a list entry for sdp-exclude
Context	configure service pw-template <i>pw-template-name</i> sdp-exclude <i>reference</i>
Tree	sdp-exclude
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] reference

Synopsis	SDP group name
Context	configure service pw-template <i>pw-template-name</i> sdp-exclude <i>reference</i>
Tree	sdp-exclude

Synopsis	Administrative state of STP
Context	configure service pw-template <i>pw-template-name</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-edge *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	configure service pw-template <i>pw-template-name</i> stp auto-edge <i>boolean</i>
Tree	auto-edge
Description	<p>When configured to true, the router automatically detects the edge port characteristics of the SAP or spoke SDP. The STP concludes there is no bridge behind the spoke SDP, the OPER_EDGE variable is dynamically set to true. If a BPDU is received, the OPER_EDGE variable is dynamically set to false.</p> <p>When configured to false, the router disables automatic detection.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	configure service pw-template <i>pw-template-name</i> stp edge-port <i>boolean</i>
Tree	edge-port

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service pw-template <i>pw-template-name</i> stp link-type <i>keyword</i>
Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-cost *number*

Synopsis	Configure path-cost
Context	configure service pw-template <i>pw-template-name</i> stp path-cost <i>number</i>
Tree	path-cost
Range	1 to 200000000
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Configure STP priority
Context	configure service pw-template <i>pw-template-name</i> stp priority <i>number</i>
Tree	priority
Range	0 to 255
Default	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

root-guard *boolean*

Synopsis	Enable/disable STP root-guard
Context	configure service pw-template <i>pw-template-name</i> stp root-guard <i>boolean</i>
Tree	root-guard
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-type *keyword*

Synopsis	Virtual circuit type associated with the SDP bind
Context	configure service pw-template <i>pw-template-name</i> vc-type <i>keyword</i>
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-vc-tag *number*

Synopsis	VLAN VC tag
Context	configure service pw-template <i>pw-template-name</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sdp [[sdp-id](#)] *number*

Synopsis	Enter the sdp list instance
Context	configure service sdp <i>number</i>
Tree	sdp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sdp-id] *number*

Synopsis	Service Destination Point (SDP) ID
Context	configure service sdp number
Tree	sdp
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting-policy *reference*

Synopsis	Accounting policy associated with an SDP
Context	configure service sdp number accounting-policy reference
Tree	accounting-policy
Description	This command associates an accounting policy with an SDP. When unconfigured, there is no accounting policy applied to the SDP.
Reference	configure log accounting-policy number
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the SDP
Context	configure service sdp number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adv-mtu-override *boolean*

Synopsis	Override the advertised VC-type MTU using the SDP ID
Context	configure service sdp number adv-mtu-override boolean

Tree	adv-mtu-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-fragmentation *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	configure service sdp <i>number</i> allow-fragmentation <i>boolean</i>
Tree	allow-fragmentation
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-tunnel *boolean*

Synopsis	Allow use of BGP route tunnels to reach far-end nodes
Context	configure service sdp <i>number</i> bgp-tunnel <i>boolean</i>
Tree	bgp-tunnel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

booking-factor *number*

Synopsis	Percentage of SDP max available bandwidth for VLL CAC
Context	configure service sdp <i>number</i> booking-factor <i>number</i>
Tree	booking-factor
Range	0 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

collect-stats *boolean*

Synopsis	Collect accounting statistics for this SDP
Context	configure service sdp number collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delivery-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Delivery type used by the SDP
Context	configure service sdp number delivery-type <i>keyword</i>
Tree	delivery-type
Options	gre, mpls, l2tpv3, gre-eth-bridged
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service sdp number description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

far-end

Synopsis	Enter the far-end context
Context	configure service sdp number far-end

Tree	far-end
Description	Commands in this context configure the system IP address of the far-end destination router for the SDP that is the termination point for a service.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the far-end destination router
Context	configure service sdp number far-end ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Description	This command configures the system IPv4 or IPv6 address of the far-end destination router for the SDP that is the termination point for a service.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

keep-alive

Synopsis	Enter the keep-alive context
Context	configure service sdp number keep-alive
Tree	keep-alive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of keepalive mechanism for the SDP
Context	configure service sdp number keep-alive admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time period between SDP keepalive messages
Context	configure <i>service sdp number keep-alive hello-time number</i>
Tree	<i>hello-time</i>
Range	1 to 3600
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-down-time *number*

Synopsis	Minimum time the SDP remains in the down state
Context	configure <i>service sdp number keep-alive hold-down-time number</i>
Tree	<i>hold-down-time</i>
Range	0 to 3600
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-drop-count *number*

Synopsis	Maximum failed request attempts when SDP is down
Context	configure <i>service sdp number keep-alive maximum-drop-count number</i>
Tree	<i>maximum-drop-count</i>
Range	1 to 5

Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-length *number*

Synopsis	Length of the keepalive request messages transmitted
Context	configure service sdp <i>number</i> keep-alive message-length <i>number</i>
Tree	message-length
Range	40 to 9198
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time SDP waits before tearing down the session
Context	configure service sdp <i>number</i> keep-alive timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable LDP-signaled LSPs
Context	configure service sdp <i>number</i> ldp <i>boolean</i>
Tree	ldp
Default	false
Introduced	25.3.R2

Platforms7705 SAR Gen 2

local-end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local end address of the tunnel defined by the SDP
Context	configure service sdp number local-end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-end
Description	<p>This command configures the local-end address of the following SDP encapsulation types:</p> <ul style="list-style-type: none">IPv6 address of the termination point of an SDP of encapsulation type l2tpv3 (L2TP v3 tunnel)IPv4/IPv6 source address of an SDP of encapsulation type gre-eth-bridged (L2oGRE SDP)IPv4/IPv6 source address of an SDP of encapsulation type gre (GRE SDP)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp [**lsp-name**] *named-item-64*

Synopsis	Add a list entry for lsp
Context	configure service sdp number lsp named-item-64
Tree	lsp
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[lsp-name] *named-item-64*

Synopsis	LSP name to associate with the SDP
Context	configure service sdp number lsp named-item-64
Tree	lsp
String length	1 to 64

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

Synopsis	Metric used in tunnel table manager for decision making
Context	configure service sdp <i>number</i> metric <i>number</i>
Tree	metric
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mixed-lsp-mode

Synopsis	Enable the mixed-lsp-mode context
Context	configure service sdp <i>number</i> mixed-lsp-mode
Tree	mixed-lsp-mode
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

revert-time (*number* | *keyword*)

Synopsis	Delay before SDP can revert to higher priority LSP type
Context	configure service sdp <i>number</i> mixed-lsp-mode revert-time (<i>number</i> <i>keyword</i>)
Tree	revert-time
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

network-domain *reference*

Synopsis	Network domain name associated with the SDP
Context	configure service sdp number network-domain reference
Tree	network-domain
Reference	configure router named-item-64 network-domains network-domain named-item
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-mtu *number*

Synopsis	Maximum Transmission Unit (MTU) the SDP can transmit
Context	configure service sdp number path-mtu number
Tree	path-mtu
Range	576 to 9782
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sdp-group [[group-name](#)] *reference*

Synopsis	Add a list entry for sdp-group
Context	configure service sdp number sdp-group reference
Tree	sdp-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[group-name](#)] *reference*

Synopsis	SDP administrative group name
Context	configure service sdp number sdp-group reference
Tree	sdp-group
Reference	configure service sdp-group group-name named-item
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

signaling *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Signaling protocol used to obtain pseudowire labels

Context **configure** service sdp number signaling keyword

Tree signaling

Description This command specifies the signaling protocol used to obtain the ingress and egress pseudowire labels in frames transmitted and received on the SDP. The signaling value can only be changed while the administrative status of the SDP is down. Additionally, the signaling can only be changed on an SDP if the SDP is not in use by BGP-AD or BGP-VPLS. BGP signaling can only be enabled if the SDP does not already have pseudowires signaled over it. Also, BGP signaling is not supported with mixed mode LSP SDPs.

Note: If the **tldp** option is selected as the mechanism for exchanging service labels over an MPLS or GRE SDP and the T-LDP session is automatically established, an explicit T-LDP session that is subsequently configured takes precedence over the automatic T-LDP session. However, if the explicit, manually-configured session is then removed, the system does not revert to the automatic session and the automatic session is also deleted. To address this, recreate the T-LDP session by using the **admin-state** command to administratively disable and then enable the SDP.

Options off, tldp, bgp

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

sr-isis *boolean*

Synopsis Enable Segment Routing for IS-IS

Context **configure** service sdp number sr-isis boolean

Tree sr-isis

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

sr-ospf boolean

Synopsis	Enable an MPLS SDP of LSP type OSPF Segment Routing
Context	configure service sdp <i>number</i> sr-ospf <i>boolean</i>
Tree	sr-ospf
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-far-end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System address of the far-end router for the SDP
Context	configure service sdp <i>number</i> tunnel-far-end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	tunnel-far-end
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-vc-etype etype-value

Synopsis	VLAN VC Ethertype
Context	configure service sdp <i>number</i> vlan-vc-etype <i>etype-value</i>
Tree	vlan-vc-etype
String length	5 to 6
String format	'etype-value' must be 0x0600-0xFFFF (e-type range)
Default	0x8100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weighted-ecmp boolean

Synopsis	Allow weighted load-balancing on an SDP
----------	---

Context	configure service sdp <i>number weighted-ecmp boolean</i>
Tree	weighted-ecmp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sdp-group

Synopsis	Enter the sdp-group context
Context	configure service sdp-group
Tree	sdp-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-name [[group-name](#)] *named-item*

Synopsis	Enter the group-name list instance
Context	configure service sdp-group group-name <i>named-item</i>
Tree	group-name
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *named-item*

Synopsis	SDP administrative group name
Context	configure service sdp-group group-name <i>named-item</i>
Tree	group-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Unique group value associated with the SDP admin group
Context	configure service sdp-group <i>group-name</i> <i>named-item</i> value <i>number</i>
Tree	value
Range	0 to 31
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system

Synopsis	Enter the system context
Context	configure service system
Tree	system
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp

Synopsis	Enter the bgp context
Context	configure service system bgp
Tree	bgp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn

Synopsis	Enter the evpn context
Context	configure service system bgp evpn
Tree	evpn
Description	Commands in this context configure BGP EVPN options.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ad-per-es-route

Synopsis	Enter the ad-per-es-route context
Context	configure service system bgp evpn ad-per-es-route
Tree	ad-per-es-route
Description	<p>Commands in this context configure how Ethernet AD per-ES routes are generated.</p> <p>The system can either send a separate Ethernet AD per-ES route per service, or an Ethernet AD per-ES route aggregating the route targets for multiple services. While both alternatives can interoperate, RFC 7432 states that the EVPN AD per-ES route must be sent with a set of route targets corresponding to all the EVIs defined on the ES. SR OS supports both options.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

extended-evi-range *boolean*

Synopsis	Reserve extended RD comm-values for AD per-ES routes
Context	configure service system bgp evpn ad-per-es-route extended-evi-range <i>boolean</i>
Tree	extended-evi-range
Description	<p>When configured to true, the system reserves the RD comm-values 1 to 65535 out of the type 1 RD that is used for AD per-ES routes. If ad-per-es-route route-target-type is also configured to evi-route-target-set, the system can pack the maximum number of EVI route targets in the AD per-ES routes.</p> <p>When configured to false, this command only reserves comm-values 1 to 512.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-distinguisher-ip-address *ipv4-address*

Synopsis	RD IP address for EVPN AD per-ES routes
Context	configure service system bgp evpn ad-per-es-route route-distinguisher-ip-address <i>ipv4-address</i>
Tree	route-distinguisher-ip-address

Description	This command configures the IP address part of the route distinguisher used for AD per-ES routes.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-target-type *keyword*

Synopsis	Method for the AD per-ES route advertisement
Context	configure service system bgp evpn ad-per-es-route route-target-type <i>keyword</i>
Tree	route-target-type
Description	<p>This command configures the method used to advertise the AD per-ES routes.</p> <p>The evi-route-target option advertises a separate AD per-ES route per service.</p> <p>The evi-route-target-set option advertises a set of AD per-ES routes aggregating the route targets for all the services in the ES. A single AD per-ES route with the associated RD (ip-address:1) and a set of EVI route targets are advertised (up to the maximum). When a significant number of EVIs are defined in the ES (hence, the number of route targets), the system sends more than one route. For example:</p> <ul style="list-style-type: none"> AD per-ES route for EVI route target set 1 is sent with RD ip-address:1 AD per-ES route for EVI route target set 2 is sent with RD ip-address:2
Options	evi-route-target – Advertise a separate AD per-ES route per service evi-route-target-set – Advertise a set of AD per-ES routes for all ES services
Default	evi-route-target
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ad-per-evi-routes

Synopsis	Enter the ad-per-evi-routes context
Context	configure service system bgp evpn ad-per-evi-routes
Tree	ad-per-evi-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

attribute-propagation *boolean*

Synopsis	Enable propagation of BGP path attributes
Context	configure service system bgp evpn ad-per-evi-routes attribute-propagation <i>boolean</i>
Tree	attribute-propagation
Description	<p>When configured to true, the router propagates the attributes in multi-instance Epipe services.</p> <p>When configured to false, the router disables the propagation of the attributes, including D-PATH, even if the domain-id is configured in the service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-path-selection *boolean*

Synopsis	Enable BGP path selection
Context	configure service system bgp evpn ad-per-evi-routes bgp-path-selection <i>boolean</i>
Tree	bgp-path-selection
Description	<p>When configured to true, the router compares the received EVPN VPWS AD per-EVI routes based on the BGP path attributes.</p> <p>The attribute-propagation command must be configured to true.</p> <p>When configured to false, the router does not compare the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

d-path-ignore *boolean*

Synopsis	Ignore D-PATH for BGP path selection
Context	configure service system bgp evpn ad-per-evi-routes d-path-ignore <i>boolean</i>
Tree	d-path-ignore
Description	<p>When configured to true, the router ignores the Domain PATH attribute (D-PATH) when BGP computes the best path selection for received routes.</p> <p>When configured to false, the router considers the D-PATH length and value as a tiebreaker in determining the best-path selection. In accordance with <i>draft-sr-bess-evpn-dpath</i>, the router compares the D-PATH attribute received in AD per-EVI routes with the same key (same or different RD) as follows:</p>

- Routes with the shortest D-PATH are preferred; therefore, routes not tied for the shortest D-PATH are removed. Routes without D-PATH are considered zero-length D-PATH.
- Routes with the numerically lowest left-most Domain-ID are preferred; therefore, routes not tied for the numerically lowest left-most Domain-ID are removed from consideration.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ethernet-segment [[ethernet-segment-name](#)] *named-item*

Synopsis	Enter the ethernet-segment list instance
Context	configure service system bgp evpn ethernet-segment <i>named-item</i>
Tree	ethernet-segment
Description	Commands in this context configure an ES instance.
Max. instances	20480
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ethernet-segment-name] *named-item*

Synopsis	ES name
Context	configure service system bgp evpn ethernet-segment <i>named-item</i>
Tree	ethernet-segment
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ac-df-capability *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AC-influenced DF election capability
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> ac-df-capability <i>keyword</i>
Tree	ac-df-capability
Description	<p>This command configures the AC-influenced DF election capability (AC-DF) into the DF election for the ES.</p> <p>AC-DF supports EVPN AD per EVI/ES routes for a specific PE, to ensure the PE is included in the candidate DF election list.</p> <p>When AC-DF is excluded on a specific ES, the presence or absence of the AD per EVI/ES routes from the ES peers does not modify the candidate DF election list for the ES. Excluding the AC-DF is recommended in ESs that use an operational group monitored by the access LAG to signal the standby LACP or to power off.</p>
Options	include, exclude
Default	include
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the ES instance
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>This command changes the administrative status of the ES.</p> <p>The ES can be enabled only when the ESI, multihoming mode, and a LAG or port association are configured. If the ES or the corresponding LAG or port is disabled, the ES route and the AD per-ES routes are withdrawn. The ES must be administratively disabled and reenabled for changes to take effect.</p>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-ifl-host-ad-routes

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the advertise-ifl-host-ad-routes context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> advertise-ifl-host-ad-routes
Tree	advertise-ifl-host-ad-routes
Description	<p>Commands in this context enable the AD per-EVI and AD per-ES routes for advertisement in the VPRN and BGP EVPN instances with R-VPLS services attached to the Ethernet segment.</p> <p>The AD per-EVI routes for the VPRNs contain the route distinguisher, route targets, and label or VNI of the VPRN BGP EVPN instance. The instance is specified by using the bgp-evpn-instance command option. The AD per-ES routes for the VPRNs contain the route distinguisher and route targets of the VPRN BGP EVPN instance. On the remote PEs, the reception of EVPN-IFL-HOST routes with an ESI matching the ESI of the VPRN AD per-EVI or -ES routes, enables the IP aliasing procedures for EVPN-IFL-HOST routes.</p>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

bgp-evpn-instance *number*

Synopsis	EVPN interface-less VPRN instance using ES
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> advertise-ifl-host-ad-routes bgp-evpn-instance <i>number</i>
Tree	bgp-evpn-instance
Description	This command specifies the EVPN interface-less BGP instance from which the label or VNI, route distinguisher, and route targets are taken when advertising the AD per-EVI and AD per-ES routes (except for the VNI or label in AD per-ES routes).
Range	1
Default	1
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

route-tag *number*

Synopsis	Route tag added to VPRN AD per-EVI routes of ES
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> advertise-ifl-host-ad-routes route-tag <i>number</i>
Tree	route-tag
Description	This command configures the router with a tag value for VPRN AD per-EVI routes. This value can be matched on export policies. VPRN AD per-ES routes are not associated with this route-tag.
Range	1 to 255
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

association

Synopsis	Enter the association context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association

Platforms	7705 SAR Gen 2

port [[port-id](#)] *reference*

Synopsis	Enter the port list instance
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association port <i>reference</i>
Tree	port
Description	Commands in this context configure the port associated with the ES. A port can be associated with an ES configured with the all-active multihoming mode only. Only Ethernet ports can be added to an ES.
Max. instances	1
Notes	The following elements are part of a choice: lag , network-interconnect-vxlan , port , pw-port , sdp , or vprn-next-hop .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[port-id] *reference*

Synopsis	Port multihomed with the ES entry
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association port <i>reference</i>
Tree	port
Description	This command configures the port ID associated with the ES.
Reference	configure port <i>port</i>

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

virtual-ranges

Synopsis	Enter the virtual-ranges context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association port reference virtual-ranges
Tree	virtual-ranges
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dot1q

Synopsis	Enter the dot1q context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association port reference virtual-ranges dot1q
Tree	dot1q
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

q-tag [[start](#)] (*number* | *keyword*)

Synopsis	Enter the q-tag list instance
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association port reference virtual-ranges dot1q q-tag (<i>number</i> <i>keyword</i>)
Tree	q-tag
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[start] (*number* | *keyword*)

Synopsis	Lower bound of the q-tag VLAN ID range

Range	0 to 4094
Options	tag-*, null
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn-next-hop [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the vprn-next-hop list instance
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association vprn-next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	vprn-next-hop
Description	Commands in this list instance are used to associate an IPv4 or IPv6 address to an Ethernet segment. A virtual Ethernet segment using this VPRN next-hop association represents a Layer 3 Ethernet segment as described in <i>draft-sajassi-bess-evpn-ip-aliasing</i> . This IP address must be installed in the route table of the VPRN service identified by the EVI so that the Auto-Discovery per-ES or EVI routes for the ES are advertised. Only one VPRN next hop is supported per Ethernet segment.
Max. instances	1
Notes	The following elements are part of a choice: lag , network-interconnect-vxlan , port , pw-port , sdp , or vprn-next-hop .
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VPRN next-hop address
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association vprn-next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	vprn-next-hop
Notes	This element is part of a list key.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

virtual-ranges

Synopsis	Enter the virtual-ranges context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association vpnnext-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) virtual-ranges
Tree	virtual-ranges
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

evi [[start](#)] *number*

Synopsis	Add a list entry for evi
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association vpnnext-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) virtual-ranges evi <i>number</i>
Tree	evi
Max. instances	1
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

[\[start\]](#) *number*

Synopsis	EVI range start information
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> association vpnnext-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) virtual-ranges evi <i>number</i>
Tree	evi
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

auto-esi *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVPN ES auto-ESI type
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> auto-esi <i>keyword</i>
Tree	auto-esi
Description	This command configures the auto-ESI type to use in the ES. When configured to none , a manual ESI must be configured. When type-1 is configured, a manual ESI cannot be configured and the ESI is automatically derived in accordance with the RFC 7432 ESI type 1 definition.
Options	none, type-1
Default	none
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

df-election

Synopsis	Enter the df-election context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election
Tree	df-election
Description	Commands in this context configure DF election for the ES.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

es-activation-timer *number*

Synopsis	Activation timer per ES
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election es-activation-timer <i>number</i>
Tree	es-activation-timer
Description	This command configures the ES activation timer for a specified ES. This timer delays the activation of a specified ES on a PE that has been elected as the DF. The SAP or SDP binding associated to an ES is activated (in case of single-active multihoming) or added to the default multicast list (in case of all-active multihoming) only when this timer has expired. If this command is not configured, the system uses the global value configured for the configure redundancy bgp-evpn ethernet-segment activation-timer command.
Range	0 to 100
Units	seconds
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

manual

Synopsis	Enter the manual context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual
Tree	manual
Description	<p>Commands in this context manually configure the service-carving algorithm, that is, the EVIs for which the PE is DF.</p> <p>The following service-carving manual algorithms are used for DF election:</p> <ul style="list-style-type: none"> <p>manual non-preference</p> <p>When the preference command is not configured, the algorithm uses the EVI range to determine the primary PE for the configured EVIs. The manual non-preference algorithm only supports two PEs in the ES.</p> <p>manual preference-based</p> <p>When the preference command is configured, the algorithm uses the configured value to determine the DF election. For EVIs not defined in the range, the highest-preference algorithm is used. For configured EVIs, the lowest-preference algorithm is used.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evi [[start](#)] *number*

Synopsis	Enter the evi list instance
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual evi <i>number</i>
Tree	evi
Description	Commands in this context configure the list of EVI ranges for which to use the PE as the primary DF, or to use the lowest preference algorithm.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[start](#)] *number*

Synopsis	Lower bound of EVI range for which the PE is primary
----------	--

Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual <i>evi number</i>
Tree	<i>evi</i>
Description	This command configures the initial EVI value of the range.
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end number

Synopsis	Upper bound of EVI range for which the PE is primary
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual <i>evi number end number</i>
Tree	<i>end</i>
Description	This command configures the end EVI value of the range. If not configured, only the individual start value is considered.
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference

Synopsis	Enable the preference context
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual <i>preference</i>
Tree	<i>preference</i>
Description	Commands in this context configure the preference for the ES and determine the DF election mode. Enabling this context ensures that the PE runs the preference-based DF election algorithm.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	DF election mode
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual preference mode <i>keyword</i>
Tree	mode
Description	<p>This command configures the DF election mode for the ES.</p> <p>A revertive ES takes over an existing active DF PE when the ES comes back after a failure, while a non-revertive ES does not.</p>
Options	revertive, non-revertive
Default	revertive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	Preference used to elect the DF
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election manual preference value <i>number</i>
Tree	value
Description	<p>This command configures the preference value used for the PE in the ES, which modifies the default value. The ES is not required to be administratively disabled to modify this command during maintenance operations.</p>
Range	0 to 65535
Default	32767
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-carving-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service-carving mode for the ES
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> df-election service-carving-mode <i>keyword</i>
Tree	service-carving-mode
Description	<p>This command configures the service-carving mode, which determines how the DF is elected for a specified ES and service.</p> <p>The auto mode is the service-carving algorithm defined in RFC 7432. The DF for the service is calculated based on the modulo function of the service (identified by either the EVI or ISID) and the number of PEs.</p> <p>In manual mode, the DF is elected based on the manual configuration added in the df-election manual context.</p> <p>In off mode, all the services elect the same DF PE (assuming the same PEs are active for all the configured services). The PE with the lowest IP is elected as DF for the ES.</p>
Options	auto – Elect the DF based on the RFC 7432 algorithm manual – Elect the DF based on the manual configuration off – Elect the same DF with the lowest IP for all services
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

esi ethernet-segment-id-mac-based

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ESI to signal in BGP-EVPN routes
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> esi ethernet-segment-id-mac-based
Tree	esi
Description	This command configures the 10-byte ESI associated with the ES that is signaled in the BGP-EVPN routes. Reserved ESI values (0 and MAX-ESI) are not allowed.
String format	'ethernet-segment-id-mac-based' must be 10-byte ESI hex (0x... or colon/hyphen octets)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

layer-3-neighbor-synchronization *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enables Layer 3 neighbor synchronization
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> layer-3-neighbor-synchronization <i>boolean</i>
Tree	layer-3-neighbor-synchronization
Description	When configured to true , the router synchronizes ARP and neighbor entries across all PEs attached to the same CE that use a single LAG. When configured to false , Layer 3 neighbor synchronization is disabled.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

multi-homing-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode of the Ethernet segment
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> multi-homing-mode <i>keyword</i>
Tree	multi-homing-mode
Description	This command configures the multihoming mode for the Ethernet segment as defined in RFC 7432. By default, the use of ESI labels is enabled for all-active , single-active , and port-active , as defined in RFC 7432. For single-active and port-active multihoming, the ESI label is used to avoid transient loops. When single-active-no-esi-label , all-active-no-esi-label , or port-active-no-esi-label is specified, the system does not allocate a label for the ESI and consequently advertises ESI label 0 to peers. Even if the ESI is configured not to send the ESI label, upon receiving an ESI label from a peer, the PE always sends traffic to that peer using the received ESI label.
Options	none – Keyword single-active – Keyword single-active-no-esi-label – Keyword all-active – Keyword

	all-active-no-esi-label – Keyword port-active – Configures port-active mode port-active-no-esi-label – Configures port-active mode with no ESI label
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group ID
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> oper-group reference
Tree	oper-group
Description	<p>This command adds the ES as a member of the operational group.</p> <p>The state of the operational group depends on the state of the SAPs contained in the ES. The operational group transitions to up if at least one SAP in the ES is up. The operational group goes down when all the associated SAPs are operationally down. The ES operational group is monitored on the LAG associated with the ES, along with single-active multihoming, so that the NDF state can be signaled to the CE by LAG standby signaling.</p>
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

orig-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Originating IP address advertised in the ES route
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> orig-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	orig-ip
Description	<p>This command configures the Originating IP field advertised in the ES route for a specific ES. By default, the Originating IP is the system IP address of the PE.</p> <p>This command configuration affects the following cases:</p> <ul style="list-style-type: none">•

When adding local ES routes, this command changes how the ES routes are added to the candidate list; the configured IP address is added, instead of the system IP address.

-

When advertising local ES routes, the configured IP address is used for the originating IP address of the route.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Next-hop IP address for ES and AD per ES routes
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> route-next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	route-next-hop
Description	This command configures the next hop to the configured IP address value for the following routes: <ul style="list-style-type: none">• ES <ul style="list-style-type: none">• AD per-ES (irrespective of the evi-route-target-set or evi-route-target configuration)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ES type
Context	configure service system bgp evpn ethernet-segment <i>named-item</i> type <i>keyword</i>
Tree	type
Description	This command configures the ES type.

The **virtual** option specifies that the ES is virtual and is associated with logical interfaces, in addition to ports and LAGs.

Options	none, virtual
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-prefix-routes

Synopsis	Enter the ip-prefix-routes context
Context	configure service system bgp evpn ip-prefix-routes
Tree	ip-prefix-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-ful

Synopsis	Enter the interface-ful context
Context	configure service system bgp evpn ip-prefix-routes interface-ful
Tree	interface-ful
Description	Commands in this context configure IP prefix routes for Interface-ful (IFF) configurations.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

attribute-uniform-propagation *boolean*

Synopsis	Enable attribute uniform propagation
Context	configure service system bgp evpn ip-prefix-routes interface-ful attribute-uniform-propagation <i>boolean</i>
Tree	attribute-uniform-propagation
Description	<p>When configured to true, the system enables the uniform propagation of BGP attributes for EVPN-IFF routes.</p> <p>When configured to false, the system re-originates the BGP path attributes when propagating EVPN-IFF routes into other inter-subnet forwarding families.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

bgp-path-selection *boolean*

Synopsis	Enable BGP path selection
Context	configure service system bgp evpn ip-prefix-routes interface-ful bgp-path-selection <i>boolean</i>
Tree	bgp-path-selection
Description	<p>When configured to true, the system enables BGP path selection for EVPN-IFF routes. The EVPN-IFF routes are ordered and selected in a similar manner as IP-VPN or EVPN-IFL routes, that is, based on the regular BGP path selection process.</p> <p>When configured to false, the system orders EVPN-IFF routes based on their {R-VPLS Ifindex, RD, Ethernet Tag}. For example, if two EVPN-IFF routes with different Route Distinguishers (RDs) are received for the same prefix on the same R-VPLS, the route with the lowest RD is selected.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

d-path-length-ignore *boolean*

Synopsis	Ignore the D-PATH length when using BGP path selection
Context	configure service system bgp evpn ip-prefix-routes interface-ful d-path-length-ignore <i>boolean</i>
Tree	d-path-length-ignore
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls

Synopsis	Enter the mpls context
Context	configure service system bgp evpn mpls
Tree	mpls
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

multicast-leave-sync-propagation *number*

Synopsis	Multicast leave group synchronization delay
Context	configure service system bgp evpn multicast-leave-sync-propagation <i>number</i>
Tree	multicast-leave-sync-propagation
Description	<p>This command configures the additional amount of time that the system waits before removing a multicast state that was synchronized in an Ethernet Segment via Multicast Join or Leave Synch routes. This value represents a delta corresponding to the time it takes for a BGP advertisement to propagate to ES peers.</p> <p>The node triggering the route computes the maximum response time as the product of the locally configured values, Last Member Query Count and Last Member Query Interval, and adds the delta value to the maximum response time. The query count value is configured in the configure services vrpn igmp robust-count command. The query interval value is taken from the configure service vpls sap igmp-snooping query-last-member-interval or the configure service vpls spoke-sdp igmp-snooping query-last-member-interval configuration, depending on the Ethernet Segment.</p> <p>Increasing the maximum response time by this value can help minimize the churn of removing and recreating the state on the node.</p> <p>This value should be configured consistently in all ES peers.</p>
Range	0 to 300
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-distinguisher *vpn-route-distinguisher*

Synopsis	RD for ES routes
Context	configure service system bgp evpn route-distinguisher <i>vpn-route-distinguisher</i>
Tree	route-distinguisher
Description	<p>This command configures RD component that is signaled in the MP-BGP NLRI for EVPN corresponding to the base EVPN instance (for ES routes). When this command is not configured, the system uses the system IP address as the default RD.</p>
String format	'vpn-route-distinguisher' must be IP:comm or AS-number pair per RD rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-auto-rd-range

Synopsis	Enter the bgp-auto-rd-range context
Context	configure service system bgp-auto-rd-range
Tree	bgp-auto-rd-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community-value

Synopsis	Enter the community-value context
Context	configure service system bgp-auto-rd-range community-value
Tree	community-value
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end number

Synopsis	Upper bound of BGP route distinguisher community range
Context	configure service system bgp-auto-rd-range community-value <i>end number</i>
Tree	end
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start number

Synopsis	Lower bound of BGP route distinguisher community range
Context	configure service system bgp-auto-rd-range community-value <i>start number</i>
Tree	start
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address *ipv4-address*

Synopsis	IP address used for selecting the route distinguisher
Context	configure service system bgp-auto-rd-range ip-address <i>ipv4-address</i>
Tree	ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fdb

Synopsis	Enter the fdb context
Context	configure service system fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

table-size *number*

Synopsis	Maximum FDB entries in the system
Context	configure service system fdb table-size <i>number</i>
Tree	table-size
Description	<p>This command configures the maximum system FDB table size, which is dependent on the chassis type.</p> <p>CPMs with at least 16 GB of memory are required when exceeding 500 000 MAC addresses in a system. This command cannot be set to a value lower than the default, which is chassis-dependent. The maximum system FDB table size also limits the maximum FDB table size of any card within the system.</p> <p>The command default depends on the chassis type and available memory.</p>
Range	4095 to 2047999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpn-gre-source-ip *ipv4-unicast-address*

Synopsis	VPN GRE source ip-address
----------	---------------------------

Context	configure service system vpn-gre-source-ip <i>ipv4-unicast-address</i>
Tree	vpn-gre-source-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpls [**service-name**] *service-name*

Synopsis	Enter the vpls list instance
Context	configure service vpls <i>service-name</i>
Tree	vpls
Description	Commands in this context create or edit a Virtual Private LAN Services (VPLS) instance.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[service-name] *service-name*

Synopsis	Administrative service name
Context	configure service vpls <i>service-name</i>
Tree	vpls
Description	<p>This command creates or edits a service instance.</p> <p>When a service is created, the customer keyword and <i>customer-id</i> must be specified and associates the service with a customer. The <i>customer-id</i> must already exist having been created using the customer command in the service context. When a service is created with a customer association, it is not possible to edit the customer association. The service must be deleted and re-created with a new customer association.</p> <p>When a service is created, the use of the customer<i>customer-id</i> is optional to navigate into the service configuration context. If attempting to edit a service with the incorrect <i>customer-id</i> results in an error.</p> <p>This command specifies the unique service identification number identifying the service in the service domain. This ID must be unique to this service and may not be used for any other service of any type. The service ID must be the same number used for every platform on which this service is defined.</p>
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the service

Context **configure** *service vpls service-name* **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

bgp [**bgp-instance**] *number*

Synopsis Enter the **bgp** list instance

Context **configure** *service vpls service-name* **bgp** *number*

Tree **bgp**

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[bgp-instance] *number*

Synopsis BGP instance

Context **configure** *service vpls service-name* **bgp** *number*

Tree **bgp**

Range 1 to 2

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

adv-service-mtu *number*

Synopsis Advertised service MTU value

Context **configure** *service vpls service-name* **bgp** *number* **adv-service-mtu** *number*

Tree **adv-service-mtu**

Description	This command configures the MTU signaled value used in the BGP for BGP-VPLS service and in the LDP for BGP-AD service. The router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-template-binding [\[pw-template-name\]](#) *reference*

Synopsis	Enter the pw-template-binding list instance
Context	configure service vpls <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i>
Tree	pw-template-binding
Max. instances	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[pw-template-name] *reference*

Synopsis	Policy name
Context	configure service vpls <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i>
Tree	pw-template-binding
Reference	configure service pw-template <i>pw-template-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-rt *route-target*

Synopsis	Import route-target communities
Context	configure service vpls <i>service-name</i> bgp <i>number</i> pw-template-binding <i>reference</i> import-rt <i>route-target</i>
Tree	import-rt
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules

Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure service vpls <i>service-name</i> bgp number pw-template-binding <i>reference</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group
Context	configure service vpls <i>service-name</i> bgp number pw-template-binding <i>reference</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon-group *named-item*

Synopsis	Split horizon group
Context	configure service vpls <i>service-name</i> bgp number pw-template-binding <i>reference</i> split-horizon-group <i>named-item</i>
Tree	split-horizon-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

Synopsis High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI

Context **configure** *service vpls* *service-name* *bgp* *number* *route-distinguisher* (*keyword* | *vpn-route-distinguisher*)

Tree *route-distinguisher*

String format 'vpn-route-distinguisher' must be IP:comm or AS-number pair per RD rules

Options auto-rd

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

route-target

Synopsis Enter the **route-target** context

Context **configure** *service vpls* *service-name* *bgp* *number* *route-target*

Tree *route-target*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

export *route-target*

Synopsis Extended community name for default import policy

Context **configure** *service vpls* *service-name* *bgp* *number* *route-target* **export** *route-target*

Tree *export*

String length 10 to 28

String format 'route-target-32' must be target:(IPv4:comm|AS pairs|IEEE MAC) per ext-community rules

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

import *route-target*

Synopsis Extended community name for default import policy

Context **configure** *service vpls* *service-name* *bgp* *number* *route-target* **import** *route-target*

Tree	import
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vsi-export *reference*

Synopsis	VSI export policies
Context	configure service vpls <i>service-name</i> bgp <i>number</i> vsi-export <i>reference</i>
Tree	vsi-export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vsi-import *reference*

Synopsis	VSI import policies
Context	configure service vpls <i>service-name</i> bgp <i>number</i> vsi-import <i>reference</i>
Tree	vsi-import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-ad

Synopsis	Enable the bgp-ad context
Context	configure service vpls <i>service-name</i> bgp-ad

Tree	bgp-ad
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP Auto-Discovery
Context	configure service vpls <i>service-name</i> bgp-ad admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpls-id *vpls-id*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VPLS identifier as a 8-byte route distinguisher
Context	configure service vpls <i>service-name</i> bgp-ad vpls-id <i>vpls-id</i>
Tree	vpls-id
String format	'vpls-id' must be IP:comm or AS-number pair per RD rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vsi-id-prefix *ipv4-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VSI prefix value
Context	configure service vpls <i>service-name</i> bgp-ad vsi-id-prefix <i>ipv4-address</i>
Tree	vsi-id-prefix

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-evpn

Synopsis	Enable the bgp-evpn context
Context	configure service vpls <i>service-name</i> bgp-evpn
Tree	bgp-evpn
Description	Commands in this context to configure the BGP-EVPN options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp

Synopsis	Enter the dhcp context
Context	configure service vpls <i>service-name</i> bgp-evpn dhcp
Tree	dhcp
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> bgp-evpn dhcp description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

snoop *boolean*

Synopsis	Enable DHCP snooping on EVPN destinations
----------	---

Context	configure service vpls <i>service-name</i> bgp-evpn dhcp snoop <i>boolean</i>
Tree	snoop
Default	false
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service vpls <i>service-name</i> bgp-evpn dhcp6
Tree	dhcp6
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> bgp-evpn dhcp6 description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

ldra

Synopsis	Enable the ldra context
Context	configure service vpls <i>service-name</i> bgp-evpn dhcp6 ldra
Tree	ldra
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

interface-type *keyword*

Synopsis	LDRA interface type
----------	---------------------

Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn dhcp6 ldra interface-type</i> <i>keyword</i>
Tree	<i>interface-type</i>
Description	This command configures this end point as a client-facing or network-facing interface. BGP EVPN service tunnels must be configured as a network-facing interface.
Options	client-facing, network-facing
Notes	This element is mandatory.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

evi *number*

Synopsis	EVPN ID
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn evi</i> <i>number</i>
Tree	<i>evi</i>
Description	<p>This command configures a 2-byte EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.</p> <p>If not specified, the EVPN ID value is zero and no route distinguisher or route targets are auto-derived from it.</p> <p>If the EVI ID value is specified and no other route-distinguisher or route-target is configured in the service, the following rules apply:</p> <ul style="list-style-type: none"> • the route distinguisher is derived from <system_ip>:evi • the route target is derived from <autonomous-system>:evi <p>If VSI import and export policies are configured, the route target must be configured in the policies and those values take precedence over the auto-derived route targets. If bgp-ad vpls-id and bgp-evpn evi are both configured on the same service, the VPLS ID auto-derived route target or route distinguisher takes precedence over the values auto-derived from the EVI. Use the show service id bgp command to display the operational route target for a service.</p>
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-mtu-mismatch *boolean*

Synopsis	Ignore MTU mismatch
Context	configure <i>service vpls</i> <i>service-name</i> <i>bgp-evpn ignore-mtu-mismatch</i> <i>boolean</i>
Tree	<i>ignore-mtu-mismatch</i>

Description	When configured to true , the system ignores the received Layer 2 MTU in the L2 Attributes extended community of the IMET route for a peer. When configured to false , the system compares the local service MTU against the received Layer 2 MTU and if there is a mismatch, keeps the EVPN destination to the peer with operational state down.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

incl-mcast-orig-ip *ipv4-unicast-address*

Synopsis	Originating IP address
Context	configure <i>service vpls service-name bgp-evpn incl-mcast-orig-ip ipv4-unicast-address</i>
Tree	<i>incl-mcast-orig-ip</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-duplication

Synopsis	Enter the mac-duplication context
Context	configure <i>service vpls service-name bgp-evpn mac-duplication</i>
Tree	<i>mac-duplication</i>
Description	Commands in this context configure the BGP EVPN MAC duplication command options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blackhole *boolean*

Synopsis	Use duplicated MAC as a black-hole MAC
Context	configure <i>service vpls service-name bgp-evpn mac-duplication blackhole boolean</i>
Tree	<i>blackhole</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

detect

Synopsis	Enter the detect context
Context	configure service vpls <i>service-name</i> bgp-evpn mac-duplication detect
Tree	detect
Description	Commands in this context monitor the number of moves of a MAC address for a period of time (window).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

num-moves *number*

Synopsis	BGP EVPN MAC duplication detection number of moves
Context	configure service vpls <i>service-name</i> bgp-evpn mac-duplication detect num-moves <i>number</i>
Tree	num-moves
Range	3 to 10
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trusted-mac-move-factor *number*

Synopsis	Trusted MAC move factor
Context	configure service vpls <i>service-name</i> bgp-evpn mac-duplication detect trusted-mac-move-factor <i>number</i>
Tree	trusted-mac-move-factor
Description	<p>This command configures the factor by which the number of moves is multiplied when detecting a MAC duplication event for trusted MACs. For example, if the number of moves is 5 and the trusted MAC move factor is 3, 5 moves, within the window, is enough to declare a non-trusted MAC as duplicate. However, 15 moves are needed to declare a trusted MAC as duplicate.</p> <p>By default the factor for a trusted MAC is the same as for a non-trusted MAC. This provides a backwards compatible solution upon upgrade of the node.</p>
Range	1 to 10
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

window *number*

Synopsis BGP EVPN MAC duplication detection window

Context **configure** *service vpls service-name bgp-evpn mac-duplication detect window number*

Tree *window*

Range 1 to 15

Units minutes

Default 3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

retry (*number* | *keyword*)

Synopsis BGP EVPN MAC duplication retry time

Context **configure** *service vpls service-name bgp-evpn mac-duplication retry (number | keyword)*

Tree *retry*

Range 2 to 60

Units minutes

Options never

Default 9

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

trusted-mac-time *number*

Synopsis Trusted MAC time

Context **configure** *service vpls service-name bgp-evpn mac-duplication trusted-mac-time number*

Tree *trusted-mac-time*

Description This command configures how long a MAC address needs to stay in the FDB as type learned without being flushed or changed in its type so the MAC is declared as trusted for the MAC duplication procedures. If the MAC changes from SAP to SAP within the same VPLS service and node, the MAC does not reset its trusted MAC timer.

Range	1 to 15
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls [**bgp-instance**] *number*

Synopsis	Enter the mpls list instance
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Description	Commands in this context configure the BGP-EVPN MPLS options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[bgp-instance] *number*

Synopsis	BGP instance
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Range	1 to 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure automatic binding of a VPRN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum ECMP routes information
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-strict-tunnel-tagging *boolean*

Synopsis	Enable/disable enforcement of strict tunnel tagging
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel</i> enforce-strict-tunnel-tagging <i>boolean</i>
Tree	<i>enforce-strict-tunnel-tagging</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel</i> enforce-untagged-route <i>keyword</i>
Tree	<i>enforce-untagged-route</i>
Description	This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.
Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution *keyword*

Synopsis	Resolution method for tunnel selection
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel</i> resolution <i>keyword</i>
Tree	<i>resolution</i>
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
Tree	resolution-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	<p>When configured to true, BGP searches the BGP LSP for the address of the BGP next hop.</p> <p>When configured to false, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter ldp <i>boolean</i>
Tree	ldp
Description	<p>When configured to true, BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.</p> <p>When configured to false, LDP tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter rsvp boolean</i>
Tree	<i>rsvp</i>
Description	<p>When configured to true, BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to false, the RSVP LSP is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure <i>service vpls service-name</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-isis boolean</i>
Tree	<i>sr-isis</i>
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none">• Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure <i>service vpls service-name bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf boolean</i>
Tree	<i>sr-ospf</i>
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop. When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none">• Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure <i>service vpls service-name bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 boolean</i>
Tree	<i>sr-ospf3</i>
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop. When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none">• Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP-EVPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and • a color value that matches the highest numbered color for the extended community attached to the service route
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter udp <i>boolean</i>

Tree	udp
Description	When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to false , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weighted-ecmp *boolean*

Synopsis	Allow weighted load balancing
Context	configure service vpls service-name bgp-evpn mpls number auto-bind-tunnel weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	When configured to true , this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP. When configured to false , this command disables weighted ECMP for next-hop tunnel selection.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

control-word *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable control word support
Context	configure service vpls service-name bgp-evpn mpls number control-word <i>boolean</i>
Tree	control-word
Description	When configured to true , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

default-route-tag *one-byte-value*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure <i>service vpls service-name bgp-evpn mpls number default-route-tag one-byte-value</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure <i>service vpls service-name bgp-evpn mpls number dynamic-egress-label-limit boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum ECMP routes information
Context	configure <i>service vpls service-name bgp-evpn mpls number ecmp number</i>
Tree	<i>ecmp</i>
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entropy-label *boolean*

Synopsis	Allow use of entropy labels for spoke SDPs
Context	configure <i>service vpls service-name bgp-evpn mpls number entropy-label boolean</i>
Tree	<i>entropy-label</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evi-three-byte-auto-rt *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	configure <i>service vpls service-name bgp-evpn mpls number evi-three-byte-auto-rt boolean</i>
Tree	<i>evi-three-byte-auto-rt</i>
Description	<p>When configured to true, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).</p> <p>Where:</p> <ul style="list-style-type: none">• Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken• A=0 (for auto-derivation)

- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Relearn request for a protected MAC is received action
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

force-vc-forwarding *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VC forwarding action
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> force-vc-forwarding <i>keyword</i>

Tree	force-vc-forwarding
Description	<p>This command configures the VLAN tag processing used on the service.</p> <p>The vlan option configures the router to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag, which is sent in the customer frame to the EVPN destinations.</p> <p>The qinq-c-tag-c-tag option configures the router to push two tags with the same value derived from the inner service-delimiting tag. At network ingress, two VLAN tags are extracted at most and the C-tag and S-tag p/de bits are propagated to the egress SAPs.</p> <p>The qinq-s-tag-c-tag option configures the router to push two tags that are copied from the QinQ service-delimiting VLAN values and may be different. At network ingress, two VLAN tags are extracted at most and the p/de bits are propagated to the egress SAP service-delimiting S-tag and C-tag respectively.</p>
Options	<p>vlan – Push VLAN ID and 802.1p bits of service-delimiting qtag</p> <p>qinq-c-tag-c-tag – Push two tags identical to inner service-delimiting tag</p> <p>qinq-s-tag-c-tag – Push two tags based on QinQ service-delimiting values</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label *boolean*

Synopsis	Default profile when the CP-provided profile is unknown
Context	configure service vpls service-name bgp-evpn mpls number hash-label <i>boolean</i>
Tree	hash-label
Description	<p>When configured to true, the router pushes the hash label.</p> <p>The hash label is never used for BUM packets.</p> <p>The hash-label push is based on the following:</p> <ul style="list-style-type: none"> • If advertise-l2-attributes (in the configure service vpls bgp-evpn routes incl-mcast context) is set to false, the hash label is pushed to a unicast EVPN destination. • If advertise-l2-attributes is set to true, the F bit is set to 1 in the Layer 2 Attributes Extended Community of the EVPN IMET route for the service. The hash label is pushed only if the remote PE signaled support for hash label (received F bit is set to 1).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress-replication-bum-label *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the same label as the one advertised for unicast traffic
Context	configure <i>service vpls service-name bgp-evpn mpls number ingress-replication-bum-label boolean</i>
Tree	<i>ingress-replication-bum-label</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mh-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode
Context	configure <i>service vpls service-name bgp-evpn mpls number mh-mode keyword</i>
Tree	<i>mh-mode</i>
Description	<p>This command configures the multihoming mode for BGP-EVPN. Users can configure only one network instance for the service.</p> <p>If a provider tunnel is enabled for the service instance, this command must be configured using the network option.</p>
Options	access, network
Default	network
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group ID
Context	configure <i>service vpls service-name bgp-evpn mpls number oper-group reference</i>
Tree	<i>oper-group</i>

Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-next-hop

Synopsis	Enter the route-next-hop context
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> route-next-hop
Tree	route-next-hop
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> route-next-hop ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address , system-ipv4 , or system-ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-ipv4

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv4 address for service EVPN route next hop
Context	configure service vpls <i>service-name</i> bgp-evpn mpls <i>number</i> route-next-hop system-ipv4
Tree	system-ipv4

Notes	The following elements are part of a choice: ip-address , system-ipv4 , or system-ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-ipv6

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv6 address for service EVPN route next hop
Context	configure <i>service vpls service-name bgp-evpn mpls number route-next-hop system-ipv6</i>
Tree	<i>system-ipv6</i>
Notes	The following elements are part of a choice: ip-address , system-ipv4 , or system-ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-tunnel-encap

Synopsis	Enter the send-tunnel-encap context
Context	configure <i>service vpls service-name bgp-evpn mpls number send-tunnel-encap</i>
Tree	<i>send-tunnel-encap</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS encapsulation
Context	configure <i>service vpls service-name bgp-evpn mpls number send-tunnel-encap mpls boolean</i>
Tree	<i>mpls</i>
Default	true

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls-over-udp *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS over UDP encapsulation
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>send-tunnel-encap</i> <i>mpls-over-udp</i> <i>boolean</i>
Tree	<i>mpls-over-udp</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon-group *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Split horizon group
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>split-horizon-group</i> <i>reference</i>
Tree	<i>split-horizon-group</i>
Description	This command configures the value of split-horizon group for all BGP-EVPN segment routing v6 instances.
Reference	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>split-horizon-group</i> <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

per-pe-etree-leaf

Synopsis	Enable the per-pe-etree-leaf context
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-evpn</i> <i>per-pe-etree-leaf</i>

Tree	per-pe-etree-leaf
Description	<p>Commands in this context configure the PE as an E-Tree leaf PE for the service.</p> <p>When this command is configured, the PE operates as a leaf PE for the service. As a result, EVPN BUM bindings are not created toward remote PEs that are also configured as E-Tree leaf PEs. In addition, received EVPN MAC/IP Advertisement routes with the leaf flag set are not installed in the service FDB unless they convey an ESI that matches a local ESI on an operationally up SAP, or the configure service vpls bgp-evpn per-pe-etree-leaf blackhole-non-local-leaf-macs command is enabled.</p>
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

blackhole-non-local-leaf-macs *boolean*

Synopsis	Blackhole non-local leaf MAC addresses
Context	configure service vpls <i>service-name</i> bgp-evpn per-pe-etree-leaf blackhole-non-local-leaf-macs <i>boolean</i>
Tree	blackhole-non-local-leaf-macs
Description	<p>When configured to true, EVPN MAC addresses learned from EVPN MAC and IP advertisement routes marked with the leaf flag and originating from remote PEs are installed in the FDB as blackhole MACs. EVPN MACs learned from non-zero ESI MAC and IP routes that are marked as leaf and associated with a local ES SAP are installed normally.</p> <p>When configured to false, the router installs EVPN MACs learned from non-zero ESI MAC and IP routes marked as a leaf and associated with a local ES SAP, while all other leaf-flagged EVPN MACs received from remote PEs are not installed in the FDB.</p>
Default	false
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

routes

Synopsis	Enter the routes context
Context	configure service vpls <i>service-name</i> bgp-evpn routes
Tree	routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

incl-mcast

Synopsis	Enter the incl-mcast context
Context	configure service vpls service-name bgp-evpn routes incl-mcast
Tree	incl-mcast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-ingress-replication *boolean*

Synopsis	BGP EVPN IMET-IR route advertisement
Context	configure service vpls service-name bgp-evpn routes incl-mcast advertise-ingress-replication <i>boolean</i>
Tree	advertise-ingress-replication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-l2-attributes *boolean*

Synopsis	Advertise Layer 2 attributes
Context	configure service vpls service-name bgp-evpn routes incl-mcast advertise-l2-attributes <i>boolean</i>
Tree	advertise-l2-attributes
Description	When configured to true , the router advertises the Layer 2 Attributes Extended Community including:

- the service MTU in the Layer 2 MTU field
- the F bit, which is set to 1 if the **hash-label** command is set to true (in the **configure service vpls bgp-evpn mpls** context); otherwise, the F bit is set to 0
- the C bit, which is set to 1 if the **control-word** command is set to true (in the **configure service vpls bgp-evpn mpls** context); otherwise, the C bit is set to 0

The router compares the received Layer 2 MTU from a peer with the local service MTU. If there is a mismatch, the operation state of the EVPN destination is set to down, except if the **configure service vpls bgp-evpn ignore-mtu-mismatch** command is set to **true**.

A mismatch between the received C bit and the local **control-word** setting (in the **configure service vpls bgp-evpn mpls** context) results in the operational state of the EVPN destination being set to down.

A mismatch between the received F bit and the local F bit (via the hash label configuration) results in the operational state of the EVPN destination being set to down.

When configured to **false**, the Layer 2 Attributes Extended Community is not advertised with the Inclusive Multicast Ethernet Tag route for the service.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-prefix

Synopsis	Enter the ip-prefix context
Context	configure service vpls service-name bgp-evpn routes ip-prefix
Tree	ip-prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise boolean

Synopsis	Advertise IP prefixes
Context	configure service vpls service-name bgp-evpn routes ip-prefix advertise boolean
Tree	advertise
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

domain-id domain-id

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vpls service-name bgp-evpn routes ip-prefix domain-id domain-id
Tree	domain-id
Description	This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i> . Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

String format	'domain-id' must be global-field:local-field (uint32:uint16 range)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-direct-interface-host *boolean*

Synopsis	Advertise the interface host address in EVPN
Context	configure service vpls <i>service-name</i> bgp-evpn routes ip-prefix include-direct-interface-host <i>boolean</i>
Tree	include-direct-interface-host
Default	false
Introduced	25.3.R2

advertise *boolean*

Synopsis Advertise BGP-EVPN MAC/IP routes

Context **configure** [service vpls service-name bgp-evpn routes mac-ip advertise boolean](#)

Tree [advertise](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

arp-nd-extended-community *boolean*

Synopsis Enable ARP/ND extended community

Context **configure** [service vpls service-name bgp-evpn routes mac-ip arp-nd-extended-community boolean](#)

Tree [arp-nd-extended-community](#)

Description When configured to **true**, the system advertises the RFC9047 ARP/ND extended community along with the MAC/IP routes advertised for local static and dynamic proxy ARP or ND entries. The system also processes the ARP/ND extended community and selects the ARP or ND entries based on the immutable flag.

When configured to **false**, the system does not advertise the RFC9047 ARP/ND extended community.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

arp-nd-only-with-fdb-advertisement *boolean*

Synopsis	Advertise ARP/ND entries if local MAC is in the FDB
Context	configure service vpls <i>service-name</i> bgp-evpn routes mac-ip arp-nd-only-with-fdb-advertisement <i>boolean</i>
Tree	arp-nd-only-with-fdb-advertisement
Description	<p>When configured to true, the router advertises local ARP/ND entries of VPRN interfaces using this VPLS in this BGP-EVPN service when the corresponding local MAC is programmed in the FDB.</p> <p>When configured to false, the router does not advertise local ARP/ND entries.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cfm-mac *boolean*

Synopsis	Enable advertisement and withdrawal of MAC address
Context	configure service vpls <i>service-name</i> bgp-evpn routes mac-ip cfm-mac <i>boolean</i>
Tree	cfm-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unknown-mac *boolean*

Synopsis	Enable advertisement of unknown MAC route in BGP
Context	configure service vpls <i>service-name</i> bgp-evpn routes mac-ip unknown-mac <i>boolean</i>
Tree	unknown-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> <i>monitor-oper-group</i> <i>reference</i>
Tree	<i>monitor-oper-group</i>
Reference	configure <i>service</i> <i>oper-group</i> <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap sap

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to be associated with this site
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> <i>sap</i> <i>sap</i>
Tree	<i>sap</i>
String length	1 to 45
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

shg-name named-item

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SHG name to be associated with the site
Context	configure <i>service</i> <i>vpls</i> <i>service-name</i> <i>bgp-mh-site</i> <i>named-item</i> <i>shg-name</i> <i>named-item</i>
Tree	<i>shg-name</i>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spoke-sdp *sdp-bind-id***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SDP associated with the site
Context	configure service vpls <i>service-name</i> bgp-mh-site <i>named-item</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	The following elements are part of a choice: mesh-sdp-binds , sap , shg-name , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-vpls

Synopsis	Enable the bgp-vpls context
Context	configure service vpls <i>service-name</i> bgp-vpls
Tree	bgp-vpls
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the BGP-VPLS instance
Context	configure service vpls <i>service-name</i> bgp-vpls admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-ve-id *number*

Synopsis	Maximum vpls-edge id for BGP-VPLS
Context	configure service vpls <i>service-name</i> bgp-vpls maximum-ve-id <i>number</i>
Tree	maximum-ve-id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ve

Synopsis	Enter the ve context
Context	configure service vpls <i>service-name</i> bgp-vpls ve
Tree	ve
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

id *number*

Synopsis	VPLS edge ID
Context	configure service vpls <i>service-name</i> bgp-vpls ve id <i>number</i>
Tree	id
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *named-item*

Synopsis	VPLS Edge instance name
Context	configure service vpls <i>service-name</i> bgp-vpls ve name <i>named-item</i>
Tree	name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

customer *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	configure service vpls <i>service-name</i> customer <i>reference</i>
Tree	customer
Reference	configure service customer <i>customer-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint [*name*] *named-item*

Synopsis	Enter the endpoint list instance
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i>
Tree	endpoint
Max. instances	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Service endpoint name
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i>
Tree	endpoint
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

block-on-mesh-failure *boolean*

Synopsis	Enable blocking after the endpoints are in a down state
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> block-on-mesh-failure <i>boolean</i>
Tree	block-on-mesh-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb

Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect *boolean*

Synopsis	Populate automatically MAC protect list with MAC addresses learned on SDP with this endpoint
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-pinning *boolean*

Synopsis	Activate MAC address pinning on this endpoint
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this endpoint.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared. Packets with unknown source MAC addresses are still forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p>

However, if the **configure service vpls fdb discard-unknown** command is set to **true**, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.

When unconfigured, the endpoint uses the global MAC learning limitations.

Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Action taken after a relearn request for protected MAC
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Description	This command configures how the system handles relearn requests for protected MAC addresses.
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-standby-signaling *boolean*

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> ignore-standby-signaling <i>boolean</i>
Tree	ignore-standby-signaling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mc-endpoint [**mc-ep-id**] *number*

Synopsis	Enter the mc-endpoint list instance
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> mc-endpoint <i>number</i>
Tree	mc-endpoint
Max. instances	1

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[mc-ep-id] *number*

Synopsis	MC-EP ID
Context	configure <i>service vpls service-name endpoint named-item mc-endpoint number</i>
Tree	<i>mc-endpoint</i>
Description	This command configures the identifier associated with the MC-EP. The ID must be the same on both MC-EP peers.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mc-ep-peer

Synopsis	Enter the mc-ep-peer context
Context	configure <i>service vpls service-name endpoint named-item mc-endpoint number mc-ep-peer</i>
Tree	<i>mc-ep-peer</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *named-item*

Synopsis	Name of the MC-EP peer
Context	configure <i>service vpls service-name endpoint named-item mc-endpoint number mc-ep-peer name named-item</i>
Tree	<i>name</i>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: name or peer-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer-address *reference*

Synopsis	IP address of the MC-EP peer
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> mc-endpoint <i>number</i> mc-ep-peer peer-address <i>reference</i>
Tree	peer-address
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	The following elements are part of a choice: name or peer-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

revert-time (*number* | *keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> revert-time (<i>number</i> <i>keyword</i>)
Tree	revert-time
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

suppress-standby-signaling *boolean*

Synopsis	Do not send pseudowire standby bit to TLDP peer when specified spoke SDP is selected as standby
Context	configure service vpls <i>service-name</i> endpoint <i>named-item</i> suppress-standby-signaling <i>boolean</i>
Tree	suppress-standby-signaling
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard-unknown *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	configure service vpls <i>service-name</i> fdb discard-unknown <i>boolean</i>
Tree	discard-unknown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service vpls <i>service-name</i> fdb mac-learning
Tree	mac-learning
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aging *boolean*

Synopsis	Enable aging of MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning aging <i>boolean</i>
Tree	aging
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning learning <i>boolean</i>
Tree	learning
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-age-time *number*

Synopsis	Aging time for locally learned MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning local-age-time <i>number</i>
Tree	local-age-time
Description	<p>This command configures the aging time for locally learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Destination Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.</p> <p>As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time).</p>
Range	60 to 86400
Default	300
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-age-time *number*

Synopsis	Aging time for remotely learned MAC addresses
Context	configure service vpls <i>service-name</i> fdb mac-learning remote-age-time <i>number</i>
Tree	remote-age-time
Description	<p>This command configures the aging time for remotely learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Destination Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service</p>

instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.

As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time). To reduce the amount of signaling required between switches, configure this time larger than the **local-age-time** command.

Range	60 to 86400
Default	900
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-move

Synopsis	Enter the mac-move context
Context	configure service vpls service-name fdb mac-move
Tree	mac-move
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of MAC move
Context	configure service vpls service-name fdb mac-move admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-down-time *number*

Synopsis	Wait time before re-enabling disabled SAP
Context	configure service vpls service-name fdb mac-move hold-down-time number
Tree	hold-down-time
Range	0 to 600
Units	seconds

Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

move-frequency *number*

Synopsis	Maximum rate MACs can be re-learned in the VPLS service
Context	configure service vpls <i>service-name</i> fdb mac-move move-frequency <i>number</i>
Tree	move-frequency
Range	1 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary-cumulative-factor *number*

Synopsis	Factor for MAC-relearn periods for MAC-relearn rate
Context	configure service vpls <i>service-name</i> fdb mac-move primary-cumulative-factor <i>number</i>
Tree	primary-cumulative-factor
Range	3 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry-count (*number* | *keyword*)

Synopsis	Number of retries for re-enabling the SAP or SDP
Context	configure service vpls <i>service-name</i> fdb mac-move retry-count (<i>number</i> <i>keyword</i>)
Tree	retry-count
Range	1 to 255
Options	unlimited
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap [[sap-id](#)] *reference*

Synopsis	Enter the sap list instance
Context	configure service vpls <i>service-name</i> fdb mac-move sap <i>reference</i>
Tree	sap
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sap-id] *reference*

Synopsis	SAP identifier
Context	configure service vpls <i>service-name</i> fdb mac-move sap <i>reference</i>
Tree	sap
Reference	configure service vpls <i>service-name</i> sap <i>sap</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level *keyword*

Synopsis	Primary or secondary port level
Context	configure service vpls <i>service-name</i> fdb mac-move sap <i>reference</i> level <i>keyword</i>
Tree	level
Options	primary, secondary
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secondary-cumulative-factor *number*

Synopsis	Number of periods to measure mac-relearn rate
Context	configure service vpls <i>service-name</i> fdb mac-move secondary-cumulative-factor <i>number</i>
Tree	secondary-cumulative-factor
Range	2 to 9

Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spoke-sdp [[sdp-bind-id](#)] *reference*

Synopsis	Enter the spoke-sdp list instance
Context	configure service vpls <i>service-name</i> fdb mac-move spoke-sdp <i>reference</i>
Tree	spoke-sdp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sdp-bind-id] *reference*

Synopsis	SDP binding ID
Context	configure service vpls <i>service-name</i> fdb mac-move spoke-sdp <i>reference</i>
Tree	spoke-sdp
Reference	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level *keyword*

Synopsis	Primary or secondary port level
Context	configure service vpls <i>service-name</i> fdb mac-move spoke-sdp <i>reference</i> level <i>keyword</i>
Tree	level
Options	primary, secondary
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-subnet-length *number*

Synopsis	Number of bits performing MAC learning or MAC switching
----------	---

Context	configure service vpls <i>service-name</i> fdb mac-subnet-length <i>number</i>
Tree	mac-subnet-length
Range	24 to 48
Default	48
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

selective-learning *boolean*

Synopsis	Allocate FDB entries on selectively learned line cards
Context	configure service vpls <i>service-name</i> fdb selective-learning <i>boolean</i>
Tree	selective-learning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-mac

Synopsis	Enter the static-mac context
Context	configure service vpls <i>service-name</i> fdb static-mac
Tree	static-mac
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac [[mac-address](#)] *mac-unicast-address-no-zero*

Synopsis	Enter the mac list instance
Context	configure service vpls <i>service-name</i> fdb static-mac mac mac-unicast-address-no-zero
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[mac-address] *mac-unicast-address-no-zero*

Synopsis	Static MAC address to SAP/SDP-binding or black-hole
----------	---

Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero</i>
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blackhole

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a static FDB entry for the MAC address to black-hole traffic
Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero</i> blackhole
Tree	blackhole
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint associated with the MAC
Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero</i> endpoint <i>reference</i>
Tree	endpoint
Reference	configure service vpls <i>service-name</i> endpoint <i>named-item</i>
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mesh-sdp *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Mesh SDP bind associated with this MAC
Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero</i> mesh-sdp <i>reference</i>
Tree	mesh-sdp
Reference	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i>
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Entity to be monitored to decide whether this entry can be installed in the FDB
Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero</i> monitor <i>keyword</i>
Tree	monitor
Options	none, forward-status
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP associated with this MAC
----------	------------------------------

Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero sap reference</i>
Tree	sap
Reference	configure service vpls <i>service-name</i> sap sap
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spoke-sdp *reference*

	WARNING: Modifying this element recreates the parent element automatically for the new value to take effect.
Synopsis	Spoke SDP bind associated with this MAC
Context	configure service vpls <i>service-name</i> fdb static-mac mac <i>mac-unicast-address-no-zero spoke-sdp reference</i>
Tree	spoke-sdp
Reference	configure service vpls <i>service-name</i> spoke-sdp sdp-bind-id
Notes	The following elements are part of a mandatory choice: blackhole , endpoint , mesh-sdp , sap , or spoke-sdp .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

table

Synopsis	Enter the table context
Context	configure service vpls <i>service-name</i> fdb table
Tree	table
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

high-wmark *number*

Synopsis	High watermark for the FDB table
Context	configure service vpls <i>service-name</i> fdb table high-wmark <i>number</i>

Tree	high-wmark
Range	0 to 100
Default	95
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-wmark *number*

Synopsis	Low watermark for the FDB table
Context	configure service vpls <i>service-name</i> fdb table low-wmark <i>number</i>
Tree	low-wmark
Range	0 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Maximum MAC entries in the FDB
Context	configure service vpls <i>service-name</i> fdb table size <i>number</i>
Tree	size
Range	1 to 511999
Default	250
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls <i>service-name</i> igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of snooping
Context	configure service vpls <i>service-name</i> igmp-snooping admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	1 to 65535
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-source-address (*keyword* | *ipv4-address*)

Synopsis	Source address for IGMP queries
Context	configure service vpls <i>service-name</i> igmp-snooping query-source-address (<i>keyword</i> <i>ipv4-address</i>)
Tree	query-source-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Options	system
Default	system
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

report-source-address *ipv4-address*

Synopsis	Source IP address used when generating IGMP reports
Context	configure service vpls <i>service-name</i> igmp-snooping report-source-address <i>ipv4-address</i>
Tree	report-source-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	1 to 255
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-l2vpn-mtu-mismatch *boolean*

Synopsis	Ignore the L2 VPN MTU mismatch with local service MTU
Context	configure service vpls <i>service-name</i> ignore-l2vpn-mtu-mismatch <i>boolean</i>
Tree	ignore-l2vpn-mtu-mismatch
Description	<p>When configured to true, the router ignores the value of the Layer 2 MTU in the Layer 2 Info Extended Community received in a BGP update message or the value of the MTU interface parameter received in an LDP label mapping message against the local service MTU or locally signaled MTU. It may, therefore, bring up the VPLS service regardless of any MTU mismatch.</p> <p>When configured to false, an MTU mismatch prevents the system from bringing up a VPLS service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *[interface-name] interface-name*

Synopsis	Enter the interface list instance
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *very-long-description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> description <i>very-long-description</i>
Tree	description
String length	1 to 255

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

hold-time

Synopsis Enter the **hold-time** context

Context **configure** *service vpls service-name interface interface-name hold-time*

Tree *hold-time*

Introduced 25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ipv4

Synopsis Enter the **ipv4** context

Context **configure** *service vpls service-name interface interface-name hold-time ipv4*

Tree *ipv4*

Introduced 25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

down

Synopsis Enter the **down** context

Context **configure** *service vpls service-name interface interface-name hold-time ipv4 down*

Tree *down*

Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced 25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

up

Synopsis	Enter the up context
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up seconds <i>number</i>
Tree	seconds

Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

static-neighbor [[ipv4-address](#)] *ipv4-address*

Synopsis	Enter the static-neighbor list instance
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[[ipv4-address](#)] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

timeout *number*

Synopsis	ARP timeout value to determine how long an ARP entry remains in the ARP cache
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

primary

Synopsis	Enable the primary context
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

address *ipv4-address*

Synopsis	IP address of the interface
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 primary address <i>ipv4-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 31
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

mac *mac-unicast-address*

Synopsis	MAC address for the interface
Context	configure service vpls <i>service-name</i> interface <i>interface-name</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	This command assigns a specific MAC address to an IP interface.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

isid-policy

Synopsis	Enter the isid-policy context
----------	--------------------------------------

Context	configure service vpls <i>service-name</i> isid-policy
Tree	isid-policy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entry [[range-entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure service vpls <i>service-name</i> isid-policy entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[range-entry-id] *number*

Synopsis	ISID policy entry ID
Context	configure service vpls <i>service-name</i> isid-policy entry <i>number</i>
Tree	entry
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-local *boolean*

Synopsis	Advertise locally-defined I-VPLS ISIDs or static ISIDs
Context	configure service vpls <i>service-name</i> isid-policy entry <i>number</i> advertise-local <i>boolean</i>
Tree	advertise-local
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

range

Synopsis	Enter the range context
----------	--------------------------------

Context	configure service vpls <i>service-name</i> isid-policy entry <i>number range</i>
Tree	range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *number*

Synopsis	Upper bound of the ISID range
Context	configure service vpls <i>service-name</i> isid-policy entry <i>number range</i> end <i>number</i>
Tree	end
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *number*

Synopsis	Lower bound of the ISID range
Context	configure service vpls <i>service-name</i> isid-policy entry <i>number range</i> start <i>number</i>
Tree	start
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-def-mcast *boolean*

Synopsis	Use default multicast tree to propagate ISIS range
Context	configure service vpls <i>service-name</i> isid-policy entry <i>number</i> use-def-mcast <i>boolean</i>
Tree	use-def-mcast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing

Synopsis	Enter the load-balancing context
----------	---

Context	configure service vpls <i>service-name</i> load-balancing
Tree	load-balancing
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

per-service-hashing *boolean*

Synopsis	Enable per-service hashing for Ethernet services
Context	configure service vpls <i>service-name</i> load-balancing per-service-hashing <i>boolean</i>
Tree	per-service-hashing
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

m-vpls *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Specify whether this is a management VPLS
Context	configure service vpls <i>service-name</i> m-vpls <i>boolean</i>
Tree	m-vpls
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-flush

Synopsis	Enter the mac-flush context
Context	configure service vpls <i>service-name</i> mac-flush
Tree	mac-flush
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tldp

Synopsis	Enter the tldp context
Context	configure service vpls <i>service-name</i> mac-flush tldp
Tree	tldp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

propagate *boolean*

Synopsis	Propagate MAC flush messages received from the T-LDP
Context	configure service vpls <i>service-name</i> mac-flush tldp propagate <i>boolean</i>
Tree	propagate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-on-failure *boolean*

Synopsis	Send MAC withdraw message on SAP/Spoke-SDP failure
Context	configure service vpls <i>service-name</i> mac-flush tldp send-on-failure <i>boolean</i>
Tree	send-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-protect

Synopsis	Enter the mac-protect context
Context	configure service vpls <i>service-name</i> mac-protect
Tree	mac-protect
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac [**mac-address**] *mac-address*

Synopsis	Add a list entry for mac
Context	configure service vpls <i>service-name</i> mac-protect mac <i>mac-address</i>
Tree	mac
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[mac-address] *mac-address*

Synopsis	Protected MAC address
Context	configure service vpls <i>service-name</i> mac-protect mac <i>mac-address</i>
Tree	mac
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcast-ipv6-snooping-scope *keyword*

Synopsis	IPv6 multicast snooping scope
Context	configure service vpls <i>service-name</i> mcast-ipv6-snooping-scope <i>keyword</i>
Tree	mcast-ipv6-snooping-scope
Options	sg-based, mac-based
Default	mac-based
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcr-default-gtw

Synopsis	Enter the mcr-default-gtw context
Context	configure service vpls <i>service-name</i> mcr-default-gtw
Tree	mcr-default-gtw
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip *ipv4-unicast-address*

Synopsis	Multi-chassis ring default gateway IP address
Context	configure <i>service vpls service-name mcr-default-gtw ip ipv4-unicast-address</i>
Tree	<i>ip</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-address*

Synopsis	Multi-chassis ring default gateway MAC address
Context	configure <i>service vpls service-name mcr-default-gtw mac mac-address</i>
Tree	<i>mac</i>
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mesh-sdp [*sdp-bind-id*] *sdp-bind-id*

Synopsis	Enter the mesh-sdp list instance
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id</i>
Tree	<i>mesh-sdp</i>
Description	<p>Commands in this context bind a VPLS service to an existing SDP.</p> <p>Mesh SDPs bound to a service are logically treated like a single bridge "port" for flooded traffic where flooded traffic received on any mesh SDP on the service is replicated to other "ports" (spoke SDPs and SAPs) and not transmitted on any mesh SDPs.</p> <p>Note: This command creates a binding between a service and an SDP. The SDP has an operational state that determines the operational state of the SDP within the service. For example, if the SDP is administratively or operationally down, the SDP for the service is down.</p> <p>The SDP must already be defined in the configure service sdp context to associate the SDP with an Epipe or VPLS service.</p> <p>SDPs must be explicitly associated and bound to a service. If an SDP is not bound to a service, no far-end router devices can participate in the service.</p>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[sdp-bind-id] *sdp-bind-id*

Synopsis SDP binding ID

Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id*

Tree [mesh-sdp](#)

String length 3 to 16

String format 'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

accounting-policy *reference*

Synopsis Policy to collect accounting statistics

Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [accounting-policy](#) *reference*

Tree [accounting-policy](#)

Reference **configure** [log accounting-policy](#) *number*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the SDP binding to the service

Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

adv-service-mtu *number*

Synopsis Advertise service MTU value

Context	configure service vpls service-name mesh-sdp sdp-bind-id adv-service-mtu number
Tree	adv-service-mtu
Description	<p>This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP. The router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.</p> <p>This command cannot be configured on a spoke-SDP that is bound to an SDP with the adv-mtu-override command.</p>
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

collect-stats *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	configure service vpls service-name mesh-sdp sdp-bind-id collect-stats boolean
Tree	collect-stats
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

control-word *boolean*

Synopsis	Use the control word as preferred
Context	configure service vpls service-name mesh-sdp sdp-bind-id control-word boolean
Tree	control-word
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls service-name mesh-sdp sdp-bind-id description description
Tree	description
String length	1 to 80

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

dhcp

Synopsis Enter the **dhcp** context

Context **configure** **service** **vpls** *service-name* **mesh-sdp** *sdp-bind-id* **dhcp**

ais

Synopsis	Enable the ais context
Context	configure service vpls service-name mesh-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais
Tree	ais
Description	Commands in this context enable the reception of AIS messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level number</i>
Tree	<i>client-meg-level</i>
Description	This command configures the client Maintenance Entity Group (MEG) level to use for AIS message generation. One restriction is that the client MEG level must be higher than the local MEG level. Only the lowest client MEG level is used for facility MEPs.
Range	1 to 7
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support boolean</i>
Tree	<i>interface-support</i>
Description	<p>When configured to true, the system enables the generation of AIS PDUs based on the associated endpoint state.</p> <p>AIS on Down MEPs triggers and clears based on the operational status of the entity it is configured on. If CCM is configured to true, transmission of the AIS PDU is based on either the nonoperational state of the entity or on any CCM defect conditions. AIS generation ceases if both the operational state is up and CCM has no defect conditions. If the MEP is not enabled with CCM, the operational state of the entity is the only consideration, assuming the command is present for the MEP.</p> <p>When configured to false, the generation of AIS PDUs is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Transmission interval for AIS messages
----------	--

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interval <i>number</i>
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def – Generate AIS frame for any defect in CCM state machine mac-rem-err-xcon – Generate AIS frame for def-mac-status defect or higher
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm-notification

Synopsis	Enter the alarm-notification context
----------	---

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ccm *boolean*

Synopsis	Generate CCM messages
----------	-----------------------

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm <i>boolean</i>
Tree	ccm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

direction *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
----------	-------------------------

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> direction <i>keyword</i>
Tree	direction
Description	This command configures the direction in which the MEP faces on the bridge port.
Options	down – Send ETH-CFM messages toward the MAC relay entity up – Send ETH-CFM messages away from the MAC relay entity
Default	down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv – Use the interface TLV suspend-ccm – Suspend continuity check messages
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect *boolean*

Synopsis	Enable automatic population of the MAC protect list
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i>

Tree	auto-learn-mac-protect-exclude-list
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	configure service mac-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-pinning *boolean*

Synopsis	MAC address pinning in active status
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Action taken after a relearn request for protected MAC
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Description	This command configures how the system handles relearn requests for protected MAC addresses.
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

force-vc-forwarding *keyword*

Synopsis	VLAN tag processing action
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> force-vc-forwarding <i>keyword</i>

Tree	force-vc-forwarding
Description	<p>This command configures the VLAN tag processing used on the service.</p> <p>The vlan option configures the router to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag, which is sent in the customer frame to the EVPN destinations.</p> <p>The qinq-c-tag-c-tag option configures the router to pushes two tags with the same value derived from the inner service delimiting tag. At network ingress, two VLAN tags are extracted at most and the C-tag and S-tag p/de bits are propagated to the egress SAPs.</p> <p>The qinq-s-tag-c-tag option configures the router to push two tags that are copied from the QinQ service-delimiting VLAN values and may be different. At network ingress, two VLAN tags are extracted at most and the p/de bits are propagated to the egress SAP service-delimiting S-tag and C-tag respectively.</p>
Options	vlan – Push VLAN ID and 802.1p bits of service-delimiting qtag qinq-c-tag-c-tag – Push two tags identical to inner service-delimiting tag qinq-s-tag-c-tag – Push two tags based on QinQ service-delimiting values
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label

Synopsis	Enable the hash-label context
Context	configure service vpls service-name mesh-sdp sdp-bind-id hash-label
Tree	hash-label
Description	<p>Commands in this context configure the use of hash labels for egress datapaths.</p> <p>For information about hash-label handling, see the "Hash label" section of the <i>7705 SAR Gen 2 MPLS Guide</i>.</p>
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service vpls service-name mesh-sdp sdp-bind-id hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.

The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

igmp-snooping

Synopsis Enter the **igmp-snooping** context
Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [igmp-snooping](#)
Tree [igmp-snooping](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

fast-leave *boolean*

Synopsis Allow IGMP fast leave processing
Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [igmp-snooping fast-leave](#) *boolean*
Tree [fast-leave](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

import-policy *reference*

Synopsis Import policy that filters IGMP packets
Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [igmp-snooping import-policy](#) *reference*
Tree [import-policy](#)
Reference **configure** [policy-options](#) [policy-statement](#) *named-item-64*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

maximum-number-group-sources *number*

Synopsis Maximum group source combinations

Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping maximum-number-group-sources number
Tree	maximum-number-group-sources
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups number

Synopsis	Maximum groups allowed
Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping maximum-number-groups number
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-sources number

Synopsis	Maximum sources that are allowed per group
Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping maximum-number-sources number
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrouter-port boolean

Synopsis	Operate port as a multicast router port
Context	configure service vpls service-name mesh-sdp sdp-bind-id igmp-snooping mrouter-port boolean
Tree	mrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping static
Tree	static

Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

group [[group-address](#)] *ipv4-multicast-address*

Synopsis Enter the **group** list instance
 Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [igmp-snooping](#) **static group** *ipv4-multicast-address*
 Tree [group](#)
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

[group-address] *ipv4-multicast-address*

Synopsis Group address of static IGMP multicast channel
 Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [igmp-snooping](#) **static group** *ipv4-multicast-address*
 Tree [group](#)
 Description This command configures an address that receives data on an interface. The IP address must be unique for each static group.
 String format 'ipv4-address' must use only digits and dots (no %zone)
 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
 Notes This element is part of a list key.
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

source [[source-address](#)] *ipv4-unicast-address*

Synopsis Add a list entry for **source**
 Context **configure** [service vpls](#) *service-name* [mesh-sdp](#) *sdp-bind-id* [igmp-snooping](#) **static group** *ipv4-multicast-address* [source](#) *ipv4-unicast-address*
 Tree [source](#)
 Notes The following elements are part of a mandatory choice: **source** or **starg**.
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version keyword

Synopsis	IGMP protocol version
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> igmp-snooping version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
----------	----------------------------------

Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress
Tree	ingress
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos

Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

network

Synopsis	Enter the network context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network
Tree	network
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group
Tree	fp-redirect-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group group-name <i>reference</i>
Tree	group-name
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

instance *number*

Synopsis	Instance of FP ingress queue group for the SDP binding
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network fp-redirect-group instance <i>number</i>

Tree	instance
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name *reference*

Synopsis	Network policy ID
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress qos network policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> ingress vc-label <i>number</i>
Tree	vc-label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping
Tree	mld-snooping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping mrrouter-port <i>boolean</i>
Tree	mrrouter-port

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds

Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-address](#)] *ipv6-multicast-address*

Synopsis	Enter the group list instance
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping static group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[group-address](#)] *ipv6-multicast-address*

Synopsis	Group address of multicast channel
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping static group <i>ipv6-multicast-address</i>
Tree	group
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> mesh-sdp <i>sdp-bind-id</i> mld-snooping static group <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id mld-snooping static group ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id mld-snooping static group ipv6-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version keyword

Synopsis	Version of MLD running on the SAP or SDP
Context	configure <i>service vpls service-name mesh-sdp sdp-bind-id mld-snooping</i> version keyword
Tree	version
Options	1, 2
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-type keyword**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported

Platforms	7705 SAR Gen 2

high-wmark *number*

Synopsis	High watermark for the MFIB table
Context	configure service vpls <i>service-name</i> mfib table high-wmark <i>number</i>
Tree	high-wmark
Range	0 to 100
Default	95
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-wmark *number*

Synopsis	Low watermark for the MFIB table
Context	configure service vpls <i>service-name</i> mfib table low-wmark <i>number</i>
Tree	low-wmark
Range	0 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Maximum SG entries in the MFIB
Context	configure service vpls <i>service-name</i> mfib table size <i>number</i>
Tree	size
Range	1 to 40959
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>service-name</i> mld-snooping
Tree	mld-snooping
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of snooping

Context **configure** [service vpls service-name mld-snooping admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** [service vpls service-name mld-snooping query-interval](#) *number*

Tree [query-interval](#)

Range 1 to 65535

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

query-source-address (*keyword* | *ipv6-address*)

Synopsis Source IP address used in MLD queries

Context **configure** [service vpls service-name mld-snooping query-source-address](#) (*keyword* | *ipv6-address*)

Tree [query-source-address](#)

Options system

Default system

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

report-source-address *ipv6-address*

Synopsis	Source IP address used when generating MLD reports
Context	configure service vpls <i>service-name</i> mld-snooping report-source-address <i>ipv6-address</i>
Tree	report-source-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	1 to 255
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-arp

Synopsis	Enable the proxy-arp context
Context	configure service vpls <i>service-name</i> proxy-arp
Tree	proxy-arp
Description	Commands in this context configure proxy-ARP in a VPLS service.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the proxy
Context	configure service vpls <i>service-name</i> proxy-arp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

age-time (*number* | *keyword*)

Synopsis Aging timer for proxy entries, where entries are flushed upon timer expiry

Context **configure** *service vpls service-name proxy-arp age-time* (*number* | *keyword*)

Tree *age-time*

Range 60 to 86400

Units seconds

Options never

Default never

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

duplicate-detect

Synopsis Enter the **duplicate-detect** context

Context **configure** *service vpls service-name proxy-arp duplicate-detect*

Tree *duplicate-detect*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

anti-spoof-mac *mac-unicast-address-no-zero*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis MAC address to replace the proxy-ARP/ND offending entry's MAC

Context **configure** *service vpls service-name proxy-arp duplicate-detect anti-spoof-mac mac-unicast-address-no-zero*

Tree *anti-spoof-mac*

String format 'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hold-down-time (*number* | *keyword*)

Synopsis	Hold down time for a duplicate entry
Context	configure service vpls <i>service-name</i> proxy-arp duplicate-detect hold-down-time (<i>number</i> <i>keyword</i>)
Tree	hold-down-time
Range	2 to 60
Units	minutes
Options	max
Default	9
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

num-moves *number*

Synopsis	Number of moves required to declare a duplicate entry
Context	configure service vpls <i>service-name</i> proxy-arp duplicate-detect num-moves <i>number</i>
Tree	num-moves
Range	3 to 10
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-blackhole *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Consider anti-spoof MAC as black-hole static MAC in FDB
Context	configure service vpls <i>service-name</i> proxy-arp duplicate-detect static-blackhole <i>boolean</i>
Tree	static-blackhole
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

window *number*

Synopsis	Time to monitor the MAC address in the anti-spoofing mechanism
Context	configure service vpls <i>service-name</i> proxy-arp duplicate-detect window <i>number</i>
Tree	window
Range	1 to 15
Units	minutes
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-arp

Synopsis	Enter the dynamic-arp context
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp
Tree	dynamic-arp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Enter the ip-address list instance
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-address] *ipv4-unicast-address*

Synopsis	Proxy ARP IPv4 address
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-list *reference*

Synopsis	MAC list for the dynamic entry
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp ip-address <i>ipv4-unicast-address</i> mac-list <i>reference</i>
Tree	mac-list
Reference	configure service proxy-arp-nd mac-list list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolve-retry-time *number*

Synopsis	Frequency at which the resolve messages are sent
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp ip-address <i>ipv4-unicast-address</i> resolve-retry-time <i>number</i>
Tree	resolve-retry-time
Range	1 to 60
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap [[sap-id](#)] *reference*

Synopsis	Add a list entry for sap
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp ip-address <i>ipv4-unicast-address</i> sap <i>reference</i>
Tree	sap
Description	Commands in this context configure the proxy ARP or ND entry for creation when the ARP or neighbor advertisement (NA) packet for the configured IP address is received on the configured SAP, when configured under the dynamic-arp ip-address context. This command can be configured in combination with the mac-list for the entry, in which

case, the MAC of the ARP or NA message and the SAP on which the ARP or NA packet is received are both checked before creating the entry.

Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[sap-id] *reference*

Synopsis	SAP identifier
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-arp ip-address ipv4-unicast-address sap <i>reference</i>
Tree	sap
Reference	configure service vpls <i>service-name</i> sap <i>sap</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-populate *boolean*

Synopsis	Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/SDP-bindings
Context	configure service vpls <i>service-name</i> proxy-arp dynamic-populate <i>boolean</i>
Tree	dynamic-populate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn

Synopsis	Enter the evpn context
Context	configure service vpls <i>service-name</i> proxy-arp evpn
Tree	evpn
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flood

Synopsis	Enter the flood context
Context	configure service vpls <i>service-name</i> proxy-arp evpn flood
Tree	flood
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gratuitous-arp *boolean*

Synopsis	Flood GARP-requests/GARP-replies to the EVPN
Context	configure service vpls <i>service-name</i> proxy-arp evpn flood gratuitous-arp <i>boolean</i>
Tree	gratuitous-arp
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unknown-arp-req *boolean*

Synopsis	Flood ARP-requests (with source squelching) if there is no active proxy-ARP entry for requested IP
Context	configure service vpls <i>service-name</i> proxy-arp evpn flood unknown-arp-req <i>boolean</i>
Tree	unknown-arp-req
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Context	configure service vpls <i>service-name</i> proxy-arp evpn route-tag <i>number</i>

Tree	route-tag
Range	0 1 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-local-es

Synopsis	Enter the evpn-local-es context
Context	configure service vpls <i>service-name</i> proxy-arp evpn-local-es
Tree	evpn-local-es
Description	Commands in this context configure EVPN local ESI information used by proxy-ARD and proxy-ND entries.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

advertise *boolean*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise EVPN local ES entries
Context	configure service vpls <i>service-name</i> proxy-arp evpn-local-es advertise <i>boolean</i>
Tree	advertise
Description	When configured to true , the router advertises EVPN local ES entries as MAC/IP advertisement routes with the proxy bit set.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

retention-timer *number*

Synopsis	Retention timer for EVPN local ES entries
Context	configure service vpls <i>service-name</i> proxy-arp evpn-local-es retention-timer <i>number</i>
Tree	retention-timer

Description	This command sets the retention timer for EVPN local ES entries, defining how long a proxy-ARP or proxy-ND entry is kept after the originating EVPN MAC/IP route is withdrawn.
Range	0 30 to 65535
Units	seconds
Default	0
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

flood

Synopsis	Enter the flood context
Context	configure service vpls <i>service-name</i> proxy-arp flood
Tree	flood
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

received-gratuitous-arp *boolean*

Synopsis	Allow GARP requests or replies to flood the service
Context	configure service vpls <i>service-name</i> proxy-arp flood received-gratuitous-arp <i>boolean</i>
Tree	received-gratuitous-arp
Description	<p>When configured to true, the system floods GARP requests and replies received on a SAP (or SDP-bind) to the service flood-list (which includes EVPN destinations and other SAPs and SDP-binds).</p> <p>The GARPs impacted by this command are identified by the sender IP address being equal to the target IP address and the MAC DA that is broadcast.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

received-unknown-arp-req *boolean*

Synopsis	Allow unknown ARP requests to flood the service
Context	configure service vpls <i>service-name</i> proxy-arp flood received-unknown-arp-req <i>boolean</i>
Tree	received-unknown-arp-req

Description	When configured to true , the unknown ARP requests received on a SAP (or SDP-bind) are flooded to the service flood-list (which includes EVPN destinations and other SAPs and SDP-binds). By default if there is no active proxy ARP entry for the requested IP address, the system floods ARP requests, including EVPN (with source squelching).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

process-arp-probes *boolean*

Synopsis	Enable replies to DAD ARP probes
Context	configure <i>service vpls service-name</i> <i>proxy-arp process-arp-probes boolean</i>
Tree	<i>process-arp-probes</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restrict-non-configured-ip-address

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the restrict-non-configured-ip-address context
Context	configure <i>service vpls service-name</i> <i>proxy-arp restrict-non-configured-ip-address</i>
Tree	<i>restrict-non-configured-ip-address</i>
Description	Commands in this context configure whether all the configured dynamic IP address entries are considered the only authorized entries in the proxy ARP or ND table. ARP or ND packets coming from a unauthorized sender IP are dropped. Therefore, unauthorized IP addresses are not learned in the proxy ARP or ND table, and ARP requests or neighbor solicitations (NS) coming from a unauthorized sender IP are not replied (unless the sponge-mac command option is configured).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sponge-mac *mac-unicast-address-no-zero*

Synopsis	Sponge MAC used to reply to unauthorized requests
Context	configure <i>service vpls service-name proxy-arp restrict-non-configured-ip-address</i> sponge-mac <i>mac-unicast-address-no-zero</i>
Tree	sponge-mac
Description	<p>This command configures the system to ignore ARP requests or neighbor solicitations from an unauthorized IP address. These requests are not learned in the proxy ARP or ND table (when the restrict-non-configured-ip-address command is configured), and the system replies with the configured sponge MAC address. Any IP address that is not configured as proxy ARP, ND dynamic ARP, or neighbor IP address is considered unauthorized and there is no reply.</p> <p>The configured sponge MAC address is not installed in the FDB or advertised in EVPN. If needed, the sponge MAC address can be configured as a static MAC in the same service in the node or a remote node.</p> <p>This command supersedes the operation of the restrict-non-configured-ip-address command for replies to ARP requests or neighbor solicitation:</p> <ul style="list-style-type: none"> • If only restrict-non-configured-ip-address is configured, all ARP or ND packets from unauthorized IPs are dropped. • If restrict-non-configured-ip-address sponge-mac is configured, ARP or ND packets from unauthorized IPs are dropped except for ARP requests or neighbor solicitation messages, to which the system replies with the configured sponge MAC address.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-refresh (*number* | *keyword*)

Synopsis	Time at which to send a refresh message
Context	configure <i>service vpls service-name proxy-arp send-refresh</i> (<i>number</i> <i>keyword</i>)
Tree	send-refresh
Range	120 to 86400
Options	never
Default	never
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-arp

Synopsis	Enter the static-arp context
Context	configure service vpls <i>service-name</i> proxy-arp static-arp
Tree	static-arp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Enter the ip-address list instance
Context	configure service vpls <i>service-name</i> proxy-arp static-arp ip-address <i>ipv4-unicast-address</i>

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap [[sap-id](#)] *reference*

Synopsis	Add a list entry for sap
Context	configure service vpls <i>service-name</i> proxy-nd dynamic-neighbor ip-address ipv6-address sap <i>reference</i>
Tree	sap
Description	Commands in this context configure the proxy ARP or ND entry for creation when the ARP or neighbor advertisement (NA) packet for the configured IP address is received on the configured SAP, when configured under the dynamic-arp ip-address context. This command can be configured in combination with the mac-list for the entry, in which case, the MAC of the ARP or NA message and the SAP on which the ARP or NA packet is received are both checked before creating the entry.
Max. instances	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[sap-id] *reference*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

advertise-neighbor-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertisement type of static or dynamic entries in EVPN
Context	configure service vpls service-name proxy-nd evpn advertise-neighbor-type keyword
Tree	advertise-neighbor-type
Description	<p>This command enables the advertisement of static or dynamic entries that are learned as host, router, or host and router (only one option is possible in a specified service). It also determines the R flag (host or router) when sending Neighbor Advertisement (NA) messages for existing EVPN entries in the proxy-ND table.</p> <p>The router-host command option is only possible when the ARP/ND extended community is advertised along with the MAC/IP routes. It determines that both host and router (dynamic and static) entries are advertised in MAC/IP routes, with an indication whether the entry is host or router in the R flag. These EVPN entries are installed as host or router entries depending on the R flag of the route, and NA messages for them are sent with the proper host or router indication.</p>
Options	router, host, router-host
Default	router
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flood

Synopsis	Enter the flood context
Context	configure service vpls service-name proxy-nd evpn flood
Tree	flood
Introduced	25.3.R2

Synopsis	Flood host unsolicited Neighbor Advertisement (NA) replies to EVPN
Context	configure service vpls service-name proxy-nd evpn flood unknown-neighbor-advertise-host boolean
Tree	unknown-neighbor-advertise-host

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unknown-neighbor-advertise-router *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Flood router unsolicited Neighbor Advertisement (NA) replies to EVPN
Context	configure service vpls <i>service-name</i> proxy-nd evpn flood unknown-neighbor-advertise-router <i>boolean</i>
Tree	unknown-neighbor-advertise-router
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unknown-neighbor-solicitation *boolean*

Synopsis	Flood unsolicited Neighbor Solicitation messages (with source squelching) into EVPN network
Context	configure service vpls <i>service-name</i> proxy-nd evpn flood unknown-neighbor-solicitation <i>boolean</i>
Tree	unknown-neighbor-solicitation
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Context	configure service vpls <i>service-name</i> proxy-nd evpn route-tag <i>number</i>

Tree	route-tag
Range	0 1 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-local-es

Synopsis	Enter the evpn-local-es context
Context	configure service vpls <i>service-name</i> proxy-nd evpn-local-es
Tree	evpn-local-es
Description	Commands in this context configure EVPN local ESI information used by proxy-ARD and proxy-ND entries.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

advertise *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise EVPN local ES entries
Context	configure service vpls <i>service-name</i> proxy-nd evpn-local-es advertise <i>boolean</i>
Tree	advertise
Description	When configured to true , the router advertises EVPN local ES entries as MAC/IP advertisement routes with the proxy bit set.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

retention-timer *number*

Synopsis	Retention timer for EVPN local ES entries
Context	configure service vpls <i>service-name</i> proxy-nd evpn-local-es retention-timer <i>number</i>
Tree	retention-timer

Description	This command sets the retention timer for EVPN local ES entries, defining how long a proxy-ARP or proxy-ND entry is kept after the originating EVPN MAC/IP route is withdrawn.
Range	0 30 to 65535
Units	seconds
Default	0
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

flood

Synopsis	Enter the flood context
Context	configure service vpls <i>service-name</i> proxy-nd flood
Tree	flood
Introduced	25.3.R2

received-unknown-neighbor-advertise-host *boolean*

Synopsis	Allow unknown NA host messages to flood the service
Context	configure service vpls <i>service-name</i> proxy-nd flood received-unknown-neighbor-advertise-host <i>boolean</i>
Tree	received-unknown-neighbor-advertise-host
Description	<p>When configured to true, the system floods received unsolicited NAs into the VPLS service (to EVPN destinations and SAPs or SDP-binds).</p> <p>When configured to false, the system does not flood unsolicited NAs regardless of the configure service vpls proxy-nd evpn flood unknown-neighbor-advertise-host command configuration.</p> <p>The NA messages impacted by this command are NA messages with the following flags: S=0 and R=0.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

received-unknown-neighbor-advertise-router *boolean*

Synopsis	Allow unknown router NA host messages to flood service
----------	--

Context	configure service vpls service-name proxy-nd flood received-unknown-neighbor-advertise-router boolean
Tree	received-unknown-neighbor-advertise-router
Description	<p>When configured to true, the system floods received unsolicited router NAs into the VPLS service (to EVPN destinations and SAPs or SDP-binds).</p> <p>When configured to false, the system does not flood unsolicited router NAs regardless of the configure service vpls proxy-nd evpn flood unknown-neighbor-advertise-router command configuration.</p> <p>The NA messages impacted by this command are NA messages with the following flags: S=0 and R=1.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

received-unknown-neighbor-solicitation boolean

Synopsis	Allow unknown NS messages to flood the service
Context	configure service vpls service-name proxy-nd flood received-unknown-neighbor-solicitation boolean
Tree	received-unknown-neighbor-solicitation
Description	<p>When configured to true, the system floods unknown NS messages into the VPLS service (to EVPN destinations and SAPs or SDP-binds).</p> <p>When configured to false, the system does not flood unknown NS messages regardless of the configure service vpls proxy-nd evpn flood unknown-neighbor-solicitation command configuration.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

process-dad-neighbor-solicitations boolean

Synopsis	Enable replies to DAD neighbor solicitations
Context	configure service vpls service-name proxy-nd process-dad-neighbor-solicitations boolean
Tree	process-dad-neighbor-solicitations
Default	true
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

restrict-non-configured-ip-address

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the restrict-non-configured-ip-address context
Context	configure service vpls service-name proxy-nd restrict-non-configured-ip-address
Tree	restrict-non-configured-ip-address
Description	Commands in this context configure whether all the configured dynamic IP address entries are considered the only authorized entries in the proxy ARP or ND table. ARP or ND packets coming from a unauthorized sender IP are dropped. Therefore, unauthorized IP addresses are not learned in the proxy ARP or ND table, and ARP requests or neighbor solicitations (NS) coming from a unauthorized sender IP are not replied (unless the sponge-mac command option is configured).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sponge-mac mac-unicast-address-no-zero

Synopsis	Sponge MAC used to reply to unauthorized requests
Context	configure service vpls service-name proxy-nd restrict-non-configured-ip-address sponge-mac mac-unicast-address-no-zero
Tree	sponge-mac
Description	<p>This command configures the system to ignore ARP requests or neighbor solicitations from an unauthorized IP address. These requests are not learned in the proxy ARP or ND table (when the restrict-non-configured-ip-address command is configured), and the system replies with the configured sponge MAC address. Any IP address that is not configured as proxy ARP, ND dynamic ARP, or neighbor IP address is considered unauthorized and there is no reply.</p> <p>The configured sponge MAC address is not installed in the FDB or advertised in EVPN. If needed, the sponge MAC address can be configured as a static MAC in the same service in the node or a remote node.</p> <p>This command supersedes the operation of the restrict-non-configured-ip-address command for replies to ARP requests or neighbor solicitation:</p> <ul style="list-style-type: none"> • If only restrict-non-configured-ip-address is configured, all ARP or ND packets from unauthorized IPs are dropped. • If restrict-non-configured-ip-address sponge-mac is configured, ARP or ND packets from unauthorized IPs are dropped except for ARP requests or neighbor

solicitation messages, to which the system replies with the configured sponge MAC address.

String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-refresh (*number* | *keyword*)

Synopsis	Time at which to send a refresh message
Context	configure service vpls <i>service-name</i> proxy-nd send-refresh (<i>number</i> <i>keyword</i>)
Tree	send-refresh
Range	120 to 86400
Options	never
Default	never
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-neighbor

Synopsis	Enter the static-neighbor context
Context	configure service vpls <i>service-name</i> proxy-nd static-neighbor
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address [[ipv6-address](#)] *ipv6-address*

Synopsis	Enter the ip-address list instance
Context	configure service vpls <i>service-name</i> proxy-nd static-neighbor ip-address <i>ipv6-address</i>

service-id *boolean*

Synopsis Send the service ID in the Vendor Specific Option
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [dhcp option-82 vendor-specific-option](#) [service-id](#) *boolean*
Tree [service-id](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

string *string-not-all-spaces*

Synopsis User-defined ASCII string for the VSO
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [dhcp option-82 vendor-specific-option](#) [string](#) *string-not-all-spaces*
Tree [string](#)
String length 1 to 32
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure <i>service vpls</i> <i>service-name sap sap</i> <i>dhcp option-82 vendor-specific-option system-id boolean</i>
Tree	<i>system-id</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-server

Synopsis	Enter the proxy-server context
Context	configure <i>service vpls</i> <i>service-name sap sap</i> <i>dhcp proxy-server</i>
Tree	<i>proxy-server</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure <i>service vpls</i> <i>service-name sap sap</i> <i>dhcp proxy-server admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as DHCP server address in SAP context
Context	configure <i>service vpls</i> <i>service-name sap sap</i> <i>dhcp proxy-server emulated-server ipv4-unicast-address</i>
Tree	<i>emulated-server</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-time

Synopsis	Enter the lease-time context
Context	configure service vpls service-name sap sap dhcp proxy-server lease-time
Tree	lease-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service vpls service-name sap sap dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	DHCP lease time
Context	configure service vpls service-name sap sap dhcp proxy-server lease-time value <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snoop *boolean*

Synopsis	Enable DHCP snooping on the SAP
Context	configure service vpls service-name sap sap dhcp snoop <i>boolean</i>

Tree	snoop
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service vpls <i>service-name</i> sap sap dhcp6
Tree	dhcp6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpls <i>service-name</i> sap sap dhcp6 description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldra

Synopsis	Enable the ldra context
Context	configure service vpls <i>service-name</i> sap sap dhcp6 ldra
Tree	ldra
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-type *keyword*

Synopsis	LDRA interface type
Context	configure service vpls <i>service-name</i> sap sap dhcp6 ldra interface-type <i>keyword</i>

Tree	interface-type
Description	<p>This command specifies the LDRA interface type.</p> <p>client-facing - configure the SAP as an untrusted client-facing interface. Only DHCPv6 client messages are accepted and encapsulated in a Relay-Forward message. It is mandatory to configure an interface ID for client-facing SAPs. Relay-Forward, Relay-Reply, and DHCPv6 server messages are silently dropped when received on a client-facing SAP.</p> <p>network-facing - configure the SAP as a network-facing interface. Only Relay-Reply messages are accepted: the server message is extracted from the Relay-Reply message and forwarded in the VPLS. All other DHCPv6 message types are silently dropped when received on a network-facing SAP.</p>
Options	client-facing, network-facing
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

options

Synopsis	Enter the options context
Context	configure service vpls service-name sap sap dhcp6 ldra options
Tree	options
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-id

Synopsis	Enable the interface-id context
Context	configure service vpls service-name sap sap dhcp6 ldra options interface-id
Tree	interface-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-tuple

Synopsis	Use an ASCII-encoded concatenated tuple
Context	configure service vpls service-name sap sap dhcp6 ldra options interface-id ascii-tuple
Tree	ascii-tuple

Description	This command specifies the use of the ASCII-encoded concatenated tuple, which consists of the system name, service ID, and SAP ID separated by " ".
Notes	The following elements are part of a mandatory choice: ascii-tuple or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-ascii-tuple

Synopsis	Use an enhanced ASCII-encoded concatenated tuple
Context	configure service vpls service-name sap sap dhcp6 ldra options interface-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	This command specifies the use of the ASCII-encoded concatenated tuple enhanced with VLAN ID and dot1p bits, consisting of the system name, service ID, SAP ID, dot1p inner VLAN, and inner VLAN ID separated by " ".
Notes	The following elements are part of a mandatory choice: ascii-tuple or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-id

Synopsis	Enter the remote-id context
Context	configure service vpls service-name sap sap dhcp6 ldra options remote-id
Tree	remote-id
Description	Commands in this context configure the Relay-Agent remote ID contents inserted by the LDRA.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac

Synopsis	Use the DHCPv6 client source MAC address
Context	configure service vpls service-name sap sap dhcp6 ldra options remote-id mac
Tree	mac
Description	This command sets the enterprise number field of the Relay Agent remote ID to 6527 and configures the DHCPv6 client source MAC address as six hexadecimal numbers.

Notes	The following elements are part of a choice: mac or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

string *string*

Synopsis	User-defined ASCII string
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dhcp6 ldra options remote-id string <i>string</i>
Tree	string
Description	This command sets the enterprise number field of the Relay-Agent remote ID to 6527 and configures the ASCII-encoded string.
String length	1 to 32
Notes	The following elements are part of a choice: mac or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	configure service vpls <i>service-name</i> sap <i>sap</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

egress

Synopsis	Enter the egress context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress
Tree	egress
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

agg-rate

Synopsis	Enter the agg-rate context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress agg-rate
Tree	agg-rate
Notes	The following elements are part of a choice: agg-rate or percent-agg-rate .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

queue-frame-based-accounting *boolean*

Synopsis	Enable frame based accounting on policers and queues
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress agg-rate queue-frame-based-accounting <i>boolean</i>
Tree	queue-frame-based-accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rate *number*

Synopsis	Enforced aggregate rate for all queues
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress agg-rate rate <i>number</i>
Tree	rate
Range	1 to 6400000000
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-mac-rewrite *mac-unicast-address-no-zero*

Synopsis	Destination MAC overwrite for unicast
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress dest-mac-rewrite <i>mac-unicast-address-no-zero</i>
Tree	dest-mac-rewrite

String format 'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

filter

Synopsis Enter the **filter** context
Context **configure** *service vpls service-name* *sap sap egress filter*
Tree *filter*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ip reference

Synopsis IPv4 filter policy name
Context **configure** *service vpls service-name* *sap sap egress filter ip reference*
Tree *ip*
Reference **configure** *filter ip-filter filter-name*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ipv6 reference

Synopsis IPv6 filter policy name
Context **configure** *service vpls service-name* *sap sap egress filter ipv6 reference*
Tree *ipv6*
Reference **configure** *filter ipv6-filter filter-name*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

qos

Synopsis Enter the **qos** context
Context **configure** *service vpls service-name* *sap sap egress qos*
Tree *qos*

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

policer-control-policy

Synopsis Enter the **policer-control-policy** context
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [egress qos](#) [policer-control-policy](#)
Tree [policer-control-policy](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overrides

Synopsis Enable the **overrides** context
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [egress qos](#) [policer-control-policy](#) [overrides](#)
Tree [overrides](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

root

Synopsis Enter the **root** context
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [egress qos](#) [policer-control-policy](#) [overrides](#) [root](#)
Tree [root](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

max-rate (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit
Context **configure** [service vpls](#) *service-name* [sap](#) [sap](#) [egress qos](#) [policer-control-policy](#) [overrides](#) [root](#) [max-rate](#) (*number* | *keyword*)
Tree [max-rate](#)
Range 1 to 6400000000
Options max

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

priority-mbs-thresholds

Synopsis Enter the **priority-mbs-thresholds** context
Context **configure** [service vpls service-name sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds](#)
Tree [priority-mbs-thresholds](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

min-thresh-separation (*number* | *keyword*)

Synopsis Minimum amount of separation buffer space
Context **configure** [service vpls service-name sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation](#) (*number* | *keyword*)
Tree [min-thresh-separation](#)
Range 0 to 16777216
Units bytes
Options auto
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

priority [[priority-level](#)] *number*

Synopsis Enter the **priority** list instance
Context **configure** [service vpls service-name sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds priority](#) *number*
Tree [priority](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[[priority-level](#)] *number*

Synopsis Priority level

Context	configure service vpls service-name sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds priority number
Tree	priority
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbs-contribution (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	configure service vpls service-name sap sap egress qos policer-control-policy overrides root priority-mbs-thresholds priority number mbs-contribution (<i>number</i> <i>keyword</i>)
Tree	mbs-contribution
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name *reference*

Synopsis	Policer control policy name
Context	configure service vpls service-name sap sap egress qos policer-control-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos policer-control-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service vpls service-name sap sap egress qos sap-egress
Tree	sap-egress
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

overrides

Synopsis Enter the **overrides** context

Context **configure** [service vpls](#) *service-name* [sap sap](#) [egress qos sap-egress overrides](#)

Tree [overrides](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

policer [[policer-id](#)] *reference*

Synopsis Enter the **policer** list instance

Context **configure** [service vpls](#) *service-name* [sap sap](#) [egress qos sap-egress overrides](#) [policer reference](#)

Tree [policer](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[\[policer-id\]](#) *reference*

Synopsis Policer unique ID

Context **configure** [service vpls](#) *service-name* [sap sap](#) [egress qos sap-egress overrides](#) [policer reference](#)

Tree [policer](#)

Reference **configure** [qos sap-egress](#) *qos-policy-name* [policer](#) *number*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

cbs (*number* | *keyword*)

Synopsis CBS

Context **configure** [service vpls](#) *service-name* [sap sap](#) [egress qos sap-egress overrides](#) [policer reference](#) [cbs](#) (*number* | *keyword*)

Tree [cbs](#)

Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides policer reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides policer reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

cir *decimal-number*

Synopsis CIR percent rate

Context **configure** *service vpls service-name sap sap egress qos sap-egress overrides policer*
reference percent-rate cir decimal-number

Tree *cir*

Range 0.00 to 100.00

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

pir *decimal-number*

Synopsis PIR percent rate

Context **configure** *service vpls service-name sap sap egress qos sap-egress overrides policer*
reference percent-rate pir decimal-number

Tree *pir*

Range 0.01 to 100.00

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

rate

Synopsis Enter the **rate** context

Context **configure** *service vpls service-name sap sap egress qos sap-egress overrides policer*
reference rate

Tree *rate*

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

cir (*number* | *keyword*)

Synopsis CIR rate

Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer <i>reference rate cir (number keyword)</i>
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pir (*number | keyword*)

Synopsis	PIR rate
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer <i>reference rate pir (number keyword)</i>
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service vpls service-name sap sap egress qos sap-egress overrides policer <i>reference stat-mode keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
----------	--------------------------------------

Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference
Tree	queue
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[queue-id] reference

Synopsis	Policer unique ID
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference
Tree	queue
Reference	configure qos sap-egress qos-policy-name queue number
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference adaptation-rule
Tree	adaptation-rule
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number
Tree	avg-frame-overhead
Description	This command configures overrides for the average frame overhead. The overrides supersede the average frame overhead configuration under the queue. For a full description of this command, see the configure qos network-queue queue avg-frame-overhead and configure qos sap-egress queue avg-frame-overhead contexts.
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cbs (number | keyword)

Synopsis	CBS
Context	configure service vpls service-name sap sap egress qos sap-egress overrides queue reference cbs (number keyword)
Tree	cbs
Range	0 to 2097151
Units	kilobytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference drop-tail
Tree	drop-tail
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low

Synopsis	Enter the low context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference drop-tail low
Tree	low
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 2147482624

Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

parent

Synopsis	Enter the parent context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference parent
Tree	parent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weight *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cir decimal-number

Synopsis	CIR percent rate
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pir decimal-number

Synopsis	PIR percent rate
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rate

Synopsis	Enter the rate context
Context	configure service vpls <i>service-name</i> sap sap egress qos sap-egress overrides queue reference rate
Tree	rate

Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

scheduler *named-item*

Tree **scheduler**

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length 1 to 32

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

parent

Synopsis	Enter the parent context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> parent
Tree	parent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure service vpls <i>service-name</i> sap <i>sap</i> egress qos scheduler-policy overrides scheduler <i>named-item</i> parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	25.3.R2

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure service vpls service-name sap sap eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM command options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep md-admin-name reference ma-admin-name reference mep-id number

Synopsis	Enter the mep list instance
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Description	Commands in this context configure an 802.1ag Maintenance Endpoint (MEP) instance. A MEP created at the VPLS service level, using the configure service vpls eth-cfm command, creates a virtual MEP.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name reference

Synopsis	Maintenance Domain (MD) name
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Reference	configure eth-cfm domain admin-name
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ma-admin-name *reference*

Synopsis Maintenance Association (MA) name
Context **configure** [service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number](#)
Tree [mep](#)
Reference **configure** [eth-cfm domain admin-name association admin-name](#)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mep-id *number*

Synopsis Maintenance Endpoint (MEP) ID
Context **configure** [service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number](#)
Tree [mep](#)
Range 1 to 8191
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the MEP
Context **configure** [service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number admin-state keyword](#)
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ais

Synopsis	Enable the ais context
Context	configure service vpls <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais
Tree	ais
Description	Commands in this context enable the reception of AIS messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure service vpls <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais client-meg-level <i>number</i>
Tree	client-meg-level
Description	This command configures the client Maintenance Entity Group (MEG) level to use for AIS message generation. One restriction is that the client MEG level must be higher than the local MEG level. Only the lowest client MEG level is used for facility MEPs.
Range	1 to 7
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service vpls <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interface-support <i>boolean</i>
Tree	interface-support
Description	<p>When configured to true, the system enables the generation of AIS PDUs based on the associated endpoint state.</p> <p>AIS on Down MEPs triggers and clears based on the operational status of the entity it is configured on. If CCM is configured to true, transmission of the AIS PDU is based on either the nonoperational state of the entity or on any CCM defect conditions. AIS generation ceases if both the operational state is up and CCM has no defect conditions. If the MEP is not enabled with CCM, the operational state of the entity is the only consideration, assuming the command is present for the MEP.</p>

	When configured to false , the generation of AIS PDUs is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval number

Synopsis	Transmission interval for AIS messages
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect keyword

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais low-priority-defect keyword
Tree	low-priority-defect
Options	all-def – Generate AIS frame for any defect in CCM state machine mac-rem-err-xcon – Generate AIS frame for def-mac-status defect or higher
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	Priority of the AIS messages generated by the node
Context	configure service vpls service-name sap sap eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais priority number
Tree	priority
Range	0 to 7

Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service vpls <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time

Tree **description**
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

direction *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	configure service vpls <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> direction <i>keyword</i>
Tree	direction
Description	This command configures the direction in which the MEP faces on the bridge port.
Options	down – Send ETH-CFM messages toward the MAC relay entity up – Send ETH-CFM messages away from the MAC relay entity
Default	down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> sap sap eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors

Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls <i>service-name</i> sap <i>sap</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

fault-propagation *keyword*

Synopsis Fault propagation for the MEP

Context **configure** [service vpls](#) [service-name](#) [sap](#) [sap](#) [eth-cfm mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) **fault-propagation** *keyword*

Tree [fault-propagation](#)

Options use-if-status-tlv – Use the interface TLV
suspend-ccm – Suspend continuity check messages

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service vpls](#) [service-name](#) [sap](#) [sap](#) [eth-cfm mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) **low-priority-defect** *keyword*

Tree [low-priority-defect](#)

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Default mac-rem-err-xcon

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mac-address *mac-unicast-address-no-zero*

Synopsis MAC address of the MEP

Context **configure** [service vpls](#) [service-name](#) [sap](#) [sap](#) [eth-cfm mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) **mac-address** *mac-unicast-address-no-zero*

Tree [mac-address](#)

Description This command specifies the MAC address of the MEP.
When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.

String format 'ieeee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service vpls <i>service-name</i> sap <i>sap</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb
Tree	fdb
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list

Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	configure service mac-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard-unknown-source *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb discard-unknown-source <i>boolean</i>
Tree	discard-unknown-source
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard-unprotected-dest-mac *boolean*

Synopsis	Discard packet with unprotected destination MAC address
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb discard-unprotected-dest-mac <i>boolean</i>
Tree	discard-unprotected-dest-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit-mac-move *keyword*

Synopsis	MAC move
Context	configure service vpls <i>service-name</i> sap <i>sap</i> fdb limit-mac-move <i>keyword</i>
Tree	limit-mac-move
Options	blockable, non-blockable
Default	blockable

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mac-learning

Synopsis Enter the **mac-learning** context
Context **configure** [service vpls service-name sap sap fdb mac-learning](#)
Tree [mac-learning](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

aging *boolean*

Synopsis Enable aging of MAC addresses
Context **configure** [service vpls service-name sap sap fdb mac-learning aging boolean](#)
Tree [aging](#)
Default true
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

learning *boolean*

Synopsis Enable learning of new MAC addresses
Context **configure** [service vpls service-name sap sap fdb mac-learning learning boolean](#)
Tree [learning](#)
Default true
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mac-pinning *boolean*

Synopsis Enable MAC address pinning on this SAP
Context **configure** [service vpls service-name sap sap fdb mac-pinning boolean](#)
Tree [mac-pinning](#)
Default false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service vpls service-name sap sap fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this SAP.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service pw-template fdb discard-unknown-source command is set to true for this SAP, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the SAP uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Action taken after a relearn request for protected MAC
Context	configure service vpls service-name sap sap fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Description	This command configures how the system handles relearn requests for protected MAC addresses.
Options	sap-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

i-vpls-mac-flush

Synopsis	Enter the i-vpls-mac-flush context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> i-vpls-mac-flush
Tree	i-vpls-mac-flush
Introduced	25.3.R2

Synopsis	Maximum group source combinations
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-sources *number*

Synopsis	Maximum sources that are allowed per group
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> sap sap igmp-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> sap sap igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> sap sap igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping send-queries <i>boolean</i>

Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-address](#)] *ipv4-multicast-address*

Synopsis	Enter the group list instance
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[group-address](#)] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	configure service vpls <i>service-name</i> sap <i>sap</i> igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

source [source-address] *ipv4-unicast-address*

Synopsis Add a list entry for **source**

Context **configure** *service vpls service-name sap sap igmp-snooping static group ipv4-multicast-address* **source** *ipv4-unicast-address*

Tree **source**

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[source-address] *ipv4-unicast-address*

Synopsis Source IP address of multicast channel sending data

Context **configure** *service vpls service-name sap sap igmp-snooping static group ipv4-multicast-address* **source** *ipv4-unicast-address*

Tree **source**

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

starg

Synopsis any source address (*,G)

Context **configure** *service vpls service-name sap sap igmp-snooping static group ipv4-multicast-address* **starg**

Tree **starg**

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

version keyword

Synopsis	IGMP protocol version
Context	configure service vpls <i>service-name</i> sap sap igmp-snooping version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
Context	configure service vpls <i>service-name</i> sap sap ingress

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service vpls <i>service-name</i> sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[scheduler-name] *named-item*

Synopsis	Scheduler name
Context	configure service vpls <i>service-name</i> sap sap ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

parent

Synopsis	Enter the parent context

Platforms	7705 SAR Gen 2

pagp *boolean*

Synopsis	Enable port aggregation protocol
Context	configure service vpls <i>service-name</i> sap sap l2pt termination protocols pagp <i>boolean</i>
Tree	pagp

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stp boolean

Synopsis	Enable all spanning tree protocols
Context	configure service vpls <i>service-name</i> sap sap l2pt termination protocols stp <i>boolean</i>
Tree	stp
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udld boolean

Synopsis	Enable unidirectional link detection
Context	configure service vpls <i>service-name</i> sap sap l2pt termination protocols udld <i>boolean</i>
Tree	udld
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vtp boolean

Synopsis	Enable virtual trunk protocol
Context	configure service vpls <i>service-name</i> sap sap l2pt termination protocols vtp <i>boolean</i>
Tree	vtp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lag

Synopsis	Enter the lag context
Context	configure service vpls <i>service-name</i> sap sap lag

Tree	lag
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

managed-vlan-list

Synopsis	Enter the managed-vlan-list context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> managed-vlan-list
Tree	managed-vlan-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

range [[vlan-range](#)] *string*

Synopsis	Add a list entry for range
Context	configure service vpls <i>service-name</i> sap <i>sap</i> managed-vlan-list range <i>string</i>
Tree	range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[vlan-range](#)] *string*

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	configure service vpls <i>service-name</i> sap <i>sap</i> managed-vlan-list range <i>string</i>
Tree	range
String format	'vlan-range' must be Q-tag range, default-sap, or .. range form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mc-ring

Synopsis	Enable the mc-ring context
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mc-ring
Tree	mc-ring

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ring-node *named-item*

Synopsis Name for the ring node associated with this SAP
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* [mc-ring ring-node](#) *named-item*
Tree [ring-node](#)
String length 1 to 32
String format 'string-not-all-spaces' must contain at least one non-space character
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mld-snooping

Synopsis Enter the **mld-snooping** context
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* [mld-snooping](#)
Tree [mld-snooping](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

fast-leave *boolean*

Synopsis Allow IGMP fast leave processing
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* [mld-snooping fast-leave](#) *boolean*
Tree [fast-leave](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

import-policy *reference*

Synopsis Import policy that filters IGMP packets
Context **configure** [service vpls](#) *service-name* [sap](#) *sap* [mld-snooping import-policy](#) *reference*

Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls service-name sap sap mld-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls service-name sap sap mld-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls service-name sap sap mld-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> sap sap mld-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> sap sap mld-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> sap sap mld-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-address](#)] *ipv6-multicast-address*

Synopsis	Enter the group list instance
Context	configure service vpls <i>service-name</i> sap sap mld-snooping static group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-address] *ipv6-multicast-address*

Synopsis	Group address of multicast channel
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping static group <i>ipv6-multicast-address</i>
Tree	group
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping static group <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[source-address](#)] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping static group <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> sap <i>sap</i> mld-snooping static group <i>ipv6-multicast-address</i> starg
Tree	starg

Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	configure service vpls <i>service-name</i> sap sap mld-snooping version <i>keyword</i>
Tree	version
Options	1, 2
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

Synopsis	Monitor operational group
Context	configure service vpls <i>service-name</i> sap sap monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multi-service-site *reference*

Synopsis	Multi service site name
Context	configure service vpls <i>service-name</i> sap sap multi-service-site <i>reference</i>
Tree	multi-service-site
Reference	configure service customer <i>customer-name</i> multi-service-site <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group
Context	configure service vpls <i>service-name</i> sap sap oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

process-cpm-traffic-on-sap-down *boolean*

Synopsis	Process CPM traffic on SAP down event
Context	configure service vpls <i>service-name</i> sap sap process-cpm-traffic-on-sap-down <i>boolean</i>
Tree	process-cpm-traffic-on-sap-down
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon-group *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Split horizon group
Context	configure service vpls <i>service-name</i> sap sap split-horizon-group <i>reference</i>
Tree	split-horizon-group
Reference	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stp

Synopsis	Enter the stp context
----------	------------------------------

Context	configure service vpls service-name sap sap stp
Tree	stp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls service-name sap sap stp admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-edge *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	configure service vpls service-name sap sap stp auto-edge boolean
Tree	auto-edge
Description	<p>When configured to true, the router automatically detects the edge port characteristics of the SAP or spoke SDP. The STP concludes there is no bridge behind the spoke SDP, the OPER_EDGE variable is dynamically set to true. If a BPDU is received, the OPER_EDGE variable is dynamically set to false.</p> <p>When configured to false, the router disables automatic detection.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	configure service vpls service-name sap sap stp edge-port boolean
Tree	edge-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp link-type <i>keyword</i>
Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-instance [**mst-inst-number**] *number*

Synopsis	Enter the mst-instance list instance
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp mst-instance <i>number</i>
Tree	mst-instance
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[mst-inst-number] *number*

Synopsis	Multiple Spanning Tree Instance number
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp mst-instance <i>number</i>
Tree	mst-instance
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-path-cost *number*

Synopsis	MSTI path cost
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp mst-instance <i>number</i> mst-path-cost <i>number</i>
Tree	mst-path-cost
Range	1 to 200000000

Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-port-priority *number*

Synopsis	MSTI port priority
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp mst-instance <i>number</i> mst-port-priority <i>number</i>
Tree	mst-port-priority
Range	0 16 32 48 64 80 96 112 128 144 160 176 192 208 224 240
Default	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-cost *number*

Synopsis	Configure path-cost
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp path-cost <i>number</i>
Tree	path-cost
Range	1 to 2000000000
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port-num *number*

Synopsis	Configure virtual port number
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp port-num <i>number</i>
Tree	port-num
Range	1 to 2047
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Configure STP priority
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp <i>priority</i> <i>number</i>
Tree	<i>priority</i>
Range	0 to 255
Default	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

root-guard *boolean*

Synopsis	Enable/disable STP root-guard
Context	configure service vpls <i>service-name</i> sap <i>sap</i> stp root-guard <i>boolean</i>
Tree	<i>root-guard</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure service vpls <i>service-name</i> service-id <i>number</i>
Tree	<i>service-id</i>
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-mtu *number*

Synopsis	MTU size
Context	configure service vpls <i>service-name</i> service-mtu <i>number</i>

Tree [service-mtu](#)

Description	<p>This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.</p> <p>The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.</p> <p>When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.</p> <p>If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.</p> <p>Binding operational states are automatically reevaluated.</p> <p>For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.</p> <p>Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.</p> <p>In the configure service epipe spoke-sdp context, the adv-service-mtu command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The adv-service-mtu command is also used to validate the value signaled by the far-end PE.</p>
Range	1 to 9782
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon-group [[shg-name](#)] *named-item*

Synopsis	Enter the split-horizon-group list instance
Context	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i>
Tree	split-horizon-group
Description	Commands in this context configure the split-horizon group options used in the VPLS instance.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[shg-name] *named-item*

Synopsis SHG name to which the SDP belongs
Context **configure** *service vpls service-name split-horizon-group named-item*
Tree *split-horizon-group*
String length 1 to 32
String format 'string-not-all-spaces' must contain at least one non-space character
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

description *description*

Synopsis Text description
Context **configure** *service vpls service-name split-horizon-group named-item description description*
Tree *description*
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

fdb

Synopsis Enter the **fdb** context
Context **configure** *service vpls service-name split-horizon-group named-item fdb*
Tree *fdb*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

saps

Synopsis	Enter the saps context
Context	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i> fdb saps
Tree	saps
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect *boolean*

Synopsis	Populate automatically MAC protect list with MAC addresses learned on SDP with split horizon group
Context	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i> fdb saps auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i> fdb saps auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	configure service mac-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard-unprotected-dest-mac *boolean*

Synopsis	Discard packet with unprotected destination MAC address
Context	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i> fdb saps discard-unprotected-dest-mac <i>boolean</i>
Tree	discard-unprotected-dest-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Action taken after a relearn request for protected MAC
Context	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i> fdb saps protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Description	This command configures how the system handles relearn requests for protected MAC addresses.
Options	sap-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spoke-sdp [[sdp-bind-id](#)] *sdp-bind-id*

Synopsis	Enter the spoke-sdp list instance
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i>
Tree	spoke-sdp
Description	<p>Commands in this context bind a service to an existing service destination point (SDP).</p> <p>A spoke SDP is treated like a traditional bridge port where flooded traffic received on the spoke SDP is replicated on all other ports (other spoke and mesh SDPs or SAPs) and not transmitted on the port it was received.</p> <p>The SDP has an operational state which determines the operational state of the SDP within the service. For example, if the SDP is administratively or operationally down, the SDP for the service is down.</p> <p>The SDP must already be defined in the configure service sdp context to associate an SDP with a VPLS service.</p> <p>SDPs must be explicitly associated and bound to a service. If an SDP is not bound to a service, no far-end devices can participate in the service</p>

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[sdp-bind-id] *sdp-bind-id*

Synopsis SDP binding ID
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id*
Tree [spoke-sdp](#)
String length 3 to 16
String format 'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

accounting-policy *reference*

Synopsis Policy to collect accounting statistics
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [accounting-policy](#) *reference*

Synopsis Administrative state of the SDP binding to the service
Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default enable
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

adv-service-mtu *number*

Synopsis	Advertise service MTU value
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> adv-service-mtu <i>number</i>
Tree	adv-service-mtu
Description	<p>This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP. The router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.</p> <p>This command cannot be configured on a spoke-SDP that is bound to an SDP with the adv-mtu-override command.</p>
Range	0 to 9782
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

block-on-mesh-failure *boolean*

Synopsis	Enable blocking after all SDPs are operationally down
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> block-on-mesh-failure <i>boolean</i>
Tree	block-on-mesh-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bpdu-translation *keyword*

Synopsis	BPDU format
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> bpdu-translation <i>keyword</i>
Tree	bpdu-translation
Options	auto, pvst, stp, pvst-rw, auto-rw
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

collect-stats *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	configure <i>service vpls</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> collect-stats <i>boolean</i>
Tree	<i>collect-stats</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

control-word *boolean*

Synopsis	Use the control word as preferred
Context	configure <i>service vpls</i> <i>service-name</i> <i>spoke-sdp</i> <i>sdp-bind-id</i> control-word <i>boolean</i>
Tree	<i>control-word</i>
Default	false
Introduced	25.3.R2

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure service vpls service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure service vpls service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ais

Synopsis	Enable the ais context
Context	configure service vpls service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais
Tree	ais
Description	Commands in this context enable the reception of AIS messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure service vpls service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level <i>number</i>
Tree	client-meg-level
Description	This command configures the client Maintenance Entity Group (MEG) level to use for AIS message generation. One restriction is that the client MEG level must be higher than the local MEG level. Only the lowest client MEG level is used for facility MEPs.
Range	1 to 7
Max. instances	7
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service vpls service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support <i>boolean</i>
Tree	interface-support
Description	<p>When configured to true, the system enables the generation of AIS PDUs based on the associated endpoint state.</p> <p>AIS on Down MEPs triggers and clears based on the operational status of the entity it is configured on. If CCM is configured to true, transmission of the AIS PDU is based on either the nonoperational state of the entity or on any CCM defect conditions. AIS generation ceases if both the operational state is up and CCM has no defect conditions. If the MEP is not enabled with CCM, the operational state of the entity is the only consideration, assuming the command is present for the MEP.</p> <p>When configured to false, the generation of AIS PDUs is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Transmission interval for AIS messages
Context	configure service vpls service-name spoke-sdp sdp-bind-id eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval <i>number</i>
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
----------	--

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais <i>low-priority-defect</i> <i>keyword</i>
Tree	low-priority-defect
Options	all-def – Generate AIS frame for any defect in CCM state machine mac-rem-err-xcon – Generate AIS frame for def-mac-status defect or higher
Default	all-def
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais <i>priority</i> <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Tree	<i>ccm-ltm-priority</i>
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure <i>service vpls</i> <i>service-name spoke-sdp</i> <i>sdp-bind-id eth-cfm mep</i> <i>md-admin-name reference ma-admin-name reference mep-id number description description</i>
Tree	<i>description</i>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

direction *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	configure <i>service vpls</i> <i>service-name spoke-sdp</i> <i>sdp-bind-id eth-cfm mep</i> <i>md-admin-name reference ma-admin-name reference mep-id number direction keyword</i>
Tree	<i>direction</i>
Description	This command configures the direction in which the MEP faces on the bridge port.
Options	down – Send ETH-CFM messages toward the MAC relay entity up – Send ETH-CFM messages away from the MAC relay entity
Default	down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep <i>md-admin-name</i> reference ma-admin-name reference mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv – Use the interface TLV suspend-ccm – Suspend continuity check messages
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>mac-unicast-address-no-zero</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

fdb

Synopsis Enter the **fdb** context

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* **fdb**

Tree [fdb](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

auto-learn-mac-protect *boolean*

Synopsis Populate automatically MAC protect list with source MAC addresses learned on SDP

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [fdb](#) **auto-learn-mac-protect** *boolean*

Tree [auto-learn-mac-protect](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

auto-learn-mac-protect-exclude-list *reference*

Synopsis Referenced MAC protect exclusion list name

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [fdb](#) **auto-learn-mac-protect-exclude-list** *reference*

Tree [auto-learn-mac-protect-exclude-list](#)

Description This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.

Reference **configure** [service](#) [mac-list](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

discard-unknown-source *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb discard-unknown-source <i>boolean</i>
Tree	discard-unknown-source
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit-mac-move *keyword*

Synopsis	MAC move
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb limit-mac-move <i>keyword</i>
Tree	limit-mac-move
Options	blockable, non-blockable
Default	blockable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb mac-learning
Tree	mac-learning
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aging *boolean*

Synopsis	Enable aging of MAC addresses
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> fdb mac-learning aging <i>boolean</i>
Tree	aging
Default	true

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	configure service vpls service-name spoke-sdp sdp-bind-id fdb mac-learning learning <i>boolean</i>
Tree	learning
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-pinning *boolean*

Synopsis	MAC address pinning in active status
Context	configure service vpls service-name spoke-sdp sdp-bind-id fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service vpls service-name spoke-sdp sdp-bind-id fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this spoke SDP.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service spoke-sdp fdb discard-unknown-source command is set to true for this spoke SDP, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p>

However, if the **configure service vpls fdb discard-unknown** command is set to **true**, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.

When unconfigured, the spoke SDP uses the global MAC learning limitations.

Range	1 to 511999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protected-src-mac-violation-action *keyword*

Synopsis	Action taken after a relearn request for protected MAC
Context	configure service vpls service-name spoke-sdp sdp-bind-id fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Description	This command configures how the system handles relearn requests for protected MAC addresses.
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

force-vc-forwarding *keyword*

Synopsis	VLAN tag processing action
Context	configure service vpls service-name spoke-sdp sdp-bind-id force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Description	<p>This command configures the VLAN tag processing used on the service.</p> <p>The vlan option configures the router to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag, which is sent in the customer frame to the EVPN destinations.</p> <p>The qinq-c-tag-c-tag option configures the router to pushes two tags with the same value derived from the inner service delimiting tag. At network ingress, two VLAN tags are extracted at most and the C-tag and S-tag p/de bits are propagated to the egress SAPs.</p> <p>The qinq-s-tag-c-tag option configures the router to push two tags that are copied from the QinQ service-delimiting VLAN values and may be different. At network ingress, two VLAN tags are extracted at most and the p/de bits are propagated to the egress SAP service-delimiting S-tag and C-tag respectively.</p>
Options	vlan – Push VLAN ID and 802.1p bits of service-delimiting qtag qinq-c-tag-c-tag – Push two tags identical to inner service-delimiting tag

	qinq-s-tag-c-tag – Push two tags based on QinQ service-delimiting values
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label

Synopsis	Enable the hash-label context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash label" section of the <i>7705 SAR Gen 2 MPLS Guide</i> .
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes. The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-group-sources *number*

Synopsis	Maximum group source combinations
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups

Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-sources *number*

Synopsis	Maximum sources that are allowed per group
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-address](#)] *ipv4-multicast-address*

Synopsis	Enter the group list instance
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-address] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i>
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping static group ipv4-multicast-address starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version keyword

Synopsis	IGMP protocol version
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> igmp-snooping version keyword
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-standby-signaling boolean

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ignore-standby-signaling boolean
Tree	ignore-standby-signaling
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress
Tree	ingress

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter
Tree	filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip reference

Synopsis	IPv4 filter policy name
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress filter ipv6 <i>reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress qos
Tree	qos
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

network

Synopsis Enter the **network** context

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network](#)

Tree [network](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

fp-redirect-group

Synopsis Enter the **fp-redirect-group** context

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network fp-redirect-group](#)

Tree [fp-redirect-group](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

group-name *reference*

Synopsis Name of the forwarding plane queue group template

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network fp-redirect-group](#) *group-name* *reference*

Tree [group-name](#)

Reference **configure** [qos queue-group-templates](#) [ingress queue-group](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

instance *number*

Synopsis Instance of FP ingress queue group for the SDP binding

Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [ingress qos network fp-redirect-group](#) *instance* *number*

Tree [instance](#)

Range 1 to 65535

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name *reference*

Synopsis	Network policy ID
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress qos network policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-label *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> ingress vc-label <i>number</i>
Tree	vc-label
Range	1 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

l2pt

Synopsis	Enter the l2pt context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt
Tree	l2pt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

termination

Synopsis	Enable the termination context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination
Tree	termination
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocols

Synopsis	Enter the protocols context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols
Tree	protocols
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cdp boolean

Synopsis	Enable Cisco discovery protocol
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols cdp boolean
Tree	cdp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dtp boolean

Synopsis	Enable dynamic trunking protocol
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols dtp boolean
Tree	dtp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pagp boolean

Synopsis	Enable port aggregation protocol
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols pagp boolean
Tree	pagp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stp boolean

Synopsis	Enable all spanning tree protocols
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols stp boolean
Tree	stp
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udld boolean

Synopsis	Enable unidirectional link detection
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols udld boolean
Tree	udld
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vtp boolean

Synopsis	Enable virtual trunk protocol
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> l2pt termination protocols vtp boolean
Tree	vtp

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping
Tree	mld-snooping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping fast-leave <i>boolean</i>
Tree	fast-leave
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options <i>policy-statement</i> <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum groups allowed
----------	------------------------

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 50

Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true

Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

send-queries *boolean*

Synopsis Generate IGMP general queries
 Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [send-queries](#) *boolean*
 Tree [send-queries](#)
 Default false
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

static

Synopsis Enter the **static** context
 Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [static](#)
 Tree [static](#)
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

group [[group-address](#)] *ipv6-multicast-address*

Synopsis Enter the **group** list instance
 Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [static](#) [group](#) *ipv6-multicast-address*
 Tree [group](#)
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

[group-address] *ipv6-multicast-address*

Synopsis Group address of multicast channel
 Context **configure** [service vpls](#) *service-name* [spoke-sdp](#) *sdp-bind-id* [mld-snooping](#) [static](#) [group](#) *ipv6-multicast-address*
 Tree [group](#)

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping <i>static group</i> <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping <i>static group</i> <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping <i>static group</i> <i>ipv6-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> mld-snooping version <i>keyword</i>
Tree	version
Options	1, 2
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

Synopsis	Operational group that affects state of the SDP bind
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>named-item</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pw-status

Synopsis	Enter the pw-status context
----------	------------------------------------

Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> pw-status
Tree	pw-status
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signaling *boolean*

Synopsis	Enable the use of pseudowire status signaling
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> pw-status signaling <i>boolean</i>
Tree	signaling
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the split horizon group where the spoke SDP bind belongs to
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> split-horizon-group <i>reference</i>
Tree	split-horizon-group
Reference	configure service vpls <i>service-name</i> split-horizon-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stp

Synopsis	Enter the stp context
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp
Tree	stp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-edge *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp auto-edge <i>boolean</i>
Tree	auto-edge
Description	<p>When configured to true, the router automatically detects the edge port characteristics of the SAP or spoke SDP. The STP concludes there is no bridge behind the spoke SDP, the OPER_EDGE variable is dynamically set to true. If a BPDU is received, the OPER_EDGE variable is dynamically set to false.</p> <p>When configured to false, the router disables automatic detection.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp edge-port <i>boolean</i>
Tree	edge-port
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service vpls <i>service-name</i> spoke-sdp <i>sdp-bind-id</i> stp link-type <i>keyword</i>

Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-cost *number*

Synopsis	Configure path-cost
Context	configure service vpls service-name spoke-sdp sdp-bind-id stp path-cost <i>number</i>
Tree	path-cost
Range	1 to 200000000
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port-num *number*

Synopsis	Virtual port number
Context	configure service vpls service-name spoke-sdp sdp-bind-id stp port-num <i>number</i>
Tree	port-num
Range	1 to 2047
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Configure STP priority
Context	configure service vpls service-name spoke-sdp sdp-bind-id stp priority <i>number</i>
Tree	priority
Range	0 to 255
Default	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

root-guard *boolean*

Synopsis	Enable/disable STP root-guard
Context	configure <i>service vpls service-name spoke-sdp sdp-bind-id stp root-guard boolean</i>
Tree	<i>root-guard</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vc-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	configure <i>service vpls service-name spoke-sdp sdp-bind-id vc-type keyword</i>
Tree	<i>vc-type</i>
Options	ether, vlan
Default	ether
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure <i>service vpls service-name spoke-sdp sdp-bind-id vlan-vc-tag number</i>
Tree	<i>vlan-vc-tag</i>
Range	0 to 4094
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stp

Synopsis	Enter the stp context
Context	configure <i>service vpls service-name stp</i>

Tree	stp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls <i>service-name</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forward-delay *number*

Synopsis	Configure forward-delay
Context	configure service vpls <i>service-name</i> stp forward-delay <i>number</i>
Tree	forward-delay
Range	4 to 30
Default	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-time *number*

Synopsis	Configure hello-time
Context	configure service vpls <i>service-name</i> stp hello-time <i>number</i>
Tree	hello-time
Range	1 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-count *number*

Synopsis	Configure BPDU transmit hold count
Context	configure <i>service vpls service-name stp hold-count number</i>
Tree	<i>hold-count</i>
Range	1 to 20
Default	6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-age *number*

Synopsis	Configure maximum STP information age
Context	configure <i>service vpls service-name stp maximum-age number</i>
Tree	<i>maximum-age</i>
Range	6 to 40
Default	20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

Synopsis	Configure protocol version
Context	configure <i>service vpls service-name stp mode keyword</i>
Tree	<i>mode</i>
Options	rstp, comp-dot1w, dot1w, mstp, pmstp
Default	rstp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-instance [*mst-inst-number*] *number*

Synopsis	Enter the mst-instance list instance
Context	configure <i>service vpls service-name stp mst-instance number</i>
Tree	<i>mst-instance</i>

Max. instances	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[mst-inst-number] *number*

Synopsis	Multiple Spanning Tree Instance number
Context	configure <i>service vpls service-name stp mst-instance number</i>
Tree	<i>mst-instance</i>
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-priority *number*

Synopsis	Priority of multiple spanning tree instance
Context	configure <i>service vpls service-name stp mst-instance number mst-priority number</i>
Tree	<i>mst-priority</i>
Range	0 4096 8192 12288 16384 20480 24576 28672 32768 36864 40960 45056 49152 53248 57344 61440
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-range [*range*] *string*

Synopsis	Add a list entry for vlan-range
Context	configure <i>service vpls service-name stp mst-instance number vlan-range string</i>
Tree	<i>vlan-range</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[range] string

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	configure service vpls <i>service-name</i> stp mst-instance <i>number</i> vlan-range <i>string</i>
Tree	vlan-range
String format	'range' must be Q-tag or low..high VLAN range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-maximum-hops number

Synopsis	Maximum number of hops in an MSTP region
Context	configure service vpls <i>service-name</i> stp mst-maximum-hops <i>number</i>
Tree	mst-maximum-hops
Range	1 to 40
Default	20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-name named-item

Synopsis	MST region name
Context	configure service vpls <i>service-name</i> stp mst-name <i>named-item</i>
Tree	mst-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mst-revision number

Synopsis	MST configuration revision
Context	configure service vpls <i>service-name</i> stp mst-revision <i>number</i>
Tree	mst-revision

Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	STP bridge priority
Context	configure service vpls <i>service-name</i> stp priority <i>number</i>
Tree	priority
Range	0 to 65535
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

temp-flooding *number*

Synopsis	Temporary flooding
Context	configure service vpls <i>service-name</i> temp-flooding <i>number</i>
Tree	temp-flooding
Range	3 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-elmi *boolean*

Synopsis	Allow E-LMI tunneling
Context	configure service vpls <i>service-name</i> tunnel-elmi <i>boolean</i>
Tree	tunnel-elmi
Description	<p>When configured to true, the router allows E-LMI packets in a VPLS service to be tunneled. The following must also be the case for this command to function:</p> <ul style="list-style-type: none">• the configure port ethernet elmi mode uni-n command is not configured• the E-LMI packets map to that VPLS service <p>When configured to false, tunneling of the E-LMI packets for a VPLS service is disabled.</p>
Default	false

Introduced	25.10.R2
Platforms	7705 SAR Gen 2

vpn-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	configure service vpls <i>service-name</i> vpn-id <i>number</i>
Tree	vpn-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn [**service-name**] *service-name*

Synopsis	Enter the vprn list instance
Context	configure service vprn <i>service-name</i>
Tree	vprn
Description	Commands in this context create or edit a VPRN service instance.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[service-name] *service-name*

Synopsis	Administrative service name
Context	configure service vprn <i>service-name</i>
Tree	vprn
Description	<p>This command creates or edits a service instance.</p> <p>When a service is created, the customer keyword and <i>customer-id</i> must be specified and associates the service with a customer. The <i>customer-id</i> must already exist having been created using the customer command in the service context. When a service is created with a customer association, it is not possible to edit the customer association. The service must be deleted and re-created with a new customer association.</p>

When a service is created, the use of the **customer***customer-id* is optional to navigate into the service configuration context. If attempting to edit a service with the incorrect *customer-id* results in an error.

This command specifies the unique service identification number identifying the service in the service domain. This ID must be unique to this service and may not be used for any other service of any type. The service ID must be the same number used for every platform on which this service is defined.

String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aaa

Synopsis	Enter the aaa context
Context	configure service vprn <i>service-name</i> aaa
Tree	aaa
Description	Commands in this context configure AAA in the VPRN.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-servers

Synopsis	Enter the remote-servers context
Context	configure service vprn <i>service-name</i> aaa remote-servers
Tree	remote-servers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

radius

Synopsis	Enable the radius context
Context	configure service vprn <i>service-name</i> aaa remote-servers radius
Tree	radius
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

access-algorithm *keyword*

Synopsis Algorithm used to access the set of RADIUS servers

Context **configure** [service vprn](#) *service-name* [aaa remote-servers radius access-algorithm](#) *keyword*

Tree [access-algorithm](#)

Options direct, round-robin

Default direct

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

accounting *boolean*

Synopsis Enable RADIUS command accounting

Context **configure** [service vprn](#) *service-name* [aaa remote-servers radius accounting](#) *boolean*

Tree [accounting](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

accounting-port *number*

Synopsis Port number on RADIUS server for accounting requests

Context **configure** [service vprn](#) *service-name* [aaa remote-servers radius accounting-port](#) *number*

Tree [accounting-port](#)

Range 1 to 65535

Default 1813

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the authentication server

Context	configure service vprn <i>service-name</i> aaa remote-servers radius admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authorization *boolean*

Synopsis	Enable RADIUS authorization
Context	configure service vprn <i>service-name</i> aaa remote-servers radius authorization <i>boolean</i>
Tree	authorization
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interactive-authentication *boolean*

Synopsis	Enable RADIUS interactive authentication
Context	configure service vprn <i>service-name</i> aaa remote-servers radius interactive-authentication <i>boolean</i>
Tree	interactive-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	UDP port to communicate with the RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius port <i>number</i>
Tree	port
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	RADIUS server ID
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authenticator *keyword*

Synopsis	Authenticator hash algorithm for the RADIUS server
Context	configure service vprn <i>service-name</i> aaa remote-servers radius server <i>number</i> authenticator <i>keyword</i>
Tree	authenticator

Description	This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.
Options	md5, sm3
Default	md5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secret *encrypted-leaf*

Synopsis	Secret key for RADIUS over UDP
Context	configure service vpn <i>service-name</i> aaa remote-servers radius server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
Description	<p>This command specifies the secret key and enables RADIUS over UDP for the RADIUS server.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7505 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS profile for RADIUS over TLS
Context	configure service vpn <i>service-name</i> aaa remote-servers radius server <i>number</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Description	<p>This command specifies the TLS profile and enables RADIUS over TLS for the RADIUS server.</p> <p>When a TLS profile is assigned to a RADIUS server, the communication automatically switches from UDP to TCP, if a secret key is also configured. When a TLS profile is removed from a RADIUS server, the communication automatically switches from TCP to UDP, if a secret key is also configured. In both cases, the server is not recreated internally, so statistics are preserved.</p>
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

server-retry *number*

Synopsis Number of attempts to retry contacting RADIUS server

Context **configure** [service vpn](#) *service-name* [aaa remote-servers radius server-retry](#) *number*

Tree [server-retry](#)

Range 1 to 10

Default 3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

server-timeout *number*

Synopsis Time to wait for a response from the RADIUS server

Context **configure** [service vpn](#) *service-name* [aaa remote-servers radius server-timeout](#) *number*

Tree [server-timeout](#)

Range 1 to 90

Units seconds

Default 3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

use-default-template *boolean*

Synopsis Apply the RADIUS default user template to RADIUS user

Context **configure** [service vpn](#) *service-name* [aaa remote-servers radius use-default-template](#) *boolean*

Tree [use-default-template](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

tacplus

Synopsis	Enable the tacplus context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus
Tree	tacplus
Description	Commands in this context configure TACACS+ in the VPRN.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting

Synopsis	Enable the accounting context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus accounting
Tree	accounting
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

record-type *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus accounting record-type <i>keyword</i>
Tree	record-type
Options	start-stop, stop-only
Default	stop-only
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the TACACS+ protocol
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authorization

Synopsis	Enable the authorization context
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

request-format

Synopsis	Enter the request-format context
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus authorization request-format
Tree	request-format
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus authorization request-format access-operation-cmd <i>keyword</i>
Tree	access-operation-cmd
Description	<p>This command sends an operation argument in authorization requests.</p> <p>In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.</p>
Options	delete
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i>
Tree	use-priv-lvl
Description	<p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-unknown-mandatory-vsas *boolean*

Synopsis	Ignore unknown mandatory VSAs and fail authentication
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus ignore-unknown-mandatory-vsas <i>boolean</i>
Tree	ignore-unknown-mandatory-vsas
Description	<p>When configured to true, the system ignores unknown mandatory VSAs and authentication succeeds.</p> <p>When configured to false, the system ignores unknown mandatory VSAs received in a reply from the TACACS+ server. Authentication fails and the user is disconnected because the system cannot process a mandatory VSA that is unknown.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus interactive-authentication <i>boolean</i>

Tree	interactive-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priv-lvl-map

Synopsis	Enter the priv-lvl-map context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map
Tree	priv-lvl-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priv-lvl [[level](#)] *number*

Synopsis	Enter the priv-lvl list instance
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[level] *number*

Synopsis	Privilege level for the mapping
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Range	0 to 15
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user-profile-name *reference*

Synopsis	User profile for the mapping
----------	------------------------------

Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i> user-profile-name <i>reference</i>
Tree	user-profile-name
Reference	configure system security aaa local-profiles profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	TACACS+ server ID
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP port to communicate with the TACACS+ server
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	49
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secret *encrypted-leaf*

Synopsis	Secret key to access the TACACS+ server
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
Description	<p>This command specifies the secret key to access the TACACS+ server in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	0 to 254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-connection

Synopsis	Enter the tls-connection context
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> tls-connection
Tree	tls-connection
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

sni

Synopsis	Enter the sni context
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> tls-connection sni
Tree	sni
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

host-name *fully-qualified-domain-name*

Synopsis	Server DNS host name sent as TLS SNI when connecting to the TACACS+ server.
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> tls-connection sni host-name <i>fully-qualified-domain-name</i>
Tree	host-name
String length	1 to 253
String format	'host-name' must contain valid lowercase 1 to 63 character DNS labels
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS client profile for the TACACS+ server TLS connection.
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> tls-connection tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

tls-port *number*

Synopsis	TCP port for the TLS connection to the TACACS+ server.
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus server <i>number</i> tls-connection tls-port <i>number</i>
Tree	tls-port

Range	0 1 to 65535
Default	300
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

server-retry-timeout (*number* | *keyword*)

Synopsis	Time before retrying requests when health checks are disabled
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server-retry-timeout (<i>number</i> <i>keyword</i>)
Tree	server-retry-timeout
Description	This command configures the maximum timeout before retrying requests when health checks are disabled and all TACACS+ servers are operationally down. Set the value of this timer to a lower value or disable it to increase the interactive responsiveness of AAA requests after the servers become unreachable.
Range	1 to 300
Units	seconds
Options	none – Disable retry timeout and send requests immediately
Default	300
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-timeout *number*

Synopsis	Time to wait for a response from the TACACS+ server
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-request

Synopsis	Enter the service-request context
Context	configure service vprn service-name aaa remote-servers tacplus service-request
Tree	service-request
Description	Commands in this context enable Nokia services to be requested from the TACACS+ server.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-grpc-rpc-authorization *boolean*

Synopsis	Request nokia-grpc-rpc-authorization service VSAs
Context	configure service vprn service-name aaa remote-servers tacplus service-request nokia-grpc-rpc-authorization <i>boolean</i>
Tree	nokia-grpc-rpc-authorization
Description	When configured to true , the nokia-grpc-rpc-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-netconf-base-op-authorization *boolean*

Synopsis	Request nokia-netconf-base-op-authorization service VSAs
Context	configure service vprn service-name aaa remote-servers tacplus service-request nokia-netconf-base-op-authorization <i>boolean</i>
Tree	nokia-netconf-base-op-authorization
Description	When configured to true , the nokia-netconf-base-op-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-user *boolean*

Synopsis	Request nokia-user service VSAs
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus service-request nokia-user <i>boolean</i>
Tree	nokia-user
Description	When configured to true , the nokia-user service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-user-profile *boolean*

Synopsis	Request nokia-user-profile service VSAs
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus service-request nokia-user-profile <i>boolean</i>
Tree	nokia-user-profile
Description	When configured to true , the nokia-user-profile service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

single-connection *boolean*

Synopsis	Enable TACACS+ single connection mode
Context	configure service vpn <i>service-name</i> aaa remote-servers tacplus single-connection <i>boolean</i>
Tree	single-connection
Description	When configured to true , the router maintains a persistent TCP connection open to the server to reduce the communication overhead for each request. When configured to false , the router opens a new TCP connection for each request.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

use-default-template *boolean*

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	configure service vprn <i>service-name</i> aaa remote-servers tacplus use-default-template <i>boolean</i>
Tree	use-default-template
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the service
Context	configure service vprn <i>service-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aggregates

Synopsis	Enter the aggregates context
Context	configure service vprn <i>service-name</i> aggregates
Tree	aggregates
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the aggregate list instance
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aggregator

Synopsis	Enter the aggregator context
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator
Tree	aggregator
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Aggregator IP address
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

as-number *number*

Synopsis	Aggregator AS number
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

as-set boolean

Synopsis	Use AS_SET path segment type for the aggregate route
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i>
Tree	as-set
Description	When configured to true , the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes. When configured to false , the AS_PATH attribute contains no AS_SET and will be originated by the ESR.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blackhole

Synopsis	Enable the blackhole context
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole
Tree	blackhole
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

generate-icmp boolean

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole generate-icmp <i>boolean</i>
Tree	generate-icmp
Description	When configured to true , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to false , ICMP unreachable messages are not generated.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community name that is added to the aggregate route
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) community <i>community</i>
Tree	community
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String length	1 to 72
Max. instances	12
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard-component-communities *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) discard-component-communities <i>boolean</i>
Tree	discard-component-communities

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

indirect (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) indirect (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	indirect
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-preference *number*

Synopsis	Local preference used when aggregate route is exported
Context	configure service vprn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) local-preference <i>number</i>
Tree	local-preference
Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy *reference*

Synopsis	Policy name for the aggregated route
----------	--------------------------------------

Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) policy <i>reference</i>
Tree	policy
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

summary-only *boolean*

Synopsis	Advertise the aggregate route only
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) summary-only <i>boolean</i>
Tree	summary-only
Description	<p>When configured to true, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to false, the router advertises both the aggregate route and its contributing routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel-group *number*

Synopsis	Tunnel group from which to associate the MC IPSec state
Context	configure service vpn <i>service-name</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tunnel-group <i>number</i>
Tree	tunnel-group
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

allow-export-bgp-vpn *boolean*

Synopsis Include BGP-VPN routes for export

Context **configure** *service vpn service-name* **allow-export-bgp-vpn** *boolean*

Tree **allow-export-bgp-vpn**

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

autonomous-system *number*

Synopsis AS number advertised to peers for this router

Context **configure** *service vpn service-name* **autonomous-system** *number*

Tree **autonomous-system**

Description This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.

If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.

Range 1 to 4294967295

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

bgp

Synopsis Enable the **bgp** context

Context **configure** *service vpn service-name* **bgp**

Tree **bgp**

Description Commands in this context configure the BGP protocol with the VPRN service.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the BGP instance

Context	configure service vprn <i>service-name</i> bgp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	configure service vprn <i>service-name</i> bgp advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows any inactive BGP route to be advertised, even though it is not the used route.</p> <p>When configured to false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-ipv6-next-hops

Synopsis	Enter the advertise-ipv6-next-hops context
Context	configure service vprn <i>service-name</i> bgp advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	configure service vprn <i>service-name</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

aggregator-id-zero *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to 0

Context **configure** *service vpn* *service-name* *bgp aggregator-id-zero boolean*

Tree *aggregator-id-zero*

Description When configured to **true**, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.

When configured to **false**, the AS number and router ID are added to the AGGREGATOR path attribute.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

asn-4-byte *boolean*

Synopsis Advertise support for 4-byte ASNs

Context **configure** *service vpn* *service-name* *bgp asn-4-byte boolean*

Tree *asn-4-byte*

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

attribute-set

Synopsis Enter the **attribute-set** context

Context **configure** *service vpn* *service-name* *bgp attribute-set*

Tree *attribute-set*

Description Commands in this context configure the handling of attribute set (ATTR_SET) attributes in BGP routes received from PE-CE peers of the VPRN.

ATTR_SET is an optional transitive BGP path attribute standardized by RFC 6368 that is added to BGP L3 VPN routes to provide logical separation between the BGP domain of a customer and the BGP domain of a service provider.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

remove *boolean*

Synopsis	Remove ATTR_SET in received BGP routes from PE-CE peers
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp attribute-set remove</i> <i>boolean</i>
Tree	<i>remove</i>
Description	<p>When configured to true, BGP ignores and silently discards ATTR_SETs in BGP routes received from PE-CE peers of the VPRN. The discarded ATTR_SETs do not affect BGP best path selection in the VPRN, and they do not appear in the VPN-IP routes that result from the VRF export of the BGP routes. Nokia recommends configuring this command to true in most deployments.</p> <p>When configured to false, BGP ignores ATTR_SETs in BGP routes received from PE-CE peers of the VPRN, but does not discard them. This allows the ATTR_SETs to propagate between CE devices connected to the VPRN and to other PE devices when the BGP routes are exported as VPN-IP routes.</p> <p>Note: If the configuration of this command is changed, ROUTE_REFRESH messages are sent to all PE-CE peers of the VPRN.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for all peers
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp authentication-key</i> <i>encrypted-leaf</i>
Tree	<i>authentication-key</i>
Description	<p>This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 422
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vprn <i>service-name</i> bgp authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

backup-path

Synopsis	Enter the backup-path context
Context	configure service vprn <i>service-name</i> bgp backup-path
Tree	backup-path
Description	<p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp backup-path ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp backup-path ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp backup-path label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv6 *boolean*

Synopsis	Enable support for labeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp backup-path label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

best-path-selection

Synopsis	Enter the best-path-selection context
Context	configure service vprn <i>service-name</i> bgp best-path-selection
Tree	best-path-selection
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

always-compare-med

Synopsis	Enter the always-compare-med context
Context	configure service vprn <i>service-name</i> bgp best-path-selection always-compare-med
Tree	always-compare-med
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

med-value *keyword*

Synopsis	Action for a missing MED attribute
Context	configure service vprn <i>service-name</i> bgp best-path-selection always-compare-med med-value <i>keyword</i>
Tree	med-value
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-as *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	configure service vprn <i>service-name</i> bgp best-path-selection always-compare-med strict-as <i>boolean</i>
Tree	strict-as
Description	<p>When configured to true, the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.</p> <p>When configured to false, the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

as-path-ignore

Synopsis	Enter the as-path-ignore context
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore
Tree	as-path-ignore
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Ignore AS path length for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore label-ipv4 <i>boolean</i>
Tree	label-ipv4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv6 *boolean*

Synopsis	Ignore AS path length for labeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp best-path-selection as-path-ignore label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

compare-origin-validation-state *boolean*

Synopsis	Allow comparison of origin validation states
Context	configure service vprn <i>service-name</i> bgp best-path-selection compare-origin-validation-state <i>boolean</i>
Tree	compare-origin-validation-state
Description	<p>When configured to true, the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state.</p> <p>When configured to false, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

deterministic-med *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	configure service vprn <i>service-name</i> bgp best-path-selection deterministic-med <i>boolean</i>
Tree	deterministic-med
Description	When configured to true , BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to

select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.

When configured to **false**, paths are not grouped and the overall best-path selection can depend on the order of route arrival.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp-ibgp-equal

Synopsis	Enter the ebgp-ibgp-equal context
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal
Tree	ebgp-ibgp-equal
Description	<p>Commands in this context allow BGP to ignore the difference between EBGp and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGp learned route over an IBGP learned route.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Consider EBGp and IBGP IPv4 routes equal
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal ipv4 boolean
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Consider EBGp and IBGP IPv6 routes equal
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal ipv6 boolean

Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Consider EBGp and IBGP label-IPv4 routes equal
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv6 *boolean*

Synopsis	Consider EBGp and IBGP label-IPv6 routes equal
Context	configure service vprn <i>service-name</i> bgp best-path-selection ebgp-ibgp-equal label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	configure service vprn <i>service-name</i> bgp best-path-selection ignore-nh-metric <i>boolean</i>
Tree	ignore-nh-metric
Description	<p>When configured to true, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to false, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the router context) or IP prefix learned from VPRN BGP peers (in the vprn context).</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-router-id

Synopsis	Enable the ignore-router-id context
Context	configure service vprn <i>service-name</i> bgp best-path-selection ignore-router-id
Tree	ignore-router-id
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGp paths from different EBGp peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGp peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

origin-invalid-unusable *boolean*

Synopsis	Ignore routes with invalid origin validation state
Context	configure service vprn <i>service-name</i> bgp best-path-selection origin-invalid-unusable <i>boolean</i>
Tree	origin-invalid-unusable
Description	<p>When configured to true, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers.</p> <p>When configured to false, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix, according to the BGP decision process.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vprn <i>service-name</i> bgp bfd-liveness <i>boolean</i>

Tree	bfd-liveness
Description	When configured to true , BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations. When configured to false , BFD is not enabled globally for all BGP sessions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure service vprn <i>service-name</i> bgp bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise

Synopsis	Enable the advertise context
Context	configure service vprn <i>service-name</i> bgp bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"> • The inherited or configured value for the bfd-liveness command that applies to the peer is true. • The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
----------	---

Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp bfd-strict-mode advertise holdtime number</i>
Tree	<i>holdtime</i>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp bfd-strict-mode next-hop-reachability boolean</i>
Tree	<i>next-hop-reachability</i>
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6

- EVPN
- IPv4 multicast
- IPv6 multicast
- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-reflect *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	configure service vpn <i>service-name</i> bgp client-reflect <i>boolean</i>
Tree	client-reflect
Description	<p>When configured to true, routes received from neighbors considered to be RR clients are reflected to other peers as expected.</p> <p>When configured to false, routes received from neighbors considered to be RR clients are not reflected to other clients.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cluster

Synopsis	Enter the cluster context
Context	configure service vpn <i>service-name</i> bgp cluster
Tree	cluster
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
----------	----------------------------

Context	configure service vprn <i>service-name</i> bgp cluster cluster-id <i>ipv4-address</i>
Tree	cluster-id
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure service vprn <i>service-name</i> bgp connect-retry <i>number</i>
Tree	connect-retry
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

convergence

Synopsis	Enter the convergence context
Context	configure service vprn <i>service-name</i> bgp convergence
Tree	convergence
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure service vprn <i>service-name</i> bgp convergence family <i>keyword</i>
Tree	family
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[family-type] *keyword*

Synopsis Address family for which convergence selection applies

Context **configure** *service vprn service-name bgp convergence family keyword*

Tree *family*

Options ipv4, ipv6

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

max-wait-to-advertise *number*

Synopsis Maximum wait time before advertising routes

Context **configure** *service vprn service-name bgp convergence family keyword max-wait-to-advertise number*

Tree *max-wait-to-advertise*

Range 0 to 3600

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

min-wait-to-advertise *number*

Synopsis Minimum wait time before advertising routes

Context **configure** *service vprn service-name bgp convergence min-wait-to-advertise number*

Tree *min-wait-to-advertise*

Range 0 to 3600

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations
Tree	damp-peer-oscillations
Description	<p>Commands in this context support the DampPeerOscillations FSM behavior described in section 8.1 of RFC 4271, <i>A Border Gateway Protocol 4 (BGP-4)</i>.</p> <p>When unconfigured, the router does not perform peer oscillation damping and immediately transitions out of the idle state after every reset.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	<p>This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.</p>
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Description	<p>Commands in this context configure how long a BGP peer session remains in the idle state after some type of error causes the session to reset.</p> <p>In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur in a short time period after each session reset cause longer and longer hold times in the idle state.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations idle-hold-time initial-wait <i>number</i>
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

second-wait *number*

Synopsis	Time that doubles after each session failure
Context	configure service vprn <i>service-name</i> bgp damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>service vprn service-name</i> <i>bgp damping boolean</i>
Tree	<i>damping</i>
Description	<p>When configured to true, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none">• Half-life: 15 minutes• Max-suppress: 60 minutes• Suppress-threshold: 3000• Reuse-threshold: 750 <p>When configured to false, BGP route damping for learned routes is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure <i>service vprn service-name</i> <i>bgp default-label-preference</i>
Tree	<i>default-label-preference</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp *number*

Synopsis	Default preference for EBGp
Context	configure <i>service vprn service-name</i> <i>bgp default-label-preference ebgp number</i>
Tree	<i>ebgp</i>
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp *number*

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp default-label-preference ibgp <i>number</i>
Tree	ibgp
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-preference

Synopsis	Enter the default-preference context
Context	configure service vprn <i>service-name</i> bgp default-preference
Tree	default-preference
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp *number*

Synopsis	Default preference for EBGP
Context	configure service vprn <i>service-name</i> bgp default-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp *number*

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp default-preference ibgp <i>number</i>
Tree	ibgp
Range	0 to 255
Default	0

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

description *description*

Synopsis Text description
Context **configure** [service vprn](#) *service-name* [bgp description](#) *description*
Tree [description](#)
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

dynamic-neighbor-limit *number*

Synopsis Max dynamic BGP sessions to accept from remote peers
Context **configure** [service vprn](#) *service-name* [bgp dynamic-neighbor-limit](#) *number*
Tree [dynamic-neighbor-limit](#)
Description This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.

Range 1 to 8192
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ebgp-default-reject-policy

Synopsis Enter the **ebgp-default-reject-policy** context
Context **configure** [service vprn](#) *service-name* [bgp ebgp-default-reject-policy](#)
Tree [ebgp-default-reject-policy](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure service vpn <i>service-name</i> bgp ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	configure service vpn <i>service-name</i> bgp ebgp-default-reject-policy import <i>boolean</i>
Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eibgp-loadbalance *boolean*

Synopsis	Use ECMP over BGP VPN and BGP routes
Context	configure service vpn <i>service-name</i> bgp eibgp-loadbalance <i>boolean</i>
Tree	eibgp-loadbalance
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure service vpn <i>service-name</i> bgp enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or

the session is left up but the route is treated as withdrawn (if **update-fault-tolerance** is set to **true**).

This command does not flap an established session because it applies only to routes received after the command is issued.

When configured to **false**, received routes are not checked for compliance with the rule.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

error-handling

Synopsis	Enter the error-handling context
Context	configure service vprn <i>service-name</i> bgp error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

legacy-mode *boolean*

Synopsis	Enable legacy-mode of BGP error handling
Context	configure service vprn <i>service-name</i> bgp error-handling legacy-mode <i>boolean</i>
Tree	legacy-mode
Description	<p>When configured to true, the BGP instance handles the BGP update error messages based on the configured update-fault-tolerance commands. If these commands are not explicitly configured, BGP error handling follows the legacy procedures described in RFC 4271, which can result in disruptive session resets.</p> <p>When configured to false, the BGP instance ignores the configured update-fault-tolerance commands and applies the new error handling procedures described in RFC 7606 on all sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure service vprn <i>service-name</i> bgp error-handling update-fault-tolerance <i>boolean</i>

Tree	update-fault-tolerance
Description	When configured to true , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. When configured to false , most errors trigger a session reset.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export

Synopsis	Enable the export context
Context	configure service vprn <i>service-name</i> bgp export
Tree	export
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Export policy name
Context	configure service vprn <i>service-name</i> bgp export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

extended-nh-encoding

Synopsis	Enter the extended-nh-encoding context
----------	---

Context	configure service vprn <i>service-name</i> bgp extended-nh-encoding
Tree	extended-nh-encoding
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure service vprn <i>service-name</i> bgp extended-nh-encoding ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family

Synopsis	Enter the family context
Context	configure service vprn <i>service-name</i> bgp family
Tree	family
Description	Commands in this context specify the BGP address families supported by the base router BGP sessions.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flow-ipv6 *boolean*

Synopsis	Advertise support for the FlowSpec-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp family flow-ipv6 <i>boolean</i>
Tree	flow-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	configure service vprn <i>service-name</i> bgp family ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	configure service vprn <i>service-name</i> bgp family ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	configure service vprn <i>service-name</i> bgp family label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcast-ipv4 *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	configure service vprn <i>service-name</i> bgp family mcast-ipv4 <i>boolean</i>
Tree	mcast-ipv4
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

mcast-ipv6 *boolean*

Synopsis Advertise support for the MCAST-IPv6 address family

Context **configure** [service vprn](#) *service-name* [bgp family mcast-ipv6](#) *boolean*

Tree [mcast-ipv6](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

fast-external-failover *boolean*

Synopsis Drop external BGP session immediately when link fails

Context **configure** [service vprn](#) *service-name* [bgp fast-external-failover](#) *boolean*

Tree [fast-external-failover](#)

Description When configured to **true**, the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down.

When configured to **false**, the BGP session remains up until the hold time expires.

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

graceful-restart

Synopsis Enable the **graceful-restart** context

Context **configure** [service vprn](#) *service-name* [bgp graceful-restart](#)

Tree [graceful-restart](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

gr-notification *boolean*

Synopsis Perform Graceful Restart procedures

Context **configure** [service vprn](#) *service-name* [bgp graceful-restart gr-notification](#) *boolean*

Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

long-lived

Synopsis	Enable the long-lived context
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived
Tree	long-lived
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertised-stale-time *number*

Synopsis	LLGR stale routes time
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

family [*family-type*] *keyword*

Synopsis Enter the **family** list instance
Context **configure** *service vprn service-name bgp graceful-restart long-lived family keyword*
Tree *family*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[family-type] *keyword*

Synopsis Address family type for LLGR
Context **configure** *service vprn service-name bgp graceful-restart long-lived family keyword*
Tree *family*
Options ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

advertised-stale-time *number*

Synopsis LLGR stale routes time for family override
Context **configure** *service vprn service-name bgp graceful-restart long-lived family keyword advertised-stale-time number*
Tree *advertised-stale-time*
Range 0 to 16777215
Default 86400
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vprn <i>service-name</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vpn <i>service-name</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vpn <i>service-name</i> bgp graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restart-time *number*

Synopsis	Restart time advertised by GR capability
----------	--

Context	configure service vprn <i>service-name</i> bgp graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure service vprn <i>service-name</i> bgp graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [*group-name*] *named-item-64*

Synopsis	Enter the group list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i>
Tree	group
Description	Commands in this context configure a BGP peer group.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *named-item-64*

Synopsis	BGP peer group name
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i>
Tree	group
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the BGP group
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicapt IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none">• If the active route for the IP prefix is a BGP route, that route is advertised.• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertise unless the active non-BGP route is matched and accepted by an export policy applied to the session• If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

as-override *boolean*

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> as-override <i>boolean</i>
Tree	as-override
Description	<p>When configured to true, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p>

	When configured to false , no AS override is performed.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

asn-4-byte *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> asn-4-byte <i>boolean</i>
Tree	<i>asn-4-byte</i>
Description	<p>When this command inherits a value of true, the use of 4-byte ASNs is supported.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, this command disables the use of 4-byte ASNs.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for peers in the group
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> authentication-key <i>encrypted-leaf</i>
Tree	<i>authentication-key</i>
Description	<p>This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 422
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
----------	---

Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd

Synopsis	Enable the bfd context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd
Tree	bfd
Description	Commands in this context configure the BFD command options for the BGP group.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

multiplier *number*

Synopsis	Multiplier for the BFD session
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of consecutive BFD messages that must be missed from the peer before the BFD session state is changed to down and the upper level protocols (OSPF, IS-IS, BGP, or PIM) are notified of the fault.
Range	1 to 20
Default	3
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

receive-interval *number*

Synopsis	Receive interval for the BFD session
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd receive-interval <i>number</i>

Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

transmit-interval *number*

Synopsis	Transmit interval for the BFD session
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> bfd transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Type of BFD session endpoint to use
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> bfd type <i>keyword</i>
Tree	type
Options	cpm-np – Processed by the network processor on the CPM auto – System determines the appropriate session type fp – Processed on the forwarding plane hardware
Default	auto
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise

Synopsis	Enable the advertise context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none">• The inherited or configured value for the bfd-liveness command that applies to the peer is true.• The interface associated with the peer has a valid BFD configuration. <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> bfd-strict-mode advertise holdtime <i>number</i>
Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP

hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.

Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> bfd-strict-mode next-hop-reachability <i>boolean</i>
Tree	next-hop-reachability
Description	<p>When configured to true, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is true does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to true only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6 • EVPN • IPv4 multicast • IPv6 multicast

- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

capability-negotiation *boolean*

Synopsis Enable capability negotiation

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [capability-negotiation](#) *boolean*

Tree [capability-negotiation](#)

Description When configured to **true**, this command enables the exchange of capabilities.
When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

client-reflect *boolean*

Synopsis Allow cluster RR to advertise routes to its clients

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [client-reflect](#) *boolean*

Tree [client-reflect](#)

Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When the command inherits a value of **true**, client reflection of routes is enabled.

When configured to **false**, this command disables client reflection of routes.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

cluster

Synopsis Enter the **cluster** context

Context **configure** [service vpn](#) *service-name* [bgp group](#) *named-item-64* [cluster](#)

Tree	cluster
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> cluster cluster-id <i>ipv4-address</i>
Tree	cluster-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damp-peer-oscillations
Tree	damp-peer-oscillations
Description	<p>Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.</p> <p>When unconfigured, command settings are inherited from the global-level configuration.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>error-interval</i> <i>number</i>
Tree	<i>error-interval</i>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i>
Tree	<i>idle-hold-time</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>initial-wait</i> <i>number</i>
Tree	<i>initial-wait</i>
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> damping <i>boolean</i>
Tree	damping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> default-label-preference

Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp number

Synopsis	Default preference for EBGp
Context	configure service vprn <i>service-name</i> bgp group named-item-64 default-label-preference ebgp number
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp number

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp group named-item-64 default-label-preference ibgp number
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-preference

Synopsis	Enter the default-preference context
Context	configure service vprn <i>service-name</i> bgp group named-item-64 default-preference
Tree	default-preference
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp number

Synopsis	Default preference for EBGp
----------	-----------------------------

Context	configure service vprn service-name bgp group named-item-64 default-preference ebgp number
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp *number*

Synopsis	Default preference for IBGP
Context	configure service vprn service-name bgp group named-item-64 default-preference ibgp number
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn service-name bgp group named-item-64 description description
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-neighbor

Synopsis	Enter the dynamic-neighbor context
Context	configure service vprn service-name bgp group named-item-64 dynamic-neighbor
Tree	dynamic-neighbor
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [[interface-name](#)] *reference*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>reference</i>
Tree	interface
Description	<p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *reference*

Synopsis	Name of the dynamic neighbor interface
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>reference</i>
Tree	interface
Reference	configure service vprn <i>service-name</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
----------	---

Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>reference</i> allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> . All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
String format	'allowed-peer-as' must be 4-byte decimal AS number or AS..AS range
Max. instances	32
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-sessions *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor interface <i>reference</i> max-sessions <i>number</i>
Tree	max-sessions
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match

Synopsis	Enter the match context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	<p>This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i>.</p> <p>All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].</p>
String format	'allowed-peer-as' must be 4-byte decimal AS number or AS..AS range
Max. instances	32
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-neighbor-limit *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> dynamic-neighbor-limit <i>number</i>
Tree	dynamic-neighbor-limit
Description	<p>This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.</p> <p>When unconfigured, the setting is inherited from the BGP global-level configuration.</p>
Range	1 to 8192
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp-default-reject-policy

Synopsis	Enable the ebgp-default-reject-policy context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import *boolean*

Synopsis	Enable default reject import policy for external peers
----------	--

Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> ebgp-default-reject-policy import <i>boolean</i>
Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

error-handling

Synopsis	Enter the error-handling context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

evpn-link-bandwidth

Synopsis Enter the **evpn-link-bandwidth** context

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* [evpn-link-bandwidth](#)

Tree [evpn-link-bandwidth](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

add-to-received-bgp *number*

Synopsis Weight added to received PE-CE BGP routes

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* [evpn-link-bandwidth](#)
[add-to-received-bgp](#) *number*

Tree [add-to-received-bgp](#)

Description This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.

For the load-balancing between EVPN-IFL and BGP PE-CE routes the **configure service vprn bgp eibgp-loadbalance** command must already be configured in the system.

Range 1 to 128

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

export

Synopsis Enable the **export** context

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* [export](#)

Tree [export](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis Export policy name

Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

extended-nh-encoding

Synopsis	Enable the extended-nh-encoding context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> extended-nh-encoding
Tree	extended-nh-encoding
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> extended-nh-encoding ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family

Synopsis	Enable the family context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> family

Tree	family
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flow-ipv6 *boolean*

Synopsis	Advertise support for the FlowSpec-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> family flow-ipv6 <i>boolean</i>
Tree	flow-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Add support for the IPv4 address family
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> family ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> family ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Advertise support for the label-IPv4 address family
----------	---

Context	configure service vprn <i>service-name</i> bgp group named-item-64 family label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcast-ipv4 *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	configure service vprn <i>service-name</i> bgp group named-item-64 family mcast-ipv4 <i>boolean</i>
Tree	mcast-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcast-ipv6 *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp group named-item-64 family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	configure service vprn <i>service-name</i> bgp group named-item-64 fast-external-failover <i>boolean</i>
Tree	fast-external-failover
Description	<p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p>

When configured to **false**, the BGP session remains up until the hold time expires.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

graceful-restart

Synopsis Enable the **graceful-restart** context
Context **configure** [service vprn](#) *service-name* [bgp group named-item-64](#) [graceful-restart](#)
Tree [graceful-restart](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

gr-notification *boolean*

Synopsis Perform graceful restart procedures after NOTIFICATION
Context **configure** [service vprn](#) *service-name* [bgp group named-item-64](#) [graceful-restart gr-notification](#) *boolean*
Tree [gr-notification](#)
Description When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.
When configured to **false**, NOTIFICATION messages are not supported.
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

long-lived

Synopsis Enable the **long-lived** context
Context **configure** [service vprn](#) *service-name* [bgp group named-item-64](#) [graceful-restart long-lived](#)
Tree [long-lived](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family [[family-type](#)] *keyword*

Synopsis	Enter the family list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[family-type] *keyword*

Synopsis	Address family type for LLGR
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i>
Tree	family

Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived helper-override-stale-time <i>number</i>

Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart restart-time <i>number</i>
Tree	restart-time
Range	0 to 4095
Default	300
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-time

Synopsis	Enter the hold-time context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Description	<p>This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.</p> <p>When unconfigured, the command value is inherited from the BGP global-level setting.</p>
Range	0 3 to 65536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
----------	--

Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> hold-time <i>seconds number</i>
Tree	seconds
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command setting is inherited from the BGP global-level configuration.</p>
Range	0 3 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import

Synopsis	Enable the import context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15

Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> initial-send-delay-zero <i>boolean</i>
Tree	<i>initial-send-delay-zero</i>
Description	<p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> keepalive <i>number</i>
Tree	<i>keepalive</i>
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.

	When unconfigured, the command inherits the BGP global-level setting.
Range	0 to 21845
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure service vprn <i>service-name</i> bgp group named-item-64 label-preference <i>number</i>
Tree	label-preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

link-bandwidth

Synopsis	Enter the link-bandwidth context
Context	configure service vprn <i>service-name</i> bgp group named-item-64 link-bandwidth
Tree	link-bandwidth
Description	<p>Commands in this context specify the handling of the Link Bandwidth Extended Community attached to specific BGP routes.</p> <p>When all used multipaths of an IP prefix correspond to BGP routes with a Link Bandwidth EC, the datapath is programmed to use weighted ECMP across the BGP next hops in proportion to the bandwidth values.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accept-from-ebgp

Synopsis	Enter the accept-from-ebgp context
Context	configure service vprn <i>service-name</i> bgp group named-item-64 link-bandwidth accept-from-ebgp
Tree	accept-from-ebgp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> link-bandwidth accept-from-ebgp ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Support Link Bandwidth EC in IPv6 routes

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> link-bandwidth send-to-ebgp label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-address (*ipv4-address-no-zone | ipv6-address-no-zone | interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> local-address (<i>ipv4-address-no-zone ipv6-address-no-zone interface-name</i>)
Tree	local-address
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-as

Synopsis	Enter the local-as context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> local-as
Tree	local-as
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> local-as prepend-global-as <i>boolean</i>

Tree	prepend-global-as
Description	<p>When configured to true, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.</p> <p>When configured to false, the global ASN is not included in the AS_PATH attribute.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> local-as private <i>boolean</i>
Tree	private
Description	<p>When configured to true, the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.</p> <p>When configured to false, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> local-preference <i>number</i>
Tree	local-preference
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> loop-detect <i>keyword</i>
Tree	loop-detect

Options	drop-peer, ignore-loop, off, discard-route
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-route-advertisement *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multipath-eligible *boolean*

Synopsis	Allow routes from group peers in multipath eligibility
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> multipath-eligible <i>boolean</i>
Tree	multipath-eligible
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-self *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> next-hop-self <i>boolean</i>
Tree	next-hop-self
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

origin-validation

Synopsis	Enter the origin-validation context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> origin-validation
Tree	origin-validation
Description	Commands in this context configure the marking of every inbound IPv4, IPv6, and labeled IPv4 route from the BGP peer with one of the following origin validation states: <ul style="list-style-type: none">• Valid (0)

- Not-Found (1)
- Invalid (2)

The configurations apply to all types of VPRN BGP peers, but generally should be applied only to EBGp peers and groups that contain only EBGp peers.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv4 *boolean*

Synopsis Enable support for unlabeled unicast IPv4 routes

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* [origin-validation](#) [ipv4 boolean](#)

Tree [ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv6 *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* [origin-validation](#) [ipv6 boolean](#)

Tree [ipv6](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis Enable support for labeled-unicast IPv4 routes

Context **configure** [service vprn](#) *service-name* [bgp group](#) *named-item-64* [origin-validation](#) [label-ipv4 boolean](#)

Tree [label-ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

passive *boolean*

Synopsis	Enable passive mode for BGP communication
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer-as *number*

Synopsis	Peer AS number
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> peer-as <i>number</i>
Tree	peer-as
Range	1 to 4294967295
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-limit [[family](#)] *keyword*

Synopsis	Enter the prefix-limit list instance
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i>
Tree	prefix-limit
Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[family] keyword

Synopsis	Address family to which the limit applies
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i>
Tree	prefix-limit
Options	ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-excess number

Synopsis	Percentage of maximum routes to install in route table
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> hold-excess <i>number</i>
Tree	hold-excess
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the post-import command is configured to true, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the idle-timeout and log-only commands.</p>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-timeout number

Synopsis	Time BGP peering remains idle before reconnecting
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> idle-timeout <i>number</i>
Tree	idle-timeout
Description	This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.

When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.

Range	1 to 1024
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>log-only</i> <i>boolean</i>
Tree	<i>log-only</i>
Description	<p>When configured to true, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and idle-timeout cannot be configured simultaneously.</p> <p>When configured to false, the router generates a log event and takes the BGP session down upon reaching the prefix limit.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp group</i> <i>named-item-64</i> <i>prefix-limit</i> keyword <i>maximum</i> <i>number</i>
Tree	<i>maximum</i>
Description	<p>This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.</p> <p>When log-only is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.</p>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> post-import <i>boolean</i>
Tree	post-import
Description	<p>When configured to true, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.</p> <p>When configured to false, the system limits the number of routes to all routes received from the peer.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> prefix-limit <i>keyword</i> threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remove-private

Synopsis	Enable the remove-private context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> remove-private
Tree	remove-private
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private limited <i>boolean</i>
Tree	limited
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private replace <i>boolean</i>
Tree	replace
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

skip-peer-as *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-communities

Synopsis	Enter the send-communities context
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-communities
Tree	send-communities
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

extended *boolean*

Synopsis Advertise the Extended Communities attribute to peers

Context **configure** *service vprn* *service-name bgp group named-item-64* *send-communities extended boolean*

Tree *extended*

Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute.

When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

large *boolean*

Synopsis Advertise the Large Communities attribute to peers

Context **configure** *service vprn* *service-name bgp group named-item-64* *send-communities large boolean*

Tree *large*

Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute.

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

standard *boolean*

Synopsis Advertise the Communities attribute to peers

Context **configure** *service vprn* *service-name bgp group named-item-64* *send-communities standard boolean*

Tree *standard*

Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to false, all standard communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-default

Synopsis	Enable the send-default context
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policy name
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Generate and advertise an IPv4 default route (0/0)
Context	configure service vpn <i>service-name</i> bgp group <i>named-item-64</i> send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Generate and advertise an IPv6 default route (::/0)
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-group *boolean*

Synopsis	Use group for static peers
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> static-group <i>boolean</i>
Tree	static-group
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-mss (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	configure <i>service vprn service-name</i> <i>bgp group named-item-64</i> tcp-mss (<i>number</i> <i>keyword</i>)
Tree	<i>tcp-mss</i>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure <i>service vprn service-name</i> <i>bgp group named-item-64</i> third-party-nexthop <i>boolean</i>
Tree	<i>third-party-nexthop</i>
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP accepst from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	BGP peer type
Context	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i> type <i>keyword</i>
Tree	type
Options	internal, external
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-time

Synopsis	Enter the hold-time context
Context	configure service vprn <i>service-name</i> bgp hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure service vprn <i>service-name</i> bgp hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.

Range	0 3 to 65535
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>bgp</i> <i>hold-time</i> <i>seconds</i> <i>number</i>
Tree	<i>seconds</i>
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.
Range	0 3 to 65535
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp-multipath *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>bgp</i> <i>ibgp-multipath</i> <i>boolean</i>
Tree	<i>ibgp-multipath</i>
Description	<p>When configured to true, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to false, this command disables IBGP multipath load balancing.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

import

Synopsis Enable the **import** context

Context **configure** [service vprn](#) *service-name* [bgp import](#)

Tree [import](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis Import policy name

Context **configure** [service vprn](#) *service-name* [bgp import policy](#) (*policy-expr-string* | *string*)

Tree [policy](#)

String length 1 to 255

String format 'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])

Max. instances 15

Min. instances 1

Notes This element is ordered by the user.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

initial-send-delay-zero *boolean*

Synopsis Send BGP updates as soon as session comes up

Context **configure** [service vprn](#) *service-name* [bgp initial-send-delay-zero](#) *boolean*

Tree [initial-send-delay-zero](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure service vprn <i>service-name</i> bgp keepalive <i>number</i>
Tree	keepalive
Range	0 to 21845
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure service vprn <i>service-name</i> bgp label-preference <i>number</i>
Tree	label-preference
Range	1 to 255
Default	170
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-as

Synopsis	Enter the local-as context
Context	configure service vprn <i>service-name</i> bgp local-as
Tree	local-as
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	configure service vprn <i>service-name</i> bgp local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

prepend-global-as *boolean*

Synopsis Prepend global AS when advertising routes to BGP peer

Context **configure** *service vpn* *service-name* *bgp local-as prepend-global-as boolean*

Tree [prepend-global-as](#)

Description When configured to **true**, the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.

When configured to **false**, the global ASN is hidden in paths announced to the EBGp peer.

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

private *boolean*

Synopsis Hide the local ASN in sent paths learned from peering

Context **configure** *service vpn* *service-name* *bgp local-as private boolean*

Tree [private](#)

Description When configured to **true**, the local ASN is hidden in paths learned from the peering.

When configured to **false**, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

local-preference *number*

Synopsis Default local preference if not in incoming routes

Context **configure** *service vpn* *service-name* *bgp local-preference number*

Tree [local-preference](#)

Max. range 0 to 4294967295

Default 100

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

loop-detect *keyword*

Synopsis Strategy for loop detection in the AS path

Context **configure** [service vprn](#) *service-name* [bgp loop-detect](#) *keyword*

Tree [loop-detect](#)

Options drop-peer, ignore-loop, off, discard-route

Default ignore-loop

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

loop-detect-threshold *number*

Synopsis Threshold for the global ASN in a received AS path

Context **configure** [service vprn](#) *service-name* [bgp loop-detect-threshold](#) *number*

Tree [loop-detect-threshold](#)

Range 0 to 15

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

med-out (*number* | *keyword*)

Synopsis Default MED attribute value to advertise to peers

Context **configure** [service vprn](#) *service-name* [bgp med-out](#) (*number* | *keyword*)

Tree [med-out](#)

Max. range 0 to 4294967295

Options igp-cost

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

min-route-advertisement *number*

Synopsis Minimum time before a prefix can be advertised to peer

Context	configure service vprn <i>service-name</i> bgp min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure service vprn <i>service-name</i> bgp multihop <i>number</i>
Tree	multihop
Description	This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGp peer multiple hops away. This command applies only to EBGp.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multipath

Synopsis	Enter the multipath context
Context	configure service vprn <i>service-name</i> bgp multipath
Tree	multipath
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp *number*

Synopsis	Maximum multipaths per prefix for EBGp learned routes
Context	configure service vprn <i>service-name</i> bgp multipath ebgp <i>number</i>
Tree	ebgp
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>bgp multipath family keyword</i>
Tree	<i>family</i>
Description	<p>Commands in this context set ECMP multipath parameters that apply only to the specified label unicast address family.</p> <p>When multipath is enabled, traffic to the destination is load-shared across a set of paths (BGP routes) that the BGP decision process considers equal to the best path. The distribution of traffic over the multiple paths may or may not be equal. The distribution is based on weights derived from the Link Bandwidth Extended Community.</p> <p>For more information about the criteria a non-best route must meet to qualify as a multipath, see “BGP route installation in the route table” in the <i>7705 SAR Gen 2 Unicast Routing Protocols User Guide</i>.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[family-type] *keyword*

Synopsis	Address family type for the multipath selection
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>bgp multipath family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp *number*

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>bgp multipath family keyword ebgp number</i>
Tree	<i>ebgp</i>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.
Range	1 to 64

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp *number*

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	configure <i>service vprn service-name bgp multipath family keyword</i> ibgp <i>number</i>
Tree	ibgp
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-paths *number*

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	configure <i>service vprn service-name bgp multipath family keyword</i> max-paths <i>number</i>
Tree	max-paths
Description	<p>This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the family command.</p> <p>Consider the following when configuring this command:</p> <ul style="list-style-type: none">• If the best path is an EBGp-learned route and the ebgp command is configured, the limit configured in the ebgp command overrides the limit configured in this command.• If the best path is an IBGP-learned route and the ibgp command is configured, the limit configured in the ibgp command overrides the limit configured in this command.• If the best path is an EBGp-learned route and the ebgp command is not configured, and this command is configured to 1, multipaths are disabled.• If the best path is an IBGP-learned route and the ibgp command is not configured, and this command is configured to 1, multipaths are disabled.
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure service vprn <i>service-name</i> bgp multipath family <i>keyword</i> restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure service vprn <i>service-name</i> bgp multipath family <i>keyword</i> unequal-cost <i>boolean</i>
Tree	unequal-cost
Description	When configured to true , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp *number*

Synopsis	Maximum multipaths per prefix for IBGP learned routes
Context	configure service vprn <i>service-name</i> bgp multipath ibgp <i>number</i>
Tree	ibgp
Range	1 to 64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-paths *number*

Synopsis	Maximum multipaths per prefix
Context	configure service vprn <i>service-name</i> bgp multipath max-paths <i>number</i>

Tree	max-paths
Range	1 to 64
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure service vprn <i>service-name</i> bgp multipath restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure service vprn <i>service-name</i> bgp multipath unequal-cost <i>boolean</i>
Tree	unequal-cost
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor [[ip-address](#)] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the neighbor list instance
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	neighbor
Description	Commands in this context configure a BGP peer or neighbor instance.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the BGP peer router
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	neighbor
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none">• If the active route for the IP prefix is a BGP route, that route is advertised.• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

advertise-ipv6-next-hops

Synopsis Enable the **advertise-ipv6-next-hops** context

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **advertise-ipv6-next-hops**

Tree [advertise-ipv6-next-hops](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv4 *boolean*

Synopsis Enable IPv4 routes to be advertised

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **advertise-ipv6-next-hops** [ipv4](#) *boolean*

Tree [ipv4](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

aggregator-id-zero *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to zero

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **aggregator-id-zero** *boolean*

Tree [aggregator-id-zero](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	configure <i>service vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-override <i>boolean</i>
Tree	as-override
Description	<p>When configured to true, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). This command cannot be explicitly configured to false.</p> <p>When the command inherits a value of false, no AS override is performed.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

asn-4-byte *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	configure <i>service vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key
Context	configure <i>service vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command specifies the BGP authentication key peers in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 422
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [authentication-keychain](#) *reference*

Tree [authentication-keychain](#)

Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.

Reference **configure** [system security keychains](#) [keychain](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

bfd

Synopsis Enable the **bfd** context

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [bfd](#)

Tree [bfd](#)

Description Commands in this context configure the BFD command options for the BGP neighbor.

Introduced 26.10.R1

Platforms 7705 SAR Gen 2

multiplier *number*

Synopsis Multiplier for the BFD session

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [bfd](#) [multiplier](#) *number*

Tree [multiplier](#)

Description This command configures the number of consecutive BFD messages that must be missed from the peer before the BFD session state is changed to down and the upper level protocols (OSPF, IS-IS, BGP, or PIM) are notified of the fault.

Range 1 to 20

Default 3

Introduced 26.10.R1

Platforms 7705 SAR Gen 2

receive-interval *number*

Synopsis Receive interval for the BFD session

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [bfd receive-interval](#) *number*

Tree [receive-interval](#)

Range 10 to 100000

Units milliseconds

Default 100

Introduced 26.10.R1

Platforms 7705 SAR Gen 2

transmit-interval *number*

Synopsis Transmit interval for the BFD session

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [bfd transmit-interval](#) *number*

Tree [transmit-interval](#)

Range 10 to 100000

Units milliseconds

Default 100

Introduced 26.10.R1

Platforms 7705 SAR Gen 2

type *keyword*

Synopsis Type of BFD session endpoint to use

Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [bfd type](#) *keyword*

Tree [type](#)

Options cpm-np – Processed by the network processor on the CPM
auto – System determines the appropriate session type
fp – Processed on the forwarding plane hardware

Default auto

Introduced	26.10.R1
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BFD is removed from the associated protocol adjacency.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-strict-mode

Synopsis	Enter the bfd-strict-mode context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise

Synopsis	Enable the advertise context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-strict-mode advertise
Tree	advertise
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none">• The inherited or configured value for the bfd-liveness command that applies to the peer is true.

- The interface associated with the peer has a valid BFD configuration.

When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.

When unconfigured, BGP does not advertise the Strict-BFD capability to peers.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

holdtime *number*

Synopsis Maximum time BGP waits for the BFD session to come up

Context **configure** *service* *vpn* *service-name* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **bfd-strict-mode advertise holdtime** *number*

Tree **holdtime**

Description This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.

Range 1 to 65535

Units seconds

Default 30

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

next-hop-reachability *boolean*

Synopsis Consider next hop unreachable if BFD session is down

Context **configure** *service* *vpn* *service-name* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **bfd-strict-mode next-hop-reachability** *boolean*

Tree **next-hop-reachability**

Description When configured to **true**, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:

- The BFD session to the peer is in a down state.
- There is a valid interface BFD configuration that applies to the peer.
- There is a valid BFD liveness configuration that applies to the peer.

The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.

Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent.

Configuring this command to **true** only affects routes belonging to the following address families:

- IPv4
- IPv6
- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast
- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

capability-negotiation *boolean*

Synopsis	Enable capability negotiation
Context	configure <i>service vpn</i> <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) capability-negotiation <i>boolean</i>
Tree	<i>capability-negotiation</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-reflect *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
----------	---

Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) client-reflect <i>boolean</i>
Tree	client-reflect
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cluster

Synopsis	Enter the cluster context
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster
Tree	cluster
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster cluster-id <i>ipv4-address</i>
Tree	cluster-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations
Tree	damp-peer-oscillations
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time initial-wait <i>number</i>

Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damping <i>boolean</i>
Tree	damping

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-label-preference

Synopsis	Enter the default-label-preference context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp number

Synopsis	Default preference for EBGp
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference ebgp number
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp number

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-label-preference ibgp number
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-preference

Synopsis	Enter the default-preference context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-preference

Tree	default-preference
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp *number*

Synopsis	Default preference for EBGp
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-preference ebgp <i>number</i>
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ibgp *number*

Synopsis	Default preference for IBGP
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) default-preference ibgp <i>number</i>
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ebgp-default-reject-policy

Synopsis	Enable the ebgp-default-reject-policy context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ebgp-default-reject-policy export <i>boolean</i>
Tree	export
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ebgp-default-reject-policy import <i>boolean</i>
Tree	import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route

matches the configured AS of the session. If there is not a match, the session is reset (if the **update-fault-tolerance** command in the **error-handling** context is set to **false**) or the session is left up but the route is treated as withdrawn (if **update-fault-tolerance** is set to **true**).

This command does not flap an established session because it applies only to routes received after the command is issued.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, received routes are not checked for compliance with the rule.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

error-handling

Synopsis Enter the **error-handling** context
Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **error-handling**
Tree [error-handling](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

update-fault-tolerance *boolean*

Synopsis Tolerate non-critical errors in UPDATE messages
Context **configure** [service vprn](#) *service-name* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **error-handling** **update-fault-tolerance** *boolean*
Tree [update-fault-tolerance](#)
Description When configured to **true**, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.
When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.
When this command inherits a value of **false**, all errors trigger a session reset.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

evpn-link-bandwidth

Synopsis	Enter the evpn-link-bandwidth context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) evpn-link-bandwidth
Tree	evpn-link-bandwidth
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

add-to-received-bgp *number*

Synopsis	Weight added to received PE-CE BGP routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) evpn-link-bandwidth add-to-received-bgp <i>number</i>
Tree	add-to-received-bgp
Description	<p>This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.</p> <p>For the load-balancing between EVPN-IFL and BGP PE-CE routes the configure service vprn bgp eibgp-loadbalance command must already be configured in the system.</p>
Range	1 to 128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export

Synopsis	Enable the export context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export
Tree	export
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Export policy name
----------	--------------------

Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

extended-nh-encoding

Synopsis	Enable the extended-nh-encoding context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) extended-nh-encoding
Tree	extended-nh-encoding
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 boolean

Synopsis	Enable IPv4 family type
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) extended-nh-encoding ipv4 boolean
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family

Synopsis	Enable the family context
----------	----------------------------------

Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flow-ipv6 *boolean*

Synopsis	Advertise support for the FlowSpec-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family flow-ipv6 <i>boolean</i>
Tree	flow-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Add support for the IPv4 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcast-ipv4 *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mcast-ipv4 <i>boolean</i>
Tree	mcast-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mcast-ipv6 *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) fast-external-failover <i>boolean</i>
Tree	fast-external-failover

Description	<p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart gr-notification <i>boolean</i>
Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

long-lived

Synopsis	Enable the long-lived context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived

Tree	long-lived
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

family [[family-type](#)] *keyword*

Synopsis	Enter the family list instance
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i>
Tree	family
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[family-type] keyword

Synopsis	Address family type for LLGR
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) graceful-restart long-lived family keyword
Tree	family
Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertised-stale-time number

Synopsis	LLGR stale routes time for family override
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) graceful-restart long-lived family keyword advertised-stale-time number
Tree	advertised-stale-time
Description	<p>This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.</p>
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-stale-time number

Synopsis	Locally-configured stale routes override time
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) graceful-restart long-lived family keyword helper-override-stale-time number
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.

Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fw
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	When configured to true , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0. When configured to false , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restart-time *number*

Synopsis	Restart time advertised by GR capability
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart restart-time <i>number</i>

Tree	restart-time
Range	0 to 4095
Default	300
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stale-routes-time *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group *reference*

**WARNING:** Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Neighbor to group
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) group <i>reference</i>
Tree	group
Reference	configure service vprn <i>service-name</i> bgp group <i>named-item-64</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-time

Synopsis	Enter the hold-time context
----------	------------------------------------

Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-hold-time *number*

Synopsis	Minimum time BGP waits between successive messages
Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Range	0 3 to 65536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Maximum hold time between successive messages
Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) hold-time seconds <i>number</i>
Tree	seconds
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command setting is inherited from the BGP group-level configuration.</p>
Range	0 3 to 65535
Introduced	25.3.R2

Platforms7705 SAR Gen 2

import

SynopsisEnable the **import** context

Context**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **import**

Range	1 to 4294967295

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Description	When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to false , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as private <i>boolean</i>
Tree	private
Description	When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-preference <i>number</i>
Tree	local-preference
Range	0 to 4294967295

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect <i>keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-route-advertisement *number*

Synopsis	Minimum interval between successive prefix updates
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multipath-eligible *boolean*

Synopsis	Allow routes from this peer in multipath eligibility
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multipath-eligible <i>boolean</i>
Tree	multipath-eligible
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-self *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) next-hop-self <i>boolean</i>
Tree	next-hop-self
Description	When configured to true , this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.

Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the **configure router bgp rr-vpn-forwarding** command should also be configured.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced25.3.R2

Platforms7705 SAR Gen 2

origin-validation

SynopsisEnable the **origin-validation** context

Context**configure service vpn service-name bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation**

Tree**origin-validation**

Description

Commands in this context configure the marking of every inbound IPv4, IPv6, and labeled IPv4 route from the BGP peer with one of the following origin validation states:

- Valid (0)
- Not-Found (1)
- Invalid (2)

The configurations apply to all types of VPRN BGP peers, but generally should be applied only to EBGp peers and groups that contain only EBGp peers.

Introduced25.3.R2

Platforms7705 SAR Gen 2

ipv4 boolean

SynopsisEnable support for unlabeled unicast IPv4 routes

Context**configure service vpn service-name bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv4 boolean**

Tree**ipv4**

Defaultfalse

Introduced25.3.R2

Platforms7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

Synopsis	Use passive mode for BGP communication
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) passive <i>boolean</i>
Tree	passive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path-mtu-discovery *boolean*

Synopsis	Enable path MTU discovery
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	When configured to true , Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer-as *number*

Synopsis	Peer AS number
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-as <i>number</i>
Tree	peer-as
Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer-creation-type *keyword*

Synopsis	Peer creation type
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-creation-type <i>keyword</i>
Tree	peer-creation-type
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure <i>service vpn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) peer-ip-tracking boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure <i>service vpn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) preference number</i>
Tree	preference
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-limit [[family](#)] *keyword*

Synopsis	Enter the prefix-limit list instance
----------	---

Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>

Tree	prefix-limit
Options	ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-excess number

Synopsis	Percentage of maximum routes to install in route table
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> hold-excess <i>number</i>
Tree	hold-excess
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the post-import command is configured to true, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the idle-timeout and log-only commands.</p>
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-timeout *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword idle-timeout <i>number</i>
Tree	idle-timeout
Description	This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer. When unconfigured, the command inherits the value from the group-level configuration.
Range	1 to 1024
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure service vpn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword maximum <i>number</i>
Tree	maximum
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> post-import <i>boolean</i>
Tree	post-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remove-private

Synopsis	Enable the remove-private context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private
Tree	remove-private
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private limited <i>boolean</i>
Tree	limited

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private replace <i>boolean</i>
Tree	replace
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

skip-peer-as *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-communities

Synopsis	Enter the send-communities context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities
Tree	send-communities
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
----------	---

Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) send-communities extended <i>boolean</i>
Tree	extended
Description	<p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to false, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) send-communities large <i>boolean</i>
Tree	large
Description	<p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to false, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	configure service vprn service-name bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) send-communities standard <i>boolean</i>
Tree	standard
Description	<p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to false, all standard communities are removed from all routes advertised to BGP peers.</p>

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-default

Synopsis	Enable the send-default context
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policy name
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Enable IPv6 family type
----------	-------------------------

Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-mss (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	configure service vprn service-name bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) tcp-mss (<i>number</i> <i>keyword</i>)
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Options	ip-stack
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) third-party-nexthop <i>boolean</i>
Tree	third-party-nexthop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ttl-security <i>number</i>
Tree	ttl-security
Description	<p>This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.</p> <p>When unconfigured, the command inherits the value of the group-level setting.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	BGP peer type
Context	configure service vprn <i>service-name</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) type <i>keyword</i>
Tree	type

Options	internal, external
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop-resolution

Synopsis	Enter the next-hop-resolution context
Context	configure service vprn <i>service-name</i> bgp next-hop-resolution
Tree	next-hop-resolution
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy reference

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	configure service vprn <i>service-name</i> bgp next-hop-resolution policy reference
Tree	policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	configure service vprn <i>service-name</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i>
Tree	use-bgp-routes
Description	<p>When configured to true, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to false, BGP next hops are not resolved.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

use-leaked-routes

Synopsis Enter the **use-leaked-routes** context

Context **configure** [service vprn](#) *service-name* [bgp next-hop-resolution use-leaked-routes](#)

Tree [use-leaked-routes](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

static *boolean*

Synopsis Use leaked static routes to resolve BGP next hop

Context **configure** [service vprn](#) *service-name* [bgp next-hop-resolution use-leaked-routes static](#) *boolean*

Tree [static](#)

Description When configured to **true**, the router allows any non-leaked unlabeled unicast IPv4 or IPv6 route in the BGP RIB to be resolved by a leaked static route with direct next hops. A BGP route resolved this way cannot resolve other routes (including BGP routes) and cannot be redistributed into non-BGP protocols, such as IGP.

When configured to **false**, the router prevents the use of leaked static routes to resolve BGP routes.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

path-mtu-discovery *boolean*

Synopsis Enable Path MTU Discovery

Context **configure** [service vprn](#) *service-name* [bgp path-mtu-discovery](#) *boolean*

Tree [path-mtu-discovery](#)

Description When configured to **true**, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.

When configured to **false**, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure service vprn <i>service-name</i> bgp peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer-tracking-policy *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	configure service vprn <i>service-name</i> bgp peer-tracking-policy <i>reference</i>
Tree	peer-tracking-policy
Description	<p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p> <p>Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure service vprn <i>service-name</i> bgp preference <i>number</i>

Tree	preference
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p>
Range	1 to 255
Default	170
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rapid-update

Synopsis	Enter the rapid-update context
Context	configure service vprn <i>service-name</i> bgp rapid-update
Tree	rapid-update
Description	<p>Commands in this context specify the address families that are configured to support the rapid update functionality.</p> <p>The rapid update functionality overrides the remaining time on a peer's MRAT timer and immediately sends routes belonging to the specified address families (and all other pending updates) to the peers receiving these routes.</p>
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ipv4 boolean

Synopsis	Include IPv4 address family routes
Context	configure service vprn <i>service-name</i> bgp rapid-update ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ipv6 boolean

Synopsis	Include IPv6 address family routes
Context	configure service vprn <i>service-name</i> bgp rapid-update ipv6 <i>boolean</i>

Tree	ipv6
Default	false
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

rapid-withdrawal *boolean*

Synopsis	Send BGP withdrawal UPDATE messages immediately
Context	configure service vprn <i>service-name</i> bgp rapid-withdrawal <i>boolean</i>
Tree	rapid-withdrawal
Description	<p>When configured to true, UPDATE messages containing withdrawn NLRI are sent immediately to a peer without waiting for the MRAI timer to expire. UPDATE messages containing reachable NLRI continue to wait for the MRAI timer to expire, or for a rapid update trigger.</p> <p>When configured to false, withdrawal processing continues with the normal behavior.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remove-private

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	configure service vprn <i>service-name</i> bgp rib-management ipv6 route-table-import policy-name <i>reference</i>
Tree	policy-name
Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs. When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in

that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Tree	send-communities
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	configure service vprn <i>service-name</i> bgp send-communities extended <i>boolean</i>
Tree	extended
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	configure service vprn <i>service-name</i> bgp send-communities large <i>boolean</i>
Tree	large
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	configure service vprn <i>service-name</i> bgp send-communities standard <i>boolean</i>
Tree	standard
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-default

Synopsis	Enter the send-default context
Context	configure service vprn <i>service-name</i> bgp send-default
Tree	send-default
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policy name
Context	configure service vprn <i>service-name</i> bgp send-default export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Enable IPv4 family type
Context	configure service vpn <i>service-name</i> bgp send-default ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Enable IPv6 family type
Context	configure service vpn <i>service-name</i> bgp send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vpn <i>service-name</i> bgp split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to false, the use of split-horizon is disabled.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-mss *number*

Synopsis	TCP maximum segment size override
Context	configure <i>service vprn service-name</i> bgp tcp-mss <i>number</i>
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	configure <i>service vprn service-name</i> bgp third-party-nexthop <i>boolean</i>
Tree	third-party-nexthop
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-evpn

Synopsis	Enter the bgp-evpn context
----------	-----------------------------------

Context	configure service vprn <i>service-name</i> bgp-evpn
Tree	bgp-evpn
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls [[bgp-instance](#)] *number*

Synopsis	Enter the mpls list instance
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[bgp-instance] *number*

Synopsis	BGP instance ID
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i>
Tree	mpls
Range	1
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP-EVPN MPLS
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure the automatic binding options of a BGP-EVPN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum ECMP routes allowed
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Description	This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level.
Range	1 to 32
Default	1

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-strict-tunnel-tagging *boolean*

Synopsis	Allow enforcement of strict tunnel tagging
Context	configure <i>service vprn service-name bgp-evpn mpls number auto-bind-tunnel enforce-strict-tunnel-tagging boolean</i>
Tree	<i>enforce-strict-tunnel-tagging</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure <i>service vprn service-name bgp-evpn mpls number auto-bind-tunnel enforce-untagged-route keyword</i>
Tree	<i>enforce-untagged-route</i>
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p> <p>The untagged-tunnel option can be used in combination with the enforce-strict-tunnel-tagging command configured to true, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.</p> <p>When unconfigured, untagged routes can bind to tagged or untagged LSPs.</p>
Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution *keyword*

Synopsis	Resolution method for tunnel selection
----------	--

Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
Tree	resolution-filter
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-EVPN routes within the automatic binding of the BGP-EVPN MPLS service to tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop. When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
----------	---

Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter ldp <i>boolean</i>
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	When configured to true , BGP uses an IS-IS tunnel type to resolve the BGP next hop. When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure. <ul style="list-style-type: none"> • Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference.

- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.
- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID.

When configured to **false**, IS-IS tunneling is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p>

- Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference.
- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.
- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID.

When configured to **false**, OSPF3 tunneling is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP-EVPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and • a color value that matches the highest numbered color for the extended community attached to the service route
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter udp <i>boolean</i>
Tree	udp
Description	When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to false , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

default-route-tag *one-byte-value*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> default-route-tag <i>one-byte-value</i>
Tree	default-route-tag
Description	This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed. When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

domain-id *domain-id***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> domain-id <i>domain-id</i>
Tree	<i>domain-id</i>
Description	<p>This command specifies the D-PATH domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as <i>domain-id:isf_safi_type</i> in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>
String format	'domain-id' must be global-field:local-field (uint32:uint16 range)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure <i>service vprn</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> dynamic-egress-label-limit <i>boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	When configured to true , this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.

For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evi number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVPN instance ID
Context	configure service vpn service-name bgp-evpn mpls number evi number
Tree	evi
Description	This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment.
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-link-bandwidth

Synopsis	Enter the evpn-link-bandwidth context
Context	configure service vpn service-name bgp-evpn mpls number evpn-link-bandwidth
Tree	evpn-link-bandwidth
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise

Synopsis	Enable the advertise context
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth advertise
Tree	advertise
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-dynamic-weight *number*

Synopsis	Maximum dynamic weight of the route
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth advertise max-dynamic-weight <i>number</i>
Tree	max-dynamic-weight
Description	This command configures the maximum weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If weight dynamic is configured, the actual advertised weight is the minimum of the number of BGP PE-CE paths for the prefix and the configured maximum weight.
Range	1 to 128
Default	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weight (*number* | *keyword*)

Synopsis	Weight of the route
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth advertise weight (<i>number</i> <i>keyword</i>)
Tree	weight
Description	This command configures the weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If set to dynamic , the weight is dynamically set based on the number of BGP PE-CE paths for the IP-Prefix that is advertised in an EVPN IP-Prefix route.
Range	1 to 128
Options	dynamic
Default	dynamic

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weighted-ecmp *boolean*

Synopsis	Enable weighted ECMP
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, the router supports the processing of the EVPN link bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the VPRN route table.</p> <p>Flows to an IP Prefix received with a weight and a zero ESI value are sprayed according to the weight. If the EVPN IP-Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer).</p> <p>The command also enables the weighted ECMP functionality for BGP CEs that are configured with an evpn-link-bandwidth add-to-received-bgp weight.</p> <p>When configured to false, the router disables the processing of the EVPN link bandwidth extended community.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gateway-ip

Synopsis	Enter the gateway-ip context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> gateway-ip
Tree	gateway-ip
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

advertise *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the advertisement of GW-IP in IP prefix routes
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>gateway-ip</i> <i>advertise</i> <i>boolean</i>
Tree	<i>advertise</i>
Description	<p>When configured to true, the router advertises an IP prefix route for prefix P with the next hop N in the GW-IP field when a BGP PE-CE route for P is received from N. If multiple CEs advertise the same prefix P from different next hops, and the configure router bgp add-paths evpn command is enabled on the Base router, the router generates multiple IP prefix routes. Each of these routes has a unique next hop encoded in the GW-IP field and a distinct path ID.</p> <p>When configured to false, IP prefix routes are advertised without a non-zero GW-IP value.</p>
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

resolve *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the resolution of GW-IP in IP prefix routes
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>gateway-ip</i> <i>resolve</i> <i>boolean</i>
Tree	<i>resolve</i>
Description	<p>When configured to true, the router resolves IP prefix routes with a non-zero GW-IP to either EVPN-IFL-HOST routes that match the GW-IP or to local R-VPLS interfaces if the GW-IP is associated with a local R-VPLS interface.</p> <p>When configured to false, IP prefix routes with a non-zero GW-IP remain unresolved.</p>
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

route-distinguisher (*string* | *keyword*)

Synopsis	Route distinguisher
Context	configure <i>service vpn</i> <i>service-name</i> <i>bgp-evpn mpls</i> <i>number</i> <i>route-distinguisher</i> (<i>string</i> <i>keyword</i>)

Tree	route-distinguisher
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to.
String format	'vprn-bgp-evpn-mpls-rd' must be IP:comm or AS-number pair per RD rules
Options	auto-rd
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-tunnel-encap

Synopsis	Enter the send-tunnel-encap context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> send-tunnel-encap
Tree	send-tunnel-encap
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS encapsulation
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> send-tunnel-encap mpls <i>boolean</i>
Tree	mpls
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls-over-udp *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS over UDP encapsulation
----------	------------------------------------

Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> send-tunnel-encap mpls-over-udp <i>boolean</i>
Tree	mpls-over-udp
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

static-service-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Static MPLS service label for this VPRN instance
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> static-service-label <i>number</i>
Tree	static-service-label
Description	<p>This command configures the static per-VRF MPLS service label for the VPRN instance. All routes advertised from this instance use the specified label instead of a dynamically allocated per-VRF label. Traffic received with the configured label is associated with this VPRN service instance. The static service label allows two or more PEs to advertise the same label and to be reached using a shared anycast address or SID.</p> <p>The specified label value must come from the static label range.</p> <p>Note: If a user configures the static label, the same label is used for that service regardless of any ressignaling or reboots.</p>
Range	32 to 1048575
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

vrf-export

Synopsis	Enable the vrf-export context
Context	configure service vprn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-export
Tree	vrf-export
Description	<p>Commands in this context specify route policies that control how routes are exported from the local VRF to other VRFs on the same or remote PE routers (via MP-BGP). Aggregate routes are not advertised via MP-BGP protocols to other MP-BGP peers. Route policies are configured in the configure policy-options context.</p>

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-import

Synopsis	Enable the vrf-import context
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-import
Tree	vrf-import
Description	Commands in this context specify route policies that control how VPN-IP and EVPN-IFL routes that are exported by other VRFs on the same or remote PEs, are imported into the local VRF.

Route policies are configured in the **configure policy-options** context.

Unless the preference value is changed by the policy, the preference value for BGP-VPN and EVPN-IFL routes specified in this context is set to 170 when imported from remote PE routers, or the value is retained from the protocol preference value of the exported route when imported from other VRFs on the same router.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-target

Synopsis	Enter the vrf-target context
----------	-------------------------------------

Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target
Tree	vrf-target
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *route-target*

Synopsis	Extended BGP community
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target community <i>route-target</i>
Tree	community
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-community *route-target*

Synopsis	Communities sent to remote PE neighbors
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target export-community <i>route-target</i>
Tree	export-community
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules

Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-community *route-target*

Synopsis	Communities accepted from remote PE neighbors
Context	configure service vpn <i>service-name</i> bgp-evpn mpls <i>number</i> vrf-target import-community <i>route-target</i>
Tree	import-community
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-ipvpn

Synopsis	Enter the bgp-ipvpn context
Context	configure service vpn <i>service-name</i> bgp-ipvpn
Tree	bgp-ipvpn
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

attribute-set

Synopsis	Enter the attribute-set context
Context	configure service vpn <i>service-name</i> bgp-ipvpn attribute-set
Tree	attribute-set
Description	<p>Commands in this context configure the handling of attribute set (ATTR_SET) attributes attached to VPN-IP routes imported into or exported from the VPRN.</p> <p>ATTR_SET is an optional transitive BGP path attribute standardized by RFC 6368 that is added to BGP L3 VPN routes to provide logical separation between the BGP domain of a customer and the BGP domain of a service provider.</p>

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export *boolean*

Synopsis	Add ATTR_SET path attribute to exported VPN-IP routes
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn attribute-set export</i> <i>boolean</i>
Tree	<i>export</i>
Description	<p>When configured to true, the router adds an ATTR_SET path attribute to all VPN-IP routes that come from the VRF export of BGP routes advertised by PE-CE peers of the VPRN. This attribute contains an exact copy of all BGP path attributes (post-import policy) of the PE-CE BGP route, excluding the NEXT_HOP, MP_REACH, and MP_UNREACH attributes, as well as the AS4_PATH or AS4_AGGREGATOR attributes. The origin AS in the ATTR_SET encodes the ASN (or confederation ID, if configured) of the exporting VPRN service. Neither the VRF export policy nor a regular BGP export policy is allowed to modify the contents of the ATTR_SET.</p> <p>When configured to false, the router does not add an ATTR_SET path attribute to VPN-IP routes exported by the VPRN. Nokia recommends configuring this command to false, unless there is a requirement for the VPRN to deliver an independent domain L3 VPN service.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import *keyword*

Synopsis	Reception behavior of ATTR_SET
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn attribute-set import</i> <i>keyword</i>
Tree	<i>import</i>
Description	<p>This command configures the reception behavior for ATTR_SETs in received VPN-IP routes.</p> <ul style="list-style-type: none">• accept — BGP accepts and processes ATTR_SETs in received unicast VPN-IP routes (MPLS or SRv6) when they are imported into the VPRN. The path attributes contained inside the ATTR_SET are used for best path selection within the VPRN, instead of the outer path attributes attached to the imported VPN-IP route. The path attributes inside the ATTR_SET determine the path attributes of BGP routes advertised to PE-CE peers of the VPRN. However, the ATTR_SET is removed at the time of advertisement. VPRN BGP routes with attributes derived from accept processing can only be advertised to EBGP peers and IBGP route reflector client peers. VPRN BGP routes cannot be advertised to BGP confederation peers. If the origin AS in the ATTR_SET attribute does not match the configured ASN, VPRN

BGP routes with attributes derived from **accept** processing are advertised to IBGP peers that are not covered by a cluster configuration.

- **drop** — BGP ignores and silently discards ATTR_SETs in received VPN-IP routes when they are imported into the VPRN. The path attributes contained inside the ATTR_SET are not used for best path selection within the VPRN. If a VPRN is not involved in an independent domain L3 VPN service, Nokia recommends configuring this command to use the **drop** option.
- **ignore** — BGP ignores ATTR_SETs in received VPN-IP routes when they are imported into the VPRN. The path attributes contained inside the ATTR_SET are not used for best path selection within the VPRN. With the **ignore** option, the ATTR_SET attribute is transmitted unchanged to the CE. Nokia recommends not to configure this command to use the **ignore** option in most deployments.

Options	ignore, accept, drop
Default	ignore
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls

Synopsis	Enter the mpls context
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls
Tree	mpls
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP-IPVPN MPLS
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
----------	---

Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure the automatic-binding options of a BGP-IPVPN service using tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	<p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum ECMP routes allowed
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Description	This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level.
Range	1 to 32
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-strict-tunnel-tagging *boolean*

Synopsis	Allow enforcement of strict tunnel tagging
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i>
Tree	enforce-strict-tunnel-tagging
Description	<p>When configured to true, the system must only consider LSPs marked with an administrative tag for next-hop resolution.</p> <p>When configured to false, tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel enforce-untagged-route <i>keyword</i>
Tree	enforce-untagged-route
Description	<p>This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services.</p> <p>If the untagged-tunnel option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.</p> <p>The untagged-tunnel option can be used in combination with the enforce-strict-tunnel-tagging command configured to true, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs.</p> <p>When unconfigured, untagged routes can bind to tagged or untagged LSPs.</p>
Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution keyword

Synopsis	Resolution method for tunnel selection
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution keyword
Tree	resolution
Options	none, filter, any
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter resolution-filter
Tree	resolution-filter
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp boolean
Tree	bgp
Description	<p>When configured to true, BGP searches the BGP LSP for the address of the BGP next hop.</p> <p>When configured to false, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gre boolean

Synopsis	Use GRE tunneling for next-hop resolution
Context	configure service vprn service-name bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre boolean
Tree	gre
Description	When configured to true , this command enables setting the tunnel type for the auto bind tunnel.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vprn service-name bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp boolean
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vprn service-name bgp-ipvpn mpls auto-bind-tunnel resolution-filter rsvp boolean
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to resolve the BGP next hop.</p> <p>When the sr-isis command is enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none">• Select the SR tunnel submitted by the IS-IS instance with the lowest tunnel table preference.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to resolve the BGP next hop.</p> <p>When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none">• Select the SR tunnel submitted by the OSPF instance with the lowest tunnel table preference.• If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric.

- If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID.

When configured to **false**, OSPF tunneling is not used for next-hop resolution.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to resolve the BGP next hop. When enabled, an SR tunnel to the BGP next hop is selected in the TTM according to the following procedure.</p> <ul style="list-style-type: none"> • Select the SR tunnel submitted by the OSPFv3 instance with the lowest tunnel table preference. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest metric. • If more than one SR tunnel exists, select the SR tunnel from the instance with the lowest instance ID. <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of SR policies to resolve the next hop of BGP IP-VPN service routes.</p> <p>This command configures BGP to search for an SR policy with:</p> <ul style="list-style-type: none"> • a non-null endpoint that matches the next hop of the service route, and

- a color value that matches the highest numbered color for the extended community attached to the service route

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to resolve the BGP next hop.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-blackhole-first *boolean*

Synopsis	Check for static blackhole route to resolve next hop
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls auto-bind-tunnel static-blackhole-first <i>boolean</i>
Tree	static-blackhole-first
Description	<p>When configured to true, the router uses a modified next-hop resolution sequence for each imported VPN-IP route. The router first checks for a static route in the Base routing table that matches the BGP next-hop address. If at least one such static route exists, and the route that is the longest match of the BGP next-hop address is a blackhole static route, the router resolves the VPN-IP route and programs it into the VPRN IP FIB table with a next-hop action that discards all matching packets. If there is no matching static route, or the longest matching static route is not a blackhole, the router resolves the VPN-IP route in the Base routing table as normal, that is, according to the configured VPRN auto-bind filter options.</p> <p>When configured to false, the router resolves the VPN-IP route in the Base routing table according to the configured VPRN auto-bind filter options.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

weighted-ecmp *boolean*

Synopsis	Allow weighted load-balancing
Context	configure <i>service vprn service-name bgp-ipvpn mpls auto-bind-tunnel weighted-ecmp boolean</i>
Tree	<i>weighted-ecmp</i>
Description	<p>When configured to true, this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.</p> <p>When configured to false, this command disables weighted ECMP for next-hop tunnel selection.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

domain-id *domain-id*

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure <i>service vprn service-name bgp-ipvpn mpls domain-id domain-id</i>
Tree	<i>domain-id</i>
Description	<p>This command specifies the D-PATH domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p>

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

String format 'domain-id' must be global-field:local-field (uint32:uint16 range)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

dynamic-egress-label-limit *boolean*

Synopsis Enables dynamic egress label limit

Context **configure** *service vpn service-name* *bgp-ipvpn mpls dynamic-egress-label-limit boolean*

Tree *dynamic-egress-label-limit*

Description When configured to **true**, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.

For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

route-distinguisher (*string* | *keyword*)

Synopsis Route distinguisher

Context **configure** *service vpn service-name* *bgp-ipvpn mpls route-distinguisher (string | keyword)*

Tree *route-distinguisher*

Description This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to.

String format 'vpn-bgp-evpn-mpls-rd' must be IP:comm or AS-number pair per RD rules

Options auto-rd

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

static-service-label *number*

Synopsis	Static MPLS service label for this VPRN instance
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn mpls static-service-label number</i>
Tree	<i>static-service-label</i>
Description	<p>This command configures the static per-VRF MPLS service label for the VPRN instance. All routes advertised from this instance use the specified label instead of a dynamically allocated per-VRF label. Traffic received with the configured label is associated with this VPRN service instance. The static service label allows two or more PEs to advertise the same label and to be reached using a shared anycast address or SID.</p> <p>The specified label value must come from the static label range.</p> <p>Note: If a user configures the static label, the same label is used for that service regardless of any resignaling or reboots.</p>
Range	32 to 1048575
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

vrf-export

Synopsis	Enable the vrf-export context
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn mpls vrf-export</i>
Tree	<i>vrf-export</i>
Description	<p>Commands in this context specify route policies that control how routes are exported from the local VRF to other VRFs on the same or remote PE routers (via MP-BGP). Aggregate routes are not advertised via MP-BGP protocols to other MP-BGP peers. Route policies are configured in the configure policy-options context.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure <i>service vprn service-name</i> <i>bgp-ipvpn mpls vrf-export policy</i> (<i>policy-expr-string</i> <i>string</i>)
Tree	<i>policy</i>
Description	This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).

Each referenced object is either a policy logical expression or the name of a single policy.

Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.

Only the first policy can have the maximum length and the rest can be up to 64 characters.

Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.

String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-import

Synopsis	Enable the vrf-import context
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-import
Tree	vrf-import
Description	<p>Commands in this context specify route policies that control how VPN-IP and EVPN-IFL routes that are exported by other VRFs on the same or remote PEs, are imported into the local VRF.</p> <p>Route policies are configured in the configure policy-options context.</p> <p>Unless the preference value is changed by the policy, the preference value for BGP-VPN and EVPN-IFL routes specified in this context is set to 170 when imported from remote PE routers, or the value is retained from the protocol preference value of the exported route when imported from other VRFs on the same router.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
----------	-------------

Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-target

Synopsis	Enter the vrf-target context
Context	configure service vpn <i>service-name</i> bgp-ipvpn mpls vrf-target
Tree	vrf-target
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

community *route-target*

Synopsis	Extended BGP community
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls vrf-target community <i>route-target</i>
Tree	community
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-community *route-target*

Synopsis	Communities sent to remote PE neighbors
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls vrf-target export-community <i>route-target</i>
Tree	export-community
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-community *route-target*

Synopsis	Communities accepted from remote PE neighbors
Context	configure service vprn <i>service-name</i> bgp-ipvpn mpls vrf-target import-community <i>route-target</i>
Tree	import-community

String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-shared-queue

Synopsis	Enable the bgp-shared-queue context
Context	configure service vprn <i>service-name</i> bgp-shared-queue
Tree	bgp-shared-queue
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cir (*number* | *keyword*)

Synopsis	Committed information rate for shared queue
Context	configure service vprn <i>service-name</i> bgp-shared-queue cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 100000000
Units	kilobps
Options	max
Default	4000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pir (*number* | *keyword*)

Synopsis	Peak information rate for shared queue
Context	configure service vprn <i>service-name</i> bgp-shared-queue pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 100000000
Units	kilobps

Options	max
Default	4000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-vpn-backup

Synopsis	Enter the bgp-vpn-backup context
Context	configure service vpn <i>service-name</i> bgp-vpn-backup
Tree	bgp-vpn-backup
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Allow BGP-VPN to be used as backup for IPv4 prefixes
Context	configure service vpn <i>service-name</i> bgp-vpn-backup ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Allow BGP-VPN to be used as backup for IPv6 prefixes
Context	configure service vpn <i>service-name</i> bgp-vpn-backup ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

carrier-carrier-vpn *boolean*

Synopsis	Allow VPRN service to support a Carrier Supporting Carrier model
Context	configure service vpn <i>service-name</i> carrier-carrier-vpn <i>boolean</i>

Tree	carrier-carrier-vpn
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

confederation

Synopsis	Enter the confederation context
Context	configure service vpn <i>service-name</i> confederation
Tree	confederation
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

confed-as-num *number*

Synopsis	Confederation number within an autonomous system
Context	configure service vpn <i>service-name</i> confederation confed-as-num <i>number</i>
Tree	confed-as-num
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

members [[as-number](#)] *number*

Synopsis	Add a list entry for members
Context	configure service vpn <i>service-name</i> confederation members <i>number</i>
Tree	members
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[as-number](#)] *number*

Synopsis	Confederation AS number
----------	-------------------------

Context	configure service vpn <i>service-name</i> confederation members <i>number</i>
Tree	members
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

customer *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	configure service vpn <i>service-name</i> customer <i>reference</i>
Tree	customer
Reference	configure service customer <i>customer-name</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

d-path-length-ignore *boolean*

Synopsis	Enable D-PATH length ignore
Context	configure service vpn <i>service-name</i> d-path-length-ignore <i>boolean</i>
Tree	d-path-length-ignore
Description	<p>When configured to true, the VPRN RTM ignores the D-PATH domain segment length for best path selection purposes (for routes in the VPRN). This allows the user to control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.</p> <p>When configured to false, the router does not ignore the D-PATH domain segment length.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp-server

Synopsis	Enter the dhcp-server context
Context	configure service vprn <i>service-name</i> dhcp-server
Tree	dhcp-server
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcpv4 [[name](#)] *named-item*

Synopsis	Enter the dhcpv4 list instance
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i>
Tree	dhcpv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	DHCP server name
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i>
Tree	dhcpv4
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the DHCP server

Context **configure** [service vprn](#) *service-name* [dhcp-server dhcpv4](#) *named-item* [admin-state keyword](#)

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

description *description*

Synopsis Text description

Context **configure** [service vprn](#) *service-name* [dhcp-server dhcpv4](#) *named-item* [description description](#)

Tree [description](#)

String length 1 to 80

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

failover

Synopsis Enter the **failover** context

Context **configure** [service vprn](#) *service-name* [dhcp-server dhcpv4](#) *named-item* [failover](#)

Tree [failover](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the failover mechanism

Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover
Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-client-lead-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover maximum-client-lead-time <i>number</i>
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.

Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>service vprn service-name dhcp-server dhcpv4 named-item failover partner-down-delay number</i>
Tree	<i>partner-down-delay</i>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer [*address*] *reference*

Synopsis	Enter the peer list instance
Context	configure <i>service vprn service-name dhcp-server dhcpv4 named-item failover peer reference</i>
Tree	<i>peer</i>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] reference

Synopsis	IP address of the failover peer
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover peer <i>reference</i>
Tree	peer
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sync-tag named-item**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover peer <i>reference</i> sync-tag <i>named-item</i>
Tree	sync-tag
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

startup-wait-time number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> failover startup-wait-time <i>number</i>

Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

force-renews *boolean*

Synopsis	Send FORCERENEW messages to force renewals of leases
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> force-renews <i>boolean</i>
Tree	force-renews
Description	When configured to true , FORCERENEW messages are enabled for DHCP.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-hold

Synopsis	Enter the lease-hold context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> lease-hold
Tree	lease-hold
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

additional-scenarios

Synopsis	Enter the additional-scenarios context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> lease-hold additional-scenarios
Tree	additional-scenarios

Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fwa-address-assignment *boolean*

Synopsis	Apply lease hold timer to FWA session
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> lease-hold additional-scenarios fwa-address-assignment <i>boolean</i>
Tree	fwa-address-assignment
Description	When configured to true , the router applies the lease hold timer to non-deferred IP addresses or SLAAC prefixes assigned to FWA sessions.
Default	false
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

internal-lease-ipsec *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> lease-hold additional-scenarios internal-lease-ipsec <i>boolean</i>
Tree	internal-lease-ipsec
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

solicited-release *boolean*

Synopsis	Apply lease hold timer for solicited releases
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> lease-hold additional-scenarios solicited-release <i>boolean</i>
Tree	solicited-release
Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

time *number*

Synopsis	Lease hold time
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> lease-hold time <i>number</i>
Tree	time
Range	1 to 631152000
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pool [[pool-name](#)] *named-item*

Synopsis	Enter the pool list instance
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i>
Tree	pool
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[pool-name] *named-item*

Synopsis	DHCP server pool name
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i>
Tree	pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*
